MDCCLXXII

P R E F A C E.

THE following Volume, as it makes a Part of this great Work, the Reader will find to be properly divided in respect to Books, Chapters, and Sections ; but here we propose to consider it in another Light, and according to that natural Way of Division arising from the different Subjects that are treated in it. In the Beginning, more especially, we have largely consider'd the Nature of Settlements or Plantations ; in the Middle Part of the Book we have shewn from Examples, the Utility of Travelling through all Parts of the habitable World ; and we have elsewhere discoursed of the great Importance of new Discoveries, and the Advantages which a Trading Nation may derive from the opening fresh Channels of Communication with the Inhabitants of distant Countries, and consequently of disposing of their Commodities and Manufactures, in Places, where, perhaps, they were never seen or heard of before. In this Place we shall very succinctly mention some of the Capital Uses that may result from the Manner in which we have treated these several Branches of our Subject, and refer the inquisitive Peruser, for a more copious and circumstantial View of the Disposition and Connection of the several Parts of this Design, to the Conclusion, where we have Reason to hope they are so stated, as to give him entire Satisfaction.

BURCH
NAV. HIST.

The great Point with respect to Plantations, is to shew, that the Riches, Power, and Happiness of the Mother-Country, depends, in a great Measure, upon them ; and that, on the other Hand, this Connection is so far from being grievous, burthensome, or prejudicial to the Colonies, that, on the contrary, their Peace, Welfare, and Prosperity, are dependant upon this, and upon this only ; so that the Benefits and Advantages of Settlements and their Mother-Countries are always reciprocal ; whence arises the Tie of mutual Obligation, that renders it equally unnatural for one to regret the Share she pays out of the Profit of her Labours, or the other to repine at the Demands that are now and then made for Assistance and Protection. It is a Thing of the highest Consequence, that these Notions should be thoroughly disseminated, and all the Points before insisted on universally understood. The sending People abroad to settle for a Time in a Plantation, ought to be considered in the Light of publick Service, because so in Fact it is, since we have proved in the following Pages, that every Planter abroad, finds Employment for several Men, perhaps for several Families at Home ; there cannot therefore be any thing more unjust, than to give a Preference of any Kind to those whom he maintains, before him who maintains them. There is also nothing more absurd, than to fancy that well regulated Colonies tend to depopulate their Mother-Countries ; which is so far from being true, that the more populous any Plantations are, the better peopled their Mother-Countries must be ; for the more flourishing the Settlement, the greater Consumption of Manufactures and Home Commodities in that Settlement : Now these cannot be consumed unless they are furnished, and they cannot be furnished without a Multitude of Hands ; but Employment will always procure these, and consequently People in a Plantation, like Water in the Sucker of a Pump, sets the Machine in Motion, and by a Kind of political Attraction, produces that Circulation of Industry which is the Health of the Constitution. *Lastly*, Though all Trade is advantageous, the Trade between Mother-Countries and their Plantations is of all others most advantageous, because where-ever the Profit falls, the same People reap it, and little or nothing is diverted into foreign Channels. The large History ensuing may be considered as a practical Commentary upon this Text, in which, by innumerable Instances it is proved, that where these Notions are adverted to and followed, Mother-Countries and their Plantations thrive equally, and that both pine, dwindle and decay, where these Maxims are either neglected or despised.

In Regard to Travels by Land, the Benefits resulting from them are partly in common, and partly distinct from those which arise from Voyages ; we shall insist here only upon the latter. We derive from well-written Relations of these, Accounts that may be relied on as to the Natural History of Countries, their Climate, Soil and Produce, whether Vegetables, Animals, or Minerals, and are thereby enabled to form some Kind of Notion of those immense Treasures, which with a wise as well as bountiful Hand, the great Author of the World has distributed through all its Parts. We are next informed concerning the

P R E F A C E.

the State of our own Species in every Country, more or less distant, or however situated in respect to our own, their Manners, Customs, Religion, Government, Laws, Forces, Revenues, and Trade. Besides all this, we learn the Progress of Art in the Improvement of Nature, which is a Point of higher Consequence than is commonly imagined; since upon a strict Review it will be found, that even amongst the most uncouth and barbarous Nations, there are many ingenious Inventions to be met with, some taken from Accident, but most dictated by Necessity, which in neither Way have ever occurred, even to the most lively Imaginations, amongst People more civilized. As for Instance, The neat Cloaths of Skins, Hunting and Fishing Tackle without Iron, and Boats that cannot sink among the *Greenlanders*; their flying Prows amongst the Inhabitants of the *Marian Islands*; their Feather Works amongst the ancient *Mexicans*, &c. By reading as well as seeing these Things, the human Mind is vastly enlarged and improved; we become weaned and estranged from those little, narrow, and childish Notions which are the Effects of a sordid Education, and by which even the brightest Genius is held in Chains. Neither is this the only Benefit, for the Extension of true Science naturally heightens and improves our moral Notions, teaches us Affability, Kindness and Commiseration for Strangers, and puts us in this respect upon executing the Fundamental Maxim of the Christian Law, by doing unto others as we would wish to be done by in their Circumstances. It teaches us Wisdom also, enables us to find out Means for meliorating our own Soil and Climate, and introducing as well foreign Fruits and Timber, as Animals; and by Labour prudently directed, making them our own. In the same Manner we transfer their Arts also, which though invented in particular Countries, and indispensably necessary in some, are, generally speaking, useful and convenient in all. Whatever Books of Travels therefore treat of these Matters most copiously, circumstantially, and correctly, deserve most to be read, and best to be preserved; which Rule we have studied to follow for the Reader's Emolument, as well as in Discharge of our own Duty.

In Reference to new Discoveries, and opening fresh Channels of Trade, we have spared no Pains, nor have been deterred by any Hazards. We have considered every Quarter of the Globe, and after enquiring how far it is already known and visited, have pointed out how much farther and better it might be known, and what Advantages might probably be expected from thence. We have not stood in Awe, upon these Occasions, either of the Censures of hasty Criticks, or the Raillery of such as despise all Projects but those of Pleasure, or of the Resentment of Men who fancy that such Discoveries would be an Intrusion upon their Rights, though they never attempt to turn these, so much, as to their own Advantage. What we have offered, has proceeded from a right Intention, from a Desire of employing the Poor, of affording suitable Rewards to enterprising Minds; and in a Word, of contributing, so far as this Opportunity put it in our Power, to the Benefit of Society, which is a Tribute due from every Member of it, for the Protection, and other Blessings that he enjoys in that Capacity. We have in every Instance had Reason for our Guide at least, and sometimes also Experience. We have proposed the undertaking of nothing without shewing that there were probable Grounds of finding the Undertaking both beneficial and practicable. We have studied to be as clear in the one, and as certain in the other, as it was possible; neither have we pretended to dictate, but have contented ourselves with propounding fairly what appeared to us feasible. To this we were chiefly encouraged by observing, that the same noble and generous Spirit, which animated our Ancestors not only to attempt, but to perform so many and so great Actions, of which we feel the Benefit, began to revive in the present Age for our own Advantage, as we hope, as well as for that of our Posterity. What was in our Power we have done to cherish and keep alive this glorious Flame, and to enable it to mount as high in present as in past Times; and if in doing this we have sometimes digressed with some degree of Acrimony into exposing the opposite Humour of preferring Indolence and Pleasure to Activity and Industry, we hope the Warmth of our Zeal will at least excuse that of our Language. It is our Comfort however, that if it does not, it can offend only the Idle and Tasteless, whom, to say the Truth, we never had a Thought to please. They must look for a Library of this Kind elsewhere, for this is consecrated entirely to the Service of ingenious and intelligent Readers, who seek Improvement and Instruction, and have no Notion of being entertained at the Expence of their Time and their Understandings.

This we flatter ourselves will be found a fair Representation of the principal Matters that are to be met with within the Compass of this Volume; and having said this, we have nothing farther to add, than that we heartily wish the Perusal of it may, in some Measure, answer our Aim, and contribute to diffuse that publick Spirit which teaches Men not only to wish well to the World in general, and to their own Country in particular, but to express the Sincerity of their Wishes in their Studies, their Discourses, and their Actions. We shall then be amply rewarded for all the Anxiety and Labour with which the achieving so great a Work has been attended, and shall cheerfully leave it as a Monument to Posterity, that we have not been idle in our Generation, or unworthy of the Examples that have been set us in this Kind of Writing, by the great Men in the last Age; in our own, and in other Countries.

THE
TABLE of CONTENTS
OF THE
SECOND VOLUME.

BOOK I.

*An Account of the CIRCUM-NAVIGATORS of the GLOBE, and
of the Discoveries of the East and West, and West-Indies.*

CHAPTER III.

Comprehending the Discovery, Settlement and Commerce of the WEST-INDIES.

SECTION I.

OF the Importance of the new discovered Continent of *America*, the Nature of that Discovery, the Felicities attending it, the Advantages derived from thence to the Art of Navigation, and the principal Points to be treated of in this Chapter. Page
1

SECT. II.

The first Voyage of *Christopher Columbus*, in which he discovered the *Lucayan Islands*, and afterwards *Cuba* and *Hispaniola*, which opened a Passage from *Europe* to *America*, with his Return to *Spain*, and Reception by their Catholick Majesties. 3

SECT. III.

The second Voyage of the Admiral *Don Christopher Columbus* to the *West Indies*, including an Account of all the Discoveries made by him in that Voyage. 16

SECT. IV.

The third Voyage of *Don Christopher Columbus* to the *West Indies*, in which he first saw the Continent of *America*, including the Troubles to which he was exposed, and his being sent home in Irons. 27

SECT. V.

The fourth Voyage of the Admiral *Don Christopher Columbus* his Discoveries on the Continent, and of the Islands in *America*; with an Account of his Return from that Voyage to *Spain*, and his Decease. 39

SECT. VI.

The History of the several Discoveries, Settlements and Conquests made by the *Spaniards* in the *West-Indies*, after the Death of the Admiral *Don Christopher Columbus*, to the Expedition of *Ferdinand*, or *Hernan Cortes*. 49

SECT. VII.

The Expedition of *Hernan Cortes* for the Reduc-

tion of *New-Spain*, from the Time of his being appointed to that Command, unto his being obliged to return to the Island of *Cozumel*. 63

SECT. VIII.

The Progress of this Expedition from the Time of the *Spaniards* embarking for *New Spain*, to the first Message sent by *Cortes* to *Montezuma*, Emperor of *Mexico*. 70

SECT. IX.

The Continuation of *Hernan Cortes's* Expedition; his Alliances with several *Indian Nations*; his Success in quelling various Seditions in his own Army, and his Preparation for his March to *Mexico*, by burning his whole Fleet. 77

SECT. X.

The History of the War of *Tlascala*, from its breaking out to *Cortes's* concluding a Peace with that Republick, and his taking them into the Confederacy against the *Indian Emperor Montezuma*. 85

SECT. XI.

The March of the *Spaniards* to *Mexico*; the Reception given to *Cortes* by *Montezuma*; his Imprisonment, and other Transactions to the Time of his ordering the *Spaniards* to quit his Dominions. 94

SECT. XII.

The History of *Cortes's* Expedition continued to the Death of *Montezuma*, and the *Spaniards* being forced to abandon the City of *Mexico*. 103

SECT. XIII.

The Conclusion of *Hernan Cortes's* Expedition, including the History of the remaining Part of the War, to the Reduction of the City and Empire of *Mexico*, by which the *Spaniards* acquired their extensive Dominions on the Continent of *North America*. 114

TABLE of CONTENTS.

	Page		Page
SECT. XIV.		<i>America</i> , from the Accession of King <i>James I.</i>	
The Discoveries made by the <i>Spaniards</i> in the Province called <i>Golden Castile</i> ; their first Knowledge of the <i>South Sea</i> , and their Establishment of <i>Panama</i> , by which a Passage was opened to the Discovery and Conquest of the great Empire of <i>Peru</i> .	136	to the Restoration.	221
SECT. XV.		SECT. XIX.	
The History of the Discovery and Conquest of the Empire of <i>Peru</i> by <i>Francis Pizarro</i> ; together with the Discovery of <i>Chili</i> , and the Conquest of that Country also.	143	An Historical Account of the <i>British</i> Settlements in <i>America</i> , from the Restoration of King <i>Charles II.</i> to the Revolution.	274
SECT. XVI.		SECT. XX.	
A Concise History of the Discovery, Settlement, and Cultivation of <i>Brazil</i> by the <i>Portuguese</i> ; the Conquest of the greatest Part of that Country by the <i>Dutch</i> ; the Recovery thereof by the <i>Portuguese</i> ; and the vast Advantages that have accrued to them of late Years from this noble Colony.	166	The History of the <i>British</i> Colonies in <i>America</i> , from the Revolution to the Death of his late Majesty King <i>George I.</i>	301
SECT. XVII.		SECT. XXI.	
The Discoveries and Settlements made by the <i>English</i> in different Parts of <i>America</i> , from the Reign of <i>Henry VII.</i> to the close of that of <i>Queen Elizabeth</i> , interspersed with various Remarks on the Progress of our Trade and Naval Power; and the Difficulties which the Nation had to struggle with in their first Attempts.	189	The History of the Rise, Progress, and present State of the Colony of <i>Georgia</i> , with the Attempt made upon it by the <i>Spaniards</i> , and their total Defeat; interspersed with original Papers.	323
SECT. XVIII.		SECT. XXII.	
The History of the Discoveries, Settlements, and other Transactions of the <i>English</i> Nation in		A succinct History of the Discoveries, Settlements, and Conquests made by the <i>French</i> in <i>America</i> ; a View of their Policy, Numbers, Commerce and Strength in that Part of the World; and some Conjectures as to the Event of their Designs, extracted chiefly from their own Authors.	348
		SECT. XXIII.	
		The Discoveries, Conquests, Settlements, and present State of the <i>Dutch</i> Colonies in <i>America</i> ; the Nature and Value of their Commerce with the <i>Spaniards</i> , and the Manner in which their Returns are made to <i>Europe</i> ; to which is added, an Account of the <i>Danish</i> Settlement; the whole collected chiefly from the <i>Dutch</i> Writers.	364

BOOK II.

Voyages and Discoveries towards the North, and through most of the Countries of EUROPE.

CHAP. I.

The Discoveries made directly towards the North, and the Attempts hitherto made for finding the North-East and North-West-Passages.

SECT. I.

THE History of the Countries lying round the North Pole, their Climate, Soil and Produce, together with an Account of the Customs, Manners, and Trade of their Inhabitants.

377

SECT. II.

The rational and philosophical Motives for seeking a Passage into the *South-Seas*, by the North-West, examined and explained; together with the History of the Attempts made with that View for the Space of One hundred and thirty Years.

399

SECT. III.

The accurate and admirable Voyage of Captain *Thomas James*, for the Discovery of a Passage into the *South-Seas* by the North west, his win-

tering in *Charlton* Island, and wonderful Return with his Ship and most of the Crew into *England*.

406

SECT. IV.

The late Attempts made for the Discovery of a Passage to the *South-Seas* from *Hudson's-Bay*, more particularly that of Captain *Christopher Middleton*, Commander of his Majesty's Sloop the *Furnace*.

437

SECT. V.

A succinct Account of the Grounds upon which a North-east Passage into the Sea of *Japan* has been expected and sought for. The Attempts of the *English* and *Dutch* on that Side, with the Reasons why all Thoughts of a Passage that Way have been for many Years given up.

452

CHAP.

TABLE of CONTENTS.

CHAP. II.

Comprehending such Voyages and Travels as relate to the Northern Parts of Europe; and such of the Countries adjacent as are subject to any of the European Powers.

SECT. I.

A Voyage to the North, containing an Account of the Sea-coasts and Mines of Norway, the Danish, Swedish, and Muscovite, Laplands, Borandia, Siberia, Samogedia, Zembla, and Iceland, with some very curious Remarks on the Norwegians, Laplanders, Russians, Poles, Circassians, Cossacks, and other Nations. 457

SECT. II.

A succinct and impartial Account of the Kingdom of Sweden, with Respect to its Climate, Soil and Produce; as also of the Temper, Genius, Customs, Policy, Form of Government, Force, and Trade of its Inhabitants. 493

SECT. III.

The present State of the Dominions of the Crown of Denmark, and of its Subjects in respect to their Manners, Customs, Laws, Forces, Revenues, Commodities and Commerce, with occasional Observations and Remarks. 501

SECT. IV.

A Comprehensive Account of the Kingdom of Poland, the Situation, Extent, Climate, Soil, Produce and Commerce of that Country, together with the Laws, Customs, Manners, Form of Government, and Genius of the Inhabitants, the Privileges of their Nobility and Power of their Kings. 508

SECT. V.

A short Account of the Ukrain and of its Inhabitants the Cossacks. 516

CHAP. III.

Comprehending Travels through the middle Parts of Europe, particularly the United-Provinces, the Austrian Low-Countries, Germany, Italy, Switzerland, Savoy, and the Territories of the Republick of Genoa.

SECT. I.

THE Travels of Mr. Maximilian Misson through Part of Holland, the Spanish Low-Countries, Germany, Tyrol, and the Bishoprick of Trent, in his Way to Italy; containing a distinct Account of whatever appeared to him remarkable in the Places through which he passed; together with Political, Historical, and Critical Remarks upon Persons and Things as he has Occasion to represent them. 521

SECT. II.

The Travels of Mr. Maximilian Misson through a great Part of Italy, with a distinct Detail of whatever is curious or worthy of Observation in the Places he visited; and many judicious and important Remarks on the Manners, Customs, &c. of the Inhabitants. 535

SECT. III.

The Travels of Mr. Maximilian Misson continued, from his Arrival at Rome to his Departure out of Italy; with Observations and Remarks. 561

SECT. IV.

Bishop Burnet's Travels through Swisserland, Part of Italy, some Provinces of Germany and the Low-Countries, in which are contained many curious Historical and Political Remarks on the Manners of the People, the Forms of Government, and the State of the Countries before-mentioned. 590

SECT. V.

The Travels of the Reverend Mr. John Ray, through the Low-Countries and Germany towards Italy, interspersed with curious Observations, Natural, Topographical, Moral, Physiological, Philological, &c. 641

SECT. VI.

The Travels of the Reverend Mr. John Ray through the Dominions of the State of Venice, Lombardy, Tuscany, the Kingdom of Naples, the Islands of Sicily and Malta, the Ecclesiastical State, the Bishoprick of Trent, the Country of the Grisons, Switzerland, &c. 658

CHAPTER IV.

Containing Travels through Spain, France and Navarre; with Descriptions of the several Provinces and lesser Districts of those great Countries; of the chief Cities and Ports in them, and of the Commodities and Manufactures for which they are principally famous.

SECT. I.

THE Travels of Francis Willoughby, Esq; through the Kingdom of Spain, with Observations on the Climate and Soil, as well as Produce of the Country; Accounts of natural Curiosities, remarkable Inscriptions, principal Commodities and Manufactures, and of the Temper, Genius, and Customs of the Span-
ish Nation. Interspersed with some Remarks by another Hand. 694

SECT. II.

Travels through Portugal and Spain, with a distinct Description of the principal Cities in both Kingdoms; particularly Lisbon, Coimbra, Porto, and Braga in the former; Madrid, Valentia, Alicant,

TABLE of CONTENTS.

Alicant, &c. in the latter : With a curious and correct Detail of the Curiosities in the *Escorial*, and a succinct Description of the other royal Palaces of their Catholick Majesties. 705

Historical, Political, Philosophical and Mechanical Remarks and Observations. 715

SECT. IV.

Travels of Dr. *John Northleigh* through *France*; interspersed with Historical, Political, and Medical Observations, made with great Care and Circumspection in two different Journies through that Kingdom, the last of which was compleated in the Year 1702, and the whole revised by the Author a little before his Death. 727

SECT. III.

The Travels of *Philip Skippon*, Esq; afterwards Sir *Philip Skippon*, and the Reverend Mr. *John Ray*, through the best Part of the Kingdom of *France*; interspersed with a great Variety of

CHAPTER V.

Comprehending Travels through the remotest Parts of Germany, Bohemia, Moravia, Hungary, &c. to the very Frontiers of Europe upon that Side; interspersed with the History of Mines, Salt-Works, Fisheries, and other curious Particulars.

SECT. I.

A Voyage from *England* to *Holland*, with a Journey from thence by Land through the Electorates of *Cologne*, *Treves* and *Mentz*, the Lower and Upper *Palatinate*, *Bavaria* and *Austria*, to *Vienna*, from thence through *Moravia*, *Bohemia* and *Saxony*, to *Hamburg*; with many judicious and useful Observations, by Dr. *Edward Brown*. 741

SECT. II.

A Description of the noble Kingdom of *Hungary*, in which its various Prerogatives, and many Excellencies are pointed out; the Nature of the Country, its various and admirable Productions, the Disposition of the People, their Language, Manners, and Customs, are, from the Knowledge of the Writers, clearly and copiously set forth; interspersed with a Variety of Geogra-

phical, Historical, Physial, Political, and Literary Remarks upon various Subjects. 759

SECT. III.

Travels through *Hungary* into *Theffaly*; a Description of the City of *Larissa*, and of the *Grand Signior's* Court there; with other curious Particulars; together with a Description of other Parts of *Hungary*, more especially of the Gold Mines; and some Remarks upon the adjacent Countries, then and now making Part of the Hereditary Dominions of the House of *Austria*. 765

APPENDIX to the former Section.

A Journey from *Vienna* to *Venice* by Land; with a distinct Account of the Quick-Silver Mines in *Friuli*, including the Author's Observations in his Passage thro' *Styria*, *Carinthia* and *Carniola*. 781

BOOK III.

Voyages to, and Travels through the Dominions of the *Grand Signior*, and through the other Empires, Kingdoms and States in *ASIA*; with curious and copious Accounts of such Parts of that great Continent as are least known.

CHAPTER I.

Voyages through the Islands of the Archipelago: Travels through most of the Provinces under the Dominion of the Grand Signior; with a full Account of the present State, Forces, Revenue, Commerce, &c. of the Turks.

SECT. I.

THE Voyages and Travels of the celebrated Mr. *John Thevenot* from *Italy* to *Constantinople*, including a very curious and exact Description of the several Places he touched at in his Passage; of the several Cities he visited upon the Coasts, and a most exact View of *Constantinople* at the Time he visited it: Interspersed with a great Variety of Historical and Political Remarks, equally instructive and entertaining. 790

SECT. II.

Containing an Account of the Customs and Manners of the *Turks*; their Learning and Religion;

the Form of their Government; their Forces by Sea and Land; as also an Account of the Christians and Jews inhabiting the Countries that are subject to the *Grand Signior*. 805

SECT. III.

An Account of several of the most remarkable Cities in *Asia*; of various Islands in the *Archipelago*, and of Things most observable in them, both with respect to their ancient and present Condition; with Remarks Historical, Physial and Geographical. 822

SECT.

TABLE of CONTENTS.

SECT. IV.

The Journey of the Reverend Mr. *Henry Maundrell* from *Aleppo* to *Jerusalem*, containing a curious and accurate Description of the Holy Land and

Page

City; interspersed throughout with great Variety, as well of Philological, Physical and Philosophical, as Historical and Critical Remarks. 841

CHAPTER II.

Containing Travels through the Empire of PERSIA, and the Provinces depending thereon; with a large Account of their Climate, Soil and Produce; the Constitution of the Empire, and Nature of the Shah's Government; the Laws, Manners, Religion, Commerce, Diversions, &c. not only of the Native Persians, but of the several Nations living in their Country and subject to the Shah; with a brief Account of the late Revolutions in that Empire.

SECT. I.

THE Travels of Sir *John Chardin* by the Way of the *Black Sea* through the Countries of *Circassia*, *Mingrelia*, the Region of the *Abcas*; *Georgia*, *Armenia* and *Media* into *Persia* proper; with a very curious and accurate Account, not only of the Countries through which he travelled, but of the Manners and Customs, Religion and Government, Commerce and Inclinations of the several Nations that inhabit them; Relations so much the more Curious, as these Countries, and the People dwelling in them, had not been tolerably described before by any Author. 862

SECT. II.

A copious and circumstantial Description of the great Empire of *Persia*; its Situation, Extent, Distribution of its Provinces, Climate, Rivers, Seas, Soil and Produce, and the chief Cities throughout the Country, so as to afford a perfect Idea of its Condition in past and present Times. 876

SECT. III.

Of the Disposition and Temper of the *Persians*; their Persons, Habits, Manner of Living; their

Artificers and Mechanicks; the Respect paid to Merchants; the Method in which their Inland Trade is carried on; the past and present State of the *English* Commerce, and other Particulars; together with some curious Observations on the Nature of the Silk Trade, and a Computation of the annual Balance in favour of *Persia*. 891

SECT. IV.

Containing an Account of the Government and Constitution of *Persia*; the Nature of the *Shah's* Power; the Distribution of Civil, Ecclesiastical and Military Offices; the interior Policy of the Empire; the regular Forces kept up there, both Horse and Foot; and the Nature and Amount of the publick Revenues. 897

SECT. V.

A succinct View of the *Persian* History, from the earliest Accounts, down to the present Time, in which is contained, a concise Representation of the several remarkable Revolutions in that Empire, Ancient and Modern; the Conquests thereof by several Nations; and the Succession of their respective Monarchs, so far as is necessary to illustrate what has been delivered in the foregoing Sections. 907

CHAPTER III.

A Description of the North-East Parts of ASIA, and the extensive Empire of CHINA, with the Countries depending thereon, and the Manners and Customs of the several Nations that inhabit them.

SECT. I.

THE Travels of his Excellency *E. Ysbrants Ides*, Ambassador from *Peter* the Great to the Emperor of *China*, through *Great Ustiga*, *Siriana*, *Permia*, *Siberia*, *Daour*, &c. to the Frontiers of *China*, containing an exact Description of the Extent and Limits of those Countries; the Nations by which they are inhabited; with a curious and copious Account of their Religion, Government, Marriages, Dwellings, Diet, daily Occupations, &c. 918

SECT. II.

Travels through the Countries of the *Mongul Tartars* lying between the *Russian* and *Chinese* Empires; the Passage through the famous Wall, and from thence through several considerable Places to the City of *Peking*, the Capital of all *China*; with Observations Historical, Physical,

Chorographical, Critical and Political, on the several Nations conversed with by our Authors, and the Countries by them inhabited; with some Conjectures also as to their former Inhabitants. 935

SECT. III.

The Author's Reception at the Court of *China*; the great Civilities paid him there; the wonderful State and Magnificence of the Imperial Palace; the Ceremonies of a publick Audience; the Person and Manners of the Emperor described. An Account of the Curiosities of the City of *Peking*; the grand Establishment of the *Jesuits*; the Civilities paid by them to the *Russian* Minister; remarkable Things observed by him during the Time of his Stay in the Imperial Residence; the pompous Ceremonies of his Audience of Leave; his Return from *China* by Land; the Accidents attending his Journey. c

TABLE of CONTENTS.

Journey, the many and great Hardships he sustained therein, notwithstanding his Interest in both Empires, and his safe Arrival, after so many Hazards, and enduring so great Fatigues at *Moscow*. 944

S E C T. IV.

A very copious and no less curious Account of the North-east Part of *Asia*, comprehending a distinct, particular, and authentick Description of all that has hitherto passed under the general Name of *Siberia*, shewing the Extent and Situation of the several Districts thereof, their Climate, Soil, and Produce; the Rise and Course of the principal Rivers, Descriptions of all the great Cities upon their Banks; of the several barbarous Nations that inhabit near these Rivers; of the Value of their Furs, and Fisheries, with the Manner of their Commerce, and a clear and full Explanation of a Multitude of lesser Circumstances, as well as material Points of Fact which contribute to the perfect Understanding the Condition of this hitherto unknown Country and all its Inhabitants: To which is added, a succinct Recapitulation of the State of the *Chinese* Empire towards the Close of the last Century; with some very impartial as well as judicious Remarks on the Temper, Genius, and boasted Oeconomy of that famous Nation; with a free Censure of those Hyperbolical Panegyrics that have been bestowed on the Progress of Science amongst them. 951

S E C T. V.

A Geographical Description of the extensive Empire of *China*, and of the Sixteen Provinces into which it is divided. In which is contained, a succinct View of the Situation, Bounds, Produce, remarkable Curiosities, and whatever else is worthy of Notice in each Province, taken entirely from the Writings of the *Chinese* themselves, and more especially from their authentick Records, and natural Histories penned by Direction of the State, with such incidental Accounts of their Antiquities, and of the personal History of the most famous Emperors, Heroes, Statesmen, and Philosophers as have been born or flourished in any of those Provinces through the Course of many Ages. 961

S E C T. VI.

A copious, accurate, and authentick Account, of whatever is most remarkable, in Regard to Per-

sons or Things, throughout the whole Empire of *China*, more especially the Number of the Inhabitants in general, and of the Christians in particular, the Rivers, Shipping, Lakes, Bridges, &c. The different Religions that prevail, and have prevailed amongst the People, their Manners, Ceremonies, and extraordinary Politeness. Of the remarkable Trees, rich Fruits, and valuable Drugs in this Country, together with a succinct Account of those Kingdoms, that either now depend or formerly depended upon it. 975

S E C T. VII.

A curious and concise Description of the Country, History of the Inhabitants, and Account of the present State of the Kingdom of *Corea*, together with some Hints of the Ease, with which Commerce might be established in its Ports, the Benefits that might be expected from thence, the great Likelihood of gaining an Entrance from thence into *Japan*, or at least an Inter-course with the *Japonesse*; and many other entertaining and instructive Particulars relative to this Subject, and the Trade that is or might be carried on in the Dominions and Dependencies of the Emperor of *China*. 1000

S E C T. VIII.

A succinct Account of Part of the North-east Frontier of the *Russian* Empire, commonly called the Country of *Kamschatka*, or *Kamschatska*, including the Voyages of Captain *Behring* for discovering towards the East; with many curious and entertaining Circumstances relating to those distant Countries and their Inhabitants; and also an Enquiry into the Probability of the Country, which he discovered, being connected with *North America*; with a Variety of other Points of great Consequence, in relation to the Designs now on Foot in various Parts of *Europe*, for making a thorough Discovery of the superior Parts of the Northern Hemisphere, which would be of the utmost Consequence to Trade and Navigation in general, and to those of *Great Britain* in particular. 1016

C O N C L U S I O N.

A retrospective View of this whole Collection, in which its particular Advantages are explained, and an Account given of the Uses to which the Contents may be applied. 1042

Navigantium atque Itinerantium Bibliotheca.

Or, A Complete COLLECTION of

VOYAGES and TRAVELS.

B O O K I.

An Account of the Circum-Navigators of the GLOBE, and of the Discoveries of the *East* and *West Indies*.

C H A P. III.

Comprehending the Discovery, Settlement, and Commerce of the WEST INDIES.

S E C T I O N I.

Of the Importance of the new-discovered Continent of America, the Nature of that Discovery, the Felicities attending it, the Advantages derived from thence to the Art of Navigation, and the principal Points to be treated of in this Chapter.

1. All Ages and all Nations have concurred in admiring such as have distinguished themselves by the Discovery of new Countries. 2. The Art of Navigation much improved in Columbus's time, and yet he had great Difficulties to struggle with in Theory and Practice. 3. By his Scheme he avoided the Imputation of Heresy, which had fallen upon all who maintained Antipodes before him. 4. No just Imputation on him that he did not find America exactly as he conjectured. 5. A succinct Account of the Subjects that are to be treated of in this Chapter.

I.  HERE are very few Points as to which the Judgments of different Times and several Nations have so well agreed, as in the Fame due to those who first discovered distant Countries. In respect to the fabulous History, *Bacchus* is highly celebrated for his *Indian* Expedition, and chiefly because he durst penetrate farther than any Man had ever gone before, he was reputed a Deity. The *Egyptians*, who were esteemed to be the wisest People of Antiquity, and with reason, since almost all the Sciences travelled into this part of the World from thence, paid the highest Tribute of Praise to such of their Monarchs as were supposed to have conquered the East, and to have penetrated into Countries where, before that time, no victorious Armies had ever come. It was for the same Cause that the *Tyrian Hercules* was so much magnified by his Countrymen; and it was the Glory which those Heroes had acquired, that

prompted *Alexander*, the most ambitious and most daring of the *Greeks*, to undertake his famous Expedition against the *Indians*, that he might not fall short of any whose Names were recorded in History; which Vanity of his transported him to such a Degree, that though, after the Ruin of the *Persian* Empire, he esteemed himself only the first of Men; yet, on his framing the Project of invading *India*, he conceived himself, and expected that others should conceive him, somewhat more than Man. In succeeding Times, we find this Humour far from being worn out, since even the *Romans*, who, if not a wiser, were most certainly a more moderate and better-judging People than the *Greeks*, esteemed the Invasion of *Britain* by *Julius Caesar* the most glorious of his Actions, and that which redounded most to the Honour of their Empire.

Upon the same Principle the famous Emperor *Trajan* was so extremely desirous of following the Example of *Alexander*, and carrying the Terror of the *Roman* Arms into.

into Countries which their Ancestors never knew. But, after all, this Notion of pushing their Conquests in this manner carries in it nothing so truly noble as the Project of discovering Countries far removed from other Parts of the World by vast Tracts of Sea; and this for many Reasons, but principally for these three. First, Because the former is the bare Result of Force; whereas the latter must be the Effect of Skill. To enjoy Courage only is common with other Animals; but Fortitude of Mind, with respect to Dangers not felt, but foreseen, is peculiar to us as Men; and so likewise is the Conduct by which Providence has enabled us to guard against them. Secondly, in attempting the Discovery of distant and unknown Regions, we not only combat those Difficulties which other Conquerors meet with; but, at the same time, attempt to subdue Nature, and to make her, who is the Mistress of Mankind, obedient to our Will, which, in ancient Times, was supposed to have somewhat in it of Divinity, because, to ordinary Minds, it seemed beyond the Reach and Power of Man. Thirdly, Whereas other Conquests tend only to the Benefit of this or that Nation; these are advantageous to the Species, and add Dominion not to a single People, but to the whole Race of Mankind.

2. We must allow that the Use of the Compass had brought about considerable Changes in the Art of Navigation, before any Attempt was made to discover new Countries by sailing Westward; but, however, there were great Difficulties to be overcome, before any Design of that sort could be accomplished. The Vessels then in use were very unfit for long Voyages, in Point of Form, Capacity, and Strength. The Seamen again had very little Experience, were naturally inclined to coasting, and knew not enough of their Art to be clearly satisfied what could, or what could not, be performed by it. Add to all this, that their Skill consisted rather in practising what they had seen before, than in the Knowledge of any settled Principle of Science, capable of directing them in any extraordinary Cases that might happen. And even as to their Observations, they were far enough from being exact, partly from the Meanness of their Instruments, and partly from the Narrowness of their Notions about the Use of them.

We may subjoin to these another Difficulty, as great, or perhaps greater, than any of the rest; which was their Proneness to Superstition, a thing incident to all Arts, while indifferently understood, which made them, on the one hand, liable to be surprized and confounded by every little Accident, and, on the other, rendered them so obstinate and intractable, that it was very hard, and, in some Cases, almost impossible, to force them out of their ordinary Road, notwithstanding their being directed by Persons of superior Abilities, and who, by a long Course of Study and Observation, had conquered all or most of these Difficulties. These Errors and Imperfections in such sort of People might, however, be very easily excused, when those who, both from their Parts and their Professions, ought to have been freer from these Foibles and Follies, entangled themselves, by their own Wilfulness and Vanity, in still greater Mistakes. Thus, for instance, it became a Point of Faith to deny that there were *Antipodes*, and the learned Bishop of *Saltzburg* was condemned as a Heretic for holding the contrary Opinion.

There has, indeed, been some Endeavours used to palliate this Matter, and to make the World believe that the Clergy, in those Days, were not quite so ignorant as they have been represented. With this View we are told, that *St. Augustin*, on whose Authority the Prelate before-mentioned was condemned, was far enough from believing, that the Earth upon which we live was flat, like a Trencher, which may be granted; but then let us hear how they explain the Matter, and in what manner they state the Case of the *Antipodes*, so as to render the Belief of them an Heresy. Why, say they, though the Church acknowledged the Earth to be a Globe, and that there was an inferior, as well as superior, Hemisphere; yet they denied that the latter was habitable, because, as it must be separated from us by a great Ocean, the Consequence they thought must have been, that, if it was peopled, the

Inhabitants could not have been descended from *Adam*, and therefore the asserting a World so peopled was, in their Judgment, a flat Contradiction of the Scriptures. This Position of theirs, though a little better Sense, was as effectual a Bar to Science, and as much calculated to prevent Discoveries, as the other Opinion of the Earth's being flat; so that, considering the Power of the Church in the fifteenth Century, one cannot help wondering how it came into the Head of so religious a Man as *Christopher Columbus* to maintain the Possibility of such an Enterprize; and one ought to wonder much more that, that after he did maintain such a Doctrine, it was not condemned as a Heresy.

3. At first sight, the examining this Point may seem to be a little wide from our Purpose; but I hope, before I have done with it, to convince the ingenious Reader that nothing can contribute so much to the perfect understanding the Subject of this Section. We have already shewn, at the Beginning of the former Volume, that, when *Columbus* first proposed his Scheme, it met with great Oppositions, more especially from the Learned, who, either not comprehending the Force of his Arguments, were resolved to conceal their own Ignorance the best way they could; or else, from a Principle of Envy, were assiduous in maintaining that what he asserted was false and absurd, merely because they had not Penetration enough to make such a Discovery themselves: But we never hear that they charged him with Heresy, and therefore I am inclined to think, that the Reason before assigned for condemning the Opinion of the *Antipodes* was the true one.

The Business then is to shew how *Columbus* avoided splitting upon this Rock, and maintained his Notion without running into that to which the Church was, in his time, as little reconciled as when the Bishop of *Saltzburg* was adjudged an Heretic. In order to clear up this, the Reader is to understand, that though *Columbus* discovered that great Continent, now called *America*; yet he was very far from declaring, at least, or perhaps from believing, before he undertook his first Voyage, that there was any such Continent; by which I mean, a Continent separated from *Europe* by so large a Part of the Ocean on one side, and as far separated from *Asia* in like manner on the other. For, had he so conceived, or, at least, had he maintained this Conception, however agreeable to good Sense and Truth, he had been most certainly esteemed a Heretic.

But the Principle he went upon, though not strictly true, exempted him from all Imputation. It was, in few Words, this, That the Earth being globular, it was reasonable to suppose, that the Continent and Islands of the *East Indies* extended themselves in such a Manner into the inferior Hemisphere, as that they might be reached very conveniently by sailing Westward. It is very evident that, by this Supposition, he entirely avoided the Heresy of maintaining, that there might be another Continent, inhabited by Men that were not descended from *Adam*. It is very true that he might maintain and publish this Doctrine, without believing it; but, as the Reader will hereafter see, this was not the Case; for he really spoke as he thought. Nor does it appear that he was deceived, even by the first Voyage that he made; but, on the contrary, firmly believed, that the Islands he had visited were such as lay at some Distance from the Continent of the most Eastern Part of *Asia*.

4. There is nothing in this Error of *Columbus* which can in the least prejudice him in the Opinion of a judicious and intelligent Person; but quite the contrary, since it was impossible for him, or, indeed, for any Man, to discover, by the Force of his Genius only, how the Divine Providence had distributed the Continent and Islands in that unknown Hemisphere. On the contrary, we learn, from hence, that there is always something magnificent and shining, and, if I may be allowed the Expression, a shadowy Resemblance of Truth even in the Mistakes of great Men. It was the Opinion of this able Person, that, after traversing a wide Sea, he should fall in with that Archipelago of Islands which *Marco Paulo* had described, and which he had called *Zipango*, or *Cipango*, which are what we call *Japon*; and, if the Continent of *America* had not lain in his way (which, as I said, it was impossi-

The Currents are observed to be generally near the Coast or in Straits &c. and more or less as they are affected by the Winds. Without the limits of the Trade Winds (which are included within 30 Deg. North & South of the Equator) the Sea is Subject to Variable Winds; tho' usually, a Stormy West Wind prevails here. Within the Trade Winds in this Ocean they are for the most part gentle & regular, which makes Sailing both safe & pleasant; hence it is that the usual Course to Virginia &c. is made so much to the Southward.

A New & Accurate Chart of the WESTERN or ATLANTIC OCEAN Drawn from Surveys and most approved Maps & Charts. The whole being regulated by Astronomical Observations By Eman. Bowen, Geographer to His Majesty.

The Columbus is generally supposed to have been the first Discoverer of the New World. Yet there is great probability that Madoc a Prince of North Wales sailed from thence & landed on the Coast of Florida (time & place of which may above p. 190. of this Work.)

ble for him to foresee) unquestionably it had been so; which is the true Reason why, at first, he fancied *Cuba* one of those Islands, and, after a little Reflection, pronounced that an Error; but still flattered himself that he should meet with these Islands, but in a higher Latitude.

It was from this Mistake of his, that the Countries which he discovered came to be called *West Indies*; for, upon his Return from his first Voyage, and bringing with him Spice, Parrots, and Gold, he made no question that the Countries he had visited made a Part of the *Indies*, that is, of the *Asian* or *East Indies*: But when, by his subsequent Voyages, he was convinced of his Error, and found that there was really a great Continent between him and the Countries he sought, he then chose to call the Islands he had discovered the *West Indies*. In Process of Time, when the Extent and Importance of the Continent to which those Islands belonged was better known, it came to be called by a more emphatic and significant Name, viz. that of the *New World*.

This, to say the Truth, was proper enough, since, on the first View of the Globe, it appears, that *America* is as it were a Balance to what was styled the World before it was discovered; and, as it lies from North to South, it occupies all the Zones, and, consequently, contains the same Variety of Climates which had been distinguished by Geographers in this Part of the World. It came afterwards to be called *America*, for Reasons which we shall assign, when we come to speak of *Americus Vespusus*, who was the first that published a tolerable Map of it, and in that Light only could be esteemed a great Discoverer.

5. We have, in the former Volume, spoken of *Columbus* as the first Circum-navigator, tho' he was not so in Fact, but in Idea only; however, as it was in Pursuit of his Notions that the Possibility of sailing round the World was first discovered, and has been since often performed, he had a just Right to be considered in that Light. In this Section we propose to speak of him as the First who visited this new World; and, after giving an Account of his Voyages thither, and of the Discoveries made by the *Spaniards*, who pursued his Tract, we shall next entertain the Reader with the History of the two great Conquests made by the *Spaniards* in *America*. The First by *Ferdinand*, or, as the *Spanish* Writers call him,

Hernan Cortes, of the great Empire of *Mexico*. The Second by *Frances Pizarro*, who subdued the no less famous Empire of *Peru*. This will afford us an Opportunity of entering into a Description of both these Countries, as they stood at the Time these Conquests were made; and of the Manners, Government, Laws, Learning, and Trade of their ancient Inhabitants.

We shall then speak of the Expeditions of our own Countrymen into this Part of the World, and of the Discoveries and Settlements made by them, from the first Voyage of *Cabot*, in the Reign of *Henry VII.* down to the Plantation of *Georgia*, which is the Last, at least of any Consequence, that we have made. The Discoveries and Settlements made by the *French* will next employ our Care. And, last of all, we shall speak of the few small Settlements which the *Dutch* and *Danes* enjoy in this Part of the Globe; which (with a View of the principal Advantages that *Europe* in general derives from her Commerce with this new World) will fill up the remaining Part, and complete the Design of this Chapter.

It may not, however, be amiss to take this Opportunity of observing, that, by this Means, our History of Discoveries will be entirely compleated; so that in our Third and Fifth Books we may, with the same Propriety, insert Travels by Land, in the most distant Parts of *Asia* and *America*, as in the most known Parts of the World; which could not however have been done, if in these two Chapters we had not shewn at large how these great Countries were first disclosed to the World, and their Commerce, in some measure, monopolized and secured to the Inhabitants of *Europe*. Hence arises the great Difference in Bulk between our First and our succeeding Books; the former being, strictly speaking, a compleat History of Navigation and Commerce, shewing the Connections between the different Parts of the World, as they now stand, as well as the manner in which those Connections arose, and have been continued: Whereas in the following Books the several Parts of the World are distinctly considered, and the Conditions of their Inhabitants particularly explained, from the Accounts given us by such as visited them for that Purpose. Thus much being said by way of Introduction, let us proceed directly to the Performance of what has been promised.

SECTION II.

The first Voyage of CHRISTOPHER COLUMBUS, in which he discovered the Lucayan Islands, and afterwards Cuba and Hispaniola, which opened a Passage from Europe to America, with his Return to Spain, and Reception by their Catholic Majesties.

1. The Difficulties which Columbus met in concluding an Agreement with the Queen of Spain.
2. The Substance of that Agreement, together with an Account of the small Force with which he undertook this Expedition.
3. He sails from Spain on the 3d of August, 1492.
4. The remarkable Occurrences in the Voyage, and the various Troubles to which the Admiral was exposed.
5. The Seamen grow uneasy and suspicious, notwithstanding all the Endeavours used by Columbus to pacify and encourage them.
6. When his Patience was quite exhausted they at last discovered Land.
7. The Admiral gives Names to the three first Islands he met with in the new World.
8. He sails to and examines the noble Island of Cuba.
9. He proceeds from thence to that of Hispaniola.
10. An Account of his Reception by the Inhabitants, and of the State of that Island at the Time of his discovering it.
11. Loses his Ship upon that Coast, and resolves to settle a Colony there.
12. Takes proper Methods for that Purpose, and gives this new Colony the Name of *Natividad*, in Honour of Christ's Nativity.
13. Begins to dispose all things for his Return to Spain.
14. Begins his Voyage from the Port of the Nativity, and rejoins Martin Pinzon, who had deserted him.
15. Prosecutes his Voyage to Lisbon, where he has an Audience of the King of Portugal.
16. Returns safely to Palos, March 15, 1493, and proceeds from thence to Barcelona, in order to pay his Compliments to their Catholic Majesties.
17. Remarks and Observations on the foregoing Voyage.

1. THE Family and personal History of Don Christopher Columbus have been so fully set forth in the Beginning of the First Chapter, that there is no Need of repeating them here; and, therefore, we shall observe, that after being slighted and abused in *Portugal*, he travelled into *Spain*, in the year 1484, in order to propose his Scheme of Discovery to King *Ferdinand* and

Queen *Isabella*, by whom he was referred to the Prior of *Prado*, afterwards Archbishop of *Granada*, who summoned an Assembly of such as were then esteemed learned, to consider of his Proposals. But there being few Cosmographers then in *Castile*, and those none of the best in the World, and, besides, as *Columbus* did not fully explain himself, lest he should be served as he had been

in *Portugal*, they came to a Resolution nothing answerable to what he had expected.

Some alledging that since in so many Ages as there were from the Creation of the World, Men so well versed in marine Affairs had known nothing of these Countries *Columbus* persuaded them must be found, it was not to be imagined that he could know more than all of them. Others, adhering more to speculative Reason, urged, that the World was so large that there would be no coming to the utmost Extent of the East in three Years, whither *Columbus* said he intended his Voyage. And in Confirmation thereof they alledged, that *Seneca*, by way of Dispute, said, That many discreet Men did not agree upon the Question, Whether the Ocean was infinite, and doubted whether it could be sailed; and, supposing it to be navigable, whether there was any Country inhabited on the other Side, and whether it was possible to go to it. They added, That no Part of this inferior Sphere was inhabited, except only a small Compass, which was left in our Hemisphere above the Water, and that all the rest was Sea; and that notwithstanding it was so, if it were possible to arrive at the extreme Part of the East, it would be also granted that from *Spain* they might go to the extreme Part of the West. There were still others who affirmed, That if *Columbus* should sail directly Westward he would not be able to return to *Spain*, because of the Roundness of the Globe; so that whoever should go beyond the Hemisphere known by *Ptolemy*, would fall down so low that it would be impossible ever to return, by reason it would be like climbing up a Hill. And though *Columbus* fully answered these Arguments, they could not apprehend him, for which Reason those of the Assembly judged the Enterprize to be vain and impracticable, and that it was not becoming the Grandeur of such mighty Princes to proceed upon so improbable a Scheme.

After much Delay, their Catholic Majesties ordered this Answer to be given to *Columbus*: That being engaged in several Wars, and particularly in the Conquest of *Granada*, they could not enter upon fresh Expences, but when that was over, they would cause further Enquiry to be made into his Proposal; and so they dismissed him. On receiving this Answer, *Columbus* went to *Sevil* very melancholy, after having been five Years at Court to no Effect. He caused the Affair to be proposed to the Duke de *Medina Sidonia*, and some say to the Duke de *Medina Celi* at the same time; and they also rejecting him, he wrote to the King of *France*, designing to go over into *England*, to look for his Brother, of whom he had heard nothing for a long time, in case the *French* would not employ him. With this Design he went to the Monastery for his Son *Don Diego*, in order to leave him at *Cordova*; and communicating his Design to Father *John Perez de Morchanta*, he put off his Journey at his Request, who, to be the better informed of the Grounds *Columbus* went upon, sent for *Garci Hernandez*, a Physician, and they three conferred together upon what *Columbus* proposed, which gave *Garci Hernandez*, as being a Physician, much Satisfaction. Whereupon Father *John Perez*, who was known to the Queen, as having confessed her sometimes, writ to her, and she ordered him to come to the Court, which was then in the Town of *Santa Fee* at the Siege of *Granada*, and to leave *Columbus* at *Palos*, giving him Hopes of Success in his Business.

Father *John Perez* having been with the Queen, she ordered 20,000 Marvedies in Florins for *Columbus*, by *James Piete*, an Inhabitant of *Palos*, for him to go to Court; where he being come, the Affair began to be canvassed again. But the Prior of *Prado*, and others who followed him, being of a contrary Opinion; and *Columbus* demanding very high Terms, and, among the rest, to have the Title of Admiral and Vice-roy, they thought he demanded too much, if the Enterprize succeeded, and looked upon it as a Discredit, if it did not. Whereupon the Treaty entirely ceased, and *Columbus* resolved to go away to *Cordova*, in order to proceed from thence to *France*, being resolved not to go to *Portugal* upon any Account. *Alonso de Quintanilla*, and *Lewis de Santangel*, a Clerk of the Revenue of the Crown of *Aragon*, were much concerned that this Enterprize should be

disappointed; and, at the Request of Father *John Perez* and *Alonso Quintanilla*, the Cardinal *Don Pedro Gonzalez de Mendoza* had heard *Columbus*, and looking upon him as a grave Man, had an Esteem for him. Besides, the adverse Party objecting, that, as *Columbus* ventured nothing himself in the Discovery, and made himself Admiral of a Fleet of their Catholic Majesties, he would not value being disappointed in the Enterprize. He offered, in answer to them, to lay down the eighth Part of the Expence, provided he should have his Quota of the Return; and yet nothing came of it. In *January*, 1492, he set out from *Santa Fee* for *Cordova*, the City of *Granada* being then in the Possession of their Catholic Majesties.

The same Day *Lewis de Santangel* told the Queen, He wondered she, who never wanted a Spirit for the greatest Undertakings, should now fail where so little would be lost, and so much might be gained; for, in Case the Affair succeeded, and fell into the Hands of another, as *Columbus* affirmed it was like to do, she might guess how prejudicial it would be to her Crown. And since *Columbus* appeared to be a discreet Man, and demanded no Reward but out of what he should find, and was willing to defray a Part of the Charge, venturing his own Person also; the thing ought not to be esteemed so impracticable. Besides, *Columbus* demanded only a Million of Marvedies to fit out his Squadron, and, therefore, he intreated her not to suffer so small an Expence to disappoint so great an Enterprize. The Queen, finding herself importuned on the same Account by *Alonso de Quintanilla*, who was in high Credit with her, thanked them for their Advice, and said she accepted it, provided they would stay till she could a little recover the Expences of the War. However, if they thought fit, it should be immediately put in execution; she would consent they should borrow what Money was requisite upon her Jewels. They kissed her Hand for this Favour; and *Lewis de Santangel* offered to lend as much as was necessary.

Upon this the Queen ordered an Alguazil of the Court to post after *Columbus*, to tell him from her to return. The Alguazil overtook him two Leagues from *Granada*, at the Bridge of *Pinos*; and, though much concerned, he returned to *Santa Fee*, where he was well received; and the Secretary, *John Colonna*, was ordered to draw up the Conditions, after he had spent eight Years in soliciting the Enterprize, and enduring in that Time many Crosses and Hardships. When *Columbus* and the Secretary had conferred about the Terms, they agreed upon the following Conditions, on the 17th of *April*, 1492.

2. First their Highnesses constitute *Don Christopher Columbus*, their Admiral, in all those Islands and Continents that by his Industry shall be discovered in the said Ocean, during his Life, and after his Death, to his Heirs, and Successors for ever, with all the Prerogatives to that Office appertaining, and in the same Manner as *Don Alonso Henriquez*, their high Admiral of *Castile*, and his Predecessors in the said Office enjoyed the same within their Districts. Item, Their Highnesses appoint the said *Don Christopher Columbus* their Viceroys and Governor General of all the Islands and Continents which he shall discover in the said Ocean, and that he may chose three Persons for the Government of each of them, and that their Highnesses take and make choice of one as shall be most for their Service.

Item, That all Commodities, whether Pearls, precious Stones, Gold, Silver, Spice, or other things whatsoever, or Merchandize of any kind, that shall be brought, exchanged, found on, or had within, the Limits of the said Admiral's Ship, their High Mightinesses, from this time, grant to the said *Don Christopher*, That he have, and enjoy the tenth Part for himself, deducting the Charges, so that of what shall remain clear and free, he have, and take the tenth Part for himself, and dispose of it at his own Will; the other nine Parts remaining for their Highnesses.

Item, In Case that on Account of the said Merchandize, which he shall bring from the said Islands, which shall be discovered, or of those which shall be taken in exchange for them of other Merchants, any Law-suit should happen to arise in the Place where the said Commerce shall be made and carried on; if by Reason of his said Office of Admiral,

Admiral, it shall belong to him to take Cognizance of such Controversy; it may please their Highnesses, that he or his Deputy, and no other Judge, shall try the said Cause, if it appertains to the said Office of Admiral as the same has been enjoyed by the Admiral Don *Alonso Henriquez*, or his Predecessors in their Districts, and according to Justice.

Item, That in all the Ships which shall be fitted out for the said Trade and Commerce, as often as they shall be fitted, the said Don *Christopher Columbus*, if he shall think fit, may lay out the eighth Part of what shall be expended in fitting them out; and that he accordingly have and receive the eighth Part of the Profits of such Ships.

These Articles were granted in the Town of *Santa Fee*, in the Plain of *Granada*, with which Dispatch and Money Don *Christopher Columbus* set out from *Granada* on the 12th of *May*, and leaving his Sons at their Studies in *Cordova*, he went to the Town of *Palos*, to undertake his Voyage; few at Court expecting that he would perform what he had promised. Their Catholic Majesties strictly enjoined him not to touch at the Mine in *Guinea*, or to come within one Hundred Leagues of the *Portuguese* Settlements. They gave him their Letters Patents to all the Kings and Princes in the World, for them to give him a favourable Reception as their Commander; he repaired to *Palos*, because there were able Seamen in that Place, and on Account of his Friendship with Father *John Perez de Merchena*, who helped him very much in the Dispatch of his Affairs; persuading the Sailors who were very backward to engage in an unknown Voyage. He carried with him Orders for that Town to furnish him with two Caravels, which by ancient Tenure it was obliged to find for the Service of the Crown, during three Months every Year.

He fitted out another Ship as Admiral, and called it *St. Mary*; the second was called *Pinta*, of which *Martin Alonso Pinzon* was Captain, and his Brother *Francis Martinez Pinzon* Master: The Third was named *Nina*, carrying square Sails, whose Captain and Master was *Vincent Yanez Pinzon*, who was very helpful in this Affair, and laid down half a Million of Marvedies for the eighth Part of the Expence. He made use of the *Pinzons*, because they were principal Men in that Town, wealthy and skilful Mariners, and all the Men seeing them approve of the Voyage, were willing to undertake it.

3. The Ships being provided for a Year, having on board ninety Men, most of them Natives of *Palos*, and among them some Friends of *Columbus*, and some of the Kings Servants, they set sail on *Friday* the third of *August*, half an Hour before Sun rising, and got over the Bar of *Saltes*, directing their Course for the *Canary* Islands, after they had all (following the Example of *Columbus*) made their Confession, and received the Holy Communion. As they held on their Voyage, on the fourth of *August*, the Rudder of the Caravel *Pinta*, in which *Martin Alonso Pinzon* commanded, broke loose, as was suspected by the Contrivance of *Gomez Rascon* and *Christopher Quintero* Mariners, to whom the Caravel belonged, because they went the Voyage against their Will, and therefore they had endeavoured to disappoint it before their Departure: But *Martin Alonso Pinzon* being an able Sailor, the Rudder was fastened with Cables in such Manner, that they were able to sail till the *Tuesday* following, when it again broke loose, and they were all forced to lie by.

This Mischance happening to the Caravel *Pinta*, at their first setting out, would have startled any superstitious Person, especially considering how disobedient *Martin Alonso* afterwards proved to *Columbus*. Having mended the Rudder the best they could, on the 11th of *August* by Break of Day they discovered the *Canaries*, and not being able in two Days to put into grand *Canaria*, because the Wind was contrary, *Columbus* ordered *Martin Alonso* to procure some other Vessel as soon as he could get ashore, and he, with the other two, made for the Island *Gomera*, to endeavour the same; but finding none, he returned to great *Canaria*, and resolved to make a new Rudder to the Caravel *Pinta*, and to change the Sails of

the Caravel *Nina*, which were square, into those called Shoulder of Mutton Sails, that he might follow the other Ships more speedily, and with less Danger.

The 5th of *September*, in the Afternoon, he sailed, and arrived at the Island *Gomera*, spent four Days there, taking in fresh Water and Fuel, with the utmost Diligence; because, being informed that three *Portuguese* Caravels were hovering about these Islands to seize him, he apprehended some Trouble on Account of the King of *Portugal's* Concern, when he understood that Don *Christopher Columbus* had articulated with their Catholic Majesties, being apprehensive that God had taken that good Fortune out of his Hands. *Thursday* the 6th, which may be reckoned the Entry of the Undertaking, he sailed to the Westward, making but little Way. But the next Day they lost sight of Land, and many sighed and wept, believing they should never see it again: But *Columbus* encouraged and comforted them with Thoughts of Wealth and good Fortune. That Day they run eighteen Leagues, but the Admiral designedly reckoned but fifteen, thinking it convenient to shorten their Run, that the Men might be less afraid. On the 11th, being 150 Leagues from the Island *Ferro*, they spied a Peice of a Mast, which seemed to have been carried away by the Current. In the same Latitude, somewhat farther on, the Current set strong to the Northward, and 50 Leagues farther Westward.

On the 14th *Columbus* about Night-fall observed that the Needle varied to the North-west about half a Point, and that at Break of Day it did the like, somewhat above half a Point, by which he perceived that the Needle did not point directly to the Star called the North; but at another fixed and invisible Point. This Variation had not till then been observed by any Person whatsoever, which was much admired, and much more the third Day after, when he had advanced 100 Leagues farther, holding the same Course, because the Needles then at Night-fall varied to the North-west as before, and in the Morning again pointed upon the very Star.

On the 15th, being near 300 Leagues Westward of the Island *Ferro*, a Flame of Fire was seen falling into the Sea in the Night, four or five Leagues from the Ships towards the South-west; the Weather being calm and the Sea smooth, the Currents still setting to the North-east; and the Crew of the Caravel *Nina*, said they had the Day before seen a Bird called a Waterwagtail, which they admired, that being the first, and a Bird which they say never flies above fifteen or twenty Leagues from Land. The next Day they were more surprized to see Spots of green and yellow Weeds on the Surface of the Water, which seemed to have been washed from some Island or Rocks, and they saw much more the Day following, which made them conclude that they were near Land, and they were strongly confirmed in it, because they saw a little Grasshopper alive upon the Weeds; others fancied there might be Rocks or Lands under Water, and, being afraid, muttered against the Voyage; it was also observed, that the Sea-Water was not half so salt as that they had passed, and that Night they saw many Tunnies following the Ships so close, that the Men in the Caravel *Nina* killed one of them with an Harping-iron, and in the Morning they found the Air as warm as in *Andaluzia*, in *April*.

Being 370 Leagues to the Westward of the Island *Ferro*, they saw another Waterwagtail, and on the 18th *Martin Alonso Pinzon*, who had slipped before with the Caravel *Pinta*, which was a very good Sailer, lay by for the Admiral, and told him he had seen a Multitude of Birds making to the Westward, which made him believe he should see Land that Night, and find it to the Northward 15 Leagues from thence; nay, he fancied he had seen it: But the Admiral judging it was not so, would not lose Time to go in quest of it, though all were for it; because he did not think himself to be in the Place, where, according to his Notions, he expected to discover it. That Night the Wind freshened, after they had sailed eleven Days without handing their Sails, still sailing right before the Wind to the Westward; the Admiral continually noting down every thing that happened; observing what Wind blew; what his Course was; what

Fishes and Birds were seen; and sounding very frequently.

4. The Men being unexperienced in such a Course, seeing no Hopes, and nothing appearing but Sky and Water for so many Days, carefully observed every Token, being then farther from Land than any Men had ever been before. On the 19th, a Sea Gull went to the Admiral's Ship, and others came near in the Afternoon, which gave Hopes that some Land was near, as believing that these Birds went not far from it; and with this Hopes, the Weather being calm, they sounded with 200 Fathoms of Line, and though they found no Ground, they perceived that the Currents ran South-west. On the 20th, in the Forenoon, they saw two other Gulls near the Admiral; and some time after they took a Blackbird with a white Spot on the Head, the Feet like a Duck's; they also killed a small Fish, and saw Abundance of Weeds like what they had seen before; and the Ships making way through them, they became less afraid. The next Morning, at Break of Day, three other little Land Birds came on board the Admiral singing, and at Sun rising they flew away; which was some Comfort to the Men, as believing that the other Sea Fowls might easily go farther from the Land, but that the little Birds could not come from so great a Distance. Some time after they saw another Gull coming from the West North-west; and the next Day in the Afternoon more Weeds to the Northward, which was some Satisfaction to them, believing the Land was near. The Weeds at the same Time perplexed them, some Knots of them being so thick, that they hindered the Ships Way, and therefore they kept as clear from them as they could. The next Day they saw a Whale; and on the 22d they spied some Birds; and those three Days the Wind was at South-west, and though it was contrary, the Admiral said it was good, because the Men muttering and refusing to obey; and alledging among other things, that since they had so long run before the Wind, it would be hard for them to return to *Spain*, by Reason that though it had sometimes proved contrary, it had held but of short time, and was not steady: And though the Admiral answered that was occasioned by their being near Land, and urged some more Reasons for it; he stood in need of God's special Assistance, because the Discontents increased, the Men grew mutinous, and by degrees, paid him no Respect; reflecting on the King for having given Orders for the Voyage; and almost all of them agreed not to proceed in it.

The Admiral managed Things with great Addres; sometimes encouraging the Men, and assuring them of the Shortness and good Success of their Voyage; and sometimes threatening them with the King's Authority; but it pleased God, that on the 23d the Wind came up at West North-west, the Sea indifferent rough as they all wished; and three Hours before Noon a Turtle Dove flew over the Admiral; and in the Afternoon a Gull and other white Birds; and among the Weeds they found little Grasshoppers. The next Day came a Gull and some Turtle Doves from the Westward, and some small Fishes, which they struck. As these Tokens had hitherto failed, the Mens Fear increased, and they took occasion to gather Parties, saying, the Admiral in a mad Humour had thought to make himself great at the Expence of their Lives; and though they had done their Duty, and failed farther from Land than ever any Man had done before, they ought not to be instrumental to their own Destruction; still proceeding without any Reason, till their Provisions failed them, which, though they were ever very sparing, would not suffice to carry them back any more than the Ships, which were already very crazy; so that no body would think they had done amiss, and that so many having opposed the Admiral's Projects, the more Credit would be given to them: Nay, there wanted not some, who said that, to put an End to all Debates, the best Way would be to throw him into the Sea, and say he had unfortunately fallen in, as he was attentively gazing on the Stars, and no body would go about to enquire into the Truth of it; that was the best Means for them to return and save themselves.

Thus the evil Designs of the Men very much perplexed *Columbus*; but sometimes giving good Words, and

at other times putting them in mind of the Punishment they would incur if they obstructed the Voyage, he curbed their Insolence with Fear, and as a Confirmation of the Hopes he gave them of soon concluding the Voyage successfully, he often put them in mind of the above mentioned Signs, promising them they would soon find a very rich Country, where they would all conclude their Labour well bestowed. The Men were so anxious and disconsolate that every Hour seemed a Year, till on the 25th at Sun setting, whilst *Columbus* was talking to *Vincent Yanez Pinzon*, he cried out Land, Land, Sir; let me not lose my Reward for this good News; and shewed towards the South-west a Body that looked like an Island, about 25 Leagues from the Ships. This, which was looked upon as an Invention concerted between them two, so much cheered up the Men, that they returned Thanks to God; and the Admiral, till Night, made as if he believed it to be so, steering his Course that way a great Part of the Night, to humour the Men.

The next Morning they all perceived they were Clouds, which often look like Land, and to the great Regret of of the major Part, they held on their Course Westward. But to return to the Tokens; they saw a Gull and a Wagtail, and other Birds; and the next Day they saw another Wagtail flying from the West Eastward, and many gilt Fishes appeared, which they killed; and a Wagtail flew very near the Ship, and they perceived that the Currents ran not so strong as before, but turned back with the Tides, and there were fewer Weeds; and the Day following they took many gilt Fishes. On the 29th they saw a Wagtail, which is a Sea-Fowl that never rests, pursues the Gulls till they empty their Bellies for fear, and catching their Dung in the Air feeds on it; and of these Birds there are many in the Islands of *Cabo Verde*. Soon after two Wagtails appeared, and many flying Fishes, which having two little Wings, sometimes fly a Musket Shot, or a few Yards, above the Water; being about a Span in Length, and sometimes fell into the Ships. In the Afternoon they met with a great Quantity of Weeds, in a Line from North to South, and three Gulls and a Wagtail pursuing them; the Men still fancying that the Weeds were a Token that there was Ground near them under Water, and that they should perish.

On the 30th, four Wagtails flew near the Admiral, and by their being together, they guessed that they were near Land, and also because four more came soon after, and they saw many Weeds in a Line from West North-west, to East South-east, and many Fishes called Emperors, which have a very hard Skin, and are not fit to eat. Though the Admiral took notice of these Tokens, he did not forget those in the Sky. He observed, there, that the Polar Stars were, at Night, on the West Quarter, and when Day came on, they were at the North-east Quarter; by which he concluded that during the Night, they advanced but three Lines, which are nine Hours, and this he found every Night; he also perceived, that at Night-fall, the Needles varied one whole Degree, and in the Morning they were right with the Star; which very much troubled and confounded the Pilots, till he told them, that the Occasion of it was the Compass of the North Star about the Pole, and that gave them some Satisfaction; for, in reality, that Variation made them apprehensive of Danger, as being far from Land.

5. October the 1st, at Break of Day, a Wagtail came to the Admiral, as did others, two or three Hours before Noon; and the Weeds came from East to West, some believing they should fall in so near the Land, that the Ships would be a-ground and perish. The same Day, in the Morning, the Pilot told the Admiral that they were then 588 to the Westward, off the Island *Ferro*. The Admiral told the Pilot, that by his reckoning it was 584; but, in his own Thoughts, and according to his true reckoning, it was 607. The Pilot of the Caravel *Nina*, on the Third, in the Afternoon, said he found they had sailed 650 Leagues, and the Pilot of the *Pinta* said 634, wherein they were mistaken, for they had always sailed before the Wind: But *Columbus* still took no notice, lest the Men should be dismayed at the vast Run; for the greatest Sea, till then known, did not exceed 200 Leagues.

Leagues. On the 2d they killed a Tunny, and saw much other Fish, and a white Bird, and many grey ones, and the Weeds very much withered, and almost rotted to Dust; and having seen no Birds the third Day, they feared they had missed some Island on either Side, believing that the many Birds they had seen, went over from one Island to another; and the Men being desirous to turn to one Side or other to seek for these Lands, *Columbus* did not think fit to let slip the fair Weather that favoured him; he kept to the West, which was what he desired, because he thought he should lose the Credit of his Undertaking, if they saw him turning, at random, from one side to the other, to find out that, which he always affirmed he knew.

For this Reason, the Men began again to mutiny, which none will wonder at, who considers so many Men led by one of whom few of them had any Knowledge, exposed to so many Dangers, without seeing any thing for so many Days, but Sky and Water, or knowing what would be the End of such a long Voyage. But it pleased God to send new Tokens, which, in some measure, quieted their Minds; for on the 4th, in the Afternoon, they saw about forty Sparrows and two Gulls, which came so near to the Ships, that a Sailor killed one of them with a Stone, and several flying Fishes fell into the Ship; all which things, and the good Words the Admiral gave them, pacified them; the next Day there flew near the Ships a Wagtail and a Gull, and several Sparrows from the Westward. On the 7th some Signs of Land appeared to the Westward, but no Man durst speak of it because of the Thickness of the Weather, though they all wished for it, to gain the Reward of an Annuity of 10,000 Marvedies, their Catholic Majesties had promised for Life to the first that should discover Land; and to prevent their crying Land at every Foot, in Hopes of that Annuity, it was ordained, that whosoever said it, if the same were not made good in three Days, should be for ever excluded from that Reward, though he should afterwards really discover it. However, those aboard the Caravel *Nina*, which was much a-head, being so good a Sailor, concluding that it was certainly Land, fired their Guns and put out their Colours. But the farther they sailed, the more their Joy abated, till it quite vanished.

In the Midst of this Anguish, it pleased God to comfort them again with the Sight of many Birds, among which many were Land Fowl, flying from the West to the South-west; and *Columbus*, considering after he had sailed so vast a Length, that such small Birds could not be far from Land, concluded it must certainly be near, and therefore he altered the Course he had then held due West, and steered South-west; alledging, that though he altered his Course, he deviated but little from the first Design, and did it to follow the Rules and Method of the Portuguese, who had discovered most of the Islands by following the Flight of such Birds: Besides, that those they then saw took the same Way, he also concluded he should find Land, for as they well knew he had often told them he did not expect to find it till he had sailed 750 Leagues from the *Canaries* Westwards; at which Distance he had also told them he should discover the Island *Cipango*, and that he should certainly have found it, had he not known it was said to lie North and South, and that he had not turned to the Southward to avoid falling on it, and that he believed it lay among other Islands on the left Hand, and which Way those Birds flew, and that it was by reason they were so near Land, so many, and such various Sorts, of them appeared.

6. It pleased God, when Don *Christopher Columbus* could no longer withstand so much Contradiction, that on the 11th of October, 1492, in the Afternoon, he received some Comfort by the manifest Tokens they perceived of their being near Land; for the Men aboard the Admiral saw a green Rush near the Ship, and next a large green Fish of that Sort that creeps close about the Rocks. Those aboard the Caravel *Pinta* saw a Cane and a Staff, and took up one that was artificially wrought, and a little Board, and saw Abundance of Weeds fresh torn off from the Shore; for which Reasons, and, because they brought

up Sand upon founding; there was a Certainty of their being near Land, which was confirmed by the Shifting of the Wind, which seemed to come from the Shore.

Columbus being satisfied, after Night-fall, when they had said the *Salve Regina*, as is usual among Sailors; he discoursed the Men, telling them how merciful God had been to them, carrying them safe so long a Voyage; and that, since the Tokens were hourly manifest, he desired them to watch all Night, since they knew that, in the first Article of the Instructions he had given them when he came out of *Spain*, he told them, that when they had run 700 Leagues without discovering Land, they were to lie by after Midnight, till Day, and be upon the Watch, for he firmly believed they would find Land that Night: And that, besides the 10,000 Marvedies, an Annuity their Highnesses had promised the Person that should first discover it, he would give a velvet Doublet. Two Hours before Midnight, *Columbus* standing on the Poop saw a Light, and privately called *Peter Gutierrez*, Groom of the Privy Chamber to the King, and bid him look at it, and he saw it; then they called *Roderick Sanchez* of *Segovia*, Purser of the Fleet, who could not discern it; but afterwards it was seen twice, and looked like a little Candle raised up, and then taken down; and *Columbus* did not question but it was a true Light, and that they were near Land, and so it proved; and it was of People passing from one House to another. Two Hours after Midnight, the Caravel *Pinta*, was always a-head, and made Signs of Land, which was first discovered by a Sailor, whose Name was *Roderick de Trians*, but two Leagues distant. But their Catholic Majesties declared, that the Reward of 10,000 Marvedies Annuity belonged to the Admiral, and it was afterwards paid him at the Shambles of *Sevil*, because he saw the Light amidst Darkness, meaning the Spiritual Light that was then coming in amongst those barbarous People. When Day appeared they perceived an Island 15 Leagues in Length; plain, much wooded, well watered, and having a Lake of fresh Water in the Midst of it; well stored with People, who stood full of Admiration on the Shore, imagining the Ships to be Sea Monsters, waiting with the utmost Impatience to know what they were, as the *Spaniards* were no less eager to be upon Land.

The Admiral went ashore in his Boat, armed, and the Royal Colours flying; as did the Captains, *Martin Alonso Pinzon* and *Vincent Yanez Pinzon*, carrying the Colours of their Enterprize, being a green Cross with some Crowns, and the Names of their Catholic Majesties. Having all of them kissed the Ground, and on their Knees, with Tears, given Thanks to God for the Goodness he had shewn them; the Admiral stood up and gave that Island the Name of *San Salvador*, which the Natives called *Guana-ham*, being one of those afterwards called *Lucayo* Islands, 950 Leagues from the *Canaries*, discovered after they had sailed 33 Days. Then, with proper Solemnity, he took Possession of it, in the Name of their Catholic Majesties, for the Crown of *Castile* and *Leon*; a great Multitude of the Natives looking on.

The *Spaniards* immediately owned him as their Admiral and Viceroy, and swore Obedience to him, as representing the King's Person in that Country, with all the Joy and Satisfaction that so great an Event deserved; all begging his Pardon for the Trouble and Uneasiness they had given him, by their Inconstancy and want of Resolution. The Admiral, believing those *Indians* a gentle and simple People, gave them some red Caps, Glass-Beads, and such like Things, which they highly valued. The *Spaniards* no less admiring their Colour and Shape. When the Admiral returned on board, the *Indians* followed him: Some swimming, and others in their Boats, called Canoes, made of one Peice of Wood, like Trays. They carried along with them Skins and Bottoms of Cotton, Parrots and Javelins, the Ends of which were armed with Fish Bones, instead of Horn, and some other Things to exchange for Glass-toys, Hawks-bells, and the like; which they were so fond of, that they received even the broken Peices of earthen Plates as precious Relics, being a People in their original Simplicity.

They were all stark naked as they were born, Men and Women, and most of them young, or not above thirty Years of age. They wore their Hair down to their Ears, and some few to their Necks, tied with a String. They had good Faces and Features, though their extraordinary high Foreheads somewhat disfigured them. They were of a middle Stature, well shaped, and their Skins of an Olive Colour, like the Natives of the *Canaries*; some of them were painted with black, and others white, and others red; most of them on their Bodies, and some on their Faces and Eyes, or only the Nose. They were not acquainted with our Weapons, for when they shewed them naked Swords, they simply laid hold on the Edges.

They knew nothing of Iron, and wrought Wood with hard sharp Stones found in Rivers. Some of them having Scars about them, and being asked by Signs, answered, that People, from other Lands, came to make them Prisoners, and they received those Wounds in their Defence. They seemed to be ready of Tongue, and ingenious; for they easily pronounced the Words they once heard. No other Sort of Creatures were seen there but Parrots.

On the 13th many *Indians* came aboard the Ships in their Canoes, most of which carried forty five Persons; yet some were so small that they held but one. They rowed with an Oar like the Peel of an Oven, as if they had dug with a Spade; and their Boats are so artificially made, that though they over-set, the *Indians* swimming turn them up again, and empty the Water with dried Gourds they had for that Purpose. They carried Cotton to barter, and some for three Ceutis of *Portugal* (worth about a Farthing) gave as many Bottoms of Cotton as weighed a quarter of an hundred Weight. They wear no Jewels or other things of Value, except some little Plates of Gold they had hanging at their Noses. They were asked whence they had that Gold, and signified it came from the Southward, where a King had much of it. The Admiral understanding that there were other Lands, resolved to go in quest of them. The Ships were never clear of *Indians*; the whole Day was spent in bartering; their Generosity not extending to give what they had, but for the Value they put upon what they received in return; looking upon the *Spaniards* as Men come from Heaven, and therefore they would have something to keep as a Memorial of their being there.

7. On the 14th, in the Morning, the Admiral, with the Boats, took a View of the Coast to the North-west. The Natives followed by Land, promising Provisions, and calling others to see the People come from Heaven, who, wondring, lifted up their Hands, and some swimming, and others in Canoes, went to ask them by Signs, whether they came from Heaven, and praying them to go and rest in their Country. The Admiral gave them all Glass Toys, Pins, and other Baubles, being well pleased; at length he came to a Ridge of Rocks, where there was a safe and spacious Harbour, and where a strong Castle might have been erected, because it was almost encompassed with the Sea. In that Place were six Houses, with many Trees about them; and because the Men were tired with rowing, and he perceived the Country was not proper to make any long stay in, he took seven *Indians* to learn the *Spanish* Tongue, and returning to the Caravels, set out in quest of the other Islands; about an hundred appearing flat, green, and inhabited, the *Indians* telling the Names of them.

On the 15th, he came to one that was seven Leagues from the First, which he called *St. Mary of the Conception*. The Side whereof next to *St. Saviour* extends 50 Leagues along the Coast; but the Admiral took the Coast that lies East and West, being eighteen Leagues in Length; anchored on the West, and went ashore. The Natives flocked thither in great Numbers, with much Amazement, and he perceiving all alike thought fit to proceed no farther; a Canoe being aboard the Caravel *Nina*, one of the seven *Indians* of *San Salvador*, or *St. Saviour*, threw himself over-board and went his Way, and though the Boat pursued, they could not overtake him; the Night before another made his Escape. Another *Indian* came in a Canoe, to exchange Cotton; the Admiral ordered a red Cap to be put upon his Head, and Hawks-Bells on

his Arms and Legs, and so sent him away very joyful, without taking his Cotton. The next Day he sailed away West to another Island, the Coast whereof stretched along 18 Leagues North-west and South-east, where he arrived on the 17th, in the Afternoon, by reason of the Calm.

On their Way they met an *Indian* in a Canoe, carrying a Piece of such Bread as they eat, and a Calabash or Gourd with Water; a little black Earth with which they paint themselves, and dry Leaves of an Herb they very much value, because it is wholesome, and has a sweet Scent, and in a little Basket a String of Glass-Beads and two Vintems, a small *Portugal* Coin, by which they knew he came from *St. Salvador*, had passed by the *Conception*, and was going to this Island, which the Admiral named *Fernanda*, in Honour of the King. They understood that the said *Indian* was going to carry Advice of the *Spaniards*, but the Way being very long, and he tired with rowing, he went aboard the Ships, where the Admiral ordered him some Bread and Honey to eat, and Wine to drink, and as soon as he arrived at the Island he ordered him to be set ashore with some Toys he gave him. The good Account he gave, caused the People to go aboard, and barter for such Things as they had met with in the other Islands, the Inhabitants of them being of one Nation. When the Boat went ashore for Water, the Inhabitants readily shewed it, and carried the little Tubs to fill the Pipes; but they seemed to be a more understanding People than the former; for they managed better in exchange of Commodities. These had Cotton Cloths in their Houses, and the married Women covered their Privities with a little Cotton Cloth, which the Maids did not.

This Island appeared to abound in Water, having many Meadows and Groves, and some agreeable little Hills, which there was not in the others; with an infinite Variety of Birds that sung sweetly, and flew in flocks, most of them different from what *Spain* affords; there were also many Lakes, and near one of them they saw a Creature like a Crocodile, seven Foot long, and they throwing Stones at him, he ran into the Water, where they killed him with their Spears, admiring its Largeness and frightful Shape; but Time afterwards made it appear, that these Animals being scaled and sleek, are good Meat; the Flesh of them being white, and much valued by the *Indians*; and in the Island of *Hispaniola* they call them *Yavanas*; in that Island they saw Trees that looked as if they had been grafted, as having Leaves and Branches of four or five different Sorts, and yet they were natural: They also saw Fishes of fine Colours, but no Land Creatures appeared, except large and tame Snakes, and Parrots, Alligators, and a Sort of little Rabbits, in Shape like Mice, but bigger, which they call *Uti*s. Proceeding towards the North-west, taking a View of this Island, they anchored in the Mouth of a fine Harbour, that had an Island before it; but they went not in, because it had not Water enough; nor would the Admiral go far from a Town that had covered them; whereas they had not yet seen, in any Islands, any bigger than of ten or twelve Houses like Tents, some round and others long, with an open Portal before them, as is usual in the Low Countries; covered with Leaves of Trees, well fitted for the Rain and Weather, with Vents for the Smoak, Ridges at the Top, handsomely made; and within them there was no other Household Stuff or Ornament, than what they carried aboard the Ships to barter. But their Beds were a Net, made fast to two Posts, which are called Hamocks. They also saw some little Dogs that did not bark.

They found an *Indian* who had a Bit of Gold in his Nose, with some Characters on it that looked like Letters; and the Admiral would have it taken from him, believing it had been a Coin, but it afterwards appeared there had never been any in the *West Indies*. Finding nothing more in *Fernanda*, than in *St. Salvador* and the *Conception*; he proceeded to the others that were nearest. The fourth Island he came to was called *Sasmoto*, and he named it *Isabella*, in Honour of the Queen; and took Possession on it before Witnesses, and the Notary, as he had done in the others. He perceived the Land was beautiful as the rest, and the People like the former. They killed another Alligator,

Alligator, and as they were going towards a Town the *Indians* fled, carrying away what they had. But the Admiral having forbid meddling with any thing, they soon came to the Ships to barter like the rest; and the Admiral gave them some Toys, and to try their Kindness asked for Water, which they carried to him in Calabashes or Gourds. He would not lose Time at the Island of *Isabella* or others; but resolved to go in quest of another, which they told him was very large, and called *Cuba*, pointing to the South; he believing it had been *Cipango*, by Reason of the Signs they gave of it, and their extraordinary Reports concerning it.

8. On the 28th he drew near the Coast, gave it the Name of *Juana* or *Johanna*; which seemed to be a better Country than the others, by Reason of the Hills, rising Grounds, and Variety of Trees, Plains, and Shores that appeared. He anchored in a great River he called *San Salvador*. The Woods appeared very thick, the Trees tall with Blossoms, and Fruits different from ours; and there were abundance of Birds. The Admiral, desiring to have Information, sent to two Houses, the People whereof fled, leaving Nets and fishing Tackle behind them, and a Dog that did not bark. He would not suffer any thing to be touched, but failed to another great River, which he called *de la Luna*, i. e. of the Moon. Another he saw, which he called *de Mares*, or of the Seas, the Banks of it were very well inhabited.

The *Indians* fled to the Mountains, which were covered with large and tall Trees of several Sorts. The *Indians* he carried with him signified to him that there was Gold and Pearls in *Cuba*; and he thought it very probable because he saw Muscles; they also said it was not ten Days Sail from thence to the *Continent*, according to the Notion he had. *Paul*, a Physician of *Florence*, having writ about it; however, though he was in the right, it was not the Land he imagined. Believing that if many Men went ashore, it would add to the Fear of the *Indians*, he sent two *Spaniards*, with one *Indian* of *San Salvador*, and one of *Cuba*, who came to the Ships in a Canoe. The *Spaniards*, being *Roderigo de Xeres*, an Inhabitant of *Ayamonte*, and *Lewes de Torres*, who had been a Jew, and spoke *Hebrew* and *Chaldaic*, and some say *Arabic*. He gave them things to exchange, and allowed them six Days to return in; directing them to go up into the Country, and enquire into all Affairs without doing harm to any body. In the mean Time he refitted the Ship, and they observed, that from all the Wood they burnt, there came a Sort of Gum like Mastic, resembling in the Leaf and Fruit the Mastic Tree, but much bigger. In this River of *Mares* the Ship had room to wind: It has 7 or 8 Fathom Water at the Mouth, and five within, with two Ridges of high Ground on the South-east, and a fine Cape to the West North-west, plain and running out; and this was afterwards the Port of *Barachoa*, which the Adalantado, or Lord Lieutenant *Diego Velasquez*, called of the *Assumption*.

When the Ship was ready to sail, the *Spaniards* returned, on the 5th of *November*, with three of the Native *Indians*, reporting they had travelled 22 Leagues, and found a Village of fifty Houses, built like them before mentioned, and that they contained about 1000 Persons, because a whole Generation lived in a House, and that the primé Man came out to meet them, led them by the Arms, and lodged them in one of these new Houses; causing them to sit down on Seats made of one solid Piece of Wood, in the Shape of a Beast, with very short Legs, and the Tail held up the Head before, with Eyes and Ears of Gold; and that all the *Indians* sat about them on the Ground, and one after another went to kiss their Feet and Hands, believing they came from Heaven, and gave them boiled Roots to eat, which tasted like Chestnuts; and intreated them to stay there, or at least, to rest five or six Days; because the *Indians* that went with them said many kind things. That Abundance of Women soon after coming in to see them, all the Men went out, and they, with the same Admiration, kissed their Feet and Hands, touching them as if they had been some holy Things, offering what they brought; and that many of

the Men would have come away with them, but that they would admit of none but the Lord and his Son, with one Servant.

They added, that, both coming and going, they found many Villages where the same Respect was paid them, but, that none of them had above five or six Houses; and that, by the Way, they met many People, each of them carrying a Fire-brand in his Hand to light Fire, and perfume themselves with some Herbs they carried along with them, and to roast their Roots, that being their principal Food; and the Fire was easily kindled, because they had a Sort of Wood, which, if they worked one Piece against another, as if piercing a Hole, took fire; they also saw a Multitude of several Sorts of Trees, such as they had not seen on the Sea-coast, and great Variety of Birds, different from ours, and among them Partridges and Nightingales; but that they had met with no four footed Creatures, besides those little Cur-Dogs that cannot bark. They had much Ground sowed with their Roots, and that sort of Corn called Maize, well tasted, either boiled or ground into Flower. They saw a vast Quantity of spun Cotton in Bottoms, and in one House they believed there was above 12,000 Pound Weight of it; the same growing in the Fields without being planted; and as the Roses blow of themselves, so does that, when ripe, though not all at the same Time; for, upon the same Plant, some were open and others still closed; and for a Leathern Thong, or a Piece of glazed Ware, or a Bit of a Looking-Glass, they would give a little Basket full of Cotton, which they did not make use of to cloath themselves, for they all went naked, but in making Nets for their Beds, and little Cloths to cover their Privities; and that being asked about Gold and Pearls, they said there was Abundance at *Bobio*, pointing Eastward.

9. The *Spaniards* still enquiring of the *Indians* for Gold, they answered, *Cubanacan*, which they thought had meant the great *Cham*, and that the Country of *Cathay* was not far off, because they also pointed out four Days Journey. *Martin Alonso Pinzon* said it must be some great City, that was four Days Journey from thence; but it was not long before they understood that *Cubanacan* was a Province in the Midst of the Island of *Cuba*, for *Nacan* signifies in the Middle, and that there were Mines of Gold. Having heard thus much, the Admiral would not lose any more time, but ordered some *Indians* to be taken, to be carried into *Spain*, from several Parts, that every one might give an Account of his own Country, as Witnesses of the Discovery: Twelve were taken, Men, Women, and Children, without giving Offence. As they were ready to sail, an *Indian*, who was one of the Womens Husband, and Father to two Boys that were aboard, came to the Ship, and desired they would take him along with his Wife and Children; the Admiral ordered him to be taken aboard, and all of them to be well used; and, because of the North Winds, he was obliged to return to a Port, which he called *del Principe*, or, the *Princes*, where he arrived on the 13th, and erected a Cross at the Mouth of it, made of two large pieces of Timber.

The next Day he stood to the Eastward, in quest of the Island *Hispaniola*, which the *Indians* called *Bobio*, and some of them *Babeque*; but it afterwards appeared *Babeque* was not the Island of *Hispaniola*, but the *Continent*, for they called it by another Name, *Carabina*. *Martin Alonso Pinzon* understanding now, that the *Indians* said there was much Gold in *Bobio*, being covetous to enrich himself, he left the Admiral on the 21st, without any strefs of Weather, or any other lawful Cause; and, his Ship being a very good Sailer, made the best of his Way thither. By the Name of *Bobio*, which was the Land of *Hispaniola*, it seemed the *Indians* would signify that it was a Land full of *Bobios*, that is, Cottages; the Admiral seeing, that, notwithstanding all the Signals he made, *Martin Alonso* was not to be found with the two Ships, and the Wind being still contrary, he returned to *Cuba*, to a large and safe Harbour, which he called *St. Catherine's*; there he wooded and watered, and saw some Stones with Tokens of Gold in them. On the Land there were tall Firr-trees, fit to make Masts, and perceiving that all the *Indians* directed him to *Hispaniola*,

niola, he sailed along the Coast more to the South-east 42 Leagues, where he found large and safe Harbours, and among them a River up the Mouth, whereof a Gally could easily pass, though the Entrance could not be perceived, unless very near to it. The Convenience of the River invited him to go in the Length of the Boat, where he found eight fathom Water, and proceeding still farther, he saw a Canoe of twelve Oars on the Land, under a sort of Arbour, and in some Houses close by they found a Mass of Wax, and a Man's Head hanging in a little Basket at a Post, the which Wax they carried to their Catholic Majesties, none being ever after found in *Cuba*, whence it was concluded to have been brought from *Yucatan*, either by stress of Weather in a Canoe, or some other way. They found no People to make any enquiry of them, because they all fled, but saw another Canoe 95 Spans in length, which could carry fifty Persons, made of one entire Tree, like the rest; and though they had no iron Tools to work them, the Instruments they made use of, for that Purpose, of Flints, proved sufficient, because the Trees were very large, and the Heart of them very soft and spungy, so that they easily hollowed them with Flints.

The Admiral arrived at the Eastern Point of it, and set out from thence on the 5th of *December* for *Hispaniola*, being eighteen Leagues over to the Eastward, but could not reach it till the next Day, by reason of the Currents. When he entered the Port he called it *St. Nicholas*, because it was that Saint's Day, and found it safe, spacious, and deep, encompassed with thick Woods, though the Land is hilly, and the Trees not very large, like those in *Spain*; for they saw Firrs and Myrtles, and a pleasant River ran into the Harbour; and on the Shore there were many Canoes as big as Brigantines of twenty-five Oars. However, finding no People, he proceeded farther to the Northward, to the Port he called the *Conception*, to the Southward of an Island he called *Tortuga*, ten Leagues from *Hispaniola*, and finding that this Island of *Bobio* was very large, and that the Soil and Trees were like those in *Spain*, as also that at one Draught of a Net, among other Sort of Fish, they had taken *Shads*, *Soles*, and other Sort of Fish known in *Spain*, which till then they had not seen in those Parts; and that they had heard the Nightingale sing, with other *European* Birds which they admired, about *December*, he styled the Island *la Espanola*, by us corruptly called *Hispaniola*. He thought fit the Name of *Spain* should have place, though some told him it would be more proper to call it *Castelana*, because only the Kingdoms *Castile* and *Leon* were concerned in that Conquest.

In regard that the *Indians* he had on board gave him so good an Account, he was earnest to see what Truth there was as to the Wealth of that Country, and to take a View of it; but the *Indians* flying, and giving one another Notice by Fires, he thought fit to send out six armed *Spaniards*, who having travelled far, returned without finding any People, saying wonderful things of the Delightfulness of the Land. Having ordered a great Cross to be erected near the Mouth of the Harbour, on the West-side, as three Sailors were in the Wood, seeking for proper Trees for that effect, they spy'd abundance of naked People, who fled as soon as they saw the *Spaniards*. The Sailors running after them took a Woman who had a little Plate of Gold hanging at her Nose. The Admiral gave her Hawks-Bells, Strings of Glass-Beads, and caused a Shirt to be put upon her, and so sent her away, with three of the *Indians* he had brought with him, and three *Spaniards*, to bear her company to her Habitation.

10. The next Day he sent nine *Spaniards*, well armed, with an *Indian* of *San Salvador*, which was four Leagues distant to the South-east; they found a Town of a thousand Houses abandoned, the Inhabitants being fled. The *Indian* went after them, and so much extolled the *Spaniards*, that they returned, and being somewhat astonished and trembling, laid their Hands on the Heads of the *Spaniards*, by way of Honour and Respect, and carrying them Provisions, desiring they would stay that Night; abundance of People then came up, carrying on their Shoulders the Woman to whom the Admiral had given the Shirt, with her Husband, who was going to return them Thanks. The *Spaniards* returned with an Account

that the Country abounded in Provisions; the People whiter and of better Countenances than those of the other Islands, more tractable, and that the Country which produced Gold was more to Eastward; that the Men were not so large, but strong boned, and gross, without Beards, their Nostrils very wide, and their Foreheads smooth and high, and that they made them so at their Birth, reckoning it graceful; for which Reason, and because they always went bareheaded, their Skulls were so hard, that sometimes a *Spanish* Sword would break upon their Heads.

The Admiral was informed that the Lord of that Territory, whom they called a *Cazique*, was coming with two hundred Men to see the Ships, and though young, they carried him on a Palankin, on their Shoulders, and he had several Counsellors; when he came on board it was observed, with Admiration, how great Respect they paid him, and how gravely he behaved. An *Indian* of the Island *Isabella* went and talked to him, telling him the *Spaniards* were heavenly Men. He went aboard, and when he came to the Quarter-deck, he made Signs for those that were with him to stay behind, excepting two who sat down at his Feet, and were his Counsellors. The Admiral ordered to give him to eat; he took a little of every thing, and having tasted it, gave it to the other two, and afterwards carried it to the rest. They gave him Drink, and he only put it to his Mouth; they all behaved themselves very gravely, said little; his Men looked at his Mouth, and spoke to him, and the Admiral, by means of the *Indian* Interpreter, gave him to understand that he was Commander for their Majesties of *Castile* and *Leon*, the greatest Sovereigns in the World. But, neither the *Cazique*, nor the rest, would believe any other than that they came from Heaven. They seemed to the Admiral to be a more rational People, than those of the other Islands; and because it grew late the *Cazique* returned ashore. The next Day, though the Wind was contrary, and blew hard, the Sea did not swell, by reason of the Shelter the Island *Tortuga* afforded to that Coast; and some Seamen went a-fishing, with whom the *Indians* were well pleased. Some Men went to the Town, and obtained little Plates of Gold for Glass-Beads, which much pleased the Admiral, because he was very desirous that some Gold might be found in prosecuting this Discovery, to shew that his Promises were not vain.

The King came again to the Shore, in the Afternoon, and then a Canoe arrived from the Island *Tortuga*, with forty Men to see the *Spaniards*; at which the *Cazique* appeared to be concerned; but all the *Indians* of *Hispaniola* sat down on the Ground, in token of Peace, and those in the Canoe went ashore; but the King stood up, and threatening them, they went aboard their Canoe again. The Admiral, being resolved to discover the Country, set sail, and during all the 19th of *December* could not get out of that little Bay between the two Islands, nor put into the Harbour hard by it. He saw many Mountains, Woods, and Groves, and a little Island, which he called *St. Thomas*. He judged that *Hispaniola* had many Capes and Harbours, and he thought the Temperature of the Air most pleasant, and the Soil delightful. On the 20th he put into an Harbour, between the little Island of *St. Thomas* and the Cape. Several Towns appeared, as also Fires; because the Season being dry, and the Grass there growing high, they burnt it to make Ways; for, as they were naked, the dry Weeds hurt them, and also to hunt the *Uti*s, which they took with Fire. The Admiral entered the Port with the Boats, and, having viewed it, said it was a very good one. He sent out to see whether there was any Town near, and they found one at a little Distance from the Sea; they saw *Indians* who kept a-loof from the *Spaniards*, but the *Indians* that came aboard the Ships bid them not to fear; and immediately so many Men, Women, and Children came, that there was no seeing through the Throng. They carried Meat, Calabashes with Water, and good Bread made of Maize or *Indian* Wheat; they did not hide the Women, as had been done in other Parts, but all admired to see the Christians, and standing amazed, glorified God. They were whiter and better shaped, better natured, and more generous; and

and the Admiral took special Care that no Offence should be given them. He sent six Men to see the Town, where they entertained them as believing they came from Heaven. In the mean Time there came some Canoes, with Men sent by a King, who desired the Admiral to go to his Town, where he was waiting for him, with many People on a Point of Land.

He went in the Boats, though many had intreated him not to go, but to stay with them. As soon as the Boats came, the King sent the *Spaniards* Provisions, and seeing they accepted of them, they went to the Town for more, and for Parrots. The Admiral gave the *Indians* Hawks-Bells, Glass Baubles, and some of Tin; he returned to the Ships, the Women and Children crying out that he should not go away. Some that, out of Curiosity followed him in Canoes, he gave Victuals to, as he did to others that swam aboard from half a League Distance; though the Shore was covered with People, they could see abundance coming and going cross a large Plain, which was afterwards called *la Vega Real*, or the Royal Plain; the Admiral again commended the Harbour, and gave it the Name of *St. Thomas*, because he found it on his Day. The 22d, in the Morning, he was going in search of the Islands, which the *Indians* said had much Gold, but was hindered by the Weather, and sent the Boats a-fishing; and then one came from King *Guacanagari*, to desire him to go to his Country, and he would give him all he had, he being one of the five Sovereigns of the Island, possessing the greatest Part of it on the North-side, where the Admiral then was; he sent him a Girdle he wore instead of a Purse, and a Vizor, with Ears, Tongue, and Nose, of beaten Gold: The Girdle was adorned with small Fish-Bones, like seed Pearl, curiously wrought, four Fingers broad. The Admiral resolved to go thither on the 23d, though to please others, there went before six *Spaniards*, because the *Indians* were so much delighted every where to see them.

The foul Weather detaining the Admiral, he sent a Notary to King *Guacanagari*, to acquaint him with it; he also sent two of his *Indians* to a Town, to see if there was any Gold, guessing that there was Plenty of it; and it was believed for certain, that this Day above a thousand went aboard the Ships; every one of them gave something, and those who went not aboard from their Canoes cried, *Take, take*. The Notary went to *Guacanagari*, who came out to meet him. He thought that Town more regular than any he had seen before. All the People gazed on the Christians with Joy and Admiration, and the King gave them Cotton Cloths, Parrots, and some Pieces of Gold, and the People, what they had; valuing the Toys the *Spaniards* gave them like Relics. Thus the Notary and his Companions returned to the Ships, attended by *Indians*.

The 24th the Admiral went to visit *Guacanagari*; the Distance from Fort *St. Thomas* to the Place where the King was might be about four or five Leagues, and there he staid, till, seeing the Sea calm, he returned aboard, and went to bed, for he had not slept in two Days and a Night. The Weather being calm the Sailor who was at the Helm left it to a Cabin-boy, tho' the Admiral had, during the whole Voyage, forbid the Steersman ever to quit the Helm, and in reality they were out of Danger of Sholes or Rocks; for on Sunday, when the Boats went to carry the Notary to the Cazique, they had surveyed all the Coast, and the Sholes there are from the Point of Land to the East-south-east, for above three Leagues, and they had also observed which Way they might pass, and finding themselves in a dead Calm they went to sleep, and it happened the Current carried the Ship on very gently, till it struck on a Rock with such a dreadful Noise that it was heard a League off, and the Fellow that was at the Helm, finding the Rudder strike, roared out.

The Admiral, hearing the Cry, was first up, and then the Master, whose Watch it was, and he ordered him, since the Boat was out, to let fall an Anchor at the Stern, for by that Means they might, with the Help of the Captain, work out the Ship, and when he thought they were doing what he had ordered, he perceived that some were making way in the Boat to the Caravel that lay to

the Windward half a League from thence. Observing that the Water ebbed, and the Ship was in danger, he ordered to cut down the Mast, and lighten it, to see if it might be saved; but it could not be done; the Water falling away all at once, the Ship was every Moment left dry, and lay a-thwart the Sea; and tho' it was not rough, by reason of the Calm, the Ship sprunk a Leak between the Ribs, and lay down on a Side, opened near the Keel, and was soon full of Water; and if the Wind had blown, or the Sea been rough, not a Man had escaped; but had the Master done as the Admiral ordered him the Ship had got off safe. The Boat came again to their Assistance, for those in the other Ship understanding how the Case stood, not only refused to receive those that had fled, but with them sailed back to the Relief of the Distressed. There being no Possibility of saving the Ship, Order was taken for saving the Men; to which Purpose the Admiral sent *James de Arana* and *Peter Gutierrez*, to acquaint *Guacanagari* that by going to visit him he had lost his Ship a League and half from Land. *Guacanagari* lamented this Misfortune, and immediately sent the Canoes, which in a Moment carried off all that were on the Decks; and he came himself with his Brothers, and took particular Care that nothing should be touched, staying in Person to guard the Goods, and sent word to the Admiral not to be concerned, for he would give him all he had; and the Goods were carried to two Houses he had appointed to lay them up in. The *Indians* so affectionately gave their Help in this Distress, that it could not have been better done in *Spain*; for the People were gentle and loving, and their Language was easy to be pronounced and learned; and they had some commendable Customs, and the King was served with much State, and he was very sedate; and the People were so curious in asking, that they would know a Reason for every thing.

On the 26th of December *Guacanagari* went on board the Caravel *Nina*, where the Admiral was in great Affliction for the Loss of his Ship: He comforted him, and offered him all he had. Two *Indians* came from another Town, bringing Plates of Gold to exchange for Hawks-Bells, which were what they most valued, and the Admiral had a Stock of those Baubles, grounded on the Experience he had learnt from the *Portuguese* in *Guinea*. The Sailors also gave notice that others carried Gold, and gave it for Ribbons and other Trifles; *Guacanagari* observing what the Admiral valued, said he would cause some to be brought from *Cibao*; and going ashore, he invited the Admiral to go eat Axis and Cazabi, which was their chief Diet; and he gave him some Masks, with gold Eyes, Noses, and Ears, with some other small Things they wore about their Necks. He also complained to him of the *Caribes* who carried away his People, which was the Reason of his flying at first, supposing the *Spaniards* had been *Caribes*. The Admiral shewed him his Arms, and a Turkish Bow with which a *Spaniard* shot very dexterously; but what he most admired was the Cannon, for when they were fired, the *Indians* fell down as if they had been dead. The Admiral having found so much Affection, and such Tokens of Gold; and believing the Country was fruitful and wholesome, judged that God had permitted the Ship to be cast away to the end that a Settlement might be made there, and that the preaching and Knowledge of his most holy Name might be begun in that Island.

The *Indians* went and came for Hawks-Bells, which were the Things they most delighted in, and as soon as they came near the Caravel, they held up the Pieces of Gold, crying, *Cbuque, Cbuque*, that is, Take, Take. An *Indian* came to the Shore with a Piece of Gold weighing half a Mark, (that is, four Ounces) and holding it in his Left-hand stretched out the Right; and an Hawks-Bell being put into it, he let go the Gold and ran away, thinking he had cheated the *Spaniard*. The Admiral resolved to leave some Men in that Country to trade with the People, and acquaint themselves with the Country, and learn the Language, that when he returned for *Spain* there might be some capable to give Directions for making of a Settlement there; and many offered themselves to that Purpose.

He ordered, for the Present, a sort of a Town to be built with the Timber of the Ship: And at this Time Advice came, that the Caravel *Pinta* was in the River, toward the Eastern Point, and *Guacanagari* sent to inquire into it. The Admiral carefully attended the Building, and the more for that there were daily greater Inducements to it, and because *Guacanagari* always shewed himself fearful of the *Caribes*; the more to encourage and to shew him the Effect of the *Spanish* Arms, the Admiral ordered a great Gun to be fired against the Side of the Ship that had been cast away, and the Ball passing clear-through fell into the Water: He shewed him what Harm our Weapons did, and told him that with them, those he designed to leave behind in his Country should defend him, because he designed to return into *Spain* to bring some Presents for him.

12. The Admiral hastened the building of the Fort; and to that purpose went ashore from the Caravel, aboard which he always lay. On the 18th, as he was going into the Boat, he thought he had seen *Guacanagari*, who went into his House perhaps for the more State, sending one of his Brothers, who received the Admiral with much Joy, and led him by the Hand to one of the Houses that had been given to the Christians, being the largest in the Town: In it they had provided for him a raised Seat, and made him sit on a Chair with a low Back the *Indians* used, and they were very neatly polished, and bright as if they had been made of Jet. As soon as the Admiral was seated, the Brother sent to acquaint the King, who presently came, and very joyfully hung a great Plate of Gold about his Neck, and staid with him till it grew late, and the Admiral went aboard the Caravel. He had several Motives for leaving a Colony in that Place; the chief whereof were, That when it was known in *Spain* that Men had been left there to settle, the People might be more inclinable to go over thither; and because all the Men left could not build another Vessel in time, and likewise could not be transported in the only Caravel he had; as also because he found those that were to stay very inclinable to it, encouraged by the Gentleness and Affability of the People; and because, tho' he had designed to carry to their Catholic Majesties some Natives of the Country, and other most valuable things there were in it, in token of the Discovery, and for the more Reputation of the Enterprize, it was convenient it should be known that Men had staid there of their own free Will.

The Fort had a Ditch round it; and, tho' built of Wood, was very strong against the Natives. It was finished in ten Days, because a vast Number of Men worked at it; and he called it the Town of the *Nativity*, because on that Day he came into the Port. On the 29th in the Morning a Nephew of the King's, very young and of good Sense, went aboard the Caravel; and the Admiral, being always solicitous to know where the Gold was found, learned all that's possible by Signs, and thought he understood some Words. Accordingly he asked the Youth about the Mines, and understood that four Days Journey from thence there was an Island to the Eastward, which he called *Guarinoex*, and others, *Macorix*, *Mayonis*, *Fumay*, *Cibao*, and *Coray*, in which there was a vast Quantity of Gold. The Admiral immediately wrote down those Names: And by this it appeared, that he understood nothing of the *Indian* Language; for these Places were not Islands, but Provinces in that Island, and Lands belonging to several Kings or Lords: *Guarinoex* was the King of that great Royal Plain before-mentioned; and the Youth meant to tell him, that in *Guarinoex*'s Country was the Province of *Cibao*, abounding in Gold. *Macorix* was another Province, which afforded little Gold: And the other Names were, as has been said, Provinces; the Admiral not knowing how to write them, because he did not understand them; and he thought the King's Brother, who was present, had reproved his Nephew for telling him those Names. At Night the King sent him a great Gold Mask, desiring he would send him a Bason and an Ewer, which it is likely were of Brass or Tin: He immediately sent them, and believed he asked for them to have the like made in Gold.

On the 30th the Admiral went to dine ashore; and it happened to be at the time when five Caziques or Princes,

subject to *Guacanagari*, were come, all of them with Crowns of Gold on their Heads, and with great State; and as soon as he landed, *Guacanagari* came to meet him, and led him by the Arm to the same House where he had been before, where the raised Place and the Chairs were. He caused the Admiral to sit down with great Courtesy and Respect, and then took off the Crown from his own Head, and set it on the Admiral's; who took off a Collar he had on of fine Beads of several beautiful Colours, and put it about the King's Neck, and took off an Hood of fine Cloth which he had put on that Day, and put it upon the King, and sent for a Pair of coloured Buskins, which he also drew on; he also put a great Silver Ring upon his Finger, because the Admiral had been told that they had seen one on a Sailor's Hand, and did all they could to get it of him; for it is certain that they put a great Value on any thing made of white Metal, whether it were Silver or Tin. With these Gifts the King thought himself much enriched, and was highly pleased. Two of those Caziques bore the Admiral company to the Place where he took Boat, and each of them gave him a great Plate of Gold; and these were not cast, but made of many Grains beaten together; for the *Indians* of this Island had not the Art of casting, but beat the Grains of Gold they found between two Stones, and by that means spread them.

13. When the Admiral returned to lie aboard the Caravel, and found that *Vincent Yanez* the Commander of it affirmed he had seen Rhubarb, and knew the Strings of it, and the Root, the Admiral sent for some Rhubarb, and they brought one Frail full of it, and no more; because they had no Spades to dig it up with; which was carried to their Catholic Majesties; but it did not prove to be Rhubarb. The Admiral looked upon the Pepper of this Island, which they call *Axi* or *Pimento*, as good Spice, saying it was better than the Pepper that they carried from the Eastern Parts; for which reason they fancied there were other Sorts of it. The Fort being finished, he ordered all to be provided for sailing, Wood and Water to be taken in, and other Preparations made. The King ordered as much as he would have of the Country Bread called *Cazabi* to be given him, as also of his Spice called *Axi*, salt Fish, and what he had besides. Tho' he would not willingly have gone away for *Spain* without coasting all that Country, which he thought extended very far towards the East, that he might have discovered its Secrets, and find the best Passage from it to *Spain*, for the safer bringing over of Beasts and Cattle, he durst not then attempt it, as thinking he had but one Caravel, and might run himself into Danger, and therefore it was not reasonable to venture farther in unknown Seas.

He complained very much of *Martin Alonso*'s forsaking him, as being the Cause of those Inconveniencies. He made choice of thirty-nine Men to stay in the Fort, such as were most willing, chearful, strong, and best able to endure Fatigues. He left with them for their Commander *James de Arana*, a Native of *Cordova*, Notary and Alguazil, with full Power as he had received it from their Majesties; and in case he should die, he appointed for his Successor in that Post *Peter Autichrez*, Groom of the Privy-Chamber to the King; and in case he died, the Place to go to *Roderic de Escovedo*, born at *Seville*; and also left with them a Surgeon whose Name was *John*, together with a Ship-carpenter, a Caulker, a Cooper, and a good Gunner who was very skilful for Fireworks. There likewise was a Taylor left, the rest were Sailors, whom he furnished with Bisket and Wine, and the other Provisions he had, for a Year; leaving Seeds to sow, and all the Goods and Things he had brought to barter, being a great Quantity; as also all the great Guns and other Arms that were in the Ship, and the Boat that had belonged to it.

When all things were ready, and he upon the point of departing, he called them together, and spoke to them to this Effect, "He bid them offer up their Prayers to God, and return Thanks to him for having carried them to such a Country to plant his holy Faith, and not to forsake him, but to live like good Christians," and

“ and he would protect them: That they should pray to God to grant him a good Voyage, that he might soon return to them with a greater Power: That they should love and obey their Captain, because it was requisite for their own Preservation; and he charged them so to do in the Name of their Highnesses: That they should respect *Guacanagari*, and give no Offence to any of his People; nor offer Violence to any Man or Woman, that the Opinion of their coming from Heaven might be confirmed: That they should not part, nor go up the Country, nor out of *Guacanagari*'s Dominions, since he loved them so well: That with his Consent they should survey the Coast in Canoes and their Boat, endeavouring to discover the Gold Mines, and some good Harbour, because he was not well pleased with that, where they remained, which he called the *Nativity*; and that they should endeavour to barter the most they could fairly, without shewing Covetousness; and endeavour to learn the Language, since it would be so useful to them, to gain the Friendship of the Natives, and very advantageous; and he promised to entreat their Catholic Majesties, to reward them, since they had opened the Way to that new World”. They answered they would punctually perform all he ordered them.

On the 2d of *January*, 1493, he went on Shore to take his Leave, dined with *Guacanagari* and his Caziques; recommended the Christians to him, whom he commanded to serve and defend him against the *Caribes*. He gave him a fine Shirt, and said he would soon return with Presents from the King of *Spain*. He answered with great Tokens of Sorrow for his Departure. One of the King's Servants then said, he had sent Canoes along the Coast to seek for Gold; and the Admiral answered, that if *Martin Alonso Pinzon* had not left him, he would have ventured to sail round the Island, and have carried a Ton of Gold into *Spain*, and would still do it, nevertheless, were he not afraid that the Caravel *Pinta* would get home safe, and give some false Information against him, to conceal their own Crime.

14. On the 4th of *January*, 1493, The Admiral left the Port he had called *Navidad*, or the *Nativity*, sailing Eastward towards a very high Mountain, without Trees, but covered with Grass, looking like a Tent, which he called *Monte Christo*, and lies to the East eighteen Leagues from the Cape he called *Santo*, that was behind, and four Leagues from the Port called *Navidad*. That Night he anchored five Leagues from *Monte Christo*; and on the 5th of *January* he proceeded to a little Island, where there were good Salt Pits; he entered the Ports, and was so much pleased with the Soil, the Plenty of Wood, and the Plains he saw, that he said that was the Island of *Cipango*; and had he thought he was so near the Mines of *Cibao*, whence so much Wealth was brought, he would have affirmed it more positively. On the 6th he sailed from *Monte Christo*, and soon after discovered the Caravel *Pinta*, sailing towards him before the Wind; they thought fit to return to *Monte Christo*, where *Martin Alonso Pinzon* made his Excuse for having parted Company, and though there was no satisfactory Reason for what he had done, the Admiral passed it by, and understood he had bartered for much Gold, and that he had taken one half for himself, and the other half for the Seamen. *Alpeat River* runs down into this Harbour, which he called *Rio de Oro*, that is, the River of Gold; because the Sand looked like Gold, and there he watered. On the 9th he hoisted Sail, came to *Ponta Roxa* or *Red Point*, which is thirty-six Leagues East of *Monte Christo*, and there they took Tortoises as big as Bucklers, as they went to lay their Eggs a-shore. The Admiral affirmed he had thereabouts seen three Mermaids that raised themselves above the Water, and that they were not so handsome as they are painted, that they had something like a Human Face, and that he had seen others on the Coast of *Guinea*. He proceeded to the River *de Gracia* or of *Grace*, where *Martin Alonso* had been, and was also called by his Name, and caused four *Indians* *Martin Alonso* had taken Prisoners by Force to be left there.

On the 11th he sailed to a Cape he called *Balprado*,
VOL. II. NUMB. 70.

from a Mountain appearing, which being covered with Snow, as if it had been Silver, he called *Monte de Plata*, or the *Silver Mountain*; and a Port that is at the Foot of it, *Puerta de Plata*, or the *Silver Harbour*, which is like a Horse-shoe; and proceeding along the Coast, with the Currents and fair Weather, above ten Leagues, he discovered several Capes, which he called *Angel*, *Punta del Hierro*, or *Iron Point*, *el Rodondo*, or the *Round Point*, *el Frances*, the *French*, *el Cabo de Buen Tiempo*, the fair *Weather Cape*, and *el Tajado*, the *Craggy*. On the 12th he advanced thirty Leagues farther, admiring the Bigness of the Island, and called one Cape, *de Pedrey Hijo*, or *Father and Son*, and gave Names to *Puerto Sacro*, or the *Holy Harbour*, and *Cabo de Los Enamorados*, or the *Lovers Cape*, and coming up with it, he discovered a vast Bay, which was three Leagues in Breadth, and in the Midst of it a small Island. He stayed there to observe the Conjunction, which was to be on the 17th, and the Opposition of the Moon and Jupiter with Mercury, and the Sun in Opposition with Jupiter, which occasions high Winds.

He sent the Boat for Water, and they found some Men with Bows and Arrows. They bought a Bow and some Arrows, and desired one of the *Indians* to go and speak with the Admiral, to which he consented. He asked him for the *Caribes*, and he pointed that they were to the Eastward; and for Gold he pointed to the Island of *St. John*, saying, There was *Gunain*, that is, pale Gold with a purplish Cast, which the *Indians* value very much. He ordered him something to eat, and to give him two Bits of green and yellow Cloth, and some Glass Beads, and the Boat to set him ashore. Those who went with him found fifty-five naked *Indians* with long Hair, like the Women in *Spain*, Feathers, Bows, Arrows, Swords made of hard Palm Wood, and heavy Spears, with which they gave heavy Blows, lying in the Wood. These *Indians* made them lay down their Arms, and then came to the Boat; where the *Spaniards* bought two Bows of them by the Admiral's Order, and were so far from selling any more, that they began to lay about, to seize the *Spaniards*, who being but seven, fell upon them, gave one a Cut upon the Buttocks, and another a Cut on the Breast; whereupon they fled, leaving their Arms behind, and many might have been killed if they had pursued them. This was the first time that the *Spaniards* and *Indians* came to Blows in this Island. The Admiral was sorry for it, tho', on the other hand, it did not displease him, that they might be sensible of the Weight of the *Spaniards* Hands.

On the 14th, in the Morning, abundance of People appeared on Shore. The Admiral ordered the Boats-crew to be upon their Guard; but the *Indians* came as if nothing had happened, and among them the King of the Country, and the *Indians* that had been aboard the Caravel, whither the King came with three *Indians*. The Admiral ordered to give them Biskets and Honey to eat, and gave them red Caps, bits of Cloth, and Beads. The next Day the King sent his Gold Crown and Provisions: The Men were armed with Bows and Arrows, four Youths in Canoes came to the Caravel, and were Men of such good Sense, that the Admiral resolved to carry them into *Spain*; They acquainted him with many Particulars, and from thence shewed him the Island of *St. John*. He sailed from that Bay which he called *de las Flechas*, or of *Arrows*, on the 16th, and would not make any long Stay because the Caravels were very leaky.

He advanced with the Wind at West North-west, and when he had sailed 16 Leagues the *Indian* which he had aboard pointed to the Island of *St. John*, that of *Martinino* and the *Caribes*, where the *Indians* were that eat Men; and though he was willing to take a View of those Islands, yet for fear of disheartening the Men, the Wind freshening, he ordered to steer directly for *Spain*; during several Days advancing successfully, they saw many Sea-gulls, and the Air was very drying, and they met with abundance of Weeds, but being acquainted with it, they were not afraid: They killed a Tunny and a large Shark, which afforded them something to eat, for they had nothing but Bread and Wine. The Caravel *Pinta* was no good Sailer, because she had little Benefit of her Mizen, by reason the Mast was not good, and the Admiral being forced

E. to

to lie by for her, they made little Way. Sometimes when there were Calms the *Indians* leaped into the Water, swam about and diverted themselves; having failed several Days changing their Course according to the Winds, they endeavoured to keep their Reckoning, and fancied they were to the Eastward of the Islands of *Azores*, because they reckoned more Leagues than they really failed. Being quite mistaken in the Way, they made to the Northward, so that instead of any of the *Azores* they would more likely have fallen in with *Madera*, or *Puerto Santo*.

15. The Admiral, being more skilful at reckoning the Run, found 150 Leagues less than the others. On the 12th of *February* the Sea began to swell with great and dangerous Storms, and he drove most of the Night without any Sail; afterwards he put out a little Sail; the Waves broke and wracked the Ships. The next Morning the Wind slackened, but the very next Night it rose again, which hindered the Ship's Way, so that he could not shift the Sails. The Admiral kept under a main Top-sail reefed, only to bear up the Ship against the Waves, but, perceiving how dangerous it was, he let it run before the Wind, there being no other Remedy. Then the Caravel *Pinta* began to bear away, though the Admiral kept his Light abroad the whole Night, and the *Pinta* answered. The 14th of *February*, after Sun rising, the Wind blew fiercer, and they were more afraid of perishing, with the Trouble of believing that the Caravel *Pinta* was already lost. The Admiral thinking himself near Death, to the End that some Knowledge might come to their Catholic Majesties of what he had done in their Service, he writ as much as he could of what he had discovered on a Skin of Parchment, and having wrapped it up in a Piece of Cere-cloth, he put it into a wooden Cask and cast it into the Sea; all the Men imagining it had been some Piece of Devotion; and presently the Wind slackened.

On the 15th he saw Land a-head, bearing from them East North-east: Some said it was the Island *Madera*, others, that it was the Rock *Cintra*, near *Lisbon*, but the Admiral always said they were the Islands *Azores*, and they plied to and fro with much Labour, but could not come up with the Island of *St. Mary*. The Admiral's Legs being very uneasy, because he had been out in all the Rain and Cold, he slept little; and on the 18th came to an Anchor on the North-side of the Island, which they found to be *St. Mary's*; presently three Men made a waft to the Caravel; he sent the Boat for them; they carried the Admiral Refreshments of Bread and Fowl from the Governor, whose Name was Don *John de Castaneda*. On the 19th he ordered one half of the Men to go out in Procession to an Hermitage there was near, to perform their Vow, and that when they returned he would go out with the other half; and desired the *Portuguese* to bring him a Clergyman to say Mass. While they were at Prayers in their Shirts, the whole Town on Horseback and on Foot, with their Commanders, fell upon and made them Prisoners.

They staying very long, the Admiral suspecting, either that they were detained, or that the Boat was staved, because the Island was enclosed with Rocks, and because he could not see the Hermitage, being covered by a Point of Land that runs into the Sea, he therefore brought the Caravel right before the Hermitage, and saw abundance of People come into the Boat, and make towards the Caravel. The Commander of the Island stood up and demanded Hostages, and though they were offered him, the *Portuguese* would not venture his Person. The Admiral asked him why he had sent him Refreshments and those *Portuguese* to invite him on Shore, and afterwards, notwithstanding the two Nations of *Castile* and *Portugal* were at Peace, he had so basely detained his Men, and that to convince him he was employed in the King of *Spain's* Service, he would shew him his Commission. The *Portuguese* answered, we here know nothing of their Majesties of *Castile*, nor their Commission, nor do we fear them. Some other Words passed between them, and the *Portuguese* bid him carry his Caravel to the Harbour, for all he had done was by the King's order. The Admiral took Witness of what he said, and answered: That if he did

not restore him his Men and the Boat, he would carry away an hundred *Portuguese* into *Spain*: This said, he returned and anchored where he was before, because the Wind blew fresh. He ordered the Cask to be filled with Sea-water to ballast the Vessel, and by reason of the foul Weather failed towards the Island of *St. Michael*, because there are no good Harbours in those Islands; and it is safest to keep out at Sea. He was in a great Storm all the Night, and having missed of the Island of *St. Michael*, he returned to that of *St. Mary*, and presently the Boat came with two Clergymen and a Notary, and five Sea-men; and upon Security given them they came aboard the Caravel, and required the Admiral to shew them the King of *Spain's* Commission, which he did, and they returned and released his Men and the Boat; and the Commander said he had Orders from the King of *Portugal* to seize the Admiral, and would give any thing to have him.

Having recovered his Men, and the Weather becoming fair, he ordered them to steer their Coast East. The next Day came to the Ship a large Bird, which the Admiral judged to be an Eagle. On the 2d of *March* there was so great a Storm, that he ordered to cast Lots for a Pilgrim to go to *St. Mary de Cinta en Guelva*, and the Lot fell upon the Admiral; so that it looked as if God had followed him, that he might humble himself, and not grow proud for the Mercies he had shewn him. They drove with all their Sails furled in the greatest Danger, without Hopes of escaping; but it pleased God that they discovered the Land and Rock of *Cintra*; and to avoid the Storm he resolved to put into the Harbour, not being able to stay at *Cascaes*. He returned Thanks to God for his Delivery, and all admired how he had got into the Port, affirming they had scarce seen such dreadful Storms. The King of *Portugal* was then at *Valparayso*, to whom he writ, signifying that their Majesties of *Spain*, his Sovereigns, had ordered him not to avoid entering his Highness's Ports, to get what he wanted with his Money, desiring he would give him Leave to come up to *Lisbon* for more Security, and that his Highness might know he came not from *Guinea*, but from the *Indies*.

Bartholomew Diaz de Lisboa Master of a Galeon, who was there in an armed Boat, went aboard the Caravel and ordered the Admiral to go up with him to give an Account of himself to the King's Officers and the Captain of the Galeon. *Columbus* answered, that he was Admiral in the Service of their Majesties of *Spain*, and was not obliged to give any Man an Account of himself; nor would he go out of his Ship unless he was compelled by Force. The *Portuguese* answered, he might send the Master of his Ship, but the Admiral would not send him neither; saying he would not do it unless compelled and could not resist it, for he looked upon it much alike to send another or go himself; and that it was the Practice of the Admirals of the Kings of *Castile*, rather to die than deliver up themselves or their Men. The *Portuguese* Master replied, that since he was so resolved, he might do as he pleased, but that he desired he would condescend to shew him his Commission from their Majesties of *Spain*, if he had any such: As soon as he had seen it he returned to the Galeon and reported what had passed; and the Captain, whose Name was *Alvaro Daman*, went aboard the Admiral's Caravel with Drums, Trumpets, and Hautboys, and offered to serve him in whatsoever he should command.

As soon as it was known at *Lisbon*, that the Admiral was come to *Lisbon* from the *Indies*, such Numbers flocked to see him and the *Indians*, that it was wonderful to observe how they stood in Admiration. The next Day he received a Letter from the King of *Portugal*, by Don *Martin de Norbona* his Servant, by which he desired him to come to him, which he was obliged to do to avoid shewing any Mistrust; he went and lay at *Sacovam*, where he was well entertained; and the King had given Orders that they should give him all he had Occasion for at *Lisbon*, without Money. The next Day he came to the Place where the King was, and the Gentlemen of the Household came out to receive him, and bore him Company to the Palace. The King received him with much Honour,

Honour, bid him sit, and after having expressed much Satisfaction for the Success of his Voyage, and asked some Particulars about it; he said he was of Opinion, that according to the Articles stipulated with the Kings of *Castile*, the Conquest rather belonged to the Kings of *Portugal*, than to those of *Castile*. He answered he had not seen those Articles, nor knew any more than that their Highnesses had commanded him not to go to *Del Mina* or to *Guinea*, and that the same had been proclaimed in all the Ports of *Andaluzia* before he set out upon his Voyage.

The King graciously answered, he believed he would not stand in need of Vouchers in that Particular; he then ordered the Prior of *Crato* to entertain him, he being the principal Person present. The next Day the King told him that if he wanted any thing he should have it; and making him sit, asked him many Questions concerning the Voyage, the new Countries, the Latitudes, and the People, and other things relating to those Parts, being much concerned for having missed of that good Fortune; and there wanted not some who offered the King to kill the Admiral, that what he had discovered might not be known, but he would not consent to it. At length, on the 11th of *March*, the Admiral took his leave of the King, and all the Gentlemen of the Court attended him. He passed through *Villa Franca* where the Queen was in the Monastery of *St. Anthony*; he kissed her Hands, and having given her an Account of his Voyage, departed; and a Servant of the King's overtook him, and told him from his Majesty, that if he would go into *Castile* by Land, he would order him to be attended, find him Carriage, and all that he had occasion for.

On the 13th he sailed with his Caravel for *Seville*, and found himself the 16th off *Saltes*; and, at Noon, he passed over the Bar with the Flood into the Port from whence he at first departed, on *Friday* the 3d of *August*, the Year before; so that he spent six Months and an Half in the Voyage. Being informed their Catholic Majesties were at *Barcelona*, he had Thoughts of going to them by Sea in his Caravel. He landed at *Palos*; was received with a solemn Procession and much rejoicing of the whole Town, all admiring so great an Action, which they never imagined the Admiral could have performed. The Admiral having resolved not to go by Sea to *Barcelona*, sent Advices of his Arrival to their Catholic Majesties, with a Summary of what had befallen him, reserving a more ample Relation to be delivered by Word of Mouth. The Answer found him at *Seville*: The Superscription of the Letter was, *To Don Christopher Columbus, our Admiral of the Ocean; Viceroy and Governor of the Islands that have been discovered in the Indies*. In his Answer he sent a Memorial of the Ships, Men, Ammunition, and Provision that were proper to return to the *Indies*, and then set out himself for *Barcelona* with seven *Indians*, for the rest died by the Way: He carried with him green and red Parrots, and other Things never before seen in *Spain*. He set out from *Seville*, and the Fame of this Novelty being spread abroad, the People flocked to the Roads to see the *Indians* and the Admiral.

Their Majesties having received the Memorial, ordered *John Roderiguez de Fonseca*, Arch-deacon of *Seville*, to furnish what the Admiral thought fit for the second Voyage he was to make to the *Indies*. The Admiral arrived at *Barcelona* about the Middle of *April*, where the whole Court and City flocking out, the Streets could not hold them, admiring to see the Admiral, the *Indians*, and the Things he brought, which were carried uncovered; and the more to honour the Admiral, their Majesties ordered their royal Throne to be placed in public, where they sat, and with them Prince *John*. The Admiral came in attended by many Gentlemen; when he came near, the King stood up, gave him his Hand to kiss, bid him rise, ordered a Chair to be brought him, and to sit down in the Royal Presence, where he gave an Account in a very sedate and discreet manner, of the Mercy God had shewn him in favour of their Highnesses, of his Voyage and Discoveries, and the Hopes he had conceived of discovering greater Countries; and shewed him the *Indians* as they went in their own native Countries, and the other

Things he had brought. Their Majesties rose, and kneeling down, with their Hands lifted up, and Tears in their Eyes, returned Thanks to God; and then the Choiristers of the Chapel began the *Te Deum*.

The Articles formerly concluded with the Admiral were only in form of a Contract; and as he had performed what he promised, their Majesties also, in the usual Form, passed Grants, making good what they had offered him in the Town of *Santa Fee*, on the 17th of *April* of the foregoing Year: And the Charters were passed at *Barcelona* on the 30th of the same Month in the succeeding Year 1493, and signed by their Highnesses on the 28th of *May*. They also gave him the Royal Arms of *Castile* and *Leon*, to bear with those of his Family, with other Additions expressing his difficult and wonderful Discovery. And their Majesties conferred some Honours on his Brothers, *Don Bartholomew* and *Don James*, tho' they were not then at Court. The King took the Admiral by his Side, when he went through the City of *Barcelona*, and did him much Honour other ways, and therefore all the Grandees and other Noblemen honoured and invited him to Dinner, and the Cardinal of *Spain*, *Don Pedro Gonzalez de Mendoza*, a Prince of much Virtue, and a noble Spirit, was the first Grandee that, as they were going one Day from the Palace, carried the Admiral to dine with him, and placed him at the Head of the Table, and caused his Meat to be served up covered, and the Essay to be taken, and from that time forward he was served in that manner.

17. We have given the History of this Voyage largely, and in a manner literally, from one of the best *Spanish* Historians, the rather because we esteem it single in its kind, both with respect to the Matter and the Manner of it, for the Discoveries hitherto made by the *Portuguese* were chiefly by creeping along Shore, and rather the Effects of Labour and Industry than of great Conduct, or an enterprising Genius; and the Discoveries that were made afterwards, had not only this Example but the Advantage also of all the Improvements which the great Skill, constant Affection, and wonderful Penetration of *Columbus*, enabled him to make in his own Art; so that Navigation grew in his Time quite another thing than he found it. In this Voyage the Reader will perceive that abundance of very trivial Accidents are very carefully recorded, which we have preserved, because taken from *Columbus's* own Journal, and because they shew how much he attended to, and what excellent Uses he made even of the most minute Circumstances, in order to keep up the Spirits of his Men, and to direct himself in the Prosecution of so hardy an Attempt, in which his Success depended intirely upon the Sagacity he shewed in those Observations, which therefore, however light and trivial they may seem to us, were of great Importance to him, and serve to shew by what light Helps Men of true Genius are able to execute the most difficult Enterprizes.

But there is one Observation of his which deserves to be particularly considered, and that is, as to the Variation of the Compass, which I find expressly set down by all the *Spanish* Writers of note, but more especially by *Herrera*, a very careful and judicious Author, and one who rarely took things upon Trust; as well as by *Don Ferdinand Columbus*, the Admiral's Son, who professes that he wrote from his Father's Papers. Upon these Grounds I make no Scruple of believing the Fact, and very much wonder that so knowing a Man as *Sir Thomas Browne*, in his *Vulgar Errors*, should positively assert, that *Columbus* was ignorant of the Variation, and that if he had observed it in his first Voyage, it must have confirmed him in his Hopes of finding a new World; because, since it turned towards the West, it manifestly proved, that there was a great Body of Land on that Side. This shews the great Danger of Theories; for, without doubt, if *Columbus* had depended upon this, he might have been mistaken, since sailing along the Coast of *Brazil* the Needle declines from the Land towards the Sea, which is a Fact that fully overturns that Hypothesis which *Sir Thomas Browne* looked upon as certain: But the Truth of the Matter is, that not only *Columbus* observed the Variation, but his Pilots also; and from thence they argued, not that they were near

near any other Land, but that they were in Danger of losing the best Guide they had, viz. the Certainty of the Compass; and therefore *Columbus* was forced to tell them, that the Reason why the Needle varied a whole Point to the North-west was, because the Star by which they discerned this Variation, took a Compass about the Pole, which gave them Satisfaction, tho' it could not give it him, who knew better than to take up with such an Opinion. This Turn, however, shews the Wisdom and good Sense of this great Navigator, who knew how to discover the Cause of most Things, and when he was at a Loss for a Cause to invent something that looked like one, in order to pacify those whose Fears were the constant Effects of their Ignorance.

It was this Talent of his that enabled him to maintain his Authority amongst such a Crew of wild and unruly Spirits, and put it in his Power to complete that Discovery which his great Parts had suggested to him. To say the Truth, consider him in what Light one will, as a Philosopher, a Seaman, a Commander in chief, a Governor, or a Legislator, he was alike great in all; and had that kind of Superiority of Mind which set him above those Events which common People, for want of a better Expression, call the Frowns of Fortune. He was not distracted in his Thoughts when his Companions despaired of ever seeing Land more; nor was he elevated by that sudden Turn of their Affections when they discovered the first Island; he knew how to pacify them when mutinous, and he knew likewise how to make a right Use of this sudden Return to their Obedience; his Behaviour towards the *Indians* was like a Father and a Friend; and it was this Magnanimity of his that induced those honest and simple People to believe that he and his Companions came from Heaven, and made them so desirous of their Company.

Neither are we to attribute his earnest and constant Search after Gold to any Self-interest, or Principle of Avarice; but to the earnest Desire he had of shewing that, by this Voyage, he had not only discovered new Countries, but Countries in which this precious Metal was found in Abundance, which in those Days passed for a Characteristic of the *Indies*. The same Notion made him listen with equal Attention to another Discovery, that one of his Commanders believed he had made of Rhubarb; which would have been a stronger Proof; for all that came

of that Drug into *Europe*, in those Days, was by the Way of *Alexandria*, and was therefore believed to come from the *Indies*, as indeed it did, tho' it grows chiefly in *Tartary*, and in those desert Countries, which, from the Frontiers of *Persia*, extend quite to *China*.

He shewed a becoming Spirit on his Arrival in the Harbour of *Lisbon*, and, in all probability, it was that Spirit that defended him from the Insults and Injuries that might have been offered him; for there wanted not some amongst the Nobility of *Portugal*, who suggested that this Discovery was to the Prejudice of their Country, and so possessed their Sovereign's Mind with this Notion, that he actually formed Pretensions to those Countries, notwithstanding he had relinquished all colour of Right to them, by rejecting the Proposals of *Columbus* when offered to him at first, and before he had made any Overtures to the Court of *Spain*. The same Greatness of Soul distinguished the Admiral in his Audience of their Catholic Majesties, in which he neither overvalued his Merit nor boasted of more than he had performed; but stated the Thing truly, and laid open the Consequences fairly, with that Penetration and Sagacity peculiar to himself.

This it was that determined their Catholic Majesties to send him again with a stronger Squadron, and better equipped, to perfect those Discoveries. He was then in the Zenith of his Favour and of his Reputation; for tho' he did greater Things afterwards, or at least such as redounded more to the Advantage of *Spain*, yet these were so far from raising him higher in Esteem, that, on the contrary, when others had made Voyages to the new World, not the Vulgar only, but some even of Quality and Figure, affected to lessen his Credit, and to treat that as a slight and easy Matter, which themselves had formerly represented, not as difficult only, but impracticable. But these Turns and Changes in other Men wrought none at all in him, and it is very remarkable, that the Instructions he gave for the Preparations of his second Voyage were so perfectly well adapted as exactly to answer the End of his Design, as will appear in the subsequent Section, in which we shall give the Reader a full and distinct Relation of that Voyage, tho' in fewer Words than were used in the Narration of the first, as well to avoid needless Repetitions, as that we may keep within the Bounds originally assigned to this Work.

SECTION III.

The Second Voyage of the Admiral Don CHRISTOPHER COLUMBUS, to the West Indies, including an Account of all the Discoveries made by him in that Voyage.

1. The Measures taken by their Catholic Majesties to secure their Properties in the first Discoveries made by their Admiral, and the Terms on which he sailed a second Time from Spain.
2. His safe Arrival in the West Indies, and the Information he received from the Natives as to the State of that Part of the World.
3. The Admiral continues his Voyage to the Island of Hispaniola, finds the Colony ruined, and the Spaniards he had left behind destroyed by their own Folly.
4. The Pains he took to put things once more into a good Condition; a Mutiny against him, and the Manner of his Proceeding after it was quelled.
5. He proceeds to discover the inland Parts of the Country, to secure the Gold Mines, and to make an absolute Conquest of Hispaniola for the Use of their Catholic Majesties.
6. The Admiral having put all things in order, resolves to leave his Brother Governor of Hispaniola, and to sail again upon Discovery, which he performs accordingly.
7. The Consequences of that Voyage, the Discoveries made therein, particularly that of Jamaica, and the Hardships endured by the Admiral and his People.
8. His return to Hispaniola, the Condition in which he found things there, and the Regulations made by him for securing and promoting the Settlement.
9. The Grounds of those Jealousies and Un easinesses which disturbed the Admiral, and induced him to resolve upon returning back again to Spain.
10. An Account of his second return from the Indies, and of the Reception he met with from their Catholic Majesties.
11. Remarks and Observations on the foregoing Section.

THE more the Discoveries made by Don Christopher Columbus were canvassed by the Spanish Council, the more important they appeared; and therefore to strengthen their Title in the best Manner possible, their Catholic Majesties dispatched an Ambassador to the Pope, who was at that time *Alexander VI.* requesting

him to exert his Apostolic Authority in their Favour, and by his Bulls confirm to them those Countries, Islands, &c. which their Admiral had discovered. This his Holiness most readily complied with, and indeed it cost him little; and by his Bull, dated May 2, 1493, granted the said Discoveries to them as fully as the Discoveries made by

by the *Portuguese* had been granted to the Crown of *Portugal*; and by another Bull dated the next Day, granted their Catholic Majesties all that had been, or should be, discovered, drawing a Line from Pole to Pole, at the Distance of 100 Leagues Westward from the *Azores*, or from the *Cape de Verd* Islands. As soon as these Bulls, whether important or impertinent we need not stay to determine, were once arrived from *Rome*, their Catholic Majesties were very desirous the Admiral should sail on his second Voyage, for which reason they hastened him away to *Seville*, where he found another Sort of a Fleet prepared than he had commanded in his first Voyage. For now there were seventeen Sail of Ships of several Sizes, and no less than fifteen hundred Men, many of them Gentlemen of good Families, offered to go over, and took an Oath of Obedience, not only to their Catholic Majesties, but to the Admiral Don *Christopher Columbus* likewise.

These Preparations, which could not be concealed from the King of *Portugal*, raised great Uneasiness at that Court, which was not to be quieted by the Pope's Bulls, his *Portuguese* Majesty apprehending that they were founded on undue Suggestions, and himself and his Subjects thereby much wronged. This he resolved to expostulate with their Catholic Majesties, and named an Ambassador for that Purpose; but they, having Intelligence of his Proceedings, sent an Ambassador to him under Colour of justifying the Measures they had taken; but, in Reality, to patch up Matters in any Manner, so as to hinder that Monarch from obstructing *Columbus* in his second Voyage. In the mean Time the Admiral being come to *Seville*, and having received with his last Dispatches his Commission, setting forth the Limits of his Government, which extended over all that the Apostolical Concession extended to; and having left his two Sons, Don *James* and Don *Ferdinand*, to be Pages to Prince *John*, he applied himself to pick out the ablest Pilots, and in mustering the Men that had been raised in the Presence of the Comptroller. For the sake of Discipline, all Persons were forbid carrying any Goods, and it was ordered, that all belonging to his Highness, and to private Men, should be entered before they left *Spain*, and the same to be done when they arrived in the *Indies*; and that all that should appear not to have been so entered, should be confiscated. The Admiral was ordered, as soon as he came to *Hispaniola*, to muster the Men, and after that, as often as he should think fit; and that they should be paid by his Direction; and that he should appoint Alcaldes and Alguazils in the Islands, and other Parts, to try civil and criminal Causes, and the Appeals from them to be to him, and that in Case it was requisite to appoint Regidores, Jurats, and Officers for the Government of the People, or of any Colony that should be planted, the Admiral should nominate three Persons to every Employment, for their Highnesses to choose one of them, but that the first time he might name them. That all Proclamations should be in the Names of their Highnesses; that he should have the eighth Part of all that was gained, paying the eighth part of all that was carried over, first deducting the tenth Part he was to have of the whole, pursuant to the Contract made; and that if it were requisite to send Ships and Men to any Parts, he might do it.

Whilst the Admiral was at *Seville* expediting his Affairs, he received a Letter from their Majesties, dated at *Barcelona*, directing him, before his Departure, to cause a Sea-chart to be drawn with the Rumbs and other Particulars requisite for the Voyage to the *Indies*, and to hasten his Departure, still promising him mighty Rewards, because that Affair of the Discovery daily appeared to be of so great Consequence; acquainting him that nothing was yet concluded with the King of *Portugal*, though it was believed he would be brought to Reason. The Admiral caused many Plants and Trees to be put aboard, and Wheat, Barley, Oats, Rye, and all Sorts of Seeds, as also Cows, Lime, Bricks, and all Sorts of Materials for building; and having embarked the Men, on the 25th of *September*, 1493, before Sun-rising sailed from the Bay of *Cadiz*: He steered South-west for the *Canaries*, and arrived at *Grand Canaria* on the 2d of *October*, and on the 5th anchored at

Gomera, where he staid two Days taking in Water, Wood, and Cattle, and eight Sows at the Rate of seventy Marvedies a-head, from which afterwards were produced all that have been since in the *Indies*. They also took in Hens and other Creatures, as also Seeds for salsading, and all other Sorts of Garden-stuff.

On the 7th of *October* the Admiral continued his Voyage towards the *Indies*, having first delivered Instructions, sealed, to every Ship, commanding them not to open them unless they were separated from him by stress of Weather; for as in those Letters he gave an Account of the Course they were to steer, to come to the Town of the *Nativity*, in *Hispaniola*, he would not have that Course known to any unless necessary. Thus sailing with a fair Gale till the 24th, when being 400 Leagues West of *Gomera*, he yet met with none of the Weeds he had seen the first Voyage; when he was out but 250 Leagues, to the great Astonishment of them all. That Day and the next a Swallow flew about the Fleet. On *Saturday*, at Night, the Corps of *St. Elmo* was seen, with seven Lights, on the round Top, and there followed mighty Rains, and frightful Thunder. On the 2d of *November*, at Night, the Admiral, perceiving a great Alteration in the Sky and Winds, and taking notice of the heavy Rains, concluded that he was near some Land, and for this Reason caused most of the Sails to be furled; and ordered all to be upon the Watch, not without Cause, for that Night they spied Land seven Leagues to the Westward, which was a very high mountainous Island, and he called it *Dominica*, because discovered upon *Sunday* Morning. A while after he discovered another Island North-east of *Dominica*, and then another, and a third after that, more to the Northward, for which Mercy God had been pleased to bestow upon them, all the Men, assembling in the Poop, sung the *Salve Regina* and other Prayers, and Hymns, very devoutly giving Thanks to God, for that, in twenty Days after departing from *Gomera*, they had made that Land; judging the Distance to be about 750 or 800 Leagues, and finding no convenient Place to come to an Anchor on the East-side of the Island *Dominica*, they stood over to another Island which the Admiral called *Marigalante*, that being his Ship's Name. Here landing, he with all necessary Solemnity again repeated the Possession he had in his first Voyage taken of all the Islands and Continents of the *West Indies*, for their Catholic Majesties.

On the 4th the Admiral sailed from the Island *Marigalante* Northwards, by another great Island he called *Sta. Maria Guadalupe*, at the Request of the Friars of the House of that Name, to whom he had made a Promise to call some Island by the Name of their Monastery; before he came to it, by two Leagues Distance, they discovered a very high Rock, ending in a Point, whence issued a Stream of Water, which falling, made such a Noise that it was heard aboard of the Ships, though many affirmed that it was only a white Vein in the Rock: The Water was so white and frothy by reason of its Fall. Going ashore in the Boat to view a Sort of a Town they saw from the Shore, they found no body there, the People being fled to the Woods, except some Children, to whose Arms they tied some Baubles to please their Parents when they returned; in the Houses they found Geese and abundance of Parrots with red, green, blew, and white Feathers, as big as common Cocks; they also found Pompions, and a sort of Fruit which look like our green Pine-apples, but much bigger, and within full of solid Meat like a Mellon, and much sweeter both in Taste and Smell, which grow on long Sticks like Aloes wild about the Fields, and are better than those produced by Art. They also saw other Sorts of Fruits and Herbs, different from ours; Beds of Cotton Nets, that is, Hamocks, Bows and Arrows, and other things of which they took none, that the *Indians* might be the less afraid of the Christians. The next Day, which was the 5th of *November*, the Admiral again sent two Boats ashore to endeavour to take some body that might give an Account of the Country, and inform him how far off, and which way, *Hispaniola* lay; each of the Boats brought back a Youth, who agreed in saying they were not of that Island, but

of another called *Boriquen* (now *St. John de Porto Rico*) and that the Inhabitants of that Island of *Guadalupe* were *Caribes* or *Canibals*, and had carried them Prisoners from their own Island. Soon after the Boats, returning to take up some Christians they had left there, found six Women with them, who had fled to them from the *Caribes*, and came of their own accord aboard the Ships.

The Admiral to invite the *Islanders* would not keep them on board, but gave them some Glass-beads and Bells, and made them be set ashore against their Wills. Yet this was done unadvisedly; for as soon as they landed, the *Caribes*, in Sight of the Christians, took away all the Admiral had given them: Therefore, either through the Hatred they bore the *Caribes*, or the Fear they had conceived of those People, a while after when the Boats returned for Wood and Water, the said Women got into them, begging of the Seamen to carry them aboard the Ships, and giving them to understand by Signs, that those People eat Men, and made Slaves of them, and therefore they would not stay with them; so that the Men yielding to their Intreaties, carried them back to the Ships, with two Children and a young Man that had made his Escape from the *Caribes*, thinking it safer to put themselves into the Hands of People they never saw, and such Strangers to their Nation, than to remain among those they knew to be wicked and cruel, and who had eaten their Husbands and Children; and as they said, they do not kill and eat the Women, but keep them as Slaves. One of the Women told them, that towards the South there were many Islands, some inhabited, others not, which she and the other Women called *Giamaetic*, *Cairvevo*, *Hunio*, *Buriari*, *Arubiari*, *Sixibei*, but the Continent which they said was very great, both they and the People of *Hispaniola* called *Zuanta*.

3. On the 10th of *October* the Admiral weighed Anchor, and sailed with the whole Fleet along the Coast of the Island *Guadalupe*, towards the North-west, for *Hispaniola*, and came to the Island *Montserat*, calling it by that Name because of its Height, and understood by the *Indians* he had with him, that the *Caribes* had depopulated it by devouring the Inhabitants. Thence he proceeded to *St. Mary Redonda*, so called because it is so round and upright, that there seems to be no getting up to it without Ladders, which the *Indians* called *Ocamaniro*. Next he came to *St. Maria la Antigua*, which is above 28 Leagues in extent, still holding on his Course North-west. There appeared several other Islands towards the North, and lying North-west and South-east, all very high and full of Woods, near one of which he cast Anchor, and called it *St. Martin*, where they took up Pieces of Coral sticking to the Anchor Hooks, which made them hope they should find other valuable Things in those Countries. Though the Admiral was very desirous to know every thing, yet he resolved to hold on his Course towards *Hispaniola*, to relieve those he had left there; but the Weather being bad, he came to an Anchor on the 13th, in an Island where he ordered some *Indians* to be taken to know whereabouts he was.

As the Boat was returning to the Fleet with four Men and three Children the Men had taken, they met a Canoe, in which there were four Men and one Woman, who perceiving they could not make their Escape, stood upon their Guard and hit two of the Christians with their Arrows, which they let fly with such Force and Dexterity that the Woman shot a Target quite through; but the Boat furiously boarding the Canoe overset it, so that they took them all swimming in the Water; and one of them swimming shot several Arrows as if he had been upon dry Land. The Admiral, departing hence, continued his Voyage West North-west, where he found above 50 Islands, which he left to the Northward; the biggest of them he called *St. Ursula*, and the others, the *eleven thousand Virgins*; next he came to the Island which he called *St. John Baptist*, but the *Indians* *Boriquen*; and the Fleet anchored in a Bay on the West-side of it, where they took several Sorts of Fish, as Scate, Soles, Pilchards, and Shads, and saw Falcons and Bushes like wild Vines, more to the Eastwards. Some Christians went to certain Houses, well built after their Fashion, with a

Square before them, and a broad Road down to the Sea, with Towers made of Cane on both Sides, and the Top of them curiously interwoven with Greens: At the End of it, next the Sea, was raised a large Gallery or Balcony, that could hold ten or twelve People, lofty and well built.

On the 21st the Admiral came up with the North-side of *Hispaniola*, and presently sent ashore, at *Samana*, one of the *Indians* born in that Part, whom he brought out of *Spain*, being then converted, who offered to reduce all the *Indians* to submit to the Christians.

The Admiral continuing his Voyage towards the Town of the *Nativity*; when he came to Cape *Angel*, some *Indians* went aboard to barter their Commodities with the Christians; coming to an Anchor, in the Port of *Monte Christo*; a Boat that went ashore, found near a River two dead Men, one of them seemed to be young, the other old; who had a Rope made of a certain Sort of Broom, or such Fuz that grows in *Spain*, called *Esparta*, about his Neck, his Arms extended, and his Hands tyed to a Piece of Wood in the Form of a Cross; but they could not discern whether they were Christians or *Indians*, but looked upon it as an ill Omen. The next Day, being the 26th, the Admiral sent ashore in several Places; the *Indians* came very friendly and boldly to talk with the Christians, and touching our Mens Shirts and Doublets repeated their Names in *Spanish*, to shew they knew how those things were called, which delivered the Admiral from the Jealousy he had conceived on Account of the dead Men: Judging that if those People had misused the Christians left there, they would not have come so boldly aboard the Ships.

But the next Day when he came to an Anchor, near the Town of *Navidad*, after Midnight a Canoe came to the Fleet, and asked for the Admiral, and being bid to come on board, for he was there, they would not do it, saying they were resolved not to go aboard till they saw and knew him. The Admiral therefore was forced to come to the Ship-side to hear them, and then presently two went up with two Masks, which they gave to the Admiral, from the Caziue *Guacanagari*. They being asked by the Admiral concerning the Christians left there, answered, that some of them died of Distempers, some parted from their Company, and were gone into other Countries: But, that all of them had four or five Wives, though it appeared by their way of speaking, that all, or most of them were dead. Yet the Admiral, not thinking it fit to take any Notice at that time, sent back the *Indians* with a Present made of Tin, and other Baubles for *Guacanagari* and themselves, and so went away that Night. On the 28th, about Evening, the Admiral with all his Fleet, came into the Port of *Navidad*, found it all burnt, and no body was seen thereabouts. The next Day, in the Morning, the Admiral landed, very much concerned to see the Houses and Fort burnt, and nothing left belonging to the Christians, but only ragged Clothes and such like things, as is usual in a Place plundered and destroyed; and seeing no body to enquire of, the Admiral went with some Boats up a River that was near the Fort.

Whilst he was going up it, he ordered the Well he had made in the Fort to be cleansed, thinking to find Gold in it; because at his going away, fearing what might happen, he commanded those he left behind, to throw all the Gold they could get into that Well, but nothing was found in it; and the Admiral could lay hold of no *Indian*, because they all fled from their Houses to the Woods; having therefore found nothing but some of the Christians Clothes; he returned to *Navidad*, where he saw eight of the Christians, and three others in the Fields near the Town, whom they knew to be Christians by their Clothes, and they seemed to have been dead about a Month; the Christians going about to seek some other Tokens or Writing of the Dead, a Brother of the Caziue *Guacanagari*, came with some *Indians* to talk with the Admiral. These could speak some Words in *Spanish*, and knew the Names of all the Christians that had been left there, and said that those *Spaniards* soon began to fall to Variance among themselves, and to take every one what Gold, and as many Women as they could; whereupon *Peter Gutierres* and *Escovedo*, killed one *James*, and then they,

they, and nine others, went away with their Women to a Cazique, whose Name was *Caunabo*, who was Lord of the Mines, who killed them all; then, many Days after came with a great many Men to *Navidad*, where there was only *James de Arana*, with ten Men who had remained with him to guard the Fort, all the rest being dispersed about the Island. The Cazique, *Caunabo*, coming up by Night, fired the Houses where the Christians lived with their Women, for fear whereof they fled to the Sea; where eight of them were drowned, and three died on Shore; that *Guacanagari* fighting with *Caunabo* in Defence of the Christians, was wounded and fled.

This Account agreed with that given by other Christians sent by the Admiral to learn more of the Country; who went to a Town where *Guacanagari* lay ill of a Wound, which he said had hindered him from waiting on the Admiral, and giving him an Account of what was become of the Christians; among whom, he said, soon after the Admiral returned for *Spain*, there began to be Dissention, and every one would barter Gold for himself, and take what Women he thought fit; and not satisfied with what *Guacanagari* gave, and allowed to be given them; they divided into several Parties, and dispersed some one Way and some another: And that some *Biscayners* joining together, went where they were all killed; and this was the Truth of what had happened, which they might tell the Admiral; desiring that he would come and see him, because he was in such a Condition, that he could not leave the House. The Admiral did so, going the next Day to visit him, and he with great Signs of Sorrow, told him all that had happened, as has been related above; and that he, and his Men, had been all wounded in Defence of the Christians; as appeared by their Wounds, which were not given by Christian Arms, but with wooden Swords and Arrows, pointed with Fish-bones.

This Discourse being over, he presented the Admiral with eight Strings of small Beads, made of white, green, and red Stones; a String of Gold Beads; a Crown of Gold, and three little Calabashes full of Gold Sand: All which might have been about four Marks weight in Gold, each Mark being eight Ounces. The Admiral, in return, gave him abundance of Baubles, which might be worth three Ryals, and were valued by him at above a Thousand. Though he was very ill, he would needs go with the Admiral to see the Fleet, where he was courteously entertained; and much pleased to see the Horses, of which the Christians had before given him an Account. And because some of those that were dead had misinformed him concerning the Faith, the Admiral was forced to instruct him in it; and afterwards would have him wear an Image of the Virgin *Mary* about his Neck, which, at first, he had refused to receive.

4. The Admiral reflecting on the Disaster of those Christians, and his own Misfortune at Sea; having lost the Men and Fort on Shore, and his Ship upon the Water; and that, not far off, there were better and more commodious Places, on the 7th of *December* he sailed with the whole Fleet Eastwards, and anchored not far from the Island of *Monte Christo*, and the next Day, at *Monte Christo*, among those seven low little Islands; which, tho' they are without Trees, yet are nevertheless very pleasant. Thence he went to anchor before a Town of *Indians*, where, resolved to plant a Colony, he landed with all the Men, Provisions, and Utensils he brought aboard the Fleet, in a Plain near a Rock; on which he built a Town, and called it *Isabella*, in honour of Queen *Isabel*, or *Elizabeth*; this Place was judged very convenient, as the Port was very large, though exposed to the North-west, and had a most delicate River within a Bow Shot of it, from which Canals of Water might be drawn to run through the middle of the Town; and beyond was an open Plain, from which the *Indians* said the Mines of *Cibao* were not very remote. For these Reasons the Admiral was so eager upon settling the said Colony, that what with the Fatigue at Sea, and what he here went through, he not only wanted time to write, Day by Day, what happened, but fell sick, which hindered his writing from the 11th of *December* to the 12th of *March*, in

the Year 1494; during which time, having ordered the Affairs of the Town the best he could, he sent one *Alonso de Hojeda* with fifteen Men, to seek out the Mines of *Cibao*; afterwards, on the 2d of *February*, twelve Ships of the Fleet returned to *Castile*, under the Command of one Captain *Anthony de Torres*, Brother to Prince *John's* Nurse, a Man of great Judgment and Honour, and in whom their Catholic Majesties and the Admiral much confided. He carried in writing an Account at large of all that had happened, as also the Nature of the Country, and what it required.

Not long after, *Hojeda* returned, giving an Account, that the 2d Day after he set out from *Isabella*, he lay at the Pass of a Mountain, which was very difficult of Access; that afterwards, at every League's Distance, he found *Caziques*, who had been very kind to him; and continuing his Journey, the 6th Day he came to the Mines of *Cibao*, where the *Indians* immediately took up Gold in a small River, as they had done in many others, in the same Province, where he affirmed there was great plenty of Gold. This News much rejoiced the Admiral, who was recovered of his Sickness, and he resolved to observe this Disposition of the Country, that he might the better know what was to be done. Accordingly, on the 12th of *March*, he set out from *Isabella*, for *Cibao*, to see the Mines, with all the People that were in Health, both Foot and Horse, leaving a good Guard in the two Ships, and three Caravels, the remainder of the Fleet; and causing all the Ammunition and Tackle belonging to the other Ships to be put aboard his own, that none might rebel and seize them, as they had attempted to do whilst he was sick; because they having gone that Voyage upon the Belief, that as soon as they landed they might load themselves with Gold, and so return rich home, the thing not happening as they expected, they grew dissatisfied and offended; as also, because of building the new Town, and weary of Diseases that the Climate, and Change of Diet caused among them; they conspired to revolt from the Admiral; and taking the Ships that remained, by Force, to return in them to *Spain*. One *Barnard de Piza*, who had been an Officer of Justice at Court, and went that Voyage in the Quality of Comptroller, was the Ring-leader, and Head of the Mutineers; therefore, the Admiral, when informed of it, would not punish him any otherwise, than by securing him on board a ship, with a Design to send him afterwards to *Spain*, with his Process drawn up, as well for mutinying, as for having writ a false Information against the Admiral, which he had hid.

Having therefore ordered all these Affairs, and having left some Persons, together with his Brother Don *James Columbus*, to look to and secure the Fleet, he set forward towards *Cibao*, carrying with him all the Necessaries to build a Fort, to keep that Province under, and secure the Christians left there to gather Gold, against any Attempts or Designs of the *Indians*; and the more to terrify them, and to take away all Hopes, that they might do in the Admiral's Presence as they had done in his Absence with *Arana*, and the Thirty-eight Christians left among them, he carried with him all the Men he could, that they might, in their own Towns, see the Power of the Christians, and be sensible that whenever any Wrong was done to a single Man travelling through the Country, there was a Force of Men to chastise it; and to appear the more formidable when he set out for *Isabella* and other Towns, he made his Men march with their Arms in Rank and File, as is usual in time of War, with Trumpets sounding, and Colours flying. In this way he marched to the Side of that River which lay about a Musket-shot from *Isabella*; and a League beyond he crossed another River, and went to lie that Night three Leagues off, in a Plain divided into pleasant Fields, reaching to the Foot of a craggy Hill, and about two Bow-shots high: This he called *Puerto de los Hidalgos*, or the Gentleman's Pass; because some Gentlemen went before, to order the Road to be made. And this was the first Road made in the *Indies*; for the *Indians* make their Ways but for one Man to pass at a time. Beyond this Pass he came into a large Plain, on which he travelled five Leagues the next Day, and

and went to lie near a great River, which the Men passed upon Floats and Canoës: This River, which he called of *Canes*, fell into the Sea at *Monte Christo*. In his Journey he passed by many *Indian* Towns, the Houses whereof were round, thatched, and with such a little Door as he who goes in must stoop very low. Here, as soon as some of the *Indians*, brought from *Isabella*, went into the Houses, they took what they liked best, and yet the Owners were not displeased; as if all Things were in common.

5. On the 14th, the Admiral set forward from the River of *Canes*, and a League and a Half from it found a great River, which he called the *River of Gold*; having passed it with some Difficulty, he proceeded to a large Town, where many of the People fled to the Mountains, but most of them fortified their Houses, barring their Doors with some *Canes*, as if they were a Defence to hinder any Body from coming in; for, according to their Custom, no Man dares break in at the Door he finds so barred. Hence the Admiral went to another fine River, which he called the *Green River*; the Banks whereof were covered with bright round Stones, and there he rested that Night. Holding on his Journey, the next Day he passed by some great Towns, where the People had put Sticks a-cross the Doors, and the Admiral with his Men, being tired, they staid that Night, at the Foot of a rugged Mountain, which he called *Parbibao*, as the Province of *Cibao* begins behind the Mountain: From this, the first Mountain they passed was eleven Leagues distant, all which is a Plain, the Way directly South. Setting out the next Day, he travelled through a Path, where they were forced, with Difficulty, to load the Horses, and thence he sent back some Mules to *Isabella* to bring Bread and Wine, for they began to want Provisions, and the Journey was long, and they suffered the more because they were not yet used to the *Indian* Diet, as they are now, who live and travel in those Parts, who find the Food of that Country more easy of Digestion, and more agreeable to that Country, than what is carried from *Europe*, though it is not so great Nourishment.

The Admiral, passing over the Mountains, on the 16th entered the Country of *Cibao*, which is rough and stony, full of Gravel, plentiful of Grass, and watered by several Rivers, in which Gold was found. The farther they went into this Country, they found it encumbered more with Mountains, on the Tops whereof appeared Grains of golden Sand; for, as the Admiral said, great Rains carried it down from the Tops of Mountains to the Rivers in small Sand. The Admiral perceiving he was now 18 Leagues from *Isabella*, and the Country he had left behind very craggy, he ordered a Fort to be built in a very pleasant and strong Place, which he called the Castle of *St. Thomas*, to command the Mines, and be a Place of Safety for the Christians that worked there. Here, breaking Ground to lay the Foundation, and cutting a Rock to make the Ditches, when they were got two Fathoms below the Stone, they found Nests made of Hay and Straw, and, instead of Eggs, three or four round Stones as big as Oranges, as artificially made as if they had been Cannon Balls. And in the River that runs at the Foot of that Hill the Castle now stands upon, they found Stones of several Colours, some of them large, of pure Marble, and others of Jasper. The Admiral, having given Orders for finishing the Castle, set out for *Isabella*, and near the *Green River* met the Mules, and staid there, sending the Provisions to the Port afterwards, endeavouring to find the Ford of that River, and of the River *del Oro*; he staid some Days in those *Indian* Towns, eating their Bread and Garlic, came well to *Isabella*, where Melons were already grown fit to eat, tho' it was not above two Months since the Seed was put into the Ground; so Cucumbers came up in 20 Days: A wild Vine of that Country, being pruned, produced Grapes which were good and large.

On the 30th a Husbandman gathered Ears of Wheat he had sown at the latter end of *January*; there were also Vetches, but much bigger than those they sowed, and all they sowed sprung up above Ground in three Days, and the twenty-fifth Day they eat of it. The Stones of Fruit

set in the Ground sprouted out in seven Days, and the Vine Branches shot out in the same time, and in twenty-five Days after they gathered green Grapes; the Sugar Canes budded in seven Days, which proceeded from the Temperature of the Climate; besides that the Waters there are very thin, cold, and wholesome. The Admiral was well enough pleased with the Air, the Soil, and the People of the Country. On the 1st of *April* there came a Messenger from Fort *St. Thomas*, who brought News that the *Indians* of that Country fled; and that a Cazique, whose Name was *Caunabo*, was preparing to come and attack the Fort. The Admiral knowing how inconsiderable the People of that Country were, made little Account of that Report, especially considering the Horses, by whom the *Indians* were afraid to be devoured, and therefore were so much afraid, that they durst not go into any House where a Horse stood; however, the Admiral thought fit to send more Men and Provisions, considering, that since he designed to go to discover the Continent with three Caravels he had left him, it was fit to secure all behind. Therefore, on the 2d, he sent seventy Men with Provisions and Ammunition to the Fort; twenty-five of which were to keep guard, and the others help to make another Road, the first being very troublesome, as were the Fords of the Rivers.

In the mean while, because the Bisket grew towards an end, and they had no Flour but Wheat, he resolved to make some Mills, though there was not a Fall of Water fit for that Purpose within a League of the Town, at which Work he was forced to stand over the Workmen, they all endeavouring to save themselves from Labour. After that, he resolved to send out all the People that were in health, except Handicraftmen and Artificers, to the *Royal Plain*; that, travelling about the Country, they might pacify it, strike a Terror into the *Indians*, and by degrees be used to their Food, since they daily felt more Want of that of *Spain*. *Hojeda* was sent to command these Men till they came to *St. Thomas*, there to deliver them to Don *Peter Margarite*, *Hojeda* himself to command in the Fort; he having taken the Pains the Winter before, to discover that Province of *Cibao* which in the *Indian* Language signifies *Stony*. *Hojeda* set out from *Isabella* the 29th of *April* towards *St. Thomas*, with this Party of Men, being above 400; and, having passed the River *del Oro*, apprehended a Cazique that lived there, and a Nephew of his, sending them in Irons to the Admiral, and cut off the Ears of one of his Subjects in the great Place in the Town, because, three Christians going from *St. Thomas* to *Isabella*, this Cazique gave them *Indians* to carry their Clothes over the River, at the Ford; and they, being in the Middle of the River, returned to their Town with them; and the Cazique, instead of punishing them, took the Clothes, refusing to deliver them. Another Cazique, who dwelt beyond the River, relying on the Service he had done the Christians, resolved to go with the Prisoners to *Isabella*, and interceed with the General for them, who entertained him courteously, and ordered the other *Indians*, with their Hands bound, to be publicly sentenced to die in the Market-place; which the honest Cazique seeing, with many Tears, obtained their Lives, promising they should never be guilty of any other Offence. The Admiral having discharged them all, a Man on Horseback came from *St. Thomas*'s, and gave an Account, that he had found in the House of that same Cazique, who had been Prisoner in his Town, five Christians, taken by his Subjects as they were coming from *Isabella*; and that he, frightening the *Indians* with his Horse, had released them, above 400 Men running away from him, of whom he wounded two in the Pursuit; and that when he had passed the River, he saw they turned upon the said Christians, whereupon he made as if he would go back against them; but they, for fear of his Horse, all ran away, lest the Horse should fly over the River.

6. The Admiral being resolved to discover the Continent, appointed a Council to govern the Island in his Absence; the Sway it consisted of was, Dr. *James Columbus*, his Brother, with the Title of President; *F. Boyl* and *Peter Fernandez* Colonel, Regents; *Alonso Canabaz de Corvajal*, Rector of *Bacca*, and *John de Luxan* of *Madrid*, Gentle-

men to their Catholic Majesties. And that there might not want Meal for the Support of the People, he hastened the Building of the Mills, notwithstanding the Rain and Floods very much obstructed. As the Fruitfulness of the Soil appeared very extraordinary, so they daily received fresh Advices of the Wealth of the Country; for some of those the Admiral had sent out were always returning with Accounts of new Mines discovered, besides the Relations of the *Indians* concerning great Plenty of Gold found in some Parts of the Island.

The Admiral not so satisfied, resolved to go out to discover along the Coast of *Cuba*, not knowing whether it was an Island or Continent; therefore taking three Ships along with him, he sailed on the 24th in the Afternoon, and came to an Anchor that Day at *Monte Christo*, West of *Isabella*: Thence he went to *Guacanagari's* Port, thinking to find him there; but he seeing the Ships, fled for fear, tho' his Subjects falsely affirmed he would soon return. But the Admiral not caring to stay, departed on *Saturday* the 26th, and went to the Island *Tortuga*, which lies six Leagues to the Westward. He lay by it that Night in a Calm, with his Sails abroad, the Tide running back against the Currents. The next Day the North-west Winds and Currents setting to the West, obliged him to come to an Anchor in the River of *Guadalquiver*, which is on the same Island, there to wait for a Wind that would stem the Current, which both then and the Year before, he found to run strong towards the East. On the 29th of the same Month, the Wind being fair, he came to *Cape St. Nicholas*, and then crossed over to the Island of *Cuba* running along the Coast of it. And having sailed a League beyond *Cabo Puerto* put into a large Bay, which he called *Puerto Granda*, or the *Grand Port*; the Mouth whereof was 150 Paces over, and had much Water. Here he anchored, and took some Refreshment. On the first of *May*, he continued his Voyage along the Coast, where he found commodious Harbours, and fine Rivers, and high Mountains upon the Sea. After he left *Tortuga*, he met abundance of the Weeds he saw on the Ocean on his Voyage to and from *Spain*. And sailing close along the Shore, abundance of People came on board in their Canoes, to bring off their Bread, Water, and Fish; giving it all freely, without asking any thing for it; but the Admiral, to send them home well pleased, ordered them to be paid, giving them Beads, Bells, and such like Baubles. On the 3d the Admiral resolved to sail over from *Cuba* to *Jamaica*, that he might not leave it behind, without knowing whether the Report of plenty of Gold they had there was true; and the Wind being fair, and he half way over, he discovered it the next Day. Upon that he came to an Anchor, and thought it the best of any he had yet seen in the *Indies*; and such Multitudes of People in great and small Canoes came a-board, that it was astonishing. The next Day he ran along the Coast to find out Harbours; and the Boats going to sound the Mouths of them, there came so many Canoes with armed Men to defend the Country, that they were forced to return to the Ships, not so much for fear, as to avoid falling out with those People. But afterwards considering, that if they shewed Signs of Fear, the *Indians* would grow proud upon it, they returned together to the Port which the Admiral called *Puerto Bueno*, that is, Good Harbour; and because the *Indians* came to drive them off, those in Boats gave them such a Flight of Arrows from their Cross Bows, that sixteen of them being wounded, they retired. The Fight ending in this manner; there came abundance of Canoes from the neighbouring Places, in a peaceable Way to see and barter Provisions; and several things they brought, and gave for the least Trifle that was offered them.

In this Port, which resembles a Horse-shoe, the Admiral's Ship was repaired, being leaky: And that done, they set sail on the 9th, keeping so close along the Coast Westward, that the *Indians* followed in their Canoes to trade. The Wind being somewhat contrary, the Admiral could not make so much Way as he wished, till on the 14th he resolved to stand over again for *Cuba*, to keep along its Coasts, designing not to return till he had sailed 5 or 600 Leagues, and was satisfied whether it was an Island

or Continent. The Day he was going off from *Jamaica* a very young *Indian* came a-board, saying he would go; and after him came several of his Kindred and other People in their Canoes, earnestly intreating him to go back; but they could never alter his Resolution; and therefore to avoid seeing his Sisters cry, he went where they could not come at him. The Admiral admiring his Resolution, gave Orders that he should be used with the utmost Civility. The Admiral leaving *Jamaica* on the 15th of *May*, came to that Point of *Cuba* which he called *Cabo de Santa Cruz*, or *Cape Holy Cross*; and running along the Coast, there happened a great Storm of Thunder and Lightning, which, together with the Flats and Currents, put him in no small Danger, and to very much Trouble, being obliged at the same time to struggle against two Evils, which required contrary Remedies; for it is a proper Remedy against Thunder to strike the Sails, and it was requisite to spread them to avoid the Flats. And had this Calamity lasted for eight or ten Leagues, it had been insupportable. But the worst of it was, that throughout that Sea, both North, and South-east, the farther they went, the more little low Islands they met with: And though there were Trees in some of them, yet others were sandy, and scarce appeared above the Surface of the Water: some a League, some more, and some less in Compass. True it is, that the nearer they sailed to *Cuba*, the higher and pleasanter the little Islands appeared. And being a Matter of Difficulty, and to no Purpose to give every one of them a Name, the Admiral called them all in general, *Jardin de la Reyna*, or the *Queen's Garden*.

But as many Islands as he saw that Day, he saw many more and bigger the next Day than he had before; and not only to the North-East, but North-west, and South-west, insomuch that they counted 160 Islands that Day, all parted by deep Channels, which the Ship sailed through. In some of these Islands they saw abundance of Cranes, in Shape and Bigness like those of *Spain*, but that they were red as scarlet. In others they found abundance of Tortoises, and of their Eggs, not unlike Hens, but that the Shells are very hard. The Tortoises lay their Eggs in a Hole they make in the Sand, and cover them, leaving them till the Heat of the Sun hatches and brings forth the Tortoises, which in time grow as big as a great Target. In these Islands they also saw Crows and Cranes like those of *Spain*, and Sea Crows, and infinite Numbers of little Birds that sung sweetly; and the very Air was as sweet as if they had been among the finest Perfumes in the World: Yet the Danger was very great, there being such Abundance of Channels, that much time was spent in finding the way through them.

In one of these Channels they discovered a Canoe of *Indian* Fishermen, who very quietly, without Concern, expected the Boat, which was making toward them; and being come near, made a Sign to them not to approach, till they had done fishing. Their Manner of fishing was so strange, that they were willing to comply with them: It was thus, They had tied some small Fishes they call *Reves* by the Tail, which run themselves against other Fish, and with a certain Roughness they have from the Head to the middle of the Back, stick so fast to the next Fish they meet, that when the *Indians* perceive it, they draw both up together: And it was a Tortoise the *Spaniards* saw taken by these Fishermen, the *Reve* clinging about the Neck of it, where they generally fasten, being by that Means safe from the other Fish biting them; and sometimes are said to fasten upon vast Sharks. When the *Indians* in the Canoe had taken the Tortoise, and two other Fishes they had before, they presently in a very friendly manner came to the Boat to know what they would have; and by their Directions went alone a-board the Ships, where the Admiral treated them very courteously, and understood by them, that there was an infinite Multitude of these Islands in that Sea; and they freely gave all they had, tho' the Admiral would suffer nothing to be taken of them but the Fish, the rest being their Nets, Hooks, and Calabashes full of Water to drink. Having given them some Trifles, they went away very well pleased; and he held on his Course with a Design

not to do so long, because he began to be short of Provisions already; whereas had he been well stored, he determined not to have returned into *Spain*, but East about.

Tho' he was very much spent, not because he suffered Pain, but because he had not slept, or lain in Bed ever since he went from *Spain* till the 19th of *May*, except eight Nights (as appears by his Journal) when he was very much indisposed. And if he had much Care upon him at other times, it was doubled this Voyage, by reason of the innumerable Quantity of Islands among which he was sailing, which were so many, that on the 20th he discovered seventy-one besides many more he saw West-south-west at Sun-setting. Which Islands, or Sands, are not only frightful, by their Multitude appearing on all Sides; but what is yet more terrible is, that every Night there rises off them a great Fog, Eastward, so dismal to behold that it looks as if some great Showers of Hail would fall. The Thunder and Lightning is violent, yet when the Sun rises it all vanishes, Part of it turning to Rain and Wind, which is so usual and natural in that Country, that it did not only happen all those Nights the Admiral was there, but the same was long after observed in those Islands by the *Spaniards* in their Return from the Discovery of *Veragua*. And generally here, at Night, the Wind is North, coming off the Isle of *Cuba*; and afterwards, when the Sun is up, it comes about East, and follows the Sun till it comes to the West.

7. The Admiral, still holding out his Course Westward among the Number of Islands, upon the 22d came to an Island somewhat bigger than the rest, which he called *St. Mary*; and, landing at a Town there, not one *Indian* would stay to talk to the Christians, nor did they find any thing in the Houses but Fish, which is all the Food those People live on, and several Dogs, like Mastiffs, who eat Fish too. Thus, without speaking to any body, or seeing any Thing remarkable, he sailed away North-east among many Islands, and abundance of those Weeds he saw on the Ocean when he discovered the *Indies*, which fatigued him very much; for sometimes he was forced to stand West, sometimes North, and sometimes South, according as the Channels would permit; for, notwithstanding his Care in sounding, and keeping Men upon the Round-top, to look out, yet the Ship often touched, and there was no avoiding it, there being no End of the Flats on all Hands. Sailing on in this manner he came again to *Cuba* to take in Water, whereof they had much need, and tho' there was no Town there, they put in because the Place was wooded, yet one of the Seamen that went ashore going up among the Trees with a Cross-bow, to kill some Bird or Beast, discovered thirty People armed with such Weapons as they use, that is, Spears and Staves, which they wear instead of Swords, and call *Macanas*; among them, he said, he saw one clad in a white Coat or Vest down to his Knees, and two that carried him, with Vests down to their Feet; all three of them as white as *Spaniards*, but that he had no talk with them; for being afraid of such a Number he began to cry out, and the *Indians* ran away without looking back.

The Admiral, the next Day, sent People ashore to know the Truth of it. They could not travel above half a League, because of the Thickness of the Trees and the Bushes, and because that Coast is marshy for two Leagues up the Country, where there are Mountains; so that they only saw Footsteps of Fishermen on the Shore, and abundance of Cranes like those in *Spain*, but bigger. Then sailing about ten Leagues Westward, they saw Houses on the Shore, from which some Canoes came with Water, and such Things as those People eat, which they brought to the Christians, who paid well. And the Admiral caused one of these *Indians* to be stopped, telling him and the rest, by his Interpreter, that he would let him go home as soon as he had directed him in his Voyage, and given some Account of that Country. At which the *Indian* was very much pleased, and assured the Admiral, that *Cuba* was an Island, and that the King, or Cazique, of the Western Part of it, never spoke to his Subjects but by Signs; that all that Coast was very low, and full of Islands, which was found to be true. The next Day, being the 11th of *June*, to pass from one Channel to another, the Admiral was forced to have the Ships

towed over a Flat where there was not a Foot of Water, and all the Breadth of it was not above two Ships Length. Bearing up close to *Cuba*, they saw Tortoises of a vast Bigness, and in such Numbers, that they covered the Sea. At Break of the Day they saw such a Cloud of Sea-Crows, that they darkened the Sun, coming from the Seaward to the Island where they all lighted. Besides them, abundance of Pigeons and Birds of other sorts were seen. And the next Day there came such Swarms of Butterflies that they darkened the Air, and lasted till Night, when a great Rain carried them away.

On the 13th the Admiral perceived that the Coast of *Cuba* ran far West, and that it was a Matter of the greatest Difficulty to sail that way, by reason of Islands and Sands that were on all Sides, and that he already began to want Provisions, for which Reason he could not continue his Voyage as he had intended. He resolving to return to the Town he had begun to build at *Hispaniola*, and to furnish himself with Wood and Water, anchored in the Island of *Evangelista*, which is thirty Leagues in Compass, and seven hundred from *Dominica*. Having directed his Course South, hoping to get out better that way, and sailing through that Channel which looked clearest, after a few Leagues found it shut up, which did not a little trouble and terrify them, seeing themselves, as it were, hemmed in on all Sides, and destitute of Provisions: But the Admiral, who was wise and courageous, said with a cheerful Countenance, that he thanked God for forcing him back the same way he came; forasmuch as if they had continued their Voyage that way they expected to go, it might have, perhaps, happened they might have run themselves into some place, whence it would have been hard getting out, and at a time when they had neither Ships nor Provisions to go back, which at present they could easily do. Thus with great Satisfaction of all the Men he returned to the Island of *Evangelista*, where he had watered; and the 25th of *June* sailed thence North-west towards some small Islands that appeared five Leagues off.

On the 20th, as he was writing his Journal of the Voyage, his Ship run a-ground so fast, that neither Anchors nor other Inventions were able to get it off. It was by Boats drawn off a-head, tho' with some Damage because of beating on the Sand. However, with God's Assistance, they got off at last, and he sailed on as the Wind and shoal Water would permit, always through a very white Sea, and two Fathom deep. Besides which, every Day about Sun-setting he was troubled with mighty Showers which rise in the Mountains from the Morasses near the Sea, which was a great Fatigue to him till he came close to *Cuba*, toward the East, the way he came at first; whence, as he had found before, came off a most fragrant Scent of Flowers. On the 7th of *July* he landed to hear Mass, and there resorted to him an old Cazique, Lord of the Province, who was very attentive at Prayer. When it was ended, he expressed by Signs, it was very well done to give Thanks to God, because the Soul which was good would go to Heaven, and the Body remain on Earth, but that the wicked Souls must go to Hell. And, among other things, said he had been in the Island *Hispaniola*, where he knew some of the chief Men: That he had been at *Jamaica*, and a great way towards the West of *Cuba*; and that the Cazique of that Place was clad like a Priest.

The Admiral sailing thence on the 16th, drew near to *Cape Cruz* in *Cuba*, where he was surprized by such a violent Storm as bore his Ship's Side under Water; But it pleased God they immediately struck all their Sails and dropped their Anchors, but yet they took in so much Water at the Deck, that the Men were not able to pump it out, especially in the Condition they were, being much spent for want of Provisions, for they eat nothing but a Pound of rotten Bisket in a Day, and about half a Pint of Wine, unless they happened to catch some Fish, which yet they could not keep from one Day to the next, because the Weather was always more inclinable to corrupt than in other Countries. And this Want being common to all, the Admiral, in his Journal, speaks thus concerning it: "I am at the same Allowance, God grant it may be to his Honour, and your Highnesses Service; for I

" shall

“ shall never again, for my own Benefit, expose myself
“ to such Sufferings and Dangers; never a Day passing
“ but I see we are all upon the Brink of Death. ”

In this Danger and Distress he arrived at *Cape Cruz* on the 18th, where he was entertained by the *Indians*. They brought him abundance of *Cazibi*, so they call their Bread made of Roots grated, a vast deal of Fish, store of Fruit, and other things such as they eat. The Wind being contrary, so that he could not sail for *Hispaniola*, he stood over to *Jamaica*, and sailed along Westward, close under the Shore; the Country all along most delightful and fruitful, with excellent Harbours at every League Distance, and all the Coast full of Towns, the People whereof followed their Ships in their Canoes, bringing Provisions, which were better liked by the Christians than what they found in the other Islands; the Climate, Air, and Weather, were the same as the rest; for in this western Part of *Jamaica*, there gathered every Evening a Storm of Rain, which lasted about an Hour, more or less, which the Admiral said he attributed to the great Woods in those Countries, for that he knew this was usual, at first, in the *Canary Islands*, *Madera*, and the *Azores*, whereas now the Woods are cut down that shaded them, there are not so great and frequent Storms of Rain as there were formerly.

Thus the Admiral sailed on, though with contrary Winds, which obliged him every Night to seek the Shelter of the Land, which appeared green, pleasant, fruitful, abounding in Provisions, and so populous, that he thought none excelled it; especially near a Bay, which he called *de las Vacas*, because there are nine Islands close to the Land, which he said was as high as any he had seen; and yet it was peopled, and very fruitful and pleasant. This Island he judged to be 800 Miles in compass, and, when fully discovered, computed fifty Leagues in Length, and twenty in Breadth. Being much taken with its Beauty, he had a great mind to stay there, to be fully informed of the Nature of it; but the Want of Provisions, and the Leakiness of the Vessels, would not permit: Therefore, as soon as the Weather was a little fair, he sailed away Eastward; so that on the 9th of *August* he lost sight of that Island, standing over directly for *Hispaniola*, and called the most Eastward Cape of *Jamaica* on the South Coast *Cabo del Farol*.

8. The two Ships that had been missing, came in about six Days after, and the Admiral proceeded on his Voyage, and arriving on the Coast of *Hispaniola*, the *Indians* came in their Canoes, and said, that two had been there from *Isabella*, and that, at the Colony, they were all well. He held on his Course to the Eastward, where he discovered a great Town, and sent the Boats thither for Water. The *Indians* came out armed with poisoned Arrows; they threatened to bind the *Spaniards* with Cords they brought; and this was the Province of *Nigüey*, the Inhabitants whereof were the most warlike People of the Island of *Hispaniola*, and poisoned their Weapons; but when the Boats came ashore, the *Indians* laid down their Arms, and asked for the Admiral, and carried Provisions. He held on his Course, and they saw a great Fish, like a middling Whale, and it had on the Neck a large Shell, like that of a Tortoise, little less than a Target; the Head it held above Water was like a Pipe or But, the Tail like that of a Tunny-Fish, very large, and two vast Fins on the Side; by this Fish and other Observations in the Sky, the Admiral perceived there was like to be a Change of Weather, and endeavoured to get under a little Island, which the *Indians* called *Adamany*, and the *Spaniards* *Saona*, which makes a Streight a little above a League over, with the Island *Hispaniola*, and is about two Leagues in length.

There he came to an Anchor, and the two other Ships, not being able to get in, ran the greatest Hazard. That Night the Admiral observed the Eclipse of the Moon, and affirmed the Difference of Longitude, between that Place and *Cadiz*, was five Hours and twenty-three Minutes; he continued there on Account of the Storm eight Days; and the other Ships being come, he sailed thence on the 24th of *September*, and came to *Cape Engano*, in *Hispaniola*, which the Admiral named *St. Raphael*; they next touched at the Island *Mona*, which

is ten Leagues from *Hispaniola*, and eight from the Island of *Porto Rico*, or *St. John*; being six Leagues in Compass, and on it grow most delicious Melons, as big as a Jar of Oil that will hold six Quarts; being gone from *Mona*, and near *St. John*, the Admiral was seized with such a Fit of the Lethargy, that he lost all his Senses, so that it was thought he could not live; for which Reason the Seamen used the utmost Diligence, and arrived with all the Ships at *Isabella*, on the 29th of *September*, without any farther Certainty of *Cuba* being an Island, than what the *Indians* had told them.

As soon as they arrived, the Admiral understood that his Brother *Don Bartholomew Columbus* was there, and that the Natives of the Island were in Arms against the *Spaniards*. It is impossible to express how much the Admiral was pleased to see his Brother, and it will not be amiss, before we proceed, to give an Account of what befel him, from the time his Brother sent him to propose the undertaking of those Discoveries to the King of *England*. He was along time before he reached that Kingdom, and then learning the Language, the Methods of Court, and gaining Access to the Ministers, occasioned another Delay; so that after seven Years, when he had articulated and agreed with King *Henry VII.* of *England*, he returned into *Spain* to look for his Brother, who having heard nothing from him during that time, concluded he was dead: At *Paris* he heard of his having made the Discovery, and that he was declared Admiral; being told it by King *Charles*, who gave him 100 Crowns towards his Journey, and though he made all the haste he could, his Brother was gone on his second Voyage, with the seventeen Ships; but he had an Instruction, which was left by the Admiral, delivered to him. He went to kiss their Majesties Hands, and visit his Nephews, *Don James* and *Don Ferdinand*, at *Valadolid*, where the Court was; being then Pages to Prince *John*. Their Catholic Majesties did him much Honour, and ordered him to go away to the *Indies*, with three Ships that were to carry Provisions to the Admiral.

He arrived there in *April* 1494, and found he was gone upon the Discovery of *Cuba*. The Admiral thought he had some Comfort in his Brother, and gave him the Title of *Adelantado*, or Lord Lieutenant; which their Catholic Majesties very much resented, saying, that it was not in the Admiral's Power so to do, but that it belonged to them to give that Title: Yet some Years after they confirmed it. *Don Bartholomew* was a very wise Man, and as expert in Sea Affairs as his Brother; somewhat harsh in his Temper, but very brave and free spoken, for which some hated him. The Admiral having established a Council for the Government of the Island, *Don Pedro Margarite*, Commander of the four hundred Men, went with them to *Vega Real*, or *Vale Royal*, ten Leagues from *Isabella*, and quartered them in the Towns there, where they lived without any Order or Discipline, ruining the *Indians*; for a *Spaniard* will eat more in a Day, than one of them in a Month. The Council reproving *Don Pedro*, because he did not check the Licentiousness of the Soldiers, he thereupon began to cavil, refusing to obey them, either in this Particular, or in marching through the Island, as the Admiral had ordered him; and fearing to be punished for those Disorders, he thought fit to embark aboard the three Ships that brought over *Don Bartholomew Columbus*, and return to *Castile*, and Father *Boyl* with him, besides some more of his Party. Being come to the Court, they gave an Account that there was no Gold in the *Indies*, and that all the Admiral said was mere Invention. The Soldiers being left without their Commander, dispersed themselves about the Country, living like Men without a Chief. Whereupon a *Cazique*, whose Name was *Guatiguanti*, who had a large Town upon the Bank of the great River, killed ten Christians, and privately sent to set fire to a House where some sick Men lay; and the *Indians*, in several Parts of the Island, killed six more; and Calumnies of the *Spaniards* being spread abroad every where, in such Sort, that all the People hated them, even them who had not seen them, and particularly the four principal Kings, *Guarinoex*, *Caunabo*, *Behechico*, and *Higuana-*
nama,

nama, and all that followed and obeyed them, being an infinite Multitude, were very desirous to turn the *Spaniards* out of the Country.

Only *Guacanagari*, King of *Marien*, did not stir, but on the contrary, kept a hundred Christians in his Country, giving them Part of what he had, and treating them affectionately, as he had done from the beginning. Some Days after the Admiral's Arrival, *Guacanagari* went to visit him, expressing Sorrow for his Sickness and Troubles; and assuring him he knew nothing of the killing of the Christians; that he was his Friend, and for that Reason all the Natives bore him ill Will, and particularly those that were in Arms in the *Vale Royal*, and other Places. The Admiral resolving to take the Field, in order to disperse those People, and reduce the Island to Peace, *Guacanagari* offered to bear him Company with his Subjects; but before he went out in Person, he sent to begin the War with *Guatiguaniti*, who had killed the ten Christians, that the Punishment might not be delayed, and to prevent his growing bolder. They killed several of his Men, and took many Prisoners; and he fled, and some of the Prisoners were sent to *Spain*. But as *Caunabo* was the most potent Lord of all the Island, and brave in his Person, and had three valiant Brothers, being King of the Province they called *Maguana*, the Admiral had his Eye more on him; and thinking it would be the best to subdue him by Policy, because to do it by Force would be difficult, he contrived to send *Alonso de Hojeda*, with nine *Spaniards*, under Colour of carrying him a Present.

The *Indians* valued Tin more than Gold, and rejoiced when they got any of it, or of the other Metals they carried from *Spain*, thinking they came down from Heaven; and when the Bell at *Isabella* rung, and the *Spaniards* upon it went to Church, they thought it spoke, and the Fame of it reached *Caunabo*; who had often thought of begging it of the Adelantado, that he might see the Turey of *Biscay*, so they called the Tin; for Turey, signifies Heaven; and they so highly valued Tin and other Metals, that they called it Turey, and the *Spaniards* added of *Biscay*, and therefore they said the Turey of *Biscay*. *Hojeda* being come to the Province of *Maguana*, about 60 or 70 Leagues from the Colony of *Isabella*, the *Indians* were in a Consternation to see him on Horse-back, as believing that the Man and Horse were all of a Piece.

They told *Caunabo* that some Christians were come, being sent by the Admiral, whom they called *Guamiquini*, and that they had brought him a Present of that they called Turey of *Biscay*, which very much rejoiced him. *Hojeda* being introduced, kissed his Hand, as the rest did, and then shewed him the Present, being Fetters and Manacles, very bright and well polished, that looked like Silver: He told him the Kings of *Spain* wore them, because they came from Heaven, that they were wont to put them on at the *Areitos*, so the *Indians* call their dancing Matches; and that it would be proper for him to go with them to bath himself in the River *Taqui*, which was half a League off, that he would there put them on him, and he should come back on Horse-back, and then would look like the Kings of *Spain*. Accordingly he went one Day, attended by a few Servants, with *Hojeda*, to the River; little imagining that nine or ten Men should have a Design upon him, in a Place where he was so powerful, he washed and refreshed himself, and being very earnest to try on the Present, having ordered the *Indians* to keep at a Distance, though they always avoided being near the Horses; they set him up behind *Hojeda*, and put on the Fetters and Hand-cuffs, the King observing all very attentively; *Hojeda* took two turns about, the better to palliate his Design, and the third time rode off with the *Spaniards* about the Horse, till the *Indians* lost Sight of them; then they drew their Swords and threatened to kill him if he did not sit still whilst they tied him with Cords to *Hojeda*; and traveling with Expedition, they arrived at *Isabella*, and delivered him to the Admiral, who kept him in his House, fettered, and when the Admiral came in he never paid him any Respect, though he did *Alonso de Hojeda*; being asked why he did so, he answered, that the Admiral

durst not go to his House to seize him, and *Hojeda* did.

The Admiral resolved to send him into *Spain*, and being embarked with other *Indians*, there arose so great a Storm, that the Ship was cast away, and *Caunabo* and the *Indians* perished; upon which the Admiral ordered two Caravels to be provided, that he might not be left without Ships. But let us now look over to *Spain*.

The Return of *Anthony de Torres* was very pleasing to their Majesties, which they signified to the Admiral by his Brother, giving him Thanks for the Toils he underwent, promising always to support him. And forasmuch as their Catholic Majesties were willing to please the Admiral, and that this Affair of the *Indies* should prosper, they ordered the Dean *John Roderiguez de Fonseca* to fit out four Ships with Expedition, furnished with such things as the Admiral required: And they appointed *Anthony de Torres* to return with them; by whom they wrote to him their Letter, dated at *Segovia* the 16th of *August*, again repeating their Thanks for his good Services, promising to promote him to the utmost, because all he had said and proposed had proved as true as if he had seen it before he went upon the Discovery: And tho' they had received the Account he had sent them, yet they desired he would more particularly acquaint them what Islands he had discovered, the Names of them before, and those he had given them, with the Distances from one to another; what he had found in every one of them, what sort of Weather there was in those Parts every Month, and how the things that were sowed came up, because some said there were two Winters and two Summers, and various sorts of Birds: That all the several things he had asked for in his Memorial were sent him. And to the end that they might oftener hear from him, it was thought expedient that a Caravel should go from *Spain* every Month, and one return from the *Indies*. The Affairs with *Portugal* being adjusted, they had sent him a Copy of the Articles concluded, that he might know and observe them on his Part: That as for the Line of Partition that was to be drawn, that being a Matter of much Difficulty and great Trust, their Highnesses could wish, if it were possible, the Admiral should be present and draw it, together with those that were to be employed about it by the King of *Portugal*; and that in case he could not come himself, he should send his Brother *Don Bartholomew*, or some other intelligent Person with Draughts and authentic Relations, and his Opinion concerning what ought to be done in the Case with the utmost Expedition, that it might come in time, and not disappoint the King of *Portugal*.

The seizing of *Caunabo* very much incensed his Brethren, who resolved to make War upon the *Spaniards* with the utmost of their Force. The Admiral, perceiving that abundance of Men drew together, and all the Country armed, took the Field with two hundred Foot, twenty Horse, and twenty Wolf-Dogs; which, as the *Indians* were naked from Head to Foot, made terrible Havock among them. There were no more Soldiers, because the rest were sick. The Admiral set out on the 24th of *March* 1495, taking along with him his Brother, the Adelantado, *Don Bartholomew Columbus*, and the King *Guacanagari* with his Men. He entered the *Royal Plain*, and discovered the Enemies Army; in which King *Manicater* had a great Number of Men. And the whole seemed to amount to an hundred thousand. The Adelantado gave the Charge, and the Men and Horses and the Dogs so terrified them, that they were soon routed, and a vast Number of them were killed and taken, the latter being adjudged Slaves, and many sent into *Spain* on board *Anthony de Torres's* four Ships. The Admiral continued ranging round about the Island near ten Months, severely punishing those he found guilty, having some Encounters with *Caunabo's* Brothers, who made the greatest Resistance; but finding their Power too weak, they and *Guarinoex*, being the chief Kings in the Island, resolved to submit themselves to the Admiral.

The Admiral having thus reduced all the People under the Obedience of their Catholic Majesties, ordered they should pay Tribute in this Manner: The Inhabitants of the Province of *Cibao*, and those of the *Royal Plain*, and those

those near the Mines, above fifteen Years of Age, to pay a small Hawk's Bill full of Gold quarterly; and all other Persons, a Quarter of an hundred Weight of Cotton each; and only King *Manicatem* to pay every Month half a Gourd full of Gold, worth an hundred and fifty Pesos. A certain Coin made of Copper or Brass with a certain Figure on it was struck, and changed upon every Payment of the Tribute, that every tributary *Indian* might wear it about his Neck, in order to shew who had paid. Upon this Occasion *Guarinoex*, King of the great *Royal Plain*, offered the Admiral to sow Corn throughout the Country from *Isabella* to *Santa Domingo*, which is from Sea to Sea fifty-five Leagues Distance, which would furnish all *Castile* with Bread, provided he would not require any Gold of him, because his Subjects did not know how to gather it. But the Admiral being a Stranger, alone, and envied by the Ministers of their Catholic Majesties, and, like a discreet Man, being sensible that the Wealth he sent must be his Support, he pressed for Gold, tho' in other respects he was a good Christian, and feared God. And accordingly he moderated the Tribute, being sensible that it could not be paid; for which some had fled to the Mountains, and others wandered into remote Provinces.

This Oppression, and the *Indians* seeing there was no likelihood of the *Spaniards* leaving the Country, because there were no Ships in the Harbour, and they built Houses on the Land with Stone and Timber, made them melancholy; and they asked them, Whether they ever designed to return home? And having found by Experience, that the *Spaniards*, compared with them, were very great Eaters, they thought they had come thither only to eat; whereupon, observing that many of them were sick, and that the Provisions brought them from *Spain* were spent, many Towns conspired to contrive some Method that they might all perish, or, to avoid that, be obliged to depart the Island.

9. In order to push this Design with Effect, the *Indians* thought best to forbear sowing, that there might be no Corn, and to retire themselves to the Mountains, where they had many good Roots to eat, and might help out with hunting *Utias*, a sort of Rabbit, whereof there is a vast Plenty. This Contrivance little availed them; for though the *Spaniards* suffered much through Hunger, and in Pursuit of the *Indians*, they, however, went not away; but many dying through downright Want obliged them to eat loathsome things, so that all the Calamity fell upon the *Indians* themselves; for they ranging about the Mountains with their Wives and Children, enduring much Hunger, and having no opportunity to hunt, fish, and get Provisions, the Hills and Rivers about which they skulked being full of Damps, a pestilential Distemper reigned among them; so that what through this, and the Wars, till the Year 1496, one Third of the Inhabitants perished.

But let us now look over to *Spain*, where Father *Boyl* and Don *Pedro Margarite*, as they agreed to go away together without Leave, so they also combined in speaking ill of the *Indies*, and misrepresenting the Enterprise, because they had not found Gold for them to plunder, in Chests, or growing on the Trees. They also alledged that the Admiral did not behave well, not having been in the Island from his Return thither in the second Voyage, till he came back from the Discovery of the Island of *Cuba*, full four Months. And there being Letters also that gave an ill Character of the Admiral, by those who went on board the four Ships under the Command of *Anthony de Torres* (for there are always Malcontents) their Catholic Majesties, at the time the Admiral took the Field against the *Indians* in the *Royal Plain*, sent away *John Aguado*, a Native of *Seville*, Groom of the King's Bed-Chamber, to observe what was doing in the Island *Hispaniola*, taking with him four Ships laden with Necessaries for the Relief of the People there.

John Aguado carried with him Credentials, dated *April* the 9th, 1495, and arrived at *Isabella* about *October*, at the time when the Admiral was carrying on the War against *Caunabo's* Brother in the Province of *Maguana*. At *Isabella*, by Words, and even by Actions, he pretend-

ed to have extraordinary Authority, interposing in Matters of Government, seizing some Persons, and reproving the Admiral's Ministers, shewing little Respect to Don *Bartholomew Columbus*, who had been left Governor there during his Brother's Absence. Nor was it long before *John Aguado* thought fit to go after the Admiral, and took Horse and Foot along with him: And those who went with him by the way gave out, that another Admiral was come, who would put the former to death; and the Natives being discontented on account of the Wars and of the Tribute of Gold, they were much pleased with this News; and some *Caziques* met privately in the House of King *Manicatem*, whose Dominions were near the River *Yagui*, where they agreed to give in their Complaints against the Admiral, and to seek Redress from this new Minister.

The Admiral, being informed that *John Aguado* was looking for him, resolved to return to *Isabella*, where in the Presence of the People he read their Highnesses Letter, with Sound of Trumpet and great Solemnity: *John Aguado* could not forbear very soon discovering his Indiscretion, thrusting himself into many Affairs, without any Respect to the Admiral, and giving thereby an ill Example to others. His Conduct being pernicious to the Admiral, the bold Threats he made, and the People being discontented on account of the Troubles, and because they had nothing to eat but the Allowance given them out of the King's Stores, which was a Porringer of Wheat, ground in a Hand-mill by some, and by others eaten boiled, and a slice of rusty Bacon, or rotten Cheese, with a few Beans, or *Spanish* Peas, and no Wine, and the Admiral obliging them, as they were in the King's Pay, to work at the Fortifications, his own House, and other Structures, they complained to *John Aguado*; for as to those who were in health, by ranging about the Island they fared better; and he thought these Complaints sufficient to lay before their Majesties.

At this time the four Ships that had carried over *John Aguado* perished in the Harbour, in those Tempests which the *Indians* call Hurricanes, and there was nothing left to carry him back but the Admiral's two Caravels, who observing his Presumption, and being informed that others had misrepresented him at Court, where he had nothing to support him but his own Merit, he resolved to appear before their Majesties, to clear himself of all those Slanders, and at the same time acquaint them with what he had found, in his second Discovery, upon the Island of *Cuba*, and his Opinion as to the Partition that was to be made of the Ocean between the two Crowns of *Castile* and *Portugal*: And to the end that all things might be thoroughly settled, he would first leave other Forts in a good Posture, which he had begun, besides that of *St. Thomas*, for the Security of the Country, being the *Magdalen*, called the *Lower Macorix*, in the *Royal Plain* belonging to the *Cazique Guanaconel*, three or four Leagues from the Place where the Town of *St. Jago* now stands; another called *St. Catherine*; another on the Bank of the River *Yagui* on the Side of *Cibao*, called *Esperanza*; another in the Kingdom of *Guarinoex*, in the *Royal Plain*, called the *Conception*. The *Caziques*, being much oppressed by the Burthen of the Tribute, discovered to the Admiral that there were good Gold Mines on the South Side, and that he might send his *Spaniards* for it.

Now as it concerned the Admiral to discover much of that Sort, to support his own Credit; and this coming at the time when he was resolved to return to *Spain*, he sent *Francis de Garay* and *Michael Diaz*, with some Men and the *Indian* Guides: They went from *Isabella* to the Fort *Magdalen*, and thence to the *Conception*, all the way over the *Royal Plain*: They next ventured through a Pass two Leagues in Length, which led them into another Plain, called *Bonao*: they advanced some Leagues farther along the Ridges of *Bonao*, and came to a great River called *Hayna*, very fruitful, and where they were told there was much Gold, as there was in all the Brooks, which they found true; for, digging in several Places, they met with such Plenty, that one Labourer, in a Day, could get above three Pesos: These they called the Mines of *St. Christopher*, from a Fort the Admiral ordered to be there built, and afterwards they were called the Old Mines.

H

When

When the Caravels were equipt and provided, the Admiral appointed his Brother Don *Bartholomew Columbus* his Lieutenant, a Person capable of a great Command; and, in case he died, his Brother *James*; earnestly charging the People to be obedient to him: He also appointed *Francis Roldan*, a Man of good Understanding, and who also had behaved himself well in his Office of Alcalde, and others he had employed him in, chief Alcalde of the whole Island, to administer Justice; for tho' he was not a Lawyer, yet being his Servant, and a discreet Man, he thought fit to entrust him in that Place. He went aboard one of the Caravels, and *John Aguado* went in the other; and in regard that their Catholic Majesties had ordered that the most sickly, and others whose Wives and Kindred had complained that the Admiral would not permit them to return into *Spain*, should have Leave, he took on board to the Number of two hundred and twenty, or better. He sailed on the 10th of *March* 1496, and, going to take a View of *Puerto de Plata*, carried his Brother Don *Bartholomew* along with him, because he designed to settle a Colony there.

Don *Bartholomew* returned by Land; and the Admiral, by reason of contrary Winds and Currents, failed to the Eastward with much Difficulty, as far as Cape *Eganno*, and on the 22d he lost sight of it. On the 9th of *April* he came to an Anchor at *Marigalante*, and the next Day at *Guadalupe*, where many Women came with Bows and Arrows to hinder their Landing; and because the Boats could not come near the Shore, as the Sea ran so high, they sent out two *Indians*, having thirty aboard, from *Hispaniola*, who told the Women that they would do them no Harm, but only take in Provisions. They answered, they should go to the other Side of the Island, where their Husbands were; and when they came, a great Number of Men appeared, shooting Flights of Arrows; but they fell short; and the Boats firing some small Guns, they all fled to the Mountains, leaving their Houses and Goods, where the Christians took and destroyed all they found. Being acquainted with the Way of making Bread, they fell to work, and made enough to supply their Want. Among other things they found in the Houses, there were Parrots, Honey, Wax, and Iron, whereof they had Hatchets to cut Looms like those for Tapestry-work, in which they wove their Tents. Their Houses were square, and not round as is usual in the other Islands. While the Bread was making, the Admiral sent forty Men up the Country, to learn something of it; who next Day returned with ten Women and three Boys, the rest of the People being fled.

Among these Women was the Wife of a Cazique, whom a Man born in the *Canaries*, that was very nimble, had much Difficulty to overtake; and she had got from him, but, seeing him alone, she thought to take him, and closing she got him down, and had stifled him, but that others came to his Assistance. These Womens Legs were swathed with Cotton from the Ankle to the Knee, that they might look thick; which Ornament they called *Coi-ro*, and looked upon it as very genteel, and those they girded so hard, that, if it happened to slip off the Leg, that Part appeared very thin. The same both Men and Women used in *Jamaica*, who swathed their Arms up to their Armpits, that is, about the smallest Parts, like the old-fashioned Sleeves among us. These Women, as soon as their Children could stand upon their Legs, gave them a Bow, that they might learn to shoot; and they all wore their Hair long and loose upon their Shoulders; nor did they cover any Part of the Body. That Lady they took said, that the Island was only inhabited by Women, and that those who would have opposed them on landing were Women, except only four Men, who were there accidentally from another Island; for at a certain time of the Year they came to sport with them. The same was observed by Women of another Island, called *Matrimonio*, of whom she gave the same Account we read of the *Amazons*; and the Admiral believed it, by what he saw among those Women, because of their Courage and Strength. They also say these Women seem to be endowed with clearer Understandings than those of the other Islands; for in other Places they reckon the Day by the Sun, and the

Night by the Moon, whereas these Women reckon by Stars, saying, when such a Star is North, then it is time to do so and so.

When they had made Provision of Bread for twenty Days, besides what they had aboard, the Admiral resolved to continue his Voyage towards *Spain*; but perceiving this Island was an Inlet to the others, he thought fit first to satisfy those Women with some Gifts for the Loss they had sustained, and then sent them all ashore, except the chief Lady, who chose to go into *Spain* with her Daughter, among the other *Indians* of the Island *Hispaniola*, one of whom was *Caunabo*, who, it has been said, was the chief Man in all the Island, and that because he was not a Native of it, but of the *Caribes*; and therefore the Lady was content to go into *Spain* with the Admiral, who having furnished himself with Bread, Wood and Water, set sail on the 20th of *April* from *Guadalupe*, with the Wind very scant, keeping near the Latitude of 22; for at that time they had not found out the Method of running away North, to meet the South-west Winds.

Having made but little Way, and the Ships full of People, on the 20th of *May* they all began to be much afflicted for want of Provisions, which was so great, that they had but six Ounces a Day for each Person, and less than a Pint of Water, without any thing else. And tho' there were eight or nine Pilots in those two Sloops, yet none of them knew where they were: But the Admiral was confident they were but a little West of the *Azores*. Thus continuing their Voyage, tho' all the Pilots were at a loss, on the 8th of *June* they were in sight of *Odemira*, between *Lisbon* and *Cape St. Vincent*, all the Pilots for several Days having still made for the Land, except the Admiral, who the Night before slackened his Sails for fear of Land, saying, he did so because they were near *Cape St. Vincent*, which all laughed at, some of them affirming they were near the *English Channel*; and even those that erred least said they were on the Coast of *Galicia*, and therefore ought not to take in any Sail, it being better to dye on Shore than starve miserably a Sea; the Scarcity being so great, that there were many, who like the *Canibals*, were for eating the *Indians* they had a-board: And others, to save the little Provision there was left, were for throwing them over-board; which they would have done, had not the Admiral used all his Authority to prevent it, considering they were human Creatures; and therefore it so pleased God to reward him with the Sight of Land next Morning, as he had promised them all; for which reason he was afterwards looked upon by the Seamen as most expert, and almost prophetic in Sea Affairs.

10. The Admiral being landed in *Spain*, began to prepare for his Journey to *Burgos*, where he was favourably received by their Catholic Majesties, who were there celebrating the Nuptials of Prince *John*, who married *Margaret of Austria*, a Daughter of *Maximilian* the Emperor, who was conducted into *Spain*. The Admiral being come to *Burgos*, he presented their Majesties with several things he brought from the *Indies*, as well Birds and Beasts, as Trees, Plants, Instruments, and other things the *Indians* use for their Service and Diversion; also several Girdles and Masks, with Eyes and Ears of Gold; besides much Gold Sand, gross and small, as Nature produced it, some Grains as big as Vetches, some as Beans, and as Pigeons Eggs. This was not always so much valued, because in Process of time there were Pieces of Gold found that weighed above thirty Pounds: Yet at this time what he brought was much esteemed, in Hopes of what was afterwards found: And accordingly their Majesties received it in good part. When the Admiral had given them an Account of all that related to the improving and peopling the *Indies*, he was desirous to return with Speed, for fear some Disaster should happen in his Absence, especially because he had left the People there in great want of all Necessaries.

Though he pressed hard on this Account, yet the Affairs of that Court being subject to Delays, he could not be so soon dispatched, but that ten or twelve Months elapsed before he obtained two Ships; which were sent with Succours under the Command of *Peter Fernandez*

Colonel.

Colonel. These set out in *February*, 1498; and the Admiral staid to negotiate the obtaining such a Fleet as was requisite for him to return to the *Indies*. But he was forced to stay above a Year at *Burgos* and at *Maderia del Campo*, where, in the Year 1499, their Catholic Majesties granted him many Favours, and gave the necessary Orders for his Affairs, and for the Government and Settling of the *Indies*.

His Credit with their Catholic Majesties was still tolerably good, tho' he had met with some Enemies in *Spain*, as well as the *Indies*, who laboured all they could to decry his Merit, and to propagate an Opinion, that he had not done so much as he had pretended, or as at first, and upon his immediate Return from the *Indies*, was universally allowed him. For such is the Nature of Envy, that, though often struck dumb by the Lustre of true Merit, it is a Monster never to be slain, at least so long as the Hero lives against whom it directs its Rage. In time, therefore, and after brooding in Silence, Envy hisses again as loud as ever: And as Meanness is a Quality inseparable from the Multitude, those Hisses, tho' over and over exploded, are a-fresh listened to and regarded. This has been the Case of all the great Men that the World has produced, and therefore we need not wonder it was the Case of *Columbus*. But to vindicate his Memory, to support the Truth, and, as far as it is in our Power, to curb the Malice of succeeding Times towards Men of equal Worth, we will bestow a few Remarks upon this Section likewise, in order to render it more useful and instructive to our inquisitive, generous, and public-spirited Readers.

II. In order to explain clearly the Controversy between the Admiral and his Opponents, we are to observe, that they acted and reasoned upon very different Principles. The Admiral at first intended to discover Lands hitherto unknown to this Part of the World; which, from the Notion he had of their Situation, he believed to be a Part of the *Indies*, and consequently abounding in those Commodities which are brought from the *Indies*, and are most esteemed in *Europe*. His Conjecture, certainly, was not improbable, nor can it be said that he failed of Success, since he opened a Passage to the new World, and plainly made it appear that he had Skill sufficient to navigate a Ship to those Coasts, of which he had no Notice whatever, but from the Light of his own Reason. He brought over from those Countries Gold, some sorts of Spice, Birds of beautiful Colours, several kinds of rich Woods, both in Colour and Scent, and People of quite a different Complexion from the Inhabitants of *Europe*. In this second Voyage he had prosecuted and improved his former Discoveries to such a degree, as to be able to affirm, that there were innumerable Islands in these new Seas; that they were all of them Countries pleasantly situated, blessed, for the most part, with a rich Soil, and abundance of fine Rivers, plentifully stocked with Wood, and in all Appearance with Metals; inhabited by a Crew of weak, timorous, and slavishly-inclined People, who were able to make little or no Resistance against the *Europeans*, and who were likely, therefore, together with their Lands and Goods, to fall entirely into their Power, and become a Part of their Possession. He had formed a Scheme of Civil Government, and settled a very effectual Discipline among the Soldiers he left behind him, in order to secure all he had thus discovered, to the Use of their Catholic Majesties, as well as to search out and render manifest all the Advantages that might be derived to the *Spaniards* from his Discoveries. In this Light, to be sure, he had performed all he had promised; was well intitled to all the Grants that had been made him, and merited the

Favour of his Sovereigns, as well as the Applause of their Subjects.

But those who endeavoured to lessen his Merit, to obscure his Fame, and to bring him into Discredit with their Catholic Majesties, went upon this Pretence, that he had undertaken to discover a Country exceedingly rich, and that on his Return from his first Voyage he had boasted of entire Success in this respect; whereas they who went over with him in his second Voyage had found no such Matter, had not been able to collect any great Quantities of Gold, or to make vast Fortunes at once, as they had promised themselves. It is very remarkable that when their Catholic Majesties applied to the Pope for his Grant of these Lands which were already discovered, and of those that by the Skill and Industry of the Admiral, and such as prosecuted his Designs, should be discovered, the principal Reason assigned for the obtaining this Grant, was the converting these *Indian* Nations to the Christian Faith, and thereby enlarging the Bounds of the Church. It was therefore altogether absurd and ridiculous to pretend, that because there were not as many Gold Mines found as were expected, or that those Mines were not so rich as they at first flattered themselves they were, this Discovery should be either neglected or despised, inasmuch as such a Behaviour was altogether inconsistent with those high Professions of Zeal for the Christian Faith, from whence their Majesties had assumed the Title of Catholic. Yet, what was no less remarkable, the Person who was at the Head of the Admiral's Enemies, was Father *Boyl*, the very first Christian Priest that, in Compliance with the Reasons offered to the Pope, their Catholic Majesties had sent over to convert the *Indians*. This Man, with all his Heat and Malice, could not deny, but there were People enough to be preached to, and that they were tractable enough in point of Religion; his only Objection was, that it did not appear that there was so much Gold in the Country where he had been as he expected; and this Objection wrought so powerfully with many of the *Spanish* Clergy, that from being great Promoters of this new Discovery, and warm Admirers of this great Man who had made it, they began now to treat the thing slightly, and to misrepresent the Admiral as one who had not kept his Word.

The wise *Columbus* foresaw all this in the *Indies*, which induced him to take the Measures he did of putting the *Indians* under a Tribute, that he might send over considerable Quantities of Gold, that the Credit of this Discovery might be kept up, and that he might be able to perfect, for their Catholic Majesties Benefit and his own, that Design in which hitherto he had beyond all reasonable Expectation succeeded. This excessive and ill-timed Appetite for Gold produced all those Mischiefs and Inconveniencies in the first *Spanish* Colonies to which we have seen them exposed in the Course of this Section, and which there is no doubt the Admiral himself foresaw, at the same time that he was sensible he could not avoid them. It was to set these things in a clear Light, to justify his own Conduct, to prevent the new World from being lost again as soon as it was found; and to secure if possible a Reward for his past Labours, by obtaining the Means of rendering them effectual, that he came over to *Spain*; where we have seen how he was received, and what Difficulties he met with in procuring the Supplies that were necessary for undertaking a third Voyage to the *West Indies*, the History of which is to be the Subject of the next Section, and which will contain Events still more curious, and more entertaining, than those which have been already related.

SECTION IV.

The Third Voyage of Don CHRISTOPHER COLUMBUS, to the West Indies, in which he first saw the Continent of America, including the Troubles to which he was exposed, and his being sent home in Irons.

1. *The Difficulties the Admiral had to surmount, in procuring a Fleet sufficient for his intended Return to Hispaniola.*
2. *A complete View of the Transactions in the Spanish Colonies, and of the Rebellion that happened there during the Admiral's Absence.*
3. *What happened to the Admiral in the Prosecution of the Voyage, and the Measures he took for sending Supplies.*
4. *The Admiral steers a new Course for Discovery, and actually falls in with Part of the Continent, now called the Province of Paria.*
5. *Examines it, and enters into Correspondence with the Natives; and yet was not clearly convinced whether it was the Continent or not.*
6. *Passes through the Boca del Drago, and resolves to steer directly for St. Domingo.*
7. *The Arrival of the Store-ships before the Admiral, and his coming to the Island.*
8. *A succinct History of the Troubles in Hispaniola, and of the Admiral's Endeavours to pacify them; which however prove altogether ineffectual.*
9. *The Court of Spain, being alarmed at the many Complaints sent from the Indies, depute a Person to go thither, with full Power to hear and determine them.*
10. *In consequence of this extraordinary Commission, the Admiral is sent home in Irons, and his two Brothers with him.*
11. *His Arrival in Spain, and the Reception he met with.*
12. *The true State of the Discoveries made to this time by the Spaniards, and their Importance.*
13. *Remarks and Observations on the foregoing Section, and on the Accidents that prove commonly detrimental to Discoveries.*

1. **T**HE Accounts given by the Admiral Don Christopher Columbus, both of the Indies in general, and of his own Conduct in particular, proved so satisfactory to their Majesties, and to the principal Persons who composed their Council, that 'twas resolved to send him back again, as he proposed, vested with such Powers, and furnished with such Supplies, as he judged requisite; for, when they came to be examined by competent Judges, the Complaints of his Enemies appeared to be as ill-founded, as the Calumnies invented by mean Minds against Persons of distinguished Merit usually are. But tho' his Enemies were not able either to deprive him of his Authority, or to hinder him from returning with a greater Measure thereof to the Indies than he enjoyed when there before, yet they had Interest sufficient to throw great Obstacles in his Way, and to delay from time to time the Performance of those Promises that had been made him. The Succours he demanded were, eight good Ships, five hundred Men, and a sufficient Quantity of Provisions of all Sorts, of which he gave in a very clear and particular Estimate, amounting in the whole to six Millions of Marvedies, which make something more than 4,500*l.* of our Money. But as he well enough knew that such an Embarkation could not be soon made, and was sensible also of the Distress to which the Spanish Colonies might be exposed by the Delays that might attend it, he desired that two Ships laden with Provisions might be first sent, and that he might go in Person with the other six, as soon as they could be got ready.

This as a thing reasonable in itself their Catholic Majesties very readily consented to, and yet it was a long time before he could procure the two first Ships to be sent away; and as for the other Ships, the equipping of them went on so slowly, and the Money necessary for that Service was issued so negligently, that the Admiral found even his large Stock of Patience almost exhausted before this Fleet was ready to sail. This was chiefly owing to the Ill-will of Don Juan Fonseca, Archdeacon of Seville and afterwards Bishop of Burgos, who had been formerly one of the best Friends the Admiral had, but was now entirely gained over by his Enemies, chiefly by the Intrigues of Father Boyl, and proved afterwards himself the most violent Enemy the Admiral had. But how much soever these Discouragers might perplex and disturb the Mind of this great Man, they were far enough from diverting him from his Purpose, or even from lessening that Zeal and Diligence with which he had hitherto prosecuted this great Affair: On the contrary, the more Trouble he met with, the more Impediments were thrown in his Way, with so much the greater Vigor, with so much the more Constancy, he applied himself to the Performance of what was requisite to accomplish it.

It was with this View that he went himself to Seville, to hasten the Preparations that were making there, and to give such Directions as he thought might most contribute to render these Preparations effectual. Yet it is more than probable, that, with all this Activity and Diligence, he would scarce have been able to have carried his third Expedition into Execution, if it had not been for the Countenance and Protection afforded him by Queen Isa-

bella, who was a Princess of vast Understanding, and of a generous and magnanimous Disposition; whereas her Husband King Ferdinand, though he was undoubtedly a great Politician, yet there was such a Darkeness in his Temper, and such a Doubtfulness in his Conduct, that there was no great Cause to wonder that the Admiral was not much in his Favour, or that the King did not stand very high in his Esteem. But before we come to speak directly of the Admiral's Voyage, it will be necessary to give the Reader an Account of what passed in the Indies during his Absence.

2. The three Ships the Admiral sent from Cadiz arrived at Isabella about the Beginning of July 1496, to the great Joy of the People for the Provisions they brought, and the News of the Admiral's safe Arrival in Spain; for Hunger being the greatest Distemper among them, nothing so much rejoiced them as Ships coming with Provisions from home. Don Bartholomew Columbus dispatched the Ships for their Return, and sent aboard them three hundred Indian Slaves, because their Majesties having been informed that some Caziques killed the Spaniards, they ordered that all who were guilty should be sent into Spain. And forasmuch as the Admiral had also acquainted their Majesties, that upon his Return from his Discovery along the Islands of Cuba and Jamaica, as he sailed along the South Coast of Hispaniola, it had appeared to him a most beautiful Country, and that there were fine Inlets which he thought might be good Harbours, and could not be far from the best Mines he had discovered, which he called *St. Christopher's*, their Highnesses, in the Letter he found at Cadiz, answered him, that he might do as he thought best in that Case, which they would approve of, as done for their Service. Hereupon the Admiral wrote from Cadiz to his Brother Don Bartholomew, ordering him immediately to go over to the South Side, and find a convenient Harbour; and if the Place was good, to carry away all that was at Isabella, and abandon it.

Accordingly Don Bartholomew, leaving his Brother Don James in his Place, set out with the ablest Men for the Mines of *St. Christopher*, and arriving at the River *Ozama*, so called by the Indians, found it very agreeable, and inhabited on both Sides. He viewed and sounded, and found that Ships of above three hundred Tons Burthen might come up it. Whereupon he resolved to build a Fort of Earth on the marshy Part of the River, at the Mouth of the Harbour on the East Side. He sent for Men from Isabella to begin the Settlement, and gave it the Name of *Santa Domingo*, either because he came thither on *St. Dominic's Day*, or on a *Sunday*, called in Spanish *Domingo*, or because his Father's Name was *Dominic*; and tho' the Admiral always called it the *New Isabella*, yet the other Name has prevailed. There remained at the *Old Isabella* the People that were building two Caravels, and some other Men: The Work being begun, Don Bartholomew resolved to view the Kingdom *Xaragua*, of whose State and Government he had heard much Discourse. Having left *Santa Domingo*, thirty Leagues from thence he came to the great River *Neyba*; where a numerous Army of Indians were drawn up; for *Bobechico* King of *Xaragua*, being

ing informed that the *Spaniards* were coming, resolved to oppose them. Don *Bartholomew* gave them to understand, that he came not to make War, but to visit the King and his Sister, and was thereupon received with much Pomp and Rejoicing. Proceeding thence thirty Leagues farther, he came to *Xaragua*: All the prime Men of the Province received him with Dancing and Singing, and other sorts of Rejoicings; he was conducted to the King's Palace, where Supper was ready, being Bread made of Cazabi, Utias boiled and roasted, and a prodigious Quantity of Sea and Fresh-water Fish. After Supper they conducted all Don *Bartholomew's* Company to their respective Quarters, their Beds being Cotton Hammocks. The next Day, in the Square where the King, his Sister, and Don *Bartholomew* were present, there appeared two Parties of Men armed with Bows and Arrows, who made a Skirmish after the manner of *Spain*, practised with Canes instead of Spears; but by Degrees they began to grow hot, and many of them were wounded, and four dropped down dead; and all this with much Satisfaction, without regarding the Dead and Wounded; and many more had suffered, had not the King, at the Request of Don *Bartholomew* and the *Spaniards*, commanded them, when most furious, to give over.

After the Entertainment Don *Bartholomew* told *Bohechico* and his Sister, that his Brother, the Admiral, was gone to visit their Majesties of *Spain*, his Sovereigns, to whom many Lords of the Island were already become Tributaries; and that he came thither to the end that he should own and pay Tribute to them. He answered, That as no Gold was found throughout all his Dominions he could not pay Tribute. Don *Bartholomew* told him, it was not his Design that any one should pay Tribute any otherwise than what his Country afforded; upon which he said, he would give him as much Cotton and Cazabi as he would demand, and ordered his People to plant Cotton, because they were to pay Tribute of it to their Majesties of *Spain*, and, in their Name, to the Admiral, and to his Brother Don *Bartholomew*, who was then in his House. Having thus concluded with *Bohechico*, Don *Bartholomew* thought fit to return to the Mines of *Cibao* and Colony of *Isabella*, and found that near 300 Men had died of several Diseases, which troubled him very much; and the more, as no Ships came with Provisions; for which Reason he resolved to distribute the Sick and Infirm among the several Forts there were between *Isabella* and *Santo Domingo* and the *Indian* Towns; that having something to eat, they might have only their Distemper to struggle with, and not Hunger at the same time.

Then, having given Orders for the carrying on the Building of the two Ships, he went towards *Santo Domingo*, gathering in the Tribute as he proceeded. The *Indians* of the Plain, and those of *Cibao*, thinking it hard to pay Tribute, and entertain Soldiers at their own Expence, and such as did eat so much, besides other things, which they looked upon as Grievances, complained to the Cazique *Guarinoex*, representing, it was his Duty to endeavour to set himself and them at liberty. *Guarinoex* being a peaceable Man, and considering the Force of the *Spaniards*, the Swiftnefs of their Horses, and the ill Success *Caunabo*, and others of the Province of *Cibao*, had met with, refused to engage in a War; but being importuned by his People, who always persuaded him that they could get the better; and, as some say, being threatened they would chuse another Leader, he consented to commence the War. The *Spaniards*, in the *Conception*, perceived those Commotions, and gave notice to those at the Fort built at *Bonao*, by some *Indians* who remained faithful to those of *Bonao*, and also sent to Don *Bartholomew*, who was at *Santo Domingo*. The *Indian* made use of a Stratagem in carrying those Letters delivered to him in a Staff that was hollow at one End; for the other *Indians* having found by Experience, that the *Spanish* Letters spoke, endeavoured to intercept them; and the Messenger, falling into the Hands of the Guards posted on the Passes, pretended to be dumb and lame, answering them altogether by Signs and Limping, as if he was going with much Difficulty into his own Country, he escaped; because they thinking he had been

dumb, asked him no Questions; and supposing that the Staff had been to help him on they did not search it. And thus the Letter came safe to Don *Bartholomew Columbus*; which proved the Safety of the *Spaniards*. As soon as Don *Bartholomew* came to the *Conception*, he advanced with all the *Spaniards* to fall upon 15,000 *Indians*, *Guarinoex* had drawn together and attacked them by Surprise at Midnight, because they never fought in the Night. They killed and took many; several Lords, of which Number they executed the chief Ring-leaders of that War; and *Guarinoex* being carried to the *Conception*, above 5000 Men followed with loud Cries, demanding their King. Don *Bartholomew* pitying them, and he, being sensible of *Guarinoex's* peaceable Temper, gave him and the other *Caziques* up to them to their great Satisfaction, the less regarded by the *Spaniards*, as being vanquished and subdued.

At this Time Messengers came to Don *Bartholomew* from *Bohechico* and *Anacanona* with Advice, that the Cazabi and Cotton were ready; for when the Seeds of Cotton are planted, the Shrubs that sprout produce Fruit in six or eight Months, and the highest of them rise about a Fathom, tho' they begin to produce when much shorter. Don *Bartholomew* was resolved to go to *Xaragua*, to gather the Tribute, and leave his Men in that Country, to give them of the Plain, and others, Rest, tho' the Soldiers were in such Want of Clothes and other Things brought from *Spain*, that they grew very uneasy. He sent Orders to *Isabella*, for one of the Caravels to come to the Port of *Xaragua* to carry him, that Harbour being a large Bay, or Inlet of the Sea, dividing the Island into two Parts, the one of which forms Cape *St. Nicholas*, stretching out 30 Leagues; the other much larger, and ends in the Cape called *Tiburon*, and the Bottom of the Bay reached within two Leagues of *Bohechico's* Palace. Those at *Isabella* sent the Caravel, and when it came into the Port, *Anacanona* persuaded her Brother to go to the Port, to see the *Spanish* Canoe. Tho' *Bohechico* had two very fine Canoes, yet *Anacanona* would not go in them; but in the Pinnacle. The Vessel fired, which put the *Indians* into such a Consternation that they were ready to leap into the Water; but seeing Don *Bartholomew* laugh, they composed themselves. When they were aboard, the Seamen played on a Tabor and Pipe, and other Instruments; which much pleased the *Indians*; they looked all about the Head and Stern, went aboard the Caravel, and into the Hold, and were amazed. Don *Bartholomew* ordered the Sails to be spread, and the Caravel to take a Trip to Sea and return to the same Place. The *Cazique* admired that so great a Vessel should make way without Oars, and go forward and backward with the same Wind.

When they returned to *Xaragua* the Caravel was loaded with Cazabi, Cotton, and other Things, and went away to *Isabella*, as Don *Bartholomew* did by Land. And being thus employed, *Francis Roldan*, the head *Alcalde*, a turbulent Man, who forgot the Admiral's Bread he had eaten, desiring to get into Authority, by raising Commotions; and taking, for his Pretence, Don *James Columbus's* having ordered the Caravel which had carried Bread and Wine to the *Isabella*, to be laid dry, to prevent its being stolen by some Malcontents, who desired to go away into *Spain*, began to cabal among the labouring Men, as also with the Seamen, and other mean People and those that were most discontented, intimating that the Caravel would be better in the Water, and ought to be sent into *Spain* with Letters to their Catholic Majesties, since the Admiral staid so long; that their Wants might be relieved, and they not perish with Hunger, or be destroyed by the *Indians*. That Don *Bartholomew* and his Brother would not send it, because they designed to revolt, and keep the Island to themselves, and to make them all Slaves, employing them in building their Houses and Forts; to attend them in gathering the Tribute, and enriching themselves with Gold. The Men finding themselves encouraged by a Person of such Power, as the Chief *Alcalde*, had the Impudence to say those things in public which before they scarce durst mutter in Corners. *Roldan* required they should all sign a Paper, importing, that it was for the Public Good that the Caravel should be set afloat; but, as he was very sensible it

was not fit that their Catholic Majesties should know he had been the Ring-leader of such a Mutiny, he sought plausible Pretences to cover his Designs; he persuaded the People that the best Way to secure the Friendship of the *Indians*, was to quit them of the Tribute: And Advice being brought that *Guarinoex's Indians* did not pay the Tribute, and that they gave Tokens of Uneasiness, Don *James Columbus*, thinking to put *Roldan* out of the Way, sent him with a considerable Part of the Men to the *Conception*, where he carried on the Mutiny more effectually, and disarmed those that would not follow. Returning to *Isabella*, having by Force taken the Key of the Magazine, he broke the Locks in Pieces, and crying *long live the King*, took all the Arms and Provisions he thought fit for his Followers, and set up for himself. Don *James* attempted to appease the Mutiny, but *Francis Roldan* behaved himself so insolently, that he thought fit to retire into the Fort.

The Mutineers went where the King's Cattle were, and, having taken what Cows, Mares, and Colts they thought fit, they went amongst the *Indian Towns*, giving out that they had quarrelled with the Admiral's Brothers, on Account of the Tribute they exacted, persuaded them not to pay any, and they would defend them. The true Reason this Fellow behaved in this insolent and rebellious Manner, was the Project he had formed of securing all to himself, by seizing the Person of Don *Bartholomew*; for he made no Question that the Admiral's Enemies would hinder him from returning into the *Indies*; and, perhaps, he had given them some Reason to hope, that he would from time to time transmit them such Relations as might serve to justify their Prosecution of *Columbus*.

But while things were in this Situation, there arrived at *Santo Domingo*, on the 3d of *February*, 1498, the Ship which the Admiral, with much Difficulty, had procured Leave to send to the *Indies*. Both Parties endeavoured to make themselves Masters of this Ship, which, however, by the Care of the Inhabitants of the Place where it arrived, was secured for Don *Bartholomew*; who, upon opening his Dispatches found, that though their Catholic Majesties were at first doubtful whether the Admiral had a Power to appoint a Lieutenant, and rather inclined to think he had not, by Virtue of his Commission, yet upon his representing that it was for their Majesties Service he had taken this Step; and that their Affairs in the new World must have fallen into great Confusion without it; they were pleased to confirm Don *Bartholomew* in his Title of *Adelantado*; which having published, it greatly promoted his Authority, and enabled him to enter into a War with the *Indians*, though it was begun upon very unjustifiable Motives, in as much as the *Spaniards* had laid upon them Burthens they were unable to bear: This War Don *Bartholomew* conducted with great Success against those unhappy People; but with Respect to the revolted *Spaniards* under *Roldan*, he could neither engage them by fair Means to return to their Duty, nor was it in his Power to reduce them by Force. As we have now run through the History of the *Spanish Colonies*, during the Absence of the Admiral we are at Liberty to pursue the proper Design of this Section, and to enter on the Admiral's third Voyage into these Parts.

3. The Admiral sailed over the Bar of *San Lucar*, on the 18th of *May*, with six Ships, and as there was Intelligence that a *Portuguese Fleet* lay at *Cape St. Vincent*, he, giving them the Slip, stood away for the Island of *Madera*, touched at *Puerto Santo* on the 7th of *June*, and found the Inhabitants exceedingly frightened, imagining that his Ships had been *French*; he wooded and watered and then proceeded to *Madera*, where he was joyfully received, because they knew him. On the 19th he arrived at *Gomera*, where he found a *French Ship* with two *Spanishs*, which they had taken: He retook one of them, and sent after the *Frenchman*, and six *Spaniards* that were on board the others, seeing their Relief at hand, drove the *French* that guarded them under Hatches, and sailed away to the Admiral. He resolved to send from *Gomera* the three Ships with Provisions to *Hispaniola*, believing the People there must be in

Want, and appointed *Alonso de Carvajal*, a worthy Man, Captain of the first of them; *Peter de Alana*, a Native of *Cordova*, Kinsman to Captain *Alana*, who had been left Governor of the Fort of the *Nativity*, at the first Discovery, Commander of the second; and in the third he placed *John Anthony Columbus*, a Relation of his own, a Man of Capacity and Judgment; he gave them Instructions, and ordered that each of them should command a Week in Chief, and carrying the Light, they should sail West by South 850 Leagues, and then they would fall in with the Island *Dominica*; whence they should steer West North-west, to fall in with the Island of *St. John*; then keep along the South-side of it, that being the true Course for the New *Isabella*, or *Santo Domingo*.

The Admiral, himself, being furnished with what he wanted, sailed on the 12th of *June*, for the Island of *Hierro*, one of the *Canary Islands*, the farthest to the Westward; He designed in the Name of the holy Trinity, as he always was wont to say, to sail to the Southward of them, till he came under the Equinoctial, and so proceed to the Westward, till the Island of *Hispaniola* should bear North-west from him, to see what Islands or Continent lay in that Part. He said it was his Opinion no Man had ever failed that Course, and that the Sea there was utterly unknown. When past the Island *Hierro* he dismissed the three Ships; and with one Ship and two Caravels stood away for the Islands of *Cabo Verde*, which he used to say was a false Name, for he had always found them dry and barren.

On the 27th of *June* he discovered the first of them, called *de la Sal*, which is small; he proceeded to that of *Buena Vista*, anchored close by a small Island, to which all the Lepers in *Portugal* were sent to be cured, by eating the Flesh of the Tortoises, and frequently washing with their Blood; for in the Months of *June*, *July*, and *August*, abundance of them resort thither from the Continent to lay their Eggs in the Sand; where they scratch a Hole, and leave above five hundred Eggs as big as a Hen's, which being covered with Sand, are hatched by the Sun, and the little Tortoises run into the Sea. The Men there waiting for the Tortoises, turn them on their Backs, and then they cannot recover themselves. The healthy People living on that Island, were only six or seven, whose whole Employment was to kill wild Goats, and send their Skins, well cured, into *Portugal*; and sometimes they killed so many in a Year, that they were worth 2000 Ducats.

The Admiral sailed from thence on the 30th, for the Island of *Santiago*, being 28 Leagues distant, and is the Chief of them. He thought to have taken Cows aboard, to carry to the Island *Hispaniola*, because their Majesties had ordered him so to do, but was obliged to abandon that Design, because the Air of that Island being very unhealthy, the Men began to sicken, besides he resolved to sail to the Southward, to find out whether King *John* of *Portugal* had been mistaken, who affirmed there was a Continent to the Southward. On the 4th of *July* he steered South-west, having never seen the Sun or Stars, since his Arrival at the Islands of *Cabo Verde*, the Sky being continually covered with a thick Fog. He gave another Reason for holding that Course, viz. to find out the Truth of what the *Indians* of the Island *Hispaniola* reported: That there had come thither from the South-east a black People, who had the Heads of their Javelins of a Sort of Metal which they called *Guanin*, some of which he had sent to their Majesties; and the Essay of it being taken, it appeared that, of thirty two Parts, eighteen were Gold, six Silver, and the remaining eight Copper; a plain Proof that the *West-Indies* had been visited by other People before the *Spaniards*.

4. The Admiral pursuing his Course South-west, he found some of those Weeds he had met with in the Way to *Hispaniola*; having sailed one hundred and twenty Leagues, as soon as it was Night he took the Latitude, and on the 13th of *July* the Heat was so violent he was afraid the Ships would take Fire, and the Men perish; and so suddenly the Wind ceased, and the excessive Heat ensued, that no Man durst go down between Decks to take

take care of the Casks of Wine and Water that were falling in Pieces, the Hoops flying off them; the Wheat parched, the Bacon and salt Meat fried: This Heat continued eight Days; the first of them was fair, so that the Sun parched them; the other seven it rained and was cloudy, and yet they found no Relief, but were all in a Manner melted. On the 14th of July he found himself in 7° of North Latitude, and they saw some black and white Daws, which are Birds that do not go far from Land. On the 15th the Admiral fell ill of the Gout for want of Sleep, and yet still he kept up.

On the 19th the Air was so burning hot that they thought they should have been destroyed in the Ships, but there soon sprung a fair Gale that delivered them from that Heat, and they sailed seventeen Days to the Westward, designing to turn again to the South, so that *Hispaniola* might bear North, where the Admiral believed he might find Land, either before or after he came to that Point; and there he hoped to refit his Ships, which were very leaky, and to recover the Provisions in order to carry them to *Hispaniola*, though they were already damaged. Upon the 22d a multitude of Birds were seen flying from the West South-west towards the North-east, and by reason of these Tokens he hoped to see Land very soon; and the 31st of July being come and no Land appearing, and Water growing short, he resolved to alter his Course, and stood to the Westward, still inclining to the right Hand, to fall in upon *Dominica*, or some one of the Islands of the *Caribbees*, now called *Caribbee Islands*, steering North and by East, which he held till Noon; a Sailor went up to the round Top and spied Land to the South-east, about fifteen Leagues distant, and seemed to be three Mountains; they immediately sung the Hymn *Salve Regina*: Having thus spied Land, he altered his Course from the *Caribbee Islands*, where he designed to have watered, and stood for a Cape that appeared to the Westward, which he called *de la Galera*, or the *Gally Point*, on account of a great Rock on it, which, at a Distance, looked like a Gally under sail. When they came to Land they found a good Port, but could not enter because it had not Water enough. He passed on to the Point he had seen, being seven Leagues to the Southward, without finding any Harbour, and observed that the Woods reached down to the Sea, all along the Coast; some Men were seen in a Canoe, at a Distance, but they fled, and it appeared that this was an Island which he called *la Trinadada*, or the *Trinity*, having promised to give that Name to the first he should discover; the Land was high, pleasant, and well cultivated.

On the first of August the Admiral advanced five Leagues along the Coast to the Westward, and came to a Point where he anchored with his three Ships, and took in Water, to the great Satisfaction of the Men. They found the Track of People, Fishing-tackle, and the Foot-steps of Goats, as they thought, which proved to be Deer, there being many in the Island. Having seen many Towns in this Island they saw another to the Southward, which seemed to be twenty Leagues long, and he called it *Isla Santa*, or *Holy Island*. All the Way from *Punta de la Galera*, to the Point where they watered, which he named *Punta de la Playa*, or the *Point of Strand*, though the Land was good, there was no Harbour, but there were many Rivers and Woods very agreeable, and still the Length of the *Holy Island* seemed greater. Seeking for a Harbour, on the 2d of August he arrived at the Point of the Island of the *Trinity*, which he called *Punta del Arenal*, or *Sandy Point*, being to the Westward, and he was then got into the Bay he called *de la Ballena*, or of the *Whale*, without knowing that he was near the Continent. He guessed that the Island of the *Trinity* extended, in length, from Cape *de la Galera*, to *Punta del Arenal*, thirty-five Leagues, though it is above forty-five; but the Admiral proceeding along it, at several times, could not make an exact Computation.

At *Punta del Arenal* he ordered the Men ashore to refresh themselves, because they were much fatigued: A Cazique of the Island was come thither, and observing that the Admiral had a Cap on of Crimson Velvet,

he paid him great Respect, took off a Circle of Gold he had on his own Head, and put it on the Admiral's; and with the other Hand took off his Cap and put it on his own, being very much pleased with it. The same Day a great Canoe, carrying twenty-five Men, came from the Eastwards, towards the Ships, and being about a Musket-shot from them, they gave over rowing, and cried aloud, which the Admiral supposed was to ask who they were, as is usual among those People; by way of answer, he shewed them some little Brass Basons and other glittering things to entice them to come near the Ships; but they advancing very little, the Admiral ordered his Men to play on a Tabor and Pipe, and the Youths to dance, thinking to please them, which proved quite contrary, for they took it for a Signal of War; and, quitting their Oars, laid hold of their Targets and Bows, and shot a great flight of Arrows.

The Admiral then ordered the Music to cease, and some Cross-bows to be brought, but only two of them to be shot, whereupon the *Indians* immediately laid down their Arms, and ran in close under the Stern of another Caravel; the Pilot whereof went down into the Canoe, entertained them, and gave one, that seemed to be a principal Person, a red Cap. They desired him to go ashore and they would give him such as they had; but as he was going in his Boat to ask leave of the Admiral, the *Indians* went away. They were young, well adorned after their Way, of agreeable Countenances, and whiter than the *Indians* of the Islands. Their Hair was long and smooth, cut after the *Spanish* Fashion; about their Heads they tied a Cotton Cloth, curiously wrought of several Colours; and another about their Waist to cover their Nakedness. The Admiral wondered, that being so near the Equinoctial, he felt Cold every Morning, though it was in the Dog Days; as also, that the Waters ran stronger to the West, than the River of *Seville*; that the Sea Water ebbed and flowed above sixty-five Paces more than at *San Lucar*; and that the Currents set so strong between the Island of the *Trinity* and *Santa*, which are two Leagues asunder (by him afterwards called *Gracia* not knowing as yet that it was the Continent) that it run like a rapid River. They found the same Sorts of Fruit as in *Hispaniola*, and the Trees, Soil, and Climate, were alike; they also caught very large Oysters, and infinite quantities of Fish, Parrots as large as Pullets, of a light green, some whitish, and others intermixt with red and yellow.

The Admiral being at Point *del Arenal*, which is the last Cape of the Island of *Trinity*, he saw towards the North-west about fifteen Leagues the Point of that he till then called *Isla Santa*, or *Holy Island*, which proved to be the Province he afterwards called *Paria*; and believing it to be another Island, he gave it the Name of *Gracia*, or *Grace*, as has been said; and he thought it extraordinary high Land, and so it is, for a vast Ridge of Mountains runs along there. Being come up to the Continent, which he, at this time, thought to be an Island, he spied near the aforesaid Point two small Islands in the Midst of another Mouth or Entrance, forming that Cape which he called *Boto*, that is blunt, because it appeared so; and another Cape of the Island of *Trinity* he called *de Lapa*: The Distance between them being five Leagues, with two little Islands in the Middle, one of which he named *el Caracal*, or the *Snail*; and the other *el Dolsin*, or the *Dolphin*. The Narrowness of the Place, the Violence of the great River *Tayapari*, and the Waves of the Sea, going into, and out of this Bay, are dangerous, and therefore the Admiral called that Streight the *Dragon's Mouth*, which Name it holds to this Day; this River that falls into the Bay of *la Balena* runs through the Country above four hundred Leagues, and as it brings down an immense Quantity of Water, especially in July and August, about which time the Admiral was there; the Rains falling then, as they do in *Spain* in October and November, and the Passage between the Continent and the Island of the *Trinity* being too narrow for such a Quantity of opposite Waters; when they meet there is a mighty Struggle between them.

5. While the Admiral lay at Cape *de Lapa*, he discovered very high Land to the North-west, which he named *Bellaforma*,

Bellaforma, because it looked well. On the 5th of *August* he sailed five Leagues from the Cape *Lapa*, and saw several very good Harbours; he sent the Boats ashore, and the Men found Fish, saw the Track of People, and a great House uncovered. He proceeded eight Leagues further, still discovering good Harbours, much Land and many Rivers. Going ashore they found well tasted Grapes, Apples, and a sort of Fruit that looked like Oranges, and within were like Figs; and saw many Monkeys.

On the 26th he sailed five Leagues; a Canoe, with five Men in it, came toward the Caravel that was nearest the Land. The Pilot called the *Indians*, giving them to understand, that he would go ashore: And as soon as he was got into the Canoe, he overset it, and swimming about, took and carried the *Indians* to the Admiral. They were of a proportionable Stature, had their Privy Members tied up and covered; but the Women were all stark naked. The Admiral gave those *Indians* Hawks Bells, Glass Beads, and Sugar, and sent them ashore, because a great Number of People appeared. And as soon as they understood how well the others had been entertained, if there had been Canoes enough, they would have all gone aboard. The Admiral used them well, gave them all Toys, asked them Questions; they answered, but did not apprehend each other. They brought him Bread and Water, and a sort of Liquor like green Wine. All of them had Targets, Bows, and poisoned Arrows. Before they entered, they smelled to the Boat, and afterward to the Men. On the 7th abundance of *Indians* came, bringing Bread, *Indian* Corn, and Eatables; as also Pitchers of Liquor, some of it as white as Milk, tasting like Wine, and some green made of Fruit and Maize. They valued not the Beads the Admiral gave them; they had a great Esteem for Tin, they called it *Turey*, as if it were come from Heaven, for they called Heaven *Turey*; and found a certain Scent in it that much pleased them. And whatever was given them, they smelled to. They carried on board abundance of Parrots of three sorts, and Bits of Cotton Cloth, well wrought, and wove of several Colours.

The Admiral would willingly have taken half a Dozen *Indians* to carry away with him, but he could not; for before Night they left the Ship. The next Day a Canoe, with twelve Men, came on board the Admiral, six of whom he took, and sent the rest on shore. He proceeded to *Putá del Aguia*, or *Cape Needle*, whence he saw a fine Country, and well peopled. And being come before a Town, which for its Beauty he called the *Gardens*, having a vast Number of Houses and People, he anchored; and many resorted to the Ships, with their wrought Cloths about their Heads, like the little Veils worn by the *Moorish* Women. They wore some little Plates of Gold about their Necks; and the *Indians* that were on board said there was plenty of it in those Parts, and shewed how they gathered it. The Admiral considering that he was above three hundred Leagues from *Hispaniola*, and that his Provisions began to grow short, made no long stay in that Country, which he thought very agreeable, full of good Houses, and inhabited by a polite and warlike People. Being come to Point *Aguja*, he discovered another to the Southward, which he thought to be an Island running out South-east and North-west, very large, and the Land high. He gave it the Name of *Sabeta*. And in the Afternoon saw another, and they were Parts of the Continent. He anchored at the *Gardens*, many Canoes, great and small, came on board with abundance of People wearing Pieces of Gold about their Necks, in the Shape of a Horse-shoe: And though they seemed to value it, they would have given all for Hawks-Bells, but he had none left: However, some Gold he got, which was very low, and they told him there were Islands hereabout that yielded much such base Gold: But the Men were Canibals. And they actually saw an *Indian* who had a single Grain of Gold as big as an Apple.

More Canoes came still, all the People wearing Gold Collars and Beads of abundance of sorts, their Clothes tied about their Heads, their Hair cut short, which looked well. There fell much Rain, which hindered many

more from going on board. Some Women went who had Strings of little Beads about their Arms, and among them some Seed Pearl, as also some large, which raised the Hopes of the *Spaniards* much. The Admiral asked, where they found them? they shewed him the Mother-of-pearl, and by very intelligible Signs gave him to understand, That they were found to the Westward, behind that Mountain, which is Cape *Lapa*, being the Point of the Province of *Paria*. He sent the Boats ashore, and found the People so tractable, that tho' the Sailors went not with a Design to land; yet two of their Chiefs civilly constrained them to it, and conducted them to a House where they entertained them, and gave them Bread and Fruits of several sorts, and that sort of white Liquor, before mentioned, and another of a red Colour and good Taste, the Men all the while keeping together at one End of the House, and the Women at the other. When they had been so treated at that House by the eldest, the youngest carried them to another, and treated them in the same manner. It seemed to them that the one was the *Cazique*, and the other his Son; and the Sailors afterwards returned very well-satisfied to their Boats. They thought these People of a very good Stature, whiter than any other *Indians*, the Country delightful and cold, which was admired by reason of its being so near the Equinoctial. The Admiral called this, which he thought to be an Island, *Paria*.

On the 10th he sailed to the Westward, seeking some Passages to get clear of those which he took to be Islands, and named *Ysabeta* and *Tramontana*, but were Part of the Continent: And the *Indians* he had on board said the Pearls were found farther Westward. He sailed on in that Bay, and sent the little Caravel to see whether there was any Passage out to the Northward, because opposite to *Ysabeta* and the Continent there appeared a very high and beautiful Island. The Caravel returned and brought an Account that they had found a very large Bay, and in it four specious Openings that looked like small Bays, and a River at the End of each of them, which he called *The Bay of Pearls*, though there are none it. The Admiral believed those Openings were four Islands, which formed that Bay of forty Leagues; but the Mariners assumed they were Mouths of Rivers; and so it proved, at least in two of them; for the great River *Tuyaparitan* came out at one End, and that of *Caurari* at the other: And tho' the Admiral would have discovered all very particularly, he could not stay, but resolved to sail for *Hispaniola*, to send for Men and Provisions into *Spain*, and order his Brother to continue this Discovery. To which Purpose, on the 11th of *August* he steered over to the Eastward, in order to pass through between the Point of *Paria* and the Continent. He advanced to a good Harbour, which he called *Puerto de Gatos*, or *Cat's Port*, which is near the Mouth, where the two Islands lye, between the Capes of *Lapa* and *Boto*.

There he came to an Anchor on the thirteenth, intending to sail next Day. The Boat was sent to take a View of another Harbour just by, which was also good; and near it were some Fishermens Houses; for which reason he called it *Puerto de las Cabanas*, or the *Port of Cottages*. Near the Sea they saw many *Mirabolán* Trees, with abundance of Oysters sticking to the Branches that hung over the Sea, and open to receive the Dew. On the 14th he advanced to Cape *Lapa*, which is that of *Paria*, to pass through the Opening, which he called, the *Dragon's Mouth*, which is between Point *Lapa* to the Westward, and Cape *Boto*; the Distance between the two Capes being a League and an half beyond the small Islands that lye in the Middle. He ran a great Risk of being lost in repassing the Streight, where the running out of the fresh Water, and the coming in of the Salt, occasioned a very dreadful Appearance, at least to the *Spaniards*, who were unacquainted therewith, though it is common enough on our Coasts, and particularly at the Mouth of the *Severn*, where the riding of one Tide upon another is called the *Egre*.

The Admiral himself was more amazed at it than at any thing he had seen, and could not help saying, That if they got safe through this Danger, they might be said to have escaped out of the *Dragon's Mouth*; whence the

Name of *Boca del Drago* was fixed upon this Place; and it has been ever since known thereby. When they got out of that Bay, extending full fifty Leagues from the first Land of *Trinity* to the Bay called *de las Perlas*, or of *Pearls*, he sailed along the Continent to observe whether that immense Quantity of fresh Water proceeded from the Rivers, as the Seamen affirmed, and he could not believe, as thinking no River in the World could carry so much Water as those Lands he saw produced, unless they were a Continent. He found along this Coast many good Harbours and Capes, to which he gave Names, as *Cabo de Conchas*, or *Cape of Shells*, *Capo Luenga*, *Long Cape*, *Cape Sabor* and *Cape Rico*, &c. He found also several Islands, particularly *Margarita*, which is fifteen Leagues in Length, and six in Breadth, very green and well inhabited. And at a small Distance from it are other small Islands, and among them *Cubaque*, where Pearls have been found, but few of the Names the Admiral gave them have continued. Having sailed forty Leagues farther, and seeing the Land continue to the Westward, he was convinced that it was no Island, but the Continent, which he discovered on *Wednesday* the 21st of *August*, 1498.

6. The Admiral was much surprized at the immense Quantity of fresh Water before spoken of, and no less at the extraordinary Coolness of the Air so near the Equinoctial; and he particularly observed, that the People thereabouts were whiter, their Hair long and smooth, more subtil and ingenious, than those he had seen before. He was very desirous to return to the Island *Hispaniola*, having a Foresight that his Presence was necessary there; and he resolved to send his Brother *Don Bartholomew* to continue the Discovery; besides, the Men were fatigued, and grew uneasy, because he had not told them at his coming from *Spain* that he was going upon Discovery: For these Reasons, on the 16th of *August* he stood away for that Island, still discovering high Mountains on the Continent; and that Day he ran sixty-three Leagues between Sun and Sun, the great Currents setting him forward as much as the Wind.

While the Admiral laboured under the before-mentioned Difficulties, the three Ships he had sent from *Spain* to *Hispaniola* under *Carvajal*, *Arana*, and *Columbus*, thro' the Ignorance of the Pilots, and by the Currents that set downwards of that Island, instead of going to the Port of *Santo Domingo*, sailed on above 160 Leagues, and not knowing where they were, arrived at the Place where *Francis Roldan* was with the Mutineers, living without any Respect to the Laws of God or Man; had they done it designedly, it could not have happened worse; and if the Revolt of *Roldan* had been known in *Spain*, it would have been concluded a malicious Contrivance either of the Captains or the Pilots. As soon as *Francis Roldan* and his Followers were informed of the Ships they went to the Harbour, which was two Leagues off, and concealing their Revolt, asked how they happened to come to that Place, and what News there were of the Admiral? They answered, that they had been carried by the Currents, and that the Admiral would soon be there with three Ships more, having some Days since steered away to the Southward from them. They went aboard the Ships, were merry together, and had some of the Provisions carried from *Spain*. When they were gone, the Captains thought fit, because of the Difficulty of returning to *Santo Domingo* by reason of the Currents and Breezes, that the Labouring-men who were in the King's Pay should march by Land, and agreed, that Captain *John Anthony Columbus*, who commanded one of the Ships, should conduct them. Forty Men, with their Cross-bows, Lances and Swords, went ashore; and *Roldan* persuading them they were to lead a very painful Life, he obliged to labour and dig, with much Hunger and Want, easily induced them to stay with him, telling them at the same time how they should live, which was, only by going about from one Town to another, taking the Gold and what else they thought fit. And tho' these forty Men were all of them condemned Criminals, yet eight of them remained true to their Captain.

This fully discovered, that *Roldan* had deserted the

King's Service, and Captain *Columbus*, being most concerned at it, went to him, told him that those Men had received the King's Pay for six Months before, and that he by employing them much obstructed the King's Affairs; therefore he advised him not to act in so scandalous a Manner; but *Roldan* regarded nothing he said, because by the Addition of those that had joined him he had above a hundred Men to defend himself against the Admiral; and Captain *Columbus* returned aboard his Ship, and with the other Captain *Pedro de Arana* resolved to go away to *Santo Domingo* with the Ships, Captain *Alonso Sanchez de Carvajal* staying behind to go by Land, and endeavour to bring *Roldan* to his Duty. By this time the Adelantado had notice, by means of the *Indians*, that there were three Ships arrived in the West, and guessing that they might be come from *Spain*, and had missed their Course, he sent out a Caravel in search of them. Before the Ships arrived, or *Roldan* had got so many Men, he had written to some of those that were with the Adelantado, desiring them, in case the Admiral should come, to endeavour to make his Peace.

The Admiral the 19th of *August* arrived at the Island *Beata*, which lies fifteen Leagues from the Port of *Yaquimo*, and twenty-five from *Santo Domingo*: And near the Island *Beata* is that of *Altovelo*. It troubled him that he had fallen away so much, but did not wonder at it, because of his continual Watching all the Nights he lay by, or plied backwards or forwards, for fear of being upon the many Islands or Sholes of which those Seas were full, which at that time were little known, and the Currents which are there very strong, and set towards the Continent Westward, carried the Ships so far insensibly towards the Islands *Beata* and *Hispaniola*, that he was afraid of driving by them. On the 20th of *August* he sent the Boats to the neighbouring Towns to summon the *Indians*, and wrote to acquaint the Adelantado of his Arrival. Six *Indians* went aboard at twice, and one of them carried a Cross-bow with all its Furniture, which did not a little surprize the Admiral, believing it to have belonged to some Soldier that was dead. The Ships having been seen to pass down the Current from *Santo Domingo*, the Adelantado set out in a Caravel to seek the Admiral: It was high Pleasure to both Brothers to meet, tho' the Admiral was much vexed at the Advice of *Roldan's* Revolt. The 22d of *August* they arrived at *Santo Domingo*, it being but a few Days less than two Years since the Admiral departed from *Hispaniola* for *Spain*.

7. The whole Colony in a manner went out with *Don James Columbus* to receive the Admiral, expressing much Joy for his Arrival: But when he thought he was come where he might take some Rest, he found himself involved in new Troubles, by reason of the Revolt. He immediately examined the Process made by the Adelantado, and, disapproving it, formed another, wherein it was sufficiently proved, that the Infurrection had proceeded from the wicked Inclination of *Roldan*, tho' neither the Adelantado, or any other Person, had given him Cause to complain, or wronged him in the least. Some Days after the Admiral, arrived the other three Ships, with *Arana* and *John Anthony Columbus*, as did the Caravel *Don Bartholomew* had sent to seek them.

One of them had struck on a Shole, lost her Rudder, and was in a very bad Condition, and having staid very long by reason of the Currents and contrary Winds, almost all the Provisions were spoilt; and the Account they brought of forty Men staying with *Roldan* much troubled the Admiral. However he resolved to try him by fair Means, forgiving him all his Offences, being sensible his Enemies in *Spain* would make a great Noise of that Revolt; for he was also positively told, that as soon as he arrived he would come and submit himself to him, he having long before written to that purpose. At this time Capt. *Sanchez de Carvajal* arrived from *Xaragua*, and declared the Obstinacy of *Roldan*, who refused his Proposals: But *Roldan* having Advice of the Admiral's Arrival, either by the *Indians* or by Letters from some Friend he had at *Santo Domingo*, resolved to come nearer, and accordingly went to *Bonao*, a fruitful and delicious Plain, where some *Spaniards* dwelt after the Fort of *Bonao* was

built, and it is twenty Leagues from *Santo Domingo*. The Admiral fearing lest any thing that might give them Uneasiness should come to the Ears of their Catholic Majesties, and at the same time discredit the Affairs of the *Indies*, which had cost him so many Fatigues, or give his Enemies occasion to revile him, tried to bring the Mutineers to an Accommodation; using this Method: Most of the *Spaniards* in the Island were desirous to return into *Spain*; he therefore, on the 12th of *September*, caused Proclamation to be made, that he would give leave to all that were willing to depart, and provide for their Passage and Provisions: Which was very acceptable to them in general, because of eight Ships that were in the Harbour, five were almost cleared, and two ready for the Adelantado to go and prosecute the Discovery of the Coast of *Paria*.

In the mean time, the Admiral being informed that *Roldan* was going to the *Conception*, about which some of the Mutineers had Estates, he gave notice of it to *Michael Ballester* the Governor of the Fort, that he might be upon his Guard, and endeavour to draw over *Roldan*, and tell him how much it troubled him that such a Man, whom he had left in so considerable a Post, and on whom he depended so much, should range about in that scandalous Manner, to the Prejudice of the King's Service; however, for the Good-will he had always borne him, he would pardon him, if he submitted; and if he required any Security, he should have it. The Governor *Ballester* went to the Fort of *Bonao*, where he found no body, but was informed that *Roldan* and the Chiefs were gone to the House of *Riquelmo*, who was one of them.

Before the Admiral went away to *Spain*, about *March* in the Year 1496, or soon after his Departure, some Towns were charged instead of their Tribute to till the Lands belonging to the *Spanish* Colonies, as they had been wont to do for their *Caziques*; and by this Method it was thought the *Spaniards* might be induced to stay the more willingly in the *Indies*, taking a Kindness to the Country, and the Merchants would come over from *Spain*, so that the Royal Revenue would increase without obliging their Majesties to be at so great an Expence as they were at the Beginning, or else to quit the Enterprize, which the Admiral much dreaded, so many being against it. The *Indians* that did not comply in performing this Duty were punished, and those that fled were held as Slaves when taken. The other Improvement, in order to produce some Profit, was that of the *Brazil* Wood, which the Admiral said was in the Province of *Yaquimo*, on the Southern Coast, near eighty Leagues from *Santo Domingo* to the Westward. By those two Improvements, including four thousand Slaves he reckoned upon, and four thousand Quintals, or hundred Weight of *Brazil* Wood, he writ to their Majesties, that they would receive forty Millions of Marvedies, which amounted to twenty thousand Pound; a large Sum, and much more considerable in those Days, than at this time.

Hereupon, soon after his Arrival at *Santo Domingo*, being informed that a *Cazique*, who had been appointed for the Service of the Fort, leaving the same, was fled to the Mountains, Soldiers were ordered thither, who took a good Number of People that were sent away in those last Ships, the Admiral reckoning that their Catholic Majesties should make their Advantage of those *Indians* as the Kings of *Portugal* did of the *Guinea* Blacks. When *Roldan*, *Gomez*, and *Adrian Moxica* were come together, the Alcalde or Governor, *Ballester*, went to discourse them; and having told them all he had been directed, offered them Pardon, and represented the Disservice they did the King by behaving after that manner. They soon shewed they had quite different Designs, uttering many haughty and disrespectful Words against the Admiral: And, among other things, said, They came not to seek Peace, but War; and that *Roldan* had the Admiral and all his Followers in his Power, either to support or destroy them: That they should not talk of any Accommodation till the Admiral had brought back the Number of *Indians* which had been sent as Slaves, because he had taken them into his Protection, and it was his Duty to deliver them from the Oppression they were under:

Besides, they wrote a Letter to the Admiral, laying all the Blame of their Revolt on his Brother. The Governor, *Ballester*, went to *Santo Domingo* with *Roldan's* Answer; in which, amongst other things, he said, that his Followers would treat with no Man but *Carvajal*; and though the Admiral had just Cause to suspect that Person on several Accounts, yet he thought it best to make a Virtue of Necessity, and to send him with *Ballester* to endeavour to reduce them to Reason. He also wrote an affectionate Letter to *Roldan*, soothing him, and in a most obliging manner inviting him to return to his Duty.

7. The Alcalde, *Ballester*, and *Carvajal*, discoursed the Rebels so effectually, that they inclined *Roldan* and the other Ringleaders to agree with the Admiral; by which it was thought all would be adjusted; but the meaner sort, being unwilling to quit that licentious Life they led, unanimously cried out, That it should not be so, but that if any Accommodation was made, it should be in Public before them all, since they were all concerned: And *Carvajal* and *Roldan* trying all ways to reduce them to Reason, and, not being able to prevail, *Roldan* demanding a safe Conduct, and signifying, that he was thoroughly convinced, that all his Men would forsake him, except such as were Gentlemen, the Admiral was much concerned at this Advice, and soon found it was true; for having made a Muster, in order to march to *Bonao*, only seventy of those that were with him said they would obey his Orders; and he had no Confidence even in many of them. In this Distress, he caused Proclamation to be made, that as to all who would return to their Duty, no Notice should ever be taken of what was past; besides, that such as desired to return into *Spain* should have their Passage gratis. At the same time he sent a safe Conduct to *Francis Roldan* for himself, and all those that should come with him, to treat at *Santo Domingo*.

Whilst this Treaty was in Agitation, the Ships having been detained eighteen Days beyond the Month agreed on when they were hired, and many of the Slaves aboard them dying, the Admiral was forced to dispatch them, and by them writ to their Majesties, acquainting them with the Rebellion of *Roldan*, and the Mischiefs his Men did in the Island. He also desired to have religious Men sent to instruct the People, and an able Lawyer for the Execution of Justice. He added, that though at first the Men had sickened by the Change of Air and Water, they were all then healthy and inured to the Country, and did better with the *Indian* Bread than with that of *Spanish* Corn; and that there was an infinite Number of Swine and Poultry and other things, which had so multiplied, that they wanted nothing but Wine and Clothes: That it would be expedient as often as possible to send him sixty or seventy Men, and he would return as many of these troublesome Disturbers. Much more he wrote to their Majesties in Vindication of himself and his Brother, and sent them some of the painted Cloths of the Coast of *Paria*, one hundred and seventy Pearls, and some Pieces of Gold, as also a Draught of his last Discovery, and a Relation of his Voyage. After several Messages it was concluded, that the Mutineers should have two Ships with Provisions to carry them to *Spain*, and every one a Slave with him; and to have Certificates of their good Behaviour. The Admiral signed those Articles on his Part, as did *Roldan* for the Mutineers. However, all things came to nothing, the Rebels not daring to go into *Spain* for fear of being punished for their Crimes.

But afterwards Captain *Carvajal* having acquainted the Admiral, that *Roldan* earnestly desired to submit himself, he went to *Azua* to be nearer to the Rebels; *Roldan* went thither to him, where a new Contract was concluded, by virtue whereof, his Followers were to be restored to what they had enjoyed before their Revolt, and he to be Alcalde-Mayor, or Chief Judge of the Island. *Roldan* began again to exercise that Office with the greatest Insolence; and all his Followers behaved themselves in the same manner. The Admiral dispatched two Ships for *Spain*; and, pursuant to his Agreement, permitted the Mutineers to embark, allowing some of them three Slaves, and others one. In *October*, 1499, *Roldan* delivered

delivered to the Admiral a Petition from all his Followers, being one hundred and two Men still adhering to him, wherein they desired to have Lands assigned them in the Province of *Xaragua*. But because it was not convenient they should be all together, some were settled at *Bonao*, others on the Plain on the Bank of the great River, others at *Santiago*; at which Places the Admiral gave them Lands. And this was the first Distribution made in the *Indies*; which set an Example to all the others that followed, that is, of assigning such a Number of *Indians* to such a Person, it being expressed in the Grants, that such a *Cazique*, or his People, should till the Ground for the *Spaniard* to whom it was given.

8. The Admiral having adjusted Matters with *Roldan*, appointed an Officer, with a Detachment, to patrol about the Island, to reduce the *Indians* to pay Tribute, and to be in Readiness, that upon any Mutiny among the Christians, or Sign of Rebellion among the *Indians*, he might suppress them; which he did with a Design to go over to *Spain*, and carry with him his Brother the Lieutenant, because he judged it would be difficult, if he were left behind, to forget old Grudges. As he was preparing for his Voyage, *Alonso de Hojeda*, who had been out on Discovery with four Ships, arrived in the Island. This Man was a Creature and Dependant upon the Bishop of *Burgos*, who perceiving this Prelate had entirely changed his Affection towards the Admiral, struck in with him, and procured a Licence to go and make Discoveries, but without the Knowledge of their Catholic Majesties; and some Persons at *Seville* having equipped, on the Credit of this Licence, four Ships, he sailed with them from Port *St. Mary's*, on the 20th of *May* 1499, and went directly in search of the Continent, pursuant to the Schemes the Admiral had delivered to their Catholic Majesties before his Departure, and which, before this Time, he had actually carried into Execution.

With this Man *Americus Vespucius* made his first Voyage, and though they never saw any other Part of the Continent than what the Admiral had discovered sailing from the Island of *Trinity*, along the Coast to *Venezuela*, yet he impudently pretended to have first discovered the Continent; and by confounding this with a subsequent Voyage which he made into those Parts, he dressed up a fine Story to his own Advantage; and being an excellent Geographer, and the best Draftsman of his Time, imposed upon the greatest Part of *Europe*. But, in *Spain*, the Falshood and Injustice of his Pretences were soon detected; for whereas he pretended that, after a Voyage of thirteen Months spent in Discoveries, he returned directly to *Spain*; *Alonso de Hojeda* positively made Oath, that he spent but five Months in the Voyage, and that finding themselves short of Provisions, they stood over, as indeed was the Truth, to the Island of *Hispaniola*, for a Supply. When he came upon the Coast of that Island, at the time of which we are now writing, he gave out, that he did not do it willingly, but purely to obtain Relief, and that he had just Reasons to expect it in a Country under the Dominion of his Sovereigns; but his real Design of creating Disturbances there, being strongly suspected, he was advised to take what he wanted, and to continue his Voyage.

This he pretended to call a great Hardship, and threw out many Reflections upon the Admiral and his Family. Upon which Ground she began to write to some that were deep in the late Troubles, and to hold Correspondence with them: But *Roldan* being informed of his Proceedings, by the Admiral's Order, went against him to prevent his doing the Harm he intended. Being come within a League and a Half of him, he understood he was at a *Caziques'*, baking Bread and Biskets, and therefore he travelled that Night to surprize him. *Hojeda* understanding that *Roldan* was coming upon him, to make the best of a bad Case, went to meet him; alledging, Want of Provisions had brought him thither, to supply himself in the King his Master's Dominions, and that he meant no sort of Harm.

But holding his wicked Purpose, and taking leave of *Roldan*, he went with his Ships to *Xaragua*, where a great many of those People lived who had before rebelled

with *Roldan*; and because the Shew of Gain is the most ready way to promote any Mischief, he began to give out that their Catholic Majesties had appointed him and *Carvajal* the Admiral's Counsellors; and that, among many other Things they had advised him to, one was, That they should pay in ready Money all in their Service, and since the Admiral was not so just as to do it, he was ready to go with them to *Santo Domingo*, to oblige him to pay out of hand; and that done, to turn him out of the Island, dead or alive, for they ought not to rely upon the Word he had given them, for he would keep it no longer than Necessity obliged him to it. Upon these Promises, many resolved to follow him; and being assisted by them, he fell upon others who opposed him, and there were some killed and others wounded, on both Sides. And being satisfied that *Roldan* would not join with them, they resolved to surprize him; but he being informed of their Design, went where *Hojeda* was, to put a Stop to his Disorders. *Hojeda*, for fear of him, retired to his Ships, and *Roldan* continuing ashore, they treated, each of them fearing to put himself into the Power of the other. *Roldan* perceiving that *Hojeda* was unwilling to come ashore, he pretended to treat with him aboard, to which Purpose he sent for his Boat, which he sent him well manned; and having taken in *Roldan* and six or seven of his Followers, when they least suspected it, *Roldan* and his People fell upon *Hojeda's* Men, and, killing some and wounding others, made themselves Masters of the Boat, returning with it to Land. *Hojeda*, who had only a small Ship left, resolved to come peaceably to treat with *Roldan*. He agreed to restore some Men he had taken by force, that his Boat and Men might be returned, alledging, if it was not restored it would be the Ruin of them all and their Ships, because he had no other. *Roldan* readily granted it, that he might have no cause to say he was lost through his Means; yet he made him give Security that he would depart the Island by a Time appointed, as he was obliged to do, by the good Guard *Roldan* kept on Shore.

A few Days after *Hojeda* was gone, one *Don Ferdinand de Guevara* being in Disgrace with the Admiral, as a seditious Person; and having taken part with *Hojeda* through Spite to *Roldan*, because he would not permit him to take to Wife the Daughter of *Anacaona* Queen of *Xaragua*, began to gather many Conspirators designing to seize *Roldan*, and succeed him; particularly he gained to his Party *Adrian de Moxica*, a chief Man among the late Rebels, and other wicked Men; who, about the Month of *July*, contrived to murder *Roldan*. He having Intelligence of the Design stood upon his Guard, and ordered his Business so well that he seized *Don Ferdinand*, *Adrian*, and the chief Men of their Party; and sending the Admiral an Account of what had happened, demanded what he should do with them. The Answer was, That since they had endeavoured, without any Provocation, to disturb the Country, he should punish them according to their Demerit, and as the Law directed: The Judge did it accordingly, and proceeded legally against them, hanged *Adrian*, as chief Author of the Conspiracy; banished others, and kept *Don Ferdinand* in Prison, till, on the 13th of *June*, he delivered him with other Prisoners to *Gonsalo Blanco*, to carry them to the Plain, where the Admiral then was.

This Example quieted the Country, and the *Indians* again submitted themselves to the Christians. Such rich Gold Mines were now discovered, that every Man left the King's Pay, and went to dig Gold at his own Expence, allowing the King the Third Part of all they found. This prospered so well that a Man has gathered five Marks, or forty Ounces of Gold in a Day. The *Indians* were also become submissive, dreading the Admiral, and so desirous to please him that they readily became Christians only to oblige him; and therefore, to settle all Things the better, the Admiral resolved to take a Progress through the Island, and accordingly he and his Brother, the Lieutenant, set out on the 20th of *February* 1499, and came to *Isabella* the 19th of *March*. From *Isabella* they set out, the 5th of *August*, for the *Conception*. From the *Conception* the Admiral designed to go to *Santo Domingo*, on the 3d of *February*, in order to return into *Spain*.

Spain, to give their Catholic Majesties an Account of all Things in the Colonies.

9. At the very Time those Disorders fell out in the Colonies, many of the Rebels from *Hispaniola*, and others that were returned into *Spain*, did not cease to give in false Informations to the King and his Council against the Admiral and his Brother; alledging they were cruel, and unfit for that Government, as well because they were not *Spaniards*, as because they had not formerly been in a Condition to learn by Experience how to govern People of Condition; affirming, that if their Highnesses did not apply some Remedy, those Countries would be utterly destroyed; or, in case they were not quite ruined, by their ill Government, the Admiral would revolt, and procure some Prince to support him, by pretending that all was his own, as having been discovered by his Industry and Labour; and that the better to compass his Design, he concealed the Wealth of the Country, and would not have the *Indians* serve the Christians, or be converted to the Faith, because by making much of them, he hoped they would be on his Side, to do what he pleased against their Highnesses.

They therefore importuned their Catholic Majesties to remove him, complaining there were several Years Pay due to them, which gave Occasion to all that were at Court to rail. And their Impudence was so great, that if the Catholic King went abroad they all got about him, crying, *Pay, Pay*; and if the Admiral's Sons, who were Pages to her Majesty passed by where they were, they cried out in a hideous Manner, making the Sign of the Cross, and saying, There are the Admiral of the *Musquito's* Sons, he that has found out false and deceitful Countries, to be the Ruin and Burial-place of the *Spanish* Gentry. Their Complaints running so high, it was resolved to send a Judge to *Hispaniola*, to enquire into all these Affairs, ordering him, in case he found the Admiral guilty of what was alledged, to send him to *Spain*, and stay there himself as Governor. The Person their Majesties made Choice of for this Purpose, was one *Francis de Bovadilla*, a poor Knight of the Order of *Calatrava*, who, on the 21st of *May*, 1499, had full and ample Commission given him at *Madrid*, and blank Letters subscribed by their Majesties to such Persons as he should think fit, in *Hispaniola*, commanding them to be aiding and assisting to him.

Thus furnished, he arrived at *Santo Domingo* at the latter End of *August*, 1500, at such time as the Admiral was at the *Conception* settling the Affairs of that Province, where his Brother had been attacked by the Rebels, and where there were more *Indians*, and those more understanding People than in the rest of the Island; so that *Bovadilla*, at his Arrival, finding no body to keep him in awe; the first thing he did was to take up his Quarters in the Admiral's Palace, and seize and make use of all he found there, as if it had fallen to him by Inheritance; and, gathering together all he could find that had been in the Rebellion, and many others that hated the Admiral and his Brothers, he presently declared himself Governor; and, to gain the Affection of the People, he caused a general Freedom to be proclaimed for twenty Years to come; requiring the Admiral to repair to him without any Delay, because it was convenient for his Majesty's Service he should do so. And to back his Summons, on the 7th of *September* sent him the King's Letter, by *F. John de la Sera*, containing no more, in effect, than that their Majesties had sent the Bearer to acquaint him with their Pleasure, which he was directed to obey. This Order was dated at *Madrid*, 21st of *May*, 1499, which Order was signed both by the King and by the Queen.

10. The Admiral having seen their Majesties Letter, came away presently to *Santo Domingo*, where the new Judge was; who having been eager to establish himself Governor there, in the beginning of *October*, without any legal Information, sent him Prisoner aboard a Ship, together with his Brother *James*, putting them in Irons, and a good Guard over them; and ordered on severe Penalties that none should dare to speak to them; after this he began to draw up a Process against them, admitting the

Rebels as Witnesses, and publicly favoured all that came to speak ill of them; who, in their Depositions, gave in such Incoherencies, that he must have been blind that had not plainly perceived they were false and malicious. For this Reason their Catholic Majesties would not admit of them, and cleared the Admiral, repenting that they had sent such a Man, and not without Cause; for this *Bovadilla* ruined the Island, and squandered the King's Revenues, gaining Numbers to be his Friends, by saying their Majesties would have nothing but the Dominion, and that the Profit should be for their Subjects; yet he neglected not his own Share, but, siding with the richest and most powerful Men, gave them *Indians* to serve them, upon Condition, they should share with him all they got by their Means, and sold by Auction the Possessions and Rights the Admiral had required for their Majesties, saying they were no Labourers, nor did not desire to make a Profit of those Lands, only kept them for the Benefit of their Subjects.

He thus on one Side selling all things under this Colour, endeavoured on the other, that they should be bought by some of his own Confederates, for one third of the Value: Besides all this, he made use of his judicial Power to enrich himself, and gain the Affections of the People; being still afraid, that the Lieutenant, who was not yet come from *Xaragua*, should put a Stop to his Proceedings, and endeavour to set the Admiral at Liberty by Force of Arms; in which Particular the Brothers behaved themselves very prudently, for the Admiral sent them Word, immediately, that they should come peaceably to him, the King's Service so requiring, that the Island might not be put into an Uproar; for when they were in *Spain*, they should more easily obtain the Punishment of such a Person, and Satisfaction for the Wrongs done them.

Yet this did not divert *Bovadilla* from putting him and his Brother into Irons, allowing the baser Sort to rail at them publicly; blowing Horns about the Port where they were shipped, besides scandalous Libels set up at Corners of Streets against them. When they were to sail, he desired *Andrew Martin*, the Master of the Ship, to look to him, and to deliver him in Irons as he was, to the Bishop *D. John de Fonseca*, by whose Advice and Direction, it was concluded, he did all these things; though when they were at Sea, the Master, being sensible of *Bovadilla's* Unworthiness, would have knocked off the Admiral's Irons, which he would not permit, saying, That since their Catholic Majesties, by their Letter, directed him to perform whatsoever *Bovadilla*, in their Name, commanded him to do; in Virtue of which Commission he had put him into Irons, he would have none but their Highnesses themselves to do their Pleasure herein; and he was resolved to keep these Fetters as Relicks, and Memorials of the Reward of his many Services, as accordingly he did; for these Irons hung up in his Room, and he ordered them to be buried with him. Notwithstanding that, having on the 20th of *November*, 1500, written to their Highnesses, acquainting them with his Arrival at *Cadiz*; they immediately gave Orders that he should be released, and sent him very gracious Letters; in which they declared they were very sorry for his Sufferings, and the unmannerly Behaviour of *Bovadilla* towards him, directing him to come to Court, where Care should be taken that he should be speedily dispatched with full Restitution of his Honour, as, indeed, was but reasonable, since all he had done, and which had brought upon him so many Troubles, was purely out of Regard to the Interest of their Majesties; and from the earnest Desire he had to hinder private Avarice from overturning the Measures taken for the public Benefit; and for the Interest of the Crown of *Castile*, at whose Expence the first Discoveries had been made.

11. Their Majesties Orders came on the 12th of *December* for him to be set at Liberty, and to repair to *Granada*; where he was received by their Majesties with a favourable Aspect, and kind Words, importing that his Imprisonment had not been by their Desire or Command, therefore they were much offended at it, and they would take care those that were in Fault should be

be punished, and full Satisfaction given him. Afterwards they ordered his Business should be expedited immediately, the Result thereof was, That a Governor should be sent to *Hispaniola*, who was to right the Admiral and his Brothers; and *Bovadilla* should be obliged to restore all he had taken from them; and that the Admiral should be allowed all that belonged to him, according to the Articles their Majesties had granted him; and that the Rebels should be proceeded against, and punished according to their Offences. Don *Nicholas de Obando* was sent with these Powers; he was a wise and judicious Man, but, as afterwards appeared, partial, craftily concealing his Passions, giving Credit to malicious Persons, and therefore acting cruelly and revengfully.

But to return to the Admiral; as their Majesties were pleased to send *Obando* to *Hispaniola*, so they thought it proper to send the Admiral upon some Voyage that might turn to his Advantage, and keep him employed till the said *Obando* could pacify and reduce the Island *Hispaniola*; because they did not mean to keep him so long out of his Office, without any just Occasion; the Informations sent by *Bovadilla*, plainly appearing to be full of Malice, and not containing any thing for which he ought to forfeit his Rights. But there being some Delay in the Execution of this Design, and ill Men endeavouring to prevail that a new Information might be expected, the Admiral resolved to speak to their Majesties, and beg of them that they would defend him against all Dangers, which he afterwards repeated by Letters; and this procured him, first of all, a very favourable Answer, and very soon afterwards as favourable Grants and Concessions as he could possibly desire; which made him, in some Measure, forget all that he had suffered, and resolve once more to expose his Life in another Voyage to the *Indies*, for the perfecting his Design, which probably after such Usage no other Man would have done.

12. The Continent of *America* had never been touched upon, or known before this Voyage; and, to the Honour of the Admiral, it must be confessed, that he discovered it by Skill, and not by Chance; and sailed directly in search of it from *Spain*, and not from the *Indies*. That he was indisputably the first Discoverer, appears from hence, that he was at the Island of *Margarita* on the first of August, 1498, whereas *Alonso Hojeda*, and *Americus Vesputius* did not sail from *Cadiz* till the 20th of May, 1499. But if the Admiral had been hindered from making this Discovery, they could not, with any Propriety, have claimed the Merit or Title of Discoverers, from what they performed in that Voyage, since they made use of the Admiral's Drafts and Projects, which by their Catholic Majesties Commands, he had put into the Hands of the Bishop of *Burgos*, for their Service; and which, without their Majesties Knowledge, he communicated to these Men, out of pure Hatred to the Admiral, and that he might, if it was possible, rob him of his Credit and Reputation, as he had already deprived him of a great Part of his Interest at Court. The Licences that he gave these Men were clandestine, and it was no sooner known that they had obtained them, than others resolved to make use of the same Interest, in order to obtain Shares in the Riches of the new World.

Amongst others, some Inhabitants of the City of *Seville* formed a Company for this Purpose, and the principal Man amongst them, at least in Point of Capacity, was one *Peter Alonso Nino*, an Inhabitant of *Palos*, who was with the Admiral when *Paria* was discovered, and *Christopher Guerra* of *Seville*. *Peter Alonso Nino* having obtained the King's Licence, upon Condition that he should not come to an Anchor, nor land any where within fifty Leagues of what the Admiral had discovered, being himself unable to fit out a Ship, proposed it to *Lewis Guerra* of *Seville* to defray the Expence; and the Samples of Gold and Pearls the Admiral had sent, having stirred up the Avarice of many, *Guerra* accepted of the Offer, provided that his Brother *Christopher* should go as Captain; and accordingly they set sail not long after *Alonso de Hojeda*. They sailed two or 300 Leagues to the Southward, discovered Land, and, keeping down the

Coast, arrived at the Province of *Paria* a few Days after *Hojeda*, where, finding the *Indians* peaceably disposed, they, contrary to their Instructions, cut *Brazil Wood*; and holding on their Course, came to that which *Hojeda* had called the *Bay of Pearls*, formed by the Island *Margarita*, where they bartered for many Pearls.

The People of this Country went aboard the Ships without any Fear, carrying Necklaces of Pearls, and some of them in their Noses and Ears; the *Spaniards* drove a great Trade with Hawks-bells, Bracelets, Rings, and several Trifles made of Tin, which they took, and for them very freely gave their Pearls; having got a considerable Quantity of them, they passed by *Coro*, near the Province now called *Venezuela*, 130 Leagues below *Paria* and the *Dragon's Mouth*; and anchored in a Bay where they were very well received by fifty Men, who came from a Place a League off; and very earnestly pressed them to anchor at their Town. The *Spaniards* gave them some of their Toys, and the *Indians* taking off all the Pearls they had about their Necks and Arms, in the Space of an Hour gave them as many as weighed fifteen Ounces. The next Day they came to anchor before the Town called *Curiana*, where the *Indians* intreated them to go ashore; but the *Spaniards* being no more than thirty-three durst not venture, and made Signs to them to come aboard, which they did in their Canoes, carrying Pearls to exchange for some *Spanish* Toys.

At length, being convinced of their Sincerity, the *Spaniards* went ashore, and being courteously entertained, stayed there twenty Days: They plentifully supplied them with Venison, Rabbits, Geese, Ducks, Parrots, Fish, Bread made of Maize, *Indian* Wheat, and other things, and brought them all the Game they would ask for. By seeing so many Deer they concluded that this must be the Continent. They perceived that they kept Markets or Fairs, and that they made use of Jars, Dishes, or Porringers, besides other Vessels of several Shapes, and that in their Pearl Necklaces they had Frogs and other Creatures made of Gold; and on asking where it was gathered, they answered, six Days Journey from thence; they resolved to sail thither, and that was the Province of *Curiana Cauchito*, where the People came aboard in their Canoes, without any Jealousy. They carried some wrought and unwrought Gold, which they bartered away, but would not part with the Pearls, they had like those of *Curiana*; however, they gave them very fine Monkies and most beautiful Parrots of several Colours.

Departing hence, they proceeded further, where above five thousand naked Men came out with Bows and Arrows to hinder their landing, and though they endeavoured to appease them by shewing Hawks-Bells and other things, they could not prevail, and therefore returned to *Curiana*, and were received with the same Satisfaction as before, and earnestly entreated for Pins and Needles; for whereas, at first, they had understood they were to sew, and tack things together, and therefore said they had no use for them, going naked, the *Spaniards* shewed them that they were used for drawing Thorns out of their Feet, there being many in that Part, at which they smiled, and asked for them. All that Country lies in seven or eight Degrees Latitude, and is not at all cold in *November* and *December*. The *Indians* were highly pleased, thinking they had cheated the *Spaniards*, who carried away above 150 Marks, or 1200 Ounces of Pearls, and some of them as large as small Hazle-nuts, very beautiful and well coloured; but they were ill bored, the *Indians* having no Iron. The *Spaniards* thought fit to return home, and so came back to *Paria* and the *Dragon's Mouth*. Two Months after they left *Curiana* they arrived in *Galicia*, on the 6th of February, 1500, where *Ferdinand de la Vega*, Lord of *Grajal*, was then Governor; before whom *Peter Alonso Nino* and *Christopher Guerra* were accused, by their own Ships Crew, of having concealed Pearls, and defrauded the King of his fifth Part, which was the Duty.

The Noise that this Voyage made, and the great Riches which the Adventurers gained thereby, promoted the Spirit of Discovery, but more especially among such as had been acquainted with the Proposals made by the Admiral,

miral, or had served under him in his two first Voyages, and consequently had greater Opportunities of gaining Experience, in this Way, than any other Men. Of these there was none so capable of prosecuting Voyages of this kind as *Vincent Yanez Pinson*, of whom we have already spoken, for he was not only a very able Seaman, and, as such, had sailed with the Admiral in his first Discovery, but was also a Man of liberal Education, great Courage, and had a large Fortune, so that he fitted out at his own Expence a Squadron of four Sail of stout Ships, with which he sailed to the *Cape de Verd* Islands, and, having there taken in such Refreshments as he thought necessary, proceeded from *St. Jago* upon the 13th of *January*, 1500, upon Discovery.

He first stood away to the South, and then to the West, and having sailed 700 Leagues lost Sight of the North Star, and crossed the equinoctial Line, being the first Subject of the Crown of *Castile* and *Leon* that did it. When past the Line, they met with such a dreadful Storm, that they expected to perish; he ran 240 Leagues farther to the Westward, and on the 26th of *February* they discovered Land at a great Distance, being that which is now called *Cape St. Augustine*, though *Vincent Yanez* named it *Cabo de Consolation*, or *Cape Comfort*, and the *Portuguese* call it the Province of *Santa Cruz*, or of the *Holy Cross*, now a Part of *Brazil*; they found the Sea thick and whitish, like a River, and, sounding, had sixteen Fathom Water. Captain *Pinson*, going on Shore, here took Possession of the Country in the Name of their Catholic Majesties, and endeavoured all he could to bring the People to trade, but without Effect, for at last they came to Blows, in which some were slain on both Sides; and at last he thought it adviseable to retire and continue his Voyage, which he did to the Mouth of the River *Maranon*, where he observed what the Admiral had done before at the Mouth of another great River; a mighty Struggle between the Tide of Salt-water running in, and a vast Current of fresh Water pouring down from the Land: He likewise found the Country at the Mouth of this River well inhabited on both Sides, but could not bring them to enter into any Trade as he expected, and therefore he resolved, without any farther Delay, to proceed towards *Paria*, which he accordingly did.

In his Passage he met with another very large River, so that he drew up fresh Water when above twenty Leagues at Sea, and therefore he called it *Rio Dulce*, or the *Fresh River*, which has been since supposed to be a Branch of the great River *Yapari*, that makes the fresh Bay between *Paria* and the Island of *Trinity*; upon this fresh River, found by *Vincent Yanez*, it is supposed that the People called *Aruacas* have their Dwellings. They proceeded to *Paria*, and there took in *Brazil* Wood; from which *Vincent Yanez* struck over to the Islands that lay in the Way to *Hispaniola*, and, the Ships being at Anchor, there arose such a dreadful Storm that two of them sunk in the Sight of the others, with all the Men; a third was forced from its Anchors, with eighteen Men, and carried out of Sight: The Fourth, which is likely had the best Anchors and Cables, riding it out, beat so furiously upon the Sea, that the Sailors, believing it would be dashed in Pieces, went all ashore in the Long Boat, without Hopes of its escaping; and, for their own Security, had Thoughts of killing all the *Indians* thereabouts, to prevent their calling in their Neighbours to destroy them; but the Ship that had been drove away with the eighteen Men returned, and that which had rode out, when the Sea grew calm, was saved. In these two Ships they went away to *Hispaniola*, where they refitted, and returned into *Spain*, about the latter end of *September*, having discovered 600 Leagues about the Coast of *Paria*.

In the latter end of the Month of *December*, 1499, *James de Lepe*, a Native of the Town of *Palos*, having heard of the Expedition undertaken by *Pinson*, applied himself to the Earl of *Miranda*, his Patron, and promised him mighty things in case he would enable him to make the same Voyage, which was very soon complied

with; and he actually arrived at the Mouth of the River *Maranon*, within a very short time after *Pinson* had left it, as he found to his Cost; for the People, being provoked by his carrying away thirty-six Men out of their Country, attacked the *Spaniards* briskly, and killed several, so that he was compelled to prosecute his Voyage to *Paria*, where he likewise quarrelled with the People, and returned without making the least Advantage of this Expedition, except taking a few *Indian* Prisoners.

As it happened about this time, it is requisite that we should speak here of the great good Fortune of the Crown of *Portugal*, a Subject of which was so happy as to fall upon one of the richest Countries of *South America*, by meer Chance; the thing happened thus: Don *Emanuel* King of *Portugal*, fitted out a Fleet for the *East Indies*, consisting of thirteen Sail, having on Board one thousand two hundred Men, Soldiers and Sailors, under the Command of *Peter Alvarez Cabral*, who sailed from *Lisbon* on *Monday* the 9th of *March*, 1500, and, to avoid the Coast of *Guinea*, where they afterwards met with great Calms, struck out to Sea on the Starboard, steering his Course to the Southward, the better to turn the *Cape* of good *Hope*, because it runs far out into the Sea; having sailed a Month, still keeping to Sea, on the 24th of *April* he fell in with the Coast of the Continent of *America*, which, according to the Computation of the Pilots, might be about 450 Leagues distant from the Coast of *Guinea*, and in about 10° South Latitude. The Pilots could not persuade themselves that it was a Continent, but some great Island like *Hispaniola*, and, in order to find it out, they held on one Day along the Coast, hoisted out a Boat, went ashore, and saw an infinite Number of naked People, but not black, nor with curled Hair like those of *Guinea*, but hanging down lank like ours, which they thought was extraordinary; the Boat returned to give an Account of it, and said that there was a good Harbour where they might come to an Anchor; the Fleet drew near to Land, and the Commander sent out the Boat again, with Orders to endeavour to take some Men.

The *Indians* retired to a Hill, waiting to see what the *Portuguese* would do; but when they were about sending other Boats, the Weather obliged them to proceed along the Coast, and they anchored in another good Harbour, which they called *Puerto Seguro*, or *safe Harbour*; a Boat went ashore and took two *Indians*, whom the Commander ordered to be clothed and sent back, whereupon a great Number of People came forward, singing and dancing, sounding Horns of several Sorts, and leaping in joyful Manner; the Commander went ashore with most of his Men, and that being Easter-day they erected an Altar under a Tree, where they sung Mass; the *Indians* drew near in a very peaceable Manner, and with much Security kneeled down, beat their Breasts, doing all that they saw the Christians do, and were as attentive at a Sermon that was preached as if they understood it.

Peter Alvarez Cabral sent away a Ship from thence under *Gaspar de Lemos*, with Advice of the Land he had discovered, which was very acceptable. The Men walked about all that Day diverting themselves, and the *Indians*, for pieces of Paper, bits of Cloth, and such like inconsiderable things, gave them Parrots and other Birds of fine Colours, Axis, Batatas, and the like. They went to the Towns, and thought the Country fruitful and agreeable, very full of Maize, or *Indian* Wheat, and Cotton. *Peter Alvarez* ordered a Stone Cross to be erected there, in Token of Possession, and therefore the *Portuguese* called that Country *Santa Cruz*, or *Holy Cross*, and it is now called *Brazil*, from that Sort of Wood brought from thence. The Commander left two Men there of twenty he had brought from *Portugal*, being banished Men, to be left where he thought fit, whom the *Indians* used very well, and one of them learned the Language, and served a long time for an Interpreter. Thus the Discovery of *Brazil* was purely accidental, and the only one independant of what was projected by the Admiral, or grounded upon his Projects.

NEW and ACCURATE CHART
of the
WEST INDIES
with the adjacent Coasts of NORTH
and SOUTH AMERICA.
Drawn from the best Authorities, assisted
by the most approved modern Maps & Charts,
and Regulated by Astronomical Observations.
By Eman. Bowen Geographer to His Majesty.

The most difficult part of the Course of Sailing thro' the
Windward Passage is from Port Royal to Point
Morant, which, being against the Trade Winds, takes
up sometimes 5 or 6 Weeks, tho' but the distance of 20
Leagues. But the most dangerous is from that Point, till
they get clear of Crooked Island, a Course of 60 Leagues,
for the French and Spaniards are generally waiting to
intercept such English Ships, as chuse to pass this way
rather than by the Gulf of Florida, where they are
also exposed to the same inconveniences, both from the
Trade Winds and the French and Spanish Cruisers.

K. Charles II by Charter dated June 30th 1665
granted to the E. of Clarendon D. of Albemarle &c.
the Province of Carolina extending Southward to
the 29 Deg. of N. Latitude so that Fort St. Augustin
as well as Georgia falls within these Limits.

Guanaham San Salvador or Cat Island was
the first Land discovered in the New World
Anno Dom. 1492 by Christopher Columbus

The Bahama Islands were taken from the English
by the French & Spaniards in 1703 in 1717 Captain
Rogers after having plundered most of them retook
New Providence which has ever since belonged to English

The Mosquitos is a small Nation of Indians never yet
conquered by the Spaniards, the Country being secured
by Morayses and inaccessible Mountains within the
Land, and by dangerous Rocks & Shoals on its Sea Side.

The Spanish Gallions coming before R. de la Hacha notice is sent from
thence over land to Cartagena, Lima, Panama &c. to hasten King's
Treasure. They then continue their Course to Cartagena and after a
stay of 2 Months go to Puerto Bello and are about a Month taking
in the Treasure from Panama &c. then they return to Cartagena finish
their Lading & sail to the Havana to meet the Flota from la Vera Cruz
whence they proceed together thro' the Gulf of Florida for Old Spain.

John Oxnam of Plymouth in 1575
fitted out a Ship with 70 Men, landed
on the Isthmus of Darien near y.
place where St. Francis Drake had
conference with the Indians, left the Ship there a-
ground, & covered her wth Trees, went inland
to a River, built a Bark & saild thro' to y.
South Sea, where he made several rich
Prizes, one of 60 Thousand
Peeas of Gold.

13. It must naturally seem strange to the judicious and attentive Reader, that every light, every transient Scheme for finding new Countries, and making fresh Discoveries, should meet with Encouragement, while the Admiral himself was not only in a manner neglected, but also most infamously abused. He ought to consider, however, that Discoveries and Improvements are seldom well understood by Statesmen and Courtiers. To speak honestly and fairly they are the last Sort of Men that can be brought to understand them, and that for this plain Reason: The Merit of such Undertakings consists in proposing a very large and certain future Advantage from a small present Expence, whereas Statesmen and Courtiers, having the present Time only in View, care very little for such Advantages as are to redound to their Country in Times after their own.

We have a clear and direct Proof of this in the Conduct of the *Spanish* Ministers upon this Occasion; for they were infinitely more ready to listen to all such Adventurers as proposed immediate Profits, and a present Supply of Gold, Pearl, and other rich Commodities, than to the Schemes of the Admiral, who was a grave public-spirited Man, and shewed his Integrity as well as his Wisdom, in desiring his Reward in those Countries which he discovered, and not in *Spain*. But to enter more particularly into the Mistakes that were made by the *Spanish* Ministers in their Conduct of this Affair, for the sake of other Countries, and future Discoveries, we will reduce them under Three Heads.

First, It was extremely wrong, to place the sole Merit of those new found Countries, in producing Gold and Pearls; and this for many Reasons which might be assigned, but we will mention only two; one is, that a Country is not enriched so much as endangered by having Gold Mines; and this, because it exhausts its Subjects, encourages Luxury, and excites the Envy of other Nations. In this Sense, whatever Commodities will produce Gold and Silver are much more valuable than those Metals, as we see plainly by the *Dutch* Fisheries on our Coasts, which are infinitely more beneficial than if, instead of Herrings, their Nets brought up so much Gold as those Herrings sell for, since it is a continual

Nursery for Seamen, employs a vast Number of People on Shore, creates a very large and profitable Trade, and has increased the *Dutch* Shipping to almost an incredible Degree: Gold and Silver, therefore, are the Riches of private Men; but the Wealth of a Nation consists in Industry and Trade. The other Reason why the bringing over such rich Metals ought not to be encouraged, especially at the Beginning of such Discoveries, is, because it hinders Plantations and Settlements, and, by exciting a Spirit of Avarice, absolutely destroys that kind of public Spirit, which can alone dispose the Inhabitants of Colonies to become truly useful to their Mother Country.

The *second* great Mistake they committed was, in making their Notions public, and thereby drawing Multitude of Adventurers to crowd in with their Projects; which not only distracted the Views of the great Men themselves, but disturbed all *Spain*, and, instead of promoting that kind of Turn which was requisite to improve those new discovered Countries, begat quite the reverse, and established it as a general Opinion, that Wealth was the sole Good, and that every kind of Hazard was to be run in order to obtain it.

The *third* Error, was their slighting and relinquishing that most wise and judicious Plan which *Columbus* had chalked out; for he, by suggesting the Conversion of Infidels to the Christian Faith, and thereby obtaining the Sanction of the Pope's Grant, had most effectually covered all the Views of Ambition and Interest which it became the Court of *Castile* to conceal; but the Bishop of *Burgos* and his Creatures were not more wanting in Virtue than negligent in Point of Decency, and, from a restless and rapacious Desire of enriching themselves in an Instant, at the Expence of this new World, drew aside the Curtain, and shewed all *Europe* at once, both what it was they sought, and how easy a thing it might be to share with them. Whereas, if they had silently established large and powerful Colonies in *Hispaniola*, and contented themselves with moderate Returns of Gold, they might have been strong enough to have given Laws in that Part of the World, before it had been possible for any other Nation to have found their way thither.

SECTION V.

The fourth Voyage of the Admiral Don CHRISTOPHER COLUMBUS; his Discoveries on the Continent, and of the Islands in America; with an Account of his Return from that Voyage to Spain, and his Decease.

1. An Account of the new Proposals made by the Admiral to the Court of Spain in regard to his fourth Voyage to the Indies, and the Acceptance they met with.
2. His Arrival in the Indies, and the base Usage that he met with from Nicholas Obando, the new Governor of Hispaniola.
3. The Admiral prosecutes his Discoveries along the Coast of the Continent, and labours all he can to gain Intelligence from the Indians, whom he treats with the utmost Humanity.
4. He continues his Voyage towards the Isthmus of Darien, supposing, from the Account given by the Natives, that he should have found a Passage thereabouts into the South-Sea.
5. Discovers all along the Coast of the Continent to the famous Haven of Porto-Bello, to which he gave that Name, and the Reason of it.
6. He enters the Port of Bastimentos, and shelters himself afterwards in that of Retrete, where he falls out with the Natives, through the Fault of his own People.
7. The Measures he took for the Preservation of the Spaniards, and the Reason of his resolving to leave a considerable Colony in that Neighbourhood.
8. The Discoveries made by them of rich Mines of Gold in the Country near their Settlement, and of the Causes of the Troubles that ensued among them.
9. The Miseries endured by the Admiral and his Men in Jamaica, and the Method they took to send Advice of their Misfortunes to Santo Domingo.
10. A large Account of the Rebellion raised against the Admiral under these Distresses, and of his Wisdom and Courage in supporting them.
11. His Return with great Difficulty to Hispaniola, and from thence into Spain, and his Reception there.
12. His Death, and some Remarks on the Circumstances attending it.
13. Observations upon this Section, and the ill Usage his Family met with notwithstanding all the Advantages derived to Spain from Admiral Columbus's Discoveries.

1. **T**HE Admiral found not only all his Patience, of which he had a large Stock, but all his Parts, and all his Address, in neither of which he was the least deficient, absolutely necessary to maintain his Ground at Court. The King, who was a Prince flattered with the Reputation of being a profound Statesman, be-

cause he knew how to dissemble, who had a large Share of Cunning, and who durst do any thing however unbecoming his Dignity and Birth, treated the Admiral with a cold Esteem, and secretly hated a Character so unlike his own. The Queen herself, tho' a true *Castilian*, which implies a Woman of Genius, Piety, and Honour, had conceived some

some Prejudices against *Columbus* on account of that Height with which he had exerted his Authority; but at the bottom at his having procured it rather by way of Contract, than by expecting such a Reward as their Catholic Majesties should judge proper. The Admiral saw this clearly enough, and that though their Majesties were desirous to do Justice to his Pretensions, yet they were inclined to strip him of his Power, and were therefore averse to his Desire of returning to the *Indies*.

He resolved therefore to attack them in their own Way; and, having demanded a private Audience of the Queen, insinuated, that what he had yet done was nothing; that his Discoveries on the Continent were with a View to find a Passage to the *East Indies*, and that he did not at all doubt but that in another Voyage he should be able to surmount all Difficulties, and subdue the *East* as well as the *West Indies* to the Power of their Catholic Majesties. This had its desired Effect; a Fleet was immediately ordered for this new Service, and the Admiral was again as much caressed, as if the King and Queen had really thought it possible to blot out of his Mind the Memory of his ill Usage.

2. He set sail from *Cadiz* on the 9th of *May* 1502, and sailed to *St. Catherines*; thence they went to *Arzilla* to relieve the *Portuguese*, who were reported to be in great Distress; but when they came thither the *Moors* had raised the Siege: The Admiral therefore sent his Brother Don *Bartholomew Columbus*, his own Son, with the Captain of the Ships, on shore, to visit the Governor of *Arzilla*, who had been wounded by the *Moors* in an Assault. He returned the Admiral Thanks for the Visit, and to this purpose sent some Gentlemen to him, among whom some were Relations to Donna *Philippa Moniz* the Admiral's Wife. The same Day he sailed, and, arriving at *Grand Canaria* on the 20th of *May*, cast anchor among the little Islands, and on the 24th went over to *Maspalomas* in the same Island, there to wood and water for their Voyage. The 15th of *June* they arrived at the Island *Martinico*, whence they stood to the Westward and came to *Domingo*, ten Leagues from the other, so running along among the *Caribbee Islands* to *Santa Cruz*; and on the 24th of the same Month ran along the South Side of the Island of *St. John*. The Admiral had a mind to change one of his Ships for another, because it was a bad Sailer, and besides would lie almost under Water, which was a Hindrance to his Voyage, because his Design was to have gone directly upon the Coast of *Paria*, and keep upon the Shore till he came upon the Streight, which he certainly concluded was about the Places since called *Verragua* and *Nombre de Dios*; but seeing the Fault of the Ship, he was forced to repair to *S. Domingo*, to change it for a better.

Yet that the Judge sent by their Majesties to call *Bovadilla* to an Account for his Mal-administration might not be surprized at his unexpected Arrival, upon the 29th of *June*, being near the Port, the Admiral sent *Peter de Terreros*, Captain of one of the Ships, to signify what Occasion he had to change that Ship, for which Reason, as also because he apprehended a great Storm was coming, he desired to secure himself in that Port, advising him not to let the homeward-bound Fleet sail out for eight Days to come, for if he did it would be in great Danger. But the Governor would not permit the Admiral to come into the Harbour, nor did he hinder the going out of the Fleet that was bound for *Spain*, which consisted of eighteen Sail, and was to carry *Bovadilla*, who had imprisoned the Admiral and his Brother, *Francis Roldan*, and all the rest who had been in the Rebellion against them, and done them so much Harm; all whom it pleased God to infatuate, that they might not admit of the Admiral's good Advice. This was prevented by their setting out of that Port for *Spain*; for no sooner were they come to the East-Point of the Island *Hispaniola*, but there arose so terrible a Storm, that the Admiral of the Fleet sunk, in which was *Bovadilla*, with most of the Rebels; and this Hurricane made such Havock among the rest, that of the eighteen Ships only three or four were saved. This happened on the last of *June*, when the Admiral, having foreseen the Storm, and being refused Admittance

into the Port for his Security, drew up as close to Land as he could, thus sheltering himself, not without much Dissatisfaction among the Men, who, for being with him, were denied that Reception which certainly had been allowed to Strangers, much more to them who were of the same Nation; for they feared they should be so served if any Misfortune should befall them for the future; and though the Admiral was concerned on the same Account, yet it grieved him more to behold the Baseness and Ingratitude used towards him in that Country he had discovered for the Honour and Benefit of *Spain*, in being thus refused to shelter his Life in it.

Yet his Judgment and Prudence secured his Ships till the next Day; when the Tempest increasing, and the Night coming on very dark, three Ships broke from him, every one his own Way, the Men on board each of them, though all in great Danger, concluding, the others were lost: Those aboard the Ship called *Santo*, thinking to save their Boat, which had been ashore with the Captain *Terreros*, dragged it astern, where it overset, and were at last forced to let go to save themselves: But the Caravel *Bermuda* was in much more Danger; for while running out to Sea, she was almost covered with it; by which it appeared the Admiral had Reason to change it, and all Men concluding that, under God, the Admiral's Brother was the saving of her, by his Wisdom and Resolution; for, as has been said, there was not at that time a more expert Sailor than he. So that after they had all suffered very much, except the Admiral, it pleased God they met again in the Port of *Azua*, on the South Side of *Hispaniola*, where every one giving an Account of his Misfortunes, it appeared, that *Bartholomew Columbus* had weathered so great a Storm, by flying from Land like an able Sailor; and that the Admiral was out of Danger, by lying close to the Shore like a cunning Astrologer, who knew whence the Danger must come. Well might his Enemies blame him therefore, as if he had raised the Storm by Magic, to be revenged on *Bovadilla*, and the rest of his Enemies that were with him, seeing that none of his four Ships perished, and that of eighteen with *Bovadilla*, only one, called *la Aguja* or the *Needle*, the worst of them all, held on its Course for *Spain*, where it arrived safe, having on board four thousand Pesos of Gold belonging to the Admiral, the other three that escaped, returning to *S. Domingo* shattered and in a distressed Condition.

3. The Admiral in the Port of *Azua* gave his Men some Refreshment after the Storm, and it being one of the Diversions used at Sea to fish when there is nothing else to do, it may not be amiss to mention two Sorts of Fish among the rest which were taken there, the one pleasant, the other singular: The first was a Fish called *Saovina*, as big as half an ordinary Bell, which lying asleep above Water was struck with a Harping-iron from the Boat of the Ship *Bisceina*, and held so fast that it could not get loose, but being tied with a long Rope to the Boat, drew it after it as swift as an Arrow, so that those aboard the Ship seeing the Boat skim about, and not knowing the Occasion, were astonished, till at last the Fish sunk, and being drawn to the Ship's Side was there hauled up by the Tackle. The other Fish was taken after another Manner: The *Indians* call it *Manati*, and there are none in *Europe*; it is as big as a Calf, nothing differing from it in the Colour and Taste of the Flesh, but that it is better and fatter: Within they have nothing like a Fish, and feed only on the Grass they find along the Banks.

But to return to our History: The Admiral having a little refreshed his Men and repaired his Ships, left the Port of *Azua* and went to that of *Brazil*, which the *Indians* call *Giacchomo*, to shun another Storm that was coming: He sailed again on the 14th of *July*, and was so becalmed, that, instead of holding his Course, the Currents carried him away to certain Islands near *Jamaica*, which are very small and sandy, and he called them *los Poros*, or the *Wells*, because, not finding any Water in them, they dug many Pits in the Sand, and took up Water there for their Use: Then sailing Southward for the Continent, he came to certain Islands, and went ashore upon

upon the biggest only, called *Guanaja*, (whence those that made Sea-Charts took occasion to call all the *Islands of Guanaja*) which are almost twelve Leagues from the Continent, near the Province now called *Honduras*, though then the Admiral called it *Cape Casinas*. Being come to the Island of *Guanaja*, the Admiral ordered his Brother *Bartholomew* to go ashore with two Boats; where he found the People like those of the other Islands, except their not having such high Foreheads; they also saw abundance of Pine-trees, and Pieces of *Lapis Calaminaris*, used to mix with Copper, which some Seamen, taking for Gold, kept Parcels of it privately a long time.

The Admiral's Brother being ashore at that Island, and very desirous to know something of it, it so fell out that a Canoe as long as a Galley, eight Foot wide, all of one Tree, and like the others in Shape, put in there, being loaded with Commodities brought from the Westward, and bound towards *New Spain*; in the midst of it was a Covering like an Awning, made of Palm-tree Leaves, not unlike those of the *Venetian* Gondolas, which kept all under it so close, that neither Rain nor Sea-water could wet the Goods; under this Awning were the Children, the Women, and all the Goods; and though there were twenty-five Men on board this Canoe, they had not the Courage to defend themselves against the Boats that pursued them. The Canoe being thus taken, without any Opposition was carried to the Admiral, who blessed God that it had pleased him at once to give him Samples of the Commodities of that Country, without exposing his Men to any Danger: He therefore ordered such things to be taken as he judged most valuable, such as some Quilts, and Shirts of Cotton without Sleeves, very curiously wrought, and dyed of several Colours, with some small Cloths of the same Sort, and large Sheets in which the *Indian* Women on board the Canoe wrapped themselves, as the *Moorish* Women at *Granada* used to do, and long wooden Swords with a Channel on each Side where the Edge should be, in which there were sharp Edges of Flint, fixed with Thread and a bituminous Sort of Matter, which cut naked Men as if they were of Steel; and Hatchets to cleave Wood, like those of Stone the other *Indians* use, but that these were made of good Copper; also Bells of the same Metal, Plates, and Crucibles to melt the Metal.

For their Provision, they had such Roots and Grain as in *Hispaniola*, and a sort of Liquor, made of Maize, like *English* Beer, and abundance of Cocoa Nuts, which in *New Spain* passed for Money, and which they seemed to value very much, for when they were brought on board among their other Goods, if any of those Nuts fell, they all stooped to take them up, as if they had been Things of great Consequence. Yet at that time they seemed to be in a manner besides themselves, being brought Prisoners from their Canoe aboard the Ship, among such strange and fierce People, and discovered nothing extraordinary, except their Modesty, which among Men and Women was highly remarkable. This moved the Admiral to use them well, and restore their Canoe, and give them some things in exchange for those that had been taken from them. Nor did he keep any one of them but an old Man whose Name was *Giumbe*, that seemed to be the Chief of them, to learn something of him concerning their Country, and that he might draw others to converse with the Christians; which he did very readily and faithfully all the while they sailed where his Language was understood; therefore, as a Reward for this his Service, when they came where he was not understood, the Admiral gave him a Present, and sent him home very well pleased, which was before he came to *Cape Gracias de Dios*.

4. Notwithstanding the Admiral had heard so much from those in the Canoes concerning the great Wealth, Politeness, and Ingenuity of the People Westward towards *New Spain*; yet thinking that those Countries lying to the Leeward, he could sail thither when he thought fit from *Cuba*, he would not go at this time, but held on his Design of discovering the Streight in the Continent, to clear a way into the *South Sea*; which was what he aimed at, in order to come at the Countries that produce Spice, and therefore resolved to sail Eastwards towards *Veragua*,

and *Nombre de Dios*, where he imagined the said Streight to be, as in effect it was; yet he was deceived in the Matter, for he did not conceit it to be an Isthmus or narrow Neck of Land, but a small Gulph, running from Sea to Sea, from whence his Mistake might proceed; for when they said the Streight was at *Veragua* and *Nombre de Dios*, it might be understood either of the Land or Water; and he took it in the most usual Sense, and for what he most earnestly desired: And yet, though that Streight is Land, it was, and is, the way to both Seas, and by which such immense Riches have been discovered and conveyed; for (says the Admiral's Journal) it was God's Will a Matter of such vast Concern should not be otherwise found out, that Canoe having given the first Information concerning *New Spain*.

There being nothing therefore in the Island of *Guanaja* worth taking notice of, he without farther Delay sailed, in order to seek out the Streight towards the Continent to a Point he called *Casinas*, because there were abundance of Trees that bear a sort of Fruit that is rough, have a Stone, and is good to eat, especially boiled, which Fruit the *Indians* in *Hispaniola* call *Casinas*. There appearing nothing worth taking notice of in that Country, the Admiral would not lose time to go into a great Bay the Land makes there, but held on his Course Eastwards along that Coast which runs along the same way towards *Cape Gracias a Dios*, and is very low and open. The People nearest to *Cape Casinas* wear those painted Shirts or Jerkins, before mentioned, and which were like Coats of Mail, made of Cotton, strong enough to defend them against their Weapons, and even to bear off the Stroke of some of ours. But the People higher Eastwards towards *Cape Gracias a Dios* were almost black, of a fierce Aspect, go stark naked, are very savage, and, as the *Indian* that was taken said, eat Man's Flesh, and also Fish just as it was taken. They have their Ears bored with such large Holes, that they may put a Hen's Egg into them; which made the Admiral call that Coast *de las Orejas*, or, *Of the Ears*.

There, on the 14th of *August*, 1502, Don *Bartholomew* went ashore in the Morning, with the Colours, the Captains, and many of the Men to hear Mass. And when the Boats went ashore to take Possession of the Country for their Catholic Majesties, above one hundred Men ran down to the Shore loaded with Provisions, who, as soon as the Boats came ashore with the Lieutenant, on a sudden retired back without speaking a Word. He ordered they should give them Hawks-Bells, Beads, and other things; and, by means of the beforementioned Interpreter, inquired concerning the Country; tho', he having been but a short time with him, did not understand the Christians, by reason of the Distance of this Country from *Hispaniola*, where several Persons aboard the Ships had learned the *Indian* Language; nor did he understand those *Indians*; who being pleased with the things which had been given them, came the next Day to the same Place loaded with several sorts of Provisions, as Hens of that Country, which are better than ours, Geese, roasted Fish, red and white Beans like Kidney Beans, and other things like those in *Hispaniola*. The Country was green and beautiful, tho' low, and producing abundance of Pines, Oaks, Palm Trees of several sorts, and Mirabolans, and almost all sorts of Provisions which *Hispaniola* affords were there to be found; abundance of Leopards, Deer, and other Beasts, as also all sorts of Fish that there are in the Islands, and in *Spain*.

The People in this Country are much like those of the Islands, but that their Foreheads are not so high, nor do they seem to have any Religion. They use several Languages among them, and for the most part they go naked, but cover their Privities; yet some wear short Jumps down to their Navels without Sleeves; their Arms and Bodies have Figures wrought upon them with Fire, which make them look odly; and some have Lions, others Deer, and others Castles, with Towers or other things, painted on their Bodies: Instead of Caps the better sort of them wear red and white Cloths of Cotton; and some have Locks of Hair hanging on their Forehead; but when they are to be fine on a Festival Day,

Day, they colour their Faces, some black, and some red; others draw Streaks of several Colours; others paint their Nose; and others black their Eyes: And thus adorn themselves to appear beautiful, in a manner that to us would make them look like Devils. The Admiral sailed along the said Coast *de las Orejas* Eastward to *Cape Gracias a Dios*, which was so called, because tho' there be but sixty Leagues to it from *Casinas*, they laboured seventy Days by reason of the Current and contrary Winds upon a Tack to gain it, standing out to Sea, and then making the Shore, sometimes gaining, and sometimes losing, Ground, as the Wind was scant or large when it came about. And had not the Coast afforded such good anchoring, they had been much longer upon it; but being clear, and having two Fathom Water half a League from the Shore, and two more at every League's Distance, they had always the Conveniency of anchoring at Night, when there was but little Wind; so that the Course was navigable by reason of the good anchoring, but however with Difficulty.

When, on the 14th of *September*, they came up to the Cape, perceiving the Land turned off to the South, and that they could conveniently continue their Voyage with those Levant Winds that reigned there, and had been so contrary, they gave Thanks to God; for which Reason the Admiral called this *Cape Gracias a Dios*. A little beyond it they passed by some dangerous Sands that ran out to Sea as far as the Eye could reach. It being requisite to take in Wood and Water, on the 16th of *September* the Admiral sent the Boats to the River, that seemed to be deep and have a good Entrance; but the coming out proved otherwise, for the Winds blowing from Sea, and the Waves running high against the Current of the River, so distressed the Boats, that one of them was lost with all the Men in it; and therefore the Admiral called it the *River de la Disgracia*, that is, of the Disaster. In this River, and about it, there were Canes as thick as a Man's Leg. And on the 25th of *September*, still running Southward, they came to an Anchor near a little Island called *Quiriviri*, and a Town on the Continent, the Name whereof was *Cariari*, where were the civilest People, the finest Country, and best Situation they had yet seen, as well because it was high, full of Rivers, and abounding in Trees, as because the Island was thick wooded and full of Forests of Palm, Mirabolan, and other sorts of Trees: For this reason the Admiral called it *Hucite*. It is a small League from the Town the *Indians* call *Cariari*, which is near a great River; whither resorted a great Multitude of People from the adjacent Parts, some with Bows and Arrows, others with Staves of Palm Tree, black as a Coal, and hard as Horn, pointed with the Bones of Fish; others with Clubs, as if they intended to defend the Country. The Men had their Hair braided about their Heads, the Women short, like ours; but perceiving the *Spaniards* to be a peaceable People, they were very desirous to barter their Commodities, which were Arms, Cotton Jerkins, and *Guanins*, which is pale Gold they wear about their Necks.

These things they swam with to the Boats, for the Christians went not ashore that Day nor the next, nor would the Admiral allow any thing of theirs to be taken, that they might not be esteemed Men that valued their Goods; but gave them some *Spanish* Baubles. The less they saw Strangers desired Exchange, the more eager they were, making abundance of Signs from Land; at last perceiving no body went ashore, they took all the things that had been given them, without reserving any, and tying them together, left them in the same Place where the Boats first went ashore, and where our Men found them when they landed. The *Indians* about this Place, believing that the Christians did not confide in them, sent an antient Man of an awful Presence, with a Flag upon a Staff, and two Girls, one about eight, the other of about fourteen Years of Age, who putting them into the Boat, made Signs that the Christians might safely land. Upon their Request, they went ashore to take in Water, the *Indians* taking great care not to do any thing that might distaste the Christians. And when they saw them return to their Ships, they

made Signs to them to take along with them the young Girls, with their *Guanins* about their Necks: And at the Request of the old Man that conducted them, they complied, and carried them aboard, wherein those People seemed more friendly than others had done; and in the Girls appeared a wonderful Spirit; for though the Christians were Strangers to them, they expressed no manner of Concern, but always looked pleasant and modest, which made the Admiral treat them well, and set them ashore again where the fifty Men were; and the old Man that had delivered them received them with much Satisfaction.

The Boats going ashore that same Day, found the same People with the Girls, who restored all the Christians had given them. The next Day the Admiral's Brother going ashore to learn something of those People, two of the chief Men came to the Boat, and taking him by the Arms between them, made him sit down upon the Grass; and he asking some Questions of them, ordered the Secretary to write down what they answered; but they seeing the Pen, Ink, and Paper, were in such a Consternation, that most of them ran away; which it was believed they did for fear of being bewitched, for they are reputed a superstitious People, and that not without Reason, because when they came near the Christians, they scattered some Powder about them in the Air, and burning some of the same Powder, endeavoured to make the Smoke go towards the Christians. Besides their refusing to keep any thing that belonged to them, shewed a Jealousy. Having staid here longer than was convenient, considering the short time they had after repairing the Ships, and provided all they wanted, they now hastened away.

Upon the 2d of *October* the Admiral ordered his Brother to go ashore with some Men to view that *Indian* Town, and learn something of their Manners, and the Nature of the Country. The most remarkable things they saw were, in a great wooden Palace, covered with Canes several Tombs; in one of which there was a dead Body, dried up and embalmed; in another, two Bodies wrapt up in Cotton Sheets, without any ill Scent; and over each Tomb was a Board with Figures of Beasts carved on it; and on some of them the Effigies of the Persons buried there, adorned with *Guanins*, Beads, and other things they most valued. These being the most civilized *Indians* in those Parts, the Admiral ordered some to be taken: Two of the chiefest were picked out, and the rest sent away with some Gifts and Civility, that the Country might not be left in an Uproar, telling them they were to serve as Guides upon that Coast, and then be set at Liberty. But they believing they were taken out of Covetousness, that they might ransom themselves with their Things and Goods of Value, the next Day abundance of them came down to the Shore, and sent four aboard the Admiral, as their Embassadors, to treat about their Ransom, offering some things, and freely giving two Hogs of the Country, which, tho' small, are very wild. The Admiral therefore, observing the Policy of these People, was more desirous to be acquainted with them, and would not depart till he had learned some things of them, but would not listen to their Offers; he therefore ordered some Trifles to be given to the Messengers, that they might not go away dissatisfied, and that they should be paid for their Hogs.

5. On the 5th of *October* the Admiral sailed, and came to the Bay of *Caravaro*, which is six Leagues in Length, and about three in Breadth. Here there are many small Islands, and two or three Channels within those Islands. The Ships sail as it were in Streets between Islands, the Leaves of the Trees sticking against the Shrouds. As soon as they anchored in this Bay, the Boats went to one of those Islands, where there were twenty Canoes upon the Shore, and the People lye naked, having only a Gold Plate about their Necks, and some an Eagle of Gold. They shewed no Signs of Fear; and the two *Indians* of *Cariari* interposing gave a Gold-Plate for three Hawks-Bells, which weighed ten Ducats. And they said there was great Plenty of that Metal upon the opposite Continent, not far from thence.

The next Day, being the twenty-seventh of *October*,
the

the Boats went ashore, where meeting ten Canoes full of People, and they refusing to barter their Gold-Plates, two of the chief of them were taken, that the Admiral might learn something of them by the Assistance of two Interpreters. The Gold Plate one of them wore weighed fourteen Ducats, and the other's Eagle, twenty-two. These said, that a Day or two's Journey up the Country there was abundance of Gold in some Places, which they named. In the Bay vast Quantities of Fish were taken, and ashore abundance of fresh Provisions, also great Plenty of Roots, Grains, and Fruit. The Men, who were painted all over, of several Colours, as red, black, and white, went naked, only covered their Privities with a narrow Cotton Cloth.

From this Bay of *Caravaro* they went to another close by it, called *Aburena*, which in some Measure is like the other. On the 17th they put out to Sea to continue their Voyage: And being come to *Guaiga*, a River twelve Leagues from *Aburena*, the Admiral commanded the Boats to go ashore; which when they were doing, they saw above one hundred *Indians* on the Strand, who assaulted them very furiously, running up to the Middle in Water, brandishing their Spears, blowing Horns, and beating a Drum in a warlike manner to defend their Country, throwing the Salt Water towards the Christians, chewing Herbs, and spurning the Juice towards them. The *Spaniards* without stirring, endeavoured to appease them, as they did, for at last they drew near to exchange the Gold-Plates they had about their Necks, some for two, and some for three Hawks-Bells, by which Means they got sixteen Gold-Plates, worth one hundred and fifty Ducats, for a few Baubles.

On the 19th of *October* the Boats went to Land again; yet before any Christians went ashore, they called to some *Indians* who were under Huts they had built that Night to defend their Country; but none of them would come, nor would the Christians land without knowing first what Mind they were in; for, as afterwards appeared, they waited in order to fall on them as soon as they had landed. But perceiving they came not out of the Boats, they blew their Horns, beat their Drums, and, making a great Noise, ran into the Water as they had done the Day before, till they came almost to the Boats, making Signs as if they would cast their Javelins if they did not return to the Ships. The Christians, offended at this Proceeding, that they might not be so bold and despise them, wounded one with an Arrow in the Arm, and fired a Cannon; at which they were so frightened, that all ran away. Then four Christians landed, and calling them back, they came very peaceably, leaving their Arms, and exchanged three Gold-Plates, declaring they had no more, because they came not to trade, but to fight. All the Admiral looked for in this Voyage, was to obtain Specimens of what those Parts afforded; and therefore, without further Delay, he proceeded to *Calibay* and cast anchor in the Mouth of a great River.

The People of the Country were seen to assemble, and afterwards sent a Canoe, with two Men in it, to the Ships, who having talked with the *Indians* that were taken at *Cariari*, presently came aboard the Admiral without any Apprehensions; and, by the Advice of those *Indians*, gave him freely two Plates of Gold they had about their Necks; and he in return gave them some Baubles. When these were gone, there came another Canoe with three Men, who did as the first had done. The Men, going ashore, found abundance of People with their King; and, to give his Subjects an Example, exchanged a Plate, and bid them barter for theirs; which in all were nineteen of pure Gold.

He then steered Eastwards, and came to *Cabravo*; the People of which Place lye near the Rivers of that Coast; and because none came down, and the Winds blew fresh, he held on his Course, and went on to five Towns of great Trade; among which was *Veragua*, where the *Indians* said the Gold was gathered, and the Plates made that they wore about their Necks. The next Day he came to a Town called *Cubija*; for here the *Indians* of *Cariari* said the Trading Country end-

ed, which began at *Caravaro*, and ran as far as *Cubija*, for fifty Leagues along the Coast. The Admiral proceeded till he put into *Porto Bello*, giving it that Name because it was large, beautiful, well peopled, and encompassed by a well-cultivated Country: He entered this Place on the 2d of *November*, passing between two small Islands, within which the Ships may lie close to the Shore, and turn out if they have Occasion.

6. The Admiral the 9th of *November* sailed out of *Porto Bello* eight Leagues to the Eastward, but the next Day was forced back four Leagues by Strefs of Weather, and put in among the Islands, where afterwards stood the Town of *Nombre de Dios*; and because all these small Islands were full of Grain, he called it *Puerto de Bastimentos*, or the *Port of Provisions*. There a Boat well-manned pursuing a Canoe, the *Indians* imagining the Men would do them harm, and perceiving the Boat was within less than a Stone's-throw of them, they all threw themselves into the Water to swim away, as they did, for though the Boat rowed hard, it could not in half a League overtake any of them. Here they continued till the 23d of *November* refitting the Ships, and that Day sailed Eastward to the Place called *Guaiga*. The Boats going ashore here found above three hundred Persons ready to trade for such Provisions as they had, and some small Ornaments of Gold they wore at their Ears and in their Noses.

But, without making any Stay here, on the 24th they put into a small Port, which was called *Retrete*, or the *Retired Place*, because it could not contain above five or six Ships together, and the Mouth of it was not above fifteen or twenty Paces over, and on both Sides of it Rocks appearing above Water, and the Channel between them was so deep that they found no Bottom, though if the Ships inclined to either Side the Men might leap ashore, which hazarded the Ships in that narrow Place, through the Fault of those who went in the Boats to view it, being covetous to deal with the *Indians*, and perceiving the Ships would lie there conveniently for it, run close to the Shore. At first the *Indians* came very familiarly to trade for such things as they had; but when they saw the Christians steal privately out of their Ships, they retired to their Houses; because the Seamen, like covetous, dissolute Men, committed a thousand Insolencies, in so much that they provoked the *Indians* to break the Peace, and some Skirmishes happened between them.

The *Indians*, encreasing daily, took Courage to come up to the Ships, which lay with their Sides close to the Shore, thinking to do some Mischief, which had turned to their own Detriment; had not the Admiral always endeavoured to gain them by Patience and Civilities: But at last, perceiving their Insolence, to strike a Terror into them he caused some Pieces of Cannon to be fired; which they answered with Shouts, thrashing the Trees with Staves, and by threatening Signs shewed they did not fear the Noise; for they thought it had been only a Thundering made to terrify them: Therefore to abate their Pride, and make them fear the Christians, the Admiral caused a Shot to be made at a Company of them upon a Hillock, and the Ball falling in the midst of them, made them sensible there was a Thunderbolt as well as Thunder; so that for the future they durst not appear, even on the Mountains. The People of this Country were the most likely they had yet seen among the *Indians*, for they were tall and spare, without great Bellies, and well-countenanced.

The Country was all plain, bearing little Grass, and few Trees; and in the Harbour there were vast Alligators, which went out to sleep ashore, and diffused as strong a Scent as if all the Musk in the World were together, but they are so ravenous and cruel, that if they find a Man sleeping, they drag him to the Water to devour him, though they are fearful and cowardly when attacked. These Alligators are found in many other Parts of the Continent, and some affirm that they are the very same as the Crocodiles of the *Nile*.

7. The Admiral, perceiving the violent East and North-east Winds did not cease, and that there was no trading with these People, resolved to go back, to be satisfied in what the *Indians* said of the Mines of *Veragua*; and

and therefore that Day he returned to *Porto Bello*, ten Leagues Westward, and, continuing his Course the next Day, was retarded by a West Wind, which was opposite to his new Design, but favourable to that he had for three Months past: But he believing this Wind would not last long did not alter his Course, but bore up against the Wind for some Days, because the Weather was unsettled; and when the Weather seemed a little favourable to go to *Veragua*, another Wind started up and drove him towards *Porto Bello*; and when they were in hopes to get into Port, they were quite beat off again. This perplexed them, and made them almost despair, seeing they could not get half an Hour's Rest, being continually wet, turning sometimes one way and sometimes another, struggling against all the Elements. Now it appeared that the Currents on that Coast followed the Wind, running Westward with a West, and with the East Wind the contrary, the Water still coming with the prevailing Wind.

The Ships being now almost broke to Pieces with the Tempest, and the Men quite spent with Labour, a Day or two's Calm gave them some Respite, and brought such Multitudes of Sharks about the Ships, that they were dreadful to behold, especially for such as were superstitious; because it is reported, that as Ravens at a great Distance smell out dead Bodies, so some think these Sharks likewise do; which, if they lay hold of a Man's Arm, or Leg, cut it off like a Razor. Such a Multitude of those were killed with the Hook and Chain, that, being able to destroy no more, they lay swimming upon the Water; and so greedy they are, that they do not only bite at Carrion, but may be taken with a red Rag upon the Hook.

Upon the 17th the Admiral put into Port, three Leagues East of *Pennon*, which the *Indians* call *Huiva*: It was like a great Bay; where going ashore they saw the Inhabitants, whose Cots were upon the Tops of Trees like Birds, they laying Sticks across from Bough to Bough, and building Huts upon them. In the Beginning of *January* they cast anchor near a River which the *Indians* call *Yebra*, and the Admiral *Belem* or *Bethlem*, because they came to this Place upon the Feast of the Three Kings. He caused the Mouth of that River, and another Westward, to be sounded; the latter the *Indians* called *Veragua*, where he found but shole Water, and in that of *Belem* four Fathom at high Water. The Boats went up this River to the Town where they were informed the Gold Mines of *Veragua* were. At first the *Indians* were so far from conversing, that they endeavoured with their Weapons to hinder the Christians from landing.

The next Day their Boats going to the River of *Veragua*, the *Indians* there did as the others had done, and not only ashore but on their Canoes in the Water. But an *Indian* of that Coast who understood them a little going ashore with the Christians, and telling them they were good People, and desired nothing but what they paid for, they were somewhat pacified, and trucked twenty Gold-Plates, some hollow Pieces like Joints of Reeds, and some Grains which were never melted, which, to make their Value the more, they said were gathered a great way off upon certain Mountains, and when they gathered it they did not eat, nor carry Women along with them; which the People of *Hispaniola* said they also practised, when it was first discovered.

On the 9th the Admiral and the *Biscaina* went up the River, and the *Indians* came presently to truck for such things as they had, particularly Fish, which at certain times of the Year come out of the Sea up those Rivers, in such Quantities as seem incredible to those who do not see it; and they exchanged some little things for Pins, and things they most valued they gave for Beads or Hawks-Bells. Next Day the other two Ships came in, which they had not done at first, because there being but little Water at the Mouth of the River, they were forced to stay for the Flood, though there the Sea never rises or falls above half a Fathom. *Veragua* being celebrated for Mines, the third Day after their Arrival the Admiral's Brother went up the River with the Boats to the Town of *Quibio* the *Indian* King, who, hearing of

the Lieutenant, came in his Canoe to meet him; they met in a very friendly Manner, giving one another such things as they valued most; and, having discoursed a long time together, went away peaceably: Next Day *Quibio* came aboard to visit the Admiral, and, having discoursed together about an Hour, the Admiral gave him some things, and his Men trucked Bells for some Gold; and so he returned without any Ceremony. Being thus very easy and secure, on the 24th the River of *Belem* suddenly swelled so high, that before they could provide against it, or carry a Cable ashore, the Fury of the Waves came so impetuously against the Admiral's Ship, that it broke one of her Anchors, and drove her with such Force against the Ship *Gallega*, which lay astern of it, that it brought the Foremast by the Board, and both were carried away foul of one another, in the utmost Danger of perishing. Some judged the mighty Rains to have been the Cause of this Flood, they having never ceased during the Winter in that Country; but had that been it, the River would have swelled by degrees, and not all of a sudden; which made it probable some great Snows had fallen on the Mountains of *Veragua*, which the Admiral called *St. Christophers*, because the highest of them was above the Region of the Air where Meteors are bred; for no Cloud was ever seen above, but all below it.

This Tempest lasted so long, that they had time enough to refit and caulk the Ships. The Waves broke so furiously upon the Mouth of the River, that the Boats could not go out to discover along the Coast, to learn where the Mines lay, and chuse a Place where to build a Town, the Admiral having resolved to leave his Brother there with most of the Men, that they might settle, and subdue the Country, while he went to *Spain* for Supplies of Men and Provisions. Upon this Prospect, the Weather growing calmer, on the 6th of *February* he sent his Brother with sixty-eight Men by Sea to the Mouth of *Veragua*, a League distant from *Belem* Westward; and he went a League and a half up the River to the *Cazique's* Town, where he staid a Day enquiring the way to the Mines. They travelled four Leagues and a half, and came near a River, which they passed forty-four times, and the next Day advanced a League and a half towards the Mines shewed them by the *Indians* sent by *Quibio* to guide them. In two Hour's time after they came thither every Man gathered some Gold about the Roots of Trees, which were there very thick, and of a prodigious heighth. This Sample was much valued, because none of those who went had any Tools to dig, or had before ever gathered any. Therefore the Design of their Journey being only to get Information of the Mines, they returned very well pleased that same Day to *Veragua*, and the next to the Ships. True it is, that as was afterwards known, these Mines were not those of *Veragua*, which lay much nearer, but of *Uirra*, a Town whose People were Enemies to those of *Veragua*; to do whom a Displeasure, *Quibio* ordered the Christians to be conducted thither, that they might go away to those, and leave his.

8. On the 14th of *February*, 1503, the Admiral's Brother went into the Country with forty Men, a Boat following with fourteen. The next Day they came to the River of *Uirra*, seven Leagues from *Belem* Westward; the *Cazique* came out a League from his Town to meet him with twenty Men, and presented him with such things as they fed on, and some Gold-Plates. Whilst they were here the *Cazique* and chief Men never ceased putting a dry Leaf into their Mouths and chewing it; and sometimes they took a sort of Powder they carried with that Herb, which looked very odd. Having rested here a while, the Christians and *Indians* went to the Town, where abundance of People came out to them, and provided them a House to lye in, giving them much to eat. Soon after came the *Cazique* of *Dururi*, which is a neighbouring Town, and with him a great many *Indians* who brought some Gold-Plates to barter. All these *Indians* said there were *Caziques* up the Country who had plenty of Gold, and abundance of Men armed like the *Spaniards*.

Next Day the Lieutenant ordered the rest of his Men to return by Land to the Ships, and he, with thirty, held

on his Journey towards *Zobrabá*, where the Fields, for above fix Leagues, were all full of Maize, like Corn Fields. Thence he went to *Cateba* another Town. At both Places he was well entertained, abundance of Provisions given him, and some Gold Plates exchanged, which, as has been said, are like the Patent of a Chalice, some bigger, and some less, weighing about twelve Ducats. They wear them about their Necks, hanging by a String, as in *Popish* Countries they do Relics. The Lieutenant, being now very far from the Ships, without finding any Port on that Coast, or any River bigger than that of *Belere*, to settle his Colony, came back the same way on the 24th of February. As soon as he returned, order was taken for his Stay, eighty Men being appointed to remain with him. They began to build Houses on the Bank of the River of *Bolemal*, about a Cannon Shot from the Mouth of it, within a Trench that lies on the Right-hand coming up the River; at the Mouth of which there is a little Hill. Besides these Houses which were all of Timber, and covered with Palm-tree Leaves which grew along the Shore, another large House was built to serve as a Storehouse and Magazine; into which several Pieces of Cannon, Powder, and Provisions were put, and other Necessaries for the Support of the Planters. But for Wine, Bisket, Oil, Vinegar, Cheese, and much Grain, which was all they had to eat, these things were left in the safest Place aboard the Ship called *Gallega*, that was to be left with the Lieutenant, that he might make Use of it either at Sea or ashore, having all its Cordage, Nets, and other Fishing Tackle; for, as we have said, there is vast Plenty of Fish in that Country in every River, several farts at certain times running along the Coast in Shoals; on which the People of the Country feed more than on Flesh: For tho' there be some farts of Beasts, they are not enough to maintain them.

The *Indians*, perceiving the *Spaniards* built Houses, as if they designed to stay among them, began to be alarmed; and the Adelantado, suspecting they designed to set fire to the Houses, marched out with seventy-four Men on the thirtieth of March, and, ordering them to advance two by two as privately as they could, came to the Cazique *Quibio's* House, where he secured him, some of his Wives and Children, and about fifty Persons in all, who offered a great Treasure, which, as they said, was on the Mountain, for their Ransom. The Adelantado, fearing the Country would rise upon him and rescue the Prisoners, sent them all away to the Ships, and followed the next Day himself with the Plunder of *Quibio's* House, which might amount to the value of three hundred Ducats in Gold Plates, Eagles, Beads and the like. But the Cazique made his Escape from those that had him in Charge, and returned to his People. Soon after the Rains fell, and the Flood coming down, opened the Mouth of the River, when the Admiral sailed out with three Ships, leaving one for the Service of his Brother. However, he came to an Anchor a League from thence to wait for fair Weather, and in the mean time sent back the Boat for Water.

The Cazique *Quibio*, who, as has been said before, had made his Escape, being much concerned for the Loss of his Wives and Children, and seeing the three Ships were gone, fell upon the *Spanish* Colony so unexpectedly, that he was within a few Paces of it before the *Spaniards* perceived it. He began the Attack with loud Shouts, casting abundance of Darts, armed at the Ends with the Bones of Fish, so that some were immediately wounded. The Adelantado being very brave, with seven or eight Men that stood by him, repulsed the *Indians*, driving them into the Wood, tho' they several times rallied: But the *Spanish* Swords making great Havock, and a Dog tearing many of them, they at length absolutely betook themselves to Flight, leaving one *Spaniard* dead, and eight wounded, of which Number the Adelantado was one. The Men in the Boat, tho' near Shore, did not land to assist their Friends, but after the Engagement went up the River to take in their Water.

The *Indians*, seeing the Boat a full League above the Colony, came out in their Canoes, and besetting it on all Sides, shouting and sounding their Horns, so plyed about ten Men that were in it, with their Darts, that

they all perished but one, who, falling into the Water, swam away to the Shore, without being discerned by the *Indians*, and carried the News of the Disaster; which so much dismayed them, being but few in Number, and most of them wounded; the Admiral out at Sea without a Long-boat, and in Danger of not being able to return to any Place, whence he might send them Relief; that, being destitute of all Hopes, they resolved not to stay ashore, and went aboard the Ship without asking the Adelantado leave, to sail out; but they could not, because the Mouth of the River was again choaked up, nor could they find any body to acquaint the Admiral therewith, by reason of the violent working of the Sea upon the Bar. The Admiral was, at the same time, in great Danger, where his Ship lay at anchor; that Coast being all open, and having only a small Boat, and weakened, besides, by the Loss of the Men that had perished in his Long-boat. Thus those in the River, as well as those at Sea, were in the greatest Distress.

To add to all these Vexations, one Night the *Indian* Prisoners that were on board the Admiral opening one of the Hatches, several of them leaped out, and threw themselves into the Sea to swim ashore; and the rest that were prevented from following their Example all hanged themselves in the Hold. The Admiral being in this Affliction, some *Spaniards* offered to swim ashore to enquire after the Boat, and the Men that had been left behind, provided the little Boat might carry them beyond the Place where the Waves broke: The Admiral accepted their Offer, ordering the Boat to carry them beyond the Place where the Waves broke, and as near the Land as might be; and there *Peter de Ledesma*, a Pilot, born at *Seville*, had the Courage to leap into the Water, and, making his Way through the rolling Waves, got to Shore, where he was informed of the Condition the Men were in; and that they all affirmed that they would not stay in that Place of Danger; for which Reason they entreated the Admiral not to depart without them, because it would be sacrificing them; and they were resolved, as soon as the Weather grew somewhat calmer, to go away in *Indian* Canoes, aboard the Ships; the Boat they had, not being able to contain them. With this Advice *Peter de Ledesma* swam back to the Boat that waited for him.

In short, those that were ashore, as soon as the Weather grew calm, went all away in two large Canoes they had made fast together, that they might not over-set, and their own Boat, leaving nothing behind them but the Hulk of the Ship, which was all worm-eaten. Being all aboard, they sailed in three Ships as far as *Porto Bello*, where they were obliged to leave one of the Ships, which was so leaky that they could not keep it above Water. They proceeded thence to a Province near which there were many small Islands, which the Admiral called *Las Barbas*, or the *Beard*, but which is now known by the Name of the *Bay of St. Blase*. Ten Leagues from thence they turned from the Continent, and stood to the Northward, to recover *Hispaniola*. At the End of ten Days they arrived at two small Islands, which were all covered with Tortoises as well as the Sea, which looked like Ridges of Rocks, and therefore the Admiral called them *las Tortugas*, or the *Tortoises*, and they are now called *Caymanes*, being about twenty-five Leagues West of *Jamaica*, and forty-five to the Southward of *Cuba*, there being no other all the Way the Admiral passed. There they came to anchor at *Jardin de la Reyna*, the *Queen's Garden*, being a great Number of small Islands to the South of *Cuba*, before spoken of; they were ten Leagues from this Island in much Want, their Bisket spoiled, and little Oil left, and labouring Day and Night at three Pumps, because the Ships were ready to sink, when there arose such a Storm that one of them run foul of the Admiral, tore off Part of his Poop, the Cables gave Way, and all had like to have perished. Thence they sailed to a Port in the Island of *Cuba*, called *Macaca*, where they refreshed themselves, being supplied by the *Indians*.

Thence they stood for *Jamaica*, where they arrived at *Puerto Bueno*, or *Good Port*, on Midsummer Eve, but it was a bad one for them, there being neither Water nor

any *Indian* Town; so that the Day after Midsummer they proceeded to another called *Santa Gloria*, and, being no longer able to keep the Ships above Water, they set them fast aground, as near the Shore as they possibly could, being about a Cross-bow shot from it, and the two Ships close together; Board and Board, shoring them on both Sides, so that they could not part, but were filled with Water almost up to the Deck, and Cabins were made on the Heads and Sterns to shelter the Men. When the Ships were thus secured, the *Indians* came in their Canoes, being covetous of *Spanish* Toys; and, to prevent Controversy, the Admiral appointed two Persons to deal with them, and every Afternoon to divide what they had purchased amongst the Men, to maintain them, for the Provisions were all either spent or spoiled.

The Admiral looked upon it as a great Mercy that God had brought him to *Jamaica*, because that Island was very populous, abounded in Eatables, and the Natives were desirous to trade; therefore, to keep them in that good Humour, he would not go up the Country for fear the *Spaniards* should disoblige the People, which would prove of ill Consequence; and this Conduct was so pleasing to the *Indians*, that they gave two *Utias* or small Rabbits for a bit of Tin, and two of their Cakes of Bread for two little green or yellow Beads, and for things of more Value they took a Hawk's-Bell. They gave the *Caziques* little Looking-glasses, red Caps, and Scissars, to please them. The Admiral having purchased ten Canoes for the Service of his stranded Ships, by this Method, the Men were plentifully supplied with Necessaries, and the *Indians* no Way disturbed at their Stay.

9. *Columbus* having consulted the Officers about the Means of getting away from thence, it was concluded to send Advice to *Nicholas de Obando*, Governor of *Hispaniola*, and to *Alonso Sanchez de Carvajal*, the Admiral's Factor there, of the Condition they were in, that a Ship might be there freighted at the Admiral's Expence, to fetch them all away. This being an Affair of much Difficulty, two Persons of Fidelity and Discretion were appointed for it, because they were to undertake so great a Passage in Canoes made of a small Piece of Timber. The Distance between the two nearest Points of *Jamaica* and *Hispaniola* being twenty-five Leagues, besides thirty more to the Points where they were to cross over, it required very great Courage to go upon such an Enterprize. In the Passage there is only one little Island or Rock, called *Navasa*, which is eight Leagues from *Hispaniola*. The Persons the Admiral pitched upon to perform this were, *James Mendez de Sagura*, chief Notary of the Fleet, a very honest and discreet Man, and *Bartholomew Fiesco*, a *Genoese*, a Person worthy of such a Trust. Each of these went in a Canoe with six *Spaniards*, and ten *Indians* to row.

The Admiral ordered *James Mendez*, as soon as he came to *Santo Domingo*, to go away to *Spain* with his Dispatches for their Majesties; containing a full Relation of his Voyage, the Dangers and Troubles he had met with, the Lands he had discovered, and the rich Mines he had actually visited at *Veragua*; and at the same time complained of the unworthy Usage he had before met with, his Imprisonment and the seizing of all he had, praying Redress, and lamenting, that, after having spent twenty Years in the Service of the Crown, he had not a House to put his Head in; but must be obliged, when he came to *Spain*, to take up his Lodgings at an Inn, &c. *Bartholomew Fiesco* was to treat with the Governor of *Hispaniola* about sending a Ship to bring the Men off, and to return with it himself. The two Canoes set out on the 7th of July; the *Spaniards* carrying their Provisions, Swords, and Targets, and the *Indians* their Gourds full of Water, *Axis* and *Cazabi*. When they came to the Point of the Island of *Jamaica*, they were obliged to stay till the Sea was very calm, to venture to strike over, the Danger being very great, especially for the *Spaniards*; for the *Indians* being very expert and naked, if the Canoes happened to over-set, soon turned them again, and with their Gourds threw out the Water. As soon as the Weather grew calm, they put themselves into the Hands of God, and launched out one Night;

the *Indians* rowing, who, to cool themselves, sometimes leaped into the Water, and afterwards returned to the Oar. When they had lost Sight of *Jamaica*, the *Spaniards* relieved the *Indians*, that they might hold out, and always watched for fear those People should do any thing amiss.

The second Day after their Departure, they began to be all very much tired, but the two Chiefs encouraged the Men, advising them to eat and recover their Strength. The *Indians*, being heated with the Sun, and the Labour of the Oars, were more busy with their Gourds than they should have been, so that they were soon empty; and, the Heat encreasing, and their Thirst with it, by Noon they had not strength to work. The Commanders then relieved them, giving them now and then to drink out of their Rundlets, and so supported them till cool of the Evening. That which most perplexed them, after having rowed a Night and two Days, was, the Fear that they had mistaken the Way, in which they were to find the Island *Navasa*, eight Leagues from *Hispaniola*, as was said before, where they expected to refresh themselves. That Afternoon they had thrown an *Indian* over-board, who died by Thirst; others lay along stretched out, quite disabled, and the rest were totally dejected, expecting Death, holding Salt-water in their Mouths to cool them, and finding no Comfort in it. They proceeded the second Night as far as they were able again, without seeing the Island till the Moon rising; *James Mendez* perceived that it appeared like a half Moon, the other half being, at first, covered by the Island; for otherwise they could not have seen it, by reason of its Smallness and the Night. Then they all encouraged the *Indians*, shewing them the Land, and giving them some sips of Water, wherewith they were so much encouraged, that they rowed on, and by Break of Day arrived at the Island where they landed.

They found this Island was all a solid Rock, about half a League in Compass, but there was no Tree nor Spring of Water on it; however, going about from one Cleft to another, they collected so much in the Hollows, as served to quench their Thirst, which did them harm; because, being scorched with Drought, they drank so much of it, that some of the poor *Indians* died upon the Spot, and others fell sick. They stayed there till the Afternoon, providing themselves with the best the Place would afford; gathering small Shell-fish on the Shore, and making a Fire to broil it, *James Mendez* having carried Necessaries for that Purpose. Being then in the Sight of the Point of *Hispaniola*, which the Admiral had named *St. Michael's*, and was since called *del Tiburon*, and designing to conclude their Passage before the Weather grew foul, as soon as the Sun was low they went into their Canoes again, and rowed, and by Break of Day arrived at the Cape, the fourth Day after their setting out. They refreshed themselves there two Days, and neither *Spaniards* nor *Indians* would run the Hazard of returning to *Jamaica* the same Way they came.

James Mendez, being in haste, went on as far as he could in the Canoe, and, at length, arrived in the Province of *Xaragua*, where he found the Governor of *Hispaniola*, who seemed well pleased with the Letter he brought him, though he proved very tedious in dispatching the Business he came about; for he suspecting the Admiral, was afraid lest some Disturbance should happen in the Island. After much importuning he gave *James Mendez* leave to proceed with his Company to *Santo Domingo*, to perform what the Admiral had ordered him. He there bought a Ship and sent it well provided, though it were a considerable time before he could accomplish his Design, as will be shewn.

10. After this Step had been taken, not only with the Consent, but by the Advice, and at the Request, of the Principal Persons on board, it was very natural to suppose they would have been easy; but the *Spaniards* that remained with the Admiral, in *Jamaica*, having suffered very much in that Voyage, began to sicken, and, despairing of Relief, all their Discourse was how they should escape over to *Hispaniola*; railing at the Admiral as if he had been the Cause of all their Misfortunes. The chief Promoters of these Discontents were two Brothers, Natives

Natives of *Seville*, whose Names were *Porras*, one of whom went over Captain of a Ship, and the other Purser of the Fleet; these Men, having endeavoured to bring all the rest to their Design, thought it sufficient that they had gained forty of the most mutinous, and resolved to declare their Intentions: Accordingly, on the 2d of *January*, 1504, being all armed, Captain *Francis de Porras* went upon the Poop where the Admiral was, and, without any Respect, said, *We are of Opinion that your Lordship will not go into Spain, but intend to keep us here to perish.* The Admiral, hearing these insolent Words, and guessing at the Meaning, very mildly answered, He could not but be sensible how impracticable it was for them to pass over to *Hispaniola*; that it was well known, he had already, by the unanimous Advice of all, sent for Ships, and if they had any better Method to offer, they might propose it. *Francis de Porras* replied, there was no need of much advising, that he might embark immediately, or stay behind; and, turning his Back, added, for I will go away into *Spain*, with all those that will follow me: Then the Conspirators cried out, *One and all, One and all*; and, after having caused much Confusion aboard the Ship, they seized ten of the Canoes the Admiral had bought, and, many of those who were sick joining them, went away to the Eastern Point of *Jamaica*, whence *James Mendez* and *Bartholomew Fiesco* had taken Boat to *Hispaniola*.

Being come to the Point of the Island, they attempted to pass over it to *Hispaniola*, forcing some Natives, with them, to row: But the Sea growing rough, and wetting them, they thought fit to lighten the Canoes, which were heavy loaded, throwing over-board all they had, except some Provisions, Water, and their Arms; and, at last, the poor *Indians* that rowed, cutting their Hands if they offered to ease themselves by holding by the Sides of the Canoes when tired with Swimming. Returning ashore, some were for passing over to *Cuba*, some for returning and making their Peace with the Admiral, or taking all he had by Force from him; others, for attempting, again, to pass over into *Hispaniola*, which last prevailing; they stayed six Weeks in the *Indian Town*, at the Point of Land, for calm Weather, ruining the poor Natives, and then twice ventured out to Sea, but were forced back. Then quitting the Canoes, they went from Town to Town, sometimes bartering with the People for Provisions, and sometimes taking them by Force; whilst they were thus ranging, the Admiral took particular Care of the Sick, to secure them to him, and laboured to gain the Friendship of the *Indians*, to make sure of Provisions, and by such Methods, all that had been distempered recovered; however, the *Spaniards* eating much more than the Natives, it was a difficult Matter to supply them plentifully, and so a great Part of his Men being revolted from the Admiral, those People began to make the less account of him, inasmuch, that he was reduced to great Streights; but it pleased God to relieve him in that Distress, after the following Manner:

The Admiral knowing there would be an Eclipse of the Moon within three Days, took therefore this Opportunity to send an *Indian*, that spoke *Spanish*, to call the *Cazique* and principal Men of those Parts to him. They being come a Day before the Eclipse, he told them that the *Spaniards* were Christians, Servants of God, who dwells in Heaven, and is Lord and Maker of all things; who rewards the Good, and punishes the Wicked; and, being angry with those that had mutinied, would not permit them to pass over to *Hispaniola*, as the others, sent by him, had done; that he was also displeased with them, because they did not supply his distressed Servants with Provisions, in exchange for Commodities, and therefore was resolved to chastise them with Famine and other Calamities; and, that they might be convinced of the Truth of what he said, God was pleased they should see a Token of his Anger in the Sky: So that they might, that Night, observe the Rising of the Moon, that she would appear of a bloody Hue, to point out the Punishment God would inflict upon them. When he had made his Speech, some of them went away in a Fright, and others scoffed at his Prediction. But, the

Eclipse beginning as soon as the Moon was up; and increasing the higher she rose, it put them into such a Consternation, that they hastened to the Ships, loaded with Provisions, entreating the Admiral that he would pray to God that he would not be longer angry with them; and they would, for the future, bring him all the Provisions he should have Occasion for.

The Admiral answered, he would offer up his Prayers to God; and then shutting himself up till the Eclipse was at the Height, and ready to decrease, he came out again, telling them he had prayed for them, promising they would be good, and supply the Christians, whereupon God had forgiven them; and they would see the Moon, by degrees, turn to her usual Complexion. The *Indians*, perceiving the Eclipse to go off entirely, returned the Admiral many Thanks, admiring the God of the Christians; went away very well pleased, religiously remembering to be grateful for the Benefit they thought they had received of the Admiral; for they supplied him plentifully with Provisions, always blessing God, believing he would punish them for their Sins; and that the Eclipses they had formerly seen, had been Tokens of his Anger.

There were eight Months passed since the Departure of their Agents without any Advice of their Arrival, or what had befallen them; which made those that were with the Admiral despair, supposing those Messengers had been cast away in their Passage, or murdered by the *Indians*. On this, one *Barnard of Valencia*, and the rest that had remained sick, conspired together to do as the *Porras's* had done before: But God prevented this Mischief by the Arrival of a small Caravel sent by the Governor of *Hispaniola*, under the Command of *James de Escobar*, one of those that had been in the Rebellion with *Roldan*. He had Orders not to go aboard the Ships, or ashore, or permit any to talk with those that were with the Admiral; or to receive, or deliver, any Letter; being only sent to see the Condition the Admiral and his Men were in. The Governor had pitched upon *Escobar* to execute this Commission, because he knew he had been in Rebellion, and therefore would not side with those in Distress. *Escobar*, leaving his Caravel at some Distance, went in his Boat to deliver a Letter from the Governor; and then standing off, made an empty Compliment from him; after which he presented the Admiral with a Cask of Wine and two Flitches of Bacon. The Admiral answered the Governor's Letter, giving him an Account of what he had discovered, and what had happened since, and praying him to send speedy Relief. Whereupon *Escobar* sailed away, which made the Men suspect that the Governor *Obando* designed to let them all perish in that Island.

However, this disappointed the second Conspiracy, and the Admiral told them, that *Escobar* went away so suddenly that they might be the sooner relieved, for he was resolved not to go away without them, and that little Caravel would not carry them all. These Words, and the Sight of the little Caravel, with the Advice that *Mendez* and *Fiesco* were safely arrived in *Hispaniola*, somewhat comforted the Men, and gave them Hopes of getting off in time. The Admiral, rather desirous to reduce the Mutineers by fair Means than by Force, that they might do no Mischief in the Island, sent two of their best Friends to acquaint them with the Advice he had received, desiring them to return, and no Notice should be taken of what had happened. *Francis de Porras* met those Messengers at a Distance, for fear they should persuade any of his Men to submit themselves, and answered, that they would not trust the Admiral, but would behave themselves peaceably in the Island, if he would promise to find a Ship to carry them off, and share half of what he had with them, since they had lost all their own Effects.

The Messengers refused to make any such Proposal to the Admiral, and *Porras* replied that if he would not do it by fair Means, he should be compelled to it by Force. When the Messengers were gone, he railed at *Columbus*, charging him with Cruelty; alledging, he would not perform what he promised if he had them once in his Power; ridiculously accusing him of being a Sorcerer;

any *Indian* Town; so that the Day after Midsummer they proceeded to another called *Santa Gloria*, and, being no longer able to keep the Ships above Water, they set them fast aground, as near the Shore as they possibly could, being about a Cross-bow shot from it, and the two Ships close together, Board and Board, shoring them on both Sides, so that they could not part, but were filled with Water almost up to the Deck, and Cabins were made on the Heads and Sterns to shelter the Men. When the Ships were thus secured, the *Indians* came in their Canoes, being covetous of *Spanish* Toys; and, to prevent Controversy, the Admiral appointed two Persons to deal with them, and every Afternoon to divide what they had purchased amongst the Men, to maintain them, for the Provisions were all either spent or spoiled.

The Admiral looked upon it as a great Mercy that God had brought him to *Jamaica*, because that Island was very populous, abounded in Eatables, and the Natives were desirous to trade; therefore, to keep them in that good Humour, he would not go up the Country for fear the *Spaniards* should disoblige the People, which would prove of ill Consequence; and this Conduct was so pleasing to the *Indians*, that they gave two *Uti*as or small Rabbits for a bit of Tin, and two of their Cakes of Bread for two little green or yellow Beads, and for things of more Value they took a Hawk's-Bell. They gave the *Caziques* little Looking-glasses, red Caps, and Scissars, to please them. The Admiral having purchased ten Canoes for the Service of his stranded Ships, by this Method, the Men were plentifully supplied with Necessaries, and the *Indians* no Way disturbed at their Stay.

9. *Columbus* having consulted the Officers about the Means of getting away from thence, it was concluded to send Advice to *Nicholas de Obando*, Governor of *Hispaniola*, and to *Alonso Sanchez de Carvajal*, the Admiral's Factor there, of the Condition they were in, that a Ship might be there freighted at the Admiral's Expence, to fetch them all away. This being an Affair of much Difficulty, two Persons of Fidelity and Discretion were appointed for it, because they were to undertake so great a Passage in Canoes made of a small Piece of Timber. The Distance between the two nearest Points of *Jamaica* and *Hispaniola* being twenty-five Leagues, besides thirty more to the Points where they were to cross over, it required very great Courage to go upon such an Enterprize. In the Passage there is only one little Island or Rock, called *Navasa*, which is eight Leagues from *Hispaniola*. The Persons the Admiral pitched upon to perform this were, *James Mendez de Sagura*, chief Notary of the Fleet, a very honest and discreet Man, and *Bartholomew Fiesco*, a *Genoese*, a Person worthy of such a Trust. Each of these went in a Canoe with six *Spaniards*, and ten *Indians* to row.

The Admiral ordered *James Mendez*, as soon as he came to *Santo Domingo*, to go away to *Spain* with his Dispatches for their Majesties; containing a full Relation of his Voyage, the Dangers and Troubles he had met with, the Lands he had discovered, and the rich Mines he had actually visited at *Veragua*; and at the same time complained of the unworthy Usage he had before met with, his Imprisonment and the seizing of all he had, praying Redress, and lamenting, that, after having spent twenty Years in the Service of the Crown, he had not a House to put his Head in; but must be obliged, when he came to *Spain*, to take up his Lodgings at an Inn, &c. *Bartholomew Fiesco* was to treat with the Governor of *Hispaniola* about sending a Ship to bring the Men off, and to return with it himself. The two Canoes set out on the 7th of July; the *Spaniards* carrying their Provisions, Swords, and Targets, and the *Indians* their Gourds full of Water, *Axis* and *Cazabi*. When they came to the Point of the Island of *Jamaica*, they were obliged to stay till the Sea was very calm, to venture to strike over, the Danger being very great, especially for the *Spaniards*; for the *Indians* being very expert and naked, if the Canoes happened to over-set, soon turned them again, and with their Gourds threw out the Water. As soon as the Weather grew calm, they put themselves into the Hands of God, and launched out one Night;

the *Indians* rowing, who, to cool themselves, sometimes leaped into the Water, and afterwards returned to the Oar. When they had lost Sight of *Jamaica*, the *Spaniards* relieved the *Indians*, that they might hold out, and always watched for fear those People should do any thing amiss.

The second Day after their Departure, they began to be all very much tired, but the two Chiefs encouraged the Men, advising them to eat and recover their Strength. After much importuning he gave *James Mendez* leave to proceed with his Company to *Santo Domingo*, to perform what the Admiral had ordered him. He there bought a Ship and sent it well provided, though it were a considerable time before he could accomplish his Design, as will be shewn.

10. After this Step had been taken, not only with the Consent, but by the Advice, and at the Request, of the Principal Persons on board, it was very natural to suppose they would have been easy; but the *Spaniards* that remained with the Admiral, in *Jamaica*, having suffered very much in that Voyage, began to sicken, and, despairing of Relief, all their Discourse was how they should escape over to *Hispaniola*; railing at the Admiral as if he had been the Cause of all their Misfortunes. The chief Promoters of these Discontents were two Brothers, Natives

Natives of *Seville*, whose Names were *Porras*, one of whom went over Captain of a Ship, and the other Purser of the Fleet; these Men, having endeavoured to bring all the rest to their Design, thought it sufficient that they had gained forty of the most mutinous, and resolved to declare their Intentions: Accordingly, on the 2d of *January*, 1504, being all armed, Captain *Francis de Porras* went upon the Poop where the Admiral was, and, without any Respect, said, *We are of Opinion that your Lordship will not go into Spain, but intend to keep us here to perish.* The Admiral, hearing these insolent Words, and guessing at the Meaning, very mildly answered, He could not but be sensible how impracticable it was for them to pass over to *Hispaniola*; that it was well known, he had already, by the unanimous Advice of all, sent for Ships, and if they had any better Method to offer, they might propose it. *Francis de Porras* replied, there was no need of much advising, that he might embark immediately, or stay behind; and, turning his Back, added, for I will go away into *Spain*, with all those that will follow me: Then the Conspirators cried out, *One and all, One and all*; and, after having caused much Confusion aboard the Ship, they seized ten of the Canoes the Admiral had bought, and, many of those who were sick joining them, went away to the Eastern Point of *Jamaica*, whence *James Mendez* and *Bartholomew Fiesco* had taken Boat to *Hispaniola*.

Being come to the Point of the Island, they attempted to pass over it to *Hispaniola*, forcing some Natives, with them, to row: But the Sea growing rough, and wetting them, they thought fit to lighten the Canoes, which were heavy loaded, throwing over-board all they had, except some Provisions, Water, and their Arms; and, at last, the poor *Indians* that rowed; cutting their Hands if they offered to ease themselves by holding by the Sides of the Canoes when tired with Swimming. Returning ashore, some were for passing over to *Cuba*, some for returning and making their Peace with the Admiral, or taking all he had by Force from him; others, for attempting, again, to pass over into *Hispaniola*, which last prevailing; they stayed six Weeks in the *Indian Town*, at the Point of Land, for calm Weather, ruining the poor Natives, and then twice ventured out to Sea, but were forced back. Then quitting the Canoes, they went from Town to Town, sometimes bartering with the People for Provisions, and sometimes taking them by Force; whilst they were thus ranging, the Admiral took particular Care of the Sick, to secure them to him, and laboured to gain the Friendship of the *Indians*, to make sure of Provisions, and by such Methods, all that had been distempered recovered; however, the *Spaniards* eating much more than the Natives, it was a difficult Matter to supply them plentifully, and so a great Part of his Men being revolted from the Admiral, those People began to make the less account of him, inasmuch, that he was reduced to great Streights; but it pleased God to relieve him in that Distress, after the following Manner:

The Admiral knowing there would be an Eclipse of the Moon within three Days, took therefore this Opportunity to send an *Indian*, that spoke *Spanish*, to call the *Cazique* and principal Men of those Parts to him. They being come a Day before the Eclipse, he told them that the *Spaniards* were Christians, Servants of God, who dwells in Heaven, and is Lord and Maker of all things; who rewards the Good, and punishes the Wicked; and, being angry with those that had mutinied, would not permit them to pass over to *Hispaniola*, as the others, sent by him, had done; that he was also displeased with them, because they did not supply his distressed Servants with Provisions, in exchange for Commodities, and therefore was resolved to chastise them with Famine and other Calamities; and, that they might be convinced of the Truth of what he said, God was pleased they should see a Token of his Anger in the Sky: So that they might, that Night, observe the Rising of the Moon, that she would appear of a bloody Hue, to point out the Punishment God would inflict upon them. When he had made his Speech, some of them went away in a Fright, and others scoffed at his Prediction. But, the

Eclipse beginning as soon as the Moon was up; and increasing the higher she rose, it put them into such a Consternation, that they hastened to the Ships, loaded with Provisions, entreating the Admiral that he would pray to God that he would not be longer angry with them; and they would, for the future, bring him all the Provisions he should have Occasion for.

The Admiral answered, he would offer up his Prayers to God; and then shutting himself up till the Eclipse was at the Height, and ready to decrease, he came out again, telling them he had prayed for them, promising they would be good; and supply the Christians, whereupon God had forgiven them; and they would see the Moon, by degrees, turn to her usual Complexion: The *Indians*, perceiving the Eclipse to go off entirely, returned the Admiral many Thanks, admiring the God of the Christians; went away very well pleased, religiously remembering to be grateful for the Benefit they thought they had received of the Admiral; for they supplied him plentifully with Provisions, always blessing God, believing he would punish them for their Sins; and that the Eclipses they had formerly seen, had been Tokens of his Anger.

There were eight Months passed since the Departure of their Agents without any Advice of their Arrival, or what had befallen them; which made those that were with the Admiral despair, supposing those Messengers had been cast away in their Passage, or murdered by the *Indians*. On this, one *Barnard of Valencia*, and the rest that had remained sick, conspired together to do as the *Porras's* had done before: But God prevented this Mischief by the Arrival of a small Caravel sent by the Governor of *Hispaniola*, under the Command of *James de Escobar*, one of those that had been in the Rebellion with *Roldan*. He had Orders not to go aboard the Ships, or ashore, or permit any to talk with those that were with the Admiral; or to receive, or deliver, any Letter; being only sent to see the Condition the Admiral and his Men were in. The Governor had pitched upon *Escobar* to execute this Commission, because he knew he had been in Rebellion, and therefore would not side with those in Distress. *Escobar*, leaving his Caravel at some Distance, went in his Boat to deliver a Letter from the Governor; and then standing off, made an empty Compliment from him; after which he presented the Admiral with a Cask of Wine and two Flitches of Bacon. The Admiral answered the Governor's Letter, giving him an Account of what he had discovered, and what had happened since, and praying him to send speedy Relief. Whereupon *Escobar* sailed away, which made the Men suspect that the Governor *Obando* designed to let them all perish in that Island.

However, this disappointed the second Conspiracy, and the Admiral told them, that *Escobar* went away so suddenly that they might be the sooner relieved, for he was resolved not to go away without them, and that little Caravel would not carry them all. These Words, and the Sight of the little Caravel, with the Advice that *Mendez* and *Fiesco* were safely arrived in *Hispaniola*, somewhat comforted the Men, and gave them Hopes of getting off in time. The Admiral, rather desirous to reduce the Mutineers by fair Means than by Force, that they might do no Mischief in the Island, sent two of their best Friends to acquaint them with the Advice he had received, desiring them to return, and no Notice should be taken of what had happened. *Francis de Porras* met those Messengers at a Distance, for fear they should persuade any of his Men to submit themselves, and answered, that they would not trust the Admiral, but would behave themselves peaceably in the Island, if he would promise to find a Ship to carry them off, and share half of what he had with them, since they had lost all their own Effects.

The Messengers refused to make any such Proposal to the Admiral, and *Porras* replied that if he would not do it by fair Means, he should be compelled to it by Force. When the Messengers were gone, he railed at *Columbus*, charging him with Cruelty; alledging, he would not perform what he promised if he had them once in his Power; ridiculously accusing him of being a Sorcerer;

Sorcerer; and affirming, that the Caravel his Men had seen had been only a Delusion, formed by Magic Art, or else he would have gone in it himself, with his Son and his Brother. By such Discourses he confirmed them in the Rebellion, and persuaded them to go and seize the Admiral, and take away what he had aboard the Ships: He accordingly marched with his Followers towards the Ships; and, being within a Quarter of a League of them, halted in an *Indian* Town called *Mayma*. The Admiral being informed of it sent the Adelantado, his Brother, with fifty Men, to persuade him to return to his Duty; who, coming within a Cross-bow-shot of the Place, sent the two Messengers the Admiral had employed before, to offer Peace; but they, despising all Accommodations, would not so much as hear them; and, on the contrary, advanced in fighting order, crying, *Kill him, kill him*; six of them having taken an Oath to destroy the Adelantado, who bid his Men do as he did, and to fear nothing but the Stain of being vanquished by Rebels. This said, they engaged; and, at the first Attack, six Men fell, most of them Rebels. *Francis de Porras*, who was a bold Man, singled out the Adelantado, and at one Cut clove down his Target to the Hand, which he wounded, but could not recover his Sword as he would; and the Adelantado, seeing his Men give way, closed with *Porras*; which done, others came in and seized him, much wounded. The Adelantado then fell in among the rest, so that many were soon killed, and among the rest *John Barla*, who had been the first that drew his Sword against the Admiral when they began to rebel; others being much wounded, the rest betook themselves to Flight.

The Adelantado would have pursued them, had not some of the best Men about him dissuaded him from it, saying, That was a sufficient Punishment, and that it was not proper to carry Things to Extremity; so he returned to the Ships, carrying *Francis de Porras*, and other Prisoners, and was joyfully received by the Admiral and those about him. The Day after the Battle, being the 20th of *May*, those that escaped sent a Petition, signed, to the Admiral, confessing their Fault, and begging Pardon, and promising to serve him faithfully for the future; all which they took solemnly an Oath to perform, renouncing any Absolution in case of Failure from Priest, Bishop, or Pope himself, at the Hour of Death, and all Benefit of the Sacraments of the Church.

The Admiral, on his Part, promised to pardon them provided their Ringleader, *Francis de Porras*, should continue a close Prisoner; and, to prevent any Controversies between the Rebels and the others, he sent them a Commander to keep them in the Island till the Ship arrived; such was the Posture of Affairs in *Jamaica*, and the Admiral had been there full a Year, when a Ship arrived freighted by *James Mendez*, and with it a Caravel commanded by *James de Salcedo*, the Admiral's Servant. *Columbus*, his Followers, and the Rebels embarked, and they sailed from thence the 28th of *June* 1504, and arrived at *Santo Domingo* on the 13th of *August*. The Governor with all the City went out to meet him, and paid him much Respect, lodging him in his own House, and paying abundance of Compliments, but all with a false Heart; for he set at Liberty *Francis de Porras*, the Ringleader of the Rebellion at *Jamaica*, who was a Prisoner aboard the Ship; and threatened to punish those that had honourably stood by the Admiral in his greatest Danger.

11. The Admiral was a Person of too great Penetration not to discern how deceitfully he was treated, and the true Motives of the Governor's Behaviour. He knew very well that *Obando* hated him, and, at the same time, feared his Credit and Reputation; but he dissembled Things as well as he could, till the Ships were ready that were preparing for carrying him back to *Spain*; and as soon as he knew that they were fit to sail, and the proper Season was come, he disposed every thing for his Departure; which was a Thing no less agreeable to the Governor *Obando* than convenient for his own Affairs.

Accordingly, on the 12th of *September*, 1504, he embarked on board a Ship, provided by his Agents, and took with him likewise the Vessel that had brought him and his People over from *Jamaica*; but just as they

were out of Port, the Main-mast of the lesser Vessel came by the Board; upon which he ordered her back to *Santo Domingo*, and continued his Voyage in the other. He had not, however, been long at Sea before he met with a most violent Tempest, in which, not the Men only, but the Pilot, expected every Moment to be cast away; and when the Vehemence of the Storm was over, and they began to congratulate each other on their narrow Escape from so great Danger, they were astonished by a very unlooked for Accident; their Main-mast flying to pieces on a sudden, and without any visible Cause.

The Admiral was at that time confined to his Bed by the Gout, which, however, did not hinder his giving the necessary Directions for making a Jury-mast of the Yard, which was accordingly done; and in this Condition they prosecuted their Voyage. Soon after they encountered another Tempest, in which they lost their Mizen-mast; notwithstanding which Accident they safely arrived at their intended Port of *St. Lucar*, having sailed 700 Leagues after they had lost their Main-mast. All the Dangers and Difficulties he had struggled with at Sea had not near so much Effect on the Admiral's Mind, as the ill News he met with on Shore; being informed, as soon as he landed, that his best Friend and only Patroness, the Queen, was dead, so that he had now none but King *Ferdinand* to apply to, who, though he always treated him respectfully, the Admiral well knew was far enough from having any Kindness for him, and even from inclining to do him Justice.

In this Situation of his Affairs, the Admiral resolved with himself to go to *Seville*, in order to take some Repose, and the Advice of his Physicians for the Recovery of his Health, which he accordingly did, having his Sons with him; and employing himself wholly in settling his Family-Affairs in order. When he had rested some Months at *Seville*, in *May* 1505, he proceeded to the Court, which resided then at *Segovia*. He did not think the King received him as he deserved, yet he presented several Petitions setting forth the Services he had performed, and his great Sufferings, and desiring the Performance of what he had promised him in return; for which the King gave him many fair Words without any Effect, having no Intention to fulfil his Engagements, and therefore under-hand offered him a large Estate in *Spain*, in exchange for what was his due in the *Indies*.

This much vexed the Admiral, who was then confined to his Bed, and he complained of it to the Archbishop of *Seville*; but at that Time King *Ferdinand* travelled from *Valladolid* to *Laredo*, to wait for his Son-in-law King *Philip*, and Queen *Johanna* his Daughter, who soon after arrived there from *Flanders*. The Admiral, not being able to go, sent his Brother the Adelantado, to compliment their Majesties and solicit his Affairs; where he was well received, and had fair Promises of having his Business favourably dispatched. But notwithstanding all this, such Methods were made use of to postpone his Demand, and protract his Business in all Offices to which it was referred, that it was no difficult Matter for him to discern, that very little good was intended him.

13. While the Adelantado, Don *Bartholomew Columbus*, was soliciting, as has been said, the Admiral's Distemper grew upon him, till, having made the necessary Dispositions, he departed this Life, with much Piety, at *Valladolid*, on *Ascension-day*, being the 20th of *May*, 1506. His Body was conveyed to the Monastery of the *Carthusians* at *Seville*, and from thence to the City of *Santo Domingo* in *Hispaniola*, where it lies in the Chancel of the Cathedral. He left his Son *James* his sole Heir, and died before he knew whether *Cuba* was an Island. It may be expected that we should add here some Character of this great Man, or at least a Description of his Person; but, having already spoken largely of his Abilities in the Beginning of our former Volume, as well as in this, we shall content ourselves with barely transcribing what a *Spanish* Historian, justly esteemed for his Fidelity and Knowledge, has discoursed upon this Subject:

His Words are these: "*Columbus* was tall of Stature, " long Visage, of a majestic Aspect, his Nose aquiline, " his

“ his Eyes grey, of a clear Complexion and ruddy, his
 “ Beard and Hair, when young, fair, though through
 “ many Hardships they soon turned grey : He was a
 “ Man of Wit, pleasant and eloquent, moderately grave,
 “ affable to Strangers, and kind to his own Family : His
 “ Conversation discreet, which gained him the Affection
 “ of those he had to deal with, and his Presence attracted
 “ Respect, having an Air of Authority and Grandeur ;
 “ temperate in Eating and Drinking, and modest in his
 “ Dress. He was very strict in Religion according to the
 “ Mode of his Country, and obliged such as were under
 “ his Command to observe the same with Decency. In
 “ that Respect, he shewed an earnest Concern for the Con-
 “ version of the *Indians* to the Christian Faith, and en-
 “ deavoured all he could to invite them thereto, by
 “ obliging the *Spaniards* to lead a Life, in some measure,
 “ agreeable to that Faith which they professed. In other
 “ Respects he was a Man of undaunted Courage and
 “ high Thoughts, fond of great Enterprizes ; patient,
 “ ready to forgive Wrongs, and only desirous that Of-
 “ fenders should be sensible of their Faults, unmoved in
 “ the many Troubles and Adversities that attended him,
 “ ever relying on Divine Providence. In short, had
 “ he performed such a wonderful Enterprize in the an-
 “ tient Days as the Discovery of the new World, it is
 “ likely he would not only have had Statues, and even
 “ Temples, erected to his Honour ; but that some Star
 “ would have been dedicated to him, as was done to
 “ *Hercules* and *Bacchus*, and among us his Name will be
 “ renowned whilst the World endures.”

13. Such was the End of this great Man, to whom, in the strictest Sense, the *Spaniards* are indebted for all that they possess in the new World, as will very clearly appear ; if we consider that he settled *Hispaniola*, took a View of *Cuba*, visited *Jamaica*, bestowed the Name of *St. John* on the Island of *Porto Rico*, called formerly *Borriquen*, and discovered almost all that can properly be called the *West Indies*. As to the Continent, it must be confessed that he barely saw it, but then he saw both Parts of it, and the Isthmus that unites them ; and he left behind him Projects for extending all these Discoveries, and his Conjectures of the Consequences that might attend them. He did still more than this, he declared positively, that there lay a Sea on the other Side of the Continent, through which there might be a Passage discovered to the *East Indies* ; and accordingly, as we have shewn elsewhere, that is, in the History of *Magellan's* Voyage, this Passage was actually discovered from the Lights given by him.

It must be confessed, that for such Services scarce any Rewards could be sufficient, much less too great ; and if it be remembered, he demanded nothing beyond his first Contract, notwithstanding that he performed much more than he promised therein, one cannot help wondering at the mean and scandalous Behaviour of King *Ferdinand*, who so ungratefully endeavoured to deprive him, and his Family, of what were their just Rights.

His eldest Son and Heir, *James*, or, as the *Spaniards* stile him, *Don Diego Colon*, inherited his Pretensions, and inherited, likewise, the Dislike of *Ferdinand*, and the Hatred of the Bishop *Fonseca* ; and though he endeavoured by Petitions, and personal Applications, to obtain his Right, yet he never could receive any other Satisfaction than fair Words and fine Promises ; with which being at last quite tired out, he desired the King to leave his Demands to the Decision of the Law, which, being what he could not decently deny, was granted.

This Suit, as may be well supposed, was tedious and troublesome, but, at last, he obtained a clear Decision in his Favour, and was re-established, by the Judges, in all his Fathers Pretensions ; notwithstanding which, the King and the Bishop found Ways and Means to delay the Execution of the Judgment ; so that he obtained nothing thereby, except the Recognition of a Right, which was sufficiently clear before. To strengthen his Interest, therefore, he thought fit to marry, which he accordingly did, into one of the most illustrious Families in *Spain* ; espousing *Mary de Toledo*, Daughter to *Don Ferdinand*, Brother to the Duke of *Alva*, and Cousin to his Catholic Majesty. By the Assistance of his Wife's Relations, he at last obtained the Government of *Hispaniola* ; succeeding the great Enemy of his Father, *Nicholas de Obando*, but with the Title only of Governor, and not of Viceroy, which was his Right.

He went thither in 1508, with his Wife, his Brother, *Don Ferdinand*, who wrote the Life of his Father, of which we have made use in the foregoing Sections, and his Uncles, *Bartholomew* and *James Columbus* ; together with many young Noblemen, and several young Ladies of good Families, by which the Lustre of the *Spanish* Settlement, in *Hispaniola*, was restored, and increased. Yet his Power was not at all greater than that of his Predecessor ; and the little he had was soon after restrained by the settling of a new Court, at *Santo Domingo*, under the Title of the *Royal Audience*, to which Appeals were allowed from all Parts of the *Indies*. Here then we are to close our Accounts of this illustrious Person and the State of his Family at his Decease.

In the next Section we shall give a succinct Account of the manner in which the *Spaniards* prosecuted the Discovery of the *Indies*, to the time of those two great Expeditions, for the Conquest of *Mexico* and *Peru* ; of which, as of the most memorable and extraordinary Transactions that have happened in this Part of the World, and which have contributed most to make it known, we shall give a larger and more particular Account ; and, indeed, if we reflect, that in all Senses whatever, the Conquests of the *Spaniards*, in the new World, have been the greatest in themselves, and more beneficial in their Consequences, than those of any *European* Nation, we cannot, certainly, think that time ill employed, which is spent in acquiring a circumstantial Account of them ; more especially as the Events therein are more curious and entertaining than those that occur in any other History whatever.

SECTION VI.

The History of the several Discoveries, Settlements, and Conquests made by the Spaniards, in the West Indies, after the Death of the Admiral Don CHRISTOPHER COLUMBUS, to the Expedition of FERDINAND, or HERNAN CORTES.

1. *The Improvements made by Nicholas de Obando in the Island of Hispaniola, and the great Value of the Gold Mines wrought there.*
2. *The Expedition of Don Juan Ponce de Leon into Puerto Rico, and his Conquest of that Island.*
3. *A Settlement made on the small Island of Cubagua, the vast Fishery for Pearls there, and the Occasion of losing it entirely.*
4. *Alonso de Hojeda, and Diego de Nicuesa, commissioned to make Discoveries, and sail with that View to the Indies.*
5. *Hojeda's unfortunate Expedition to Carthagena, where he had been destroyed, but for the timely Assistance afforded him by Nicuesa.*
6. *Afterwards fixes the Settlement of St. Sebastian, his Misfortunes and Death, together with the Fate of his new Colony before mentioned.*
7. *The History of Valquez Nugnez de Balboa, and of his surprising Exploits in the Indies.*
8. *The History of Don Diego de Nicuesa resumed ; he founds the Colony of Nombre de Dios, his subsequent Misfortunes and miserable Death.*
9. *The Conquest of the great Island*

of Cuba undertaken by Don Diego Velasquez, and the Progress made therein by him. 10. The famous John Ponce de Leon, by an unaccountable Delusion, undertakes an Expedition to find out the Fountain of Youth; which produces the Discovery of Florida. 11. The Discoveries made on the Continent by the Command of Diego Velasquez, under Ferdinand de Cordova his Lieutenant, to the Death of Cordova. 12. These Discoveries resumed and prosecuted with greater Success, by the Command of Velasquez, under John Grijalva. 13. His subsequent Expeditions open a Passage into that Country, since stiled New Spain. 14. On his Return Grijalva is most unjustly disgraced by Diego Velasquez, for pursuing his Orders too strictly. 15. Observations and Remarks on the principal Events in the foregoing Section.

IT is natural for us to begin this Section with some Account of the Progress of the Spaniards in *Santo Domingo*, or *Hispaniola*, after a regular Government was settled there, and the Value of the Discovery thereby made known; and this for two Reasons, first, because the immense Wealth derived from this Colony was what excited the Spaniards to continue their Discoveries; and because this Vein of Wealth has been long since dried up, and, at present, we hear nothing of the Gold of *Hispaniola*; which, at its first Discovery, yielded more in Proportion than ever *Peru* has done since. This was, in some Measure, owing to the Industry and Care of *Nicolas Obando*, who first employed a skilful Pilot to sail round the Island, and describe its Coasts; and afterwards took Pains to examine all the Provinces into which it was divided, and surveyed them likewise.

In his time there was discovered, near the Town of *Puerto Real*, a Mine of good Copper, but, after much Money expended about it, the Produce did not answer. Those three hundred Spaniards whom *Obando* found in the Island, at his first coming, lived very disorderly, and had taken the most beautiful Women, and of the best Quality in it, for their Mistresses, their Parents believing that they were married; but the *Franciscan* Friars, thinking the Lewdness not to be tolerated, made Instance to the Governor for some Remedy therein; who, at last, decreed, that they should either part, or be married within a limited time: Many Men of Quality thought this a very hard Imposition, yet, rather than lose the Dominion they had over the *Indians*, in right to those Women, they complied, and married them, and tho' this entitled them to what was their Wives, and the Lawyers said they had a legal Right to the Service of those *Indians*, *Obando* took them away as soon as they were married, and gave them to others, allowing them as many in other Places; alledging he did it to prevent their growing proud as natural Lords, and to keep them in Submission, as holding those *Indians* only by Gift; but this was looked upon as an unjust depriving of the natural Lords of their Subjects.

This *Nicholas de Obando*, when he went over Governor of *Hispaniola*, carried with him *Roderick de Alcazar*, Goldsmith to their Majesties; a discreet and honest Man, who had the Employment of Marker of the Gold, and his Fee was one per Cent, which was looked upon as a very indifferent Allowance; but, after the Distribution of the *Indians*, there was so much Gold gathered, that it was four times melted down every Year; twice at the Town of *Buena Ventura*, on the Banks of *Hayna*, eight Leagues from *Santo Domingo*, where the Gold, brought from the old and new Mines, was cast; and the other two at the City of *la Vega*, or the *Conception*, where the Gold of the Mines of *Cibao*, and the adjacent Parts, was conveyed; at each melting, in the Town of *Buena Ventura*, there came out between 110000, and 120000 *Pesos*; and at *la Vega* between 125000, and 130000 *Pesos*, and sometimes 140000. Thus the Product of *la Vega* was the greatest, and all the Gold of the Island amounted to 460000 *Pesos*, or more Money; according to the nicest Computation, 150000 Pounds; which yielded unto *Roderick de Alcazar* about 4500 *Pesos* a Year; which, at that time, was a very considerable Revenue, and though it was well bestowed on him, their Catholic Majesties revoked it.

It was remarked, even at this time, that such as wrought at these Mines were never any Gainers, notwithstanding the vast Quantities of Gold, of which they became Masters; for, living always luxuriously, and upon

Credit, their Gold, at the melting times, was often seized for their Debts, and very frequently did not afford enough to bring things to a Ballance.

2. The last War, in the Province of *Higuey* in *Hispaniola*, produced a great Extention of the Spanish Power; for the Governor, *Obando*, appointed one to command in those Parts, and keep the *Indians* in awe, who soon formed a Project of carrying his Authority beyond the narrow Bounds which were assigned it. The Name of this Spanish Gentleman, was *Juan Ponce de Leon*, a Person of good Sense, great Courage, but, withal, imperious and cruel. He was informed, by the *Indians*, that the Island of *St. John de Puerto Rico*, by these People called *Borriquen*, was exceedingly rich in Gold; a Circumstance sufficient to tempt him to a better Acquaintance with it.

In order to this, he applied himself to the Governor, giving him a full Account of all that he had heard, and desiring his Licence to go over to the Island to enquire into that Affair, to trade with the Natives, and see what might be done towards settling there; for, till then, they knew nothing of it farther, than that it appeared very beautiful; and they saw abundance of People when Ships passed by it. *Juan Ponce* embarked in a small Caravel, with some Spaniards and *Indians* that knew the Place, and landed in the Dominions of *Aguey Bana*, the greatest Lord of the Island, who had a Mother and Father in Law, who all received and entertained him very kindly; and the *Cazique* changed Names with him, which they called becoming *Guatiacos*, or sworn Brothers. He gave the Mother the Name of *Agnes*, and called the Father-in-law *Francis*; and, though they would not be baptized, they kept the Names which the Christians gave them.

This *Cazique*, his Mother, and Father-in-law, were very good-natured, and always advised the Son to be a Friend to the Spaniards. *Juan Ponce* presently made it his Business to enquire whether what the *Indians* had told him was true, concerning the Gold Mines. The *Cazique* conducted him all over the Island, shewing him the Rivers where Gold was found, and among them two that were very rich; the one called *Manatuabon*, and the other *Cebuco*, whence much Treasure was afterwards drawn. He caused Samples to be taken, which he carried to the Governor of *Hispaniola*, leaving some Spaniards there well recommended to the *Cazique*, and his Mother, who were well entertained till others came to settle. The greatest Part of this Island consisted of high Mountains, some of them covered with fine high Grass, like that in *Hispaniola*. There are few Plains, but many Vales with pleasant Rivers running through them, and all very fruitful. The western Point of it is but twelve or fifteen Leagues from the eastern Cape of *Hispaniola*; so that in fair Weather the one may be seen from the other, by People standing on the Tops of those Points.

There are some Ports, but none good, except that which is called *Puerto Rico*, where the City and episcopal See are seated. The length of it is about forty Leagues at least, and the Breadth sixteen; the Circumference about 120. The Southern Coast lies all in seventeen, and the Northern in eighteen Degrees Latitude. It produced much Gold, though not quite so fine as that of *Hispaniola*, yet not much inferior to it.

While *Ponce de Leon* was thus employed, *Obando* was recalled, and Don *Diego Colon*, Son to the Admiral, came to take the Government of *Hispaniola* in his Room; bringing with him, from *Spain*, a new Governor for *Puerto Rico*; but he who had made the first Settlement

on that Island disputing this Appointment, the young Admiral, without farther Ceremony, set them both aside, and appointed one *Michael Cerron* Governor of that Place, and made one *Michael Diaz* his Lieutenant.

However *Juan Ponce de Leon*, by the Interest of his Friend *Obando*, procured a new Commission from *Spain*, and, going over to *Puerto Rico*, easily found Pretences for picking a Quarrel with *Cerron* and *Diaz*, whom he sent Prisoners into *Spain*. These People thus out of his way, *Juan Ponce de Leon* prosecuted his first Design of conquering the Island, but found it a much more difficult Task than he imagined. However, at last he compassed it; and with much ado the poor *Indians* were forced to submit. In consequence of which they were made Slaves, and employed in the Mines till they were quite worn out. Since which the Gold has likewise failed; which many *Spanish* Writers acknowledge to have been a Judgment from God for that barbarous Proceeding; so much the more probable, because the same thing has happened in other Parts of their Dominions.

3. The Court of *Spain* was at this time very solicitous to make the most of the Settlements already made in the new World, and therefore from time to time admitted of such Representations as those who had been in the *Indies* thought fit to make, as to what was requisite to be done there for promoting the Royal Revenue.

Amongst other Propositions of this nature, there was one which suggested it was much for the King's Interest that the Island of *Cubagua*, called also *Of Pearls*, near *Margarita*, should be inhabited by *Spaniards*, and therefore the Admiral was ordered to take care of it, that the Trade there might be the better looked after. And the Inhabitants of *Hispaniola* made a great Advantage of it, finding the *Lucayo Indians* most useful, because they were extraordinary Swimmers and Divers; so that one of them came to be worth one hundred and fifty Ducats. And they not only defrauded the King of his Fifth, but also abused and destroyed the *Indians*, which obliged them to stand upon their Guard, and was prejudicial to the Trade. This Island of *Cubagua*, somewhat above three hundred Leagues from *Hispaniola*, is about three Leagues in Compass, lies in almost ten Degrees of Latitude, the Soil very barren and dry, affording much Salt-petre, some few *Guaiacum* Trees and Shrubs, without any Grass or Birds, only such as are proper to the Sea, being all flat and without any Springs of fresh Water.

No Land Creatures were found upon it, except a few Rabbits. The Natives painted themselves, and fed on the Pearl Oysters. They brought over in their Canoes Water from *Cumana* on the Continent, which is seven Leagues distant, and gave Seed-pearl for it to those who would carry it over. Wood they had from the Island *Margarita*, which lies a League to the Northward of it, and incompasses it from the East to the North-west. And to the Southward of it is *Cape Araya* on the Continent, where the great Salt Pits are.

It has a good Port on the North Side. The Swine that were carried thither from *Spain* soon degenerated, their Claws turning upwards half an Handful. There was infinite Plenty of Oysters breeding the Pearl within them, a little Nob growing at first soft, and afterwards hardening as it grows. Some Years the King's Fifth of only the Pearl Fishery amounted to fifteen thousand Ducats. And it was wonderful that such a Quantity of Pearls should be found in so small a Compass, taken by Men diving, and staying under Water as long as they can hold their Breath, pulling off the Shells from the Places they flick to. And it is to be observed that there are Pearls for above four hundred Leagues from *Cape de la Vela* to the Bay of *Paria*. And besides these the Admiral found at *Cubagua* (which he called the *Island of Pearls*) he discovered them on the Coast of *Cumana*, as also all along the Coast of *Paria*, *Maracapana*, *Puerto Flechado*, and *Curiana*, which is near *Venezuela*.

4. Amongst other Adventurers who petitioned the *Spanish* Court for Leave to make Discoveries, *Hojeda* was one, a brave Man, but poor; and *John de la Cosa*, who had been his Pilot, and had saved that Money which the other spent, out of pure Affection offered to assist him with

his Life and Fortune. They had a Grant promised them of all that had been discovered on the Continent: But *Diego Nicuesa* interposing, being a richer Man, and having a better Interest, stopped the Grant, and procured Half of it for himself. To the former Adventurers the Court granted all the Country between *Cape de la Vela* and the Gulph of *Uraba*, now stiled the *Gulph of Darien*, under the Name of *New Andalusia*; and to the latter, from the before mentioned Gulph to *Cape Gracias a Dios*, under the Name of *Castilla del Oro*, or *Golden Castile*, without a Word said of the Admiral, to whom of Right all these Countries belonged as discovered by his Father.

The Island of *Jamaica* was likewise granted to *Diego Nicuesa*, in common, but the Admiral, being in the *Indies*, secured that for himself. *Hojeda* was able to fit out but one Ship, and one Brigantine; but *Nicuesa* had two Brigantines; with which they both sailed to *Santo Domingo*, where they quarrelled about their Rights: And it was with great Difficulty that the Disputes between them were adjusted: At last, however, this was done, and both proceeded to their respective Governments, or rather to settle the Colonies they had promised.

5. Those Disputes took up much time, so that it was the latter End of the Year 1510 before either of them left *Hispaniola*. *Alonso de Hojeda*, with whom *Francis Pizarro* embarked, departed from the Island *Beata*, and, standing to the Southward, in a few Days arrived at *Carthagena*, which the *Indians* called *Caramari*, and they were then in an Uproar, and ready to oppose the *Spaniards* because of the Injuries done them by *Christopher Guerra* and others, who had passed by that way, and under Pretence of trading had seized many, and made Slaves of them. Those People were of a large Stature, the Men wore their Hair down to their Ears, and the Women very long. And both Sexes were very expert in shooting with their Bows. *Hojeda* and *John de la Cosa* had religious Men with them, his Master being very desirous to induce them to submit; and, having *Indians* of *Hispaniola* who spoke the Language, he advised them to be peaceable, and to leave off their Cruelty, Idolatry, and other hideous Vices practised among them; but they, being very much incensed, for Reasons before mentioned, would not give ear to those Persuasions.

Alonso de Hojeda, pursuant to his Instructions, tryed all possible Methods to allure them, tho' he had also Orders in case they proved obstinate, to declare War and make Slaves of them. He began to barter for Gold, giving them some *Spanish* Toys; but those *Indians* being fierce and bold, *John de la Cosa* said he thought it would be better to settle a Colony at the Bay *Uraba*, where the Natives were more gentle, and that from thence they might return to *Carthagena* better provided. *Alonso de Hojeda* being always too resolute, and the more for that, having been in a great Number of Quarrels and Engagements in *Spain* and *Hispaniola*, he had never lost a Drop of Blood, did not regard the Advice, but fell upon the *Indians* who were preparing to attack him, killed many, seized some, and found a small Quantity of Gold in the Places taken from them.

Not satisfied with that, using some of the Prisoners for his Guide, he went to a Town four Leagues up the Country, whither those who had escaped from the last Fray were retired, and found the People there upon their Guard, armed with Targets, Swords of extraordinary hard Wood, Bows, sharp poisoned Arrows, and Rods, which they threw like Darts. The *Spaniards* crying out, *Santiago*, that is *St. James*, fell on, killing and taking all they met. Eight *Indians*, who were not so expeditious as the rest, retired into one of their thatched Houses, where they defended themselves a considerable Space, killing one *Spaniard*; at which *Hojeda* was so provoked, that he ordered the House to be fired, where they all perished in a Moment. Here he took sixty Captives, whom he sent to the Ships, and pursued those that fled. The Inhabitants of a Town called *Yarbaco* having Notice thereof, withdrew into the Mountains with their Wives, Children, and Effects.

The *Spaniards* coming thither by break of the Day, and finding nobody, grew heedless, and dispersed themselves

selves about the Country. The *Indians* observing their Carelessness, fell upon them unexpectedly, and they so surpris'd endeavoured to retire to some Place of Safety, but still met with their Enemies, who, they being divided into several Detachments, attacked, wounded, and killed them with Flights of poisoned Arrows. *Hojeda*, with some of his Companions maintained the Fight, often kneeling, the better to cover himself with his Target; but when he saw most of his Men killed, trusting to his Activity, he rushed through the thickest of the *Indians*, and, running as if he had flown, got into the thickest Part of the Woods, directing his Course the best he could towards the Sea, where his Ships were. *John de la Cosa* got into a House that had no Thatch on it, where he defended himself at the Door till his Men being slain, and himself so wounded with the poisoned Arrows that he could no longer stand, looking about he saw one that still fought courageously, to whom he said, That since it had pleased God to preserve him he should go immediately and tell *Hojeda* all that had happened, and *Hojeda* and he were the only two that escaped, Seventy *Spaniards* being slaughtered.

Things being in this Situation, very lucky for the *Spaniards*, *Nicuesa* with his Ships appeared, and he, landing, was informed of what had befallen his Rival through his own Rashness; upon which he desired he might be fought for, and brought to him; and as soon as he saw him he said, That in such a Case they ought to forget their Disputes, and only remember they were Gentlemen and *Spaniards*, offering at the same time to land his Men, and assist him in revenging the Death of *John de la Cosa*. They did accordingly land 400 Men, which proved alone more than sufficient to beat the *Indians*, to take and burn their Town, and to put them in possession of a vast Number of Slaves, and of a Booty worth Seven thousand Pieces of Gold to each of them. After this Victory they agreed to part, and that each should pursue that Plan of Discovery and Planting directed by his Commission; which they accordingly did with what Fortune we shall hereafter shew.

6. As for *Alonso Hojeda*, as soon as he understood that it was the Design of *Nicuesa* to steer for *Veragua*, he crowded all the Sail he could, for the River of *Darien*; but having lost his old Pilot, upon whose Experience he chiefly depended, he missed the River, and at last resolved to fix a Settlement on the Eastern Promontory of the Gulph of *Uraba*; which he accordingly did, and called his new Town *St. Sebastian*; which he did the rather, because as that Saint is said to have been martyred by the Arrows of the Infidels, he thought him a fit Patron to defend him against the poisoned Arrows of the *Indians*.

He was hardly fixed there before he found all the Inhabitants of the Country to be a Race of barbarous Savages, from whom he had nothing to expect, but all the Mischief they could do him; in this Situation he thought fit to detach Captain *Enciso* with one of his Ships to *Hispaniola*, with Orders to bring him as great a Reinforcement of Men as he could possibly obtain, and during his Absence he intrenched himself as well as he could, the better to secure his People; but Provisions growing very soon so low, that they were not in a Condition to subsist, he found himself under a Necessity of making some Excursions into the Country to obtain a Supply; which Expedient, however, failed him, and he had the Misfortune likewise to lose many of his Men by the Arrows of the *Indians*, which were poisoned with the Juice of a certain stinking Root, that grew by the Seaside. By these Disasters his new Colony was quickly reduced into a most wretched Condition, starved if they remained within their Works, and sure of meeting with Death if they ventured out of them; in this sad State, and when they absolutely despaired, they saw with an Amazement a Ship enter the Port.

It proved to be no better than a Pirate, commanded by one *Bernard de Talavera*, who, flying from Justice, took Shelter here, in a Place to him unknown. *Alonso Hojeda* did not think it necessary to inquire very nicely into the Man's Character, but very readily bought his Ship's Cargo, and treated the Captain so well that he willingly entered into his Service. However serviceable

this Relief might be, it was but of short Continuance; so that, all their Provisions eaten up, the Savages more troublesome than before, and no Succour coming from *Hispaniola*, they were once more at their Wits-end. After various Schemes formed to no Purpose, it was at last resolved that he should go himself to *Santo Domingo*, in order to procure Supplies; and accordingly, leaving *Francis Pizarro* to command the Colony, he embarked on board *Talavera's* Vessel, and put to Sea. The Voyage was very unfortunate from the Beginning; for *Hojeda* using too much Severity towards the Crew, and behaving very haughtily to Captain *Talavera*, he not only deprived him of all Command, but very fairly clapped him in Irons. A Storm however arising, the Crew who, though they thought him a bad Officer, yet knew him to be a good Seaman, set him at Liberty; and it was chiefly by his Skill they were enabled to save their Lives, by running the Ship ashore on the Island of *Cuba*.

It was but a very short Passage from thence to *Hispaniola*, but *Talavera* durst not go there; and therefore he prevailed upon *Hojeda* to venture a Voyage of one hundred Leagues to *Jamaica* in a Canoe, and he was lucky enough to perform it. He had, by his Commission, some Pretensions on this Island; and having heard that the Admiral had sent over thither Don *Juan de Esquivel*, with the Title of Governor, he threatened to cut off his Head if ever he fell into his Hands; but now he was forced to sue to him for Favour, and was very kindly used. After a short Stay at *Jamaica*, the Governor, at his own Request, sent him over to *Santo Domingo*; where he learned that Captain *Enciso* was failed for *St. Sebastian*, but found his own Credit so low that he could scarce raise wherewithal to buy him Bread; and in a short Time after he actually died of Want, though he deserved a better Fate, being one of the bravest Men that ever failed from *Spain* to the *Indies*. *Talavera* had still worse Luck; for, staying too long at *Jamaica*, the Admiral caused him to be apprehended, tried, and hanged for a Pirate.

In the mean time, Captain *Pizarro* quitted *St. Sebastian*, and, with a very few Men, and with much Difficulty escaped to *Cartagena*, where, very luckily for him, Captain *Enciso* was just arrived with two Ships, and a considerable Reinforcement; he took *Pizarro* on board; and they returned all together to *St. Sebastian*, where they had the Misfortune to be shipwrecked; and, getting ashore with much difficulty, they found the Place reduced to Ashes by the Savages. They restored it as well as they could, and got ashore what they were able of Provisions, and other Necessaries, out of their stranded Vessels; but were soon reduced to the utmost Extremities both by War and Famine; Hunger frequently forcing them out, and the Savages constantly driving them back again with the Loss of some of their Number, which they could very ill spare, being but One hundred and eighty Men at first. Such were the Miseries to which these Men exposed themselves in Search of Riches.

7. We must, before we can proceed, give the Reader some Account of a very extraordinary Person who was engaged in this Expedition, and who, by his Dexterity and Presence of Mind, delivered his Companions, in some measure, out of the Dangers they were in. The Name of this Gentleman was *Vasquez Nugnez* or *Nunez de Balboa*: He was a Person of good Family, great Parts, liberal Education, of a fine Presence, and in the flower of his Age, being then about Thirty-five. He had formerly sailed with *Bastidas* upon Discoveries, and had afterwards obtained a very good Settlement in *Hispaniola*, but, having committed some Excesses there, was in danger of being put to Death. In these unfortunate Circumstances he procured himself to be put on board Captain *Enciso's* Ship in a Bread-cask, and, after having remained there some Days, he ventured at last to make his Appearance, when the Ship was an hundred Leagues at Sea. The Captain, who had been charged not to carry any Offenders out of the Island, was extremely vexed at this Adventure, and threatened to set him on Shore in the first Desert Island he came to; but the principal Persons on board interceding for him, the Captain was at last pacified, and granted him his Protection;

fection; which, however, did not efface from his Memory the Usage he had met with, as we shall see in its proper Place.

This Man, observing that the Company were in a down-right Despair, and knew not which way to turn themselves, took upon him to encourage them, by asserting, that they were not in so desperate a Condition as they imagined; for that, when he was upon this Coast before, with *Bastidas*, they had failed to the Bottom of the Gulph, where they had seen a very large fine Town, situated in a fruitful Soil, in a fine Climate, and which was inhabited by warlike *Indians* indeed; but such as did not make use of poisoned Darts. He therefore advised them to get off their Brigantines which were stranded, and endeavour to pursue their Voyage.

They approved *Nunez's* Advice, failed to the River which the *Indians* call *Darien*, and, having viewed the Place, found all according as he had described it. The Inhabitants and their Cazique, whose Name was *Cemano*, understanding that the *Spaniards* were coming, secured their Wives and Children, and with Five hundred Men waited for the *Spaniards* on a little Hill, who having performed their Devotions fell upon them, and soon put them to the Rout. They went to the Town, and, as they wished, found it full of Provisions. The next Day they marched up the Country and the Mountains thereabouts, where they found many Houses without Inhabitants, they being all fled, but there were Vessels, Household Goods, and Cotton Things like short Petticoats for Women, as also much Cotton spun and unspun, and Plates of Gold, such as they hung on their Breasts, and other Things, amounting in the whole to Ten thousand Pieces of fine Gold. *Enciso* being overjoyed at this Success, sent for the Men that had been left on the other Side of the Bay, because the Brigantines could not carry them at once. *Nunez* gained much Reputation by the Success of this Enterprise, and began to be in very high Esteem.

They all agreed to establish a Colony there, and to call it *Santa Maria el Antigua del Darien*, or *S. Mary the Antient of Darien*; the first being the Name of a Church at *Seville*, and the latter, the *Indian* Name of the River. *Nunez*, being now in great Credit, secretly contrived with his Friends to depose *Enciso* from the Command, alledging, that since they were out of the Limits of *Hojeda's* Government, he had no longer any Authority. Whilst these Things were in Agitation *Enciso* thought fit to order that no Man, upon Pain of Death, should trade with the *Indians* for Gold; and they, suspecting he did it to draw all to his own Advantage, unanimously threw off all Subjection to him, saying his Authority was expired on the Account above mentioned, and for other Reasons. *Enciso* thus deprived of the Government, they resolved to chuse Alcaldes and Regidores, which are the Titles of the chief Magistrates in *Spanish* Towns; and accordingly *Nunez de Balboa*, and *Zamadio*, were elected Alcaldes, and *Valdibia* was appointed Regidore. However, the Men, not being pleased with this Government, and repenting that they had excluded *Enciso*, begun to fall at variance about it; some alledging that it was not proper to be without a Commander in chief, and by this means they divided into three Parties. One of them demanding that *Enciso* should be restored till the King appointed another Governor; the second said they ought to submit themselves to *Nicuesa*, because that Country was within his District; the third consisted of *Nunez's* Friends, who would have the present Government stand, but, in case they would have a single Commander, insisted it should be *Nunez de Balboa*.

In the Midst of all these Debates, *Roderic Enriques de Colmenares* arrived with two Ships, having on Board Provisions, military Stores, and seventy Men. This Captain, meeting a great Storm by the Way, put into the Port of *Santa Maria*, fifty or sixty Leagues from *Carthagena*, by the *Indians* called *Gayra*; the Boats going there to water, the Lord of that Country came out with twenty of his Followers, clothed in a sort of Cotton Cloaks, though all *Indians* in those Parts go naked, and, drawing near, bid them not take of that Water, because it was not good, shewing them another River. Not being able

to come at it by the beating of the Sea, they returned to the first Place; and, as they were filling their Casks, on a sudden about seventy *Indians* rushed out, and, before the *Spaniards* could stand upon their Guard, wounded forty-five of them with their poisoned Arrows: The wounded Men swam away, because the Natives stayed the Long-boat, and, when they got to the Ships, they all died except one. Seven *Spaniards* hid themselves in a great hollow Tree, in order to swim to the Ship at Night.

But the Men on board, supposing them to be killed, failed away very melancholy, for the Bay of *Uraba*, to enquire after *Nicuesa*; and, finding no body on the East-side of the Bay, where they thought *Hojeda's* Men, or their own, might be, *Colmenares* was much surprized, suspecting they were all dead, or gone to some other Place; but thought fit to fire some Pieces of Cannon, that they might hear him if they were thereabouts; and to make Fires at Night, and Smokes by Day, on the adjacent high Rocks. They that were at *Santa Maria el Antigua del Darien* heard the Gun, which made all the Bay roar to the Westward, and made Signals, and he came to them about the middle of *November*, 1510. He distributed the Provisions he had among them all, and, by that Generosity, gained the Affections of the greater Part of those who opposed the calling of *Nicuesa*; so that they agreed he should be sent for, in order to take upon him the Government.

8. It is requisite for us, now, to turn to Don *Diego Nicuesa*, in order to see how he passed his time after leaving *Alonso Hojeda*, whom he had so generously assisted. A few Days after, he met with as great Mischiefs at Sea, as *Hojeda* had done on Shore; for he was tossed by a dreadful Tempest from without, and betrayed within by *Lopez de Olano*; who, perceiving the Squadron separate, followed one of the largest Ships into the River *Chagre*, in order to set up for himself, and left his Patron to shift as he could. After some very unlucky Adventures, he arrived at *Veragua*, which was their general Rendezvous; and there he laboured to persuade the People to abandon their original Design as impracticable, and to sail away to *Hispaniola*, there to make the most of what they had left; alledging, that without all doubt, *Nicuesa* was perished with all his Men.

While they were meditating this Project, there came a Shallop into the Port, with four Men on Board, who brought Advice that the Governor *Nicuesa* was not far off; that he had been stranded upon an unknown Coast, and marched a great Way with incredible Fatigue by Land, and was, with his Followers, in a most miserable Condition. Upon hearing this News, *Olano's* Heart relented, and he immediately dispatched the Shallop with Provisions and Refreshments, which came so opportunely, as to save *Nicuesa* and his Men from starving, which otherwise must have been their Fate. Yet this did not, in the least, soften his Resentments against his Lieutenant; whom, if it had not been for fear of the Men, he would have hanged; and, as it was, he put him in Irons, and threatened to send him in that Condition to *Spain*. It was not long, however, that this Authority remained in his Hands; for, endeavouring to settle a Colony on the River *Bethlehem*, he found himself so streightened for Provisions, that he was constrained to leave a Part of his Men there, and to sail with the rest to *Puerto Bello*; but the *Indians* not suffering them to land, he was constrained to proceed four or five Leagues farther to that Port, which, for Reasons before mentioned, *Columbus* called the *Bastimentos*; and, as soon as he entered it, he cried out *Paremos aqui en el nombre de Dios*, that is, *Let us stay here in the Name of God*.

There debarking his Men, he began to erect a Fortrefs, which, from the Expression before mentioned, was called *Nombre de Dios*. He had not been long there before he found himself in the same Plight as in the former Colony; so that he was obliged to send one of his Vessels to *Santo Domingo*, to beseech the Governor to grant him some Assistance. This Vessel was scarce out of the Port, before that with *Colmenares* on board arrived in the River of *Darien*, on the Message that has been before related from the *Spanish* Colony settled there. *Col-*

menares, and his Men, were so amazed to see *Nicueffa* and seventy of his Company he had left with him, lean, ragged, and bare-footed, that they could not forbear shedding of Tears, especially when they heard how many had died, and the great Disasters they had sustained. *Colmenares* did all he could to comfort *Nicueffa*, telling him that the People of *Darien* desired he would come and govern them; the Country there being good, that they had Provisions in Plenty, and did not want Gold. *Nicueffa* began to be in Spirits, and, having received Provisions, banished Despair, returning thanks to God for that great Mercy; however, as soon as this Joy was over, he lost the Reputation he had before gained in *Hispaniola*, of being a discreet and prudent Man; for, forgetting the miserable Condition he had been in, and not remembering that those People who submitted themselves to him had done it of their own Free-will; he had so little Sense as to declare in Public, that he would take all their Gold from them, and punish them over and above, which was soon spread abroad.

Nor was this the only Error he was guilty of, for he suffered a Caravel to go before, having a mind to view some Islands that lay in the Way. That same Night *Lopez de Olano*, who was still kept Prisoner, spoke with some of those that came from *Darien* to incense them, and, when he was going aboard, he said, *Nicueffa* fancies that *Hojeda's* Men will receive him as we did, when he had been lost at *Veragua*. *James Albetes* and the Bachelor, *Corral*, went aboard the Caravel that went before, and gave notice at *Darien* of what *Nicueffa* had said concerning taking away their Gold and punishing them, that he was become cruel and ill natured, abusing those that were with him, and more to that effect. *Nicueffa* from the little Islands sent *John de Cayzedo* to acquaint the People of *Darien* that he was coming, and, he being privately his Enemy, incensed them still more than the other two had done before; whereupon they resolved not to admit him among them; and this Resolution was chiefly forwarded by *Nunez de Balboa*, who advised all the prime Men to keep him out; though, at the same time, underhand he called the public Notary, and declared that he was not against *Nicueffa*, and required him to give him a Certificate of the same.

Nicueffa having spent eight Days among the Islands, taking some *Indians*, when he came to the landing Place at *Darien*, was amazed to find many of the *Spaniards* on the Shore, and one of them, in the Name of all the rest, requiring him to return to his own Government at *Nombre de Dios*; but, desiring to be heard, and returning again the next Day, as soon as he landed they went to seize him, but, being extraordinary swift of Foot, none of them could overtake him. *Nunez* hindered the People from proceeding any farther, fearing they might do him some harm, and from that time was much his Friend. *Nicueffa* intreated them that in case they would not accept of him as their Governor, he might, at least, be admitted as a Companion, which they refusing, he farther prayed they would keep him as a Prisoner, for he would rather die than go back to starve at *Nombre de Dios*.

But, notwithstanding all this, they forced him, and about seventeen of his Men, into an old rotten Bark, and ordered them to make their Way back to the Place they had quitted, on pain of being sunk where they were. There is no doubt they endeavoured this, but with what Success, is uncertain, only thus much is known, that they were never seen any more. There was, indeed, a Story current in the *Indies*, that when the *Spaniards* came to settle themselves in *Cuba*, as shall be presently related; they found this Inscription cut in the Bark of a large Tree: *Here the unfortunate Nicueffa finished his Miseries and his Life together.*

9. The Admiral, Don *Diego Columbus*, was very much blamed for not endeavouring, to the best of his Power, to succour these Adventurers, notwithstanding that the Governments bestowed upon them were contrary to his just Rights; and his Enemies made use of this to his Prejudice, at the Court of *Spain*, which had always a Jealousy of him, and therefore readily listened to whatever Complaints were brought against him. The Admiral, on his Side, was so sensible, and so well apprized of this, that he

left no Stone unturned to secure himself those Countries upon which, he conceived from the Contract made with his Father, he had just Pretensions.

Upon these Grounds, having understood, at the beginning of the Year 1511, that the Court was very desirous of having the great Island of *Cuba* discovered and planted, though they had no accounts of any rich Mines therein; he resolved to be beforehand with them, and to send a Body of Men thither, under the Command of a Person whom he could trust; that having a Lieutenant there of his own, the Court might have no Pretence for granting it away to any new Undertakers, as they had done that Part of the Continent which his Father had discovered, and even the Island of *Jamaica*, which, however, he had recovered. To this Purpose he made choice of *James Velasquez*, being the wealthiest and best beloved of all the first *Spanish* Inhabitants in *Hispaniola*; besides, he was a Man of Experience, of a mild and affable Temper, though he knew how to maintain his Authority, and very discreet. As soon as it was known, in *Hispaniola*, that *James Velasquez* was going to make Settlements in *Cuba*, abundance of People resolved to bear him Company, some, because he was beloved, and others, because they were ruined and in Debt. All these being about three hundred Men, rendezvoused in the Town of *Salvatierra de la Zavana*, to embark on board four Ships, that Place being at the extremity of *Hispaniola*.

But, before we proceed, it is fit to observe, that the Province of *Guatiaba*, lying next to *Cuba*, the Distance between the two Points being but eighteen Leagues, many *Indians* went over to *Cuba* in their Canoes, and among them passed over, with as many of his Men as could, a Cazique of the Province of *Guatiaba*, called *Hatuey*, a brave and discreet Man. He settled on the nearest Country, known by the Name of *Mayci*, and, possessing himself of that Part, kept the People as Subjects, but not as Slaves; for it was never found in the *Indies*, that any Difference was made between a free People, or even their own Children, and Slaves, unless it were in *New Spain*, and the other Provinces, where they used to sacrifice Prisoners of War to their Idols, which was not practised in those Islands. This Cazique, *Hatuey*, fearing that the *Spaniards* would some time or other pass into *Cuba*, always kept Spies to know what was done in *Hispaniola*; and being informed of the Admiral's Design, he assembled his People, who were most martial, and, putting them in mind of their many Sufferings under the *Spaniards*, told them, "They did all that for a great Lord they were very fond of, which he would shew them." And then, taking some Gold out of a little Palm-tree Basket, added, "This is the Lord whom they serve, him they follow, and, as you have already heard, they are about passing over hither only to seek this Lord; therefore let us make a Festival, and dance to him, to the end, that when they come, he may order them not to do us harm". Accordingly they all began to sing and dance till they were quite tired, for it was their Custom to dance as long as they could stand, from Night-fall till Break of Day, and their Dances were as in *Hispaniola*, to the Music of their Songs; and though fifty thousand Men and Women were assembled, no one differed from the rest in the Motions of their Hands, Feet, and Bodies. But those of *Cuba* far exceeded the Natives of *Hispaniola*, their Songs being more agreeable: When they were spent with singing and dancing before the little Basket of Gold, *Hatuey* bid them not to keep the Lord of the Christians in any Place whatsoever, for though he were in their Bowels, they would fetch him out, and therefore they should cast him into the River, under Water, where they would not find him, and so they did.

It may not be amiss, here, to give a Description of *Cuba*, from the *Spanish* Writers: This Island is 230 Leagues in Length, from Cape *San Antonio* to the Point of *Mayci*. The Breadth from Cape *Cruze* to Port *Manati* is forty-five, and there it begins to taper, and so runs on to the Westernmost Point, narrowing to about twelve Leagues, from *Matamano* to *Havanna*; its Situation is within the Tropic of Cancer, from twenty to twenty-one Degrees: Most of it is flat, full of Woods and Forests, but,

but, from the Eastern Point of *Mayci*, for thirty Leagues, there are vast high Mountains, as there are beyond it to the Westward, and in the Middle there are Hills, but not very high. Very fine Rivers run down on both the North and South Sides, full of Fish, and especially Skates and Olives, that go up from the Sea towards the middle of it. On the South Side there is a prodigious Number of little Islands, which the first Admiral, Don *Christopher Columbus*, called the *Queen's Garden*. There are others, though not so many, on the North-side, which *Velasques* called the *King's Garden*. On the South-side, about the middle, there runs down, into the Sea, a mighty River, which the *Indians* call *Cauto*; the Banks of it are very agreeable, and in it are vast multitudes of Alligators.

This Island is very well wooded, so that Men may travel almost two hundred and thirty Leagues always under Trees of several Sorts, and particularly sweet-scented and red Cedars, of which they make large Canoes, that contain fifty or sixty Persons; and of this Sort there were once great Numbers in *Cuba*. There are abundance of Storax Trees, so that if a Man in a Morning go up to a high Place, the Vapours that rise from the Earth smell of Storax, coming from the Fire the *Indians* make at Night, and drawn up when the Sun rises. Another Sort of Trees produce a Fruit called *Xaquas*, which, being beaten, and laid by four or five Days, though not gathered ripe, are full of Liquor like Honey, and better tasted than the sweetest Pears. There are abundance of wild Vines, that run up high, bearing Grapes, and Wine has been made of them, but somewhat sharp; and there being an infinite Quantity of them throughout the Island the *Spaniards* were wont to say, they had seen a Vineyard that extended two hundred and thirty Leagues. Some of the Trunks of those Vines were as thick as a Man's Body, which proceeded from the extraordinary Moisture and Fertility of the Soil.

All the Island is very pleasant, and more temperate than *Hispaniola*, is very healthy, and has safer Harbours for Ships than if they had been made by Art, as is that of *St. Jago* on the Southern Coast, in the Shape of a Cross; that of *Xaquas* scarce to be matched in the World, the Ships passing to it through a narrow Mouth not above a Cross-bow Shot over, and then turn into the open Part of it, which is about ten Leagues in Compass, with three little Islands so situated that they may fasten their Ships to Stakes on them, and lie safe from the Winds of all the Compass, being sheltered by Mountains as if they were in a House, and there the *Indians* had Pens to shut up the Fish. On the North Side there are good Harbours, the best being that which was called *de Carenas*, and now the *Havanna*, so large that few can compare to it; and twenty Leagues to the Eastward of it is that of *Matanoas*, which is not quite safe. About the Middle of the Island is another good Port called *del Principe*; and almost at the End that of *Baraca*, where good Ebony is cut; between which there are other good anchoring Places, tho' not so large or commodious as those we have mentioned.

There are abundance of Fowl in *Cuba*, as Pigeons, Turtle-doves, Partridges like those in *Spain* but smaller, of which there are none in the other Islands, nor Cranes, except on the Continent: Another Sort of Birds there was, of which they had none on the Continent, of the Size of Cranes, which at first are very white, and by degrees turn red, now called *Flamences*, and would have been much valued by the *Indians* of *New Spain*, if they had them, for the curious Feather-works they made; these move always five hundred or a thousand in a Flock; they look like Sheep bedaubed with red; they seldom fly, but stand on the Ground in the Sea, their Legs in the Water, and drink the Salt-water; if the *Indians* took any to keep in their Houses, they were forced to throw Salt into their Water. There is an infinite Multitude of Parrots, and about *May*, when they are young, they eat them, being very good Meat. They had few Land Animals, except a kind of Rabbits like those in *Hispaniola*; but to make amends for this, they had vast Quantities of both Sea and River Fish, especially Tortoises, excellent in their Kind, and very wholesome, curing the Itch and Leprosy in such as were content to make them their constant Food. As for *Indian* Corn, no Island in the *West Indies* produced it in greater Plenty;

and, taking all things together, it might be pronounced one of the finest Countries in that Part of the World, and one of the best provided. After the *Spaniards* had been settled there some time, they found considerable Quantities of Gold in the Rivers, some very pure and rich, but for the most part of less Value than the Gold in *Hispaniola*, or in the Island of *St. John de Puerto Rico*.

After having spoken of the Country itself, and of its several Products, it is but just that we should say something of the Natives, before they were conquered. The first Inhabitants of this Island were the same as those of the *Lucayos*, a good sort of People, and good-tempered. They had *Caziques*, and Towns of two or three hundred Houses, with several Families in each of them, as was usual in *Hispaniola*: They had no Religion, as having no Temples, or Idols, or Sacrifices; but they had Physicians, or conjuring Priests, as in *Hispaniola*, who, it was thought, had Communication with the Devil, and their Questions answered by him. They fasted three or four Months to obtain this Favour, eating nothing but the Juice of Herbs; and, when reduced to extreme Weakness, they were worthy of that Apparition, and to be informed whether the Seasons of the Year would be favourable or otherwise, what Children would be born, whether those born would live, and such like Questions. These were their Oracles, and these Conjurers they called *Bebiques*, who led the People into many Superstitions and Fopperies, curing the Sick by blowing on them, and such other exterior Actions, and mumbling some Words between their Teeth.

Those People of *Cuba* knew that Heaven, the Earth, and other things, had been created; and said they had much Information concerning the Flood, and that the World had been destroyed by Water, from three Persons that came three several Ways. Men of above seventy Years of Age said, that an old Man, knowing the Deluge was to come, built a great Ship, and went into it with his Family and abundance of Animals; that he sent out a Crow, which did not return for some time, staying to feed on the dead Bodies, but afterwards returned with a green Branch; with other Particulars, as far as *Noah's* two Sons covering him when drunk, and the other's scoffing at it; adding, that the *Indians* descended from the latter, and therefore had no Coats or Cloaks; but that the *Spaniards* descended from the others that covered him, and were therefore clothed, and had Horses. As to their Laws and Customs, since they lived in Towns and had Lords, it is likely their Will was a Law; many affirm, that the Natives of *Cuba*, *St. John de Puerto Rico*, *Hispaniola*, and *Jamaica*, were not guilty of the Sin of Sodomy, nor did they eat human Flesh, though *Oviedo* is of opinion that they were Sodomites; other Men, of as much Reputation as he, deny it, and reprove him for it; and the most probable Opinion is, that all those Islands were first inhabited by People that came over from *Florida*.

After saying so much of *Cuba*, let us go on to what *James Velasquez* did there: He set out from *Salvatierra de la Zavana* in November 1511, and landed at a Port called *Palina*, in the Territories of the above-mentioned *Cazique Hatuey*, that went thither from *Hispaniola*, who stood on his Defence, taking the Advantage of the Woods, where the *Spaniards* could not make use of their Horses. After two Months thus spent, the *Indians* hid themselves in the thickest Part of those Forests, and the *Spaniards* hunting them, they carried all they took to *James Velasquez*, who distributed them among his Men, not as Slaves but Servants. *Hatuey* withdrew into the most inaccessible Places; however, after much Time and Toil, he was taken and carried to *James Velasquez*, who caused him to be burnt; whereupon all the Province of *Mayci* submitted, none after such an Example of Severity daring to hold out. When it was known in *Jamaica* that *Velasquez* was in *Cuba*, many of those who were with *John de Esquivel* asked leave to go over and serve under him: *Panfilo de Narvaez*, a Gentleman well born, went a Commander of thirty Archers; he was a Man of a graceful Presence, well-behaved, but not over discreet. He was well received with his Archers by *Velasquez*, who gave him

him the chief Command next himself, so that he governed all things under him. The *Indians* of the Province of *Mayca* being quite suppressed, *Velasquez* began to think of dividing them among the *Spaniards*, as *Obando* had done by them in *Hispaniola*, and took to himself those of five Towns, where he had been Lieutenant; and to this purpose he founded a Town at a Harbour on the North Side, which Place was by the Natives called *Barracoa*; and this was the first *Spanish* Colony in that Island.

From this Place he sent *Narvaez* with thirty Men to the Province of *Bayamo*, fifty Leagues from *Barracoa*, a fine open Country, and very agreeable: Only *Narvaez* rode, all the rest marching on foot. The Natives of the Country came out to meet them with Provisions, because they had no Gold, being astonished at the Sight of the Mare, and a Man on her Back. The *Spaniards* took up their Quarters in an *Indian* Town, the Inhabitants whereof, observing their small Number, resolved to rid themselves of them. Though *Narvaez* was not very cautious, he had his Mare in the same thatched House where he lay, and a Guard at Night. Near seven thousand *Indians* assembled from all Parts of the Province, with their Bows and Arrows: They fell upon *Narvaez* and his Men after Midnight, though it was unusual for them to fight at that time: They gave the Attack in two Parties, and found the Sentinels asleep. The best of it was, that being earnest to plunder the *Spaniards*, for they ever coveted to be cloathed since first they saw them, they did not observe the time they had agreed on, so that one Party was more forward than the other, and entered the Town shouting.

Narvaez awaked in a Consternation: The *Indians* went into the thatched Houses, where finding the *Spaniards*, they neither wounded nor killed them, being wholly intent upon getting their Cloaths. The Shouts having surprized them, the *Spaniards* in their Fright knew not what they were doing. Those *Indians* *Narvaez* had carried with him from *Jamaica* lighted Firebrands; and, this shewing the *Spaniards* their Danger, *Narvaez*, though wounded by a Stone, found Means to get to his Mare and mount her: At that time, it seems, Part of the *Spanish* Furniture was hung with Bells, and the *Indians* hearing the Sound of them, and seeing *Narvaez* coming after them on a round Trot, with his Sword drawn in his right Hand, they not only abandoned their Enterprize, but fled out of their Country; and *Velasquez* being informed of this, sent a Detachment to join *Narvaez*, and so became absolute Master of that Province, the Inhabitants taking shelter in different Parts of the Island, and some, from their first Impressions of Terror, flying to the full Distance of fifty Leagues, leaving none but their old and decrepid People behind them.

10. We have already shewn, how *Juan Ponce de Leon*, by the Interest of *Nicholas Obando*, was restored to the Government of *Puerto Rico*, and how he sent his Predecessors *Cerron* and *Diaz* Prisoners into *Spain*, which, tho' he looked upon it as a bold Stroke in Politics, turned upon himself; for they, presenting a Petition against him to the Court of *Spain*, and being strongly supported by the Admiral's Interest, were sent back again in their former Employments; by which *Ponce de Leon* found himself reduced to the State of a private Man. But having made a good use of his Time, he had acquired a large Fortune, which induced him to think of regaining his Credit and Power by making Discoveries: And accordingly, on the 1st of *March* 1512, he sailed from the Port of *St. German*, with two stout Ships fitted out at his own Expence, steering through the Islands called *Lucayos*, till, on the 2d of *April*, he discovered Land unknown to the *Spaniards* before that time, in the Latitude of 30° 8'. Charmed with which Piece of good Fortune, he ran along the Coast in search of some Port, and at Night anchored near the Shore, in eight Fathom Water: Believing that Land to be an Island, they named it *Florida*, because it appeared beautiful, having many pleasant Groves, and was all level, as also because they discovered it at *Easter*, which the *Spaniards* call *Pascha de Flores*. *Juan Ponce* went ashore there to discover and take possession.

On the 8th they sailed again, and on the 20th of *April*

they perceived some *Indians*, where they anchored. *Juan Ponce* being called by the *Indians* went ashore, and they immediately endeavoured to possess themselves of the Boat, the Oars, and the Arms; which was not refented, that they might not provoke them, till one of them stunning a Sailor with a Stroke of a Cudgel he gave him on the Head, the *Spaniards* were obliged to fight, and had two of their Men wounded with Darts and Arrows pointed with sharp Bones, and the *Indians* received little Damage. Night parting them, *Juan Ponce* with some Difficulty got his Men together, and sailed thence to a River, where they wooded and watered; sixty *Indians* came to oppose them, one of whom was taken to give some Information, and to learn *Spanish*. The River they called *de la Cruz*, or of the Cross, leaving one of Stone there, with an Inscription. On the 8th of *May* they doubled the Cape of *Florida*, giving it the Name of *Cabo de las Corrientes*, or *Cape Currents*, because they are stronger there than the Winds, and came to an Anchor near to a Town called *Abacoa*. All this Coast, from *Cape Arracifes* to this *Cape Corrientes*, lies North and South one Point to the Eastward, is clean, and has six Fathom Water; the Cape lying in eighteen Degrees fifteen Minutes North Latitude. They sailed on till they met with two Islands to the Southward, in twenty-seven Degrees; one of which, being a League in Compass, they named *Santa Monta*, and watered there.

On the 15th of *May* they proceeded ten Leagues, along a Ridge of small Islands, as far as to two white ones, and called them all together *los Martyres*, or the Martyrs, because the high Rocks at a distance look like Men that are suffering, and the Name has been regarded as prophetic, on account of the many that have since been cast away there: They held on sometimes North and sometimes North-east, and on the 24th ran along the Coast to the Southward, as far as some small Islands that lay out at Sea, and yet did not perceive that was the Continent. A Way appearing to be between them and the Coast for the Ships to take in Wood and Water, they continued there till the 3d of *June*, and careened one of the Ships called *St. Christopher*. Here the *Indians* came out in Canoes to view the Christians, being the first time they did so, for the *Spaniards*, tho' called by them, would not go ashore. When they went about to weigh an Anchor, only to remove it, those People, thinking they were going away, came out in their Canoes, and laid hold of the Cable to draw the Ship away; whereupon the Long-boat was sent after them, and the Men going ashore took four Women, and broke two old Canoes. At other times when they came, there was no failing out, as finding no Opportunity, but on the contrary they bartered some Skins and Gold, tho' but indifferent.

On the 4th of *June*, while they were waiting for a Wind to go in search for the Cazique *Carlos*, who the *Indians* that were aboard said had Gold, a Canoe came to the Ships with an *Indian* that understood the *Spaniards*, supposed to be a Native of *Hispaniola*, or some of the Islands inhabited by Christians; he bid them stay, for the Cazique would send Gold to barter. They waiting accordingly, saw twenty Canoes, Part of them made fast two and two together; some of them went to the Anchors, others to the Ships, and began to fight: Those at the Anchors, not being able to weigh them, attempted to cut the Cables; but a Long-boat was sent out, which obliged them to fly, taking four, and killing some. *Juan Ponce* sent two of them to tell the Cazique, that, though he had killed a *Spaniard*, he would make peace with him. The next Day the Boats went to found the Harbour, and the Men landed. Some *Indians* came and told them, that the Cazique would come the next Day to trade; but it was to gain Time, to draw Men and Canoes together, as it appeared; for at eleven o' Clock eighty Canoes well equipped attacked the nearest Ship, and fought from Morning to Night, without doing the *Spaniards* any harm, the Arrows falling short, because they durst not come near, for fear of the Cross-bows and great Guns: At length they drew off, and the *Spaniards*, having staid there nine Days, resolved on *Monday* the

14th to return to *Hispaniola* and *Puerto Rico*, discovering some Islands in the Way, of which the *Indians* they had with them gave an Account.

They sailed along Islands till the 21st, when they arrived at the small Islands they called *las Tortugas*, or the *Tortoises*; because they took one hundred and seventy of them in a short time in one of them, and might have taken many more if they would. On the 28th, seeing Land, they came to an Anchor to trim their Yards and Sails, but could not tell what Country it was, most of them took it for *Cuba*, because they found Canoes, Dogs, Cuts of Knives, and other Iron Tools, yet none of them knew it to be that Island. The 25th of July they were among a parcel of low Islands, without knowing any thing of that Place, till *Juan Ponce* sent to view an Island, which appeared to be *Bahama*, and so an old *Indian* Woman, they had found alone in another Island, told them, as did *James Miruelo*, a Pilot, who happened to be there with a Boat from *Hispaniola*; having ranged backward and forward till the 23d of September, and refitted the Ships, *Juan Ponce* resolved to send one of them to take a View of the Island *Bimini*, where the *Indians* said there was a Spring that made old People young again. *John Perez de Ortubia* was appointed Captain of that Ship, and *Antony de Alaminos* Pilot; they took two *Indians* to pilot them over the Sholes, there being so many that it is a difficult Matter to pass between them. Twenty Days after *Juan Ponce* returned to *Puerto Rico*, as did, some time after him, the Ship which he had sent, which found the Island of *Bimini*, but not the famous Spring. Yet the Island was large, pleasant, and diversified with Hills, Meadows, Plains, many Rivers and delightful Groves.

It is certain that *Juan Ponce de Leon*, besides the main Design of making new Discoveries, which all the *Spaniards* then aspired to do, was intent upon finding out the Spring of *Bimini*, and that River in *Florida*, the *Indians* of *Cuba* and *Hispaniola* affirmed old People bathing themselves in became young again; and it was certain that many *Indians* of *Cuba*, firmly believing that there was such a River, had, not long before the *Spaniards* discovered that Island, passed over into *Florida* in search of that River, and there built a Town where the Race of them still continue. This Report prevailed with all the Princes and *Caziques* in those Parts, to endeavour to find out a River that wrought such a wonderful Change; so that there was not a Brook, nay, scarce a Lake or Puddle in all *Florida* but what they bathed themselves in, and there are some still that persist in it, ignorantly believing that it is the River now called *Jordan*, at the Cape of *Santa Helena*; never reflecting that the *Spaniards* first gave it that Name, in the Year 1520, when the Country of *Chicora* was discovered. Though this Voyage, made by *Juan Ponce*, turned to little or no Account to him, yet it gave him Encouragement to go to Court to sue for some Reward for the Countries he had discovered, believing them to be all Islands and no Continent, which Notion continued some Years. However, the Voyage was beneficial on account of the Rout soon after found out, to return to *Spain* through the Channel of *Bahama*, which was first performed by the Pilot, *Antony de Alaminos*.

For the better understanding of *Juan Ponce's* Voyage, it is to be observed that there are three different Archipelagos of *Lucayo* Islands. The first the *Bahama* Islands, which gave Name to the Channel where the Currents are most impetuous: The second they called *de los Organos*, and the third *Martyres*, which are next to the Shore of *Tortoises* to the Westward, which last being all Sand, cannot be seen at a Distance, and therefore many Ships have perished on them, and along that Coast of the Channel of *Bahama* and the Islands of *Tortugas*. *Havanna*, in the Island of *Cuba*, is to the Southward, and *Florida* to the Northward, and between them are all the before mentioned Islands of *Organos*, *Bahama*, *Martyres*, and the *Tortugas*; having a Channel with a violent Current, twenty Leagues over in the narrowest Place, between *Havanna* and *los Martyres*, and fourteen Leagues from *los Martyres* to *Florida*; between Islands to the Eastward, and the widest Part of this Passage to the Westward, is forty Leagues, with many Sholes and deep Channels, but there

is no Way for Ships or Brigantines, only for Canoes. But the Passage from *Havanna*, to come to *Spain*, is along the Channel of *Bahama*, between the said *Havanna*, *Martyres*, the *Lucayos*, and Cape *Canaveral*; and this was the great Merit of *Juan Ponce de Leon*, who was well rewarded in *Spain*. There happened about this time a very singular and melancholy Event, which, because I find it recorded by many *Spanish* Historians, and as it shews to what a Height Corruption was grown in so short a time, as since the *Spaniards* had settled in the *Indies*; it seems but reasonable that it should find a Place here for the Instruction of the Reader. The Reports that had reached *Spain* of the manner in which the poor Natives were treated in the *Indies*, being assigned to the Proprietors of Land as if they were Cattle that grazed upon it; it moved some religious Men, of the *Dominican* Order, to go over to the new World, in order to see what Progress they should be able to make among the *Indians*, by the Use of spiritual Weapons only.

Three of these Fathers landed in the Island of *Porto Rico*, where one of them falling sick, the other two procured a Vessel to carry them over to the Main, where they were landed not far from that City, which *Hojeda* and *Vespucius* saw in their first Voyage, and called it from its standing in the Water *Venezuela*, that is, *little Venice*; where they found the People very docile and tractable, and were in a fair Way of making Converts to the Christian Religion; but, very unluckily for them, a *Spanish* Pirate that made it his Business to steal *Indians*, anchored on the Coast, and the poor People, confident of being well treated by Christians, went on board the Vessel with their *Cazique* at their Head, of which the Pirate taking advantage, weighed anchor, and made all the Sail he could for *Hispaniola*. This, as may be easily imagined, raised a great Tumult among the *Indians*, who were on the very Point of putting the two *Dominicans* to Death; when another *Spanish* Ship arrived in the Port, commanded by a Gentleman of honour; he pacified the *Indians* as well as he could, and having received Letters containing a true state of the Fact, from the Fathers, he promised that in four Months time their *Cazique* and the rest of their Countrymen should be sent home again.

As he really intended to perform what he had promised, so on his return to *Hispaniola*, he applied himself to the Royal Audience, or supreme Tribunal, at *Santo Domingo*, setting forth the Case as it stood, and the Danger that the two Priests were in, if these *Indians* were not sent back in due time. But, alas! it so happened, that these very People had been purchased as Slaves by some of the Members of the Royal Audience, and they were not so much in love with Justice as to release them. The Consequence was, that when the four Months were expired, the *Indians*, to revenge the Loss of their Prince and Relations, murdered the two *Dominicans*, whose Names were *Francisco de Cordova*, and *Juan Garcias*.

II. It is now time for us to return to the Transactions of *Don Diego de Velasquez*, in the Island of *Cuba*, who, having reduced the best Part of that Country, and settled several *Spanish* Colonies therein, began to be very desirous of setting up for himself, and of shaking off the Authority of the Admiral *James Columbus*, by whom he had been placed there. The Admiral was by this time recalled into *Spain*, and opposed this Project of *Velasquez* to the utmost of his Power; which, however, was now sunk so low, that he was not able to carry his Point; for though *Velasquez* was still left accountable to him for the Exercise of his Authority, yet he was not allowed to recall him but with the Consent of the Crown, which so well answered the Purpose of *Velasquez*, that he resolved to execute, without farther Delay, a Project which he had long meditated of fitting out Ships for Discovery.

He no sooner made his Intentions known, than numbers of *Spanish* Planters, who were grown rich, embraced the Proposal, and offered to contribute large Sums towards carrying it into execution. Amongst those who distinguished themselves on this Occasion, *Francis Hernandez de Cordova*, a rich and brave Man, who had *Indians* of his own, offered to go as Captain of those Men, which, being granted, he fitted out two Ships and a Bri-

gantine with all necessary Stores: He lifted one hundred and ten Soldiers, and sailed from *Santo Domingo*, in *Cuba*, to the *Havanna*. They left the *Havanna* on the 8th of *February*, 1517, and on the 12th they doubled Cape *St. Antony*, holding on their Course to the Westward, because the Pilot *Antony de Alaminos* said the first Admiral had always inclined that Way when he sailed with him, being a Boy.

They met with a great Storm that held them two Days, in which they expected to have perished; and after twenty-one Days being at Sea, lying by at Nights, they saw Land, and, from their Ships, could descry a large Town, which was about two Leagues from the Coast. As they drew nigh two Canoes full of Men appeared: They hailed them, the Canoes drew near, and thirty *Indians* went aboard the Commodore, having Jackets without Sleeves, and pieces of Cloth wrapped about them instead of Breeches. The *Spaniards* gave them Meat, some *Spanish* Wine, and strings of Beads. They made Signs, for there was no Interpreter, that they would be gone, and return the next Day with more Canoes to carry them ashore; very much admiring the Ships, the Men, their Beards, their Cloaths, their Arms, and other things they had never seen before. The next Day they returned with twelve Canoes and an *Indian*, who was the *Cazique*, crying out *Conez Cotoche*, that is, come to my House; and, for this Reason, that Place was called *Cape Cotoche*. The *Spaniards*, having consulted, hoisted out their Boats, and in them, and the Canoes, went ashore with their Arms, where an infinite number of People waited to see them.

The *Cazique* still pressed them to go to his House, and they, observing so many Tokens of Friendship, concluded to do so, in order to take a view of the Country; when they came to the Wood, the *Cazique* called out to a great Number of armed Men that lay in Ambush, and immediately there appeared a Multitude in Armour, made of quilted Cotton, with Targets, wooden Swords having edges of Flints, large Cutlasses, Spears and Slings, adorned with Plumes of Feathers, and their Faces painted of several Colours. They gave a hideous Shout, pouring in at the same time such a shower of Stones and Arrows that they wounded fifteen *Spaniards*, after which they fell on Sword in Hand, and fought with much Resolution. The *Spaniards* had only twenty-five Cross-bows and Muskets, which were well plyed. But, when the *Indians* felt the Sharpness of the *Spaniards* Swords, they fled, many being wounded, and seventeen killed. There were taken in this Action two Youths who became Christians, and were called *Julian* and *Melchior*; the *Spaniards* returned to their Ships well pleased, for having found a rational sort of People, and other things different from what there were at *Darien*, and in the Islands; and, more especially, Houses of Stone and Lime, which had not, till then, been seen in the *Indies*.

They held on their Course down the Coast, always lying by at Night; and, having advanced fifteen Days after this manner, they found a large Town, and a Bay near it, which they believed to be a River where they might water, which was very acceptable, as they were in want. They landed, and understanding the *Indians* called it *Quimpeche*, they from thence called it *Campeche*. Being come to a Well of good Water, of which the Natives used to drink; when they had taken what they wanted, and were ready to return to their Ships; fifty *Indians* clad in Jackets, with large Cotton Cloths instead of Cloaks, came, and, by Signs, asked them what they wanted, and, whether they came from those Parts where the Sun rises, inviting them to go to their Town: When they had seriously considered on it, and put themselves into a good posture of Defence, for fear of being served as they had been at *Cotoche*, they went to certain Places of Worship built with Lime and Stone, where there were Idols of various ugly Shapes, as they had seen in the former, with fresh Signs of Blood, as also Crosses painted, which they were much amazed at.

Abundance of People, Men, Women, and Children, came flocking, looking upon them with Astonishment, and some of them smiled; soon after two Parties of armed Men appeared in good order, like those of *Cotoche*;

from one of the Temples issued ten Men in very long white Mantles, their Hair long, black, and twisted up in Rolls behind: In their Hands they had little earthen Fire-pans, into which they cast Gum Anime, which they called *Copal*, and perfumed the *Spaniards*, bidding them to depart their Country or they would kill them; then they began to beat their little Kettle-Drums, and to sound their Horns, Trumpets, and Pipes. The *Spaniards*, because the Men that had been wounded at *Cotoche* were not yet well recovered, and two died, retired to the Shore in good Order, still pursued by the armed Parties, and embarked again without any Loss. When they had sailed six Days longer the Wind blew North, bearing upon the Coast, so that they had like to have perished. When the Storm ceased they endeavoured to draw near the Shore to water, because their Casks were leaky, so that their Water lasted not long. They anchored near a Town, in a Bay, where they landed in the Afternoon, a League from the Town called *Potonchan*, and filled their Vessels at some Wells they found near certain Places of Worship of Lime and Stone, like the former. When ready to return they perceived armed Men advancing towards them from the Town, just as before. They asked whether they came from those Parts where the Sun rises, the *Spaniards* answered they did; and then the *Indians* drew back to some Houses, because the Night came on, and the *Spaniards*, for the same Reason, resolved to stay there; a great Noise being heard soon after, the *Spaniards*, upon Debate, were divided, some being for embarking, and others thinking the Retreat dangerous, because there seemed to be three hundred *Indians* to one of them.

When Day appeared they perceived that the first Parties had been joined by others, who, incompassing them, poured in a great shower of Arrows, Stones and Darts, which wounded near eighty *Spaniards*, with whom they closed, using their Swords and Spears; and, though the *Spaniards* were not idle with their Fire-arms, Cross-bows, and Swords, the *Indians* frightened them, but, when they felt the *Spanish* Swords, they drew farther off, the better to take aim with their Arrows; whilst they fought they cried out *Calachani*, *Calachani*, which, in the Language of *Yucatan*, signifies *Cazique*, or Captain, meaning that they should shoot at the Commander, *Hernand de Cordova*, and they were not wanting in Endeavours, for they shot twelve Arrows into him, which, it was generally said, he might have avoided, for there was no Encounter in which he was not foremost, though there was more Occasion for his directing than acting. He finding himself so much wounded, and, that the Courage of his Men could not vanquish such a Multitude, continually increasing, they made a most furious Onset, and broke through them, the *Indians* still pursuing them with hideous Noise and Cries; when they came to the Boats, their Number being great they were ready to sink, but still they made off, the Natives shouting at them, and running into the Water to wound them with their Spears: Seven and forty *Spaniards* were killed in this Action, and five died aboard the Ships. The wounded Men endured most piercing Pains, their Wounds having been wet with the Sea-water, and swelling, cursing the Pilot *Alaminos* for his Discovery, who still persisted that this Country was an Island, and they called this Bay *de Mala Prelea*, that is of the *bad Fight*, for the ill Success they had met with. The *Spaniards* that escaped aboard the Ships gave God Thanks for their Deliverance out of that Danger; but, being all wounded except one, they resolved to return to *Cuba*, and, in order to it, burnt one of their Ships that was leaky, because they wanted able Hands to sail them both, and ply the Pump. Being distressed for want of Drink, having left their Casks at *Potonchan*, some of the foudest Men went ashore, who could get no Water but what was brackish, which they took at a Creek where there were many Alligators, and therefore they called it *de los Lagartos*, or of *Alligators*. *Antony de Alaminos* advising with the other Pilots, it was resolved to stand over for *Florida*, and, accordingly, in four Days they discovered that Country. *Alaminos* was sent ashore with twenty of the stoutest Soldiers, carrying Cross-bows and Muskets, and Captain *Francis Hernandez*, who was much wounded,

wounded, begged he would speedily bring him some Water, because he was perishing for want of it.

When landed near a Creek, *Alaminos* told them he knew the Place, having been there before with *Juan Ponce de Leon*, and that they must be upon their Guard; having accordingly posted Centinels along an open Shore, they dug Pits, where they found good Water, drank some, and washed out Linen for the wounded Men. When they were about returning, they perceived one of the Sentinels come running, and crying, *To Sea, to Sea; for warlike Indians are coming*. On the other hand, they spied many Canoes coming down the Creek. The *Indians* with long Bows and Arrows, Spears and Swords, after their manner, cloathed in Deer-skins and being of a large Size, were very dreadful. They let fly their Arrows, and at the first Discharge wounded six of the Soldiers; but seeing the Effect of the Cross-bows, Muskets, and Swords, they made to the Canoes, which pressed hard upon the Sailors, and had wounded *Antony de Alaminos* in the Throat. The Soldiers closed with them, being up to the Waste in Water, and with their Swords made them quit the Boat they had taken. When ready to embark, they asked the Soldier who had stood Sentinel, What was become of the other Sentinel? He said, he had seen him step aside with a Hatchet in his Hand, to cut down a *Palmito* going towards the Creek along which the *Indians* came, and presently had heard the Cry of a *Spaniard*, which made him come to bring the Alarm. That Soldier was the only one who escaped at *Potonchan*, and it was his hard Fate to perish there; for the others followed the Tract of the *Indians*, and found a Palm Tree he had begun to cut, and near it a greater Tract than elsewhere, which made them conclude that they had carried him away alive, and though they had searched for above an Hour, they returned to the Ships without finding him.

The Men were so extreme thirsty, and desirous of Water, that, as soon as the Boat came to the Ship's side, a Soldier leaped into it, and laid hold of a Jar, and drank so much that he swelled, and died within two Days. Sailing from thence, in two Days and Nights they arrived at the little Islands, called *los Martyres*, where the greatest Depth being but four Fathoms, the Ship touched upon some Rocks, and became very leaky; but it pleased God that, after so many Sufferings, they arrived at *Port Carenas*, now the *Havanna*; from whence Captain *Hernandez de Cordova* sent an Account of his Voyage to the Governor *James Velasquez*, with the Particulars of all he had seen, and died ten Days after. Three of his Soldiers died also at the *Havanna*, which made up fifty-six lost in the Expedition; the rest dispersed themselves about the Island, and the Ships returned to the City of *Santiago*; by which the Fame of their Voyage was spread over all *Cuba*.

12. As indifferent Success as this first Discoverer met with, yet his Memoirs were highly esteemed by *Velasquez*, who frequently declared, that it was by no means his Intention to part with this Discovery in such a manner; but that, on the contrary, he was determined to pursue it when Opportunity offered, for many Reasons, but chiefly for this, because those People seemed more civilized than any other *Indians*, and were consequently more likely to prove rich. These Sentiments of his were no sooner known, than several of the principal Inhabitants of the Island offered him their Assistance, so that he was quickly in a Condition to put to Sea a small Squadron consisting of three Sail of Ships and one Brigantine, having on board in the whole two hundred and fifty Men, under the Command of the Captains *Alvarado*, *Montejo*, and *d'Avila*; but the Person who commanded in chief was *John Grijalva*, a Man of Courage, Fidelity and Experience, to whom *Velasquez* gave this Order, That he should make what Discoveries he could, but no Settlement. They sailed from *Cuba* on the 8th of May 1518, and, having visited the Coast of *Florida*, and doubled Cape *St. Antony*, discovered the Island of *Cozumel*, to which their Commander gave the Name of the Island of *Santa Cruz*, because he found it on the Feast of *Holy Cross*, but it retained, notwithstanding, its old Name, by which it is still called.

Grijalva landed with a competent Number of Soldiers, and no body appeared, because the Natives having never seen Ships before, when they perceived them under sail, fled; whilst some went to seek them he ordered Mass to be said. Two old Men being found in a Field of *Indian* Wheat, and understanding the Language of the *Indians*, *Melchior* and *Julian*, who had been taken in the former Expedition, *Grijalva* made much of them, and giving them some Beads and Looking-glasses, sent them away to their Lord, but they never returned. Whilst they waited for them, a young Woman, exceeding handsome, came, and in the Language of *Jamaica* said, The People were all fled into the Wood for fear; but that she, being acquainted with Ships and *Spaniards*, was come to them: Many that came on board the Ships understanding her, and admiring at it, asked, Who had carried her to that Island? she answered, That a Canoe going out a fishing from *Jamaica* two Years before, with ten Men in it, a Storm, and the Currents, had drove them to *Cozumel*, where her Husband and all the rest had been sacrificed to their Idols. *Grijalva* believing that Woman would be a trusty Messenger, sent her to call the Natives, not confiding in *Melchior* or *Julian* for fear they would not return. The Woman came again two Days after, according to Promise, telling them, That though she had done all she could to persuade them, they would not by any Means be brought to go back.

13. *Grijalva* finding no Good could be done there, went aboard again, and took with him the *Jamaica* Woman, because she begged him not to leave her there. In this Island they found many Hives of good Honey, Batatos, and Swine of that Country having their Navel on their Backs, which much refreshed them. They saw several Temples, and one particularly like a square Tower, wide at the Bottom, and hollow at the Top, with four large Windows and Galleries; and in the hollow Part, being the Chapel, were the Idols, behind which was a sort of Vestry; where the Things belonging to the Service of the Temple were kept: At the Foot of it was an Inclosure of Lime and Stone, with Battlements, well plaistered; and in the Midst of it a Cross of white Lime three Yards high, which they held to be the God of Rain, affirming, that they never wanted it when they devoutly begged it of the same. The *Spaniards*, embarking again, sailed along the Coast, much admiring to see large and beautiful Structures of Stone, with several high Towers which at a Distance made a good Appearance; for which Reason, no such Thing having been seen at the *Indies*, as also on Account of the Cross, *Grijalva* said they had found a NEW SPAIN. Eight Days after they arrived at the Shore of *Potonchan's* Town, came to an Anchor, and landed the Soldiers with all the Boats near some Houses, where the *Indians* being grown vain with the Thoughts of having drove *Hernandez's* Men out of the Country, stood drawn up to hinder the *Spaniards* from landing, shouting, and making a great Noise with their Trumpets and Kettle-drums, and tho' some Falconets, in the Boats, put the Men to a great Fright, being a Thing they had never seen, yet, when the Boats came near, they began to shoot their Arrows, and cast Stones and Darts with their Slings, running into the Water to wound the *Spaniards* with their Spears; but as soon as they landed they made them give way with their Swords; for the *Spaniards* being taught by Experience, began to use the same sort of defensive Armour stuffed with Cotton, as the *Indians* did; so that they received less Harm by the Arrows, and yet sixty Soldiers were wounded, three killed, and *John de Grijalva*, the Commander in chief, was shot with three Arrows, one of which broke some of his Teeth.

The Boats coming with the Soldiers that had been left aboard, the *Indians* quitted the Field, and the *Spaniards* went to the Town, dressed the wounded Men, buried the Dead, and found only three of the Natives. *Grijalva* used those three well, gave them some Toys, and sent them to call the Inhabitants, promising not to hurt any Man; but they never returned, nor would he send *Melchior* or *Julian*, because he suspected them. *Grijalva* embarked again, and came to a large, wide Gulph of fresh

fresh Water, like a River, but it was not; and *Antony de Alaminos* said it was an Island, and that the Water parted it from another Country, for which reason he called it *Boca de Terminos*, that is, *the Mouth of the Boundaries*. They landed, stayed three Days, and found it was no Island, but a Bay, and good Harbour. There were Temples, with Idols of Clay and of Wood, representing Men, Women, and Serpents; but no Town could be seen, and it appeared that those were Chapels for People that went a trading and hunting. During those three Days they took several Deer and Rabbits with a Grey-hound Bitch they had, which, the *Spaniards* not minding her, they left there; holding on the same Way, always by Day, to avoid falling in among Flats or Rocks, they discovered a very large Mouth of a River, which seemed to be a good Harbour; but founding it, they perceived that the two largest Ships could not go in, as the two smaller did. The Boats went up the River very cautiously, because they saw many armed *Indians*, like those at *Potonchan*, in Canoes along the Shore.

This River, by the Natives called *Tabasco*, being the Name of the Lord of the adjacent Town, the *Spaniards* named *Rio de Grijalva*, from their Commander in chief who found it. As they advanced higher, they heard the Noise of hewing Wood, because the Inhabitants, having been informed of what had happened at *Potonchan*, concluded there must be War.

The *Spaniards* landed at a Grove of Palm-trees, about half a League from the Town. The *Indians* seeing them land, about fifty Canoes full of armed Men, with Plumes of Feathers, and very fine, moved, stopped again at a small Distance from the *Spaniards*, in a warlike Posture; and when the *Spaniards* were ready to fire their Falconets upon them, they first sent *Melchior* and *Julian* to speak to them. These Interpreters told them, that they came only to treat about some Affairs that would please them. Four Canoes drew nearer, and being shewn little Glasses on Strings, and thinking they had been the Sort of Stones called *Chalchibites*, much valued among them, they were pacified. Then *Grijalva* ordered the Interpreters to tell them, that these Men were Subjects of a great King, to whom mighty Princes paid Obedience, and it was reasonable they also should submit to him, because it would be much to their Advantage; and that till they could explain these Affairs to them they should furnish Provisions. The *Indians* answered, that they would give Provisions, but that they had a Lord of their own, and did not know why they who were just come should offer to impose a new Lord upon them; that they should take heed how they made war on them, as they had done at *Potonchan*, for that they had provided above three *Xiquiples* (each *Xiquiple* being eight thousand) of Men against them; that they knew they had killed and wounded above two hundred at *Potonchan*; but that they were not so weak as those People; and, to conclude, that they were come thither to know their Will, and would go and make a very just Report of what they said to a Number of very great Men, that were assembled either to treat of Peace or renew the War. *Grijalva* gave them Strings of Beads, Looking-glasses, and other things, charging them not to fail to bring back an Answer, because if they did not, he must needs go to the Town, though not to do any harm.

He then returned to the Ships. The Messengers delivered the Message, and all the prime Men, who were wont to be consulted in martial Affairs, thought Peace was preferable to War. They immediately sent their *Indians* loaded with roasted Fish, Hens, several Sorts of Fruit, and Bread; then laying some Mats on the Ground, they placed a Present on them, being a handsome Mask of Wood, and several Sorts of Feather-work, very beautiful; and an *Indian* said the Lord would come the next Day to see the *Spaniards*: Accordingly, taking along with him many Men unarmed, he without any Jealousy went aboard *John de Grijalva's* Ship, who was a genteel Man, about twenty-eight, and had on a loose Coat of Crimson Velvet, a Cap of the same, with other rich Ornaments suitable to the Coat. The Cazique was received with much Honour; sitting down they began their Dis-

course, of which both Parties understood very little, unless it was by Signs, and some Words the two *Indians*, *Julian* and *Melchior*, interpreted. After some time, the Cazique ordered one to take out of a *Petaca*, which is in the Nature of a Trunk, the things he had carried.

The *Indian* took out Plates of Gold, and thin Boards covered with Gold, for Armour, as fit as if they had been made for *Grijalva*, and the Cazique himself put them upon him, and took them off, applying those that suited best; and in this manner he put him on a complete Suit of Gold Armour, as if it had been of Steel. He also presented him various Works in Gold and Feathers, a thing much valued among them; and it was wonderful to see how beautiful *Grijalva* looked; who gave the Cazique all the Signs of Gratitude that could be thought of. He called for a very fine Shirt, and with his own Hands put it upon the Cazique; took off his great Coat of Crimson Velvet, and put that on him, as also a Pair of new Shoes. In short, he clothed and adorned him the best he could, gave him some of the best Strings of Beads, and Looking-glasses, Scissars, Knives, and several things of Tin; and the like to all that were with the Cazique. What the Cazique gave to *Grijalva* was computed to be worth three thousand Pieces of Eight; and among the rest there was a wooden Head-piece covered with thin Plates of Gold, three or four Masks, some of them covered with a sort of Stones like Emeralds, &c. and the Sight of these things made the *Spaniards* very eager to settle in a Country which produced so much Wealth.

As for *John Grijalva*, having received this great Present at *Tabasco*, and being sensible that the *Indians* were not willing that their Guests should stay long, and in regard that the *Spaniards* asking for more Gold, the *Indians* answered *Culua*, *Culua*, he proceeded farther, and in two Days came to a Town called *Aqualunco*, which the *Spaniards* named *la Rambla*, the Inhabitants whereof appearing at a distance, and having Targets of Tortoise-shells, which glittered in the Sun, made some of the *Spaniards* fancy that they were of pale Gold; they discovered a Bay in which the River *Tonala* falls, where they entered at their Return, and called it *St. Anthony's River*: At a distance again they saw the great River *Guazacoallo*, but could not go up it, because of the foul Weather: Next they had a Sight of the snowy Islands of *New Spain*, and *St. Martin*, which Name was given them by the Soldiers who first discovered them. Holding on their Course, Captain *Alverado* went ahead with his Ship, and entered a River the *Indians* call *Papaloava*, but the *Spaniards* gave it the Name of *Alverado's River*, where the *Indians* of the Town of *Tavotulpale* brought Fish, and the other Ships staid till he came out again: They then advanced to the Mouth of another River, which they called *de Banderas*, or of Colours, because the *Indians* having large white Cloths on long Poles, like Colours, waved them for the *Spaniards* to come to them.

It is necessary to inform the Reader of the Reasons which occasioned this, and which, in few Words, were these: The Country, on the Coast of which they now were, was a Province of the great Empire of *Mexico*, over which *Montezuma* reigned, a Prince of great Wisdom and Penetration, who, having heard both of the former and of the latter Exploit of the *Spaniards*, and of the Pains they took to be acquainted with the maritime Parts of his Empire, began to grow jealous thereat, and was uneasy in his turn to know who and what these People were, and why they took so much Pains to be instructed as to the State of Countries that did not belong to them: To answer this Purpose effectually, he gave Directions to the Governors of these Provinces to entertain these Strangers civilly, to take every Opportunity that offered of trading with them, and to send him, from time to time, such an Account of their Motions, as might enable him clearly to discern what Opinion he ought to entertain of them. It was in Consequence of these Instructions, that the *Indians* set up these Colours, to invite the Strangers on Shore.

On the other hand, the *Spaniards* seeing themselves invited by the Signals of the Colours, *Grijalva* ordered two Boats to go ashore, and in them Captain *Francis de Montejo*,

tejo, with all the Musketeers and twenty other Soldiers, with Directions, that, in case the *Indians* appeared in a warlike Posture, he should give notice of it, that Succours might be sent. As soon as they landed they offered him Fowls, Bread, and Fruit; the *Indian*, *Julian*, not understanding that Language, which was the *Mexican*, and they perfuming the *Spaniards*, burning Copal in little Fire-pans; *Montejo* sent advice to *Grijalva*, who, thereupon came up close with the Ships and landed, when one of the King of *Mexico*'s Governors, and the other great Men, paid him much Respect, he having given them some Glass-Beads and Necklaces of several Colours. The Governor ordered the *Indians* to bring Gold to barter, and in the space of six Days they stayed there, they got the Value of 15,000 Pieces of Eight in Gold Baubles, and Toys in several Shapes.

14. All things had hitherto succeeded happily, so as to do great Credit to the Commander in chief, and to those who were under him, but still there was nothing done comparable to the Expectations which had been raised in *Cuba* of this Expedition; which prompted them to lose no time, but to continue their Voyage with the utmost Diligence, and, at the same time, with all possible Caution. *John Grijalva* therefore contented the *Caziques* with Presents of such things as he had, and having taken Possession of the New Country for the King, and for *James Velasquez*, in his Majesty's Name, embarked again because the North Winds blew there upon the Land, and he was not safe; finding an Island near the Continent he called it *Isla Blanca*, or *white Island*, because the Sands were whitish; and not very far from these another appeared four Leagues from the Coast, which, being well wooded, they called *la Verd*, or the *Green*. Farther they saw another a League and a half from Land, and there being a good Road opposite to it, *Grijalva* ordered the Ships to anchor there; he went to the Island with the Boats, because there was Smoak, and found two Houses well built with Lime and Stone, having many Steps that led up to Altars, on which there were Idols; and they perceived that five Men had been sacrificed there that Night, their Breasts being ripped open, their Legs and Thighs being cut off, and the Walls bloody, which much astonished the Christians, and therefore they call this the *Island of Sacrifices*.

They landed, again, opposite to the Island, where they made themselves Huts of Boughs and the Sails of the Ships, whither some resorted to barter Gold in small Figures; but the Gold being inconsiderable, and the *Indians* fearful, the *Spaniards* removed to another little Island about half a League from the Main. They landed on a Strand, built Barracs on the highest Part of those Sands to avoid the Plague of the *Mosquitos*, or *Gnats*; and, having founded the Harbour, found there was sufficient Water, and that the little Island sheltered them from the Northwind. *Grijalva* went over to the Island with thirty Soldiers, in two Boats, where he found a Temple with Idols, and four Men who wore very long black Mantles with Hoods, being the Priests of the Temple, and, that very Day, had sacrificed two Boys, whom they found ripped open, and their Hearts taken out; a piece of Cruelty which moved the *Spaniards* to Compassion. *Grijalva* asked an *Indian* he had carried from the River *de Banderas*, who seemed a good rational Man, what that was for; who answered, that the People of *Ulua* would have it so. The Name of the *Spanish* Commander in chief being *John*, and the time of the Year about the Feast of *St. John Baptist*, he gave that Name to the Island, and accordingly it has always been called *St. John de Ulua*, to distinguish it from *St. John de Puerto Rico*.

Grijalva staid there seven Days bartering for some small quantity of Gold; the Men being quite tired with the Trouble given by *Gnats*, having certain Knowledge that the Land they had been on was the Continent, and that there were great Towns on it, justifying the Name given it of *New Spain*; the *Cazibi* Bread growing mouldy and bitter, and the Men being too few to settle a Colony, because ten had died of their Wounds, and others were sick; it was thought fit to give an Account

of all things to the Governor *Velasquez*, especially as he had ordered not to make any Settlement, that he might send a greater Number if he should judge it fit to be done; for *Grijalva*, notwithstanding all the aforesaid Reasons to the contrary, was always of Opinion to build a Town. *Peter de Alverado* was made Choice of to carry this Message to *James Velasquez*, in the Ship *St. Sebastian*, and to take with him all the Gold and other things that had been traded for, and all the sick. *Velasquez*, after the Departure of *Grijalva*, from *Cuba*, had been in much Care for his Ships, as sailing on unknown Seas, and therefore sent *Christopher de Olido*, a Commander of Note, in a Ship with seventy Soldiers, to get Intelligence.

He being at Anchor on the Coast of *Yucatan*, there arose such a Storm as obliged him to cut his Cables, and run back to *Santiago*, in *Cuba*, whence he had set out; and, at the same time, arrived *Peter de Alverado* with the Gold, Cotton, Cloths, and a Relation of what had been done and discovered, which was mighty agreeable to *Velasquez*, who conceived great hopes of that Enterprize, and the Report was spread abroad to the great Astonishment of all Men.

Velasquez being a severe Man to those that served him, and especially provoked against such as were misrepresented, also over-credulous, and *Peter de Alverado* having been one of those that were for settling a Colony, and representing the Affair to him as he thought fit, gave him very ill Impressions of the Man who had served him so faithfully, and with such strict regard to the Orders he received from him at his Departure. But before we insist on this, let us return to our Discoverers, and to the Progress they made in their Design of obtaining a clear Account of this Part of the Continent.

When Captain *Alverado* was gone for *Cuba*, *Grijalva*, by the Advice of the Captains and Pilots, continued his Discovery; and coasting along in sight of the Mountains of *Tuspa*, so called from the Town near by them, and others, higher than they, for the same Reason, called *Tuspa*; farther in the Province of *Panuce*, they saw Towns, and a River which they called *Decanacas*. As they lay at Anchor, not being upon their Guard, ten Canoes, full of armed Men, appeared, and drawing near to the least Ship, commanded by *Alonso d'Avila*, poured in a flight of Arrows, wounded five Soldiers, laid hold of the Cables and cut one, intending to carry off the Ship; and, though the Men in it behaved well, and overset two of the Canoes, yet they stood in need of the Fire-arms from the other Ships; for the most of the *Indians* being wounded by them, desisted from their Enterprize, and sheered off; the *Spaniards* sailed along the Coast till they came to a very large Point of Land, which being very difficult to double, and the Currents extraordinary strong; the Pilot *Alaminos*, gave *Grijalva* many Reasons to shew that it was not convenient to proceed any farther that Way; the Captains, Pilots, and principal Men, consulting together what should be done, those that had been before for settling a Colony, were for turning back to find a proper Place for it.

The Captains, *Montejo*, and *Avila*, who differed in Judgment, alledged that Winter was drawing on, and Provisions were scarce, for which Reason, and because one of the Ships was leaky, it was proper to return to *Cuba*; besides, that they were not able to maintain their Ground because the Natives were numerous and warlike, and the *Spaniards* much fatigued with being so long at Sea. *Grijalva* considering that his Instructions were positive not to settle, and that his Commanders opposed it, urging sufficient Reasons, thought fit to comply, and, tacking about, they arrived at the great River of *Guazacoalco*, but could not enter it, the Weather preventing them. They proceeded to that of *Tonala*, which they called of *St. Antony*, where they careened the leaky Ship. In the mean time many *Indians* came from the Town, which was a League off, with Hens, Bread, and other Eatables, which they parted with for *Spanish* Toys; and the News being spread abroad, others came from *Guazacoalco* and the rest of the Neighbouring Towns, bringing Provisions, some small Gold Plates, and Copper Axes, very

R

bright,

bright, with the Shafts of them painted. The *Spaniards*, thinking those Axes had been of pale Gold, purchased six hundred of them, and the *Indians* would willingly have parted with more.

A Soldier, whose Name was *Bartholomew Pardo*, went into a Temple that stood in the Fields, whence he took that Perfume which the *Indians* call *Copal*, or, as some call it, *Gum Anime*; he also took the Knives made of Flints, with which they sacrificed Men, ripping open their Breasts, and some Idols; all which he delivered to the Commander in chief, having first taken off their Earrings, Pendants, Plates, and Crowns of Gold, worth about ninety Pieces of Eight; but, not being able to conceal his Joy for the Booty, *Grijalva* had Notice of it, who ordered all to be taken from him; yet, being of a generous Temper, restored them upon paying the fifth to the King. The Ship being refitted, in forty-five Days they arrived at *Cuba* with four thousand Pieces of Eight in Gold, besides what *Alverado* had carried, and the Copper Axes, which, when they went to pay the fifth, thinking them to have been Gold, they found rusty, to the Confusion of the Purchasers.

They put into the Port of *Matanzas*, where they found a Letter from the Governor, ordering *Grijalva* to make haste to the Port of *Santiago*, and to tell the Men that another Fleet was fitting out to return thither to make a Settlement; and that they who intended to go back should remain in some Farms he had thereabouts. *Grijalva* made haste to *Santiago*, where the Fleet was making ready; and when he appeared before *Velasquez*, he had no Thanks for the Trouble he had been at; but was abused, because he had not settled, though it was pursuant to his own Instructions; which was a great Oversight in *Velasquez*, and such an Oversight as was altogether inexcusable; for his great Point was, to find in the first Place a Man capable of making such a Discovery, and in the next, one incapable of betraying him in order to set up for himself.

There could not certainly be a more difficult, or a more uneasy Employment, than to search out such a Person; but one would have imagined, that a Man of so much good Sense as *Velasquez* really was, would have had Wit enough to have kept him, when Experience had demonstrated that *Grijalva* was such a Man. The very thing for which he disgraced him, ought chiefly to have preserved him from that Fate, since nothing but a scrupulous Regard to Instructions could possibly tie down a Man who had made great Discoveries, from taking that Method which was most likely to acquire him Reputation, and to establish at once his Fortune and Independence. But *Velasquez*, like many other Men of good Sense, preferred other Peoples Opinions to his own, and thereby lost the Advantage which his superior Talents would have given him, though it is highly probable that this Error of his might contribute more to the important Conquests made by the *Spaniards* in those Parts than the wisest Measures he could have taken, as the Reader will see at large in the ensuing Sections; but it is now time to conclude this with a few Observations and Remarks, which I flatter myself will be of some Use to the Reader.

15. The vast and surprising Success which the *Spaniards* met with in reducing so many fine Islands, and such rich and fruitful Countries under their Dominion, has united a multitude of Writers in a Notion, that they conducted their Affairs with that extraordinary Prudence and Steadiness of Character, for which they have been always remarkable; but a little Reflection on the Facts related in this and the foregoing Sections will shew, that this Notion is absolutely groundless, and that they acted in this Matter with as little Conduct and with less Judgment than could have been expected from a Nation at that time in so high a Reputation for Wisdom, as they were. The Truth is, that it was the Virtue of Particulars that acquired all; and, in this Respect, they were indeed very fortunate, since few Nations could boast of abler Politicians, or of more expert Captains than those three great Men to whom the *Spaniards* owe their mighty Empire in *America*.

The first was the Admiral *Columbus* who discovered the Islands, and upon whose Schemes those Discoverers went who found and subdued the two great Empires on the Continent. The next was *Ferdinand Cortes*, and the Third, the Marquis *Pizarro*, Men of incredible Abilities, and therefore worthy of immortal Reputation. There is no doubt that their Atchievements, weighed in the Balance of Reason, very far exceeded those of most of the Antients; for whereas, these had commonly good Tools to work with, those not only did their Work but forged their Tools. To convince the judicious Reader of what I say, I shall not send him for Instances without the Limits of this Performance; for having given this Work the Title of a *Library*, there ought to be nothing wanting in it that is necessary to make its Subject understood. Let us compare then the Expedition of *Nearchus*, of which we have given the History in our former Volume, with that of *Columbus*, let us consider how great a Fleet, what a Number of Men, and what able Commanders he had, how small a Discovery he made, failing always within Sight of Land, and only from the Mouth of the *Ganges* to the Head of the *Persian Gulph*, yet how great a Figure does his Expedition make in the Works of the ablest Authors of Antiquity, and what mighty Rewards were bestowed upon him for those Services, his important Discoveries. Yet *Columbus*, with three Vessels, smaller than any of his, with scarce any Encouragement or Assistance from those about him, made this surprising Transfit from *Spain* to the *West-Indies*, and established the *Spaniards* there before his Death, in wider and more useful Conquests, than accrued to the Master of *Nearchus*, from his *Indian Expedition*. Let us compare the Force with which *Alexander* attacked the *Indians*, and failed of subduing them, with the Armies commanded by *Cortes* and *Pizarro*, and we shall find that the latter were, beyond all question, greater Conquerors, as we shall fully demonstrate at the Close of their respective Expeditions.

At present we mention these only as Proofs of the Truth of our Observation, that it was not the Wisdom of the *Spanish* Government; but the personal Abilities of such as were accidentally employed in their Service that brought about those great Events. For, with regard to the former, we have seen how ill they treated the first Discoverer at Court, and how far they were from putting it in his Power to exert, even in their Service, his great Capacity to the utmost. After his Decease, the Management of the Affairs of the *Indies* fell almost intirely into the Hands of the Bishop of *Burgos*, who, of all the Statesmen at that Court, was the least fit to have been intrusted with them, and who in fact managed them in the strangest manner imaginable. Listening, on the one hand, to the Proposals of every needy Projector, as in the Case of the first Adventurers mentioned in this Section; and on the other, slighting the Schemes of those who, by their general Knowledge of the *Indies*, were most likely to accomplish great Things, and who, by their wise Conduct in the settling of their new Colonies, had, in their own Hands, a Power sufficient to accomplish them. Accordingly we shall see that of all the Bishop's Instruments, not one succeeded in what he proposed; but, on the contrary, brought themselves to Beggary and Want, by rashly engaging in Enterprizes every way beyond their Ability, whereas all the successful Undertakings of the *Spaniards* were under such as were employed by the Governors of Colonies, and consequently the *Spanish* Ministry had no Right to take to themselves any sort of Credit from their Performances.

The only Favourites of our famous Bishop *Fonseca*, that made any Figure in the World, were two very bad Men, well provided with Impudence, but very indifferently furnished with other Talents. The first of these was *Americus Vesputius*, whom we have already mentioned with little Credit, and whom we shall again have occasion to mention with less. This Man, by the Interest of his Patron, was declared Chief Pilot of *Spain*, and to him all the Journals of Discoveries were communicated, from which he drew very elegant Maps, and helped out by his

his Fancy whatever Defects there were in his Memory, so that he exhibited things with a very graceful Proportion, and the only thing wanting in his Charts was a strict Regard to Truth; but, however, they answered his Purpose very well, for, besides securing to him a good Place and a competent Salary, they enabled him to impose his Name on the new World, before he had discovered a Foot of it.

The other Creature of the Bishop's that distinguished himself, was *Bernard de Santa Clara*, whom he preferred to be Treasurer of *Hispaniola*, under the Governor *Obando*, who was likewise in the Esteem of the Bishop, and the most worthy of all his Friends; the Treasurer before mentioned, was a very indifferent Steward for the King, but acquired a very good Estate for himself, of which he was so proud, that, besides the Salt for use, he caused four large Salt-fellers, full of Gold-dust, to be set every Day upon his Table; which piece of Vanity being known in *Spain*, a Commission was granted to inspect this Gentleman's Accounts, and by this means it was discovered that he had cheated the King, or, at least, was indebted to him in 80000 Pesos, which makes near 25000 Pounds in our Money. The Governor *Obando* was very sensible, that, when all this Man had was sold, the King would hardly have his Due; but, to save the Bishop's Credit, and his own, he bethought himself of a very extraordinary Expedient: He loved to pass for a Man of strict Justice, and therefore he ordered the Treasurer's Effects to be set up to Auction; this was, in all appearance, very fair, and no Exception could be taken at it; but the Governor, when the Lots came to be put up, encouraged People to bid considerably more than they were worth, telling them that he would warrant it a good Bargain; they, to merit his Favour and Protection, bidding upon each other; the whole of his Effects were sold for 96000 Pesos, so that the King had his Debt, and the Treasurer a very pretty Fortune to begin the World with again. Such were the Arts, such the Intrigues, of those Men, who had oppressed the old Admiral, and such the little dirty Contrivances by which they hid their own Failings.

Yet these things were done under the Reign of King *Ferdinand*, esteemed one the wisest Monarchs of his time; and things went rather worse under the Emperor *Charles V*, though he was, certainly, in every Respect, as great a Prince as ever sat upon the *Spanish* Throne. The Inference I would make from thence, is, that at all Events, and under all Administrations, Discoveries ought to be attempted and encouraged, because they carry in themselves such Incitements to complete them, that they seldom or never fail of proving beneficial in the End, whatever Mistakes there may fall out in the Management of them at the beginning.

Some ascribe this to Chance, others with more Sense as well as Decency, to Providence. But, however, certain it is, that great Occasions provoke, if they do not produce, great Spirits; and when once the Way is open, and two or three Instances have shewn the World that many things are practicable, that for several Ages were thought impossible, mighty things are performed; for Emulation is a noble Principle, and one of the greatest Secrets in Government is to excite it; for it is rarely seen that any thing meets either with Favour from the Great, or with popular Encouragement, but it is suddenly carried to a great Degree of Perfection. When once such a Spirit is raised, even the most disastrous Accidents cannot extinguish it; the Numbers of *Spaniards* that perished in the first Attempts on the Continent, by Ship-wreck, Famine, and Diseases; the unfor-

tunate Ends of *Hojeda*, *Nicuesa*, and *Cordova*, had no bad Effects in deterring others; for as all agreed there were Gold and Pearls to be met with in those Parts; the Thirst of Gain in some, and the Thirst of Glory in others, soon overcame the Terror of such Examples, which, at first Sight, one would have thought impossible to have removed; besides, there wanted not some who diverted the Blame of all these Miscarriages, from the Difficulty of the Enterprize, on the Imprudence or some other Imperfection of the Commander; and, as Slanders always find an easy Belief, so the Imputations that fell upon the Dead, served to encourage the Living; and Men were easily brought to think that either their superior Capacities, or better Fortune, would carry them through, notwithstanding former Adventurers had failed.

To these we may add several concurring Circumstances, which gave Life and Vigour to these Undertakings, and which, for the Sake of Brevity, we shall reduce under three general Heads. First then, the Marriage of *Don Diego Colon*, to *Donna Maria de Toledo*, induced a great many young Gentlemen, and some Ladies of good Families, to transport themselves to *Hispaniola*, which proved of incredible Service to the new Colony, as we may easily conceive, if we reflect on the *Spanish* Temper, and that it had in it, formerly, a much stronger Tincture of that Heroic, or if you will, romantic Spirit, of which it still retains enough, and which, of all others, was the fittest for promoting such kind of Exploits. The second was the establishing a sovereign Tribunal at *Santo Domingo*; the Members of which having large Salaries; some considerable Persons, and those too of a more advanced Age, were thereby engaged to accept of these Employments; which carried over likewise a new Train of young People, in Quality of their Dependents, and there being a continual Struggle for Power between this new Tribunal, or as the *Spaniards* stile it, the *Royal Audience of Santo Domingo*, and the Admiral; this created such a Jealousy and Competition amongst the Dependents on both Parties, as had very favourable Effects on Affairs in general, and greatly promoted the Success of the Colony; how much soever it might perplex or disturb their Superiors, by the Trouble it occasioned. The third and last that we shall mention, was the Distaste taken, especially at his first coming to the Crown, against the Emperor *Charles*, on account of his Partiality in favour of his Countrymen, the *Flemings*, which induced the Flower of the *Spanish* Gentry to think rather of advancing their Fortunes in the *Indies*, whither none but *Spaniards* could go, than their Credit in his Service; whom they judged to be neither over-willing to discern their Merit, nor over-ready to reward it.

These Observations as they arise naturally from what has been before related, so they will serve greatly to illustrate the following Sections; in which we shall exhibit to the View of the Reader, as great Instances of Courage and Conduct; of civil Policy, and military Skill, as are to be met with in any History whatever; and for the Honour of the *Spaniards* it must be acknowledged, that how ill soever those Heroes who conquered *America* were treated by their Statesmen; the learned Pens of that Nation have done as much Justice to their Labours, as themselves could wish, and have not suffered any of their Actions to appear with less Lustre to Posterity in their Writings, than the Recital of such great and glorious Performances deserved. But it is now time to quit these Reflections, and to resume the Thread of our History, which leads us to shew on what Grounds, in what manner, and with what Force the Conquest of the great Empire of *Mexico* was undertaken.

SECTION VII.

The Expedition of HERNAN CORTES for the Reduction of New Spain, from the Time of his being appointed to that Command, unto his being obliged to return to the Island of Cozumel.

1. The

1. The Resolution taken by Diego Velasquez, Governor of Cuba, to pursue the Discoveries and Settlements of New Spain, and the Measures taken for equipping a third Squadron for this Expedition.
2. The Character of Cortes, who was appointed Commander in chief, and the manner in which he attained that Command by the Nomination of Velasquez.
3. Departure of the Fleet from St. Jago de Cuba, and the Reasons why Velasquez laboured to deprive Cortes of the Command he had given him.
4. The Attempts made by Velasquez to carry this Design of his into Execution, and the Methods which were successfully used by Cortes to overthrow and defeat them.
5. Cortes takes upon him the Command, notwithstanding Velasquez recalled his Commission, and proceeds in his Voyage with the universal Applause of all who are engaged in the Design.
6. Arrives at the Island of Cozumel, and remedies all the Disorders which had been occasioned by the coming thither of a Part of his Fleet before him, under Peter Alverado.
7. Sails from thence with a Design of prosecuting his Expedition, but finds himself obliged to return thither with his Fleet.
8. There comes thither, during his stay, one Jerom de Aguilar, a Spaniard, long a Prisoner in Yucatan, who gives a large Account of that Court, and of its Products.
9. Observations and Remarks on the foregoing Section, with some Reflections on the political Character of Cortes.

THE Discoveries made on the Continent, under the Direction of those employed by *Diego Velasquez*, made a prodigious Noise over all the *West-Indies*, and multitudes there were who shewed a Readiness to hazard their Lives, and embark their Fortunes for the Prosecution of this Design. We have, in the former Section, shewn how this Country, when first discovered, came to be called *New Spain*; for the Soldiers observing to one another the Resemblance between the Soil and Climate of this strange Land, with those of their own, the Comparison made such an Impression upon their Minds, that they cried out one and all, a *New Spain*, a *New Spain*; so that while other Colonies derived their Names either from the misunderstanding of *Indian* Words, or from the arbitrary Pleasure of the first Discoverers, this was imposed by the Voice of the People.

But the great Business was to secure and settle this new found Country, and that immediately and without Delay; for *Velasquez* saw plainly, that if he did not proceed in his Design, it would be undertaken, either from other Colonies, or by Persons commissioned directly from *Old Spain*; and it was the Apprehension of this that made him so very angry, though with very little Reason, at the Conduct of his Cousin and Creature, *John Grijalva*, in not making a Settlement there, though in express Compliance with his own Order. His own Ambition hindered him from distinguishing another's Obedience; and the vast Hopes he had formed to himself, from the Discovery and Conquest of *New Spain*, would not permit him to receive any Excuse from him, who, as he thought, had defeated them. On the other hand, *Grijalva* was extremely modest, which hindered him from defending himself as he might have done; so that he contented himself with shewing the Instructions he had received, and insisting that his Behaviour should be tried by them; which *Velasquez* looked upon as a tacit Imputation on himself; he applied all his Care, however, to the refitting the Vessels employed in the last Expedition, and equipping both them and others for a new one, in which he succeeded very happily, and had, in a short time, such a Prospect of a Fleet, capable of carrying into execution the Designs he had formed, that he directed his Agents at the Court of *Spain*, to insist upon very high Terms, particularly that he should be declared Lord Lieutenant of the Countries subdued by his Direction, and at his Expence.

His Preparations being in such Forwardness, it was absolutely necessary that he should make choice of some body to act in quality of General and Commander in chief: And, in this, he found himself under very great Difficulties. The inferior Officers, and even the People in general, who were to make the Voyage, were very desirous of their old Commander, *John Grijalva*; but, to this, he would by no means agree, either from an obstinate ill grounded Persuasion of his want of Capacity, or, because he was afraid of trusting a Man whom he had injured in so high a Degree. When his Friends and Counsellors saw this, they recommended several others, rather in Compliance with their own Interest, and Notions, than from a just Esteem of their Abilities, and a due Notion of the great Danger there was

in committing the Conduct of so important an Enterprize, to one who might prove unequal to the Task.

This gave excessive Uneasiness to *Velasquez*, who was a better Judge of Men than those who advised him, and who had probably been more successful in his Choice, at least with regard to his own Interest, if he had acted without any Advice at all.

At last, when the Season for sailing approached, and this Affair would admit of no longer Delay, *Amador de Laris*, the King's Treasurer, and *Andres de Duero*, his Secretary, took upon them to mention *Ferdinand*, or, as the *Spaniards* call him, *Hernan Cortes*, but in a very artful Way; for they told the Governor, that in doing this, they had not the Service of their Friend so much at Heart, as the Good of the Expedition; and the Character they gave him was so modest, and so much short of the Truth, that *Velasquez*, who knew him as well as they did, was extremely sensible that they did not endeavour to impose upon him; and therefore, from the very beginning, he listened readily to their Recommendations; he knew very well, that not only great, but even contrary Talents were requisite in the Person he wanted, who of Necessity must be a Man of high Spirit, capable of acting from his own Lights in all Cases, without adhering too strictly to Instructions, and at the same time it was to be wished that he should preserve such a Regard for the Person who employed him, as not to be tempted by any Success whatever to throw off his Dependence. Hard Qualities these to be found, but Qualities about which the wisest Man might be easily mistaken.

2. Before we go farther, it will be proper to say who *Hernan Cortes* was, and through what variety of Events his happy Destiny led him to achieve the Conquest of *New Spain*. He was born in *Medillin*, a Town of *Estremadura*, Son of *Martin Cortes*, of *Monroy*, and *Donna Catalina Pizaro Altamarino*, Names that sufficiently declare the Nobility of his Extraction. In his Youth he for some time applied himself to Letters, and was two Years at *Salamanca*, which were sufficient to make him sensible that the Application of a studious Life, was contrary to his Temper. He returned home, resolved to follow the Wars, and his Parents pointed out to him *Italy*, but when he came to embark, he fell dangerously ill, by which Accident he found himself obliged to change his Intention, though not his Profession, and therefore he resolved to go to the *Indies*, where the War, at that time, was carried on with a View to Glory, rather than to Wealth. He embarked with the Approbation of his Parents, in the Year 1504; and carried Letters of Recommendation to *Don Nicholas de Obando*, great Commander of the Order of *Alcantara*, his Kinsman, and then Governor of the Island of *St. Domingo*.

He was no sooner arrived there, and known, than he gained general Esteem, and was so kindly received by the Governor, as to be immediately admitted into the Number of his Friends; but all these Favours were not sufficient to divert his Inclination to Arms, for he was so uneasy at the Inaction wherein he found that Island which the *Spaniards* now possessed, without any Opposition from the Natives, that he desired leave to go and serve

in the Isle of *Cuba*, where the War was still carried on; and having gained the Consent of his Kinsman, he endeavoured to signalize himself in that War, by Valour and Obedience, which are the first Virtues of a military Profession. He very soon acquired not only the Reputation of a valiant Soldier, but also that of an able Commander; distinguishing both his Courage in Action, and his Capacity in Council. *Cortes* was well made, of an agreeable Countenance, and, besides these common natural Endowments, he was of a Temper which rendered him amiable; for he always spoke well of the Absent, and was pleasant and discreet in his Conversation. His Generosity was such, that his Friends partook of all he had, without being suffered by him to publish their Obligations.

He married in that Island, *Donna Cathalina Suarez Pacheco*, a noble and virtuous young Lady. This Courtship brought him under many Difficulties, by the Interfering of *Diego Velasquez*, who made him Prisoner till such time as all Differences were adjusted; and then *Velasquez* gave her to him in Marriage, after which they were intimate Friends, and the Governor, in a little time, gave him a Distribution of *Indians*, and the Post of *Alcalde* or chief Magistrate in the Town of *St. Jago*; an Employment usually conferred on those who had distinguished themselves in the Conquest of those Countries. In these Circumstances was *Hernan Cortes*, when *Amador de Laris*, and *Andres de Duero*, proposed him for the Conquest of *New Spain*: And they did it with so much Address, that the next time they waited upon *Diego Velasquez*, furnished with fresh Reasons to enforce their Recommendation, they found him resolved on *Cortes*, and so possessed with the Advantages of entrusting the Undertaking to his Care, that they changed their premeditated Arguments into Flattery; and only endeavoured to oblige him by applauding a Resolution so agreeable to their own Wishes. They agreed with the Governor that it was convenient immediately to publish the Choice, in order to put a Stop, at once, to all farther Pretensions; and *Andres de Duero* was not slow in the Dispatch of the Commission.

Cortes received his new Charge from *Velasquez* with great Expressions of Respect; being as sensibly affected with the Confidence the Governor reposed in him, as he was afterwards with his Distrust. The Resolution was made public, and well received among those who desired to see that Affair brought to a Conclusion; but occasioned much Discontent among his Rivals for the Employment. Those who had declared themselves with the greatest Coldness, were the Relations of *Diego Velasquez*; who made very strong Efforts to raise in the Governor a Distrust in *Cortes*. 'Tis reported, that *Diego Velasquez* walking out with *Cortes*, and with his Friends and Relations, a pleasant crack-brained Fellow, with whose Whimsies he used to be diverted, said to him, Thou hast done well Friend *Diego*; shortly there will be Occasion for another Fleet to go in pursuit of *Cortes*. But *Diego Velasquez* stood firm to his Resolution, and *Cortes* wholly applied himself to hasten the Preparations for his Departure. The first Step, was to erect his Standard with the Sign of the Cross; having this Inscription in *Latin*, *Let us follow the Cross, for with this Sign we shall overcome*.

He appeared in the Habit of a Soldier, which became his Person well, and suited his Inclinations better; he employed his own Stock liberally, and what he could borrow from his Friends, in the buying of Provisions, Arms, and Ammunition, to hasten the Departure of the Fleet; endeavouring, at the same time, to draw together a Number of Soldiers for the Expedition, in which he did not find much Difficulty; for, the very Name of Enterprize, and the Fame of the Captain, were so great, that, in a few Days, were listed three hundred Soldiers; among whom, were *Diego de Ordaz*, the principal Confident of the Governor, *Francisco de Morla*, *Bernard Diaz del Castillo* (who has written the History of this Conquest) and other Gentlemen. The time for their Departure being come, Orders were given for the Soldiers to embark, which they did in the Day-time, the People all running

to the Sight; and at Night, *Cortes*, accompanied by his Friends, went to take leave of the Governor, who embraced him in a very friendly Manner, and the next Morning accompanied him to the Sea-side, and saw him embark. Small Circumstances, and of little Importance, if some had not wrote, without any manner of Reason, that he called the Soldiers together from their Houses, at Midnight, embarking with them by stealth; and that *Diego Velasquez* going out after him in the Morning, *Cortes* came up to him in a Boat well armed, and gave him to understand, in a disrespectful Manner, that he no longer had regard to his Orders.

3. The Fleet weighed from the Port of *St. Jago*, in *Cuba*, the 18th Day of *November*, 1518; and, having coasted along the North-side of the Island, sailed towards the East, and in a few Days arrived at the Port of *la Trinidad*, where *Cortes* had some Friends, who gave him a very kind Reception. With this Reinforcement of Gentlemen, and an hundred Soldiers who came from the two Settlements, the Strength of the Fleet was considerably augmented; and, at the same time, Care was taken to buy up Provisions, Arms, and some Horses. *Cortes* assisted all who wanted with his Money; but scarce had left the Port of *St. Jago*, when his Enemies began to cry out against him, talking of his Disobedience, after the Custom of Cowards, who always attack the Absent.

Diego Velasquez hearkened to their Discourse, and though he seemed to be displeased, they discovered in his Mind Jealousy, easy to be worked up to an entire Distrust; to which end they made use of *Juan Millan*, who, notwithstanding he was very ignorant, pretended to the Knowledge of Astrology. This Man, set on by others, having engaged *Velasquez* to Secrecy, acquainted him in mysterious Terms, that this Expedition would have a fortunate and unfortunate Event, giving him to understand that he had learned so much from the Stars; and though *Diego Velasquez* was a Man of sufficient Sense to discern the Vanity of such Prognostications, nevertheless as his Foible was Jealousy, this had such an Effect, that, notwithstanding he despised the Astrologer, he began to be affected by what he said. From such slight Beginnings sprang the first Resolution which *Diego Velasquez* took to break with *Cortes*, by depriving him of the Command of the Fleet; he dispatched immediately two Couriers to *la Trinidad*, with express Orders to *Francisco Verdago* his Cousin, to dispossess him of his Captain Generalship, in a judicial Way, as supposing his Commission now revoked, and another Person named in his Room.

Cortes was quickly informed of this Accident, and, without being discouraged at the Difficulty of the Remedy, shewed himself to his Friends and Soldiers, that he might know in what manner they would resent the Injury done to their Captain, and how far he might depend upon the Justice of his Cause, by the Judgment they passed upon it: He found them all not only in his Interest, but resolved to defend him from such an Injury, though it should carry them to the last Extremity of taking Arms in his Defence; and though *Diego de Ordaz*, and *Juan Velasquez de Leon* were less warm, as depending more upon the Governor; they were easily brought to approve that which they had not Power to hinder. Being thus secure, he went to visit the *Alcalde*. He laid before him the Danger to which he might expose himself in supporting such a Piece of Injustice, by disgusting so many Persons of Distinction as followed him; and how much the Fury of the Soldiers was to be feared, whose Affections he had gained, that he might the better serve *Diego Velasquez*; and that he already found it difficult to keep them within the Bounds of Obedience to him.

Francisco Verdago approved his Reasons from a Principle of Generosity, and offered not only to suspend the Execution of the Order, but to write to *Diego Velasquez* to engage him to desist from a Resolution, which was now impracticable; *Diego de Ordaz*, and the rest who had any Interest with the Governor, offered to do the same, and wrote immediately. *Cortes* likewise wrote to him, complaining of his Distrust, without shewing how far he was disgusted, or omitting his ordinary Respect.

These Measures taken to quiet the Mind of *Velasquez*; *Cortes* resolved to prosecute his Voyage, and, sending *Pedro Alverado* by Land, with a strong Party of Soldiers, to take care of the Horses; and raise more Men in the Settlements upon the Road, he sailed with the Fleet for the *Havanna*.

The Ships parted from *la Trinidad* with a favourable Wind; but, at the coming on of the Night, they separated from the *Capitana*, where *Cortes* was on board, without observing, as they ought to have done, the Course he stood, or perceiving the Error of the Pilots, until the Day discovered it; but being now far advanced, they continued their Voyage, and arrived at the *Havanna*, where the Soldiers landed. They were kindly entertained by *Pedro de Barba*, at that time Governor of the *Havanna*, under *Velasquez*. They were much concerned that they had not waited for their Captain, but their Discourses on that Subject went no farther than to furnish themselves with Excuses against his Arrival; yet perceiving that he staid longer than they thought it possible he could, unless some Misfortune had befallen him, they began to be uneasy and divided in their Opinions: Some were for sending two or three Vessels in search of him; some proposed to name a Commander in chief in his Absence, but others thought such a Proposition unseasonable; however, as nobody commanded, every one gave his Verdict, and nothing was done.

He who most insisted upon naming a Commander, was *Diego de Ordaz*; who, as a Confident of *Velasquez*, expected to be preferred to the rest; and thought, that by the gaining of this Point, he should stand fair to obtain that Post from *Velasquez*. But at last, after a Dispute of seven Days, *Cortes* safely arrived with the *Capitana*. His Delay was occasioned by the Fleet's passing over some Flats, which lie between the Harbour of *la Trinidad* and Cape *St. Anthony*, at a small Distance from the Isle of *Pines*; where the *Capitana*, as being the largest Ship, struck, and was in Danger of being over-set.

4. This Accident served to raise his Reputation; for animating his Men on the View of the Danger, he gave such Orders as were necessary, with great Presence of Mind, and without Confusion. His first Care was to put out his Boat, and take out the Ship's Lading, which was carried to a little sandy Island; by which means he so far lightened her, as to set her afloat; after which, getting clear of the Shore, he took her Lading on board again, and pursued his Course; having thus spent the seven Days he was detained, and thereby much advanced his Reputation. *Pedro de Barba* lodged him in his own House, and he was received with great Acclamations by his Soldiers, whose Numbers immediately encreased; several of the Inhabitants and Gentry entering into the Service; among these were *Francisco de Montejo*, who was afterwards the King's Lieutenant of *Yucatan*; *Diego de Soto del Toro*, *Garcia Caro*, *Juan Sedo*, and other Persons of Distinction and Fortune, who added very much to the Reputation of the Enterprize.

These Preparations took up some Days, but as *Cortes* knew not how to be idle, he commanded the Artillery to be brought on shore to be cleaned and proved; ordered the Cannoniers to observe, exactly, how far each Gun would carry; and, as there was great plenty of Cotton thereabouts, he directed the making a sufficient Quantity of defensive Arms. These were a kind of Quilts in the Form of great Coats, which were called *Escaupilles*: Necessity inventing what Experience afterwards approved. It being found that Cotton stitched between two Cloths was a better Defence than Iron against the Arrows and Darts of the *Indians*; for they lost their Force, by the weak Resistance they met with; and were likewise hindered from glancing from one Man to another. At the same time he exercised his Soldiers in the Use of their Fire-arms and Cross-bows, and the Management of their Pikes: He taught them how to form and file off in Order; how to charge, and how to secure a Post: Instructing them both by Voice and Example, in the Rudiments of War, after the Manner of Antiquity; which Practice, in time of Peace, was in so much Esteem

among the *Romans*, that from this kind of Exercise they gave their Armies the Name of *Exercitus*.

With the like Diligence and Ardour he went on with the rest of his Preparations; but when every one was rejoicing at the near Approach of the Day appointed for their Departure, *Gaspar de Garnica*, a Servant of *Velasquez*, arrived at the *Havanna* with fresh Orders to *Pedro de Barba*, expressly enjoining him to dispossess *Cortes* of the Command of the Fleet, and to send him Prisoner under a good Escort; telling him how highly he had been displeased with *Francisco Verdago*, for letting him go from *la Trinidad*: And withal, giving him to understand how much he would risque in not complying with his Orders. He likewise sent to *Diego de Ordaz*, and to *Juan Velasquez de Leon*, to be assisting to *Pedro de Barba* in the Execution of his Commands. But *Cortes* was advertised of what was doing from several Hands, and even from *Garnica*. They warned him to take care of himself, since he, who first entrusted this Enterprize to his Conduct, was now going to discard him, in a Manner highly injurious to his Honour, and who freed him from the Scandal of Ingratitude, by forcing from him the Favour for which he stood obliged. *Cortes*, though a Man of great Spirit, could not help being shocked with this new Attempt, which touched him the more sensibly, the less it was expected; for he thought *Velasquez* had been satisfied with the Assurances that had been given him by all, in their Answer to his first Orders which came to *la Trinidad*; but being convinced of his Obstinacy, he began with less Temper to think of taking care of himself. He acknowledged that *Velasquez* had expended some Money in fitting out the Fleet, but the greatest Part of the Charge was borne by himself and his Friends, and almost all the Soldiers were raised upon their Credit: He was also concerned for the Enterprize, which he foresaw would entirely miscarry if he quitted it; but that which most sensibly affected him, was the Wound given to his Honour, which is dearer than Life itself; and upon these Reflections *Cortes* took his first Resolution of breaking with *Velasquez*, judging that it was now no longer a time to smother his Resentment, but resolved to provide for himself, and make use of the Force he was Master of, as Occasion should require. To this end, before *Pedro de Barba* had determined to publish the Order he had against him, he made haste to send away from the *Havanna* *Diego de Ordaz*, whose Fidelity he suspected on account of the Efforts he had made to be chosen Commander in chief in his Absence. He therefore commanded him to embark immediately on board one of the Vessels, and to make the best of his Way to *Guanicanico*, a Settlement situate on the other Side of the Cape *St. Antony*, to take in some Provisions, which he had directed to be carried to that Place, and there to wait his Arrival with the rest of the Fleet.

Cortes assisted in putting this Order in Execution, with his usual Diligence and Calmness, and by this means got quickly rid of a Person who might have given some Opposition to his Design. He went then to visit *Juan Velasquez de Leon*, whom he easily brought over to his Interest; being himself not a little displeased with the Proceedings of his Relation, and withal, more tractable and of less Artifice than *Diego de Ordaz*. Having taken these Precautions, he shewed himself to the Soldiers, acquainting them with the new Disaster that threatened him. They all offered him their Services, agreeing in their Resolution of assisting him, but differing in the Manner of expressing themselves. But *Pedro de Barba*, apprehending the ill Consequences of not appeasing this Tumult in time, went to *Cortes*, and, appearing publicly with him, quieted all in a Moment, by declaring aloud that he did not design to execute the Order of *Velasquez*, or to have any Share in so great and so unprovoked an Injustice.

This turned all their Threats into Acclamations; and he presently shewed the Sincerity of his Intentions, by publicly dispatching *Gaspar de Garnica* with a Letter to *Velasquez*; in which he told him that this was not a time to stop *Cortes*, who was too well attended to let himself be ill treated, or to be reduced to Obedience by Violence; he represented to him in the strongest Terms, the Ferment

ment his Order had occasioned among the Soldiers, and the Danger the Town had been in by the Commotion, and concluded his Letter with advising him to regain *Cortes* by Acts of Friendship, by adding new Favours to those he had already bestowed, and relying on his Gratitude for what could not be compassed either by Persuasion or by Force.

5. A Brigantine of moderate Burden having joined the ten Vessels which composed his Fleet, *Cortes* distributed his Men into eleven Companies, putting one on board each Vessel; and named, for Captains, *Juan Velasquez de Leon*, *Alonso Fernandez Portocarrero*, *Francisco de Montejo*, *Christoval de Olod*, *Juan de Esculante*, *Francisco de Mirla*, *Pedro de Alverado*, *Francisco Saucedo*, and *Diego de Ordaz*, who he had not sent out of the way with an Intention to forget him, nor was he willing to disoblige him, by not giving him an Employment. He reserved for himself the Command of the *Capitana*, and intrusted the Care of the Brigantine to *Gines di Mortes*. The Command of the Artillery he bestowed upon *Francisco de Orozco*, a Soldier, who had signalized himself in the Wars in *Italy*; and chose for his chief Pilot *Antonio de Alaminos*, a Man of Experience in those Seas, having served in the same Quality in the two Voyages of *Francisco Hernandez de Cordova*, and *Juan de Grijalva*.

He drew up Instructions for his Officers, wherein, with singular Foresight, he provided against Contingencies; and the Day of Embarkation being come, they celebrated a Mass of the Holy Ghost with great Solemnity, at which all the Soldiers very devoutly assisted, recommending to God the Beginning of an Enterprize, the Success of which they expected from his Divine Assistance; and *Hernan Cortes*, as the first Act of his Command, gave the Word *St. Peter*, thereby acknowledging him the Patron of this Expedition as he had been of all his Actions from his Childhood. After which he ordered *Pedro de Alverado* to sail for the North Coast, in search of *Diego de Ordaz* in *Guanicanico*, and, after they were joined, to wait for the Fleet at Cape *St. Antonio*. The rest of the Vessels had Instructions to follow the *Capitana*, and, should they be separated by contrary Winds, or any other Accident, to stand for the Isle of *Cozumel*, discovered by *Juan de Grijalva*, which was but little distant from the Land they were in search of, and where *Cortes* purposed to consider and resolve on what should be most necessary for the Prosecution of their Enterprize.

In fine, they departed from the *Havanna* the 10th of February, 1519. The Wind at first was favourable, but did not long continue so, for at Sun-set there arose a furious Storm, which put them in great Disorder; and when the Night came, the Ships were obliged to separate, that they might not run foul of each other, and to put right before the Wind. The Ship that *Francisco de Mirla* commanded suffered most, a Break of the Sea carrying away the Rudder, whereby he was in great Hazard of being lost; but the Storm ended with the Night, and as soon as they had Light enough to distinguish Objects, *Cortes* was the first who came up with the Ship in danger; the rest followed his Example, and the Damage she had suffered was soon repaired. At this time *Pedro de Alverado*, who was gone in search of *Diego de Ordaz*, discovered, by Day-break, that the same Storm had forced him into the Gulph a great way farther than he imagined; for, in order to keep clear of the Shore, he had been obliged to put out into the open Sea, as least dangerous. The Pilot found by his Compass and Chart, that he was fallen very far from the Course prescribed to him, and was at such a Distance from Cape *St. Antonio*, that his Return would have been very difficult; wherefore he proposed it, as most adviseable, to sail directly for the Isle of *Cozumel*. *Alverado* left it to his own Choice, representing to him the Order of *Cortes*, after such a manner as looked as if he disapproved it.

Hereupon they continued the Voyage, and arrived at the Island two Days before the Fleet. They landed with a Design to lodge themselves in a small Town near the Coast, well known to the Captain and some of the Sol-

diers since the Voyage of *Grijalva*, but they found it deserted; for the *Indians*, upon the first Notice that the *Spaniards* were landed, abandoned their Houses, retiring farther into the Country. *Pedro de Alverado* was a young Man of Spirit and Valour, well qualified where he received Orders, but of too little Experience to give them. He had a mistaken Notion, that while the Fleet was coming, any thing but Inaction would be a Virtue in a Soldier, and therefore ordered his Men to march, and to take a View of the inner Part of the Island; and at a little more than a League distance they found another Town forsaken in the same manner, but not so entirely unfurnished as the former, for there were some Cloths and Provisions, which the Soldiers seized as Spoils of an Enemy; and in a Temple of one of their Idols they found many Jewels which served to adorn it, and some Instruments for sacrificing, made of Gold mixed with Copper, which, though of small Value, they took away. This Expedition did by no means promote the Service they were upon, but, on the contrary, frightened the *Indians*, and crossed the Design of gaining their Friendship. *Pedro de Alverado* grew sensible that he had made a false Step, and retired to his first Post, having taken three Prisoners, two Men and one Woman, who surrendered without any Opposition.

6. The next Day *Cortes* arrived with the whole Fleet, having sent to *Diego de Ordaz*, at Cape *St. Antonio*, to join him; suspecting, as it proved, that the Storm would hinder *Alverado* from executing his Orders, and though inwardly well pleased to find him there in safety, he commanded the Pilot to be imprisoned, and reprimanded the Captain very severely, for not pursuing his Instructions, as well as for his Presumption in marching up and down the Island, permitting his Soldiers all the while to rob and plunder the Inhabitants.

He did all this publicly, delivering his Reproof in a set Speech, which not only contained his Sentiments, but his Reasons also why he thought it so great a Fault, inasmuch as it tended to lessen the Reputation of the *Spaniards*, and to defeat the Design of the whole Voyage. To repair this Mistake, however, as well as he could, he immediately sent for the three Prisoners, and, having set them at Liberty, caused both their Gold and their Cloths to be restored to them, and then, joining his own *Indian*, *Melchior*, who was the only Interpreter he had, his Companion *Julian* being dead, he sent them away with a great many Presents for their Cazique, with Orders to assure them, that he highly disapproved of whatever had been done to their Prejudice; and that he was firmly resolved to do every thing in his Power to merit their Friendship. To prevent any new Disputes, which he thought it his Interest to avoid, he drew down his Forces to the Sea-side, and, having encamped them there for three Days, he thought fit to make a general Review; upon which it appeared, that this mighty Army with which he was to undertake the Conquest of the *Mexican* Empire, consisted of no more than Five hundred and eight Soldiers and Officers, Sixteen Horse, and of those who did not belong to the Army, two Chaplains and one hundred and nine Pilots, Mariners, and Men of other Professions. To these he made a long Speech, in which he represented to them, that Discipline was of far greater Advantage than Numbers, exhorting them to obey his Orders punctually, and promising that his Example should ever give Weight to his Authority.

He had scarce made an End of his Oration before Intelligence was brought him, that a considerable Number of *Indians* were approaching, divided into several Corps, and without Arms: He drew up his Men, however, in Order of Battle, and commanded them to remain under Arms, till it should appear what it was those People aimed at. The *Indians* no sooner came in sight, than, gazing attentively upon the *Spaniards*, they remained for some time without Motion, only whispering and consulting among themselves what they had best to do. At length, perceiving that no Hostilities were offered, they advanced boldly on a sudden, and, mingling themselves with the Soldiers, presented them with Refreshments, and from

from that time continued a friendly Correspondence, without shewing any Signs either of Terror or Surprise; the Reason of this was, That having in their Island an Idol universally revered by all the neighbouring Nations, they were accustomed to see People of different Countries, Habits, and Languages, which either hindered them from being so much astonished, as other *Indians* were, or else taught them better to conceal their Fear.

At Night they all retired to their Houses, and the next Day the principal *Cazique* of the Island came to visit *Cortes* with a numerous Equipage, delivering his Embassy and Present himself. The General received him with great Courtesy, and by his Interpreter returned Thanks for the Visit, with an Offer of his Friendship and that of his Followers. To which the *Cazique* replied, That he accepted the Friendship offered, as a Man who knew how to preserve it. One among the *Indians* who accompanied him was heard to repeat, after a bad manner, the Name of *Castilla*, and *Cortes*, whose Attention nothing could divert from his Point, observed the Word, and commanded the Interpreter to inquire into the Meaning of it. The *Indians* said, that his Men very much resembled certain Persons who were in *Yucatan*, Natives of a Country called *Castilla*; which *Cortes* no sooner heard than he resolved to set them at Liberty, and engage them in his Service.

Upon informing himself more particularly, he found that they were in the Power of some *Indians* of the highest Rank residing two Days Journey within the Province of *Yucatan*. *Cortes* communicated his Intention to the *Cazique*, and asked him, whether these were warlike *Indians*, and what Force would be necessary to rescue the Christians from Slavery? The *Cazique* gave him a very reasonable Answer, telling him, the securest Way would be to ransom them; for that endeavouring to release them by Force of Arms, would expose them to the Hazard of being massacred by their Masters. *Cortes* embraced his Advice, with Admiration to find so much good Sense and Policy in the *Cazique*, whose Rank among Princes, though inconsiderable, had taught him some Principles of what they call Reason of State.

He immediately gave Orders to *Diego de Ordaz*, to sail with his Vessel and Company to the Coast of *Yucatan* by the shortest Cut from the Isle of *Cozumel*, where he was to land the *Indians* appointed by the *Cazique* for this Purpose. They carried a Letter from *Cortes* to the Prisoners, together with some Trifles for their Ransom, and *Ordaz* was commanded to stay eight Days for them, in which time the *Indians* undertook to return with an Answer. The two Vessels came upon the Coast of *Yucatan*, and landed the *Indians*. They, within two Days, delivered the Letters to a *Spaniard* whose Name was *Jerom de Aguilar*, who was pleased with it and the Toys. Some say, the *Indians*, for Fear, delivered the Letter to *Aguilar's* Master, who seeing him read it, wondered that Persons at such a Distance should understand each other by that Method. *Aguila* referring himself to his Master, as fearing he would cause him to be killed if he attempted to go away privately, obtained Leave of him to go, desiring that he would make them his Friends. This Lord sent some *Indians* with him, and when he came to the Coast, he perceived they had waited thereabouts, finding several Crosses made of Canes. Being much grieved for want of some Conveniency to proceed any farther, and going along the Coast, he found a Canoe half sunk, which, with the Help of his Companions, he cleared of the Sand; and, though half rotten, got into it, rowing with a Pipe-stave he also found by chance, and so went down the Coast, crossing in the narrowest Part over to the Island, being at least four Leagues. The Currents carrying him near to the Fleet.

In the mean time *Cortes* marched, with all his Troops in a Body, to take a View of the Island; not that he saw any Necessity for being on his Guard, but to keep the Soldiers together, and to preserve the Inhabitants from being insulted. He told his Men, that they were an indigent People unable to defend themselves; that the Sincerity they shewed entitled them to good Treatment in return; and that their

Poverty was such as gave no Temptation to Avarice; that they were not to expect from that small Spot of Ground any other Wealth than Reputation. He was always accompanied by the *Cazique* and great Numbers of *Indians*, who supplied him with Provisions, and exchanged Gold for Glass Beads, believing that they overreached the *Spaniards*, and could never purchase those Toys at too dear a Rate.

At a little Distance from the Coast stood the Temple of the Idol so much revered by the *Indians*. It was a square Building of Stone, and of no contemptible Structure. The Idol bore the Figure of a Man, but of such an horrible Aspect as plainly discovered the Original it was designed to represent. This Circumstance of Deformity was observed in all the Idols worshipped by those miserable People, however they differed in Make or Signification; whether it were that their Imaginations hit in this respect, or that he who struck out the most hideous Figure was accounted the best Workman. 'Tis said, this Idol was called *Cozumel*, and gave to the Island the Name which it retains to this Day. The *Spaniards* found a very great Concourse of *Indians* in the Temple, and in the midst of them a Priest, distinguished from the rest by a certain Ornament or Covering, which scarcely hid his Nakedness. He seemed to preach, and persuade them to something, by a Voice and Action extremely ridiculous. *Cortes* took this Opportunity to discourse the *Indian* Prince roundly on the Subject of his Idolatry, telling him, in the first place, that it was impossible for them to continue Friends if he did not quit it; and next, that it was very unworthy of him, who was a Man of Sense and good Understanding, to pay Divine Honours to an ugly deformed Image, fitter to frighten Children than to be revered by Men.

The *Cazique* did not know how to argue with him, but seemed rather willing to shift the Discourse; telling him, that he was much his Servant in what depended upon him; but that, as for Religion, it was out of his way, and so left it wholly to the Priests, who should, if he pleased, discourse with him upon the Subject. This was readily accepted, and one of the Priests sent for, who no sooner understood the Business than he began to threaten the most dreadful Penalties, in the Name of his Idol, against any who should presume to dishonour him or his Habitation. Upon which *Cortes*, to shew them how much they were deceived and imposed upon by these Jugglers, caused all the Idols to be broke to pieces, and most of their Chapels to be demolished, only the largest of them he preserved entire; and, having caused a very neat Altar to be set up there, he had Mass said thereon by the Chaplains and Priests; and, at his Departure, charged the *Cazique* to take care that every thing was kept in good Order, and that no Insult was offered to the Image of the blessed Virgin, or to the two Crosses which he erected in that Chapel; which the *Indian* Chief very readily promised. And thus all Things being adjusted, *Cortes* began to provide for his Departure, the Ship being returned with Advice, That they had waited the appointed Time without seeing any thing of the Persons for whom they were sent, and therefore judged it their Duty to return.

7. All Things being in order, *Cortes* put to Sea, with a Design to follow the same Course, which *Juan de Grijalva* had done before, and to discover the Countries from which he had retired by too scrupulous an Obedience to the Orders he had received. The Fleet had the Wind a-stern, and all were overjoyed at the prosperous Beginning of their Voyage, when an unexpected Accident gave them great Uneasiness. *Juan de Esculante* fired a Gun, and the rest of the Commanders, casting their Eyes towards him, observed that he followed with great Difficulty, and soon after tacked about, and stood for the Island. *Cortes* well understood the Meaning of what he saw; and, without staying to deliberate, immediately ordered the Fleet to follow him. *Juan de Esculante* stood in need of all his Diligence to save his Vessel, for she had sprung a Leak, and took in so much Water that she was upon the point of sinking when she reached the Shore, notwithstanding all possible Expedition.

dition had been used in coming to his Relief: The Soldiers landed, and the Cazique presently came down with the *Indians*, and seemed to be surprized at the sudden Return; but when they understood the Reason, they very chearfully helped to unload the Vessel, and afterwards assisted in repairing and careening it, managing their Canoes with great Dexterity, and performing singular Service in a Case that required it.

8. While this was doing, *Cortes*, accompanied by the Cazique and some of his Soldiers, went to visit the Temple, and found the Cross and Image of the Virgin *Mary* in the same Place where he had left them, observing withal, to his great Satisfaction, some Signs of the Veneration paid them by these *Barbarians* in the Cleanliness of the Temple, and the Perfumes they had burned, besides Flowers and Boughs, with which they had adorned the Altar. *Cortes* thanked the Cazique for the Care he had taken in his Absence. The *Indian* was pleased, and received the Compliment of the *Spaniard* as if it had been an Instance of his extraordinary Conduct, that the Image and Altar had stood unmolested for no longer a time at the most than for two or three Hours.

Whilst the Ship was refitting, *Cortes* was told that a Canoe appeared making from *Yucatan* towards the Island; he came out to view, and, thinking it fell off a little, ordered *Andrew de Tapia* to go as much under the Shelter of the Land as he could, and endeavour to take that Canoe which made to the Shore behind a Point of Land; four Men stark naked landed out of it, only their Privities covered, and their Hair tressed wound about their Heads, with Bows and Arrows in their Hands. *Andrew de Tapia* had posted himself so as to come upon the Canoe, and as soon as the *Indians* were landed, made towards them Sword in Hand; three were afraid, and would have returned to the Canoe, but the fourth bid them not fear, and spoke to the *Spaniards*, saying, *Gentlemen, I am a Christian*: And, with Tears in his Eyes, asked if that was *Wednesday*? because he had a Prayer-Book he made use of every Day, and desired to know whether he was right? He desired them to return Thanks to God, kneeled down, and lifted up his Eyes and Hands to Heaven, and also blessed God for having restored him to the Company of Christians.

Andrew de Tapia embraced him, as did all the rest, and then they went to *Cortes*, who received him with much Joy. The new Comer and his *Indian* Companions paid the greatest Respect, and couched down upon their Hams, laying their Bows and Arrows on the Ground at their Right-hands; then having moistened their Right-hands with Spittle, they touched the Ground, and stroaked their Breasts next the Heart, that being the greatest Respect they paid to their Princes, to denote, that they humbled themselves to the Ground they trode on. *Cortes* being informed that this was the way of Salutation, he again bid *Aguilar* welcome, and, taking off a long yellow Robe trimmed with Crimson he had on, with his own Hands put it upon him, desiring he would rise off his Hams and sit on a Chair. Asking his Name, he answered, his Name was *Jerom de Aguilar*, and that he was born at *Eija*, and related to the Licenciado *Mark de Aguilar* whom *Cortes* knew. Meat and Drink being set before him, he took of both very moderately. And being asked why he was so very sparing, answered, he did it, because having been so long used to the *Indian* Food, that Change of Diet might do him harm, whereas taking very little, tho' it were Poison, there was no Danger.

He was in Deacon's Orders, and for that reason said, he never would marry, tho' he had been much importuned to it by the *Indians*. The Account of his Life and Adventures being too long for that time, *Cortes* bid him rest till the next Day, and ordered his Steward to clothe him; which he was not very fond of at that time, because, having been so long used to go naked, the Garment *Cortes* had thrown over him was somewhat troublesome.

The next Day *Cortes* asked him, before less Company, how he had fallen into the Hands of those *Indians*; he answered, That being at *Darien* at the time of the Con-

test between *James de Nicuesa* and *Nunez de Balboa*, he came away with *Valdibia*, who was bound for *Santo Domingo*, to inform the Admiral and the King's Officers of what was doing in those Parts, to return with Men and Ammunition, and carry twenty thousand Ducats for the King: That when he came near *Jamaica*, the Caravel was cast away on the Shoals called *Caymanes* or *Alligators*; at which time twenty Men, with much Difficulty, got into the Long-boat, without Sails, Bread, or Water, and very bad Oars: That seven of the twenty Men soon died, being reduced to such Distress, that they drank their own Water; and the others landed in a Province called *Maya*, where they fell into the Hands of a cruel Cazique, who sacrificed *Valdibia* and five others, offering them up to his Idols, and then eating them, keeping a Festival, according to the Custom of the Country: That he and six more that were shut up in a Pen or Coop to serve for another Festival, resolved to lose their Lives some other way, and, breaking thro' the Cage accordingly, fled over the Mountains without being discovered, till it pleased God that they came into the Dominions of another Lord who was an Enemy to him from whom they fled, and naturally courteous, affable, and inclined to do Good; his Name was *Acquineuz*, Governor of *Xaman Cona*, who granted them their Lives, but made Slaves of them: That the said Lord soon dying, he served *Taxmar*, who succeeded him in the Lordship: That five of his Companions soon died thro' the Hardships they endured, he only remaining with one *Gonzalo Guerra*, who was with the Cazique *Chetemal*, and married a very great Lady in that Country, by whom he had Children: He was then Commander for a Cazique called *Nachancam*, and, having gained many Victories over his Lord's Enemies, was much beloved and esteemed.

He added, that he had sent him *Cortes's* Letter, and desired him to come away, since there was so favourable an Opportunity, and had staid for him longer than was convenient, and believed he kept away for Shame, because his Nose, Lips, and Ears were bored, his Face painted, and his Hands wrought after the manner of that Country, where only brave Men are permitted to have their Hands wrought. Proceeding in the Account of his own Adventures, he said he had endured very much during the first three Years, being obliged to carry Wood, Water, and Fish for his Lord; which he performed with much Satisfaction to save his Life, doing what every *Indian* directed him; by which means he gained the Affection of them all. The Cazique observing that he lived chastly, tempted him several ways, sending him out at Night a fishing with a beautiful *Indian* Girl about fourteen Years of Age, who had been instructed to provoke him; and he had a Hammoc given him for them to lye in. The Hammoc being hung up, the young Girl went into it, and invited *Aguilar* to come and lye with her, upbraiding him upon his Refusal, saying that he was not a Man; yet he lighted a Fire, and lay down on the Ground by it. The Cazique, being informed of this by her, had the more value for him, and trusted him with his Wife and House; which shews that Virtue is honoured even among barbarous Nations. Afterwards he desired his Lord to employ him in his Wars, and contributed to the obtaining several Victories, which gained him so much Reputation, that he was looked upon as the prime Man in the Country: And when the Ships under the Command of *Hernandez de Cordova*, and those under *Grijalva*, traded on that Coast, they took special care that he should not make his Escape. The Conversation of this Man proved highly agreeable to *Cortes*, and the Accounts he gave were of extraordinary Use in the Prosecution of his Expedition, because they enabled him to foresee whatever might happen, to procure Advantages, and to provide against Difficulties.

9. It must be acknowledged that the Facts which are contained in this Section are far enough from being surprising or extraordinary, but however, they are extremely curious, and withal highly necessary. The Histories of such Discoverers as these ought to be written for some great End, and with some important View; bare Amusement

usement is too mean a Consideration. But what End, what View so just, so laudable, so worthy of the Subject, as the promoting vigorously Expeditions of a like nature by so noble an Example. Yet how is this to be done otherwise than by explaining the Character of *Cortes* fully, and shewing how he came to undertake so great an Enterprize with so slight a Force; how from the very Beginning he had all the Difficulties to struggle with that the Author of an Epic Poem could have suggested to raise the Character of his Hero, and shewed such Fortitude, Sagacity, and Penetration in overcoming them, as would have puzzled the greatest Poet to have feigned in favour of him, whose Character and Adventures had depended solely upon his Imagination.

Here we see him fixed upon to be the Commander in Chief in the greatest Expedition that hitherto the *Spaniards* had undertaken, merely for the sake of his personal Merit and great Abilities. We next find him suspected, hated, recalled by the very Person to whom he owed his Power. Yet proceeding, notwithstanding all these Difficulties; and tho' the Beginnings of his Enterprizes were not attended with any remarkable Success, we see him establishing an Authority even superior to that given him by his Commission, when by the Contrivances of his Enemies, his Title to command was so weakened, as that he

had scarce any legal Authority at all. We see him from his first setting out, acting as the Legislator as well as General and Commander in Chief, and not only forming his own Conduct upon just, honourable, and heroic Principles, but infusing these with great Diligence and Dexterity into the whole Body of his Followers, as if, not content with being a Hero himself, his Ambition excited him to command an Army of Heroes, and so to ballance his want of Numbers by raising the Power, the Credit, and Courage of the small Number he commanded.

We see him acting upon all Occasions by the Lights of his own Reason, and without taking the Advice of any who were about him; not that he despised Counsel, but that for good Reasons, and from just Motives, he suspected those he would otherwise have admitted of his Council. And lastly, we see him behave towards the *Indians* with Dignity void of Arrogance, instilling Courage, not Fear, and teaching them Obedience, by proposing it as their Interest, rather than due to his Pleasure. We shall see him in the succeeding Sections uniform in his Conduct, exact in his Discipline, sage in his Resolutions, vigorous in their Execution, always besieged with new Difficulties, and yet surmounting them by the Force of his Understanding, and the Steadiness of his Virtue.

SECTION VIII.

The Progress of this Expedition from the time of the Spaniards embarking for New Spain, to the first Message sent by CORTES to MOTEZUMA Emperor of Mexico.

1. *The Motives which induced Cortes to resolve to attempt the Conquest of New Spain with so small a Force and under so many Difficulties.*
2. *He arrives at the River Grijalva, finds his landing opposed, but debarks at last in spite of the Indians.*
3. *The Town of Tabasco taken, and a great Victory gained over the Indians.*
4. *A Peace ensues thereupon, to the Satisfaction of both Parties; after which the Spaniards embark in order to continue their Voyage.*
5. *They land in New Spain, and meet there with Embassadors from Motezuma Emperor of Mexico.*
6. *The General and Governor of the Province confer with Cortes; inquire into the Reason of his coming thither, and send an Account of it to their Emperor Motezuma.*
7. *The manner in which the Indians transmitted a full Account of the Spaniards and their Force to their Emperor.*
8. *The Reception that Account met with, and the Answer returned to Cortes's Request, by Motezuma.*
9. *Remarks and Observations upon this Section, and on the Situation Cortes found himself in at this Juncture.*

THE short Stay that *Cortes* made in this Island was spent in deliberating on the proper Means for carrying his great Designs into Execution, towards which he found that good Information was likely to contribute more than the best Advice; he therefore spent many Hours alone with *Aguilar*, whom he found to be a Man of Sense and Probity, of great Courage, and who had a Head perfectly well turned either for Service in time of War, or for Negotiations in time of Peace. It was from this Man that he learned perfectly the Humour and Temper of the *Indians*, their Maxims of Government, their military Discipline, the Advantages derived to them from thence, and in what respect they were inferior to the *Spaniards*. Matters about which he seemed to inquire from that natural Curiosity only which is incident even to the greatest Minds; but, in reality, he had nothing less in view than to amuse himself with hearing strange Stories, and made these Inquiries for the sake of knowing how to use all Opportunities that offered, and that he might be able to create them where they were wanting.

Among other extraordinary Qualities, he was blessed with so happy a Memory, that he retained whatever he once heard, and knew how to make use of the slightest Circumstances so as to convert them into material Advantages; of which we shall see many remarkable Instances in the following Sections. He took occasion likewise, during his stay in this Island, to gain over to his Interest the ablest and most enterprising Persons that were embarked with him in this Expedition, by representing to them how inseparably their Interests were connected with his, so that it was impossible for him to ne-

glect rewarding them, if by a proper Discharge of their Duty they put it his Power. In all these Applications he had much less regard to the Character and Station, than to the Temper and Capacities of the Men with whom he dealt, so that he admitted to his Conversation private Men as well as Officers, which gained him the Affections of the People, and rendered it impossible for any Cabals to be formed against him, without his having immediate Intelligence of the Motives from whence they sprung, and the Persons by whom they were managed.

He drew likewise another great Advantage from this Conduct, and that was bringing the greatest Points to bear without appearing to have any Concern in them; so that he never proposed any thing he had a mind to carry, but by the help of his Agents he first infused it into the Minds of the People, and then complied with their Will, or rather seemed to comply with it when he accomplished his own. He defeated the Designs of his Enemies by preparing the People to suggest their Dislike to them, when proposed by himself in Compliance with the Resolutions taken in Councils of War. And by these Arts he rendered himself at once the most arbitrary and despotic Commander, and the very Man in the World least suspected of having any such thing in his Thoughts. The Difficulties they had hitherto met with, might under any other General have disgusted the People and destroyed their Hopes, but his Management was so dextrous, that under him they had quite different Effects; for he found Means to convince them, that all Miscarriages were owing to those of *Velasquez's* Party; whence the Soldiers inferred, that all things would go well if

Cortes

Cortes had the sole Command. Such were the Dispositions of the *Spaniards* while Preparations were making to prosecute their Voyage to the Main.

2. The Fleet left this Island the second time on the 4th of *March*, 1519, doubled the Point of *Catoche*, which is the most Easterly Part of *Yucatan*, and following the Coast came to the Road of *Champatan*, where the Question was put in a Council held on that Subject, Whether they should land or not? *Cortes* inclined to the Affirmative, that he might chastize the *Indians* for the Opposition given to *Juan de Grijalva*, and before that to *Francisco Hernandez de Cordova*; and some Soldiers that had been present on both these Occasions, pushed by a Spirit of Revenge, supported his Opinion with an extreme Warmth; but the chief Pilot, and the rest of his Profession opposed it with unanswerable Reasons; for the Wind that favoured the Continuance of their Voyage, directly opposed their landing in that Place. Whereupon they pursued their Course, and arrived at the River *Grijalva*. There was no Occasion to deliberate here, for the good Treatment which the *Spaniards* had received formerly from the *Indians* of *Tabasco*, and the Gold at that time brought from thence, were two powerful Attractives; and *Cortes* readily complied with the Inclinations of his Soldiers, although he had no Design to stay there many Days, for his Thoughts were continually bent on the Dominions of *Moteczuma*, of which *Juan de Grijalva* had his first Account in this Province; it being his Opinion, That in this sort of Expeditions it was adviseable to begin with attacking the Head rather than the Members, and so encounter the greatest Difficulties with his Forces entire.

As he had some Knowledge of this Place by the Experience of those who had been there before, he made a Disposition for entering the River. And leaving the larger Vessels at an Anchor, he embarked all his Soldiers, well armed, in those of a smaller size, and in the Boats, and was beginning to make the best of his way against the Current, in the same Order as had been before observed by *Juan de Grijalva*; when he perceived a considerable Number of Canoes, with armed *Indians*, cover both Sides of the River, supported by several other Bodies on the Shore. *Cortes* drew near in close Order, and commanded that none should fire or shew the least Sign of Hostility. He followed in this likewise the Conduct of *Grijalva*, for he was more solicitous to use the proper Means of succeeding in his Enterprize, than to avoid the Imputation of copying after another, well knowing what Risques they run who value themselves upon finding new ways with no other Design than to be distinguished from those who went before them. The *Indians* thought to put a Stop to the *Spaniards* by their horrible Outcries; and as soon as they were so near that what they said could be distinguished, *Jerom de Aguilar* found that he understood their Language, which was the same, or with little Difference from that of *Yucatan*. And *Cortes* looked upon it as the Work of Providence that he was furnished with so good an Interpreter. *Aguilar* informed him, that the Words he understood were Menaces, and that the *Indians* were inclined to War. Upon which *Cortes* stopt, and ordered him to advance in one of the Boats with Offers of Peace. *Aguilar* executed his Orders, and returned in a very short time with an Account, that the *Indians* were in great Numbers prepared to defend the Entrance of the River, and so obstinate in their Resolution, that they had very insolently refused so much as to hear him. *Cortes* had no Design to begin a War in that Country, or delay his Voyage; but finding that he was now engaged, he thought it would be dishonourable to retreat, and suffer this Insolence of the Barbarians to go unpunished. The Night overtaking them in a Country unknown, *Cortes* thought it most advisable to lye by till Day, and disposed every thing after the best manner for the Engagement. During this Suspension he commanded all the Artillery out of the great Vessels; and his Soldiers had Orders to arm themselves with their Cotton Coats, for the better resisting the Arrows; to which he added such other Directions as he thought necessary, without representing the Danger greater or less than it was.

As soon as Day appeared the Vessels were drawn up in a Half Moon, whose Figure lessened by Degrees till it ended in the Boats, the River being large enough to allow Room for that Disposition. Their Advance was very slow, and seemed to invite to Peace; but the Men soon discovered the Canoes of the *Indians* who waited their coming in the same Order as the Night before. The General commanded his Men not to stir till they were attacked, telling them all, That they ought to use their Shields before their Swords, as the Justice of this War depended on the Provocation to it. And being desirous to have Reason still more on his Side, he sent *Aguilar* to them a second time with Offers of Peace, and to assure them that this was a Fleet of their Friends who designed their Advantage, and came on the Foot of that Alliance which had been formerly made with *Juan de Grijalva*; That to refuse them Entrance, would be a Breach of it, and would oblige the *Spaniards* to open their way by force of Arms; and that whatever Damage they should sustain, must be imputed to themselves. The Answer to this second Proposal, was the giving the Signal for the Attack. They advanced by the Favour of the Current near enough to use their Arrows, of which they discharged so great a Number, both from the Canoes and the Banks of the River, that the *Spaniards* were very much embarrassed in their Endeavours to cover themselves; but having received the first Charge, according to Order, they returned it with so much Vigour, that the Canoes quickly left the Passage free: And many of the *Indians*, intimidated at the Deaths of their Companions, flung themselves into the River. The Vessels pursued their way up the River, without farther Opposition, and approaching the Shore on the left Side, the Troops began to land, but in a Place so marshy and covered with Brambles, that they found themselves engaged in a second Conflict, for the *Indians* who lay there in Ambush, and those who escaped from the Engagement on the River, united in one Body, and renewed the Attack with prodigious Fury. The great Quantity of Arrows, Darts, and Stones which they discharged, increased the Difficulty of the Morass.

But *Hernan Cortes* drew up his Men, and those Ranks which were formed making head against the Enemy, covered the rest of their Troops, who were landing. Having formed his Battalion in Sight of the Enemy, whose Numbers continually increased, he gave Orders to Captain *Alonso Davila* to advance with an hundred Soldiers through the Wood, and possess himself of the Town of *Tabasco*, the Capital of that Province, not far distant from the Place of Action, according to the Accounts of those who had been upon the former Expedition. After which he engaged that vast Multitude, forcing them back with equal Courage and Difficulty, for he was obliged very often to march up to the Knees in Mud; and it is said, that in the Heat of the Engagement the General lost one of his Shoes, and fought a great while without missing it, so thoroughly was his Attention employed upon the Business of the Day. After the *Spaniards* had passed the Marsh, the *Indians* gave way, and disappeared in an Instant among the Bushes. Their Flight was owing in Part to their losing the Advantage of Ground, and in Part, to their Concern for the Town of *Tabasco*, upon their discovering the March of *Davila*; as it presently appeared by the great Multitudes that repaired to the Defence of that Place.

This Town was fortified with a kind of Wall, generally used in the *Indies*, made of large Trunks of Trees fixed in the Ground after the manner of Palisadoes, and so placed together, that there was Room between to discharge their Arrows. The Compass was round, without any Traverses or other Defences; and at the closing of the Circle, the Extremity of one Line covered the other, and formed a narrow winding Street, in which were two or three little Castles of Wood, which filled up the Passage, and wherein they used to post their Sentinels. A sufficient Fortrefs against the Arms of this new World, where they were happily ignorant of the Arts of War, and of those Methods to attack and defend, in which Mankind have been instructed elsewhere either by Malice or Necessity.

3. *Cortes* arrived at the Town a little while before *Alonso Davila*, who had been hindered by some Marshes and Lakes in his way; and having joined his Troops to the Batallion, and distributed proper Instruction for breaking down the Palifadoes (without giving time either to the *Indians* to recover themselves, or to his own Soldiers to reflect on the Difficulty) gave the Signal to begin the Attack, only stopping to say, *My Friends, here we must lodge this Night*. The Soldiers went on together with equal Resolution, and turning aside a Shower of Arrows with their Shields, and even with their Swords, gained the Foot of the Palifado; the Intervals of which were of Service at that time for the Discharge of the Fire-arms and Cross-Bows, which quickly drove the Enemy from their Posts, and gave an Opportunity to those who were not engaged to beat down a Part of their Palifadoes. The *Spaniards* entered without Difficulty, because the *Indians* retired to the inner Part of the Town; but it was soon perceived that they had stopped up the Streets, where they again made head, but with small Effect, for they were embarrassed by their own Numbers; and while some were retiring from one Work to another, they put the rest, who would have fought, into Disorder.

In the Centre of the Town there was a void Space, where the *Indians* made their utmost Efforts, but after a short Resistance, turned their Backs and fled into the Woods. *Cortes* would not follow the Chace, that he might give his Soldiers time to refresh, and the Fugitives an Opportunity to sue for Peace, taking Counsel from their Defeat. Thus did the *Spaniards* gain *Tabasco*, a large Town, and well provided for Defence, for the *Indians* had sent away all their Families and Effects, and stored the Place with Provisions; so that tho' there was nothing found to gratify Avarice, there was nothing wanting which Necessity required. Fourteen or fifteen were wounded, in this Engagement, in which died a considerable Number of *Indians*. Of the Wounded there was no Account, because they took care to carry them off, it being a Point of honour amongst them to conceal their Loss from the Enemy. That Night the Troops were quartered in that Part of the Town in which they last engaged. *Cortes* went his Rounds, and posted his Sentinels with as much Care and Exactness, as if he had had an Army of Enemies in View, well knowing Caution is as necessary as Valour in a Commander.

The next Day the Country appeared quite deserted, and so far as the Eye could reach there was not the least sign of an Enemy. However, *Cortes* did not think it proper to march out of his Quarters; this great Stillness made him suspicious, and his Apprehensions were increased when he understood that his Interpreter *Melchior*, who came from *Cuba*, had deserted them that very Night, leaving his Christian Habit hanging on a Tree. It was he that induced them to renew the War, acquainting them with the small Number of our Soldiers, that they were not immortal, nor their Fire-arms Thunder and Lightning, as they imagined; the Dread of which had made them desirous of Peace. But this Crime did not go long unpunished, for the same Barbarians whom he had persuaded to take up Arms, being vanquished a second time, revenged themselves on the Adviser of the War, by making him a miserable Sacrifice to their Idol.

In this Uncertainty *Cortes* resolved to send out *Pedro de Alverado*, and *Francisco de Lugo*, each with an hundred Men by different ways to view the Country, with Orders, if they found an Army in the Field, to retire to their Quarters without engaging with unequal Numbers. This Resolution was immediately executed, and *Francisco de Lugo*, after little more than an Hour's March, fell into an Ambuscade of numberless *Indians*, who attacked him on all Sides, and that with such Fury, that he was obliged to draw up his little Batallion into a Square. The Number of the Enemy increased, and the *Spaniards* began to be tired, when it pleased God that *Alverado*, who had taken a different Road from his Companion, met with a Marsh, which obliged him to turn aside, and brought him where the Report of the Fire-arms gave him Notice of the Engagement. *Alve-*

rado marched strait to the Noise, and discovered the Enemies Squadrons: Upon which he advanced with all the Haste possible, under Cover of a Wood; and sending an *Indian* of *Cuba* to *Cortes* to advise him of the Accident, drew up his Men, and fell upon the Enemy with so much Resolution, that the *Indians*, surprized at the sudden Assault, left them the Passage free, and, without giving the *Spaniards* time to break them, dispersed of themselves.

This Succour gave *Francisco de Lugo's* Soldiers time to breathe, and as soon as the two Captains had joined their Troops and doubled their Ranks, they charged another Batallion of the Enemy, who stooped up the way that they might not execute the Orders they had received to retreat. Here again they found Resistance, but in fine, they made way through them with their Swords, marching forward, though continually attacked, and sometimes almost borne down; some fought while others took Breath; and whensoever they mended their Pace to gain Ground, they were charged by the whole Body of the Enemy, who immediately, upon their facing about, got out of their Reach, retiring with the same Swiftnefs that they attacked; the Motions of this Multitude of Barbarians, resembling the rolling of the Sea when the Waves are driven back by the Wind. The *Spaniards* had marched about three Quarters of a League, continually plying their Weapons, when *Hernan Cortes* appeared at a Distance; who upon the Notice given him by *Alverado*, was coming to their Relief with all the rest of his Troops. As soon as the *Indians* spied him, they made a Halt, giving those they pursued time to march off, and continued a while looking on by way of threatening, or to signify that they were not afraid. Yet afterwards they dispersed in several small Bodies, and left the Field. *Cortes* returned to his Quarters without engaging farther, because it was requisite to take care of the Wounded, being eleven in both Companies, of which Number two died; and this was reckoned at that time a very great Loss.

Some Prisoners were taken upon this Occasion, and *Cortes* ordered *Jerom de Aguilar* to examine them separately, to know what it was those *Indians* founded their Obstinacy on, and what Forces they had to support it. Their Answer differed in some Circumstances, but they agreed in declaring that all the *Caziques*, in the neighbouring Countries, were summoned to the Assistance of *Tabasco*, and that the next Day a very powerful Army was to be drawn together, to make an End of the *Spaniards* at once, of which Number the Body that had attacked the two Companies under *Francisco de Lugo*, and *Pedro de Alverado*, was but a small Detachment. This Intelligence gave *Cortes* some Uneasiness, whereupon he resolved to call his Captains together, and advised with them what was proper to be done. He laid before them the Difficulties in which they were engaged, their small Numbers, and the great Preparations the *Indians* had made to destroy them, without concealing the least Circumstances of what the Prisoners had declared. He then proceeded to consider how far their Glory was concerned, representing to them their own Valour, the Nakedness and Weakness of their Neighbours, and how easily they had defeated them at *Tabasco*, at their Landing; but above all, he urged the ill Consequences of turning their Backs upon those Barbarians, which would be a Disgrace of so much Consequence, that, in his Opinion, they must either entirely lay aside the Enterprize of *New Spain*, or proceed no farther, till they had either established Peace, or subdued that Province; but, that he only proposed this, being resolved to act as should be judged most convenient.

Every one gave his Opinion, and they all agreed that it was not practicable to depart that Country, till they had reduced the Inhabitants: Whereupon *Cortes* proceeded to make the necessary Dispositions for that Enterprize. He ordered the wounded Men to be carried on board, the Horses to be landed, the Artillery to be in a Readiness, and every thing to be in Order by the next Morning. As soon as it was Day, giving the Command of the Foot to *Diego de Ordaz*, he and the other Commanders mounted on Horseback, and kept Pace with the

the Artillery, which moved with much Difficulty, because the Ground was boggy; till coming to a Place called *Cintba*, a little less than a League from their Quarters, they discovered, at a great Distance, the *Indian* Army so numerous, that the Eye could not reach to see the end of them.

We will now describe the *Indian* Way of marching and engaging, which may serve upon all Occasions, the Art of War being almost the same among all the Nations in *New Spain*. Most of their Weapons were Bows and Arrows; the Bow-Strings were made of the Sinews of Beasts, or of Thongs of Deer Skin twisted, and their Arrows were headed with Bones ground sharp, or Fish-bones; they used also a kind of Darts, which sometimes they threw, and sometimes managed like a Pike. They had likewise long Swords which they used with both Hands, as we do Falchions made of Wood, in which they fixed sharp Flints; the strongest of them had Clubs pointed with Flints, and there were Slingers who threw Stones with great Force and Skill. The defensive Arms, which are only used by Commanders and Persons of Distinction, were Coats of quilted Cotton, Breast Plates, and Shields of Wood or Tortoise-shell, adorned with Plates of such Metal as they could get, and some made use of Gold as we do of Iron. The rest were naked, and all of them painted with various Dyes and Colours on their Faces and Bodies, which they made use on to strike a Terror into their Enemies, believing that Ugliness made them appear dreadful. Their Heads were covered with diverse Plumes of Feathers, like Crowns raised high to make them appear taller. They had also warlike Instruments and Music, with which they animated their Soldiers and gave Signals; there were Flutes made of great Canes, Sea-shells, and a Sort of Drums made of the Trunk of a Tree, so hollowed and made thin, that they answered to the Stroke of a Stick a very displeasing Sound, but seemed well suited to the Ears of those People. They formed their Battalions of great Numbers without any Order, but had Troops of Reserve to relieve where there was Occasion. They made their Attacks with great Fury and terrible Out-cries, with which they thought to intimidate their Enemies; a Custom which some have accounted among the Brutalities of those *Indians*, without observing that it has been used by many ancient Nations, and not despised even by the *Romans*: We do not argue whether this is a commendable Custom or not, but only say it was not so barbarous in the *Indians*, as to be without Example in other Nations.

Their Armies were composed of Natives, and several Troops of Auxiliaries from the neighbouring Provinces, who came to the Assistance of their Confederates, being led by their Caziques, or some prime *Indian* of their Family. These were divided into Companies, whose Captains led, but could scarce govern, their Men: For when they came to engage, they were directed either by Fear or Rage, as is usual among such Multitudes, being equally eager to attack and to run away. Such was the Soldierly of the *Indians*; and after this manner that Army, or rather Inundation of Men, which seemed to cover all the Country, advanced towards the *Spaniards*; *Cortes* was sensible of the Danger he was in, yet did not despair of the Success, but encouraged his Soldiers with a cheerful Countenance, and posted them under the Shelter of a rising Ground, which covered their Rear, and placing the Artillery where it could do most Execution, he struck into a Wood with his fifteen Horse, advancing far into it in order to fall out and flank them as Occasion should require. As soon as the *Indian* Army came up within a proper Distance, they first shot their Arrows, and then fell upon the *Spaniards* with such Fury and Precipitation, that the Fire-arms and Cross-bows not being able to stop them, they were obliged to make use of their Swords. Great was the Slaughter made among them, and as they pressed on in Throngs, the Artillery destroyed whole Companies; but they were so obstinate, that, as soon as the Ball was passed they closed again, and covered the Loss they had sustained; making loud Cries, and throwing Dust into the Air that the *Spaniards* might not see those who fell, or hear their Lamentations.

Diego de Ordaz acquitted himself as a good Captain and valiant Soldier. But the Enemies being so very numerous, the *Spaniards* had enough to do to stand their Ground; and the Inequality of their Strength began to appear, when *Cortes*, who could not come sooner to the Assistance of his Men, by reason of some Brooks he had to pass, sallied forth from the Wood, and fell upon all that Army, breaking through the thickest of their Battalions, and doing such Execution with his Horse, that the *Indians*, wounded and trodden under Foot, thought of nothing but getting from them, throwing away their Arms as an Obstacle to their Flight. *Diego de Ordaz*, sensible that the Relief he expected was come, by the weak Resistance of the Enemies Van-guard which began to face about by Reason of the Confusion in the Rear, without Loss of time advanced with his Foot, charging those who had oppressed him, with so much Resolution, that he obliged them to give way till he came to the Place where *Cortes* and his Captains had cleared off the Enemy.

They all joined to make the last Effort, and were forced to mend their Pace, for the *Indians* were retiring in an hasty Manner; yet still making head, and employing their missile Weapons; and this manner of renewing, and withdrawing from Fight in good Order they continued till the *Spaniards* came up to them, when finding themselves again attacked, they turned their Backs, and instead of retreating, fled outright. *Cortes* commanded his Men to halt, to avoid the shedding of more Blood; ordering only some Prisoners to be taken whom he might make use of to set on foot a Treaty of Peace, which he chiefly had in view, looking on this War as no more than a Circumstance of his principal Design. Above eight hundred *Indians* remained dead upon the Spot, and the Number of the Wounded was very great. Of the *Spaniards*, two Soldiers were killed, and threescore and ten wounded. The Enemy's Army, according to the Accounts we have, consisted of forty thousand Men; who, although they were naked Barbarians, yet had Hands to do Mischief. And should we grant that they wanted Courage, which is proper to Men, yet they could not be destitute of that Fierceness of which brute Beasts are capable.

4. The next Day *Cortes* caused the Prisoners to be brought before him, among whom were two or three Officers. They discovered in their Countenances great Fear, expecting to be treated after the same cruel Manner they used to treat the Vanquished. But *Cortes* received them with great Courtesy, encouraged them with a cheerful Countenance, and set them at Liberty, giving them some trifling Presents, and telling them at the same time, that he knew both how to conquer and to forgive. This Piece of Humanity had so good an Effect, that within a few Hours several *Indians* came to the Quarters with *Indian* Wheat, Flower, and other Provisions; designing by that Present to facilitate the Peace, which they were to propose from the principal Cazique of *Tabasco*. The People who came on this Embassy were of the meanest Sort, and made no Figure, which *Jerom de Aguilar* took notice of; because it was the Custom of that Country, upon all Occasions, to send Persons of the first Rank. And although *Cortes* was very desirous of Peace, he refused to admit their Proposals, as not coming in due Form, and sent back the *Indians* without so much as seeing them; bidding them, by his Interpreter, acquaint their Cazique, That if he desired his Friendship, he must send Persons of greater account, and after a more decent Manner, to solicit it. The Cazique acknowledged his Fault, and the next Day sent thirty *Indians* of better Quality, with their Ornaments of Plumes and Jewels, wherein all their Pride consisted; they were followed by a Train of *Indians* loaded with another Present of the same kind as before, but in greater abundance. *Cortes* gave them Audience, attended by all his Captains, affecting a grave and severe Countenance.

They approached with very great Submission, and having perfumed him with *Gum Anime*, or *Gum Copal*, and other sweet Scents, they delivered their Embassy, which began with some frivolous Excuses for their past War,

and concluded in earnest Entreaties for Peace. The General represented to them the just Causes he had to be displeased with them, that on a View of their Faults, the Pardon might appear with greater Lustre, and the Peace which he granted them prove more welcome. The Ambassadors received it with great Applause, returning extremely satisfied, and easily enriched with those slight Baubles they so highly valued. Afterwards the Cazique himself came to visit Cortes, accompanied by all his Officers, bringing with him a Present of Cotton Cloths, Plumes of various Colours, and some Pieces of Low Gold, more valuable for the Workmanship than for the Metal; he first made his Present in order to be better received: Cortes caressed him very much, and the Visit passed in Protestations of a reciprocal and sincere Friendship, all transacted by the Interpreter; the Spanish Captains treated the other prime Indians who accompanied the Cazique, and nothing appeared but Signs of Joy and Peace, which they explained by their Countenances and Embraces to supply the Want of Language.

The Cazique took his leave, and appointed another Day for an Interview, and to shew his Sincerity and how much he confided in the General, he ordered his Subjects to return with their Families to *Tabasco*, and assist the Spaniards in whatever they should want. The next Day he came again to the Quarters, with the same Attendance, and twenty Indian Women, well dressed after the Manner of the Country, telling Cortes he brought them as a Present to serve him and his Companions, being very skilful in dressing all Sorts of Meat, and in making Bread of Indian Wheat, which, amongst them, was always the Work of Women; they ground the Grain between two Stones, like those we use for Chocolate, and when reduced to Flower, they made it into Paste, without having any Occasion for Leaven: Then they spread and moulded it upon a Sort of Earthen Plates, which they put over the Fire and baked it; this being the Bread with which God has abundantly supplied that new World (to make amends for the Want of Wheat) and is very agreeable to the Taste, and not offensive to the Stomach. Amongst these Women came one principal Indian, well made, and of more than ordinary Beauty, who was afterwards baptized, and received the Name of *Marina*, and proved very useful in the Conquest, as will appear in its proper Place.

The Pilots pressed the Departure of the Fleet, which, according to their Observations, might be endangered by any longer Stay in that Place. And though Cortes was concerned to leave those People before he had better instructed them, he found himself obliged to think of his Voyage, and Palm Sunday drawing nigh, he appointed that Day for embarking, so ordering it that the Festival might be kept first, according to the Rites of the Church, Religion being always his first Care; at the same time they embarked their Provisions, and made all other necessary Preparations for their Voyage. The Indians assisted in all things with an officious Diligence; and the Cazique, with his Captains, attended Cortes with the greatest Respect and Veneration. When Mass was done, Cortes took leave of the Cazique, and, having confirmed the Peace with further Demonstrations of Friendship, he embarked, leaving these People rather obedient than subject to the King; and as to Religion, so far in the Way to Salvation, as to desire, or at least not to oppose, the Means of obtaining it.

5. The next Day the Spaniards set sail, and, following the Coast to the Westward, came within Sight of the Island of *Guazacoalco*, and without putting in at the Island of *Banners*, had a View of the Island of *Sacrifices* and other Places, which had been before discovered, and forsaken by *Juan de Grijalva*; the Soldiers who had served under him, telling their Comrades what Adventures they had met with in that Expedition; and Cortes learning from the ill Success of that Enterprize, how to manage his own better. At length they arrived at *St. Juan de Ulua* at Noon, and the Ships had no sooner anchored between the Island and the main Land to shelter themselves from the North Winds, than they saw two large Canoes, which

in that Country are called *Piraguas*, coming from the neighbouring Coast with some Indians in them, who drew near without shewing the least Concern, discovering by this Security, and some Signs they made, that they came in a peaceable Manner, and had those on board who desired to be heard. When they came within a small Distance of the Admiral, they began to speak in a strange Language that *Aguilar* did not understand, which much troubled Cortes, being concerned to want an Interpreter, when he had most Occasion for him, looking upon it as an Obstacle to his Undertaking; but Providence, that brings about its Designs, by Ways which to Men appear casual, soon relieved him in this Distress.

The Indian Woman, whom we shall now call *Donna Marina*, was not far from Cortes and *Aguilar*, and guessing by their Looks what they were discoursing, and what they wanted, she told *Aguilar*, in the *Yucatan* Tongue, that those Indians spoke the Mexican Language, and desired Audience of the General, on the Part of the Governor of that Province. This *Donna Marina* was Daughter to the Cazique of *Guazacoalco*, one of the Provinces subject to the Emperor of Mexico, bordering upon that of *Tabasco*, and had, through some Accidents of Life, which are variously reported, been carried away in her Youth to *Xicalango*, a strong Place upon the Confines of *Yucatan*, which was kept by a Mexican Garrison: There she was bred in a poor Manner, no way agreeable to her Birth; till by a fresh Misfortune, either by Sale or being taken in War, she became a Slave to the Cazique of *Tabasco*, who made a Present of her to Cortes. In *Guazacoalco* and in *Xicalango* they spoke the Mexican Language, and in *Tabasco*, that of *Yucatan*, which *Aguilar* understood: So that *Donna Marina* understood both those Languages, and explained to the Indians in the Mexican Language, what *Aguilar* told her in that of *Yucatan*. Cortes making use of this round about Way of speaking by two Interpreters, till such time as *Donna Marina* had learned Spanish, which was not long, for she had a very ready Wit and several natural Endowments which well agreed with her Birth. She was ever a most faithful Interpreter to Cortes, and he confirmed her in his Interest by Ways not altogether so decent, for he had Son by her, called *Don Martin Cortes*, who was made Knight of *St. Jago*, in consideration of the Nobility of his Mother's Birth.

The Indians acquainted him that *Pilpatoe*, and *Teutile*, the one Governor, and the other Captain General of that Province, from the great Emperor *Moteczuma*, had sent them to know of the Commander of the Fleet, with what Intention he was come upon their Coast? Cortes caressed them, gave them a few Baubles, and treated them with some Spanish Wine, and having thus obliged them, answered, "That he came as a Friend, to treat of Matters of great Importance to their Prince and all his Empire; for which Purpose he would meet the two Governors, and hoped to receive the same good Treatment from them, as others of his Nation had done the Year before." And having received some Information concerning the Greatness of *Moteczuma*, his Riches and Form of Government, he sent them away very well contented.

The next Day being *Good Friday*, the Spaniards all landed on Shore near the Fleet, and Cortes gave Orders for landing the Horses and Artillery, and that the Soldiers, in Companies, should go and cut Fascines to entrench themselves, not forgetting to post the necessary Guards at the Avenues, and to build a sufficient Number of Barracs to shelter them from the Heat of the Sun, which, at that time, was very great. The Artillery were planted so as to command the Country, and in a little time they were all under Cover. For *Teutile* sent a great Number of Indians with Provisions, and Orders to assist the Spaniards in that Work: To whom they were of great use, because they brought their Tools edged with sharp Flints, with which they cut Stakes, and fixed them in the Ground; interwove with them the Boughs and Leaves of Palm-trees; forming the Walls and Roofs of a Lodging with much Ease and Diligence, being great Masters in this kind of Architecture, as having in many Places no other Houses, and being less barbarous in proportioning

portioning their Structures to what Nature requires, than those who build vast Palaces where still they cannot find sufficient Room for their Vanity. They also bought some Cotton Cloths with which they covered the Officers Barracks, the better to defend them from the Heat of the Sun. In the best of them *Cortes* ordered an Altar to be set up, on which, when adorned, he placed the Image of the *Virgin Mary*, and at the Entrance a great Cross, in order to celebrate Easter; for Religion was always his chief Care, and in that he was always equally zealous with the Priests. *Cortes* understood by these *Indians*, that General *Teutile* was attended by a considerable Body of Troops, and that he was establishing the Dominion of *Moteczuma*, in some Places newly conquered of this Province, the Civil Government of which was vested in *Pilpatoe*. And the great Care they took to send Provisions, and help the *Spaniards* in building of their Barracks, was not without Artifice, so far as could be gathered; for they were very much terrified with the Account of the Success at *Tabasco*, which had now spread over all the Country; and considering that the Forces with which they were provided were inferior in Strength to those they had vanquished; they had recourse to Presents and Civilities, in order to oblige those they could not resist.

6. They passed the following Day in great Tranquility, but not the less upon their guard; the *Indians* were continually coming to their Quarters, some to work, and others with Provisions, which they trucked. On *Easter-day* in the Morning *Teutile* and *Pilpatoe* came with a very great Attendance to visit *Cortes*; he received them in equal State, surrounded by his Officers and Soldiers. The first Compliments being over, he carried them with him to the great Barrack, which served for a Chapel, it being the Hour of Divine Service, ordering *Aguilar* and *Donna Marina* to tell them, that before he acquainted them with the Intention of his Journey, he was to comply with the Duties of his Religion, and recommend to the God of all other Gods, the good Success of his Proposition. After Service was over, they returned to the Governor's Barrack, who entertained the two Generals at Dinner, and he treated them with great Plenty. The Banquet being over, *Hernan Cortes* called his Interpreters, and, with a determined Air, said, That his coming thither was to treat with the Emperor *Moteczuma* on the Part of Don *Carlos* of *Austria*, Monarch of the *East*, touching Affairs of great Importance, not only to his own Person and Estate, but likewise to the Welfare of all his Subjects; for performing whereof it was necessary for him to appear before his royal Presence, and hoped he should be admitted with all the Civility and Respect that was due to the King who sent him.

The Governors changed Countenance at this Proposal, and seemed to hear it with Dissatisfaction; but before they returned an Answer, *Teutile* ordered a Present he had provided to be brought, and about twenty or thirty *Indians* came in loaded with Provisions, fine Cloths, Feathers of several Colours, and a great Box in which were several Pieces of Gold curiously wrought: Having made his Present with a good Grace and Civility, and finding it was well received and praised, he turned to *Cortes*, and, by the Help of the same Interpreters, prayed him to accept that small Present from two Slaves of *Moteczuma's*, who had Orders to entertain such Strangers as came upon his Coast; but adding, that he must not immediately think of prosecuting his Voyage, it being no easy Matter to speak with their Prince. *Cortes* replied with some Warmth, That Kings never refused to hear the Ambassadors of other Princes: That what belonged to them in this Case was, to acquaint *Moteczuma* with his Arrival, for which he would allow some Time; but that they should likewise let their Emperor know that he came resolved to see him, and determined not to leave his Country with Dishonour to the King whose Representative he was. This bold Resolution of *Cortes*, gave the *Indians* so much Uneasiness, that they durst not reply; on the contrary, they intreated him not to move from these Quarters till the re-

turn of *Moteczuma's* Answer, offering to supply him with all Things that were necessary for the Support of his Soldiers. At this Time, some *Mexican* Painters, who came in the Train of the two Governors, were very busy about drawing upon Cotton Cloths (which they brought ready primed for that Purpose) the Ships, Soldiers, Arms, Artillery, Horses, and every thing else that appeared to them remarkable, of which Variety of Objects they formed different Landscips no way contemptible, either for the Colours or the Drawing.

7. These Pictures were drawn by the Order of *Teutile*, the better to inform *Moteczuma* of that extraordinary Novelty; and, to make those Descriptions more intelligible, they placed some Characters here and there, with which they seemed to explain and give the Signification of the Picture. *Cortes* had notice of what these Painters were doing, and went out to see them; and being informed that they were painting upon those Cloths the Information which *Teutile* was to give *Moteczuma* of what he had proposed, and the Forces he had with him to make it good, he with his usual Wit presently observed, that these Images wanted Action to express the Valour of his Soldiers; and therefore resolved to exercise his Men before them, to give the greater Life and Vigour to the Picture: To this End, he ordered them to Arms, drew up in a Body, commanded the Artillery to be made ready; and telling *Teutile* and *Pilpatoe*, that he would entertain them after the manner of his Country, he mounted his Horse with his Captains: The first ran two and two, after the Manner in *Spain*; and then the whole Troop being divided into two Bodies, they skirmished, at which strange Sight the *Indians* stood amazed, and like Men beside themselves; for observing the obedient Fierceness of those Beasts, they began to think there was something more than natural in those Men that managed them. Immediately, at a Signal made by *Cortes*, the Fire-arms discharged; and, soon after, the Artillery. The Confusion and Astonishment of these People increasing, with such various Effects, that some fell down to the Ground, others began to fly; and those who had most Presence of Mind affected Admiration, to dissemble their Fear.

Then *Cortes* encouraged them, giving them to understand, that, among the *Spaniards*, these were military Diversions. It was presently observed, that the Painters were inventing new Figures and Characters, to supply what was wanting on their Cloths; some painted the *Spaniards* armed and drawn up in form, others, their Horses in Exercise and Motion. They described the Artillery with Fire and Smoke, and represented the very Noise with the Similitude of Lightning, without omitting any of those frightful Circumstances that most directly regarded what their King was solicitous to know. In the mean time *Cortes* returned to his Barrack with the two Governors, and after having presented them with some small *Spanish* Jewels, he prepared a Present of fundry sorts of Curiosities, to be sent from him to *Moteczuma*; to which Purpose he made Choice of several Pieces of the most solid and brightest Glass, to which he added a *Holland* Shirt, a Cap of Crimson Velvet adorned with a Gold Medal representing *St. George*, and a Tapestry Chair; which the *Indians* seemed so much to admire, that it was thought a fit Present for the Emperor. With this small Shew of Liberality, *Hernan Cortes* took leave of the two Governors, who remained as much obliged by his Civilities, as embarrassed by his Designs.

8. The *Indians* halted at a small Distance from the *Spanish* Quarters to consult what Measures they should take. New the Result of this Stop was, that *Pilpatoe* remained there to observe the *Spaniards*; for which Purpose a convenient Spot being fixed, a great Number of Barracks were raised; and in a few Hours there appeared a considerable Village built upon the Plain *Pilpatoe* provided against the Suspicion this Novelty might produce, sending word to *Cortes*, that he staid there to take care of his Entertainment, and the better to supply his Troops with Provisions. *Teutile* proceeded to his own Quarters, and dispatched an Account to *Moteczuma* of all

all that had happened upon the Coast, sending the Pictures which were drawn by his Orders, and *Cortes's* Present, with the utmost Diligence. For this Purpose, the Kings of *Mexico* had a great Number of Couriers distributed among all the principal Roads of the Kingdom, chosen out of the swiftest *Indians*, and bred up to it from little Children. Rewards were paid out of the Public Treasury to those who arrived first at the appointed Place. Those Couriers were relieved at every Town, like our Post-horses, and made the greatest Speed, because they succeeded one another before they were tired, so that the first four of the Couriers never ceased. The Answer came in seven Days, and *Teutile* brought it to the *Spanish* Quarters, together with a Present from *Motexuma*, which loaded an hundred *Indians*; and before he delivered his Embassy, he caused them to lay Mats of Palm-tree Leaves upon the Ground, and place in order upon them the several things of which the Present was composed.

There were various sorts of Cotton Cloth well wove, and so fine, that they could not be distinguished from Silk but by feeling, a Quantity of Plumes and other Curiosities made of Feathers, whose beautiful and natural Variety of Colours the *Indian* Artists knew to mix and dispose with so much Skill, that without making use of artificial Colours, or of the Pencil, they would draw Pictures and imitate Nature. They next produced a great Number of Arms, Bows, Arrows, and Targets, made of the finest sorts of Woods; two very large Plates of a circular Form, the one of Gold, which by its embossing represented the Sun; and the other of Silver, representing the Moon; and lastly, a considerable Quantity of Jewels, Pieces of Gold, some Precious Stones, Collars of Gold, Rings, Pendants after their Fashion, and other Ornaments of greater Weight, in the Shape of Birds and Beasts, so curiously wrought, that notwithstanding the great Value of the Metal, the Workmanship exceeded it. As soon as *Teutile* had brought his Wealth before the *Spaniards*, he turned to *Cortes* and told him, That the great Emperor *Motexuma* sent him these in Return for his Presents, and to shew how much he valued his King's Friendship, but that he did not think it convenient, nor was it possible in the present Posture of his Affairs to grant the Permission he asked, of passing to his Court.

Cortes returned Thanks for the Present, and answered *Teutile*, That it was far from his Intention to be wanting in Obedience to *Motexuma*, but that it was not in his Power to go back without Dishonour to the King, or to forbear persisting in his Demand with all the Earnestness to which he was obliged by the Reputation of a Crown that was honoured and respected among the greatest Princes of the World. The *Spaniards* reasoned amongst themselves very differently upon those Presents, some conceiving great Hopes from conquering so rich a Country, while many concluded, the attacking so powerful a Monarch with such an Handful of Men, to be a Piece of Rashness; but the greatest Part justified the Constancy of their Captain, looking on the Conquest as good as made. *Cortes* gave them leave to talk on, concealing his Sentiments till a proper time; and to keep his People out of Idleness, which was the way to make them dispute less, he ordered two Vessels out to view the Coast and search out some Port or Bay where the Fleet might be more under Shelter, and some more fertile Plain, where they might be accommodated until the return of *Motexuma's* Answer, making a Pretence of the Sufferings of his People in this sandy Soil, where the Heat of the Summer was doubled by Reflection, and the Persecution of the Mosquitoes made even the Hours of Rest uneasy. He appointed Captain *Francisco de Montejo* to command this Cruise, and picked out the Soldiers that were to bear him company, being those that seemed most averse to his own Opinion. He ordered him to run along as far as he could, steering the same Course he had done the Year before with *Grijalva*, and

that he should take notice of what Towns appeared along the Coast, without landing to view them, allotting ten Days for their Return; by which Means he executed what was proper to be done, employed those that were troublesome, and entertained the rest with Hopes of Relief.

9. The Skill and Conduct of *Cortes* appear manifestly in the Prudence with which, in his Circumstances, he took such Precautions. But tho' they made him somewhat easy for the present, yet they were so far from filling him with Confidence, that on the contrary his Mind was never more occupied than at this Juncture. He saw a new Scene opened, not only unexpectedly, but directly opposite to his Expectations. He found, instead of small and narrow Districts, which hitherto the *Spanish* Arms had easily subdued, a wide extended Empire, to which *Spain* itself was, in comparison, a Province; and this under the Dominion of one potent Monarch, whose Power descended to him through a Line of glorious Princes, renowned for the Wisdom of their Politics and the Compass of their Conquests: He found this Monarch well apprized of his Designs, and determined to oppose them with the whole Force of his Empire.

On the other hand, these Informations so clearly convinced him of the Weakness, or rather Inequality of his Army; and he was at the same time so sensible of the Difficulties, which perplexed him in the Command of it, that he began seriously to doubt whether it was possible for him to perform what his Ambition had prompted him to undertake. He kept this Concern of his so well concealed, that nothing of it appeared either in his Countenance or his Language, the former appearing more open, and the latter assuming a more resolute Tone than in times when for want of good Information he had less Fears about him; he determined, however, not to relinquish his Enterprize, but to push it as far as it would go, and never to think of a Retreat till he was fully satisfied that the Obstacles that lay in his way were absolutely insurmountable. He applied himself therefore with the utmost Diligence to raise the Spirits, and heighten the Fortitude of his Soldiers.

In order to this, he took Pains to shew them the great Advantages derived from their Discipline, and the small Strength that occurred from Numbers, where they wanted that material Circumstance. He taught them to observe how favourable the Divisions of the *Indians* among themselves were to their Design, and of what vast Importance it was to preserve the Good Will of those who were inclined to favour them, which was no otherwise to be done than by behaving towards them with all the Kindness and Clemency imaginable. But above all, he made it his Business to inflame their Hopes with the Prospect of that vast Wealth which must accrue to them from the Possessions of so rich a Country, and for the sake of which, it would be requisite, and at the same time highly reasonable to forego certain trifling and temporary Advantages, particularly such as resulted from plundering the little Towns that fell into their Hands, and treating all that came under their Power as Vassals and Slaves. He shewed them that this must necessarily break their Spirits, and enervate their Power, which at the same time that it rendered these *Indians* useless as Subjects, lost all that Accession of Strength which might be derived from them as Allies, and without which it was simply impossible they could carry on their Enterprize with any Probability of Success.

By a frequent and constant Practice of these Methods, he brought his Troops to a Degree of Confidence, which as yet he wanted himself, and rendered them not only willing to obey his Commands, but impatient even of necessary Delays, and so little afraid of Danger as to treat with Contempt such as attempted to insinuate, that their General engaged in an Undertaking to which his Forces were utterly unequal.

SECTION IX.

The Continuation of HERNAN CORTES's Expedition, his Alliances with several Indian Nations, his Success in quelling various Seditions in his own Army, and his Preparation for his March to Mexico, by burning his whole Fleet.

1. *The State of the Mexican Empire at this Time, and the Causes of Motezuma's Apprehensions, which diffuse themselves through the whole Indian Nation.*
2. *The Answer sent by him to Cortes, and the Resolution taken by the Spanish General thereupon, which produces a Rupture with the Indians.*
3. *Cortes defeats a Conspiracy formed against him, embraces the Friendship of the Zempoallans, and under Colour of settling a Colony institutes a new Government amongst his Spaniards.*
4. *Resigns up his Commission to the new Magistrates, receives it again, and quashes another Conspiracy.*
5. *The Army continues its March to Zempoalla, where Cortes brings the Cazique to have a perfect Confidence in him and in his People.*
6. *He prosecutes his Journey to Quiabillan, gains over the Cazique of that Country also, and persuades him to seize Motezuma's Commissioners.*
7. *He encreases the Number of his Allies, founds the City of Vera Cruz, and gives Audience to fresh Embassadors from the Emperor of Mexico.*
8. *The Spaniards, by an artful Contrivance, are drawn in by their Indian Confederates to attack the Inhabitants of Zimpazingo, with whom, coming to a better Understanding, they soon make Peace.*
9. *Cortes returns to his own Colony at Vera Cruz, sends Deputies to Spain to justify his Conduct, and prevents some Disputes that might have happened from Sharers in his Discoveries.*

1. **T**HERE cannot occur, in any History, a more surprizing Event than that the Rumour of the Approach of *Cortes*, with his Handful of *Spaniards*, should strike so great an Empire as that of *Mexico* really was, with so much Terror and Amazement. The nearer he came the more *Motezuma* was alarmed; the more frequent Councils he held, and in each of these discovered more and more Uneasiness and Apprehension, which quickly infected his Grandees; for in all Countries, and in all Ages, Courtiers are, in some Measure, Copies of their Monarchs, especially in arbitrary Governments; and therefore, we need not wonder that his Fear first diffused itself among his Nobility, and from them, through the whole Mass of his Subjects, so that the Confusion became general, and the approaching Destruction of their Government, might in very legible Characters be read in the Faces of the whole Nation. But to conceive this Fact clearly, to understand it perfectly, and to form from thence just Notions both of its Causes and Consequences, it is absolutely requisite that we should take a View of the State of this Country, and of its Government at this Juncture, which will, indeed, require Time and Room; but, the Importance of the Matter considered, I hope it will appear that neither can be better employed.

The Empire of *Mexico* was then at its greatest Height of Glory, having under its Dominion almost all the Provinces which had been discovered in *North America*, which were governed by *Motezuma* himself, or by the petty Kings or Caziques, his Tributaries. The Length of it extended from East to West above five hundred Leagues, and the Breadth from North to South, in some Places, was two hundred; a Country populous, rich, and plentiful. On the East it was bounded by the *Atlantic Sea* (now called the *North Sea*) and extended along all that great Space of Land, between *Panuco* and *Yucatan*: on the West it reacheth the other Sea, being washed by the *Asiatic Ocean* (or Gulph of *Anian*) from Cape *Mendocino*, to the farthest Part of *New Galicia*. On the South it stretched out farther, running along the South Sea from *Acapulco* to *Guatimala*, approaching by the Way of *Nicaragua* to the Isthmus or narrow Neck of Land, which unites the two *Americas*. On the North it extends as far as *Panuco*, including that Province, but was streightened considerably by the Mountains possessed by the *Chichimecas* and *Otemies*, a barbarous People, without Government, living in the Holes of Rocks, feeding upon the Game they kill in hunting, and the Fruits of such Trees as grow wild; but so dextrous in the use of their Arrows, and in making their Advantage of the Passes of the Mountains, that they had often withstood the whole Power of *Mexico*, being satisfied with not being conquered, and only desiring to preserve their Liberty amongst the wild Beasts.

This Empire grew to this vast Greatness in little more than one hundred and thirty Years; for the *Mexicans*, a warlike Nation, were always making room with their Arms, among those who inhabited that Part of the World. They were, at first, governed by a valiant Captain, who made them Soldiers and sensible of military Honour. Afterwards they chose a King, giving the supreme Dominion to him, who had the greatest Reputation for Valour, being acquainted with no Virtue but Fortitude, or if acquainted with other Virtues, they looked upon them as much inferior: They always observed this Custom, without regard to hereditary Succession; yet, where Merit was equal, they preferred the Royal Blood; and the same Wars by which their Kings acquired their Titles to the Crown, enlarged the Monarchy.

At first Justice supported their Arms, for the Oppression of their Neighbours forced them to Defence; but their Power afterwards increasing, Justice was laid aside, and Tyranny took place. *Motezuma* was the eleventh King, and the second of that Name, a singular Person, and much esteemed among the *Mexicans* before he began to reign. He was of Royal Blood, and a Soldier in his Youth; he raised his Character by several heroic Actions, and gained the Reputation of a valiant Captain: He returned to the Court, and finding himself applauded and respected as the first Man of his Nation, he entertained Hopes of grasping the Scepter at the next Election. He then employed all his Skill in gaining Friends, to which end he made use of many Arts. He affected great Obedience towards the King, and extraordinary Modesty and Composure in his Words and Actions; carefully preserving such an austere Gravity in his Countenance, that the *Indians* were wont to say the Name of *Motezuma* became him well, which, in their Language, signifies a *surly Prince*, though he endeavoured to temper his Severity by his Liberality.

He also gained the Character of being zealous for his Religion: And to this end he built an Apartment in the most frequented Temple, to which he retired in the Sight of all the People, and stayed there many Hours. He gained so much Veneration by these outward Appearances, that when the King his Predecessor died, the Electors gave him their Votes unanimously, and the People received him with great Acclamations; he made a shew of refusing, suffering himself to be courted to comply with his own Desires, and seemed to accept the Crown with Reluctancy: But no sooner was he possessed of it, than all that Artifice which he had forced upon his natural Temper ceased, and he discovered those Vices that had been hitherto covered with the Shew of Virtues.

The first Action by which he manifested his Pride, was the discarding all who belonged to the Royal Family,

mily, which till his Time was composed of middling People; and under colour of greater Decency he made his Nobles serve him, even in the meanest Employments of his House. He shewed himself seldom to his Subjects, and only when it was necessary to his Ministers and Domestics, looking upon Retirement and Melancholy as a Part of Majesty. And for those who obtained Leave to come into his Presence he invented new Obeisances and Ceremonies, enlarging Respect almost to Adoration. He persuaded himself that he had the intire Command of the Lives and Liberties of his Subjects, and exercised great Cruelties that he might put it out of Doubt with others; he imposed new Taxes, without Necessity, at a certain rate on each Head of his Subjects, and exacted it with so much Rigour, that even Beggars were not exempted bringing to his Treasury some mean things, which were received and then thrown away before their Faces.

These violent Actions made his People fear him, but as it is usual for Fear and Hatred to go together, some Provinces rebelled; to reduce which, he went himself in Person, being too jealous of his Authority to suffer any other to command his Armies. But, however, it cannot be denied, that he had a martial Inclination and Spirit, and that none were able to resist his Power, except the Provinces of *Mecoacan*, *Tlascala*, and *Tezcaca*, and he was wont to say, "He did not subdue them because he wanted those Enemies to supply him with Captives for the Sacrifices of his Gods." He had reigned fourteen Years when *Cortes* arrived on his Coast, and had spent all that Time in establishing the most thorough Tyranny that any History has recorded. Many strange things fell out at this Juncture, which were magnified by Report, and falling in with the superstitious Temper of the Emperor and his Subjects, formed such a Series of Prodigies as frightened all Ranks and Degrees of People, in a Manner, out of their Wits.

2. Whilst *Moteczuma's* Court was taken up with melancholy Reflections, *Hernan Cortes* endeavoured to obtain some Account of the Country; at that time *Francisco Montejo* returned from his Voyage, having coasted some Leagues to the Westward, and discovered a Town called *Quiabitsan*, situated in a fertile Soil, and well cultivated, near an anchoring Place or Bay, capacious enough, where, in the Opinion of the Pilots, the Ships might ride and be secure, under the Shelter of some great Rocks which broke the Force of the Winds. This Place was distant from *St. Juan de Ulua* about twelve Leagues, and *Hernan Cortes* began to consider it as a commodious Situation: But before he came to a Resolution *Moteczuma's* Answer arrived.

Teutile, with the principal Captains of his Troops, came with their little perfuming Pans, burning Gum Copal. After the Smoaking, Courtesies, and Ceremonies were over, *Teutile* ordered *Moteczuma's* Present to be produced, which was somewhat less, but of the same Sort of Goods and Pieces of Gold as came with the first Embassy. All that they brought particular, were four green Stones like Emeralds, called *Chalcuities*; and *Teutile* told *Cortes*, with a great deal of Gravity, that *Moteczuma* had sent those Stones to the King of Spain as Jewels of an inestimable Value. The Embassy was delivered in Terms resolute and disagreeable, and the Conclusion of it was to dismiss the Guests without giving them leave to reply. Night drew on, and when *Cortes* was beginning his Answer, the *Ave-Maria* Bell rung in the Barrac, that served for a Chapel, and he kneeled down to say that Prayer, as did all the rest after his Example. Their Silence and Devotion struck the *Indians* with Admiration, and *Teutile* asked *Donna Marina* the Meaning of that Ceremony; *Cortes* understood their Question, and thought it proper to make use of this Opportunity, while he satisfied their Curiosity, to talk to them upon the Subject of Religion, beginning to return to his Answer, by telling *Teutile* that one Point of his Embassy, and the principal Motive which his King had to offer his Friendship to *Moteczuma*, was the Obligation Christian Princes lay under to oppose Idolatry, and the Desire he had to instruct him in the Knowledge of the Truth, and to help him to get free from the Slavery of the Devil, the invisible Tyrant of his

Kingdoms, who, in reality, held him a Slave and a Vassal, though, in outward Appearance, he was so powerful a Monarch; and that coming from such remote Countries upon Affairs of such a Nature, and in the Name of another more powerful Monarch, he could not omit making new Efforts, and persevering in his Instances till he should prevail to be heard: Since he came on a peaceful Account, as appeared by the small Number of his Men, from which no Suspicion could be had of greater Designs.

No sooner had *Teutile* heard the Resolution of *Cortes*, than he started up hastily, and with some Sort of Impatience, between Anger and Confusion, told him, That hitherto the great *Moteczuma* had treated him as a Guest, but that if he continued obstinate it would be his own Fault if he found himself treated as an Enemy; and, without staying for an Answer, or so much as taking leave, he turned his Back and went hastily out of his Presence, followed by *Pilpatoe* and the rest of his Attendants. *Hernan Cortes* was a little startled at *Teutile's* Proceeding, but so much Master of himself, that, turning to his People with a Smile in his Countenance, "We shall see, says he, where this Challenge will end; we know, for the most Part, Threats are the Effects of Fear." And that very Night the Guards were doubled, and *Cortes* provided against what was possible, as against a Thing certain, for Commanders can never be too careful. As soon as Day appeared the *Spaniards* found a considerable Alteration, which gave them some Disturbance; for those *Indians* which inhabited *Pilpatoe's* Cabins were retired, and not a Man appeared in all the Country: Those also kept away who used to bring Provisions from the neighbouring Towns.

These Beginnings of Want were sufficient to make some Soldiers begin to be uneasy, looking upon it as very unadvised to think of settling in that Country, which Murmuring, some Friends of *Velasquez* took Advantage of, and began to exclaim, saying in common Discourse, That *Hernan Cortes* had a Mind to destroy them, and ambitiously pursued a Design without a Force proportioned to the Undertaking. That the Intention of maintaining themselves with such a Handful of People in the Dominions of so powerful a Prince, would be judged rash by all Men. And that it was now necessary that they should all demand to return to the Island of *Cuba*, in order to refit the Fleet and reinforce the Army.

Cortes being informed of this, made use of his Friends and Confidants to enquire the Opinions of the rest of his Men, and found that he had on his Side the most, and those too of greatest Consequence, upon which he suffered himself to be seen by the Malcontents. *Diego de Ordaz* was the Person who spoke in the Name of all, and with some Heat and Disrespect told him, That as his Forces were very unequal to the Attempt he was about to make, his Soldiers thought he would do much better to return and endeavour to get such Reinforcements as might enable him to pursue his Design with some Probability of Success. *Cortes* heard him patiently, and then told him calmly, that if all the Soldiers were of that Opinion they were very unfit for such an Enterprize, and he would think of returning home.

3. After *Ordaz* and his Party had left *Cortes*, he gave Direction for publishing the Return to the Island of *Cuba*, and ordered the Captains should embark with their respective Companies on board the Vessels under their Command, and be ready to sail the next Day early. But no sooner was this Declaration published, than those who were under-hand in the General's Interest began to stir in the Affair, crying out, That *Cortes* had deceived them by professing he meant to settle in that Country, that they would not leave it, that if he had a Mind to retire he might, with such as were willing to follow him, for they should not want some Gentleman that would take the Command. This Clamour was so well managed, that it brought over many that had been forced or persuaded into the contrary Faction; and *Cortes's* Friends who had stirred up one Part were obliged to appease the other.

They commended their Resolution, and offered to speak to *Cortes* to suspend the Execution of his Order, and

and before this Ardour cooled they went to him, attended by many of the Soldiers, in whose Presence they told him in a high Strain, That the Troops were upon the Point to mutiny on Account of his Order: They complained that he had taken such a Resolution without the Advice of their Captains: They put him in mind of what had happened to *Juan de Grijalva*, whose Disgrace was occasioned by his not making a Settlement in the Country he had discovered, and maintaining himself there; for which he was treated as a pusillanimous Person, and the Command of the Fleet taken from him: They told him, in short, what he had directed should be told him, which he received as if it had been unexpected News. When they had done, he said that he had been misinformed, that he would proceed with such as were willing, that he would constrain nobody, but, on the contrary, would cause a Ship and every thing necessary to be provided for carrying back to *Cuba*, such as found they had not Courage enough to follow him and his Friends.

This Resolution met with great Applause, for some made Rejoicings because they were sincerely glad, and others that they might not be distinguished from those that really were so. None were so bold, at that time, as to contradict the making of a Settlement: Nor did those very Men who had before been Malcontents know what to say for themselves. But *Cortes* admitted those Excuses they offered without enquiring further into the Affair, laying that up for a better Opportunity. It happened that whilst *Bernal Diaz del Castillo*, with another Soldier, stood at one of the Avenues, they saw five *Indians* coming along the Road next the Sea-side, towards the Quarters, and thinking them too small a Number to alarm the Army, they suffered them to approach.

They stopped at a little Distance, and signified by Signs that they came in a peaceable Manner, with a Message to their General; *Diaz* went with them, leaving his Companion in the same Post to observe if any more followed. *Cortes* received them very civilly, ordered them to be well treated before he heard them, and observed they were of another Nation, as differing from the *Mexicans* in their Habit, though, like them, they had Rings in their Ears and Lips, with Jewels hanging to them. Their Language also had a different Sound, and when *Aguilar* and *Donna Maria* came, it appeared that they spoke in a different Idiom, and it fell out happily that one of them understood, and with some Difficulty pronounced, the *Mexican* Language, by which means, and not without some Trouble, it was known that they were sent by the Lord of *Zempoalla* to visit the Captain of those valiant People, whose great Actions in the Province of *Tabasco* had reached his Ears; and to inform him, that being a warlike Prince, and a Friend to brave Men, he desired his Friendship.

They dwelt much upon the Value their Master had for good Soldiers, as doubting least the *Spaniards* should attribute that to his Fear, which they would have thought the Effects of his Inclination. *Cortes* very courteously accepted of the Friendship proposed to him on the Part of their Cazique, looking upon it as a particular Favour from Heaven, that this Embassy should arrive at a time when the *Mexicans* had left him, of whom he was now growing jealous; and he put the more Value upon it when he understood that the Province of *Zempoalla* was in the Road to that Place which *Francisco de Montejo* discovered from the Coast whither he was thinking to remove his Quarters. He asked the *Indians* some Questions, to inform himself of the Forces of the Cazique.

It being asked how it came to pass that they (being so near) had so long delayed coming with this Proposal, they answered, that the *Zempoallans* had nothing to do where the *Mexicans* appeared, whose Cruelties were abhorred by their Nation. This Intelligence was not disagreeable to *Cortes*, and diving farther into it, thro' Curiosity, he understood that *Moteczuma* was a cruel Prince, abhorred for his Pride and Tyranny, that many of his People were subject out of Fear; and that some Nations were desirous to free themselves from his Yoke. This made his

Power appear the less formidable, and several Stratagems and Means of increasing his Army came into his Head, which gave him some Sort of Encouragement.

The first that occurred, was to take part with those afflicted People, believing it would not be difficult to form a Party against a Tyrant, among his own Rebels. So he reasoned then, and it fell out afterwards accordingly: He immediately dismissed those *Indians* with some Gifts, in token of Friendship; and told them he would soon come and pay their Master a Visit, in order to establish a Friendship with him, and give him the Assistance he should stand in need of.

His Intent was to pass through the Province, and take a View of *Quiabitslan*, where he had Thoughts of fixing his first Settlement, from the good Account he had received of its Fertility; but it behoved him, for other Ends, which he was then contriving how to compass, to hasten the forming his small Corporation in his present Quarters, although he was to remove the Troops to a Place more commodious: He communicated his Resolution to those Captains that were his Confidants, and having by this Means smoothed the Way for what he had to propose, he assembled the Men in order to name the Officers of the new Government. At which short Conference, those that were acquainted with the Mind of *Cortes* prevailed; and *Alonso Portocarrero*, and *Francisco de Montejo* were appointed Alcaldes, *Alonso Davila*, *Pedro*, and *Alonso de Alverado*, and *Gonzalo de Sandoval* were Regidores. The chief Alguazil and Procurator General *Juan de Esculante*, and *Francisco Alverez Chico*.

They also appointed other inferior Officers; and, having taken the accustomed Oath, to observe Reason and Justice, according to their Duty, for the greater Service of God and the King, they took Possession, and began to exercise their Employments with the usual Solemnity, calling their new Settlement by the Name of *Villa Rica de la Vera Cruz*; which Title it received in the Place where it was afterwards fixed, being called *Villa Rica*, in Remembrance of the Gold they had seen in that Country, and *de la Vera Cruz*, in Acknowledgment of their landing there, on the *Friday of the Cross*, or *Good Friday*, as we call it. *Cortes* was present as a private Person among the other Members of the Colony, and, though he could not easily lay aside that kind of Superiority which is wont to consist in the Respect which others pay, he endeavoured to support the Authority of those new Ministers, and by his Respect to reduce the others to obey them.

4. The next Day in the Morning the Council met, under colour of consulting about some Points relating to the Preservation and Augmentation of the new Settlement, and soon after *Hernan Cortes* desired Admittance, to propose an Affair which concerned the public Good. The Council rose up to receive him, and he, paying his Respect to the Magistracy of the Town, went and took his Seat immediately next to the first Regidore, and then laid open the Reason which induced him to disapprove that Commission under which he had hitherto acted; and having finished his Discourse, he threw upon the Table the Commission given him by *Diego Velasquez*, kissed the Truncheon, and delivered it into the Hands of the Alcalde, and retired to his Barrac.

He was under no Uneasiness about the Event, for he had so disposed Matters that he ventured but little in the Resolution; but it must be confessed, that the Manner of acting was very handsome and noble, and no less commendable, than the Art he used to supply the Defects in his Authority. The Council soon resolved upon the Election, for some had considered what they were to propose, and others had nothing to reply: They all voted to admit the Resignation of *Cortes*; but that he ought to be obliged to take upon him the Command of the Army again, the Town giving him his Commission in the Name of the King, during the Time, and in the Interim, until his Majesty should otherwise order. And they resolved to communicate the new Election to the People, either to see how they would receive it, or, in order to be satisfied of their Approbation. The People were called together by the Voice of a Cryer; and the

Renunciation of *Cortes* being published, with the Resolution of the Council, they received such Applause as was concerted.

Some congratulated the Council on their good Election; others demanded *Cortes*, as if he had been denied, and if any were of a contrary Opinion they dissembled, and took care not to be remarkable by their Silence. This Work being over, the Alcaldes and Regidores went with the greatest part of those Soldiers to the Quarters of *Cortes*, and acquainted him that the Town of *Villa Rica de la Vera Cruz* had, in the Name of the King *Don Carlos*, with the Consent and Approbation of the Inhabitants in full Council, chosen and appointed him General of the Army of *New Spain*; and, in case it were necessary, did require and command him to take upon him that Post, it being convenient for the public Good of the Town and his Majesty.

Cortes accepted of the new Command with great Respect, and now began to govern the Troops with another kind of Authority, which had its Effect in the Obedience of the Soldiers. The Dependants upon *Velasquez* resented this Alteration in a very indiscreet Manner, for they could not disguise their Vexation, nor would they give way to the Current which they were not able to stem. They endeavoured to invalidate the Authority of the Council, and cast Reflections on *Cortes*, blaming his Ambition, and talking with Contempt of those that were deceived. And, as Scandal has its hidden Poison, and an unknown Power over those that hear it, it spread in their Conversation, where there wanted not some who hearkened to, and endeavoured to foment it.

Cortes did all in his Power to remedy this Inconvenience, apprehending it might draw away those who were already disquieted, or put those into a Commotion who were easily stirred up. He had already found by Experience how little his Patience availed, and gentle Means made the Evil worse, and therefore resolved to make use of Severity, which generally has the best Effect upon the Insolent. He ordered *Diego de Ordaz*, *Pedro Escudero*, and *Juan Velasquez de Leon*, to be seized, carried aboard the Fleet, and put in Irons. This Action struck a great Terror into the Troops, and it was his Design to improve it, declaring in a very positive and resolute manner, that he seized them as seditious Persons, and Disturbers of the public Peace; and, that he would proceed against them, and make them pay for their Obstinacy with the Loss of their Heads.

In which Disposition he continued some Days, without proceeding to the Rigour of Justice; for he rather desired to reform, than punish them. At first he suffered none to go near them, but afterwards permitted it, artfully making use of this Permission for some of his Confidants to endeavour to reduce and bring them to Reason, which in time they compassed, he suffering himself to be pacified so effectually, that he made them his Friends; and they faithfully stood by him in all the Accidents which afterwards befel him; believing that they owed their Lives to his Clemency only.

5. The Persons before-mentioned were no sooner imprisoned than *Pedro de Alverado* marched with a hundred Men to view the Country, and bring in Provisions; for they began to be sensible of the Want of those *Indians* who used to provide for the Army. He was ordered to commit no Hostility, and he had the good Fortune to perform his Commission with little Trouble. At a small Distance he came to some Villages, the Inhabitants whereof had fled into the Woods, but had left their Houses well provided, and without doing any Damage either to them or their Furniture. The Soldiers took what they had Occasion for, and returned to their Quarters thoroughly loaded, and very well pleased. *Cortes* immediately disposed his March as he had resolved, and the Ships accordingly sailed for the Bay of *Quiabistan*; he followed by Land, taking the Road of *Zempoalla*, keeping the Coast on his Right, and sending a Party before to discover the Country, providing against all Accidents which might happen in Circumstances where Security might be justly accounted Neglect.

They reached in a few Hours the River of *Zempoalla*, and finding it deep, they were obliged to make use of

some Canoes, and other Vessels of Fishermen, which they found on the Shore; in which the Soldiers passed over, making their Horses swim. Having overcome this Difficulty, they arrived at some Houses in the District of *Zempoalla*; and they took it for no good Sign, not only finding them forsaken by the *Indians*, but also without either Furniture or Provisions, only they left in their Temples several Idols, with various Instruments, or Knives made of Flint, and some miserable Remains of human Victims scattered upon the Ground, which at the same time moved Compassion, and struck them with Horror. Here they first saw the *Mexican Books*, which have been already mentioned: There were three or four of them in the Temples, which was thought contained the Rites of their Religion, each made of a long thin varnished Cloth, which they folded in equal Foldings, so that every Fold made a Leaf, and all together made up the Volume like ours to Appearance, and were written or painted with that kind of Cyphers used by the Painters of *Teutile*.

The Army were presently quartered in the best Houses, and passed the Night somewhat uneasily, their Arms in Readiness, with Sentinels at a convenient Distance. The next Day they continued their March in the same Order along the great Road, which turned off to the Westward, leading farther from the Shore, and during the Morning, they saw no Person of whom to gain Intelligence; which gave them Uneasiness, till, entering into some very pleasant Meadows, they discovered twelve *Indians*, who were coming in search of *Cortes* with a Present of Hens and Bread, sent him by the *Cazique* of *Zempoalla*; very earnestly entreating him not to fail of coming to his Town, where he had provided Quarters for his Men, and where he should be more plentifully entertained. By these *Indians* he understood, that the *Cazique's* Residence was at a Town one Sun's Distance from that Place, which, in their Language, signifies the same as one Day's March; for they understood not the Division of Leagues, but measured Distance by Suns, counting Time, and not the Way. *Cortes* dismissed six of the *Indians*, with many Thanks for the Present, keeping the other six to shew him the Way, and to ask them some Questions; for he was not entirely satisfied with this kind Treatment, which being so much unlooked for seemed the less to be depended on. That Night they halted in a small Village, thin of Inhabitants; but very desirous to entertain the *Spaniards* well: And by the Behaviour of those People to the *Spaniards*, judged that their Nation was inclined to Peace; nor were they deceived in their Conjectures.

In the Morning the Army moved towards *Zempoalla*, following the Guides with all necessary Caution, and towards Evening there came twenty *Indians* forth, to receive *Cortes*, well dressed after their Fashion, who, after having paid their Respects, said, That their *Cazique* did not come with them, by reason of some Impediment, but had sent them to pay that Respect on his Part, being very desirous to be acquainted with such valiant Guests, and to receive them into his Friendship and his Esteem. The Town was large and beautiful, situated between two Rivers, which fertilized the Country, descending from some Mountains at a small Distance, which were covered with Trees, and easy of Ascent. The Buildings were of Stone, covered and adorned with a sort of Lime very white and shining, and afforded a pleasant and noble Shew at a Distance, insomuch that one of the Scouts, who was sent before, returned in haste, crying aloud, That the Walls were of Silver; which Mistake made much Mirth in the Army, where many at first perhaps believed it, who afterwards made a Jest of his Credulity.

The Squares and Streets were filled with People, who came to see the Entry without any Arms that could give Suspicion, or any other Noise than that which usually proceeds from a Multitude. The *Cazique* came out to the Gates of his Palace, and his Distemper appeared to be a monstrous Fatness, which oppressed and disfigured him: He drew near with some Difficulty, supported by the Arms of some noble *Indians*, by whom he seemed to direct his Motion. His Habit was a Mantle of fine Cotton,

Cotton thrown over his naked Body, enriched with various Jewels and Pendants, which also he wore in his Ears and Lips: A Prince of a very extraordinary Make, in whom Weight and Gravity agreed wonderfully well. It was necessary for *Cortes* to put a Stop to the laughing of the Soldiers. But as soon as the *Cazique* began his Discourse, receiving *Cortes* with his Arms, and welcoming the rest of the Captains, he shewed his good Sense, and by his Speech forced a Respect to his Person.

He discoursed much to the purpose, and shortened his Compliments with Respect and Discretion, bidding *Cortes* retire to rest after his Journey, and quarter his Men, after which he would visit him in his Quarters, and talk more at Leisure about their common Interests. He had provided Quarters in square Courts which had many Chambers, where they were all accommodated, and plentifully furnished with all they had Occasion for. After which the *Cazique* made way for his Visit, by sending a Present of Jewels, of Gold, and other Curiosities, to the Value of above 2000 Pefos, and soon after came himself with a splendid Attendance, in a Chair, carried on the Shoulders of the Chiefs of his Family. *Cortes* went forth to receive him, attended by his Captains, and, giving him the Precedence and the Right-hand, retired with him and his Interpreters, for he thought it convenient to talk to him without Witnesses. After having made him the usual Speech about the Intent of his coming, the Grandeur of his King, and the Errors of Idolatry; he proceeded to tell him that the Design of those valiant Troops was to redress Wrongs, punish Violence, and take Part with Justice and Reason.

He touched on that Point on purpose to draw him in, by Degrees, to complain of *Moteczuma*, and to discover what Advantages might be expected from his Indignation, of which he had been before informed. It presently appeared, by the Change of his Countenance, that *Cortes* had touched the right String; and, before he resolved on an Answer, he began to sigh, as one who found a Difficulty in making his Complaints: But at length, his Resentment prevailing, he broke out into Lamentations of his Unhappiness, and told him, That all the *Caziques* of the neighbouring Countries were under a miserable Slavery, groaning under the Oppressions and Tyranny of *Moteczuma*, without sufficient Force to free themselves, or Courage to think on a Remedy; that he caused himself to be served and adored by his Subjects like one of his Gods, and would have his Violencies revered like the Decrees of Heaven: But that it was not his Desire to have him adventure to support them, because *Moteczuma* was too powerful and strong for him to resolve to declare himself his Enemy, nor would it be agreeable to the Laws of Civility to pretend to his Friendship by selling, at so great a Price, the small Service he had done him.

Cortes endeavoured to comfort him; telling him, That he should little regard *Moteczuma's* Power, having Justice on his Side; but that he was obliged to pass on to *Quiabisslan*, where the Oppressed and Needy should find him ready to assist them, and all who, having Reason on their side, stood in need of his Arms, which he might communicate to his Friends and Confederates; assuring them all, that *Moteczuma* should not be able to oppose it while he undertook their Defence. With this they both took Leave, and *Cortes* prepared for his March, having gained the Good-will of that *Cazique*, and being extremely well pleased, in himself, at the better Prospect of his Designs; which, from being only distant Views of the Imagination, began now to appear possible.

6. The Army being ready to march, they found four hundred *Indians* provided to carry their Baggage and Provisions, and to help to conduct the Artillery, which was a great Ease to the Soldiers, and looked upon as an extraordinary Respect of the *Cazique*, till they understood, from *Donna Marina*, that it was a common Practice to assist their Allies with that Sort of Luggage-carriers, which, in their Language, they call *Tamenes*, who are able to travel five or six Leagues with three Quarters of an Hundred Weight on their Backs. The Country they were entering was pleasant and delightful; Part covered with great Trees, and the rest cultivated; at which Sight the *Spaniards*

went on cheerfully, rejoicing at their good Fortune in marching through so plentiful a Country. At Sun-set they found themselves near a little Village unpeopled, where they staid to avoid the Inconveniency of entering *Quiabisslan* by Night; and arrived the next Day by Ten in the Morning.

The Buildings appeared, at a Distance, on an Eminence of Rocks, which seemed to serve instead of Walls; a Situation naturally strong, the Avenues narrow and steep, which they found without Defence, and yet they entered with Difficulty. The *Cazique* had retired with the Inhabitants to discover, at a Distance, the Intention of the *Spaniards*; and the Troops took Possession of the Town, without finding any Person from whom they could gain the least Information, till coming to a Square, where the *Indians* had their Temples, there came out Fourteen or Fifteen *Indians* to meet them, handsomely dressed, after their manner, and with Abundance of Civilities endeavoured to cover their Fear with Respect. *Cortes* encouraged them by his Caresses, and gave them some Beads of blue and green Glass, a sort of Coin, which for its Effects began to be valued even among those who were acquainted with it; with which good Treatment they recovered from the Fright, and gave him to understand, That their *Cazique* had withdrawn himself to prevent a War, by putting himself on his Defence, and not adventuring his Person by trusting to armed Troops which he did not know; and it was impossible to hinder the Flight of the Inhabitants, who were under less Obligations to run themselves into Danger. But that as soon as the rest should be sensible of the Goodness of such Guests, they would immediately return to their Houses, and account it a great Happiness to serve and obey them. *Cortes* gave them all the Assurances possible, and, whilst they were gone with this News, he gave strict Orders to the Soldiers to treat the *Indians* well, who soon shewed what Confidence they had in the *Spaniards*; for that very Night some Families returned, and, in a little Time, the Town was filled again with its Inhabitants.

Some time after the *Cazique* returned, bringing with him the *Cazique* of *Zempoalla*. They both came in Litters, on the Shoulders of Men. He of *Zempoalla* made a handsome Excuse for his Neighbour, and, after some short Discourse, they introduced their Complaints of *Moteczuma*, recounting, with great Warmth, and sometimes with Tears, his Tyrannies and Cruelties; to which the *Cazique* of *Zempoalla* added as the utmost Aggravation: "This Monster is so proud and fierce, that, besides his impoverishing us by Tributes, and raising his Wealth out of our Calamities, he invades the Houses of his Subjects, taking forcibly from us both our Wives and Daughters, staining with their Blood the Altars of his Gods, after having sacrificed them first to other Uses more cruel, and less honest." *Cortes* endeavoured to comfort them, and bring them to enter into a Confederacy with him; but at the Time that he was enquiring into their Strength, and the Number of People that would take Arms in Defence of their Liberty, two or three *Indians* came in, who seemed in a great Fright, and whispering the *Caziques* in their Ears, put them into such Confusion that they rose up, losing Courage and Colour, and went hastily away, without so much as taking leave or making an end of their Discourse.

The Cause of this Disorder was quickly known; for six Royal Commissioners, such as went about the Kingdom to gather *Moteczuma's* Tributes, were seen passing before the *Spaniards* Quarters. They were adorned with Abundance of Feathers and Pendants of Gold on fine clean Cotton Cloths, with a sufficient Number of Servants and inferior Officers; who, moving great Fans made of Feathers, fanned their Masters to cool them, or shaded them from the Sun as Occasion required. *Cortes* went out to the Gates, with his Captain, to see them, and they passed on without paying him any Respect, and with Countenances that shewed Indignation; which Pride provoked some of the Soldiers so much, that they would have chastised them, had they not been withheld by *Cortes*, who rested satisfied at that Time with sending *Donna Marina*, with a sufficient Guard, to inform himself of what

what they were doing. By this Means it was understood, that, after having seated themselves in the Town-house, they summoned the Caziques to appear before them, and reprimanded them publicly for their Boldness in admitting Strangers into their Town, who were Enemies to their King; and therefore, besides the ordinary Service, to which they were obliged, they demanded twenty *Indians* to sacrifice to their Gods, as an Atonement for such a Crime.

Cortes sent for the two Caziques by some Soldiers, who had Orders, without any Noise, to bring them to his Presence; when letting them know that he saw into their most hidden Designs, he told them, That he was well acquainted with the Vileness of those Commissioners, who, without any Pretence but their having admitted his Troops, endeavoured to impose on them new Tributes of Human Blood: That it was no Time for such Abominations, nor would he suffer such horrid Commands in his Presence; but ordered them, without fail, to call their People, seize the Commissioners, and leave him to maintain what they should do by his Advice. The Caziques refused to execute such a bold Command, as being grown mean-spirited; but *Cortes* repeated his Order with so much Resolution, that they immediately went to execute it, and that with great Applause of the *Indians*.

They seized the Ministers of *Moteczuma*, whom they put in a kind of Pillories in their Prisons, and very inconvenient, for they held the Delinquents by the Neck, obliging them continually to do their utmost with their Shoulders to ease the Weight, for the sake of breathing. It was very pleasant to see how proud the Caziques returned to give an Account of their noble Action, for they thought to execute them, and to make them suffer the Punishments assigned by the Laws to Traitors; and, seeing that would not be permitted, they desired to sacrifice them to their Gods, as if it were a kind of Grace. The Prisoners being secured by a sufficient Number of *Spanish* Soldiers, *Cortes* retired to his Quarters, and to consider with himself what was to be done; for he was not willing absolutely to break with *Moteczuma*, but still to keep him in Suspence. On the other hand he considered it as a very necessary Point to maintain that Party which was beginning to form, that he might have their Assistance, in case he should happen to want them. In fine, he held it most convenient to manage Matters with *Moteczuma* by making a Merit of suspending the Effects of that Disrespect.

The Result of those Reflections was, to send, at Midnight, for two of the Prisoners with all possible Privacy; and, after receiving them courteously, to tell them, That he had sent for them in order to set them at Liberty: And that, as they received it solely from his Hands, they might assure their Prince he would endeavour very speedily to send the rest of their Companions, who remained in the Power of the Caziques, whom he would endeavour to make sensible of their Faults, and perform all that should be for his Service; for that he was desirous of Peace, and to testify, by his Speech and Actions, all the Marks of Civility that were due to the Embassadors of so great a Prince. The *Indians* durst not set out on their Journey, for fear of being killed, or taken by the way; and he was forced to give them a Guard of *Spanish* Soldiers, who conveyed them to the next Bay, where the Ships lay, and one of the Boats was ordered to land them beyond the District of *Zempoalla*.

The Caziques came, in the Morning, much troubled for the Escape of the two Prisoners; and *Cortes* received the News with Signs of Surprise and Concern, blaming their Want of Vigilance, and, upon this Pretence, he ordered, in their Presence, that the rest should be carried aboard the Fleet; but he privately directed the Officers on board to treat them well, and to keep them safe, by which he gained the Confidence of the Caziques, without disobliging *Moteczuma*, whose Power, so much cried up and dreaded among those *Indians*, made him careful how he acted.

7. The good Behaviour of the *Spaniards* towards their Allies was quickly divulged through all the Districts thereabouts; and the two Caziques, of *Zempoalla* and *Quiabitslan*,

gave notice to all their Friends and Confederates of their Advantages, being freed from Impositions, and their Liberty secured by the Protection of a People invincible, who knew the very Thoughts of Men, and seemed of a superior Nature. The Report spread with Exaggerations. It was said publicly among the People, That their Gods were come down to *Quiabitslan*, darting Lightning against *Moteczuma*; which Credulity lasted some time among the *Indians*, and caused a Veneration, which, though ill founded, very much facilitated the Beginnings of this Conquest.

This high Opinion of the *Spaniards* so increased, and the Name of Liberty sounded so well in the Ears of the Oppressed, that, in a few Days, there came to *Quiabitslan*, thirty Caziques of the Mountains that were in sight, which had numerous Settlements of *Indians*, called *Totanaques*, a rustic People, of different Languages and Customs; but strong, active, industrious, and remarkable for their Courage. They paid their Obedience, offered their Troops, and, in the Form proposed to them, swore Fidelity and Vassallage to the King of *Spain*, of which a solemn Act was made before the Secretary of the Council.

The Number it is likely was very great, the Settlements many, and the People easily stirred up against *Moteczuma*; especially for that the mountainous Country was inhabited by warlike *Indians* lately subdued, or not quite conquered. This kind of Confederacy being made, the Caziques returned to their Houses, ready to do as they had been commanded; and *Cortes* resolved to settle the Town of *Villa Rica de la Vera Cruz*, which till then moved with the Army, though observing its proper Distinctions as a Republic. They pitched upon the Plain between the Sea and *Quiabitslan*, half a League from that Town, a pleasant Place which invited them by its Fertility, abounding in Water, and having great Plenty of Trees, which lay commodious for the cutting of Timber for the Buildings. They laid the Foundations, beginning with the Church; the Handicraftmen were distributed; Carpenters and Masons, &c. who came with Soldier's Pay; and the *Indians* of *Zempoalla* and *Quiabitslan* assisting with equal Activity, the Houses began to rise, mean as to Architecture, rather for a Covering than any Commodiousness. They presently drew the Compass of the Wall, with Traverses of strong Mud-work; a sufficient Defence against the Weapons of the *Indians*, and, in that Country, it might be properly called a Fortrefs. The principal Officers of the Army helped to carry on the Work, applying both their Hands and Shoulders, and *Cortes* worked hard as if he had set himself a Task, not satisfied with the seeming Diligence, which is sufficient in a Superior, to set a good Example.

In the mean time they had at *Mexico* the first Advice of the *Spaniards* being admitted into *Zempoalla* by that Cazique, a Man, in their Opinion, of suspected Fidelity, and the neighbouring Places little to be depended upon. Which Account so provoked *Moteczuma*, that he proposed to draw together his Forces, and march out in Person to chastise this Offence of the *Zempoallans*, and put the rest of the Mountain Nations under the Yoke, taking the *Spaniards* alive, whom he had already destined for a solemn Sacrifice to his Gods.

But, at the same time that he began to make great Preparations for this Enterprize, the two *Indians* whom *Cortes* had dispatched from *Quiabitslan* arrived at *Mexico*, and gave an Account of their Imprisonment, and that they owed their Liberty to the Captain of the Strangers, who had sent them to represent how much he desired Peace, and how far it was from his Intentions to do him any Disservice; extolling his Courtesy and Mildness so much, that it might be perceived, by the Praises they gave *Cortes*, how much they had been frightened by the Caziques.

Upon this Affairs changed. The Anger of *Moteczuma* was mitigated, his Preparations for War ceased, and he determined again to try Negotiation, and endeavour to divert *Cortes* from his Designs by a new Embassy and Present, to which Measures he easily inclined; for, in the Midst of his Anger and Pride, he could not forget the Signals of Heaven, and the Answers of his Idols, which he looked upon as evil Omens of his Undertaking,

or

or at least they obliged him to delay the Breach, endeavouring to qualify his Fear after such a Manner, that it should be taken for Prudence by Men, and for Respect by his Gods.

His Embassadors arrived just as the new Settlement and Fortrefs of *Vera Cruz* were completed. They were the Emperor's Nephews, young Men, but assisted by four ancient Princes, who attended them as Counsellors. They told *Cortes*, That the Emperor had determined to chastise the *Caziques*, till he received an Account of his Behaviour, which induced him to suspend his Vengeance: That he hoped, however, he would soon quit that Country, since the Obstacles which hindered his coming to his Court were in their Nature insurmountable.

According to his usual Custom, *Cortes* heard their Discourse with great Temper and Calmness, and received the Presents made him by the Emperor with all Respect possible; treated the Embassadors with great Kindness and Complaisance; made them many Presents, besides a proper Return to *Moteczuma*: But, at the same time, declared, That Difficulties were no Discouragements to him, and the Importance of his Commission was such, that, at all Events, he must pursue his Journey. This highly disgusted the Embassadors; but was very useful with regard to the Allies, who were confirmed in their Opinion that *Cortes* was something more than Man, since the great Emperor of *Mexico* vouchsafed to court his Friendship, and discovered an Apprehension of his Presence. They began therefore to conclude themselves safe under his Protection, and to lay aside that Fear, to which not only they, but their Ancestors, had been accustomed.

8. The *Cazique* of *Zempoalla*, a short time after, came to *Vera Cruz*, with some principal *Indians*, whom he brought as Witnesses of what he intended to offer, which was, That now the Time was come to protect and defend his Country; for that some Troops of the *Mexicans* were arrived in *Zimpazingo*, destroying the Corn-fields, and committing some Hostilities in his District. *Cortes* found himself engaged to support the *Zempoallans* to maintain his Credit; and besides, he thought it would not be right to suffer that Insolence of the *Mexicans* as it were in his Sight, and that in case they were some advanced Troops of *Moteczuma's* Army, it would be necessary to strike a Terror into them to discourage the rest of his People, for which Purpose he determined to march in Person; engaging in it somewhat too hastily, for he was yet unacquainted with the Deceits of those People (a capital Vice among the *Indians*) and suffered himself to be carried away without examining into the Truth. He offered them to march out immediately with his Troops to chastise those Enemies who disturbed the Peace of his Allies, and, ordering them to provide *Indians* of Burthen for the Service of the Baggage and Artillery, he made a Disposition immediately for his March, and took the Road of *Zimpazingo*, with four hundred Men, leaving the rest in the Fortrefs of *Vera Cruz*.

As he passed by *Zempoalla* he found two thousand armed *Indians* whom the *Cazique* had provided to serve under him in that Expedition, divided into four Bodies, with their Captains, Colours, and Arms, according to the Custom of their Militia. *Cortes* thanked him very much for the Care he took to provide that Succour; and though he let him understand that he had no Occasion for his Men upon an Expedition of so small Importance, yet he suffered them to go to provide against all Events; but intimated he did so only to let them share in the Glory of the Success. That Night they lodged three Leagues from *Zimpazingo*, and the next Day, in the Afternoon, they discovered the Town on the Top of a small Hill, a Branch of the Mountain, among great Rocks, which hid Part of the Buildings.

The *Spaniards* began to overcome the Craggedness of the Mountain, but not without considerable Trouble; for, being jealous of an Ambuscade, they went doubling and filing off as the Ground would permit; but the *Zempoallans*, either more dextrous or less embarrassed by the Narrowness of the Paths, advanced with a Sort of Fury, which appeared like Valour, but was, indeed, no better than Revenge. *Cortes* was obliged to give Orders to

halt, at a time when some Troops of the Van-guard were already in the Town.

He continued his March without meeting any Resistance, and just as he was preparing to attack the Town in several Parts, there came out of it eight Priests who enquired for the Captain of that Army, before whose Presence they came in an humble and pitiful Manner, such as sufficiently shewed Submission, without the Help of an Interpreter. Their Dress was a black Mantle, of which the End reached the Ground, and the upper Part was gathered and plaited about the Neck, with a Piece hanging loose in Form of a Hood. Their Hair reached to their Shoulders, clodded with the human Blood of their Sacrifices; Marks of which they superstitiously preserved on their Faces and Hands, for it was not lawful for them to wash themselves. These Priests soon convinced the *Spanish* Commander that he had been imposed on, that the Troops from *Moteczuma* were long ago retired, and that this was only an Artifice of his Allies, who were their Enemies, in order to make use of him as an Instrument for their Destruction.

A thing in itself very scandalous and base, but at this Juncture particularly barbarous and black, as it contributed to draw an Imputation upon the *Spaniards*, which might have been fatal to their Affairs. After hearing their Discourse he returned to his *Indian* Allies, and by the Confusion of the *Zempoallan* Captains, it appeared that those Priests spoke Truth, and *Cortes* was concerned at the Deceit, and vexed, at the same time, at the Malice of the *Indians*; but considering what was most proper to be done upon this Occasion, he presently ordered the Captains *Olido* and *Alverado* to go with their Companies, and gather the *Indians* together who had advanced before to get into the Town, and were now busy in the Pillage, and had taken a considerable Quantity of Cloaths and Furniture and some Prisoners.

They were brought to the Army shamefully loaded, and the plundered People following, crying out for their Goods, for whose Satisfaction *Cortes* commanded them to unbind the Prisoners and deliver up the Goods to the Priests, that they might restore them to their proper Owners, and calling for the *Zempoallan* Captains, reproved them publicly for their Presumption, telling them they deserved Death for their Offence in making use of him only to compass their Revenge; however, being warmly entreated by the *Spanish* Captains whom he had instructed before to pacify him, he pardoned them for that time, enlarging upon his Clemency, though, in Truth, he did not then dare to chastise them; knowing well, that to preserve new acquired Friends, Clemency was more requisite than Justice. Having managed things so as to give him a Reputation with both the Nations, he commanded the *Zempoallans* to lodge without the Town, and marched in with the *Spaniards*, where he was received with the Applause due to a Deliverer.

Immediately the *Cazique* of *Zimpazingo* visited him in his Lodging, with others of the Neighbourhood, who came out of Friendship, acknowledging the King of *Spain* for their Prince, whose Name was already beloved and revered in that Country, where the People desired to be his Subjects out of Hatred to *Moteczuma*, whom they knew, and Love to a Prince they knew not.

In their March back to *Zempoalla*, the Troops passed by two Towns of those that were newly entered into the Confederacy; and while they halted in the Afternoon, a Soldier, whose Name was *Mora*, took two Hens, so that *Cortes* saw it, and was so angry because it was done in his Presence, and in regard that he would have his Soldiers to observe Discipline, that he ordered him to be hanged, and had not *Peter Alverado* cut him down with his Sword, he had actually died; as it was he dropped down half choaked, and some time afterwards was killed in Battle, at *Guatemala*. The Lord himself was near *Zempoalla* waiting for *Cortes* with Provisions, and under great Concern, on account of having made him undertake that Journey on false Relations; for they were not so barbarous as not to be sensible that *Cortes* made good his Assertion, that he was sent to maintain Justice, which gained him much Reputation; and as the Dread of *Mo-*

tezuma

tezulma made them uneasy, they could have wished, that for their greater Security, the *Spaniards* had never departed from their Town; for which Reason they said that since they were now all one Nation, they should take their Women, and carried them eight beautiful Damsels, Daughters of principal Persons, with Gold Necklaces and Pendants in their Ears, with Women Servants, the *Cazique* saying that seven of them were for the Captains, and the other, being his own Niece, for *Cortes*.

That General, before he would receive the Ladies, insisted that Idolatry should be abolished, to which the *Indians* were very loth to consent, alledging that they had no Occasion to quarrel with the Gods of their Fore-fathers, since they had given them Success in War and good Harvests; but what struck them most, was their Fear that if they destroyed these Gods, that is to say, the Idols they worshipped, they would punish them severely; but *Cortes* put them out of their Terror, by taking that upon himself; and when the Idols were once destroyed, the People submitted readily enough, in spite of all the Pains their Priests took to prevent it; and this great Point of Religion once settled, *Cortes* and his Commanders made no Sort of Difficulty of accepting the Ladies, which was very agreeable to the *Indians*, who looked upon them thenceforward, not only as their Allies, but as their Countrymen.

9. *Cortes* having thus concluded a League with the *Zempoallans*, marched away to his new Colony of *Villa Rica*, and the same Day he came to it a Ship arrived from *Cuba*, commanded by *Francisco de Salcedo*. The Ship brought Captain *Lewis Martin*, with a Mare and ten Soldiers, and *Salcedo* had a good Horse. These Persons brought Advice that *James Velasquez* had received the Title of *Adelantado*, and the King's Commission to trade and make Settlements in the new discovered Countries that had been granted him. The Forces having been now three Months in *New Spain*, and the Fort almost made defensible, it was proposed to go up the Country: But it was resolved, in the first Place, to send some Persons to the King, to give an Account of what had been done in his Service, and carry him a fifth of the Gold, and all the rest that had been given.

Alonso Puerto Carrero and Captain *de Montejo* were pitched upon to go on this Errand, and *Cortes* thinking that what he had was very little, when every Officer and Soldier had his Share, and that the King's Fifth being accordingly very inconsiderable, it would not answer the Account they were to give of the Wealth of that Country; he ordered *Francis de Montejo* and *James de Ordaz*, that they, as Men in Authority, should speak to the Soldiers Man by Man, to resign their Shares to be sent to the King as a Present; many of the Gentlemen to whom the same was proposed, freely offering to do the like. They readily consented, and all that had been got was converted into a Present, for *Cortes* would not deduct his own fifth Part, nor any Salary, only taking so much out of the whole Sum, as was necessary for the Expence of the Voyage, and to maintain the Messengers going and coming, besides something *Cortes* sent to his Father *Martin Cortes*. He gave those Deputies ample Instructions, with a particular Relation of what he had done both at *Cuba* and in *New Spain*; he likewise wrote a very long Letter to the King, taking Notice in it of the vast Extent and Wealth of the Country, the Hopes he had of reducing it under his Obedience, and begging he would not forget him when any Commissions were given out for that Country. The Magistrates of *Vera Cruz* wrote another Letter, representing the Service they had done his Majesty, the Reasons they had for making the Settlement, and their Sufferings. The Captains wrote another to the same Effect, as did the Soldiers of most Note; promising to defend that Town at the Expence of their Lives, unless otherwise commanded by his Majesty; and all of them most humbly intreating the King to bestow the Government of that Country, and others that should be by them discovered and subdued, upon *Ferdinand Cortes*, whom they had chosen for their Commander, to prevent Disputes; and because no Man was more capable of serving his Majesty; and that, in Case another had been appointed, his Com-

mission might be called in Question, and that his Majesty would be pleased speedily to answer and dispatch their Deputies.

Cortes gave them the best Ships, and appointed *Antony Alaminos* their Pilot, who, in order to avoid coming near *St. Jago de Cuba*, sailed through the Channel of *Bahama*. They sailed on the 26th of July, 1519, with fifteen Sailors, and touching at *Marien*, in *Cuba*, proceeded to the *Havanna*, passed the Channel of *Bahama*, and had a good Voyage to *Spain*; being the first that ever sailed that Way, which he did to avoid falling into the Hands of *Velasquez*. *Alaminos* took this Resolution, being well acquainted with the *Lucayo* Islands, and the Coast of *Florida*, and concluding that those Currents must end somewhere; and accordingly he stood Northwards, and it proved well, for being got safe out of the Channel, he came into the open Sea, and arrived safe at *Sanlucar*, in October. *Benedict Martin* was then at *Seville*, in order to carry over the King's Dispatches to *James Velasquez*, at *Cuba*. He informing the Officers of the *Indian* House, that those Deputies were out of the King's Service, they seized all that was in the Ship, together with the 3000 Castalanos they had for their Expences, and what *Cortes* sent his Father. The Present for the King was sent to him at *Valladolid*, and Advice given to the Bishop of *Burgos*, who was fitting out the Fleet to carry his Majesty over to *Flanders*, with Complaints against *Cortes*, for having revolted from *James Velasquez*. The Deputies, with the Pilot *Antony de Alaminos*, and *Cortes's* Father, went away to meet the King at *Tordesillas*.

When the Deputies were gone from *Vera Cruz*, some Servants and Friends of *Velasquez*, and among them *F. John Diaz*, being uneasy among themselves, contrived to steal a small Vessel, and sail to *Cuba*, to acquaint *James Velasquez* with what was doing; but when they had got the Ship ready, and were going to embark in the Night, *Bernard de Coria* repented, and gave Notice of it to *Cortes*, who immediately ordered the Sails to be taken from the Ships, and the Fugitives to be secured, who owned the Truth of the Charge, impeaching also some Persons of more Note than themselves, at whom, *Cortes* considering his Circumstances, connived. However, he, with much seeming Sorrow, condemned *James Escudero* the *Alguazil*, who had formerly arrested him in *Cuba*, to be hanged, and, with him, *James Cermeno*, a Man so active, that with only a Spear in his Hand, he would leap over another Spear held up at Arms-length by the tallest Men in the Army. Another had one Foot cut off, and two were whipped; he would not punish *F. John Diaz*, because he was a Clergyman; and thus *Cortes* made himself feared and honoured. And as soon as he had signed the Warrant for Execution, to prevent its being obstructed by Intreaties, he went away to *Zempoalla*, where he appointed *Peter Alverado* to meet him.

He was now intent on his Journey to *Mexico*, and his People desirous of undertaking it, *Cortes* putting them in Hopes that they would be there enriched, by which Means he gained their Affections, and kept them in awe. The order of this March being under Deliberation, at *Zempoalla*, *Cortes* resolved to sink all his Ships, to deprive the Favourers of *Velasquez* of all Hopes of returning to *Cuba*; because there were so many of them, that if they went away they would have weakened his Forces, and, at the same Time, to add Resolution to the rest; who finding themselves in that vast populous Country, without any Possibility of getting away, would be obliged to follow and obey him, and to trust only to their Valour. However, lest this should occasion some Disturbance among the Men, he contrived, that the Soldiers, who were his most zealous Friends, should ask it of him, persuading him to it, with several Arguments, and among the rest, that the Mariners, being an hundred Men, they would be a great Help to the Soldiers, and bear Part of all their Fatigues. The Soldiers, accordingly, asked it, and a public Instrument was made of the same by a Notary, though it was thought that there was another piece of Subtily in this extraordinary Management, which was, his not being left alone under the Obligation of paying for the Ships, but that the whole Army should be equally bound to pay for them.

This done, he ordered *Juan de Esculante*, the chief Alguazil, to repair to *Villa Rica*, and to bring ashore from the Ships their Anchors, Iron Work, Sails, and all that might be of any Use, and then to sink them all except the Boats; and that the Mariners who were aged or disabled, and unfit for Service, should stay in the Town. *Juan de Esculante*, who was a very diligent Man, performed it with much Expedition, and returned to *Zempoalla* with the ablest of the Seamen, many of whom proved very good Soldiers. The more we consider and reflect upon

this Stroke of our Hero's Policy, the more we must be persuaded he deserves that Title, since nothing could be greater in itself, or performed with more Spirit and Resolution than this Scheme of burning his Ships, which he knew must fill his Soldiers with a determined Resolution to conquer, since it absolutely took away what had hitherto damped and qualified that Ardour, the Hopes of getting back to *Cuba*, and escaping perpetual Labours by a timely, though less honourable Retreat.

SECTION X.

The History of the War of Tlascala, from its breaking out to CORTES's concluding a Peace with that Republic; and his taking them into the Confederacy against the Indian Emperor MOTEZUMA.

1. *The Interruption Cortes met with in his intended March by the appearing of a Spanish Squadron on the Coast, and the Means he used to oblige them to retire.*
2. *He resumes his March towards Mexico, advances as far as Zocotlan, and resolves to move on notwithstanding the Report of the vast Power of Motezuma.*
3. *Determines to take the Rout of Tlascala, though advised against it, and sends some of the Zempoallans, as his Embassadors, who are very ill treated.*
4. *A War ensues notwithstanding all the Care of Cortes to prevent it, in which several bloody Battles are fought, and a dreadful Slaughter made of the Tlascalans.*
5. *A great Battle fought, in which the Republic exert their whole Strength, but are nevertheless overcome, though with Difficulty.*
6. *The Tlascalans employ Spies, which are discovered and punished: Another Battle ensues, in which they are again beat.*
7. *A Mutiny amongst the Spaniards, on the point of breaking out, is stopped by a Negotiation set on foot for Peace.*
8. *The Peace is at length concluded, to the great Joy and Satisfaction of both Parties, notwithstanding the Pains taken by Motezuma's Embassadors to delay or hinder it.*
9. *A succinct History of this celebrated Republic, including a Description of the City of Tlascala, and the Manner in which Cortes was treated by its Inhabitants.*
10. *He persists in his Resolution of marching to Mexico, explains himself clearly upon that Subject to the Tlascalans, engages them to assist him in his Undertaking, and prepares for his March.*
11. *Observations on the most remarkable Events contained in the foregoing Section.*

THE Genius of *Cortes* distinguished itself chiefly in delivering him suddenly, and as it were, without Difficulty, out of those sort of dangerous Conjunctions which seemed to threaten him with immediate and inevitable Destruction: Of this there occurred a very extraordinary Instance. Immediately after he had fixed a Resolution of putting all to the Hazard, and marching directly with his handful of Troops into the Empire of *Mexico*, we have seen him take one of the boldest and most romantic Steps that was perhaps ever put in practice by a Person of so much Prudence and good Sense, in the burning of his Fleet, purely to prevent those who were under his Command from having it in their Power to fly from those Difficulties which he meant they should overcome; but no sooner was this extraordinary Measure taken, than the whole Use of it seemed to be destroyed by an Accident he could not possibly foresee, and which therefore it was impracticable for him to avoid.

This Accident was, the Arrival of a small Squadron upon the Coast, of which his Governor at *Vera Cruz* immediately gave him notice. This could not fail of making *Cortes* uneasy, who, when he first received the Intelligence, apprehended that it must be fitted out by *James Velasquez*, in order to deprive him of his Command, under Pretence of sending a Reinforcement for the more effectual Prosecution of the Expedition. He foresaw in an Instant what the Consequence of this might be, and therefore determined to march back with all the Forces under his Command to *Vera Cruz*, that he might be in a Condition to deal with his Enemies, either by way of Persuasion or that of Arms, as Occasion should require. He did so; but upon his Arrival he was informed, that those Ships came from the Northward; that they had been fitted out by the Governor of *Jamaica*, upon Discovery; and, that they meant to set Bounds to his Conquests on that Side, under Pretence that they first found the Country of *Panuco*, and had traded with the Inhabitants for Gold, to the Amount of three thousand Pieces of Eight or better.

He grew easier upon this Advice, though there were still two Points to be carried before he could think of prosecuting his first Enterprize: The first was, giving a Check to this Scheme of Discovery; that he might have no more Rivals to disturb his Undertakings hereafter. The other, to oblige these Ships to quit the Coast instantly; that none of the Malcontents in his Army might have an Opportunity of deserting to them.

In order to effect this, he marched with a small Party of such as he could best trust, to the Sea-shore; where he was hardly arrived before he met with three *Spaniards*, one of whom advancing towards him said, He was a public Notary, and that he brought the other two as Witnesses, to attest the Delivery to him of a Writing which he had in his Hand, containing the Governor of *Jamaica's* Claim to a Part of this Country. *Cortes* declined taking the Paper, telling him very mildly, That it would be better if Captain *Pineda*, who he understood was the Commander, would come on Shore himself. The Notary answered, That neither he, nor any body else, would quit the Ship. Upon this *Cortes* seized him and his Companions, and waited all Night behind a Sand-hill, to see if any body would venture from the Ship; but finding that no-body came, he obliged his Prisoners to strip themselves, and having dressed three of his Men in their Clothes sent them to make a Signal; upon which a Boat came off from the Ship with twelve Men well armed: *Cortes's* Soldiers perceiving this retired under a Tree, and four Men landing from the Boat with an *Indian*, advanced towards them, not in the least doubting that they were their own People. By this Stratagem he got these likewise into his Hands; and the Boat's Crew on seeing what had happened went off, to acquaint those on board therewith, and in a few Hours after the Ship bore away, and quitted that Coast.

By this Means he delivered himself at once out of this Perplexity; and the Men he had taken, being well used, gave him a faithful Account of all they had seen, and very readily enlisted in his Service, assuring him at the

same time, that the Discoveries they had made were of so little Consequence, and the Produce of their Voyage so very inconsiderable, that he was not like to hear of any more Attempts of the like kind from *Jamaica*, which gave him singular Satisfaction, and encouraged him to resume his Design for pursuing, which he found all under his Command, both Officers and private Men, more eager for than ever, which was chiefly owing to their seeing him always successful in every thing he took in hand.

2. *Cortes* returned to *Zempoalla*, resolving to lose no Time before he set out for *Mexico*. The Men to carry Burthens being ready with the Baggage and Artillery, with the Auxiliaries of *Zempoalla*, and those of the Mountain Towns, whom he took along with him as Hostages, leaving a Page of his own, of the Age of twelve Years, to learn the Language, he set forward on the 16th of *August*, several prime Persons waiting on him, of whom he took Leave at a small Distance from the Town. The *Indians* wept, considering the Danger into which they were going, though they relied on the Valour of the *Spaniards*, who were four hundred in Number, besides fifteen or sixteen Horsemen, and six small Pieces of Cannon, with the Ammunition belonging to them. The March began in good Order; they arrived the first Day at *Xalapa*, and thence proceeded to another Town, which, being Confederate with *Zempoalla*, gave them good Reception. There *Cortes* told them he was sent by the King of *Spain*, to admonish them to forbear sacrificing of Men, and following the other wicked Courses they were guilty of, and to live in Peace and Justice, and to chastize Tyrants.

He erected a Cross in every Town, ordering them to respect it; for, as they should be after better informed, through that holy Emblem they were to expect all Happiness in this World and in the next; he proceeded to *Texutla*, where he spoke to the same Effect to the Heads of the People, and they entertained him affectionately. They then came into the desert Country, where they met with much Hail and Rain, a sharp Wind blowing from the snowy Mountains. The Men endured much, for there was also but few Eatables to be met with. They marched through another Pass, where there were small Places of Worship, with Idols and great Piles of Wood cut for the Service of the Temples. The Cold continued, and they were in great want of Provisions, which the Men bore with wonderful Patience, though the Weather pinched them, because they were thin clad, and used to the temperate Climate of *Cuba*, *Zempoalla*, and the Sea-coast. They next came into the Territories of *Zocotlan*, subject to the King of *Mexico*; *Cortes* sent two *Zempoallans* before, to desire those People, in his Name, that they would be pleased to quarter his Forces, and, at the same Time, held them in Readiness for all Events, because this must be considered as an Enemy's Country; when they came in sight of the Town, a *Portuguese* Soldier saying that it was like *Castel Branco*, in *Portugal*, they gave it that Name.

The Lord was called *Olintel*, whom the *Spaniards* nick-named the *Squab*, because he was very fat. He ordered the Men to have Provisions given them, but not a very great Quantity, or with a very good Will. *Cortes* by Means of his Interpreters, who daily grew more expert, talked to him as to others, and he was pleased to hear those Things which were so strange to him. *Cortes*, observing with what State he was served, asked him whether he was a Confederate, or a Subject, to the King of *Mexico*? He answered that Question, by saying, who is not a Slave to *Moteczuma*? *Cortes* replied, that beyond the Sea there was a greater Sovereign, meaning the King of *Spain*, whom many Princes served, that himself was one of the meanest Subjects he had, and that the Lord ought to submit himself, and give some Demonstration that he did so. He answered that he would do nothing but what *Moteczuma* should command him. *Cortes* did not carry on this Discourse any farther, looking upon the Lord and his People to be Men of Resolution, but desired he would tell him something of *Moteczuma's* Grandeur. This Lord said he was Sovereign over many Kings; that there was

not the like of him in the World; that many Lords served him in his Palace bare-footed, with their Eyes fixed on the Ground; that there were thirty Princes in his Empire, each of whom had one hundred thousand fighting Men in his Dominions, and some Years *Moteczuma* sacrificed as Victims fifty thousand; that he resided in the largest, most beautiful, and strongest City in the Universe, being in the Water, and having above fifty thousand Acales for the Service of it; that his Court was very spacious, that many Princes of the Country round about continually resorted thither to serve him; that his Revenues were incredible, because none, even the greatest, was exempt from paying Tribute, nor any so poor as not to give something, though it were only Blood from his Arm; that his Expences were prodigious, because, besides those of his Civil List, he had continual Wars, which obliged him to maintain great Armies.

This Account struck some of the People about *Cortes* with great Apprehensions, from the mighty Strength of *Moteczuma*, compared with their own slender Force; but he who had an admirable Faculty of turning every Thing to his own Advantage, usually discoursed of the Greatness of the *Indian* Emperor, with Pleasure; for, said he, if we seek Wealth and Country from our Conquests, we ought to rejoice, that those, against whom we fight, have great Riches and large Dominions. As for this *Indian* Chief, with whom he then lodged, he was Lord over twenty thousand People, had thirty Wives in his House, and above one hundred Women to wait on them, and two thousand Servants. The Town was large, and contained thirteen Temples, with abundance of Idols made of Stone; they sacrificed to them, Men, Women, Children, Turtles, and other things, burning many Perfumes, with great Veneration. *Moteczuma* had five thousand Men in Garrison in this Town and its Territory, and Men were ready two and two, at small Distances, all the Way to *Mexico*, in the Nature of Posts, to carry an Account of all Things that happened. *Cortes* was now thoroughly confirmed in the Notion he had of the Grandeur of *Moteczuma*; and though some about him were always giving Hints of the Difficulty of the Undertaking, and the Danger, he never shewed the least Irresolution, but, on the contrary, with an undaunted Intrepidity, encouraged his People, assuring them of Success, with as much Firmness, as if he had it in his Power, as, indeed, he foresaw all Exigencies with wonderful Sagacity and Discretion.

Olintel seemed to grow better affected, and made more plentiful Provision for the Men, upon the Discourse he had with *Cortes*; though he said he could not tell whether *Moteczuma* would not be displeased at his having entertained them without his Leave. *Cortes*, finding him more courteous, began to talk of Religion, and would have had a Cross erected, as had been done in other Towns, but *F. Olmedo* did not think it proper, for fear of some Irreverence. *Francis de Lugo*, a Man of Note, had with him a very large Greyhound that barked very much in the Night: The Gentlemen of that Town asked those of *Zempoalla* whether that was a Tyger, Lyon, or other Beast to kill Men? They answered, it was a Beast under good Command, and would bite and kill, when, and whoever his Master pleased. They told them the great Guns killed whom they would, with some Stones they threw into them, and that the Horses ran like Stags, and overtook whom they pleased, none being able to escape them; that those were the Men who conquered the People at *Tabasco*, threw down their Idols, and made them Friends with their Neighbours. That *Moteczuma* had sent them Presents, because he looked upon them as Gods, and therefore they wondered why *Olintel* made them no Presents. Moved by what they said, he immediately sent *Cortes* four Head-pieces, three Collars, and some Lizards, all of Gold, a Load of Cotton Cloth, and four Women Slaves to make Bread. In this Town there was a Charnel containing abundance of Skulls and Bones of Men that had been sacrificed, and in all other Towns in that Country, after the same Manner as at *Mexico*, which shall be described in its Place.

3. *Cortes* staid nine Days with *Olintel*, to refresh the Men,

Men, and having given him a Present of his Toys, which was much valued, began to consult which Way he should travel to *Mexico*; *Olintel* said, the best and plainest Way would be through a Town called *Colula*. The *Zempoallans* opposed it, alledging that those People were very treacherous, and had always Garrisons; whereas the *Tlascalans* were his Enemies, and good People, for which Reason that would be the better Way. *Cortes* demanded of the Lord twenty Soldiers to be his Guides, as being well acquainted with the Country, which were given, and with them he set out toward *Tlascala*; as soon as he came to a Town called *Xacazingo*, he sent four *Zempoallans* to *Tlascala*, with a Letter and a red Hat, and though he was sensible that they understood not the Letter, he thought they would, at least, conclude it to be a Message, that they might not do any harm to the Messengers; for it was known that the *Tlascalans* were informed that the *Spaniards* were marching towards them, and that they brought with them some *Indians* that were Tributaries to *Moteczuma*, as the *Zempoallans* and those of *Olintel* had taken up Arms. *Cortes* ordered the Messengers to tell the Gentlemen of *Tlascala*, that he had been informed, by the Lord of *Zempoalla*, and the neighbouring Towns, his Friends and Confederates, of the bloody Wars they had so justly waged with *Moteczuma*, who had done them so many Wrongs; that he was sent by a mighty Prince, in the first Place, to bring them to the Knowledge of the true God, and at the same time to deliver them from the Oppression of the *Mexican Culus*; that he sent them that Hat, and with it a Sword and a Cross-bow, that they might see with what powerful Weapons he designed to assist them.

This he did, because he had heard how much a Cross-bow and *Spanish* Weapons had been admired at *Mexico*. *Cortes* sent this Embassy by the Advice of the *Zempoallans*, who said the *Tlascalans* were numerous and warlike, Enemies to *Moteczuma*, and would easily be brought into the Confederacy of the *Totanaques*. *Cortes* was more inclined to this Message, since he hazarded nothing in so doing, and had always found the *Zempoallans* sincere: And at this Place he began to be more fully informed of the Affairs of *Tlascala*. The Messengers coming, were received there, and conducted to the Town-House, where Provisions were given them. The Council met, the *Zempoallans* were called in, and delivered distinctly the Message given them by *Cortes* in the best Terms they were able. On the other hand, the *Tlascalans* having received the Hat, the Letter, and Arms, *Maxiscatzin*, one of the Lords of the Republic, bade them sit down, said they were welcome, that they thanked the *Totanaques* for their Advice, and were glad of their Liberty; that they were also thankful to the great Stranger for his Present, and that they might rest themselves, because it required time for them to come to a Resolution. Hereupon the *Zempoallans* withdrew, abundance of People flocking thither to enquire what they came about, and they recounting what they had seen of the Valour of the *Spaniards*, of their Behaviour, and their Weapons, describing the Horses, and all the rest, and magnifying every thing.

The Lords of the Commonwealth, being by themselves, *Maxiscatzin*, a Man of much Wisdom and well beloved, made a Speech, advising them to receive the *Spaniards* in a friendly Manner, but *Xicotencatl*, who was General of the Army, was for opposing them. This Diversity of Opinions occasioned high Debates, the Traders and peaceable People being of *Maxiscatzin*'s Mind, and the Soldiers siding with *Xicotencatl*. Whereupon *Temilotecatl*, another of the four principal Lords, was of Opinion, that Embassadors should be sent to the Commander of these new People, to tell him they should be well received, and in the mean Time, *Xicotencatl* should advance with the *Otomies*, and try what those were whom some called Gods, and if he vanquished them *Tlascala* would gain eternal Honour, but if not, the Blame might be thrown upon the *Otomies*, as a barbarous and rash People: This Advice being approved, was put in Execution. The *Zempoallan* Messengers were then called in, and told, that they were resolved to receive those Strangers in a friendly Manner, but, at

the same time, they retained them under Colour of a Festival, to gain Time for their General to march, and to answer finally according to the Event. Eight Days passed since *Cortes* sent the *Zempoallans* to *Tlascala*, and they were not returned; he asked those that went with him what made them stay so long? They answered, it was likely they did not dispatch them for Ostentation; for which Reason, and because they gave him great Assurances of the Friendship of the *Tlascalans*, he resolved to advance with his Forces. At the end of the Valley, he found a great Wall of dry Stone, a Fathom and an half high, twenty Foot broad, with a Parapet. This Wall reached cross the Valley, having only one Entrance, ten Paces wide, and there was a double Enclosure in the Nature of a Ravelin, about forty Paces in length, so strong, that had there been any to defend it, the *Spaniards* would have had enough to do to force their Way through. *Cortes* halted to view it, and examine every Part, to see whether there were any Ambush.

By this *Cortes* was convinced there were good Grounds for the Notion conceived of the Valour of the *Tlascalans*, since so great a Work had been erected to oppose them. The Workmanship of this Wall was much admired, because it was very artificially done, without any Mixture of Plaister. He entered the Enclosure towards *Tlascala*, his Men marching in good Order, and the Artillery ready, still sending Parties before to prevent Surprise. When they had advanced a League they came to a thick Wood of Pine-trees, with abundance of Thread and Papers tangled about the Trees, and, crossing the Way, which the *Spaniards* laughed at, being informed that the Sorcerers had promised the *Tlascalans* that they would disable them with those Threads and Papers. When they had advanced three Leagues from the Wall, *Cortes* sent Orders to his Men to hasten their March because it was late; and, going forward with the Horse-men, as soon as they came to the top of a Hill, two that went foremost, fell in with fifteen or sixteen *Indians*, armed with Swords and Targets, who had been posted there to give Intelligence; and as soon as they discovered the *Spaniards* ran away, tho' the *Spaniards* endeavoured to treat with them; but finding that the Horses would overtake them, they drew up all together, and, defending themselves, fought so desperately, that they killed two Horses, having almost cut off their Heads; their Swords being edged with Flints, so fastened to the Wood, that they cut like Razors; the *Indians* retired brandishing their Swords, without shewing the least Fear. But *Cortes* discovering above five thousand in a Body, that were moving to relieve the others, ordered them to be struck through with Spears, which he had forbid before, and sent to the Infantry to hasten forward: Before the Infantry could come up, the Body of the *Indians*, before mentioned, had reached the Horse-men, and, having shot their Arrows, began the Fight.

The Horse-men killed many with their Spears, especially those that pressed upon them. As soon as the *Indians* saw the *Spanish* Infantry, they retired, being much frightened at the Horses, saying those Stags were bigger than theirs, swifter, and, that it was by Inchantment, that the *Spaniards* rode on them. When the *Indians* were thus withdrawn, two of the Messengers that *Cortes* had sent to *Tlascala*, returned, with some Presents from the Republic, who said they were sorry for the Rudeness of those barbarous People, who were some Towns of *Otomies*, that had committed such a Disorder without Leave, though they were glad they had been chastized as they deserved; that the Republic was desirous to see, know, and serve him in their Town; and if they would have them pay for the Horses these *Otomies* had killed, they would immediately send Gold and Jewels; though *Cortes* was sensible of the Falshood of the Messengers, he thanked them for their Offer, adding, he would soon be with them, and, suppressing his Concern that the *Indians* had found the Horses to be mortal, said he would take no Pay for them, because he should soon have many more brought him from the same Place where these had been bred. Those *Otomies*, though Savages, were subject to the Republic of *Tlascala*, having
their

their Towns in Bottoms, and their Scouts on the Hills; who, when they discovered any Strangers, made Fires to give Notice from one Place to another, and the People assembled to defend themselves.

4. The *Tlascalans* Ambassador returned Home, carrying off about seventy *Indians* killed in the Action, to bury them; and *Cortes* ordered the dead Horses to be interred that the *Indians* might not be daily put in mind, by seeing them, that they could kill the rest. The Army was then, as has been said, within the Territories of *Tlascala*, and all that Province, from *Villa Rica* thither, was called *Catasta*, which, though large, was not populous; because *Motezuma* had, some time before, destroyed it. The Country is like *Andaluzia*, rich, hot, and fruitful, having many fresh Waters, which produce much Fish, Forests of Wild Trees, and Oaks bearing large Leaves, but smaller Acorns than those in *Spain*. At Sun-setting *Cortes* encamped near a Brook, on a convenient Spot of Ground; and they kept Guard, by an hundred at a time, having been undisturbed that Night. The next Day they came to certain Houses of *Otomies*, where they found some of them dead of the Wounds they had received: They burnt the Houses, and, for Want of better Provisions, fed upon Tunis, a sort of Fruit that Country produces; because they saw the *Indians* eat them.

The next Day *Cortes* proceeded, and being come to a troublesome Pass, commanded every way by Hills; before they began to enter it a Dog barked: One *Lores*, a Smith, and an able Horseman, made up to the Place, killed two *Indians* he met, and the rest fled. Here the other two *Zempoallan* Messengers *Cortes* had sent to *Tlascala*, came sweating, lamenting, much abused, and in such a Fright that they could scarce speak: They prostrated themselves on the Ground, laid hold of *Cortes's* Feet and said, The wicked *Tlascalans*, breaking through the Immunities of Embassies, had bound them to be sacrificed to the God of *Victory*; that they unbinding each other that Night, had made their Escape; and that they intended to sacrifice all the *Spaniards* in the same manner. Soon after their Arrival, about a thousand *Indians* well armed, appeared on a little Hill, who attacked the *Spaniards* with great Cries, and Volleys of Darts, Stones and Arrows. *Cortes*, by Means of the Interpreters desired them to be quiet, because he would willingly have Peace, signifying the same to them. He perceiving they did not forbear, fell on, and they artfully gave way, retiring till they drew the *Spaniards* into an Ambush of thirty thousand, that lay in little Hollows that were by the Pass. The *Spaniards* were in a desperate Condition, considering the Multitude of their Enemies who charged them where they had not room to stir. But the Encouragement given by *Cortes*, telling them, They now fought for their Lives, and did no Wrong to those that had attacked them, infused fresh Courage. Here *Tuch*, one of the Noblemen of *Zempoalla* told *Marina* he foresaw the Death of them all; for it was impossible that one Man should get off alive. *Marina* told him, the God of the Christians, who was powerful, and loved them, would deliver them out of that Danger.

Not long after, the *Spaniards* and their confederate *Indians*, fighting manfully to avoid being sacrificed, got out of that Streight, where the *Tlascalans* behaved themselves in such a furious manner, that several of them came to close with the *Spaniards*; and others laid hold of the Horsemen's Spears as they rode before to make way for the Foot; and the confederate *Indians* leaping into the Water, *Cortes*, every now-and-then turned to the Infantry, and bad them remember, That the planting the Faith of Jesus Christ depended on the Preservation of their Persons. That they might expect very great Rewards besides, that being *Spaniards* they ought not to despond, which their Nation never did. At length they extricated themselves from among those deep Roads and Brooks, and got into the plain Fields, where the Horses having room to run, and the Cannon to play, terrified the *Indians*, and killed many; so that, not able to endure it, they retired to a rising Ground and there fortified themselves. In this Fight some of the *Spaniards* were wounded,

but not one killed, and many *Indians* died upon the Spot, as did others afterwards of their Wounds. The *Spaniards* rejoiced, and with loud Voices returned Thanks to God, for having delivered them out of that Danger; nor was there any Want of Joy among the *Indians*, their Friends, who embracing the *Spaniards*, congratulated their Escape. The Gentlemen of *Zempoalla* commending *Marina*, related her Prediction, and she declared she had never been afraid.

Such was the Posture of Affairs, when an *Indian* who commanded one Part of the Enemy's Army, making Signals of Peace, came down where *Cortes* was with some of his prime Men about him, and said, That Experience had convinced him, that he and his were invincible and immortal Gods, therefore desired him that the War might cease, and he would prevail with the Commanders on his side, that they should be reconciled, and permit him to enter into *Tlascala*. *Cortes* cheerfully answered, That he had already offered them his Friendship, and, tho' he had sufficient Cause to be otherwise, that he would still be their Friend. The Commander went back to the *Tlascalans*, who beat him so unmercifully that he was near Death. He returned to *Cortes*, saying, These wicked Men would destroy him. *Cortes* ordered him to be dressed, and bade him, since they were to be engaged with his Countrymen, stand apart, with a Token he gave him that he might not be hurt. In skirmishing before the Battle begun there were several notable Actions; among the rest one of the four *Indians* whom *Cortes* had sent on his Embassy to *Tlascala*, knowing a Captain who in that City had seized him, asked Leave of *Cortes* to challenge him, who encouraged and allowed of the Challenge, directing a *Spaniard* to draw near when they were engaged, that if his *Indian* should be in danger he might not perish.

The Fight was begun in the Sight of both the Armies, with their Swords and Targets, but at the Conclusion, the *Zempoallan* killed the *Tlascalan*, and cut off his Head. The confederate *Indians* celebrating the Victory with mighty Cries, and the *Spaniards* perceiving that *Cortes* rejoiced at it, and looking upon that as an happy Prefage of his future Victory, sounded their Trumpets and beat their Drums. Between the two Armies was a very narrow and dangerous Pass, which the *Tlascalans* defended, and the *Spaniards* were of Necessity to march that way. *James de Ordaz* boldly closed with the Enemy, pushing them, and gaining Ground, though Showers of Arrows fell on him and his Men: At length he gained the Pass, and then the Horses were led through. The *Tlascalans* having lost that Pass so proper to be defended, left the Field and marched clear off; and the *Spaniards* being very well pleased that they might be still advancing, took up their Quarters in a little Tower that stood in an Eminence called *Tracozizincó* where there was a Temple with a little Town, which was afterwards called of *Victory*. They with extraordinary Diligence made Barracs of Boughs and Straw, the *Indians* working at them with much Alacrity, because *Cortes* pleased them, and they were ready to serve upon all Occasions upon that Account, and to avoid falling into the Hands of their Enemies. All that Night, being the first of *September*, strict Watch was kept, and *Cortes* himself was upon the Guard with the third Part of his Men at the Morning Watch, which was most apprehended, but no Enemy appeared; because it was not their Custom to fight in the Night.

The next Day *Cortes* thought fit to send Messengers to desire the *Tlascalans* to permit him to proceed freely on his Way, since it was not his Design to do them any Harm, nor was he going to join the Confederacy against the King of *Mexico*; but only to perform what his Master the King of *Spain* had commanded him. In the mean time leaving *Pedro de Alverado* with half of the Forces, he marched with the other half, and the Horsemen. He burnt four or five Towns, and returned with four hundred Prisoners and no Loss, though the Enemy charged him all the way to his Quarters, where he was told the *Tlascalan* Commander had answered his Message,

Message, and that they would, the next Day, tell him their Minds. This bold Answer, and the Advice Cortes had received, that One hundred and Fifty thousand Men were assembled, made him put his Forces into such a Posture as he might not be surprized. Cortes resolved to be informed by the most rational of the Prisoners about all things that were convenient for him to know; and they answered, That since they were his Prisoners, and so well used, they would tell him the Truth: They declared, that the Army was composed of *Otomies* and *Tlascalans*, all Subjects of the Republic of *Tlascala*, though they did not care to have it known that their Commonwealth made the War, because they would not have it thought, if they should be vanquished, that it had been by their Authority; that they hated him, because they imagined he was going to be a Friend to their mortal Enemy *Moteczuma*, and therefore they agreed never to give over till they had conquered the *Spaniards*, and sacrificed them to their Gods, and made a solemn Banquet of them, which they called heavenly; that the War was carried on at the particular Instigation of *Xicotencatl*, the General of the Republic, who carried its Standard, which was a golden Eagle with its Wings displayed, and that he would see it the next Day in the Rear of the Army, because they were to fight; for in time of Peace it was before: That they were about One hundred and Fifty thousand Men, most Archers, who were very much afraid of the Thunder, and of the great running Stags, and were amazed at the dreadful Wounds their Swords had made.

5. The *Tlascalans* Army appeared, the Standard was seen, and the Number of Men was so great that they covered the whole Plain, all painted, adorned with great Plumes of Feathers, armed after their Manner with Bows and Arrows, Slings and Javelins, which they cast with such Dexterity that they would pierce a Door, and was the Weapon the *Spaniards* most dreaded; long Spears, and Swords edged with Flint; Targets, Clubs, Head-pieces, wooden Gauntlets, and Greaves covered with Deer-skins; gilt Cotton Armour for the Body Finger-thick, which they called *Escupiles*, worn afterwards by the *Spaniards*, who found them useful against the Arrows, and convenient in the Toils they underwent, not being able to endure Steel or Iron: They likewise made use of the *Indian* Targets, their own being soon spoiled, and those were made of Wood, Leather, and adorned with Feathers, and others of Reeds and Cotton, being the best, because they did not split.

The Army marched very orderly, divided in two Battallions, but crowded together, and every Battallion had Horns and Kettle-drums, which was an extraordinary Sight, for the *Spaniards* had never beheld so great an Army since they discovered the *Indies*. The Enemy halted very near the *Spaniards*, with a deep Trench between them. Cortes shewed himself highly pleased at the Sight of them, and told his Men, that God gave them that Opportunity for his Glory, and the Honour of the *Spanish* Nation, which would strike a Terror not only into *Moteczuma*, but into all that World. The *Tlascalans* being highly elevated with so mighty an Army, encouraged by the small Number of the *Spaniards*, puffed up with their usual Success against their Enemies, sent three hundred Turkeys, two hundred Baskets of Cakes of *Zentli*, that is Fifty hundred weight of Bread, which was an extraordinary Supply, for the *Spaniards*, considering the Distress they were in, and this, that they might be in better Case, and taste more deliciously when sacrificed.

When the *Tlascalans* thought the *Spaniards* had eaten, *Xicotencatl*, in a very haughty Manner, commanded two thousand Men to go and take those Creatures the Sea had spewed up, and if they defended themselves to kill them. The Two thousand Men passed the Trench, and with no less Intrepidity advanced to the Tower: The Horsemen went first to receive them, the Infantry followed, and the *Tlascalans*, at the first Encounter, were made sensible of what the *Spanish* Weapons could do. They retired a little, but returned with greater Fury; when they were fully convinced that those few Men were

not to be slighted. In their Retreat they were most of them killed. The Commander of the Army, having seen what had happened, fell on so boldly, that many of the *Indians* came up to the Camp, and some entered it, in spite of those who were left upon Guard, fighting with the *Spaniards* Hand to Hand. This proved a Day of glorious Toil, for the Fight lasted above four Hours, within and without the Trenches, before they could make room, the *Indians* charging and attacking so furiously; till seeing a great Number killed, they began to slacken, being amazed that they could not kill a *Spaniard*, looking upon that as wonderful, so that they still fought as if they had been angry with themselves; but as it grew late they retired.

The *Spaniards* rested the better because they knew the *Indians* would not fight in the Night, but kept a good Guard. The *Tlascalans* did not look upon themselves as vanquished, and how many were killed could not be known, because as they fell they hid their Dead. The next Day Cortes marched out into the Country, burnt some Towns, and plundered one that had three thousand Inhabitants, but few Soldiers, because most of them were gone to the Army. The Town was fired, many Prisoners carried away, and the *Spaniards* returned to their Quarters, at a Time when a great Number of Men were coming to defend that Place, but retired immediately for fear of the Guns, and being fatigued with Heat. The next Day the *Tlascalans* thinking they could gain more Advantage over the *Spaniards* in narrow Places, in a haughty Manner sent them Provisions again, as they had done before; challenging them to come into some straight Place, but finding they did not, they boldly began the Attack again. They fought five Hours very desperately, without being able to kill one *Spaniard*, which was what they aimed at, but of them a prodigious Number was slain, because as they thronged together, the Cannon, the Muskets, and the Cross-bows, did dreadful Execution. At length, tired and ashamed that they had not executed their Malice, they retired in Confusion.

The next Morning the Commanders sent Messengers unto Cortes, who thus addressed him: Sir, if you are a fierce God, here are five Slaves for you to eat; if you are a good God, we offer you Incense and Feathers; and if you are a Man, take then Fowls, Bread, and Cherries, for you and your Men to eat. Their Design was to know whether the *Spaniards* were Men like themselves, because as they had not been able to vanquish them, or so much as kill one, they concluded they were immortal; and seeing, on the other Hand, that they did eat and do other things like Mortals, they were confounded. Cortes, who never wanted Presence of Mind on any Occasion, said they were all mortal Men like themselves; but that, because they believed in, and served one only true God, he did, and would always, assist them; that they should not deal treacherously with him, for all would turn to their Prejudice; and since he did not desire to do them any harm, but to be their Friend, he advised them not to be obstinate; having delivered himself thus mildly, he dismissed them, returning Thanks for the Present.

The next Day thirty thousand *Tlascalans* advanced, being desirous to signalize themselves, and fought so bravely, that the Battle was more bloody than the former, but at length retired; and it is to be observed, that for the Space of ten Days the *Spaniards* continued in those Quarters, the *Indians* generally supplied them with Fowl, Bread, and Cherries, only that they might have the Opportunity of viewing their Order and Situation, whether any dead Men were buried, wounded, or dressed, and observe how they looked, or whether they had more or fewer Forces; yet the *Spaniards*, at first, had no Jealousy of their Design, and, on the contrary, commended the *Indians* for making War only with their Weapons, for had they cut off their Provisions they must have been undone.

6. The *Tlascalans*, intent upon seeking Revenge, and finding how little they could do by Force, had recourse to Policy; and, in order the more to lull the *Spaniards* into Security, they sent some Men of Note with Presents of Gold and Feathers: They made many submissive Bows to Cortes, and the eldest of them told him, That the Re-

public sent that small Present, which was not so inconsiderable, for want of good Will, but by Reason of the Poverty of their Country; and that if he had any Commands, they would serve him very readily. *Cortes* thinking the Messengers had been sincere, very pleasantly told them, That though he valued the Presents, he made more account of their Good-will, and coveted nothing more than making them his Friends. The next Day the *Tlascalans* sent fifty Men, who brought Provisions, asked how the Men did, and what they meant to do? *Cortes* said they were all very well, and gave Thanks for the Present; and these Men growing familiar, walked about the Camp, and observing every thing therein, and particularly the Horses Teeth; a *Zempoallan* Gentleman taking particular Notice of them, told *Cortes* he looked upon these Men as Spies; and that they had some private talk with the *Indians* of *Tztaactuchitlan*: Upon this, *Cortes* ordered one of them to be taken up, whom he examined by his Interpreters, using Threats if he did not confess the Truth. He owned that they had been all sent to discover which Way they might burn the Barracks, for which Purpose they designed to march with a great Army by Night, thinking that the Guns, Horses, and Weapons, were less to be feared in the dark.

Others having confirmed this Account, he caused the Hands of seven of those Men, and the Thumbs of others, to be cut off, though much against his Inclination, but believing it might be of use for the future; and bid them go tell their General, *Xicotencatl*, that he would serve all the Spies, that fell into his Hands, after that Manner; and that he might advance with his Army, for that he would always find the *Spaniards* invincible by Night or by Day. Those Men with their Hands cut off, struck a great Consternation among *Xicotencatl's* Forces, begetting an Opinion, that the *Spaniards* had some Spirit that discovered their Thoughts to them, for which Reason they durst send no more Spies or Provisions. *Cortes*, after this Information, enlarged his Trenches, and fortified his Camp, providing every thing till Sun-set, when he perceived that the Enemies Army was advancing to put their Design in Execution; and judging it most convenient not to suffer them to come up to his Quarters, he boldly marched out to meet them, which he thought would terrify them the more, as supposing their Intention had not been known.

He accoutred all the Horses with large Breast-plates, full of Hawks-Bells, that the Noise might make them seem the more; directing they should strike the Enemies on their Faces, with their Spears, because they were wont to lay hold off, and snatch them away. Then, having told the Soldiers that they must overcome that Multitude by dint of Valour, he fell on at the very time when the Spies, whose Hands had been cut off, were relating what had befallen them, which much troubled the General and all that heard it, but they were much more astonished to see themselves so unexpectedly assaulted, so that they instantly dispersed and fled, without making any Opposition; and though a great Slaughter was made, *Cortes* took care to put a Stop to the Pursuit, for fear they should be drawn into some Place of Disadvantage. The next Day *Cortes* seeing his Men chearful, said to them, That since God had, till then, so visibly assisted them, they would be all very much to blame if they did not proceed on what they had so well begun with Resolution, and to that Purpose it was requisite to press hard upon the *Tlascalans*, to the End, they might afterwards prove the surer Friends, for that nothing could be more advantageous to them, in *New Spain*, than to be in Confederacy with that Commonwealth, which was to be compassed by prosecuting the Victories they had gained.

All the Commanders and Soldiers promised to follow and go wherever he would lead them; *Xicotencatl* being much out of Countenance at the Disasters he had met with, retired to *Tlascala*; *Maxiscatzin*, and the other Lords, told him it had been better to have followed the first Advice, and saved the Lives of so many, and therefore it was in vain to persist obstinately to the Loss of the Reputation of that Republic. *Cortes* seeing no Enemy appear in the open Country, went up to the

top of the Temple, where his Quarters were, whence he discovered several Towns, and abundance of Smokes towards the Mountains; then coming down, he told his Captains he believed that to be a large Place, and since no Enemy appeared, it was proper not to lose Time, but to put in Execution what had been agreed on. As soon as it was Night, having before taken a view of the Country, he resolved to try his Fortune, and entered upon a great Road, with half his Infantry, and all his Horses, judging that Way would lead him to the Smokes he had seen. They had scarce gone a League, before a Horse fell, which *Cortes* ordered to be sent back to the Quarters, and presently two more fell one after the other, and in this Manner there fell five.

The Soldiers begged of *Cortes* to turn back, and do what they designed by Day, because they looked upon this as an ill Omen: He, with an undaunted Courage, prayed them for the Love of God, whose Cause they had in hand, not to regard superstitious Observations, but to hold their Way, since he went himself foremost, and that the Horses might return to the Place from whence they came. He had scarce spoke these Words, when his Horse fell, which he wondered at, whereupon all his Men urging that it was a vain Thing to proceed, and some, that he would ruin all; he, in a severe Manner, told them they ought to consider that great Undertakings were not to be carried on without Difficulties, that they should try to march a-foot, leading the Horses, to see what that Accident tended to: When they had marched far after this Manner, the Horses were all well, and they could never find what occasioned their past Distemper, though some fancied it might have been some Sorcery of the *Indians*, much practised among them, but *Cortes* said it was the Cold of the Night which gave them the Gripes. They proceeded thus till they came into some stony Grounds, from which they extricated themselves with Difficulty, and spying Fire, made towards it. They found two Men and two Women in a House, who conducted them to the Mountains, where *Cortes* had seen the Smoke.

Before it was Day they came to some Villages, where the Fright was greater than the Hurt; and being informed that *Cintancingo*, a large Town, was by, they soon came to it, the Surprise occasioning much Confusion: Some Harm was done at first, but the People running away in the utmost Consternation, *Cortes* ordered that no Person should be killed, and nothing taken, so that the Disorder soon ceased, and the Inhabitants returned to their Houses. *Cortes* went up to a high Place, whence he discovered such a multitude of Houses, that he was astonished, and asking what Places those were, received an Answer that it was the City of *Tlascala*, and the Villages about it; he called all his Men, and said, what would it have availed to have destroyed the People of *Cintancingo*, since there are so many yonder? Then turning to *Alonso de Grando*, who was chief Alcalde, he asked him what he thought was fit to be done, considering the multitude of People they had discovered? He answered, that they should return to the Sea and write to *James Velasquez* to send Supplies, because if any cross Accident or Sickness should happen among them, it was certain they should be all devoured by the *Indians*. *Cortes* was much concerned at this Answer, and especially for its touching upon *James Velasquez*: However, he replied, that he ought to consider that if they must certainly die, it was better to perish in the Prosecution of their Design than in running away.

7. He then went to rest him by a Spring, without the Town, whither the Chiefs of the Country resorted to him, with abundance of unarmed Men, carrying a quantity of Provisions. They thanked him for having done no hurt, as he might; offered to obey him, and interceded with the Lords of *Tlascala* for a Peace: He entertained them very kindly, promising his Friendship, provided they were sincere, and so returned to his Quarters, advising the Soldiers not to speak ill of the Day till it was past, for he hoped that the War with *Tlascala* was at an End, as they would find it, and if so, God had much Prosperity in store for them. Those he had left in his Quarters were very melancholy, fearing some Disaster, because of the

the Sickness of the Horses; but when they saw him return with a pleasant Countenance, and all Men safe, with some of the Natives of the Country, they crowded to welcome him; he told them all that had happened, but when they were informed of the Greatness of *Tlascala*, and the Multitude of those martial People, reflecting how many Accidents might happen, how little Hopes there were of Supplies, when they had run themselves into a Country they knew nothing of; they began to hold Cabals, resolving to persuade and to require *Cortes* not to carry them where they could not easily retreat, since the Danger was so evident, offering to follow him through greater Fatigues, provided it was with a suitable Power, that which they then had being too inconsiderable for so extensive a Country.

His Friends advised him to take order about it before the Men mutinied; he answered, that the Danger was not so great, for he did not believe that *Spaniards* could be so faint-hearted, especially having till then met with so much Success. One Night, going the Rounds, he heard loud talking, and some Soldiers saying, if our Commander is mad, let us be wise and tell him in plain Terms, that he must consider what is fit to be done, or we will leave him by himself. He told some who were with him, that those who durst say so were likely enough to do it, and going on heard the like in other Places, which troubled him very much; he would willingly have punished them, but thought it better to take no Notice, till hearing that the Murmurs increased, he caused all the Men to be drawn together, and spoke to them so effectually, that they all readily submitted to follow and obey him.

Very soon afterwards six *Mexican* Noblemen arrived, attended by about two hundred Persons; being brought before *Cortes*, they made him profound Obedience, and it appeared that they had Notice, at *Mexico*, of the Victories he had gained over the *Tlascalans*; before they spoke they delivered him a Present from their Monarch, viz. one thousand Cotton Garments, various curious Pieces of Feather-work, and the Value of 1000 Castellanos in very fine Gold Dust, as it is taken out of the Mines: Then the Eldest of them said, That their Master, *Moteczuma*, saluted him, sent the Present by them, wishing him all Prosperity, much rejoiced at the News he had received of the Victories he had obtained over the *Tlascalans*, that, wishing him well, he desired he would not go to *Mexico*, because the Way was very bad and dangerous, and he should be sorry that any Misfortune should befall Men of so much Valour, whom he so entirely loved; that he was willing to acknowledge the King of *Spain* his Friend and Sovereign, whom he would serve in all he should command. *Cortes*, by his Interpreters, answered they were welcome, and he would consider of their Message. *Cortes's* Design was, that those Embassadors should see how he behaved towards the *Tlascalans* in case the War was carried on, and if Peace was concluded, that they should hear how he reproved them for having begun it.

He then gave Orders that they should be well treated; at that time he was indisposed, and therefore had not for some Days marched into the Country, so that nothing more was done than securing the Quarters, and skirmishing with Parties of *Tlascalans*. The Enemy fancying this proceeded from Weakness, or a Loss they were not acquainted with, prepared to attack them. *Cortes*, notwithstanding his having taken Physic, mounted on Horse-back, fought a long time in Person, and omitted nothing that was to be done, till the Enemy were routed and fled; the *Mexicans* being present, and observing every Circumstance of the Action. The *Tlascalans* admiring that all their Power had not been able to compass their Design, and most of them concluding that the *Spaniards* were assisted by some Deity, which rendered them invincible, and being informed that the *Mexican* Embassadors were arrived at the *Spanish* Army; having seriously consulted what was to be done, after many Debates and Contests, concluded that Peace ought to be made, and Endeavours used to divert them from entering into any Alliance with the *Mexicans*, because that would be the

greatest Misfortune that could befall them. Young *Xicotencatl* was appointed to go on this Embassy, though he endeavoured to excuse himself, but having received positive Command, he made ready with fifty of the principal Men in the City, and some Youths to be left as Hostages.

He carried a Present of Cotton Cloth, and Feather-works with some Gold, according to the Ability of that City, which had very little of those things. *Cortes*, being advertised of this Embassy that was coming from the Republic of *Tlascala*, and that *Xicotencatl* was the Person employed, went out to receive and conduct him to his Quarters, with much Honour and vast Attendance. They two sat down, all the rest standing, as well *Spaniards* as *Tlascalans*; the Present and the Hostages were brought in, and *Xicotencatl*, in a very courteous Manner, begged Pardon for what was past, for himself and his Republic, making many Excuses, and offering to enter into a strict Alliance with the *Spaniards*, and to serve them faithfully for the future.

Cortes, having considered the *Tlascalan's* Speech, told him that notwithstanding what was past, they might depend on his Friendship, and on his coming among them, immediately after the Departure of the *Mexican* Embassadors: Upon which *Xicotencatl* rose up very well pleased. *Cortes* went with him out of his Tent, the other Commanders attended him out of the Quarters, all being well pleased, hoping that since the War was concluded with *Tlascala*, they should reap great Advantages from the Alliance, for at that time considering that some were dead, many wounded, and the rest spent with Fatigues, their Number so small, and the many Difficulties they had to surmount; they concluded that if the War had lasted, they must all have perished, and therefore they ascribed the concluding of this Peace, at that time, to be especial Goodness of God; and for confirming them in this religious Opinion, *Cortes* ordered Mass to be said, and a solemn Thanksgiving; after which, *F. John Diaz* called the Tower of the Temple there, *The Tower of Victory*, in memory of those Battles which the Troops had gained whilst they had their Quarters close by it, during almost forty Days they continued in that Place.

8. On the Return of this great Man, who had acted as Embassador, the Senate assembled, and heard, at leisure, a full Report of the Manner in which this Negotiation had been managed, and judging from what he delivered, that it imported them highly to secure the Friendship of *Cortes*, in order to have his Protection against *Moteczuma*; they resolved to leave no Means untried to bring him into their City as soon as possible, to prevent his concluding an Alliance with their Enemy. The Peace was proclaimed, and they made a Mitole, that is, a public Dance of above twenty thousand Men richly adorned.

They offered extraordinary Sacrifices to their Gods, burning abundance of Perfumes, and garnished the Doors of their Houses, with Boughs and Variety of Flowers; the *Mexican* Embassadors were much concerned at that Alliance with the *Tlascalans*, and bid *Cortes* take care not to trust these People who were so false that they would endeavour to compass, by Treachery, what they had not been able to perform by Force; and that he might be assured, if they once went into *Tlascala*, that they would murder them every Man. Though *Cortes*, who was a cautious Man, did not, as yet, repose much Confidence in the *Tlascalans*; he answered, that if they were ever so treacherous, he was resolved to go into the City, for he feared them less there than in the Field. Having heard his Resolution, they desired he would give Leave for one of them to go first to *Mexico*; he was pleased with their Proposal, because it gave time to see if the Friendship the *Tlascalans* offered was sincere, and how it was taken at *Mexico*; whilst these things were in Agitation, many *Tlascalans* resorted to the Army with Provisions, others went out only to see and become acquainted with the *Spaniards*, entreating them to come to their City. They gave them good Words, till the Messenger, returning from *Mexico* the sixth Day, brought ten costly Vessels of Gold, well wrought, and one thousand five hundred

hundred Cotton Garments, and in *Moteczuma's* Name, intreated *Cortes* not to expose himself by going into *Tlascala*; for, he assured him, he would repent it, because those were a needy People, and invited him thither that they might rob him.

On the other Hand, the four great Lords had already sent to importune him to repair to their City, offering him still greater Security if he desired it, and protesting that their Friendship should last for ever, for they would never violate the Faith of the Republic upon any Account. *Cortes* concluding that so much Courtesy must needs proceed from a sincere Friendship, and being much courted to it by the *Zempoallans*, resolved to go to *Tlascala*, and accordingly began his March, leaving several Crosses and Heaps of Stones at his Quarters by the *Tower of Victory*, in Memory of those glorious Advantages he had gained there.

The Accounts the *Zempoallans* and other *Indians* that followed the *Spaniards* gave were very advantageous; who, glorying to be in their Company, extolled their Valour, their Goodness, and their brave Actions; praising their God, by whose Aid they conquered. *Cortes* took Care to send Advice to *John de Esculante*, and the rest that had been left behind at *Vera Cruz*, of the Success it had pleased God to give him, directing them to carry on the building of the Fort, and to keep a watchful Eye upon the Natives, and upon the Ships that should come from *Cuba*, and ordering two Jars of Wine to be sent him for saying Mass, and for the Sick, having used all that he carried with him. When he arrived at *Tlascala* on the 18th of September 1519, the Lords of the four great Quarters of the City came out to meet him, attended by several others of the greatest Persons of the Commonwealth, and above an hundred thousand Men. The Province complimented him at several Places, first at *Tezonpantzinco*, next at *Atliquetzan*, a very large Town, whither *Pilteculti* came with a very numerous Retinue; thence *Cortes* proceeded to *Tezatliala*, belonging to old *Xicotencatl*, who came not because of his great Age. The other Lords being *Maxciscatzin*, *Zitlacpopucatzin* and *Tlevexolotzin*, with all the prime Nobility, came up in good Order. Young *Xicotencatl* embraced *Cortes*, as did the other Lords, whom he received very courteously, and they all proceeded together to the Place where he and his Men were to be quartered, always expressing their Desire to serve them; when the *Spaniards* had been put into their Quarters at the great Temple, and the *Indians*, their Friends, with them, they were generously treated and supplied with all Necessaries.

The more to assure *Cortes* of their Affection, they presented him with above three hundred beautiful Women, all very well dressed, that had been condemned to be sacrificed, which they gave the *Spaniards* as an Offering, and they lamented their Misfortune. *Cortes* would not accept of them, alledging, that their Religion would not permit any Man to have more than one Wife, and she a Christian: At last, in regard that the *Indians* take it very ill to have their Gifts refused; some of them were received under Colour of serving Donna *Marina*, who was present at all Conferences, and much respected; for it was the Custom among the *Indians*, for a Woman of Quality to have a great Number to wait on her. And the *Indians* observing, that these and other Women Slaves they gave the *Spaniards* lived contentedly with them, the prime Men afterwards gave them their Daughters, that the Race of those brave Men might continue among them. *Xicotencatl* gave a beautiful Daughter, he had, to *Peter de Alverado*, and she was afterwards called Donna *Louisa Tecbquiluasín*; those People having no Ceremony in Marriage more than the Consent of the Parties. They gave *Cortes* the Name of *Calchichitl*, signifying an Emerald, and Emeralds are highly valued among those People. They called *Peter de Alverado* the Sun, because he was very fair of Complexion, with an agreeable Red, and much beloved by the *Tlascalans*. *Cortes*, by Degrees, enquired very particularly into the Power and Condition of *Moteczuma's* Empire, and the Enmity between him and the Republic, and omitted nothing that might afford him Means of

providing amply for the Accomplishment of his Enterprize.

9. This bringing over of the Government and People of *Tlascala* to his Interest, uniting them in the Confederacy against *Moteczuma*, and engaging them to furnish an Army for that War, was one of the greatest Strokes of Policy that was shewn by *Cortes*, in the Management of this whole Affair; and without taking which, it had been simply impossible for him to have succeeded. It may not be amiss therefore, before we proceed further, to give a more particular Account of this celebrated Republic, which makes so great a Figure in the History of the New World. The Town of *Tlascala* is situated in Lat. 20° in a Climate extremely temperate, and in a Soil wonderful fruitful; the whole District belonging to it was about 50 Leagues in extent, and yet within that narrow Compass, from the great Mildness of its Government, more especially in Comparison of that of the *Mexican* Monarchs, the Republic was able to raise those prodigious Armies that have been before-mentioned.

The Place itself was built amongst the Rocks and white Cliffs, so as to provide rather for Strength and Security than for Neatness and Beauty, though, as far as the Ground would permit, the City was not destitute of either. It was from this Situation that it derived the Name of *Tlascala*, which signifies a Place of Rocks, tho' it was afterwards called *Tlascallan*, which some *Spanish* Writers call a Corruption; but, as they allow that in the *Indian* Tongue it implies, a Place well stored with Corn, and consequently belonged as justly to this City as the other; I cannot see why we should not rather suppose the City had two Names; the first, perhaps imposed by their Enemies, and the latter by themselves. There was a fine River passed through their Territory, and washed a Part of the City, which commonly overflowed in the Winter, and thereby greatly enriched the Soil, but sometimes over-ran its Banks with such Violence, as to do a great deal of Mischief, and rendered Dykes necessary, which they, wanting Skill to raise, had recourse to superstitious Ceremonies and bloody Sacrifices, which instead of curing increased the Mischief. The Town was divided into Parcels at small Distances, without any Order; many Houses crowded together, and between them several narrow winding Lanes, the Houses terraced at the Top on Beams, some on Mud-walls, some boarded, some on Brick, and some of Lime, and Stone, according to every Man's Ability; they had no upper Floors, but all on the Ground; having very large Rooms of irregular Shape, nor had they Doors or Window-Shutters, but only Matts, made of a Sort of Sedge, which they hung on and took down at Pleasure, with Hawks-Bells, of Gold, Copper, or other Metals, and Sea-Shells hanging on them to make a Noise, when they were taken down, opened or shut. Most of this Country was inhabited, for from the City there stretched out other Towns, like Suburbs, extending two or three Leagues beyond the Walls of it; every House had Land about it, and there were eighteen Towns adjacent, belonging to *Tlascala*. The Inhabitants being above one hundred thousand, and all the Country round this Province was enclosed by other Nations, Subjects to the *Mexicans*, who had maintained War against *Tlascala* for sixty Years past, and pressed them on all Sides.

The *Tlascalans* had expelled the *Ulmecans* and *Zucatecans* out of their Country, and kept it to themselves, calling themselves at first *Chicimecans*. Having settled their Boundaries to be known by, and refusing to submit to any King, or General, there ensued Civil Wars among them, by their conspiring against their best Commanders. The prime Men were so hard pressed that they craved Aid of *Tescuco*, and other Towns, being much straitened in *Tlascala*. With those Succours they enlarged their Borders, and grew too hard for their Enemies, who sought Assistance of *Matzaliutzin*, King of *Mexico*. He sent Word to the *Tlascalans*, that though he had promised to assist their Enemies, it should be only in Shew, for which he prayed them not to hurt his Subjects.

jects. When the War was over, those *Chichimecans* of *Tlascala* struck a great Terror into the Country, and all the *Culus* and *Mexicans* joined in Alliance with them, and living long in Peace, had Leisure to build their Towns and settle the Frontiers. *Tlascala* enjoying Peace, all the Province was inhabited, and *Kalliuacuth*, who was looked upon as the only Lord, divided what he had with his Brother *Teyobualminqui*, and went down to govern his People into the Vale of *Ocoteculco*.

These Brothers left the Sovereignty to two Sons of theirs; and one of them, though very brave, grew so tyrannical in his old Age, that his Subjects, being uneasy, conspired, and slew him and all his Friends and Kindred; but two Nurses hid two young Sons of his, from whom descended *Maxiscatzin*, the most faithful Friend of the *Spaniards*; the other three Lords of *Tlascala* were of no less remarkable Descents. After the Death of *Culhuacutli*, the City and its Territory began to be governed as a Commonwealth. The *Mexican* Language was spoken at *Tlascala*, though there was another which they called *Otomitick*, from a Nation, which revolting from the Kings of *Mexico*, was received by the *Tlascalans* as their Subjects, and had Lands given them to till, on Condition that they should guard the Frontiers against the *Mexicans* and *Culus*. These were the barbarous *Otomies*, on whom the *Tlascalans* at first laid the blame, for having taken up Arms against *Cortes*. They are very hardy, excellent Husbandmen, obstinate Idolaters, leud, savage, and hard to be brought to Christianity, Drunkards, and fond of living in remote Places, being the reverse of those that speak the *Mexican* Tongue, who were docile and polite. These *Otomies* were once possessed of all that Country, and there are of them scattered every where, but nothing is known of their Original; because they are so barbarous, that they can give no account of themselves.

10. *Cortes* being come into *Tlascala*, to please *Maxiscatzin*, removed into his Quarter of the Town called *Ocoteculco*, where a Market was kept every Week. The four Lords that governed the Commonwealth, and other great Men, went thither to discourse *Cortes*, and intreat him to acquaint them with his Intentions, promising to concur sincerely in whatsoever he should propose. *Cortes* gave them to understand that he was come to instruct them in the Christian Religion, to abolish Idolatry, and to assist them against all their Enemies; and particularly *Moteczuma*. *Maxiscatzin* replied, in Defence of their Gods, and *Cortes* rejoined, still pressing them to renounce their Idols; but, by the Advice of *F. Bartholomew de Olmedo*, and some of his Officers, he thought fit not to urge the Point of Religion any farther at that time. They promising not to eat any more human Flesh, yet they all returned to it as soon as he was out of the way. Being now satisfied that his Friendship with the *Tlascalans* was established, he proposed his Journey to *Mexico*; and though they represented to him the Power of *Moteczuma*, the Strength of the City, the Danger he was running into among the *Culus*, who, they said, were given to change; as also their Multitude; in Conclusion, to please him, they consented to all he said, and offered to assist him, if he would make War, or to bear him Company, if, as he said, he only designed to visit *Moteczuma*: Accordingly they immediately began to appoint Commanders, raise Men, and lay up Provisions.

The Fame of the Alliance between the *Spaniards* and the *Tlascalans* being spread abroad, put all the Country into a Consternation, and especially *Moteczuma*, who was still resolved to obstruct *Cortes*'s coming to *Mexico*; though, at the same time, in order to draw him from *Tlascala*, he proposed his removing to *Chulula*, where he might be better entertained. The *Tlascalans* earnestly opposed it, and zealously offered fifty thousand Men to attend him, because the People of *Chulula*, after having been long at Peace with them, being corrupted by *Moteczuma*, had, in a Battle they had with the *Mexicans*, and in which the *Tlascalans* led the Van, fallen in upon their Rear, and killed many of them, since which time they had been Enemies. The *Tlascalans* advised *Cortes* to consider that the *Chululans* said they did not fear

him, because their God *Quetzalcoatl* was so powerful, that he would destroy his Men with Fire from Heaven, or drown them with Water: He smiled at this, and continued his Preparations. On the Part of the *Tlascalans* nine Sons of the Prime Men of the Quarter of *Ocoteculco* were appointed Commanders of the Troops that were to attend *Cortes* from thence, the other Quarters nominated thirteen Commanders. The several Commanders had also their peculiar Colours, and all very gay, with Plumes of Feathers, after their Manner. Certain it is, that the *Tlascalans* were very dubious of the Event of the Journey, being apprehensive of the *Chululans*, and bearing much Respect to their City, as it was a Place of great Devotion and reputed Sanctity among them. *Cortes*, by the Advice of the four great Wards, sent to call those that governed at *Chulula* to him.

Eight Leagues from the City of *Tlascala* is the Mountain called *Popocatepod*, the Top whereof always smoaked; and whilst the *Spaniards* were at *Tlascala* it cast out more Fire than usual, to the great Astonishment of the Natives. *James de Ordaz* took a Fancy to see that Wonder, for till then it was a strange Thing to the *Spaniards*, and the *Indians* affirmed that no Mortal had ever been upon the Top of that Mountain. *Cortes*, to shew the *Indians* that the *Spaniards* made small Account of what they thought impracticable, was well pleased that *Ordaz* should go and view it: He took with him some *Spaniards* and a few *Indians* for Guides, who stopped at a certain Distance; and *Ordaz* advancing, they heard the dreadful Noise that was within, felt the Earth quake, and arrived at the Place to which the Fire and Stones cast out of the Mountains reached, the great Quantity of Ashes choking up the way. These Things making some uneasy, and being very weary with going up, they would willingly have turned back; but *Ordaz* telling them, it was a Shame for *Spaniards*, who had undertaken any thing not to go through, they advanced, making their Way through the Ashes, and arriving at length at the Top, through a thick Smoak, they for some time viewed the Mouth, which seemed to be round, and above a Quarter of a League in Compass, with a deep Cavity, within which the Fire raged as it does in a Glass-House. From the Eminence appeared the great City of *Mexico*, seated in its Lake, and Towns about it: Not being able to make any longer Stay by reason of the excessive Heat, he returned the same way he came for the Benefit of the Track. The *Indians*, being astonished that mortal Men should do such an Action, kissed their Garments, believing that to be one of the Mouths of Hell: Where such Lords, as were Tyrants, suffered for their Sins; and afterwards went to rest.

11. The Events which we have reported in this Section are in themselves so great and extraordinary, that if their Consequences had not put them out of all Question, they might very easily pass for Things altogether incredible. If *Cortes* could have exhibited to the *Spanish* Ministry a Scheme of his Expedition, and had therein laid it down as a thing practicable to have beat the Republic of *Tlascala*, though capable of bringing three or four hundred thousand Men into the Field, into begging a Peace, and then making use of their whole Power against *Moteczuma*, it would certainly have been taken for the wildest, most romantic, and ridiculous, Proposition that was ever seriously recommended to the Consideration of Persons intrusted with the Management of public Affairs; and yet it is very evident, that from the Time he first heard of this Republic, he actually formed such a Scheme, foresaw all the Difficulties that would attend it, provided for them, and by firmly persisting in the Execution of his own Plan brought it to bear. This plainly shews us, that there is scarce any thing insurmountable to a great Genius, or which may not be brought about if Men are obedient to a Commander, and awed with those extraordinary Abilities which constitute what we call a Hero.

There seems to be no Question made by the *Spanish* Historians, that the whole Success of this amazing Enterprize was entirely due to the Wisdom, Fortitude, and steady Resolution of this great Captain, who yet,

for any thing that appears, was made so rather by the Strength of his natural Abilities, than from any Helps which he received from Discipline, or Experience; for it is certain that he had seen little of War before he undertook this Expedition, and had never acted as a Commander in chief, till such time as he put himself at the Head of it, which is another Circumstance full of wonder, or rather more surprizing than all the rest taken together.

But it may be suggested, that such as have written his History, may be partial in this Respect, and attribute more to *Cortes*, and less to those who attended him, than they deserve; which, however, the very Circumstances

of the History demonstrate to be false, since it very plainly appears that there were always in his Army a considerable Number of Malcontents, who, if they durst, would have declared against his Authority, and in favour of that of *James Velasquez*, which must have ended in overturning the Expedition; so that from hence it very plainly appears, he was so far from having much Assistance from those about him, that, in reality, a great Part of his Care was necessarily employed in preventing those Seditions, which they were continually labouring to stir up, and which, as we shall see hereafter, no Successes could induce them to leave off.

SECTION XI.

The March of the Spaniards to Mexico, the Reception given to CORTES by MOTEZUMA, his Imprisonment and other Transactions to the Time of his ordering the Spaniards to quit his Dominions.

1. *The Manner in which Cortes marched from Tlascala towards Mexico, and the Number of Tlascalans that accompanied him in his Way to Chulula.*
2. *His Reception in that City, the Methods used by Motezuma to bring the Inhabitants to conspire against the Spaniards, and the Mischiefs that ensued.*
3. *Upon Peace being restored at Chulula, Cortes continues his March towards Mexico, and is complimented on the Road by many of the Mexican Nobility.*
4. *His solemn Entry into Mexico, the Manner of his first Interview with Motezuma, the prodigious Splendor of that Monarch's Equipage, and his Civility to the Spaniards.*
5. *The Manner in which the Spaniards were disposed of, and settled, in the Palace of Motezuma's Father, and the Provision made for them by the Orders of that Emperor.*
6. *The first Causes of Qualpopoca's Irruption into the Country of the confederate Indians; John de Esculante assists them, and is killed, the News of which alarms Cortes excessively.*
7. *He resolves to seize the Person of Motezuma, executes that Resolution, and carries away the Emperor from his own Palace to the head Quarters of the Spaniards.*
8. *Qualpopoca, who occasioned this Rupture between the Spaniards and Mexicans, is sent for by Motezuma, and to satisfy the Spaniards is burned alive.*
9. *A Conspiracy formed against the Strangers by Cacamazin the Emperor's Nephew, discovered and defeated by the Diligence and discreet Behaviour of Motezuma.*
10. *At the Persuasion of Hernan Cortes the Indian Monarch declares the King of Spain his Successor, and does Homage to Cortes as his Representative.*
11. *The true Motives of Motezuma's Conduct in this Affair, and his Demand that Cortes and his Soldiers should quit his Dominions.*

1. **T**HE Embassadors from *Motezuma*, taking great Pains to infuse Jealousies into the Mind of *Cortes*, of the People of *Tlascala*, and pressing him daily to depart, at last, to content them, and being willing to ease the *Tlascalans* of the strange Dread they had conceived of the Gods of *Chulula*, he resolved to remove; after he had resided twenty Days in *Tlascala*, and been informed of all that related to the City of *Mexico*, its Situation and the Power of *Motezuma*, and his Empire, and having concluded a Peace between *Guacozingo* and *Tlascala*, obliging both Parties to restore all that had been taken during the War. He was attended by a hundred thousand Men; many were much concerned at his going upon that Enterprize, believing he would be lost; but others concluded that his Valour would extricate him from all Difficulties. Merchants went along with them to trade for Cotton and Salt; the *Chululans*, to whom the Interpreter, *Aguilar*, had protested that *Cortes* would make War with them, unless they went to submit themselves to the King of *Spain*, being informed that he was upon his March, sent several great Men, who said they came not before, because the *Tlascalans*, their mortal Enemies, were false, whereas they themselves were sincere, and then they, in a solemn Manner, declared themselves Subjects of the Crown of *Spain*: They reached not the City that Day, to avoid entering by Night, though the Distance was but five or six Leagues, but encamped, where the *Chululans* prayed *Cortes* not to permit the *Tlascalans* to do them any harm. He, seeing no sign of War, ordered them to return home, taking his Leave of the Officers with much Courtesy and Affection, and presenting them with such things as he had. He retained with him only three thousand *Tlascalans*, or, as other Authors say, six thousand, and would not take a greater Number to avoid putting himself into the Hands of a barbarous People, of whose Fidelity he hitherto had had but little Tryal.

The *Tlascalans* said those People where he was going

were faithless, that he must be upon his Guard; and, as an Instance, mentioned how they had betrayed them. They offered to go to *Mexico* whensoever they should be called, and declared they would most willingly have proceeded with their whole Army, to see the Event of the Affair; but *Cortes* told them he was satisfied with those he had, being for their Valour worth four times as many. The next Day above ten thousand *Chululans* came out to meet him, bringing Roses, Flowers, Bread, Fowl, and Music: One great Body came to welcome *Cortes*, and then drew off in good Order, to make Way for another; which was done, because that City, being divided into six large Wards, three of them were for *Motezuma*, and three were not. When they came to the City, all the rest of the People came out much surprized at the Shape, Mien, and Weapons of the *Spaniards*: Their Priests advancing in white Garments, like Surplices, their Arms naked, and Cotton Fringes about the Edges of their Robes: Some of them carried Idols in their Hands, and others burned Perfumes, others sounded Horns, beat Kettle Drums, and played on several Sorts of Music, all of them singing, and some perfuming the *Spaniards*. In this pompous Manner they entered *Chulula*, and went where they lodged all together, and their *Indians* with them always upon their Guard, being plentifully supplied with all kinds of Provisions.

A few Days after, *Cortes* observed very suspicious Circumstances; that some of the Streets were barricaded, and abundance of Stones laid on the tops of Houses, to throw down; the Supplies of Provisions grew shorter, the great Men and Commanders of the City seldom visited him, and *Motezuma's* Embassadors started Objections against his going to *Mexico*, with more Boldness than before; nor was this all, for the *Chululans*, by order of the Embassadors, had presumed to tell him that there were Alligators, Tygers, and other fierce Creatures, where *Motezuma* was, which, if he ordered them to be turned loose, would

would devour the *Spaniards*; to which he answered, he could not believe he would put any Affront upon those that came to visit him, but that in case he should do so, they were to understand that those savage Animals did not hurt the *Spaniards*; these things made him resolve with himself how he should subdue the People of *Chulula*, before he went farther.

2. *Moteczuma* in the mean Time sent fresh Agents, by whom he promised mighty Rewards to the Lords of the Quarters of *Chulula*, if they would cut off the *Spaniards*, giving the Commander a gold Drum, and promising to assist him with thirty thousand Men. The Commander undertook to perform all, on Condition that the *Mexicans* should not come into the City, because he was afraid they would make themselves Masters of it. They agreed to barricade the Streets, and pelt the *Spaniards* from the tops of their Houses, that so they might take and deliver them bound. The thirty thousand *Mexicans* being so posted, that without coming into the City, they might take all the *Spaniards* that should happen to escape out of it, they also began to convey away their Goods, and secure their Wives and Children, which afforded new Grounds for Suspicion. Whilst *Cortes* was thus uneasy and dissatisfied, *Marina* acquainted him that a Lady of Quality had told her, that having taken a Kindness for her, she advised her, if she would avoid being killed with the *Spaniards*, to stay with her, and she would hide her in a House where she should be safe, because the *Mexicans* and the *Chululans* had agreed to destroy them.

Cortes, upon this, caused two Priests to be seized, who being examined asunder, and threatened, confessed the same that *Marina* had declared: Whereupon he called the prime Men and Priests, and bid them not deal underhand, but if they had any thing to say to him, to speak plain like Men of Honour. They answered they were his Servants, that he might let them know when he designed to depart, and they would attend him armed, for fear of any Difference between him and the *Mexicans*; he told them he would set out the next Day, and therefore ordered they should find Men to carry their Baggage, and furnish them with Provisions.

The *Chululans*, thinking they had a sure Game to play, carried the Men to be loaded with Provisions, but as those *Indians* never used to undertake any considerable Enterprize without consulting their Gods, they sacrificed ten Children of three Years old, four Boys, and six Girls, being the usual Sacrifice upon commencing a War. Their Commanders posted themselves, with as many of their Men as they could, at the four Gates of the Quarters through which the *Spaniards* were to march out. *Cortes*, who omitted nothing conducive to his Safety, had ordered his Men to Arms, the Horses to be ready, and the *Tlascalans* and *Zempoallans* to observe when the Signal was given, by firing a Musket; when all things were ready, he called the principal *Chululans*, pretending that he would take his Leave of them: Forty were admitted; and more would have come if they might, but the most considerable of them being wanting he was sent for. *Cortes* then, in the Presence of the *Mexican* Embassadors, said he had loved them as Friends, and they had hated him as an Enemy, as appeared by their Usage; though all his Men had been inoffensive, that they had desired the *Tlascalans* might not come into their Country, and he had consented to it; and that though he had advised them to deal fairly, and challenge him like brave Men, if they had any thing against him, yet they had agreed with the *Mexicans* to destroy his Forces by Treachery; for which heinous Offence he had resolved to put them all to Death, and raze their City.

They were for a while struck dumb, and beside themselves; but being a little recovered, said, "This Man is like our Gods, who know all things, it is in vain to deny any thing." And accordingly they confessed all he had said was true. Then taking four or five of them aside, he asked them for what Reason they would have done such a wicked Deed? They answered, that *Moteczuma* was so averse from his going to *Mexico*, that the Embassadors, to obstruct it, had put them upon it. *Cortes* told the Embassadors what the *Chululans* said, but at

the same time pretended not to believe *Moteczuma* could be guilty of so foul a Design, and they endeavoured to excuse themselves. The Signal of firing a Musket being then given, the *Spaniards* sallied out, and, meeting with little Opposition from the Inhabitants, though they were in Arms, killed almost six thousand of them, without touching Women or Children, and set fire to all the Houses and Towers where any Resistance was made.

The Cries of the *Indians* on both Sides were prodigious, and the Confusion not to be expressed. Many Gentlemen got up into the Tower of the great Temple, with the Priests, where they stood upon their Defence: Their Lives were offered them if they would surrender: Only one complied, and was well received, the rest were all burnt. The Cross-bow Men shot those that were got up to the Tops of the Trees in the Court of the Temple, and it was observed that the Priests complained of their Gods for not defending them. A great Part of the City was plundered: The *Spaniards* took the Gold and Feather-work, though not much were found; and their *Indians* had the Cotton and the Salt, which was esteemed a great Booty by them. The News of what had happened was immediately carried to *Tlascala*, where the Lords of the Republic ordered their General *Xicotencatl* to march with all speed, to the Assistance of their Friends, which they did; and *Cortes* having returned Thanks, and bestowed Presents on the General and other Officers, sent them back well pleased to *Tlascala*, where their Joys were incredible, for the Booty taken from the Enemies, and no less for being free from the Fire from Heaven, and the Tempests with which the *Chululans* threatened to destroy the *Spaniards*, and all their Adherents.

The Lords that were Prisoners intreated *Cortes* to put a Stop to his Resentment, since they were not so much to blame as the King of *Mexico*, and to permit two of them to go and see what was become of the Multitude. He thereupon ordered the Slaughter to cease, and many stood up who had lain on the Ground among the Dead: So great was the Authority of the two Lords of the Commonwealth, whom *Cortes* permitted to go about the City, that the next Day it was full of People, and as quiet as if nothing had happened. He set at Liberty the other Lords and Gentlemen he had taken Prisoners, at the request of *Maxiscatzin*, and *Guacozingo*, who had resorted to him, telling them they might be thankful he did not entirely subvert the City, and put them all to the Sword, for so he was accustomed to punish Traitors. He then proposed a Reconciliation between them and the *Tlascalans*. By the Advice of *Cortes* they also made choice of a new General, the former being dead, and that City was a Republic as well as *Tlascala*. Next he ordered the *Tlascalans*, and his other confederate *Indians*, to clear the Court of the great Temple, and the Streets, of the dead Bodies, because they began to stink.

Moteczuma being informed of all that had passed, and that nothing could divert *Cortes* from the Prosecution of his Design of coming to *Mexico*, sent fresh Embassadors with four large Dishes of Gold, and a great Quantity of Provisions, with Orders to assure him that he knew nothing of the Design that the Inhabitants of *Chulula* had to have murdered his Men, and that he might freely come to *Mexico* if he thought fit, because he had opposed his Journey only to spare him the Fatigue of it. As this flattering Message was false in itself, so the Conduct of the Emperor at home was as mean-spirited and base. For when he heard that his Plot was discovered, and his Confederates destroyed, for having attempted to put it in execution, he shut himself up in the great Temple, fasted and prayed for a Week together, and in the mean Time sacrificed a multitude of poor innocent Men to his Gods, in hopes of appeasing them.

3. It was in Consequence of these long Meditations on the present melancholy State of his Affairs, that he sent a great Lord of his Court to *Cortes* under Pretence of a friendly Visit; but in reality, with a View to dissuade him from proceeding further, by assuring him the Roads were dangerous, Provisions scarce, and the Climate unwholesome. The *Spanish* Commander answered cheerfully, that to many of these Hardships they were

were enured, and that he did not at all doubt they should be able to overcome the rest. *Moteczuma* was informed of all by some of his People, though most of them staid among the *Spaniards*; and as it was suspected that they were privately armed to fall upon them by Surprise, *Cortes* bid the *Mexican* Lords not stir into the Quarters of the *Spaniards* at Night, because they never slept, and were wont to kill all that came among them. Notwithstanding this Precaution, some Spies were employed to find whether that was true, and the Sentinels killed three or four of them, being forewarned, which proved so advantageous, that the *Mexicans* afterwards took up Quarters very far from the *Spaniards*.

The next Day they marched to a Town called *Amascameca* in the Province of *Chalco*; the Lord came out to meet *Cortes* with a great Retinue; gave him forty Women Slaves, the Value of three thousand Pieces of Eight in Gold, and Provisions for two Days; and told him in Secret afterwards, in what a tyrannical Manner *Moteczuma* treated him, and all others; *Cortes* comforted, encouraged, and gave him some Toys, so that they parted very good Friends. The Army advanced from thence to a small Town, half of which stood in the Lake, and the other half at the Foot of an uncouth stony Mountain. Many of the King's Servants kept with the Army, supplying it with all Necessaries, and that Night they designed to have murdered all the *Spaniards*; but *Cortes* was so watchful, that his Sentinels, and a small extraordinary *Corps de Garde* he had appointed killed twenty Men that were skulking in the Quarters; the next Morning before they set out abundance of People came from *Mexico*, and many Gentlemen attending on *Cacamazin*, Nephew to *Moteczuma*, Lord of *Texcuco*, a Youth about twenty-five Years of Age, who was richly clad, and carried on a Sort of Sedan upon Mens Shoulders; and when he alighted, some went before sweeping the way; *Cortes* came out of his Tent to meet him, paying him much Respect, and treating the others very courteously; twelve Noblemen went with him into the Tent, and *Cacamazin*, with much State and Gravity, said, that he and these Gentlemen were come to wait on him; adding, to excuse his Uncle, that he came not in Person, because he was indisposed. *Cortes* answered him fully, and yet *Cacamazin* insisted that it was not fit for him to go to *Mexico*, because he suspected there might be some Difficulty in his Admittance, or that it would be opposed. *Cortes* gave him a Present of such Things as he had, treating him in a very courteous and loving Manner, but held on his way; and it was wonderful to see what a Multitude of People came out from *Mexico*, and the other Towns on the Lake to see the *Spaniards*, admiring their Habit, Beards, Arms, Horses, and the Strangeness that appeared in every particular, saying, these are truly Gods.

Cortes warned them not to cross the Soldiers Ranks, nor to come near the Horses, nor to touch their Garments, which would immediately cost them their Lives, lest growing familiar with his Soldiers they should fear them the less. They came to *Texcuco*, which was twice as big as *Seville*, the Streets very regular, the Houses beautiful, and seated in a Plain on the Salt-Lake, and had fresh Water in Pipes brought from the Mountain to every House, which made it a very agreeable Habitation; from thence they proceeded to *Lavaca*, which they called *Venezuela*, or *Little Venice*, containing about two thousand Houses, all in the Water, pleasant, and plentifully supplied with Fish; they entered it by a Causeway, twenty Foot broad and above half a League in length, with good Houses and Towers.

The Lord of the Place came out to meet *Cortes* with Necessaries; and at his Request they staid there that Night; he discoursed *Cortes* in private, declaring, how much he wished to be discharged from his Subjection to *Moteczuma*, made grievous Complaints, adding, that if he and his were Gods, as they seemed to be, he ought to set many great Men at Liberty, who would all be assisting to him. He comforted and assured him that the Great Monarch *Moteczuma* would do whatsoever he would ask of him. As for the way to *Mexico*, that Lord assured him it was all good, being along a Cause-

way, and broader than that which had brought him thither.

4. After this Conference, from which he learned many things that were of very great Use to him, *Cortes* set out better satisfied, having resolved to make Boats to enter into *Mexico*, being afraid they should break down the Causeways; he marched with much Circumspection, sending some Horsemen before to discover what passed. At the Request of *Cacamazin*, he went two Leagues farther, to *Xztacpalapa*, a Town belonging to another of *Moteczuma's* Nephews, who came out to meet him with another Prince of the Royal Family, and with them came an infinite Crowd of People. They presented him with Women Slaves, Plumes of Feathers, Garments, and to the Value of four thousand Pieces of Eight in Gold: The Lord of *Xztacpalapa* made a Speech, bidding *Cortes* welcome, in the King's Name; *Cortes* answered very discreetly, and presented him some Toys, which were more acceptable for the Rarity than the Value.

At *Xztacpalapa* he was well entertained in a House that had large Courts, upper and lower Floors, and very delightful Gardens; the Walls were of Stone, the Timber-work well wrought; there were many and spacious Rooms hung with Cotton Hangings extraordinary rich in their way; on one Side of it was an Orchard, with abundance of Fruit and Greens, the Walls were all inclosed with Reeds, interwoven, covered with odoriferous Flowers. There were Ponds of fresh Water, with much Fish in them; one of them was four hundred Paces square, with Steps to go down to the Water and to the Bottom; such Numbers of small Herons, wild Ducks, Gulls, and other Sorts of Fowls resorted to the Lakes, that they were sometimes covered. This City contained ten thousand Houses, one half in the Salt-Lake and the other on the Continent; on the way from it to *Mexico* was a Spring of good Water encompassed with tall Trees.

Cortes attentively observed all these Particulars, and having considered the Grandeur of *Mexico*, he is reported to have rejoiced very much, and to have bid some of his best Friends cheer up, for they should soon receive the Reward of all their Labours. *Moteczuma*, who still desired nothing more than to obstruct *Cortes* from coming to *Mexico*; when he was at *Xztacpalapa* sent some Gentlemen to advise him to go back, representing to him many Dangers, and offering to give him whatsoever he should demand. *Tuch*, the Nobleman of *Zempoalla*, being informed of what they had said, told *Cortes* he should not give Credit to those Difficulties and Dangers they talked of, for he had been himself in *Mexico*, and offered to conduct him to the King's Palace, over a very fine Causeway. *Cortes* then advancing, ordered an Indian to go before, and make Proclamation as he went, in the *Mexican* Language, that no Man should cross the way, for if any did, they should be immediately killed, which proved of great Use, by giving them room to march notwithstanding the Crowd of the People.

Xztacpalapa is two Leagues from *Mexico*, joined to it by a Causeway, so broad, that eight Horsemen can easily go abreast, and it is so strait, that, were it not for one Angle it forms, the Gates of *Mexico* might be seen at the first setting out; on the Sides of it are *Mexicatzingo*, a Town of four thousand Houses, seated in the Water; *Cuyoacan* of six thousand Houses on the Land, very beautiful and pleasant; and *Hiucilopucheo* of five thousand Houses. In these three Towns there were many Temples, and high Towers all plaistered over with white Lime, which, when the Sun shone upon them, at a Distance, looked like Silver, being a great Ornament to those Places, and now are Monasteries; there was in them a great Trade of Salt, but not white, nor agreeable to eat, especially to the *Spaniards*, yet good for salting of Meat: It is made of the Surface of of the Earth, that is near the Lake and full of Saltpetre: The Lumps of it are round, and almost of Brick Colour, and they yielded *Moteczuma* a very great Revenue. The Trade still continues, and this Salt is carried into Provinces very far distant.

On the Causeway there were Draw-bridges, at certain Distances over the Openings, through which the Water runs, out of one Lake into the other. The Fresh-water Lake

1 Motezuma in his Royal Robes. 2 Cortes with a rich Collar about the Neck of Motezuma. 3 The Chair and Canopy of Motezuma. 4 The Guard that Attended Cortes.

Lake is higher than the Salt, and though it runs into the other, they do not mix much, because of the Causeways that part them. *Cortes* had three hundred *Spaniards*; and when they marched out of *Tlascala* their Number seemed so small to him, that, fancying some stayed behind, he sent *Peter de Alverado* to fetch them out, but he found none. The *Indian* Confederates that followed him were six thousand; for some *Tlascalans*, *Chululans*, and others, had joined him at *Chulula*: Being come near to *Mexico*, where another Causeway joins the former, he found a Stone Bulwark two Fathoms high with two Towers at the Ends, and between them a Breastwork with two Gates: There *Cortes* halted, because four thousand Gentlemen of the Court, richly clad all in the same Livery, came out to meet him; every one of them, when he came to the Place where *Cortes* was, made Obeisance, touching the Ground with his Right-hand, and kissing it, and passing along returned to the Place from whence he came.

To this Bridge the Emperor himself advanced, to meet *Cortes* under a Canopy of Green Feathers and Gold, carried on the Heads of four Lords: Before him walked three Lords one after another, each of them holding a Gold Rod upright, which was carried before *Moteczuma* every time he went abroad, either by Land or Water, like a Standard or Token that the great Lord was there, to the End that all who were in the Way, though they did not see him might pay the due Respect. Two principal Lords, his Brother *Quequatbuac*, and his Nephew *Cacamazin*, led him by the Arms; they were all richly clad after the same Manner, bating that the King had Golden Shoes, which they call *Zagles*, not unlike those of the antient *Romans*, and on them many precious Stones of great Value, the Soles fastened with Thongs. The two Lords that led him were barefoot, for the Respect they paid him was so great that no Man durst come in his Presence without taking off his Shoes, nor might they lift up their Eyes.

Moteczuma kept along the Middle of the Street, and two hundred followed him, as close to the Wall as they could, their Eyes fixed on the Ground, because it was accounted Disrespect to look on his Face. As soon as *Cortes* saw him he alighted off his Horse, at a small Distance with some Gentlemen, and drawing near saluted him after the Manner of *Spain*. Those that led *Moteczuma* stopped *Cortes*, thinking it a grievous thing that any Man should touch him, being held as some Deity; they saluted one another after their Manner: *Moteczuma* touched the Ground with his Hand, kissing it, a Ceremony used among the *Indians*, and then bid him Welcome: *Cortes* returned him Thanks for having come out to meet him, and put about his Neck a Collar of fine Glass and precious Stones with some Enamel. *Moteczuma* bowed a little, in token of accepting the Present. He went on a little before, with the Nephew that led him by the Arm, and ordered the other to stay and wait upon *Cortes*, leading him by the Hand along the Middle of the Street, not permitting any *Spaniards* or *Indians* to come near. This was the greatest Honour *Moteczuma* could have done *Cortes*. The two hundred Gentlemen in one Livery that went behind, as soon as they turned about, came one by one to welcome him; the Day would have been too short if all the Nobility in the City were to have done the like; but the King going before, they all turned their Faces to the Wall, in token of Respect; so that the others, who were behind, could not come up.

The King was much pleased with the Collar *Cortes* gave him; because, though it was not costly, it was gay, sparkling, and very strange to him. That he might not be thought to fall short in any thing that became a great Prince, he called two Officers of his Bed-chamber, and bid them bring two Collars of large red Prawns as big as great Snails or Walnuts, at every one of which hung eight Gold Prawns wrought to the Life, and about half a Foot long: When brought, the King stopped till *Cortes* came up, and with his own Hands threw them upon his Neck. The *Indians* were amazed that *Moteczuma* should do *Cortes* so singular a Favour, for he had never done the

like to any other Man. The *Spaniards* were astonished to see such a Multitude of People, and after a long time passing through them came to a very large Court, which was the Wardrobe of the Idols, and had been the House of *Axyacazin*, *Moteczuma's* Father.

5. At the Door of it, the Emperor taking *Cortes* by the Hand, led him into a spacious Room, placed him on a rich elevated Place, adorned with precious Stones, and said to him: "You are in your own House, eat, rest, and take your Pleasure, I will soon return." *Cortes* made him profound Obeisance without answering one Word. Such was the Reception that mighty Prince gave *Cortes* in that vast City of *Mexico*, on the 8th of November, 1519. They were lodged in a House that contained so many spacious Rooms, with Bed-chambers, that one hundred and fifty *Spaniards* could all lie single. It was also worth observing that, though so big, every Part of it, to the least Corner, was clean, neat, matted, and hung with Hangings of Cotton and Feather-work of several Colours, and had Beds of Matts with Pavillions over them, no Man of what Quality soever having any other: There was Fire with Perfumes in every Chamber, and so many Servants every where, as sufficiently discovered the Grandeur of that Prince. When *Moteczuma* was gone, *Cortes* assigned every Man his Apartment, placing the Artillery before the Door, and when he had ordered all that was requisite, the prime Men serving him in such a Quality as is usual in the Houses of the greatest Persons there, in Honour to him, and because it was then convenient, stood in order about the Walls.

When they had all dined and rested, *Moteczuma* returned, and *Cortes* went to meet him; they both walked together to the raised part of the Room, and when they were seated in the Presence of many *Mexican* Gentlemen and *Cortes's* chief Commanders, *Moteczuma* gave *Cortes* many costly Jewels of Gold, Silver, Feather-work, and six thousand rich Cotton Garments. *Cortes* returned Thanks for the noble Present in such a Manner as shewed good Breeding and Discretion. Soon after, the Emperor entred into a long Conference with the *Spanish* Commander, in which he shewed himself a very great Politician, and a deep Master in the Art of Dissimulation: He set out with giving abundance of plausible Reasons why he was so very unwilling to admit them into his Capital: He next took notice of the strange Reports that had been spread about them; and then told them, he believed, that as strange as they appeared to one another, they were really Countrymen, since it was certain that the Ancestors of the *Mexicans* came from a Land at a great Distance, and had not been settled there above a Century, that therefore he regarded them as Brothers; that they were free to take what they pleased, and that they should study to amuse and divert themselves the best way they could.

6. *Cortes* thanked *Moteczuma* for these singular Marks of his Kindness and Affection, took a View of the City, and for some time passed his Days very agreeably; however, before he had formed in his own Mind any Scheme of fixing the *Spaniards* in that Country, Things began to change their Aspect; and he saw great Cause to esteem himself in more Danger than he had yet been exposed to in the Prosecution of this Design. The Occasion of his Apprehensions was the Arrival of two *Tlascalans*, disguised so as to pass all *Moteczuma's* Guards, whose Business was to inform him, that the *Indians* allied to the *Spaniards*, finding their Lands ravaged by one of *Moteczuma's* Captains, whose Name was *Qualpopoca*, and apprehending that he had a Design upon *Zempoalla*, they applied themselves, as he had directed, to *Esculante*, whom he had left Governor of *Vera Cruz*, and desired his Protection. The *Spanish* Governor sent immediately to *Qualpopoca*, to desire that he would forbear injuring the Friends of the King of *Spain*; but, notwithstanding he repeated his Instances more than once, he found them ineffectual; and therefore, in pursuance of his Instructions, he marched to their Relief with all the Force he could spare, which consisted of no more than forty *Spaniards*, and those but indifferently armed; having

with them only two small Field-Pieces; but being joined by two thousand of the Confederate *Indians*, he ventured to engage the *Mexicans*, though double his Number; that is to say, between four and five thousand Men.

If the Confederate *Indians* had behaved as they ought, he would probably have obtained an easy Victory; but they fled as soon as the Battle began, having lost a few Men: The *Spaniards*, being forsaken by their Allies, stood their Ground, and routed the *Mexicans*, who, having never felt them before, could not stand the Edges of the *Spanish* Swords. They pursued them as far as the Town, which was afterwards called *Almeria*, and burnt it. *John de Esculante* was dangerously wounded in this Fight and his Horse killed, and six of the Men were greatly hurt: *Esculante* died of his Wounds as soon as he came to *Villa Rica*. The *Indians* carried off one Soldier alive, whose Name was *Arguillo*, a Native of *Leon*; a Man of a large Head, black Beard, very lusty and strong, who being sent to *Moteczuma* (for this happened before *Cortes* entered *Mexico*) died by the Way of his Wounds; and because he stunk, they carried the Head, which, being of a lusty Man, put him into a Consternation: He would not have it offered at any of the Temples in *Mexico*, but in some one without; and said, he wondered how it fell out that his Men, being so numerous, did not vanquish that small Number; and, that he was convinced that those Men were not immortal, though they appeared to be very brave. The Consternation he was put into by the Sight of *Arguillo's* Head, some say, proceeded from the Predictions he had, That such Men should conquer his Monarchy, and change the Religion of his People. It is to be observed, however, that this last Circumstance was not known to *Cortes* at that time; so that he was in doubt, whether this Action was performed by Order of the Emperor, or even whether he knew or approved it.

However, as the Situation he was in made him very uneasy, he sent privately to the most sensible and best affected *Indians* of his Army, of whom he demanded, "If they had observed any Alterations in the Minds of the *Mexicans*, and in what Esteem the *Spaniards* were at that time among them?" They answered, "That the common People were taken up with their Festivals made for the Diversion of the *Spaniards*, whom they revered because they saw them honoured by their Emperor: But that the Nobility seemed pensive and mysterious: That they had secret Conferences, the Result of which they kept very private. They said, they had observed some Expressions which admitted a sinister Interpretation, one of which was, that it would be no difficult Matter to break down the Bridges of the Causeway, with others of the same kind; which all together gave sufficient Cause of Suspicion." Two or three of those *Indians* heard it whispered, That some few Days before a *Spaniard's* Head was brought as a Present to *Moteczuma*, and that he commanded it to be taken away and concealed, after he had viewed it with some Astonishment, it being of a very large Size, and the Face of a fierce Aspect; Marks which agreed very well with that of *Juan de Arguillo's*. This added to the Uneasiness of *Cortes*; for hence it appeared that *Moteczuma* was privy to the Proceedings of his General.

7. As these Informations left him no longer any room to doubt, that notwithstanding all the Kindness shewn him, *Moteczuma* was actually contriving his Destruction, he saw it was necessary some quick Measures should be taken to deliver himself and the *Spaniards* out of those Dangers with which they were at present surrounded; but the Difficulty was, to fix upon that which might best answer the End, and, when fixed upon, to carry it into Execution. He meditated upon this Subject a whole Night by himself; and, having settled in his own Mind what was to be done, he then called a Council of War, in order to hear the Opinion of his Officers; in which they differed extremely, most of them, however, inclined to make a Retreat; and some of them suggested, that as *Moteczuma* had made them such large Offers to prevent their coming to *Mexico*, he would probably be willing to give them as much Gold as they

could reasonably ask, in order to get them out of his Capital; but *Cortes* disapproved this: And having in a set Speech shewed the Impossibility of their putting any such thing in practice, concluded, that the only Method they had left to secure themselves, and put a speedy Issue to this Business, was to seize the Person of the Emperor; and the Reasons he gave for it were so strong, and the Method he proposed for executing it liable to so few Objections, that at last it was unanimously agreed upon, and a Resolution taken to do it without Delay.

A most surprising Scheme surely, considering the Force that *Cortes* had, and the many thousands that were in daily waiting about *Moteczuma's* Person. Yet this Design, as it was contrived with great Wisdom, was executed with no less Spirit and Success. The Hour which the *Spaniards* were accustomed to wait upon *Moteczuma* was chosen for the Execution of their Design, that no Alarm might be given by their making him an unseasonable Visit. *Cortes* gave Orders to his Men to arm themselves in their Quarters, to saddle their Horses and to hold themselves in Readiness without making any Noise, until they received fresh Instructions. He possessed himself of all the Avenues of the Streets leading to *Moteczuma's* Palace, with a small scattered Detachment of Soldiers, and went to the Palace accompanied by the Captains *Pedro de Alverado*, *Gonzala de Sandoval*, *Juan Velasques de Leon*, *Francisco de Lugo*, and *Alonso Davila* having ordered thirty private Men to follow at a Distance.

It was no surprising Sight to see them enter with their Arms, which they usually carried as a military Ornament. *Moteczuma*, as usual, came out of his Apartment to receive the Visit, and they all took their Seats: His Servants, as by his Order they were always accustomed to do, retired to another Part of the Palace, and when *Donna Marina* and *Geronimo Aguilar* were come up, *Cortes* began his Complaint with becoming Resentment: First, he laid before *Moteczuma* the Action of his General who had the Insolence to form an Army, and attack his Confederates, in Violation of the Peace, under which they thought themselves secure: Then he urged as a Crime, for which he ought to make Satisfaction to God and Man, the spilling the Blood of a *Spaniard* by the *Mexicans*, after they had made him Prisoner, to revenge upon him in cold Blood the Ignominy of their own Defeat: And lastly, he exposed in proper Colours, as a Point of still greater Consideration the Excuse made by *Quialpopoca* and his Captains, who declared they had undertaken that unjustifiable War by the Emperor's express Order; concluding, that he thought he owed so much to his Majesty, as not to give Credit to any Action so unworthy of his Greatness, as that of favouring the *Spaniards* in one Place, while he was endeavouring to destroy them in another. But *Moteczuma* denied it.

Cortes interposed upon this, telling him, he believed what he said to be true, and that he could never entertain any Notion that so great a Man as he, could be guilty of so base an Act; but that what convinced him, did not seem to have the same weight with his People, and that, for their Satisfaction, it would be very proper he should remove from his own Palace, and go and live with the *Spaniards* in that he had assigned him, till such time as *Quialpopoca*, whom he immediately sent for, arrived. *Moteczuma* was extremely surprized at so strange a Proposition, and for some time refused to hear of it; neither could all the Eloquence of *Cortes* have brought him to consent if *Donna Marina* had not interposed; who told him, she was his Subject, and had therefore nothing so much as his Interest at Heart: That his Life was in the utmost Danger, and that nothing but his yielding to this Necessity could save him; and that it was in vain to dispute where the only Question was, Whether he would chuse the Loss of Life, or temporary Liberty? This determined *Moteczuma*. Let us go, said he, to your Quarters, since I find it can be no otherwise.

When he had said this, he left the Palace, without any more Delay, taking with him all his usual Attendants, the *Spaniards*, marching on Foot close by his Chair, surrounded it, under pretence of waiting on him. A Report was

was presently spread about the City, that the Strangers had carried off the Emperor, and the Streets were crouded, some in Despair, and some discovered the Tenderneſs of their Concern by their Tears. But *Motezuma*, with an Air of Gaiety and Compoſure, appeaſed the Tumult, and ſatiſfied them in ſome Meaſure. He commanded them to ceaſe their Cries, and, at the firſt Motion of his Hand, a profound Silence enſued: He then told them, “ That he was not going to Priſon, but for his own Diverſion “ to paſs a few Days with his Friends, the Strangers.” As ſoon as he was ſettled in his new Lodging, many Noblemen reſorted to *Motezuma*, expreſſing their Sorrow for that Innovation, and offered to do any Service that ſhould be enjoined them.

Cortes being ſenſible of the Boldneſs of his Enterprize, and the Danger he was in, to provide for the worſt, ordered two Brigantines to be built, that would carry two hundred Men, to come into, and go out, of the City, as there ſhould be Occaſion.

They were ſoon finiſhed, and he kept them under a ſtrong Guard near his Quarters, to the no ſmall Amazement of the *Indians*. *Motezuma* fearing leſt any harm that might be done to the *Spaniards*, by his People, might affect him, put on a chearful Countenance to conceal the Grievs that perplexed him, telling the Men of Quality that ſerved and viſited him, there was no Occaſion to be ſo much concerned, ſince he was well, lived in that Apartment at his Eaſe, and no Injury or Affront was offered him; that he had choſen to go thither to convince the *Spaniards* that what had been ſaid of him, in relation to *Qualpopoca*, was not true; that he deſigned to puniſh him, that no other ſhould be guilty of the like; that he would ſtay there till *Cortes* was ſatiſfied, and that ſince he might depart from thence whenſoever he ſhould think fit, they ought to ſet their Hearts at reſt, and as they had always loved him, they ſhould ſhew it at that Time.

As ſoon as he was brought into the Apartment, *Cortes* ſet a Guard over him, and gave the Command thereof to *John Velasquez de Leon*; and if particular Care had not been taken, he would have been conveyed away; for Walls were broke through, and other Methods uſed; and one Day he attempted to throw himſelf off from the flat Roof of a Houſe, that was ten Fathoms high, for his People that were underneath to catch him, had not a *Spaniard* that was upon the Guard, and near his Perſon, held him. *Cortes* viſited him every Day, and for his Diverſion, ordered the Soldiers to exerciſe their Weapons, at which he was very much pleaſed, and generously rewarded them. His own Servants waited on him, as they were wont to do in his Palace, and ſo did the *Spaniards*, who, by *Cortes*’s Command, honoured and reſpected him as a King.

There he decided Law-ſuits, diſpatched all Buſineſs, and adminiſtered the Government of his Kingdoms, ſpeaking, either in private or public, to any Perſon whomſoever; and yet the *Indians* were ſo reſtleſs and uneaſy, that they never ceaſed by Day or Night to attempt reſcuing him: For this Reaſon *Cortes* ordered *Roderigo Alvarez Chico*, a brave and watchful Man, to guard the backſide of the Houſe, with ſixty Men, twenty mounting at a time; and *Andrew de Monjarraz* to do the ſame before the Palace, with the ſame Number.

Motezuma was ſerved like a great Prince, the Diet that was brought him by four and four Men holding up the Diſhes, with much Reſpect, made a long Train, and when he had done, all the Meat was divided among the Gentlemen that ſerved, and the *Spaniards* that guarded him. His Bed conſiſted in many coſtly Cotton Blankets, ſome of them very fine, ſome quilted, and covered with others of great Value, made of Feathers and Wool, of various and natural Colours. The Bed was laid on Matts, and a wooden Beadſtead, all ſuited either for the Heat or the Cold. It was this Confinement of the Emperor which afforded *Cortes* all the Opportunities he could wiſh, of enquiring narrowly into the Situation of his Affairs, and of penetrating into all the Secrets of his Government; he likewiſe found Ways and Means to draw out of the *Indian* Monarch, in this Confinement, very large Sums of

Money, or, which was the ſame thing, Gold and Jewels to an immenſe Value.

8. In all outward Appearance *Motezuma* was very eaſy and well ſatiſfied, the *Spaniſh* Soldiers behaved to him with the greateſt Civility and Reſpect imaginable, and as for the Officers, they were his conſtant Companions, with whom he converſed continually, and ſhewed a great deal of Pleaſure, as alſo in playing at certain *Spaniſh* Games, particularly at Skittles, in which he became, very ſoon, a great Proficient. In the miſt, however, of all theſe Condeſcentions, he ſhewed himſelf a great Politician; for, obſerving how fond the *Spaniards* were of Gold, he took care to loſe, that he might have an Opportunity of giving, and of obtaining, by this Means, an Intereſt amongſt them.

While things were in this Situation, *Qualpopoca* arrived with his Son and fifteen Men of Quality, who had been concerned with him in killing the *Spaniards*, in twenty Days after the Confinement of *Motezuma*; he was conducted to *Mexico* by many great Men that went out to meet him, and he was brought in upon their Shoulders and thoſe of his Vaffals: When come to the Place he alighted, put on Garments of leſs Value than he had before, and took off his Shoes, waited ſome Time till he had Leave to go in, drew near alone, all that went with him, ſtaying behind; and having made many Bows, and performed the uſual Ceremonies, with his Head hanging down, and his Eyes fixed on the Ground, he ſaid, “ Moſt high “ and mighty Sovereign, here is your Slave *Qualpopoca*, “ whom you have commanded to come; what will “ you have done, for I am your Slave, and muſt of Neceſſity obey you?” *Motezuma* ſternly answered, “ He “ had done very ill in killing the *Spaniards* without any “ Provocation, and ſaying he had done it by his Order, “ and therefore he ſhould be puniſhed as a Traitor to the “ Strangers, and to his King.” *Qualpopoca* going to excuſe himſelf, he would not hear him, ordering that he, his Son, and the reſt, ſhould be delivered up to *Cortes*, who, having fettered, cauſed them to be examined, and they confeſſed the killing of the *Spaniards*; being asked whether he was *Motezuma*’s Subject, he answered, “ Is “ there any other Lord that I could be ſubject to?” They were examined a ſecond time more ſtrictly, and threatened with the Rack, and unaniſmouſly averred that they had killed the two firſt *Spaniards* by *Motezuma*’s Order, as they had likewiſe thoſe in the Field.

When they had made this Confeſſion, and confirmed it, *Cortes* condemned *Qualpopoca* and the reſt to be burnt. The Sentence being made known to him, he ſaid, That though he was to ſuffer Death for having killed thoſe two *Spaniards*, his great Lord, *Motezuma*, had commanded him, and that he ſhould not have preſumed to have done it, unleſs he had thought it for his Service. He, with his Son, and the reſt, were conducted under a ſtrong Guard of *Spaniards*, to a large Square, and being ſet on a large Pile of broken Bows and Arrows that were dry, with their Hands and Feet bound, Fire was ſet to it, they again confeſſing the ſame as they had before: He prayed as the reſt did, and the Fire blazed, and they were ſoon burnt, without Diſturbance; the *Mexicans* admiring the Execution done by the *Spaniards* in ſuch a great City and Kingdom, and in the Preſence of their Monarch. Before and after this Execution, that the *Spaniards* might be always in readineſs, *Cortes* made Proclamation that none of them ſhould go naked to Bed, and that the Horſes ſhould ſtand all Night ſaddled, with their Bridles at the Pommels of their Saddles, becauſe it was ſuſpected there would be an Infurrection, and that they would attack the *Spaniards* when aſleep; but the Vigilance of *Cortes* was thought to have diſappointed that Deſign; and he cauſed the firſt Soldier that was found to have lain in Bed naked, to be expoſed to public Shame, keeping him two Days in Fetters in the Air, induring the Dew in the Night, and the Sun in the Day, and a Clog at his Foot; no Intreaties prevailing to relieve him, alledging that Severity was requiſite in ſuch Caſes.

After the Confeſſion was made, whiſt they were carrying *Qualpopoca* to Execution, *Cortes*, attended by his Commanders, went to *Motezuma*, and ſaid to him, “ You know

“ know you denied your having ordered *Qualpopoca* to
 “ kill my Companions, you have not done therein as
 “ became so great a Prince, and since you have occa-
 “ sioned the Death of my Men, as also of *Qualpopoca*,
 “ his Son, and so many of his People, had I not Regard
 “ to the Affection you have shewn to my King, and in
 “ his Name to me, I should think you ought to pay
 “ for it with your Life; for both the divine and hu-
 “ man Law, appoints that a Murderer, as you are,
 “ should die: However, that you may not go altogether
 “ unpunished, and that you and your People may be
 “ sensible how advantageous it is to deal sincerely, I will
 “ order you to be put in Irons.” *Moteczuma* was very
 much surprized at this Reproof, and could scarce utter
 his Words for Confusion, but only said that he was inno-
 cent, and he might do what he would with him. *Cor-
 tes* went from him in a very angry Manner, and immedi-
 ately after he was fettered.

It was thought that *Cortes* used this Policy to divert
 him from the Grief he might justly conceive at the Exe-
 cution of *Qualpopoca* in his own Sight. It is impossible
 to express how much *Moteczuma* was concerned, when he
 saw himself in Irons; he affirmed he was innocent, and
 lamented his Condition; his Kindred and Nobility
 were astonished, and in that Consternation they wept,
 and kneeled down, bearing up his Fetters with their
 Hands, and thrusting fine Cloths through the Links, that
 they might not touch his Flesh, nor could they think
 what to do; for if they had had recourse to Arms, they con-
 cluded that their Lord would certainly be put to Death,
 which added to their Terror. When *Qualpopoca* was ex-
 ecuted, *Cortes*, thinking he had gained his Point, went in
 the Afternoon to *Moteczuma*, and, saluting him with an
 Air of Kindness, ordered his Fetters to be taken off, tel-
 ling him, that though, according to the Confession of the
 People executed, he deserved to be more severely punish-
 ed, yet for the Love he bore him, and because he could
 not believe so great a Prince guilty of such a foul Acti-
 on, he had commanded him to be set free. *Moteczuma*
 was as much rejoiced at those Words, as he had been be-
 fore dejected, upon being removed and put into Irons.
 He embraced *Cortes*, returned him Thanks, and bestow-
 ed many Favours that Day, as well on the *Spaniards*
 as his own People.

By this Means both Parties were satisfied with each
 other, and *Moteczuma* came by Degrees to have such a
 Confidence in *Cortes*, that he represented to him the Ex-
 pediency of granting him Leave to go to visit some of
 his Temples, that his Subjects might not look upon
 him to be longer a Prisoner, which was granted, upon
 Condition that human Sacrifices were abolished. As *Cor-
 tes* perceived that this Confidence in *Moteczuma* had gain-
 ed upon him extremely, he laid hold of this Opportunity
 to demand his Assistance, for the accomplishing of vari-
 ous things he had in view, which were very necessary to
 him, and which, however, he could not accomplish, but
 by the Emperor's Assistance.

The first of these was, the Knowledge of the gold
 Mines, where they were, to whom they belonged, how
 wrought, and what Quantities of that precious Metal,
 were obtained from them. *Moteczuma* gave him very
 clear and distinct Answers to all these Inquiries, and, for
 his farther Satisfaction, allowed such of his People as he
 could trust, to go to the Mines, both within and without
 his Dominions. In the next Place, *Cortes* was willing to have
 a Map of the Sea-coasts of the Mexican Empire, that he
 might be the better able to fix upon some Port, to which
 Succours and Supplies might be sent him; he was, ac-
 cording to his Desire, furnished with a very accurate and
 extensive Description of the maritime Provinces under
Moteczuma's Dominion, finely painted after their Manner,
 which answered his Purpose perfectly. The last thing
 that he aimed it was, the obtaining of a sufficient Quan-
 tity of Gold to be sent to *Spain*, in order to maintain his
 Credit there, and secure the King's Favour. In obtaining
 this, he met with no Difficulty, the Emperor and the
 great Men of his Court, readily yielding him their Assis-
 tance.

9. But in the Midst of this Tranquility, there arose a

new and very unlooked for Disturbance, which neither
Moteczuma nor *Cortes* could foresee or prevent. It was
 occasioned by the Emperor's Nephew, *Cacamazin*, who
 mortally hated the *Spaniards*; and going to *Tezcucoco*, told
 his chief Counsellors how much he loved them, desir-
 ing they would reflect how they were kept under by a
 handful of Strangers, who dared to confine his Uncle
Moteczuma, to whom the greatest Respect was due; that
 it was intolerable so small a Number, and those of ano-
 ther Religion, should turn them out of their Houses, and,
 what was still worse, set up their Gods in the Temples, in-
 stead of those of the Country; that it was high time to
 stand up for Religion, Liberty, Honour, and their King,
 without delaying till the Strangers had Succours from
 their own Country, from *Tlascala*, and from other Parts;
 and therefore they should make ready, for he was resolv-
 ed to fall upon the Intruders; yet if they differed from
 him in Opinion, they might tell him so, and he would be
 advised by them.

They approved of the Design, and offered to stand by
 him; but some ancient Men, who had no mind to flat-
 ter him, said, he should consider what he did, that *Cor-
 tes* was brave, had gained several Victories, and they be-
 lieved there was very great Friendship between him and
Moteczuma, for if he would have drove him out of *Mexico*
 he might have done it; they advised him therefore not
 to be carried away by the Fire of Youth, or the Ambiti-
 on of Rule, since there were other Heirs as near as he.
 However, War was agreed on, and Preparations were made
 with the greatest Privacy, that nothing might be known
 by *Moteczuma* or *Cortes*; but, notwithstanding their Care,
 they soon had Notice of it.

Cortes perceiving the View of this turbulent Youth, and
 suspecting that *Moteczuma's* want of Resolution, or great
 Affection for the *Spaniards*, encouraged him to undertake
 the Design, sent Word to the Emperor that he had much
 Cause to suspect him, because, since what had happened
 about *Qualpopoca*, his Nephew, *Cacamazin*, was conspir-
 ing against him; and therefore he desired him to put a
 Stop to those Proceedings, otherwise all would light upon
 himself. *Moteczuma* was much surprized at this Mes-
 sage, and affirmed he knew nothing of what his Nephew
 was doing; that he was very well pleased there, and
 would send for his Nephew *Cacamazin*, and if he refused
 to come, would order him to be brought by Force, and
 delivered up into his Hands to be punished, if convict-
 ed of that Crime. *Cacamazin* was then preparing for
 War, and the People readily came in to him, because he
 gave out that he would rescue the King.

This Affair put the *Spaniards* upon their Guard, and
Cortes designed, for making an Example, and establishing
 his own Reputation, to go himself to *Tezcucoco*, and attack
Cacamazin in his own House; but *Moteczuma* prevented
 it, alledging that the City was strong, and the People of
Culua at his Nephew's Command, and therefore it was
 better to take another Course. *Cortes* followed his Ad-
 vice, and sent to bid *Cacamazin* remember their Friend-
 ship, that he should consider it was an easy Matter to be-
 gin a War, but not so to put an End to it; and that it
 would be for his Advantage to keep on good Terms with
 the King of *Spain* and his Subjects. He answered plain-
 ly, He would entertain no Friendship with those that
 oppressed the Country, and overthrew their Religion;
 that he knew not who the King of *Spain* was, nor did
 he desire to be informed; and that if he would not
 have him make War, he should immediately depart
Mexico. *Cortes* again advised him to desist, and desired
Moteczuma to lay his Commands upon him.

The Emperor sent for him, which he was so far from
 regarding, that he said, If his Uncle were the Man he
 ought to be, he would not suffer himself to be confined;
 and since *Moteczuma* was so mean-spirited, he was resolv-
 ed to restore the Monarchy to its former Splendor, which
 had been lost through his Cowardice. *Cortes*, upon this,
 resolved to march out to meet *Cacamazin*, though the
 Danger was great, considering the Multitude of Ene-
 mies within and without: But still *Moteczuma* hindered
 him, contriving with some of his Nephew's Command-
 ers, that they should deliver him into his Hands. These
 being

being bribed, as they were with *Cacamazin*, consulting about the Management of the War, secured him, and before it was known abroad, conveyed him, by Water, to *Mexico*, and had him carried on Mens Shoulders, richly clad, to *Moteczuma's* Apartment, who would not see him, but ordered he should be delivered to *Cortes*, who, well pleased to have escaped that Danger, ordered him to be close confined.

The next Day, by the Advice of *Moteczuma*, *Quizquizcatl*, younger Brother to *Cacamazin*, was constituted Lord of *Culua*, being then at *Mexico* with his Uncle, having made his Escape from his Brother; and *Moteczuma* conferred on him the Crown and the Title of King, with the usual Solemnity; telling him he designed to look upon him, for the future, as his Son: *Quizquizcatl* kissed his Hand, promised Obedience, and then, turning to *Cortes*, gave him Thanks, protesting he would ever be his Friend. *Cacamazin* was much concerned, when he heard that his Brother was made Lord of his Dominions, and *Cortes* had him strictly observed, knowing that there were many that would willingly have conveyed him back to *Texcuco*. *Moteczuma* sent two Embassadors to signify to that City the new Election, and caused the elected Monarch to be attended by many of his Courtiers, and *Cortes* sent along with him several of his prime Men, both of them in Person bearing him Company to the Gates of *Mexico*; he was received at *Texcuco* with all public Demonstrations of Joy, being carried on Mens Shoulders.

At the Entrance into the City, the Magistrates took him up, and when come to the Palace, an ancient Gentleman set a Garland of Flowers on his Head, and, all the Company being silent, made a Speech to him; the Purport of which was, "That he was sensible, how, when he was serving *Moteczuma*, being fled from his Brother, on Account of his Pride, the Gods had raised him to that high Dignity, for which Reason he ought to take care not to change his noble Disposition; for that the thing Kings should most endeavour to acquire, was the Love of their Subjects, &c." These Ceremonies performed, the People withdrew, and *Cortes* was delivered from the Dangers that had threatened him. This, in itself, and independent of its Consequences, could not but be very agreeable to our Hero, who saw himself, by this Means, raised to the highest Authority, exclusive of the sovereign Power in that Empire; for the People being well enough acquainted with *Moteczuma's* natural Disposition, attributed this mild Way of punishing, entirely to *Cortes*; and on the other Hand, the first Prince of the Empire looked upon himself as his Creature, so that there appeared a Probability of his establishing some kind of Interest in *Mexico*, and the bare Appearance of this, was enough to engage *Cortes* to do all that lay in his Power to cultivate and increase it.

10. All things seemed at this time to concur in favour of the *Spaniards*, and to render their Stay in the Empire of *Mexico* more safe and more agreeable than it had hitherto been. Yet, of a sudden, this fine Prospect was intirely over-cast, and the Face of Affairs unexpectedly changed. It seems that *Moteczuma*, though he had dissembled his Resentment, was far enough from being pleased with the long Stay which the Strangers made; and, indeed, if we consider their Behaviour towards him, it was no Wonder; but he dissembled so well, that neither *Cortes* nor any of his People suspected him; and was so great a Politician, that when he actually propounded the Scheme he had framed to be rid of them, they were so far from conceiving it in that Light, that they took it for the highest Act of Favour he had ever done them.

In short, *Moteczuma* offered to call a general Assembly of his Nobles, and there acknowledge, in a most solemn Manner, the Sovereignty of the King of *Spain* over his Dominions, and his own, and his Subjects Duty towards him. There could be nothing more acceptable to the *Spanish* Captain than this unexpected Offer of the *Indian* Monarch's, and therefore he encouraged him to carry it into Execution as soon as possible, without ever suspecting that the Emperor was as much inclined to this

as himself, though from a very different View. The Assembly was accordingly called, and *Moteczuma*, being seated on his Throne, made a very long, and a very extraordinary Speech: He said they all knew well enough, that their first Emperor came from the East; and that he had left them a Prophecy, that his Descendants should return to govern these Countries; that without doubt the King of *Spain* was the lawful Successor to the Empire, that if he had come thither in Person, he would have laid down his Crown at his Feet; that as it was, he was resolved to do him Homage, and send him a Present of the most valuable Things in his Dominions, and that he expected they would likewise contribute out of their own Possessions, that this Present might be the more worthy the Acceptance of so great a Prince.

In this Manner *Moteczuma* concluded his Discourse, though he did not utter it all without Interruption; for in spite of all the Efforts made upon himself in this Act of his, when he came to pronounce himself Vassal to another Prince, he found something so shocking, and so repugnant to his Nature, in those Expressions, that he paused a while as if he wanted Words to proceed, and he shewed his Concern so publicly, that some Tears were seen trickling down his Cheeks, which seemed as if they had escaped his Eyes, without their Consent; and the *Mexicans*, sensible of his Disturbance, and of the Cause from whence it proceeded, began likewise to shew their Concern, breaking forth into loud Sighs, desiring in Appearance, not without something that favoured of Flattery, that by the Noise they made, their Fidelity should be taken Notice of; so that *Cortes* thought it necessary to desire Liberty to speak, in order to encourage *Moteczuma*, and put him out of the Perturbation he was in. He said, "That it was not the Intention of the King his Sovereign, to dispossess him of his Royal Dignity, nor to make the least Innovation in his Government; but, that all he desired was, that they would, at the present Assembly, settle his Right to the Succession, in Favour of his Descendants or Posterity; by Reason of his being so far distant from those Regions, and so taken up in other Conquests, that the Case mentioned in their Traditions and Prophecies, might not happen in many Years." With which Explanation *Moteczuma* recovered Heart, re-assumed an Air of Tranquility, and finished his Discourse, as has been before observed.

The *Mexicans* remained astonished, and utterly confounded to hear such a Proposal, wondering at it, as a Thing inconsistent with, and unbecoming, the Majesty of so powerful a Monarch, and a Prince so extremely jealous of his Authority. They looked on each other without daring either to contradict, or to give any Sign of Consent; as being apprehensive, that by doing either, they should but confirm him the more in his strange Determination. This respectful Silence lasted till his prime Minister, as a Person who had a better Knowledge of his Prince's Disposition than any other, took upon him to speak for the rest, and said, "That all the Nobles who composed that Assembly, respected him as their Lord and natural Sovereign, and should be ready to obey whatever his Majesty had been pleased to propose, and to follow any Example he should think fit to set them; they not doubting but that he had well weighed every thing, and had consulted with Heaven; and they had no Instrument more sacred than that of his Voice, whereby to be informed of the Will of their Gods." The whole Assembly agreed in the same Sentiment, and *Hernan Cortes*, when it came to his turn to make his Acknowledgments, dictated to his Interpreters, a Speech no less artful than the former; in which he gave Thanks to *Moteczuma*, and all who were present, for this Demonstration of their Respect, accepting their Service in the Name of his King, without seeming to think it strange that they complied with their Obligations, but, rather as one who receives his Debt, and is pleased with his Debtor's punctual Payment.

The Emperor took immediate Care to collect in Gold and Jewels, particularly Emeralds, a Present suitable to his own Dignity; and his Nobility followed his

Example with the utmost Alacrity. All these rich Gifts were carried, by *Moteczuma's* Order, to the Apartment of *Cortes*, who named a Receiver and Treasurer, that they might take an exact Account of what was delivered; and in a few Days they amassed such a Quantity of Gold, that besides the precious Jewels, and pieces of curious Workmanship, after they had melted down the rest, they found 600000 Pesos of Gold, in Bars of good Alloy; out of which the fifth Part was set aside for the King, and of the remainder, a second Fifth for *Hernan Cortes*, with the Approbation of his People, and to defray the Expence of providing for the public Necessities of the Army; he likewise set aside the Sum for which he stood accountable to *Diego Velasquez*, and that which his Friends, in the Island of *Cuba*, had lent him; the rest was divided among the Officers and Soldiers, including those that were at *Vera Cruz*.

Those who had Employments had equal Shares, but amongst the private Men there was some Difference made; for those were distinguished and best rewarded, who had done best Service, or had been least troublesome in the past Disturbances. An Equity of a very dangerous Nature, where just Rewards are looked upon as Grievances, and Distinction of Merit occasions Complaints: There were great Murmurings and bold Words uttered against *Hernan Cortes* and the Captains; for at the Sight of such a Mass of Wealth, those whose Deserts were least, required an equal Recompence with the most Deserving. Their Avarice could not possibly be satisfied, nor was it convenient to publish the Reasons of that unequal Distribution; by degrees, however, and by the Dexterity of his own Management, *Cortes* got the better, and reduced the whole Army, not only to a peaceable Deportment, but to a voluntary Submission to his Method of managing.

In order to this he found it necessary, not only to part with some of his Share, but even to give considerable Sums in ready Money, to such as were worst dealt with, and complained loudest; amongst whom, there was one Fellow that had but 300 Pieces of Eight for his Share, who said, merrily, that he would take care not to engage himself again in a Contract with two Kings; alluding to the General's taking one fifth for his Catholic Majesty, and another for himself, upon which *Cortes* gave him 200 Pieces of Eight more, with which the Soldier was very well content.

II. The General was perfectly well pleased with the Situation he was now in, for he thought that he had entirely got the better of the Factions in his own Army, and that he stood higher in the Favour of *Moteczuma* than ever; but it was not long before he was convinced to the contrary; and found, when he least suspected it, that the *Indian* King was bent upon obliging him to quit his Country, a Thing he never apprehended would have come into the Emperor's Head, or if it had, that he would have had Spirit and Courage enough to avow it. But as wise and as penetrating a Man as he was, he found himself deceived in both.

The Manner in which this great Affair broke out, was thus: One Day as *Cortes* was diverting himself with the *Spanish* Commanders, *Moteczuma* sent *Orleguilla*, a young *Spaniard* who had learned the *Indian* Language, and of whom he was very fond, to tell him that he wanted to speak with him immediately, and at the same time that the young Man delivered this Message, he informed *Cortes* that *Moteczuma* had spent a great Part of the Night in close Consultation with his principal Ministers, and some of his Priests. As soon as he had heard this, *Cortes* could not help saying that he did not like the Message, but, however, he resolved to wait upon the Emperor immediately, taking with him about a Dozen of the *Spaniards* that were by when he received the Message, and laboured to conceal, as well as he could, the Confusion he was in. When he came into *Moteczuma's* Presence, he saluted him with profound Respect, and then asked him very courteously, what were his Commands?

The Emperor received him with more Gravity than usual, and with an Air of Greatness that till then he had never put on; and being now somewhat acquainted with

the Forms of *Spanish* Civility, called for Chairs, and all the rest standing, and two Interpreters on their Sides, he said, "Captain *Cortes*, my Gods are angry with me for having permitted you to stay so long in my City, destroying our Religion; they say they will give me no Rain, will destroy my Corn, send the Plague, and subject my Empire to my Enemies. I intreat you to depart this Place immediately; ask what you will have, for I love you entirely, and if I did not I should not beg it of you, since I have it my Power to do you harm, and shall not tell you so again. Take what you will out of my Treasures, and go away satisfied, for my Gods will not allow of what has been done; and since you see I can do no less for their Honour and my own, be not concerned." When he had uttered these Words, before the Interpreter began to speak, *Cortes* turned to a *Spaniard*, and said, "Run to our Comrades, and bid them be in Readiness, for their Lives are at Stake." When the Interpreter had done, *Cortes* rousing his Courage, very sedately answered, "Experience had made him sensible of his Affection, and that it was not his Fault if he did not continue in his Company; but, that since his Gods and his People were of that Mind, he should consider when he would have him be gone."

The King was so well pleased with his Answer, that he said, "He would not have him go till he thought fit himself, and he would then give him four Loads of Gold, every Horseman two, and every Foot-Soldier one." *Cortes* replied, "That he could not return to his own Country without Ships, and since he had sunk those that brought him, it was his Request, that he would cause Timber to be felled at *Vera Cruz*, which the *Indians* called the Coast of *Calchicoeca*, and he would find Men to build them." *Moteczuma* approved, and ordered Timber to be felled. *Cortes* appointed Workmen to do what *Martin Lopez* should direct them, and *Moteczuma* believed it. *Cortes* acquainted his Men with *Moteczuma's* Will, encouraged them, and said, "That God, whose Cause they had in hand, would in the mean Time, while the Ships were building, so dispose their Affairs, that they should not lose that good Country." He directed *Martin Lopez* to make shew of carrying on the Work with Diligence, but to retard it as much as might be, and send him Advice of every thing that happened.

There were various Motives induced *Moteczuma* to take this Resolution, which might, in some Respects, be thought not so agreeable to his Temper and Constitution, that was, as various Instances we have given plainly shew, rather timorous than enterprising. But after all, the great and true Spring of this sudden and surprizing Resolution, was his considering that if things went on in their present Channel, one or other of these Events must necessarily follow, viz. that either the *Spaniards* would absolutely acquire the Possession of his Dominions, by the Consent of his Subjects, or else the Inhabitants of the *Mexican* Empire, to preserve their ancient Government and Religion, would elect a new Emperor, under whose Conduct they might drive them out by Force; and in either Case he looked upon himself as undone. It was for this Reason that he determined to comply with all the Demands that *Cortes* had made, that he might have no Pretence for staying longer; and that he might likewise furnish his Priests with an Opportunity of telling the People, that their Emperor having now fulfilled the Will of the Gods in every Respect, had thereby regained their Favour, so that now they might depend upon the Assistance of Heaven, in expelling the Strangers.

On the other hand, the great Design of *Cortes* was to gain Time, in Hopes that he should receive the King's Commission, and a great Reinforcement from *Spain*, which might enable him to act with Vigour, and secure that extensive Empire to his Catholic Majesty; and of this he had the greater Hopes, because he had now brought his Men to have an absolute Confidence in him; and they no longer thought there was any thing impossible

fible to be done that *Cortes* thought practicable. But alas! all these fine Notions were but Dreams, and this great Commander found, to his Cost, that a Civil War amongst the *Spaniards* must first be gone through, before

all the Pains he had taken, and all the Arts he had practised, would open a Passage, for completing what he apprehended was at hand, the entire Conquest of the Empire of *Mexico*.

SECTION XII.

The History of CORTES's Expedition continued to the Death of MOTEZUMA, and the Spaniards being forced to abandon the City of Mexico.

1. The first Intelligence of a considerable Squadron and a new Army of *Spaniards*, landing in the Dominions of *Motezuma*, communicated by him to *Cortes*, and the Consequences of that surprizing Piece of Intelligence.
2. The Rise and Occasion of this second Expedition formed by *James Velasquez* for the Destruction of *Cortes*, and the gaining to himself the Province of New Spain.
3. The Pains taken by the Royal Audience at *Santo Domingo*, to prevent *Velasquez* from executing so rash a Design, and so prejudicial to the public Service.
4. The Fleet sails under the Command of *Pamphilo de Narvaez*, arrives at *Vera Cruz*, and the bold Stand made in that Fortrefs by *Sandoval* in favour of *Cortes*.
5. The Measures taken by that great Commander for securing *Mexico*, and for marching with the rest of his Forces against *Narvaez*.
6. He executes this Design, and endeavours to come to Terms of Accommodation with the other Army, which are absolutely rejected.
7. He attacks *Narvaez* in the Night, and after a short Dispute defeats his Forces entirely, and takes him Prisoner.
8. The Consequences of this Victory, and the wise Measures taken by *Cortes* to improve it, till he is informed of the Troubles at *Mexico*.
9. A short Account of the Occasion of this Sedition at *Mexico*, and of the Methods taken by *Peter Alverado* to quell it, and to reduce the Indians to their Duty.
10. The Arrival of *Cortes*, and the several Engagements that afterwards happened between his Troops and the People of *Mexico*, who notwithstanding his Arrival persisted in carrying on the War.
11. *Motezuma* endeavours to pacify his Subjects, and while he is speaking to them receives a Wound on the Temples by a Stone, of which he dies.
12. The Conduct of *Cortes* after this unfortunate Accident, and the Pains he took to reconcile himself to the Indians, though to no Purpose.
13. The Reasons which induced him to resolve upon quitting *Mexico*, and to make the best Retreat from thence he could.
14. The manner in which he executed this Retreat, and the many Difficulties and Dangers with which it was attended.
15. Observations and Remarks upon the principal Occurrences mentioned in this Section.

1. **T**HE Satisfaction that the Emperor received from the Hopes he entertained of being shortly rid of the *Spaniards*, and the Expectations of *Cortes*, that he should be for some time quiet, from the Measures he had taken, were entirely destroyed by a very unforeseen Accident, equally inconsistent with both their Intentions. In short, *Motezuma* had Intelligence brought him that eighteen Sail of Ships were seen off the Coast of *Ulua*; and his Officers, who commanded in that Part of the Country, had sent the Figures of all these Ships painted upon Cloths, which served instead of Letters, with a Description of the People they had seen in them; and some Characters, which signified what they suspected of their Intentions, being *Spaniards* in Appearance, and arriving at a time when he treated of dispatching those who were already at his Court. Whatever Impression these Representations had on the Mind of *Motezuma*, the Result was, that he immediately sent for *Cortes*, laid the Picture before him; and told him, "That now the Provision he was making for his Journey was unnecessary, since some Ships of his Nation were arrived upon the Coast, in which he might embark."

Cortes viewed the Painting with Attention rather than Surprise; and though he did not understand the Characters, which described them, he knew enough by the Habit of the People and the Mark of the Vessels, not to doubt their being *Spaniards*: The first Motion of his Heart inclined him to Joy, since he believed that his Commissaries were arrived, and flattered himself that they had brought him very considerable Supplies, in such a Number of Vessels. The Imagination is easily carried away to that which one desires; and he could not suppose, at that time, that so powerful an Armada was designed against him, for he formed his Judgment by his own sincere and noble Manner of acting, and the Well-intentioned are with Difficulty brought to believe that which is against Justice and Reason.

His Answer to *Motezuma* was, "That he would depart immediately if these Ships were bound back for any of the King of *Spain's* Dominions." And, without being surprized that the Emperor should have the

first News of these Particulars, because he was no Stranger to the indefatigable Diligence of his Couriers, he added, "That it would not be long before he should have an Account of this Accident from the *Spaniards* who were at *Zempoalla*, and that then he should know with Certainty whither those Ships were bound, and the Designs of their Owners, and whether it would be necessary to proceed in the building of those Vessels." *Motezuma* approved this Answer, being well pleased with his Readiness. But in a short time, a Letter came from *Vera Cruz*, in which *Gonsalo de Sandoval* sent *Cortes* Word, "That those Ships belonged to *James Velasquez*, and brought eight hundred *Spaniards* to oppose and deprive him of his Conquest." This unexpected Stroke he received in the Presence of *Motezuma*, and stood in Need of all his Courage and Resolution to conceal his Perturbation of Mind; for he found himself in Danger from the very Quarter from whence he expected Succour.

In order to understand however this Point of Fact clearly, and to judge perfectly of the Danger in which *Cortes* stood from his Countrymen, it will be requisite to cast our Eyes over to *Cuba*, and consider what passed there after the Departure of the Fleet under the Command of this great Man.

2. *James Velasquez* was at first equally angry and uneasy at the Step which *Cortes* had taken; but after he had received Advice from his Agent in *Spain*, that he had obtained for him the Title of the King's Lieutenant, not only in *Cuba*, but also in all the Countries which should be discovered by him, or by his Means, he became possessed with a kind of Fury, and conceiving this Disrespect to him, even before he became the King's Lieutenant, to be a kind of Treason, he resolved to punish it as such, and to exert the whole Strength of the Colony for that Purpose.

What contributed to heighten his Choler extremely, was the Substance of certain Letters he received from his Agent, in which he was told, that the Bishop of *Burgos*, President of the *Indies*, was his best Friend; but that the King was highly pleased with the Conduct of *Cortes*, and

and that all *Spain* rung of the great Things he had performed, and the mighty Discoveries he had made. The Applause given to *Cortes* made him impatient and outrageous, and notwithstanding he was not sorry to see the Conquest so far advanced, yet he could not bear that another should receive the Thanks which, in his Opinion, were due to him alone, so vain was he, in the little Share he had in the first Disposition of that Enterprize, that without any other Foundation he took to himself the Name of Conqueror. Upon those Motives he immediately prepared to form a Fleet and Army for the Destruction of *Cortes*, and all who had followed his Fortune. He bought Ships, listed Soldiers, and went in Person over the whole Island, visiting the *Spaniards*, and encouraging them to the Undertaking.

He shared with them before-hand the immense Riches of that Conquest, which he said was usurped by ill advised Rebels, who had basely made their Escapes from *Cuba* by flight. With those Hopes, and some Expence, he got together a Body of Men, which in those Parts of the World might be termed a formidable Army. It consisted of eight hundred *Spanish* Foot, eighty Horse, and ten or twelve Pieces of Artillery, with abundance of Provisions, Arms and Ammunition. He appointed for chief Commander of that Expedition *Pamphilo de Narvaez*, a Man of Capacity, and of the first Distinction in that Island, but highly opinionated, and obstinately positive in his Resolutions.

He gave him the Title of his Lieutenant, naming himself Governor of *New Spain*. He gave him likewise secret Instructions, in which he ordered him, "That he should endeavour to the utmost of his Power to take *Cortes*, and send him Prisoner under a strong Guard, that he might receive from his Hands the Punishment he had deserved; that he should do the same by the chief Officers who followed him, in case they refused to abandon his Interest, and that he should take Possession in his Name of all that had been conquered, and adjudge it to be all within his District, as the King's Lieutenant." He never so much as considered that it was possible his Design might not succeed, or that the new Officer he sent might not have it in his Power to treat the old one in the Manner he directed.

3. But while he was thus employed in taking Measures to gratify his private Resentment, under Colour of promoting the public Service, some wiser People in the *Indies* were much better employed; for the *Royal Audience* at *St. Domingo*, as soon as they were informed of these Preparations, foreseeing the Inconveniencies that might result from so public a Competition, sent the *Licenciate Velasquez de Ayllon*, Auditor of the same Audience, to endeavour to bring *Velasquez* to reason; and if he found gentle Means insufficient, to acquaint him with the Orders he carried; commanding him upon great Penalties to disarm his People and unrig his Fleet, and not disturb or give any Impediment to the Conquest, in which *Hernan Cortes* was employed, under the Colour of its belonging to him; and in case he had any Complaint against *Cortes*, or any Claim of Right to the Country he was then gaining, to appear before the *Royal Tribunal*, where he should be sure of Justice in a regular way.

The *Licenciate*, according to his Instructions, did all he could to reduce *Velasquez* to reason, making use of what Arguments he thought most proper to persuade him to desist from his Enterprize; and seeing him incapable of Advice, he shewed his Orders, and caused them to be notified by an *Escrivano* he had brought with him for that Purpose, accompanying them with Requests and Protestations. But nothing was sufficient to stop his Resolution, for the Title of the King's Lieutenant had so raised him, in his own Conceit, that it seemed he would acknowledge no Superior in his Government, and obstinately persisted in his untractable Humour.

The *Licenciate* seeing that he endeavoured to hasten the Embarkation of his People, feigned a Desire of beholding this Land, so much applauded and cried up, and under the Pretext of Curiosity offered to accompany them, to which Proposal *Velasquez* agreed, that the News of his Insolence might come later to the Isle of *Santo Do-*

mingo. Whereupon he embarked with general Approbation. *Andres de Duero*, that Secretary of *Velasquez*, who favoured *Cortes* so much, in the beginning of his Fortune, likewise, made one in this Expedition; some say, he offered himself for this Voyage, purely to share some of the Wealth *Cortes* had acquired, by putting him in Mind of the Services he had formerly done him; and others say, it was to pacify *Narvaez*, and prevent as much as he could the Ruin of his Friend.

4. The Fleet set sail, and, having a favourable Wind, in a few Days got Sight of the desired Land. They came to an Anchor in the Port of *Ulua*, and *Pamphilo de Narvaez*, sent some Soldiers ashore to get Intelligence, and make what Discoveries they could in the neighbouring Villages. These were not long before they surprized two or three *Spaniards* who were straggling about that Place. They brought them before the Commander, and the Men either fearful, or inclinable to Novelty, informed him of all that had passed in *Mexico* and *Vera Cruz*, endeavouring to flatter him, by discrediting of *Cortes*; Upon this Intelligence the first thing he resolved on, was, to treat with *Gonsalo de Sandoval* about the Surrender of the Fortrefs under his Command, and to engage him either to maintain it for him or to disarm it, and with his Garrison to join the Army.

He intrusted this Negotiation with a Clergyman, named *Juan de Guevara*, a Man of a less gentle Temper than his Profession required. There went with him three Soldiers, who served as Witnesses, and a public Notary. *Gonsalo de Sandoval* had his Sentinels in proper Places, to observe the Motions of the Fleet; and they gave Advice from one to another, by which Means he had an account of their Approach a good while before they arrived, and being assured that there was no greater Number to follow, he ordered the Gates to be opened, and retired, to wait their coming.

The Priest after the first Civilities were over, gave him an Account of the Forces with *Narvaez*, who were come to take Satisfaction for the Injury which *Cortes* had done *Velasquez*, by withdrawing from his Obedience, the Conquest of that whole Country being intirely his Property, as having been begun by his Order, and at his Expence. *Sandoval* answered him with some Warmth, which he could not well conceal, "That *Pamphilo de Narvaez* was his Friend, and so loyal a Subject, that he would certainly desire nothing but what should be convenient for his Majesty's Service. That the present Juncture of Affairs required that he should join his Forces with those of *Cortes*, and assist him to perfect that which was in such Forwardness, for that the Quarrels of private Persons were not, at the King's Expence, to be decided by a Civil War: But that if *Narvaez*, preferring private Revenge to public Interest, designed any Violence against *Cortes*, he might be assured not only himself, but all the Garrison, would rather chuse to die, than to agree to so dishonourable an Action."

The Priest received this Repulse as an unexpected Stroke, and broke out into injurious Language and Threats against *Cortes*, calling him Traitor, and went so far as to say, that *Sandoval*, and all who espoused that Traitor's Interest, deserved no better Title. They all endeavoured to bring him to reason, putting him in mind of his Profession, that he might be sensible of the Consideration upon which they bore with him: But he, raising his Voice without changing his Stile, commanded the Notary he had brought with him to publish the Orders he had, "That all might know that they were to pay Obedience to *Narvaez* on Pain of Death." But this was what could not be put in Execution, for *Gonsalo de Sandoval* told him roundly, "That he would order him immediately to be hanged, if he presumed to publish any Orders which did not come from the King."

At last Things rose to such a Height, that, to prevent a Mutiny, *Sandoval* found it requisite to make these People Prisoners; and upon mature Consideration, he likewise thought proper to send them Prisoners to *Mexico*, being carried by *Indians* in Chairs, or a kind of Litters, that

that are used in that Country, under a small Guard, commanded by *Pedro de Solis*, of whom he had a very good Opinion, and who behaved in this Affair admirably well.

5. In the mean time *Cortes* was extremely at a loss how to behave in this Conjunction. He had many things to do, and many Points to carry; stood exposed to a Multitude of Crosses, and had little or nothing in his Favour; yet his Behaviour was perfectly sober and discreet. He told *Moteczuma*, that his King had sent a considerable Army to prosecute his Rights to his Country; but, as he had already received his Homage, he would go to his Countrymen, persuade them to return, and go back with them himself. He gave his Soldiers to understand, that, notwithstanding *Narvaez* was sent, with the whole Force of the Island of *Cuba*, for his Destruction; yet he did not doubt he should be able to bring him, or at least his Soldiers, to join with them; and, in that Case, he made no sort of Question of their being strong enough to make a total Conquest of the Empire of *Mexico*. To his Officers he was very sincere, and found in them the most perfect Obedience.

In the mean time, *Solis* arrived with the Prisoners, sent by *Sandoval*; but *Cortes*, who had been before informed of their coming, went out to receive them with more than ordinary Attendance. He immediately ordered their Fetters to be taken off, embraced them with great Humanity, and *Guevara* more than once, with particular Civility, telling him, "That he would chastise *Sandoval* for the little Regard he had shewn to his Person and Dignity." He afterwards conducted him to his own Apartment, gave him his Table, and, with a seeming Satisfaction, intimated, "How much he esteemed the Happiness of having *Narvaez* in that Country, on account of the past Friendship and Intimacy that had been between them." He took care that the chief Spaniards should all appear chearful before him. He made them Witnesses of the Favours he received from *Moteczuma*, and the great Respect with which he was treated by the Mexican Princes. He presented them with some Jewels of Value, which greatly mollified their Tempers.

He did the same by their Companions; yet without letting them know he stood in need of their good Offices to induce *Narvaez* to Peace. He dispatched them in four Days, fully persuaded by his Reasons, and engaged by his Liberality. After he had taken these Measures, he resolved to send some Person of Account to make such Proposals to *Narvaez* as were reasonable. He chose Friar *Bartholomew de Olmedo*, a Person of known Wisdom and Eloquence. He hastened his Dispatches, and gave him Letters for *Narvaez*, for the Licenciate, and for the Secretary *Duero*, with several Jewels to distribute as he should think proper.

It is easy to apprehend, from the Account that has been already given, that, in the whole Progress of this Expedition, this great Commander had never met with so much Trouble and Perplexity, or apprehended himself in so great Danger as in this Conjunction, when, with all the Forces of the Mexican Empire, he had likewise a superior Army of Spaniards to deal with, and those no less inclined to destroy him than his foreign Enemy. *Moteczuma* saw his Trouble, notwithstanding he took all the Pains he could to hide it; and, in a Conversation he had with him upon the Subject, told him plainly, That he perceived either he, or the new Spanish Commander, must be a Rebel; which mortified *Cortes* extremely. But he remained firm, notwithstanding, in his first Resolution, which was to march in Person against *Narvaez*, and to leave a sufficient Body of Spaniards behind him in *Mexico* to secure the Person of *Moteczuma*, and preserve the City under their Obedience. The Number of Men that were to be employed for this Purpose was no more than fourscore; but they were picked and chosen Men, to whom he assigned for their Commander, Capt. *Peter Alverado*, a Man of Fidelity and Resolution, extremely beloved by the Spaniards, and very highly esteemed by *Moteczuma*. He sent Orders likewise to *Sandoval* to quit the Fortrefs of *Vera Cruz*, and to leave it to the confederate Indians, that he might be able to march against *Narvaez* with the greatest Force he could draw together.

He gave Directions also for raising considerable Bodies of well-affected Indians; but he absolutely refused to accept of the Succours which *Moteczuma* offered him, that he might not put either himself, or the Spaniards under the Command of his Rival, into the Power of those who were naturally Enemies to both. These were vast, and indeed almost incredible, things to be performed in so short a space of time; and yet such was his Diligence, such was his Dexterity, that they were performed, and every thing was ready for his Departure against the Day he had appointed. But what was still stranger, and more extraordinary, he not only found his Soldiers perfectly well inclined to his Service, but all his Indian Confederates as chearful and hearty in his Interest as he could either wish or desire; so that, difficult as his Enterprize was, he entered upon it with a fair Prospect of Success.

6. *Cortes*, being resolved to lose no time in marching against *Narvaez*, thought fit to acquaint *Moteczuma*, and received a suitable Answer from that Monarch, who, at his Departure, bore him Company as far as the Causeway of *Papalapan*, where he took his Leave very kindly. Many Mexicans went with him; some returned because he desired them so to do; and others because they grew weary. Those that followed went to bring the King word of every thing that happened, as they hourly did. He was very well received at *Chulula*, where the Men were refreshed; and, half a League from thence, he met a great Number of *Tlascalans* coming to compliment him. The *Chinantlans* had Pikes, and *Cortes* ordered all the Men to wear Escapiles, or Armour made of Cotton. *Sandoval* likewise came to the Place assigned him, where, upon a Muster, there were found two hundred and sixty-six Men, including the Commanders, five Horsemen, and the Friar.

Cortes's Friends that were with *Narvaez*, being informed that he drew near, advised to send *Andrew Duero*, who had an Influence over *Cortes*, to propose an Accommodation. *Duero* went, and discoursed *Cortes* in private, and the Result was, that they treated one another like Friends. When *Duero* was gone, *Cortes* ordered *John Velasquez*, who was a Relation to *Narvaez*, to go to his Camp, and take with him his Gold Chains, and all he had, besides much he gave him. *Velasquez* excused himself; but *Cortes* would have him go, offered him his own grey Mare, and, having discoursed him in private, and given him some Jewels, he departed. *Velasquez*, arriving at *Zempoalla*, alighted at the Cazique's House, and from thence went to *Narvaez's* Quarters, who, being informed that he was come, was going out to seek him, and, having received him very lovingly, said, He should be his Guest. He answered, He must return immediately; for that he only came to kiss his Hands, and to try whether any Accommodation could be made. *Narvaez* flew into a great Passion, and said, He wondered he should chuse to reconcile him to a Traitor, who had revolted from his Cousin *James Velasquez*. *John Velasquez* was much offended at it, and said, That such Words were not to be spoken in his Presence of *Cortes*, who was a very worthy Gentleman. Capt. *Salvatierra*, and other Officers, thinking that *Velasquez* took too much Liberty, advised *Narvaez* to secure him; but *Augustin Bermudez*, who was Chief Alguazil, *Andrew de Duero*, and *John de Leon*, opposed it, and persuaded *Narvaez* to make much of him, who did so, and desired him to persuade *Cortes* to surrender himself, and put an end to all Controversies. *Narvaez* would have *Velasquez* see his Army, which passed in review before him, and so they went to dinner. Immediately after *Velasquez* took his leave, thinking he had done what he came for, which was to see the Forces, speak to some particular Persons, and render *Narvaez* secure. The Friends of that Commander were become absolutely tired of the Company of *Velasquez*, and were therefore glad to be rid of him, so that they prevailed upon his Friend not to importune him to stay; and indeed *Narvaez* himself was, by this time, of their Opinion.

After his Departure they held a Council of War; in which the Friends of *Narvaez* represented to him the Danger he was in from the Money that *Cortes* had taken care to distribute among his Soldiers; and, while they were discoursing on this Subject, the Cazique of *Zem-*

poalla came, and asked him what he was about; adding, That, when he least expected it, *Cortes* would be there and kill him; for that he had so many Spies that he knew every thing that was done. Tho' they made a Jest of him, the War against *Cortes* was proclaimed to be carried on with Fire and Sword, and all Plunder to belong to the Taker. *Narvaez* marched out, with his Forces and Artillery, about a Quarter of a League from *Zempoalla*, intending to wait for *Cortes* there; but, it happening to rain all that Day, and those Men not being inured to Hardships, they murmured, saying, It was proper to return to their Quarters. Those who were acquainted with *Cortes*'s Valour thought otherwise; and insisted that it was ill Advice to go back. *Andrew Due-ro* gave *Cortes* Notice of all those Particulars, by a Soldier who deserted.

Narvaez retiring, upon the Confidence that *Cortes* durst not attack him, ordered Soldiers to be posted on the River he was to pass, forty Horsemen to stay all Night on the Road to *Zempoalla*, Twenty more to be in the Courts of his Quarters, and the Artillery, consisting of eighteen small Guns, to be planted before the Doors: And thus he thought himself secure. He then proclaimed he would give two thousand Pieces of Eight to any Man that should kill *Cortes*. *Sandoval* had ordered a considerable Number of Musketeers, Cross-bowmen, and other Soldiers, with Partisans, to lye in his Apartment; and the Captains *Salvatierra*, *Gommerera*, and others of his Confidants with them.

Cortes, coming to the River of Canoes, found much Difficulty in passing it, because there was a great Flood, and two Soldiers were drowned seeking for the Ford. As soon as they got over they heard firing of Muskets in *Narvaez*'s Army, which much frightened the Indians; who sent *Motezuma* an Account of all, magnifying his Power, and looking upon *Cortes* as a lost Man, which was no small Satisfaction to the *Mexicans*. *Cortes*, in that Place, drew his Men together; and, in a long Speech, acquainted them with all the ill Practices of *Narvaez*, extolled their Valour, and told them, they were then to fight for their Lives, for their Honour, and for their Estates; the Design of their Enemies being to make them Prisoners, and seize all they had. *John Velasquez*, *James de Ordaz*, and other Commanders, answered, He might be assured they would either conquer or die, and should take heed not to be ensnared by any fallacious Terms. *Cortes* was over-joyed to find his Men in this Disposition, and desired them to keep their Order exactly, for many great Misfortunes happened for want of it; and it was very remarkable that he never gave them the least Intimation of the Intelligence he held in the Enemy's Army, that his Soldiers might believe that his whole Dependence was upon their Valour. He further said, He designed to attack the Enemy at Midnight, or before break of Day, which was the best Method for a few to deal with a great Number. *Alonso Davila* answered, That they did not desire to live without him, so that he might go when he pleased, and do as he thought fit, for they would be satisfied to die with him at all Times.

As soon as *Narvaez* heard where *Cortes* was, he sent *Gonsalo Carrasco*, a bold Man, and his Servant *Hurtado*, to approach as near *Cortes*'s Forces as he could, and bring him Advice of his Motions. *Cortes*'s Forerunners met with *Carrasco*, and took him; who spoke aloud that *Hurtado* might make his Escape; and so he did. *Hurtado* came among *Narvaez*'s Forces, ran thro' their Quarters crying, Arm, arm! telling them, That *Cortes* was at hand, and *Carrasco* taken; but could give no Account of the Men or their Number. Some said *Cortes* could not come in such a dark, rainy Night, and *Narvaez* bid *Hurtado* go to sleep, for he had certainly fancied it. *Cortes*, to justify his Proceedings, gave *Sandoval*, who was his chief Alguazil, a Warrant to secure *Narvaez* for raising Commotions in the Country; and, in case he resisted, to kill him, requiring all his Officers and Soldiers to be assisting. Then he divided his Men into three Parties; the First under *Sandoval*, which was of sixty Men; the Second under *Christopher Olid*, a good Soldier, and a Man of extraordinary Strength. *Cortes* himself took the Third. They had, among them all,

seventy Pikes made of Oak, with the Spears before-mentioned, being thirty-eight Spans in Length. The Word was *The Holy Ghost*. He appointed *Sandoval*'s Pikes to attack *Narvaez*'s Quarters, and the rest the Cazique's House, where he was kept under a Guard that he might not run away; and fifty Men to fall upon the Alcalde *John Jusse*; and *Olid* was to attack *Narvaez*'s Artillery, and he to support them.

The three Bodies advanced within a Stone's-throw of one another. *Cortes* halting, intreated *Carrasco* to tell him the Disposition of *Narvaez*'s Forces, threatening to hang him if he lyed; and he, refusing, was so near being hanged, that his Throat was sore for some Days: And one of the Horsemen saved him. Being come to a Place where the Road divided itself into two, they prayed, put on their Escapiles, or Cotton Armour, and marched towards the Town in good Order, observing strict Silence. *John Velasquez*, then seeing a Light on high, told *Cortes* that was *Narvaez*'s Quarters, and he answered, I am glad that the Light guides us. He commanded *Sandoval* to move directly to *Narvaez*, which was a good Choice, for he was a daring Commander, and the other Parties to guard his Flanks. *Sandoval* charged *Canillas* not to beat his Drum till he ordered him, and kept him before him. When they were close by *Narvaez*'s Quarters, *Cortes*, who was giving Directions, said to *Sandoval*'s Party, Gentlemen, stick close to the Houses on both Sides of the Streets, that the Cannon-balls may pass along without doing any execution. All this could not be done so silently but that there was Notice given of it. *Narvaez*, who was putting on a Breast-plate, said to him that brought the Advice, Be not uneasy, and ordered to beat the Alarm; but none came in from the other Towers, where the rest of his Men were quartered, for they could not come, being hindered by *Cortes*'s Men. When *Sandoval* came to *Narvaez*'s Quarters, the first Sentinels, who stood at the Foot of the Stairs of the Court, cried out. *Sandoval*, seeing he was discovered, ordered *Canillas* to beat his Drum. *Cortes* cried, Fall on, fall on! *Holy Ghost, Holy Ghost!* Advance.

Sandoval going up the first Stairs, with his Men following, found in the first Court a Room full of Blacks; one of them came out with a Light in his Hand, and was killed with the Pikes. They passed on towards *Narvaez*'s Apartment, and going up four Steps saw the Artillery planted. One Gun was fired, which killed two of *Cortes*'s Men; but the rest pressed on so fast that the other Pieces could not be fired. *Cortes* caused the Artillery to be thrown down the Steps, and went up five more to get into the Room where *Narvaez* was with about forty Soldiers. *Sandoval*, who was already come up with *Narvaez*, required him to yield, but he made a Jest of it, and stood upon his defence till *Martin Lopez*, one of *Cortes*'s Men, set fire to the Thatch that was on the Tower, and the Smoke drove *Narvaez* and his Men out of the Place, and then he was run into the Eye with a Pike. *James de Rojas*, Ensign to *Narvaez*, fought bravely in Defence of his Colours, till two Pikes were thrust into him, when falling he cried out, Lady help me! and *Cortes* answered, She shall save you, not permitting him to be killed.

When *Narvaez* was wounded, *Peter Sanchez* came up and closed with him, and then *Sandoval* said, Yield yourself Prisoner, so they dragged him down the Steps till Fetters were put upon him, and carried him to *Cortes*; to whom he said: My Lord *Cortes*, value your good Fortune in making me Prisoner this Day. He answered, That the least Action he had performed in that Country was the taking of him; and therefore ordered he should be well secured. He was not dressed that Night, by reason of the Confusion all Men were in, but the next Day was sent to *Villa Rica*. *Narvaez* being taken, and his Men making no further Opposition, *Cortes* ordered himself to be proclaimed Captain-General, and Chief Justice of both Armies, in the King's Name; commanding all Men to come in and take an Oath to him as such, upon pain of Death.

They all did so, some voluntarily, others because they did not know how to avoid it, except three hundred Soldiers, who fortified themselves in their Quarters; to whom

Carrasco

Carrasco now released said, It was a fit time to fall upon *Cortes's* Men, because those who had taken an Oath to him were disarmed, and his own Soldiers dispersed, plundering. Tho' the Advice was not disliked, those Men having no Head, and many aspiring to be so, they staid till it was Day; when *Christopher de Olid* came to offer them a good Reception, from *Cortes*. Most of them cried, *God bless the King and James Velasquez*. When the Shout was over, *Olid* told them, they would be compelled by Force to what they refused to do voluntarily. Whilst he went to acquaint *Cortes*, *Carrasco* advised them to fall upon *Cortes's* Baggage, and they should be all rich; and might then embark, and carry *James Velasquez's* Treasure enough to fit out another Fleet. Though they liked the Proposal they could not agree, so that *Carrasco* went alone, and finding no Guard but *Marina* and *John de Oreaga*, Page to *Cortes*, he took a Horse and a Spear, returned to those Men who were still together, and shewed them what an Opportunity they had lost. *Cortes* then ordered his Artillery to advance against those that would not submit, and commanded the Gunner to fire one Piece in the Air: He did so. *Olid* spoke to them again, and they again answered, *God bless the King and James Velasquez*. One Gun being then fired upon them killed two Men, and the next one. Whereupon some of them went over to *Cortes*, and the rest held out till wanting Ammunition they surrendered.

All had taken the Oath to *Cortes* except *Carrasco*, and he appearing on the Horse he had stolen, *Cortes* said to him: Friend, that Horse is mine; alight. He said he would not unless his own was restored. *Cortes* replied, he should quit him immediately, and Orders should be given for returning his. As to the Oath, he refused it; for which he had a Clog fastened to one of his Feet, which continued three Days, and then he took the Oath. He was not hanged, to avoid exasperating those People.

8. When all had been sworn, he mustered his own Men, to see how many were missing; and *Narvaez's* Party seeing they were only two hundred and sixty without the great Army of the *Tlascalans*, that had been reported, and that they had but those few Pikes without Armour or Horses, and some Coats of Mail, Spears, and Cross-bows, and their Swords in bad Condition, they were much ashamed, that they, with their little Pannels, as they called the Cotton Armour, should have defeated so many Men of Note, and, blushing, cursed *Narvaez* for his ill Conduct; which much troubled *Cortes*, till by Degrees he gained their Affections: Two only of his Men were killed and one wounded; and eleven of *Narvaez's* Party slain.

Then came the Cazique of *Zempoalla* with his *Indians*, bringing Garlands of Roses, and setting them on the Heads of *Cortes* and the other Commanders, congratulated their Victory, and desired them to go to his House; and in return *Cortes* gave him some *Spanish* Baubles; and having ordered all that had happened to be painted, *Narvaez* taken and put into Irons, his Men submitting, and *Cortes* victorious, the Cazique sent it to *Moteczuma* by the Advice of *Cortes*, who also sent a *Spaniard* to inform *Alverado*. When first *Cortes* came to *Zempoalla*, the Lord presented him with a beautiful Woman of Quality, who took the Name of *Catherina*, and now he took up his Quarters in the Woman's House, because it was strong. She treated him very kindly; but he was uneasy in his Mind, seeing those conquered People indisposed. Whilst he was thinking how to get over this Difficulty, Capt. *Barrantes* came to him with the *Chinantlans* well armed after their Manner, which was a great Satisfaction to him, that *Narvaez's* Men might see how he was obeyed in *New Spain*.

He resolved to send those *Indians* back, and to divide the *Spaniards*; and accordingly ordered *James Ordaz* to march with Three hundred Men to subdue the Province *Guacacoalco*, and *John Velasquez* with another Detachment to the River of *Garray*; thus to employ them, and secure himself, which at the same time was acceptable to them. *Cortes* next commanded *Peter de Malvenda*, Steward to *Velasquez*, to pick up what belonged to his Master and *Narvaez*, and secure it. A Black belonging to *Narvaez*, having the Small-Pox, infected the whole Town

of *Zempoalla*, and the *Indians* frequently washing themselves, Numbers of them died, and lying unburied occasioned a pestilential Distemper which spread through all *New Spain*, and there ensued a very great Mortality. Others affirm, that this Distemper was not brought over by the Black, but that they had it at certain Times in the *West-Indies*, and this seems the more likely, because it affected none of the *Spaniards*.

Whilst *Cortes* was endeavouring to settle his Affairs at *Vera Cruz*, wherein he met with some Difficulty, and *James Ordaz* was gone upon the aforesaid Commissions, the *Spaniard* he had sent to *Mexico* with the News of his Victory returned, and said the *Mexicans* were in Arms, and shewed some Wounds they had given him; saying he had escaped miraculously. He pressed *Cortes* to march to the Relief of *Alverado*, telling him, that the *Indians* had burnt the four Brigantines he had built at *Mexico*, thrown down a Wall at the *Spanish* Quarters, which had been repaired with much Difficulty, undermined another, set Fire to the Ammunition, taken up the Draw-bridges, cut off the Provisions, killed *Pena*, *Moteczuma's* Favourite; that the *Spaniards* had defended themselves bravely, killing many *Indians*; and that, if *Moteczuma* had not sometimes commanded his People to give over the Attacks for fear *Alverado* might kill him, the *Spaniards* had been destroyed. Hereupon he settled the Government at *Villa Rica*, leaving *Narvaez* and his Men Prisoners there; commanded those he had sent abroad to halt till further Orders; made a Speech to the Men, saying, That those who were willing to follow him should have Arms given them; and the Occasion being urgent, all unanimously offered their Service.

9. It now plainly appeared that *Cortes* was become entirely Master of all the *Spaniards* under his Command, the new obeying as well as the old Soldiers, and shewing as much Zeal for his Service. He had already given the necessary Orders for securing the Fleet, and for putting a good Garrison into *Vera Cruz*; so that it was more in his Power to execute the Design he had formed, and which indeed the Circumstances of Affairs required, marching directly to *Mexico*, and forcing a Passage through the Rebels, to the Relief of his Countrymen. He directed his Rout accordingly from *Zempoalla* towards *Tlascala*, having with him One thousand Foot, and One hundred Horse; but they were soon obliged to take different Roads for the sake of Subsistence, which, notwithstanding all the Care and Circumspection *Cortes* could use, they found it sometimes difficult to procure; insomuch that in the Course of this Journey, they found themselves more than once exposed even to the highest Extremities of Hunger and Thirst, and, which is very strange, the new Troops that had shewn themselves so uneasy, and so impatient, under much lighter and less grievous Hardships, behaved upon this Occasion with all the Firmness and Constancy that could be desired, either from the great Hopes they had formed to themselves of being made rich and happy by this Expedition, or because they were desirous of shewing their new General, that whatever Opinion he might have formed of them from what was passed, he should find them, in every Respect, as brave, as hardy, and as capable of enduring Fatigue as those he had trained up himself.

In this March, but especially at *Tlascala*, *Cortes* found Means to gain a very clear and distinct Account of the Causes of that Sedition which had happened in his Absence, and of which it is necessary likewise that we should say somewhat, that the subsequent Part of this Section may be the more perfectly understood. A very short time after the Departure of *Cortes* from *Mexico*, *Peter Alverado* began to perceive visible Marks, not only of Coldness and Dislike, but of Hatred and Disaffection in the People of *Mexico*; neither were his Conjectures unsupported by Proof, since he was quickly informed, that, at the Persuasion of their Priests, the *Mexicans* were providing Arms, and whatever else was requisite, in order to attack the *Spanish* Troops. He was certainly very much to be commended for being constantly on his Guard, and neglecting nothing that might contribute to the defeating of their Design. In this, however, he was much to blame

blame, that he did not either communicate his Suspicions, or his Discoveries to *Moteczuma*, or so much as confer with him on the present Posture of his Affairs, since that Monarch testified great Affection to the *Spaniards*; and, if applied to in time, might have prevented things from coming to Extremities.

But *Alverado*, it seems, depended upon his own Forefight, and the Courage of his Soldiers; and understanding that the *Indians* were actually preparing, under Colour of a solemn Dance, which was one of the principal Rites of their Religion, to surprize and cut off the *Spaniards*, he resolved to be beforehand with them, and to put it out of their Power, by shutting them up in the great Temple where this Dance was to be performed by their principal Nobility, in which he succeeded; but when he had them in his Power, and saw that they were richly adorned with Gold and Jewels, he either commanded, or at least permitted, his Soldiers to fall upon them, and cut them to Pieces, and strip the dead Bodies of their valuable Ornaments, which afforded the *Indians* that escaped, a fair Pretence of carrying on an open and avowed War, which from that time they did, and almost every Day attacked the *Spaniards* in their Quarters; which, though they were not able to force, and notwithstanding they killed but three or four, and lost several hundreds, nay, some thousands of their own People, yet they continued the War with the greatest Obstinacy, supposing, that in Time the *Spaniards* would expend their Ammunition, and, that sooner or later they should destroy them all. The *Spaniards* themselves apprehended this, and therefore pressed *Cortes* to hasten his March, in order to relieve them.

10. He was very sensible of their Distress, and of the Necessity of extricating them from it; and therefore, with as little Delay as possible, he quitted *Tlascala*, taking with him some of the bravest Troops of that Republic, with whom he continued his March towards *Mexico*; which City, without meeting many Difficulties on the Road, he entered upon the Feast of St. John, 1520. He met with no Opposition, for the *Indians* had quitted a great Part of the City, and had broke down several Bridges. However he advanced with great Caution, and at length arrived at the *Spanish* Quarters, where he was received with the utmost Joy by *Alverado*.

The *Spanish* Writers differ as to his Behaviour towards *Moteczuma*; some say that he used him kindly, but others expressly affirm, that he did not so much as pay him a Visit, and that he afterwards repented of this, as of one of the greatest Mistakes he ever made. He added, however, another of a different Nature; for, in Hopes of pacifying the *Indians*, he released *Moteczuma's* Brother, who proved his most dangerous Enemy, and therefore the *Indians* chose him for their Captain. He aimed, at first, at an Accommodation, but he soon found that impracticable, and that *Moteczuma* had entirely lost his Authority, which proved of very ill Consequence to the *Spaniards*, *Cortes* sent *Antony del Rio* to *Zempoalla*, to give an Account of the Posture of Affairs, and hasten the March of those that stayed behind; and as he was passing a Horseback, through *Tlatlelulco*, which is the Market-Place, the People howled, and began to pursue him; being thus followed, and seeing a Stop before, he thought it best to turn back, and breaking through the Crowd with his Horse, Sword in Hand, returned to the Quarters. *Cortes* then sent five Horse-men to see how Matters stood, who found some Timber taken of the Bridges, under which the Cuts of Water ran, and turning another Way, found the like in other Streets, many People on the Tops of the Houses pointing to them to pass the Bridges.

The next Day *Hojeda* and *Marquez* went to seek Provisions, and finding a Bridge broken, and the Waters in the Trench deep, they made a shift to get over, by throwing in Rubbish, pieces of Matts, and other Things; then passing along a little Street, *Marquez* heard a great Cry, and returning to his Companion, they agreed to fly, and had it not been for a *Tlascalan* they had with them, who was their Guide, there were so many Windings of Streets, that they had been in great Danger: They met

with an *Indian* Priest crying out, and behaving himself like a Mad-man; they pursued him, and he ran into an House that was full of tame Cranes, which, when they saw him, began to set up their Cry, in such a Manner, that *Hojeda* came out in a Consternation; the Citizens flocked together on all Hands, great Cries were heard, and the Tops of the Houses were full of Men. Six *Spaniards* that were at the Top of the Temple looking out, gave Notice of the Disturbance, and *Hojeda* and *Marquez*, coming in, two hundred Men sallied out of the Quarters, whilst the rest were arming. They fought with a great Number of *Indians*, who pressed on furiously, without any Dread of the Swords; the Action lasted till Night, an infinite Number of *Mexicans* being slain, and not one *Spaniard*; thus was *Cortes* convinced that the War was unavoidable, and therefore he endeavoured to send privately for *Salcedo*, who had been left behind with the Wardrobe. He ordered Men out to throw down some Trenches the *Indians* had cast up, that the Horses might pass.

As soon as it was Day, the Shouting, Whistling, and Fighting, began again, and continued the whole Day, with the Destruction of many *Mexicans*; and some *Spaniards* were hurt, because the *Indians* threw Stones from the Tops of Houses; but the Fire-arms and Cross-bows drove them. The next Day the *Indians* assaulted *Cortes* the third Time, in a most desperate Manner, killing *Carezo* an Horse-man; and *Cortes* finding that the greatest Mischief came from Tops of Houses, he left the Horse-men, and with one hundred and forty Musketeers and Cross-bow Men, entered the Street of *Tabuca*, gained it entirely, and came to *Tabuca*, where they might have fortified and secured themselves with all their Wealth; but, despising the *Indians*, they returned to their Quarters, and were set upon, in the Streets, by vast Numbers of *Indians*, where the Horses having no room, were of little Use.

They took one *Spaniard* alive, and sacrificed him in Sight of all the rest; they also took two Pieces of Cannon, and threw them into the Trenches, so that the *Spaniards*, with much Difficulty, returned to their Quarters; and the *Indians* again cleared those Places which the *Spaniards* had filled up for their Horses to pass; the next Day they engaged the fourth Time; the *Indians* being so numerous, that it was wonderful to behold; who attacked the Court of the great Temple, where, though it was large, no Use could be made of the Horses, because it was paved with broad Stones; many great Men were on the Top of the Temple, commanding where the Attack should be made. *Cortes* sent *Escobar*, his Chamberlain, against them, with one hundred Men; and by that time they were got up four Steps, there came down upon them, such a Shower of Stones, pieces of Timber, Sticks, and Fire-brands, that they were forced to retire: Three times they were repulsed in this Manner. *Cortes*, being informed of it, tied a Target to his Arm, because he was wounded in the Hand, went to that Place, said it was a Shame there should be any longer Delay in that Affair, advanced foremost, and was followed by many.

They got up the Steps, and though many *Spaniards* were knocked down, fell upon the three hundred Gentlemen that were there, and left not six of them alive, some being killed with the Sword, and others throwing themselves headlong from the Parapet of the Temple; two laid hold of *Cortes* to cast themselves down with him, but he being a strong Man, got loose. The same happened to *Hojeda*, and he would have perished in that Manner, had not one near him relieved him. They went up to the Top of the Temple, where they found no Man, but much *Cacao* and Meat; and the *Tlascalans* and *Zempoallan* *Indians* had a good Day of it, for they fed upon the *Mexicans* that were killed. The *Mexicans* came on again the next Day in a greater Rage, and had new Ways of fighting, being assisted by the neighbouring Towns. They threw their Javelins close by the Ground, to wound the Feet and Legs, and in this Manner above two hundred *Spaniards* were hurt, till they provided Armour.

The Arrows flew so thick, that those who were appointed to

to gather them up every Day, burnt forty Cart-Loads of them. Provision was become so scarce, that the *Indian* Allies had but a little Cake, every Day, each Man, for their Allowance, and every *Spaniard* fifty Grains of *Indian* Wheat; nor was there less Want of Water, so that they endured much Drought. They dug in their Quarters, and, though the Earth was full of Salt-petre, they found fresh Water, which was wonderful; a *Tlascalan* looking over some of their Works, to see what was doing, the *Mexicans* cried to him, "You Dog, you and those Christian Dogs shall now perish with Hunger and Thirst." He answered, "You infamous false Scoundrels, who know not how to fight, but in Crowds, take that Cake which I had to spare this Day, out of my Allowance, for you shall all be destroyed by degrees."

The next Morning the Battle revived, and the *Indians* set Fire to the House; it was put out by throwing down a Wall, and that Breach made good with Cannon, and a Work raised; and because some Mischief was done from a Tower of *Moteczuma's* House, *Cortes* resolved to make himself Master of it. He attacked it with two hundred Men, and it was wonderful that long Pieces of Timber being rowled down the Stairs at Length, which might have overthrown ten or twelve Men, they all turned end Ways, and did no harm. He gained the Tower; killed those that defended it; advanced into the City; burnt above one thousand Houses; gained seven Bridges; killed a prodigious Number; and here a Horseman came to tell him, that the great Men of *Mexico* would treat with him of Peace: He was glad of it, sent *Alverado* and *Sandoval*, with sixty Horse, and ordered *John Velasquez* to stay there with four hundred Foot, to secure the Bridges; then he went to the *Mexicans*, whom he saluted very courteously. They asked him why he did not go away as he had promised, since he had Ships, and restore them their Lord *Moteczuma*? Whilst he was in Discourse about this Affair, Advice was brought him that the Bridges were lost; he hastened away thither, and found *John de Soria*, and another Soldier, dead, and five Horses fallen down; he recovered them, and fought so resolutely, that his Presence alone was the saving of many Lives.

II. *Cortes* returned to his Quarters, with two Contusions on his Knee, made by Stones, where he found the Men in Confusion, believing he had been killed, because he stayed so long. They rejoiced at the Sight of him; the Battle continued; the *Indians* broke the Bridges, and fought from the Tops of their Houses: *Cortes* seeing one of them very fine, and obeyed by all the rest, sent *Marina* to ask *Moteczuma*, whether he thought they had put the Government into his Hands. He answered, that they would not presume to chuse a King in *Mexico*, while he was living. He looked at them, and said they were his Kindred, and that, among them, were the Lords of *Texcoco* and *Xztapalapa*; the Engagement still grew warmer; *Cortes* was in Confusion, and *Moteczuma* in no less, apprehending, as is likely, that they would kill him; he bid *Marina* acquaint the General that he would go up to a Parapet on the House, to speak to his Subjects, which might perhaps induce them to come to an Accommodation. *Cortes* was pleased with it, he went up with a Guard of two hundred *Spaniards*, in Royal Apparel, and *Marina* with them, to know what was said.

The Noblemen that went up with him made a Sign, and he was presently known, and raising his Voice said, "He should be pleased if they would behave themselves gratefully, for the Good he had done them: That he had been informed they had chosen another King, because he was confined, and loved the Christians, but could not believe they would forsake their natural Sovereign, for another which God would punish; that if they had fought so long to set him at Liberty, he thanked them, but they were mistaken, for he was there by his own Consent; that being his own House, in order to entertain his Guests, and therefore he desired them to lay down their Arms; since every Man they killed, cost them above two thousand; especially considering that they offered Peace, and had not taken their Goods, ravished their Wives or Daughters,

and were willing to be gone; that he could go out from thence whensoever it pleased him, having always had the Liberty so to do; and therefore, if they loved him, they should give over, and lay aside all Prejudice, which never permitted Men to act indiscreetly." The *Mexicans* listened to him with much Attention: But, as soon as he had done, cried out, "Hold your Peace, you effeminate Scoundrel, born to weave and spin; those Dogs keep you a Prisoner, you have no Heart, you are a Coward." Then they fell on again, casting abundance of Stones, and shooting their Arrows, and, though a *Spaniard* took care to cover *Moteczuma* with a Target, yet, as ill Luck would have it, a Stone hit him on the Temple.

He went down to his Chamber, laid him on his Bed, and was so much ashamed, and out of Countenance, that, though the Wound was not dangerous, he died in four Days with Grief, forbearing to eat, and refusing to be dressed. The Fight continued, without Intermision, all the while that *Moteczuma* kept his Bed; who, finding his Strength fail him, sent for *Cortes* in great haste, and, sitting up, leaning on the Pillows with Tears in his Eyes, taking hold of his Hand, said, "That he knew not where to begin, that he was the same *Moteczuma*, whom he had so positively insisted to visit, whom the World had so much respected, that he knew not what ill Fate attended him; for he had not usurped another's Kingdom, had done Justice, conquered many Nations, bestowed many Favours, and yet those, who before durst not look him in the Face, had insulted their King, giving him such Language as was not fit for a Slave, and throwing Stones at his Royal Person; that his Heart was ready to burst, and he died in great Rage, wishing he could see those Villains punished; but it was now too late, and his End was rather occasioned by Vexation, than by the Wound; he therefore begged, that since he died for his Sake, he would take care of his Children, and punish those that had insulted him, and the Person that had usurped the Crown." *Cortes* could not help being moved at these Words, and holding him by the Hands, begged that he would not cast himself down, for he would perform all his Commands, as if they were the King's; adding, that he had been in the Wrong in not suffering himself to be dressed; that he gave him his Word to take care of his Children, and revenge his Wrongs to the full; these and other Words, uttered by *Cortes*, very much comforted him; but *Cortes* was forced to take his leave, to go and see what was doing abroad.

The next Day, being told he was very ill, he came back to see him, found him in a great Agony, and said, "That since he had agreed to be baptized, he should do it then to save his Soul, for *Francis Olmedo* was there ready to do it." He answered, "That having but half an Hour longer to live, he would not forsake the Religion of his Ancestors." And soon after he died, some of the great Men that were Prisoners with him being present, to whom he recommended his Children; and the Revenge he desired to his last Gasps. He never would suffer any Cloth or other thing on the Wound, but if any was laid on, he pulled it off, wishing for Death. Four Hours after he was dead, *Cortes* looked out at the Top of the House, made a Signal for a Cessation, desiring to speak to the Commanders, and told them, "That they ill requited their Sovereign, having killed him with a Stone; but, that he had died rather of Vexation, than of the Wound: That he would deliver them his Body, to be buried according to their Manner; bidding them not contend any longer, for that God, who was just, would destroy that City by his Hands." They answered, "They had a Commander, and would have no more to do with *Moteczuma*, dead or alive," with other such insolent Expressions. *Cortes* turned his Back upon them, and ordered those great Men that had attended him to carry out the Body, that they might see he died by the Blow of the Stone. As soon as it was out of the House, an *Indian* richly clad, ran up to him, making ugly Faces, without speaking, as if he had asked whose Body that was, and being

told it was *Moteczuma's*, he made Signs to have it carried back to the *Spaniards*, and then ran to his own Party. Those that carried him vanished on a sudden, and the *Spaniards* heard no more of him, but supposed he had been buried in the Wood of *Chapulteque*, because great Lamentations were heard there.

It is conceived that these were the greater, because they intended, by this Ceremony, not only to pay the Funeral Honours due to their deceased Sovereign, but in some Measure, also to expiate the Crime of which they had been guilty in taking away his Life; for the new World afforded no Nation so barbarous, as not to account it a most infamous Wickedness, for Men to embroe their Hands in the Blood of their lawful Prince. This *Moteczuma* was the second of his Name, and the eleventh in the Order of the *Mexican* Emperors; he was, before his Accession to the imperial Dignity, accounted one of the bravest Men, as well as one of the best Officers in the Territories of *Mexico*, having fought nine Battles, and obtained in each the Victory; he was dreaded by his own People, but esteemed and beloved by the *Spaniards*, for whom he had a singular and very extraordinary Affection.

He left several Children; two of his Sons who accompanied him in his Confinement were killed by the *Mexicans*. When *Cortes* made his retreat, he had two others, with three Daughters, which Ladies were afterwards converted, and married to *Spaniards*. But the most illustrious of all his Children, was *Don Pedro de Moteczuma*, who was also soon after converted to the Catholic Religion, and had that Name given him at his Baptism: He was next Heir to his Father, his Mother being Princess of the Province of *Tula*, and one of the Queens who resided in the imperial Palace, with Royal Dignity; which Princess likewise followed her Son's Example, and was baptized by the Name of *Donna Maria de Niagua Suchil*, keeping up in these Surnames the Nobility of her Ancestors. His Majesty bestowed many Favours on *Don Pedro*, giving him an Estate, and considerable Rents in *New Spain*, with the Title of Count de *Moteczuma*, whose legitimate Succession is still preserved in the Counts of that Title, with the heroic Remembrance of their royal Original.

12. The *Mexicans*, as soon as they had finished the Funeral of their Emperor *Moteczuma*, resolved to elect a Successor, under whose Command they might carry on the War, against the *Spaniards*, with Effect; and, with this View it was, that they elected *Quetlavaca*, one of their greatest Princes, and the Second Elector in virtue of his Principality. But he dying in a few Days, they made choice, in his room, of *Gatimozin*, a Man of great Reputation in War, and who seemed the most capable of answering their Purpose. It was under his Conduct that they attacked the *Spaniards* again, with greater Fury than ever; but not with greater Success, but rather the contrary.

In one of their Engagements, however, they killed a considerable *Spaniard*, and wounded several others, tho' with great Loss to themselves; the Day following, therefore, they desired a Conference, to which *Cortes* consented, in hopes of coming to some Accommodation; he went to hear their Proposals from the Wall, and some of the Nobles drawing near, on the Part of the new Emperor, proposed, "That he and his People should prepare to set out and direct their March to the Sea-side, assuring him, There should be a Cessation for as much Time as was necessary for him to make ready for his Departure; adding, that, if he did not determine to come to that Resolution, he might depend upon it that both himself, and all who were with him, should perish: For that they were now convinced that the *Spaniards* were not immortal; and that, tho' the Death of every *Spaniard* should cost them the Lives of twenty thousand Men, there would still remain a Multitude to celebrate the conclusive Victory." *Cortes* answered, "That the *Spaniards* never pretended to be immortal, but valued themselves upon being Men of Valour, and knew themselves to be so far superior, in every Respect, to the *Mexicans*, that, without any

greater Force than what he then had with him, he had Courage enough to undertake the total Destruction, not only of their City, but of the whole Empire. But that, being moved at the Calamities they had suffered, he was determined to depart, since the Subject of his Embassy, and all the Business he had there, was at an End, by the Death of the great *Moteczuma*, whose Friendship had detained him at *Mexico*; and that he would put his Design in execution without the least Delay, as soon as some Articles, which were necessary for his March, should be mutually agreed on." The Deputies gave Signs of being well satisfied; but these Overtures of Peace were made with perfidious Views.

This new Emperor had called a Council of his Ministers and Grandees, in which it was resolved, That, to avoid the Damage they received from the *Spanish* Arms, the Slaughter of their People, and the Ruin of their City, the best Method would be, to keep them close blocked up, in order to distress them by Famine, and to weaken them, that when they were dispirited and wanted Strength, they might attack them with more Advantage. Having invented this new Way of reducing an Enemy, till then utterly unknown amongst their Stratagems of War, it was resolved to make Overtures of Peace, in order to obtain the Suspension of Arms they desired; flattering themselves that they might be able to protract the Treaty till the small Reserve of Provisions, laid up in their Quarters, were consumed; to which Purpose all possible Care should be taken to hinder the Besieged from Relief; to block up, with Works, and Bodies of Men posted at a proper Distance, all the Ways by which they might attempt to make their Escape, and to break down the Bridge at the Entrance of the Causeway which led to the Road of *Vera Cruz*; thinking it no longer convenient to suffer them to depart the City, left at this Juncture, when the Provinces were ill satisfied with the present Government, they might excite the Malcontents to a Rebellion, or reinforce themselves by an Army of *Tlascalans*. Some of the Assembly called to mind several Persons of great Distinction Prisoners in the *Spanish* Quarters; reflecting upon what they must suffer, since of necessity they must perish with Hunger before the Calamity could affect the Enemy. But they were all so zealous for the public Cause that they unanimously voted, that those Prisoners would be happy, and discharged their Duty if they sacrificed their Lives for the Benefit of their Country; and it is not unlikely that they fared the worse on account of *Moteczuma's* three Sons, who were with them, and whose Deaths would be no way unwelcome to the Assembly, the Eldest being a hopeful young Prince, capable of wearing the Crown, highly esteemed by the People, and the only Person of whom the new Emperor had reason to be jealous. Their only Concern was for the chief of their idolatrous Priests, who was likewise in the same Prison, for he was universally revered as the second Person in the Empire; and to produce his Liberty they made use of a very notable Stroke of Policy.

The same Deputies returned that Evening and proposed, on the Part of their Sovereign, "That, in order to prevent any Misunderstandings which might retard the Treaty, it would be proper for the *Spaniards* to send some one of the *Mexican* Prisoners to the Emperor, well instructed on the Subject of the Capitulation." This Expedient seemed reasonable; and the Deputies no sooner found it admitted but they artfully let drop, by way of Advice, that none would be so proper as a certain ancient Priest, because he was an intelligent Person, able to remove all Difficulties which might be started; which specious and well managed Pretext sufficed for the obtaining what they proposed: Not that *Cortes* was ignorant of the Artifice of the Proposal, but, considering of what Importance it was, to found the Minds of those People, he esteemed it a small Matter to part with a Prisoner who was troublesome and detestable. Soon after the Priest was dismissed, fully instructed by the General in some Demands relating to the March; intending afterwards, in case he returned, to employ him further in other matters of greater Consequence. But it was to no Purpose to wait for his Return, it being soon evident

evident that there was no such Design. The Sentinels discovered that the Enemy besieged the Quarters at a greater Distance than they were wont, that they appeared more circumspect than ordinary, casting up Trenches, and other Works, to defend the Passage of the Canals, and that they had detached some bodies of Men to the Lake, who were breaking down the Bridges of the principal Causeway, and cutting off all Communication with the Road which leads to *Tlascala*; a Proceeding which fully discovered the Artifice of their Designs.

This Intelligence *Cortes* received with Concern; but, inured to overcome great Difficulties, he reassumed his natural Calmness, and, upon his first Reflections, which always pointed directly at the Remedy, he ordered a Bridge of Planks to be made, wherewith to cover the Opening of the Causeway, capable of bearing the Weight of the Artillery, and so contrived that it might, without much Difficulty, be carried by forty Men: And, without losing more Time than what was necessary for the completing of this Work, he assembled his Captains to consult with them, and to take their Opinion concerning the Retreat, whether it should be made by Day or by Night. His Commanders differed in Opinion, but the Majority of them inclined rather to the Night, and *Cortes* yielded, or at least seemed to yield, to them, because they were the Majority; but, as the greatest Minds are not exempt from some Weakness, so it is said that *Cortes* was in a great Measure influenced by the Advice of a private Man, whose Name was *Botello*, and who passed for a kind of Prophet; this Man had the Boldness to declare, that if they marched by Night, and without Delay, they should certainly get off safe, but, that either himself or his Brother should be killed. It was the Custom of *Cortes* to despise his Predictions, while he listened to him, and to treat them as ridiculous, though he suffered them to make an Impression upon him, in which, if Company could be any excuse, *Cortes* might have pleaded the Examples of others, as great Heroes as himself.

13. This Resolution of retiring being thus taken in the Morning, it was farther agreed, to execute it immediately, and to take the Opportunity of the succeeding Night. The very same Evening the General dispatched another *Mexican*, as his Ambassador, to the City, with Pretence of continuing the Treaty begun by the Priest, giving them to understand that all Things should be got ready for their Departure, within eight Days, at farthest. *Cortes*, in the mean while, was diligently disposing Matters to begin the March, the Shortness of the Time making every Moment precious. He distributed his Orders, and gave his Captains the necessary Instructions, providing against all Accidents which might happen upon the March, with all imaginable Precaution.

He formed his Van Guard of two hundred *Spanish* Soldiers, with the choicest of the *Tlascalans*, and about twenty Horse, under the Conduct of the Captains *Sandoval*, *Azebedo*, *Ordaz*, *Lugo* and *Tapia*; he gave the Command of the Rear Guard, with a greater Number both of Horse and Foot, to *Alverado*, *Juan Velasquez de Leon*, and other Captains, of those who came with *Narvaez*. In the main Body or Centre, he placed the Prisoners, Artillery, and Baggage, with the rest of his Army, resolving himself to be employed as Necessity should require, at the Head of one hundred choice Men, with the Captains *Davila*, *Olid*, and *Vasquez de Tapia*. Things being thus disposed, he made a short Speech to his Soldiers, laying before them the Difficulties of the Undertaking, upon which he enlarged a little the more, because it was a current Report among them, that the *Mexicans* never engaged by Night, and it was necessary to inspire them with Distrust, lest they should fall into over-great Security. He next caused all the Gold, Silver, and Jewels, which were in the Custody of *Christoval de Guzman*, Groom of his Chamber, to be brought into his Apartment, and out of it he separated the Fifth, belonging to the King, in those Things which were least bulky, of which he made a formal Delivery to those Officers, who had Care of the Accounts and Provisions of the Army, giving a Mare of his own and some wounded Horses for the Carriage thereof, in order to spare the

Indians, who might be in other Respects serviceable upon that Occasion.

The Remainder, according to the best Computation could be made, amounted to upwards of seven hundred thousand Pieces of Eight, all which Wealth he left with little or no Reluctancy, protesting publicly, "That it was no Time to embarrass themselves with it, and that it would be a Shame to employ those Hands so unworthily, which ought to be left free for the Defence of Life and Reputation." But finding the Soldiers not so well contented with this inestimable Loss, he added, as he was going away, "That they ought not to look upon their Retreat from thence as abandoning of that acquired Treasure, and their main Design, but as a necessary and indispensable Disposition, in order to return with a greater Force. After the same Manner as a Man draws back his Arm, in order to give the greater Blow." And withal, gave them to understand, that he should not think it a Crime in them to take away as much of that Wealth as they conveniently could; and though the greatest Part of them took Care to go light, there were some, and particularly those who came with *Narvaez*, who gave themselves up to pillage, loading their Shoulders beyond what they were well able to bear; a Permission, in which all the military Care and Circumspection of *Cortes* seemed to be asleep. It was very near Midnight when they marched out of their Quarters, without the Sentinels or Advance Guards finding any thing to give them the least Suspicion, and notwithstanding both the Wetness of the Weather and the Darkeness of the Night favoured their Intention of marching, and freed them from any Jealousy of the Enemies continuing Abroad in their Works; they so punctually observed Silence, and Circumspection, that Fear itself could not have wrought what Discipline did in those Soldiers; the portable Bridge went with the Van Guard, and those who had the Charge of it, laid it over the first Canal, but the Weight of the Horses and the Artillery made it stick so fast in the Stones, which supported it, that they could, by no Means, remove it to the other Canals, as they designed, nor had they indeed an Opportunity to do it, for before the Army had passed the first Breach of the Causeway, they were obliged to take to their Arms, with the greatest Precipitation, finding themselves assaulted on every Side, when they least of all suspected any such Matter.

The Address with which those Barbarians disposed their Enterprize was worthy Admiration. They observed with a still and silent Vigilance the Motions of the *Spaniards*. They assembled and distributed, without Noise, the Multitude of their Troops. They took Advantage of the Silence and Darkeness of the Night, to compass their Intention of drawing near without being discovered. They covered the whole Length of the Lake on each Side of the Causeway, with armed Canoes, beginning the Attack with so little Confusion, and such excellent Order, that the *Spaniards* heard their Shouts, and the warlike Sound of their Shells, almost at the same Time that they felt their Arrows. The whole Army had undoubtedly been destroyed, if the *Indians* had observed the same good Order in the Heat of the Engagement, as in the Beginning of the Attack; but to them Discipline was a Restraint, and when once they began to be enraged, Custom prevailed. They charged in Heaps where they perceived the Bulk of the Army, pressing upon each other after such a Manner that their Canoes were broke to Pieces by striking on the Causeway, and the Violence of those who were furiously endeavouring to advance, proved a new Danger to those who were foremost.

The *Spaniards* made terrible Destruction among the naked Multitude, but they had not Strength sufficient to hold out such incessant Exercise of their Swords and Spears, nor was it long before they found themselves likewise attacked in Front, and were obliged to turn their Faces, where the Danger grew most pressing; for the *Indians*, who were at a Distance, or who could not bear the Tedioussness of the Oars, flung themselves into the Water, and by the Help of their Arms and natural Agility, climbed up the Causeway, in such Numbers, that

that they were not able to make use of their Weapons ; and this new Assault proved a Relief to the *Spaniards*, for the *Mexicans* were easily routed, and all of them in a Manner being killed, their Bodies were sufficient to fill up the Canal, with no other Trouble than the flinging them in, where they served to supply the want of a Bridge, for the Army to pass over. After this Manner, some Writers relate it, though others say, that they luckily found a Beam of sufficient Breadth, which the Enemy had left whole in the second Bridge, on which the Soldiers passed over in Files, guiding the Horses through the Water by the Bridles.

14. *Cortes* passed with the first Body of his People, and, ordering *Juan de Xarmillo* to take Care to form the Men as fast as they arrived, he returned, without Delay, to the Causeway, with the Captains *Sandoval*, *Olid*, *Davila*, *de Morla* and *Dominguez*: He entered the Engagement, animating those who fought as well by his Presence as by his Example ; he reinforced his Troop, with as many Soldiers as he thought necessary to stop the Enemy on both Sides of the Causeway, and ordered the rest to file off from the Centre, causing the Artillery to be thrown into the Water, to free the Passage, and facilitate the March. *Cortes* at last retired, with all he could pick up of the Rear-Guard, and as he was penetrating through the second Space of the Causeway, with little or no Opposition, he was joined by *Alverado*, who owed his Life to little less than a Miracle of Resolution ; for having found himself closely beset on every Side, his Horse killed under him, and one of the Canals still before him in his way, he fixed his Lance or Spear in the Bottom of the Lake, and, raising his Body by Force, and supporting his Weight in the Air, by the Strength of his Arm cast himself on the other Side ; a surprising bold Action, which has since been looked upon as something surpassing Nature ; and *Alverado* himself, when he afterwards reflected upon the Distance, and the Success he had met with in the Attempt, easily became sensible of the Disproportion there was between the Fact itself, and the Feasibility of it.

The Army gained the firm Land by the first Appearance of the Day, and halted near *Tabuca*, not without some Jealousy of that Town, which was very populous, and in the Interest of the *Mexicans*, but they took Care not immediately to quit the Neighbourhood of the Lake, that they might give Time to those who could escape from the Battle to save themselves ; nor was that Precaution unnecessary, for several *Spaniards* and *Tlascalans* found the Advantage of that Stop, who, by their Valour and good Management, got off by swimming to the Shore, where they hid themselves in the Fields of Maize in the Morning. These gave the General an Account that the last Division of the Rear Guard was entirely cut off ; and *Cortes* having drawn up his Troops, found that he had lost about two hundred *Spaniards*, more than one thousand *Tlascalans*, forty-six Horses, and all the *Mexican* Prisoners, which last not being able to make themselves known in the Confusion and Obscurity of the Night, were treated as Enemies by those of their own Nation: The *Spaniards* were fatigued and discouraged, their Numbers diminished, and the Artillery all lost, expecting every Moment to be attacked, and the Place of their Retreat far off ; and among so many Motives of Concern, their Misfortune received a great Addition, by the Loss of some principal Captains, in which Number, those of the greatest Note were *Amador de Larez*, *Francisco de Morla*, and *Francisco de Salcedo*, who lost their Lives, all discharging their Duties with extraordinary Valour. *Juan Velasquez de Leon*, who retreated in the very last of the Rear Guard, likewise lost his Life, oppressed by Multitudes, after having endured incredible Fatigue, shewing an invincible Courage, even to the latest Gasps ; a Loss, which was generally lamented, for all Men respected him, as the second Person in the Army.

Cortes sat down upon a Stone to rest himself a little, while his Officers were putting the Troops in order, and disposing them, to prosecute their March. He found himself so oppressed with Concern, that he never more stood in Need of all his Magnanimity to temper his Grief.

He summoned all his Constancy to his Assistance ; and, at the same Time he gave his Orders, animated his People, and exerted himself with his wonted Alacrity. He enquired for the Astrologer, either in order to reprimand him for the Part he had in hastening the March, or to divert his Melancholy, by rallying him upon his Science ; but he was told, he was killed in the first Assault, off the Causeway ; that Wretch having met with the Fate common to those of his Profession. But, in the midst of those Misfortunes, it was no small Consolation to *Cortes*, and the whole Army, that *Donna Marina* and *Hieronimo de Aguilar* had found Means to escape from the Battle, in the terrible Confusion of that Night : They being the principal Instruments of the Conquest, and no less necessary than they had been before ; for without them, it was altogether impossible to engage the Friendship of the Nations they were going to seek ; nor was it less happy, that the *Mexicans* did not follow the Chace, for they gave Time for the *Spaniards* to breathe after their Fatigue, and to march in better Order, and with less Hasten, mounting the disabled Men on the Strongest of the Horses. This Stop of the *Mexicans* proceeded from an unexpected Accident, which may be attributed to the Providence of God. The Sons of *Moteczuma* who had attended on their Father, during his Continuance in the Quarters, together with all the *Mexican* Prisoners, who were last under Convoy, with the Baggage, were unfortunately killed by the Enemy ; and in the Morning, the *Indians* allured by the Spoils of the Dead, beheld pierced through with their own Arrows the Bodies of those unhappy Princes, whom they revered with that kind of Adoration they once did their deceased Father. They stood amazed, stupified, and confounded at the Sight, without daring to pronounce the Cause of their Astonishment. However, it was not long before the News was carried through the Troops, and they were all seized with Fear, and that kind of sudden Terror, which the Antients called Panic.

The *Mexican* Chiefs resolved to send an Account of this Accident to the new Emperor ; and he, who was forced to affect a Concern, out of Compliance with those whose Grief was unfeigned, commanded the Army to halt : Beginning the Ceremony of the Funeral with Outcries and Lamentations, which used to precede the Obsequies, whilst the Priest, followed by all who had remained in the City, came to receive their Royal Bodies, in order to conduct them to the burying Place of their Ancestors. It was to the Death of those Princes, that the *Spaniards* were indebted for the first Recovery from their Confusion, and that seasonable Respite ; but they lamented, notwithstanding, their untimely Fate, and particularly *Cortes*, who loved those Princes, respected in them the Memory of their Father, and had founded Part of his Hopes in the right of the Elder. *Cortes*, in the mean while, directed his March towards *Tlascala*, with Guides of that Nation, his Army continually in order of Battle, as not being without Suspicion of some Design in the Enemies Delay ; and upon such Occasions Diffidence is oftener attended with Success than too confident Security. It was not long before some Corps of armed *Indians* appeared, who followed the Army, without approaching within Shot. These were the Inhabitants of *Tabuca*, *Escapugaleo*, and *Tenecuga*, whom the *Mexicans* had summoned, to observe the Motions of the *Spaniards* on the March, till such Time as they had discharged themselves of their Duty towards the Sons of *Moteczuma*. *Cortes* extended his Front, where he posted his Fire-Arms and Cross-Bows, being obliged to engage in the open Field, without having any Place of Security to retire to.

As many of the *Indians*, as had Courage enough to venture near, died without Discouragement to the rest. The Horse sallied out to skirmish, and made a very great Slaughter ; But the Number of the Enemy continually increased, and their Arrows and Slings did considerable Damage ; the *Spaniards* were tired, and without Hopes of repulsing that enormous Multitude, and now their Valour began to slacken for want of Strength ; when *Cortes*, who behaved himself in the Battle like a Soldier, without forgetting the Duty of a General, observed a Rising-ground at no great

Distance from thence, which commanded the whole Plain; upon the Top of that Eminence was a Building which appeared like a Fortrefs, or at least the Exigence in which he found himself made him fancy it such: He resolved to possess himself of that Post, for the Advantage of its Situation, and, detaching a Party of Men to reconnoitre it, he moved with the Army to gain it, which he did not find could be effected without Difficulty, being obliged to face the Enemy all the while ascending the Hill, and to place some Companies of Harquebussiers, to defend the Avenues; but he happily compassed his Design, possessing himself of the Tower without Resistance, and in that found all the Convenience which at that time he could desire. It was a Temple; but the Priests and Servants who attended the Worship of that Place had quitted it, flying from the Neighbourhood of War, as People of a different Profession; the Court of this Temple was encompassed with a Wall after their Manner of building, which, together with the Towers wherewith it was flanked, rendered it tolerably defensible; and under the Shelter of those Works the *Spaniards* began to breathe.

The Enemy did not dare to scale the Hill, nor did they give any Signs of their intending an Assault, but they approached within Musket-shot, surrounded the Eminence on all Parts, and made some Advances to shoot their Arrows. In the mean time nothing was to be heard but barbarous Shouts and Menaces, which served only to discover their Weakness. They were kept off till Evening began to approach, at which time they all retired; whether to comply with the Observation of their Custom, of retiring with the Sun, or that they found themselves fatigued with having been in a manner continually engaged, is uncertain. *Cortes* disposed every thing in his Quarters with all the Care and Circumspection that a Post so threatened obliged him; he ordered the Guards and Sentinels to be sooner relieved than ordinary; that all might have their equal Share of Rest: They made some Fires, as well because of the Coldness of the Season, as to consume the Arrows of the *Mexicans*, to deprive the Enemies of their Ammunition. He gave some Refreshment to the People out of the Provisions found in the Temple, and what the *Indians* had saved with the Baggage; particular Care was taken of the Wounded, which was attended with no small Difficulty in a Place where all Necessaries were wanting.

Cortes attended in Person to all, but still without forgetting the Danger to which he lay exposed; and before he would retire to Repose he assembled his Officers, to consult with them what was to be done in this Juncture: He had already formed his Resolution, but he always declined positively deciding in such Matters; and he was a great Master in bringing People over to what was reasonable, without shewing his own Opinion, or making Use of his Authority: He proposed different Methods which might be taken, with the several Inconveniencies attending each of them; leaving them to judge which Expedient was most adviseable; but that which he judged best was, to continue the March so as to be out of Reach of the Enemy before they renewed the Attack: In support of which Advice he advanced many Reasons. He had scarce finished his Discourse when all the Captains agreed that no other Resolution was practicable; and it was determined to begin their March at Midnight. *Cortes* conformed to what was really his own Opinion, though he treated it as the Opinion of others, a Policy which he was accustomed to make Use of, in order to prevent Disputes when the Affair was urgent and admitted of no Delay, and which only those can practise who understand the Art of deciding by asking Advice, and of making a Proposal

in such a manner as to leave no room for Objection. As we have now conducted *Cortes* and his Army out of *Mexico*, and have seen with how much Prudence and Discretion he managed every thing when Fortune seemed to desert him, it seems but reasonable to put an End here to this Section, and to reserve the Restoration of his Fortunes and the Recovery of his Conquests, to the next.

15. But, that we may not proceed too hastily, let us pause a Moment, in order to consider the great Events we have been reading, and from thence form a true Judgment of the Merit of this illustrious Conqueror. We have in the former Section shewn, that with a meer handful of Men, he undertook to conquer one of the most extensive Empires the World ever saw; and to which no Power, now subsisting, can be esteemed equal. We have seen that this could not be called a rash or improvident Action, though it was, certainly, one of the boldest and most daring, that ever entered the Breast of Man. As a Person skilled in Mechanics, may, with good Sense and great Reason, undertake to perform, with an inconsiderable Force, what, to a Person unacquainted with that Science, would be esteemed beyond the Reach of Nature; so the Vigour of this Man's Understanding, his incomparable Sagacity, and wonderful Penetration, enabled him to foresee most of the Events that did fall out; and to contrive the proper Means for converting them to his Purpose, as his Fortitude, Presence of Mind, and happy Equality of Temper, put it always in his Power to exert his superior Abilities upon all Occasions, and set him above the reach of Accident or Danger, however great or unexpected. We have seen him in this Section, performing things almost incredible; and some of them also, particularly the seizing and imprisoning *Moteczuma*, not altogether justifiable. But this is so far from being a new Thing in a Hero, that I believe it may be fairly said, there is scarce a Character of this kind in ancient or modern History, in which more immoral and more outrageous Actions do not frequently occur.

One Thing more I shall remark before I proceed in this History, because it seems to do more Honour to the Courage and Conduct of *Cortes*, than any thing else; and in few Words it is this: The only Shadow of an Objection that can be raised against the Praises that have been bestowed upon this illustrious Person, arises from the Suggestion that he acted with regular and well disciplined Troops, against a barbarous and uncivilized People, unskilled in the Arts of Policy or War: But the Measures taken by the *Indians*, to drive him out of *Mexico*, and the Manner in which they acted in the Execution of those Measures, very plainly prove that this Suggestion was ill grounded. Since, from thence, we plainly see that they neither wanted Skill as Politicians, nor were destitute of Discipline as Soldiers. The Success likewise that they met with in the Conduct of their Scheme, plainly demonstrates, That if they had been to deal with a Man of less Abilities than *Cortes*, they would effectually have carried their Point, and have driven the *Spaniards*, not only out of *Mexico*, but out of all their Dominions, and have preserved their Empire, perhaps, till this time; for, had they once acquired a thorough Knowledge of the Artillery and Powder, they were certainly ingenious enough to have acquired the Use of them; which if they had done, there is no Reason to doubt that they would have kept their Ground, and have preserved, at least, the interior Part of their Country; though, by dint of their Naval Power, the *Spaniards* had made themselves Masters of their Coasts.

SECTION XIII.

The Conclusion of HERNAN CORTES's Expedition, including the History of the remaining Part of the War, to the Reduction of the City and Empire of Mexico; by which the Spaniards acquired their extensive Dominions on the Continent of North America.

1. *The Spaniards continue their Retreat under fresh Difficulties, while the Indians labour to intercept and bring them to a general Engagement.*
2. *The whole Force of the Mexican Empire defeated in the famous Battle of Otumba, and the imperial Standard taken.*
3. *The Precautions taken by Cortes to improve this Victory, and to prevent the bad Effects of a Mutiny that had like to have broken out among his People.*
4. *The Mexicans send an Embassy to Tlascala, in hopes of gaining that Republic; in which they are disappointed by the Interposition of such Lords as were Friends to the Spaniards.*
5. *The War renewed with great Success, and a new Colony founded by the Spaniards on the Frontiers.*
6. *The Measures taken by Cortes for the Prosecution of the War, the bad Disposition of the Army, and the Difficulties which he found in keeping the Troops from running into a general Mutiny.*
7. *He receives, very unexpectedly, very considerable Succours from Spain, which encourages him to think of recovering Mexico.*
8. *He is so fortunate as to obtain still larger Reinforcements, but is obliged to discharge a Part of his Army, on Account of their seditious Behaviour.*
9. *While Preparations were making for a new Expedition, Cortes resolves to send over fresh Agents to Spain, in order to procure a Commission from the Emperor.*
10. *An Account of what happened at Court upon the former Application, by the Father of Cortes and his first Agents, and of the timely Arrival of the second.*
11. *The History of this Matter farther continued, to the obtaining a Declaration of Council in favour of Cortes, against Velasquez.*
12. *An Account of his memorable Expedition into the Province of Tezcuco, which submits without a Stroke.*
13. *The War with Mexico renewed by Cortes, with great Danger to his Army and to himself.*
14. *Upon a Foresight of the Difficulties that might attend the War, he makes Proposals of Peace to the Mexican Emperor, which are haughtily rejected.*
15. *The War breaks out afresh, and Cortes gains several Victories over the Mexicans.*
16. *The Indians are defeated in a general Engagement, in which, however, Cortes run a great Hazard of being killed or taken.*
17. *A Conspiracy formed among the Spaniards to murder him, and a Sedition amongst the Allies.*
18. *Cortes ventures to attack three Causeways of the City of Mexico at once, and at the same Time carries on the War upon the Lake.*
19. *The Progress of the War, and the unexpected Difficulties the Spaniards met with therein.*
20. *Cortes makes a general Attack, in which, after an obstinate Engagement, he is defeated.*
21. *The Spanish Prisoners are sacrificed to the Indian Idols, and all their Affairs surprizingly decline.*
22. *Cortes renews the Attack, and forces the Indian Emperor to retire to the farthest Part of the City.*
23. *The Emperor, Guatimozin, successor to Motezuma, is taken Prisoner, after which the City immediately surrenders.*
24. *A succinct Account of the Reduction of the whole Mexican Empire, and of the Rewards bestowed upon Hernan Cortes.*
25. *Observations and Remarks upon this and some of the foregoing Sections.*

1. **A** Little before the appointed Hour, the Troops were assembled: The Order to march, and the Reason for so doing, was given at the same time, upon which they prepared for setting out, applauding the Resolution. Cortes ordered to conceal their Motion, that they should leave all their Fires burning, and, giving to Diego de Ordaz the Charge of the Van-Guard, with some intelligent Guides, he placed his chief Strength in the Rear, where he remained, that he might be the nearer Danger, and be a Security to those who passed before. They set forward with all necessary Caution; and, the Guides being ordered to keep at some convenient Distance from the high Road till the Morning, they marched, little more than half a League, without the Silence of the Night being interrupted by the least Noise: But, upon their entering into a broken and hilly Ground, the Scouts fell into an Ambush; divers Troops of Indians came pouring down from the Eminences, and rushing from among the Bushes, without Order, attacked the Flank; and though not so numerous as to oblige the Army to halt, yet the Spaniards were obliged to beat off such of the Enemy as ventured nearest, to break through several Ambuscades, and to dispute many narrow Passes.

The Spaniards were apprehensive, at first, that it was the whole Army which they had left on the other Side of the Temple, and some report this Action as a Pursuit made by those Mexicans; but they were the Militia of the neighbouring Towns; who, by Orders received from Court, endeavoured to disturb the March, posting themselves in the broken Parts of the Road. With this kind of Opposition the Army advanced two Leagues, and before Day halted in another Temple, situate upon an Eminence, not altogether so high as the former, but of sufficient Height to view the Country round about; that by the Number of Enemies they should discover, they

might judge what Measures were fittest to be taken for their Security. The Indian Peasants continued their Shouts, following at a Distance, till, having advanced about two Leagues farther, they discovered a Village advantageously situated, and as they believed well peopled. Cortes pitched upon this Place for his Quarters, and gave Orders for his Troops to possess themselves of it; and they found it wholly forsaken by the Inhabitants, together with some Provisions, which they could not carry off; and which, at that Juncture, were very welcome. Here the Army stayed a Day or two; the Condition of the Wounded being such, that they could not proceed. They made two Marches more, through a Country more rocky and barren, always out of the great Road, and somewhat doubtful whether their Guides were right. They had no Cover in the Night, nor did the Persecution of those Indians cease, who continually kept in Sight; or, perhaps, they might be others who came out after the first, in order to follow them through their respective Districts. But the greatest of all Inconveniencies was, they suffered Hunger and Thirst to that Degree, that they wanted little of being quite dispirited. The Officers and Soldiers, however, animating each other to move on.

They were forced to have recourse to the Herbs and Roots of the Field for Sustenance, without examining whether they were venomous; though such as were the most prudent governed themselves by the Knowledge and Example of the Tlascalans. One of the wounded Horses died, and the Want they had of that Creature's Service in the Army, was forgot with Joy; for it was divided as a Regale among those who were in the greatest Extremity, who celebrated the Feast by inviting their best Friends to partake of that dainty Food: A relishing Banquet at that time, at which all Scruples of Stomach gave way to Necessity. The last of these two Marches terminated

Ancient MEXICO.

1 The Great Square. 2 The Temple. 3 Village of Tlacotalpa. 4 Defence of the Royal Palace.
5, 6 The Pleasure House & Garden. 7 A Wharf to supply the City. 8 Village of Texcoco or Texcoco. 9 The Great Lake.

terminated in a little Village, whose Inhabitants, without abandoning their Dwellings like the others, gave them free Entrance, neither were they wanting in their Assistance to them, with a seeming Cheerfulness in every thing they were ordered; which unexpected Entertainment was a new Stratagem of the *Mexicans*, that their Enemies might come less prepared to the Snare which they had provided for them.

These People freely shewed their Stores of Provision, and, from other neighbouring Villages, procured what was sufficient to make the fatigued *Spaniards* forget their past Sufferings. Early in the Morning the Army was disposed to ascend the Mountain, which on the other Side declined into the Valley of *Otumba*, through which they must of Necessity pass to take the Road to *Tlascala*. They observed some Alteration in the *Indians* who followed their March; for their Shouts and Scoffs express rather Satisfaction than Indignation; and Donna *Marina* took notice, that they frequently said go on Tyrants, go on, for you will quickly arrive at the Place where you will all perish. These Expressions gave them Occasion to reflect; some began to doubt that these *Indians*, confiding in the *Tlascalans*, rejoiced at the Danger to which the *Spaniards* were marching, as having received some Notice that there had happened a Change in the Fidelity of that Nation. But *Cortes*, and those of better Judgment and Penetration, looked upon this Novelty as a Token of some Ambush, that was nearer than *Tlascala*; for there wanted not Examples of the Simplicity and Easiness with which the *Indians* were wont to publish the very thing which they endeavoured to conceal: An Error not peculiar to this People, and though a certain Indication of Levity, no direct Mark of Barbarism.

2. They continued their March disposed for fresh Action; when the advanced Guard, having reached the Mountain Top, came with an Account that the Enemy had possessed themselves of all the Valley, barring up the Passage to the Road whither they were directing their Course with a formidable Multitude. It was the same Body of *Mexicans* which they had left at the first Temple, reinforced with new Troops, who had discovered, in the Morning, the sudden Retreat of the *Spaniards*; and, notwithstanding they did not doubt but that they should be able to overtake them, yet they feared, by the Experience of the Night, that it would not be possible to destroy them before they reached the *Tlascalan* Territories, if they went on securing Mountains; for which Reason they sent Dispatches to *Mexico* for Reinforcements, that an Affair of so much Importance might not miscarry for want of necessary Force, which Proposal was so well received in the City, that all the Nobility instantly set out, followed by the rest of the Troops which they had assembled, to join the Army, and in the Space of three or four Days they divided themselves into different Roads, marching under Shelter of the Mountains, with such Expedition, that they got before the *Spaniards*, and filled the whole Valley of *Otumba*, which is a very spacious Plain, where they might undiscovered wait for their Enemies, and attack them without embarrassing each other for want of Room.

The Captain General of the Empire was distinguished in the Centre of the Multitude, borne up upon Mens Shoulders in a Litter sumptuously adorned, in such a Manner, that being a Witness of every one's Behaviour, his Orders might be punctually executed. Upon this Chair, or Litter, stood erect the Royal Standard of *Mexico*, which was not intrusted into any other Hand but his, and could only be brought into the Field in Cases of the greatest Exigence. This Standard was a Net of Massy Gold hanging on a Pike, and crowned with a Plume of Feathers of various Colours; both the one and the other mysteriously denoting a Superiority. The *Spanish* Army perceiving the fresh Danger for which they were to prepare, *Cortes* began to examine the Countenances of his People, with that natural Fire in his Look, which influenced their Hearts far better than Words; and finding them inspired with a generous Resentment, he thus addressed them: "Our Case is now such, that we must either die or conquer: The Cause of our

"God fights for us;" nor had he time to say any more, for the Soldiers themselves interrupted, crying out for the Word of Command; and he advanced with his Front extended, and united the Body of the Army with the Wings of the Horse, who were appointed to defend the Flanks, and secure the Rear. The Fire-arms and Cross-Bows made their first Discharge so opportunely, that the Enemy had scarce time to make use of their missive Weapons. The Swords and Lances did still greater damage; the Horse taking care, at the same time, to break, and to put to Flight those Troops which endeavoured to inclose the *Spanish* Army.

They gained some Ground by the first Charge. The *Spaniards* gave no Stroke without a Wound, nor any Wound which needed a second Blow. The *Tlascalans* threw themselves into the thickest of the Battle, with an infinite Thirst after *Mexican* Blood, and all had such Command of their Passions, that they killed first those who appeared to be Leaders. But the *Mexicans* fought with great Obstinacy, advancing, though not in the best Order, yet, with surprizing Resolution, to supply the Places of those who fell; and the *Spaniards* were fatigued with the Slaughter, for the Battle was continually renewing with fresh Men. Their whole Army seemed to give way whenever the Cavalry charged them, or the Fire-Arms advanced; but they returned with new Vigour to recover their lost Ground, the Multitude moving so from Place to Place, that the whole Field appeared like a Sea of Men, the perpetual Flux and Reflux seeming to justify that Comparison.

Cortes fought on Horseback, carrying Death and Terror wheresoever he came. But the obstinate Resistance of the *Indians* gave him no small Concern; for it was not to be hoped, but that the Strength of his Men must abate, with such unintermitting Action; and reflecting upon the Measures he might take, to advantage himself, or to make his way to the Road, he was relieved by one of those Observations he was accustomed to lay up in his Mind. He remembered to have heard among the *Mexicans*, that the whole Fortune of their Battle depended upon the Standard Royal; the gaining or losing of which decided the Fortune of the Day, on either Side; and being not insensible into what Confusion the Enemy was always put by the Charge of the Cavalry, he took a Resolution to make an Effort, for the gaining the Imperial Standard. To this Effect, he called for the Captains *Sandoval*, *Alverado*, *Olid*, and *Davila*, to follow and secure his Rear, together with the rest of the Horse which generally attended him; and having encouraged them with a short Harangue, and given the necessary Instructions how they were to proceed, he advanced, and attacked on that Part which appeared weakest, and least distant from the Centre.

The *Indians* gave back, dreading the Shock of the Cavalry, and before they could recover themselves, the *Spaniards* threw themselves upon the disordered Multitude, treading under Foot whole Battallions, and, without much Opposition, arrived at the Place where the Imperial Standard was defended by the Nobles who were appointed for its Guard; and while the Captains were dispersing that numerous Guard, *Cortes* closed with the Captain General of the *Mexicans*, who at the first Stroke of his Lance fell, being dangerously wounded, on the other Side of his Litter: He was soon forsaken by his Guard, and left alone; when *Juan de Salamãca*, a private Gentleman, leaped from his Horse, and put an End to the little Life he had left; and seizing the Standard, gave it into the Hands of *Cortes*. This *Salamãca* was a Person of some Distinction in the Army; and, for having done his General such a Piece of Service, the Emperor conferred some Favours upon him, giving him for the Crest of his Arms the Plume of Feathers which crowned the *Mexican* Standard.

The *Mexicans* no sooner saw their Imperial Standard in the Power of the *Spaniards*, than they struck all the rest of their Colours, and betook themselves to a precipitate Flight, seeking Shelter in the Woods and Fields of Maize: The neighbouring Mountains were covered with the terrified Remnants of the Army, and in a few Moments the Field of Battle remained to the *Spaniards*, who

who pursued their Victory with all the Rigour of War, and made a terrible Destruction of the Fugitives; it was so absolutely necessary to ruin and disperse them, that they might not return. On the Side of the *Spaniards* some were wounded, of which Number two or three died at *Tlascala*; and *Cortes*, himself, received a Blow on his Head, with a Stone, so violent, that it battered his Head-Piece, and made a small Fracture in his Skull. The Spoil was given to the Soldiers, which was very considerable, for the *Mexicans* came with costly Jewels and Ornaments, as to triumph. The *Spanish* Authors say, that twenty thousand *Indians* lost their Lives in this Battle. A round Computation indeed! and perhaps, what is not uncommon in such Cases, a certain Number put for an uncertain.

3. The same Spirit which *Cortes* shewed in his utmost Difficulties, appeared in the Precautions taken by him in making the most of this Victory, and taking an immediate Care for securing such a Post, as might give them time to concert what was to be done next. There appeared on the Top of a Mountain, at some Distance, a large old *Indian* Palace, which he gained. There they staid that Night, and as soon as it was Day advanced a considerable way through the Plain; then going up a small Hill they found a Spring of good Water, where they halted and refreshed themselves, for till then they had met with very little, and that not good; they came to *Gualipa*, a Town of two thousand Houses, belonging to the Republic of *Tlascala*: The People of that Place went out to receive them, shewing extraordinary Compassion for their Sufferings; the Women wept at the Sight of them, and they were supplied with Necessaries, in a most affectionate Manner.

Cortes blessed God he found such Entertainment among Infidels. Those People asked why they would not believe them, when they always told them they should not trust the *Mexicans*, who were treacherous. That Day, in the Afternoon, came to them *Maxiscatzin*, and another Lord, who was Governor of *Guaxacingo*, and, when christened, called Don *John Xuares*, and many others, as did *Xicotencatl*; but this last only in a Compliment. They brought much Provision. *Cortes* received them with Joy; but they were amazed to see him and so many others wounded. *Maxiscatzin*, in that Astonishment, delivered himself very elegantly, saying, that since his Valour was sufficient to withstand all the *Mexican* Empire, there had been some Treachery in the Case, comforting him, and bidding him be easy; for, since he was alive, he might revenge that Injury, being among the *Tlascalans*, his sincere Friends, who he promised should assist him with all their Power; all the other Lords gave him the same Assurances, and *Cortes* returning Thanks in a most courteous Manner, producing the *Mexican* General's Standard and Arms, delivered the same to him, and gave the rest much of the Booty taken in the Battle of *Otumba*.

The other Commanders and Soldiers, following the same Example of *Cortes*, distributed abundance of the Booty they had gained in that Fight, which was very acceptable, as being *Mexican* Trophies. Here *Cortes* was informed, that about twelve Days before, *John Juste* and *Morla*, with about thirty *Spaniards*, had set out from *Gualipa*, carrying *Cortes*'s Equipage to *Mexico*; and that tho' they fought well, they were all cut off by the *Mexican* Garrisons, together with one of *Maxiscatzin*'s Sons, who he sent along with them. This was afterwards verified, for they found cut on a Tree. *This way passed the unfortunate John Juste, and his unhappy Companions, being reduced to such Want of Food, that they gave a Wedge of Gold, weighing eight hundred Pieces of Eight, for a few little Cakes of Italian Wheat.* Thence the *Spanish* Army proceeded to *Tlascala*, and the Country being populous, the Roads were crowded with the Inhabitants coming out to see them. The Magistrates met *Cortes*, with above two hundred thousand Men in good Order. The Women and Children went foremost, and wept as soon as they saw the *Spaniards*, cursing the treacherous *Mexicans*; next came the Citizens, and received them in a most courteous Manner. The Lords of the four Quarters

took *Cortes* into the Middle of them; there was much Music at the Entrance into the City; he was lodged in *Maxiscatzin*'s House, who made him a great Entertainment, and in this Court there was much dancing and rejoicing.

At *Tlascala* *Cortes* found Capt. *Paez*, whom he had left there, with eighty *Spaniards*, and was glad to hear that he had been well used; he assured him, that *Maxiscatzin* was his real Friend, and that *Xicotencatl* hated him. When he understood that *Maxiscatzin* had offered *Paez* an hundred thousand Men to march with the *Spaniards*, to his Relief, and that *Paez* excused himself, alledging, that he had observed his Orders, considering how much Service the Succour might have done him, he gave him some hard Words, calling him Coward; for that brave Commanders, in such Perils, are not to adhere literally to Orders, but to act as Exigencies may require. *Hojeda* was the Person that entertained the greatest Friendship with the *Tlascalans*, and brought Provisions from the Country Towns; some reproached him, saying, why come you hither to devour our Substance; go your way, you come in a wretched Condition from *Mexico*, being turned out like cowardly Women. He gave them good Words; but *Cortes* was much concerned at it, being informed that *Xicotencatl* was the Occasion of it: He acquainted *Maxiscatzin*, who said, that whilst he lived no Man should presume to affront him; however he kept himself upon his Guard.

A Numbness seized his Head, occasioned by his Wound, and, it being followed by a violent Fever, he was in much Danger; but it pleased God, as he was well taken care of, he recovered. Whilst his Distemper held him, those few *Spaniards* he had, hearing some suspicious Words from the *Indians*, muttered that they would return to the Sea Coast, alledging that *Cortes*'s Contrivances to return to *Mexico* would be their Ruin, and that they were now fattening to be sacrificed and eaten, as the *Indians* designed; few being of a contrary Opinion, the greater Number, with a Notary, forcibly required *Cortes* to go away to *Vera Cruz*, to avoid the Danger that threatened. *Cortes* answered with much Gravity and Calmness: In the first place, he extolled their past Actions, put them in mind of the Victories they had obtained, and the Valour of the *Spanish* Nation, blamed their Faint-heartedness, for that having made the World ring with the Fame of their Exploits they should shew Fear, which would turn to their Shame; he promised them much Wealth and Prosperity; dispelled the Fears they had conceived of the *Tlascalans*; said, he would try their Friendship by making War on the *Tepeacans*, who had lately slain several *Spaniards*; he put them in mind, that all he had said to them had proved true; that he had performed all he promised, and then, in case the Affair of *Tepeaca* did not succeed, he would find some Expedient for them to return with Honour to *Vera Cruz*.

This appeased them for the present, but he had several Consultations with the chief Commanders, as to the Confidence that was due to the *Tlascalans*: Some affirmed, that there was no trusting of them, so that if they took a small Number of them the War would not be carried on; and if they had many, it was dangerous: Others added, that the Enmity between these two Nations was well known, as were the Advantages the *Tlascalans* reaped by the War with the *Culus*; for which Reason their Fidelity was not to be called in question. *Cortes*, having maturely weighed this Affair, and made some Enquiry into the Matter, adhered to this Advice, which made him believe that his good Fortune would not forsake him in this Enterprize.

4. The *Mexicans* having offered up their Sacrifices, returned Thanks to their Gods, repaired their City, and, understanding how well the *Spaniards* had been received in *Tlascala*, resolved to send six Men of Note Embassadors thither with a Present of Cloth, Feather-works, and Salt, which were the Things those People wanted most. Notice being given of their coming, they were met as usual, and the Council being assembled to hear them, the Eldest delivered his Present and said, That as they were

were Relations, spoke the same Language, and observed the same Religion, it would be convenient to put an End to the long Wars that had been between them, and that they should partake of those Things wherein the *Mexican* Empire abounded. And they wanted besides other Advantages that would accrue by Peace; and therefore in order to bring that to pass it was proper they should sacrifice those few Christians, with whom their Gods were offended for many Reasons, and who would insult them in the same Manner if they did not look to themselves. The Present was received, and they said they would consider of it. When the Embassadors were withdrawn, their Proposals were debated: *Xicotencatl* and others spoke for the Confederacy; *Maxiscatzin*, defending the *Spaniards*, advised them to be Friends with them, alledging the Fidelity and Honour due to Guests.

He extolled their Valour, assuring them of the same Advantages the *Mexicans* proposed, and particularly insisted, that the Friendship of the *Spaniards* ought not to be slighted, as it might contribute to enlarge the Dominions of their Commonwealth, which they could not expect from the *Mexicans*, whose Ambition and Perfidiousness was well known; besides, that if once the *Spaniards* were expelled, no question was to be made but that they would be greater Enemies than before, though it were only for having entertained them in *Tlascala*. *Xicotencatl* still obstinately insisted, that the *Spaniards* were ill Men; and both Sides reflecting on each other, it came to such a Height, that *Maxiscatzin* gave *Xicotencatl* a Push from him, and threw him down some Steps, telling him he was a base Man, and a Traitor to his Country. The *Mexicans* returned home without any other Answer, and reported what had happened. *Cortes* being immediately informed of all these Particulars returned Thanks to *Maxiscatzin*, promising he would endeavour to make good all he had in his Name promised to the Republic. *Xicotencatl*, being satisfied that *Cortes* would be acquainted with what had been done in the Council, went to him and said, he had tried by all Means to acquire Honour, by opposing him; but that since the Gods had made him invincible, he begged he would take him into his Favour, offering his Person, and desiring he would make Trial of him in carrying on the War against *Tepeaca*, *Chulula* and *Guaxacingo*, since they had offended him in breaking the Friendship and Faith contracted with him, going over to the *Culus*, and killing the *Spaniards* that were marching through that Country; besides, that to make the War on *Mexico*, as he intended, it was proper first to take off their Confederates, and begin with *Tepeaca*.

Cortes embraced him, returning Thanks for his good Will, and promising to take such Measures for the Service of the Republic, that it should be revenged on all its Enemies. Fifty Days were now passed since *Cortes*'s Arrival at *Tlascala*, after his Return from *Mexico*, and *Xicotencatl* pressed him daily, saying the Men were ready whensoever he should think fit. Though *Cortes* had more need to have attended his Cure than to enter on fresh Fatigues so soon; yet, for fear of losing so favourable an Opportunity, understanding that the *Tepeacans*, and the *Mexican* Forces with them, had secured all the Passes that led to the Sea, he sent Messengers to the *Tepeacans*, and to the other Towns, desiring them to quit the Friendship of the *Mexicans*, and to embrace that of the *Tlascalans*, and he would forgive them the Injury done him by breaking their Faith, which they had engaged to him when he marched to *Tlascala*. They made little Account of his Offer, but resolved to adhere to the *Mexicans*. *Cortes* signified the same to the Council of *Tlascala*, and they, being Enemies to the *Tepeacans*, naturally inclined to War, desirous to please *Cortes*, who had gained all the prime Men, having sent them many Presents from *Mexico*, and done them much Honour; and believing that the War would be very advantageous to the Republic, offered to supply him with fifty thousand Soldiers.

5. As *Cortes* found all things succeeded to his Mind, and that it was not only just, but necessary to chastise the Injury done by the *Tepeacans*, he began to prepare for his March. And here he first thought to send the King an Account of all that had happened; because he had not done it

since he set out from *Villa Rica* for *Mexico*: He told his Majesty all his Successes, as also his Misfortune at *Mexico*, with all the Particulars relating to it; shewing all his Disappointments to have been occasioned by *Pamphilo de Narvaez*, who could not be brought to an Accommodation, for which Reason he kept him Prisoner at *Vera Cruz*; he likewise demanded Men and Horses, promised to subdue that vast Empire with little Assistance, and without Expence to the Crown; for he offered to pay for the Horses, Arms, and Ammunition that should be sent to him: He desired some Reward might be bestowed on *Jerom de Aguilar*, the Interpreter, who did extraordinary Service; and prepared to send *Mendoza* with this Account, and the Value of thirty thousand Pieces of Eight in Gold: The Alcaldes and Regidores of *Villa Rica*, who were always with *Cortes*, wrote at the same time. *Tepeaca* being but eight Leagues from *Tlascala*, the Inhabitants knew what was coming upon them, and on their Side prepared for War; but we must here mention what occasioned this War; viz. the Affair of the *Spaniards* those People destroyed.

The News of the great Wealth of *New Spain* being spread throughout the Islands, several *Spaniards* transported themselves to *Vera Cruz*; where, about fifty or sixty of them, joining together, set out for *Mexico*, by the Way of *Tepeaca*, at the Time that *Cortes* was retired to *Tlascala*; and all the Country having been informed that the War was declared against the *Spaniards* at *Mexico*, the *Tepeacans* resolved to kill them and their Captain, whose Name was *Corenado*, which they actually put in Execution; and the like was done in other Parts, concluding that the *Spaniards*, at *Mexico*, would be all destroyed, as the *Mexicans* every where reported. *Cortes* marched out of *Tlascala* with his *Spaniards*, and six thousand Indian Archers, till such time as the fifty thousand *Tlascalans* were raised, to be under the Command of *Xicotencatl*, assisted by *Alonso de Hojeda*, and *John Marquez*, who spoke the Language tolerably; he advanced three Leagues, and took up his Quarters at *Cinpancingo*, whither so great a Multitude resorted from the Lordships of *Guaxacingo* and *Chulula*, that it was not doubted but that they amounted to an hundred and fifty thousand fighting Men.

The People of *Zacatapeque*, and of *Acazingo*, having made it their Choice to join in this War with the Inhabitants of *Tepeaca* against the *Spaniards*; they, as lying nearest *Tlascala*, were first entirely destroyed; and then *Tepeaca* was reduced to such Extremities, that the Inhabitants submitted, and took an Oath to be good Subjects to the King of *Spain*. This War happily over, *Cortes* divided the Profits between his own Forces and the Republic of *Tlascala*, after deducting the Fifth for the King. The Republic of *Tlascala* was highly pleased to see *Cortes* share the Booty so punctually with them, and besides, their City was full of Slaves, Salt, Cotton, Feather-works, Jewels, and other things they had Occasion for. The City of *Tepeaca* being perfectly reduced, *Marina* understood that the *Mexicans* were preparing to fall upon the *Spaniards* when they least suspected it. *Cortes* seized some that were nearest about him, who, he was informed, knew of it; and, having examined into the Affair, punished them severely. The *Mexicans* having Advice that *Cortes* was marched to make War on *Tepeaca*, took care to send Armies to several Parts to secure their Frontiers, persuaded their Allies to stand by them, and made all possible Preparations, not only to defend themselves, for that they looked upon as a Matter of no Difficulty, but to offend the *Spaniards*; and like a subtle People, sent the Heads of Horses, and other things they had taken, to the several Provinces they suspected might be inclinable to forsake their Interest, giving out that *Cortes* was dead, and encouraging the People with the Hopes, that having no Commander, they would easily make an End of all the rest. This Notion so far prevailed with the *Indians*, who are naturally fickle, that most of them revolted, though they had sworn Obedience to the King of *Spain*; and wherever any *Spaniards* were they slaughtered them.

When all things were settled at *Tepeaca*, and in the

neighbouring Parts, *Cortes* sent some Commanders to reduce those that still held out; enjoining them to try all gentle and fair Means; and gave out that he would return to *Tlascal*. The chief Men of *Tepeaca* entreated him, that since they were become the King of *Spain's* Subjects, pursuant to the Oath they had taken, he would not forsake them; but, in case he could not avoid going, he would leave some *Spaniards* there, or else they should be destroyed: *Cortes* answered, that he would endeavour to satisfy them, and that they need not fear the *Mexicans*, for he hoped in God they should soon see them quite disabled; and thinking the Situation of that City very convenient to secure the Way to *Villa Rica*, as commanding the Passes through which the *Spaniards* came into these Parts; and that the Province was in the Midst of the Country, near to the Republic of *Tlascal*, *Guaxacingo*, and *Chulula*, on which it bordered; and on another Side upon the *Culuas*, who, being so close by, might occasion new Commotions there: Upon all these Considerations, and to please the *Tepeacans*, who had desired a Garrison of him, he sent for the Alcaldes and Regidores of the Council, who were with him, and told them it was convenient to settle a Colony there, for the Reasons aforesaid; who approving of it, he appointed the proper Officers, and *Ferom de Aguilar* to be Regidore, being always ready to requite those that deserved it. He called this Place *Segura de la Frontera*, i. e. the Security of the Frontier, because founded upon the aforesaid Motives, and because it lay on the Frontiers of *Culua*.

6. It has been before observed, that for the better carrying on the War against the *Spaniards*, the *Mexicans* had thought fit to elect *Guatimozin* for their Emperor, the Nephew and Son-in-law to *Moteczuma*: He was a young Man about twenty-five Years old, of so much Spirit and Vigilance, that, contrary to the Manner of his Predecessor, he entirely gave himself up to the Care of the Public; being desirous, immediately, to shew the Advantages of Government when placed in proper Hands: He knew what the *Spaniards* were doing in the Province of *Tepeaca*, and, foreseeing the Designs they might form, when assisted by the united Forces of the *Tlascalans*, and other neighbouring Provinces; he began to have those reasonable Apprehensions, which are necessary to prudent Measures.

Cortes received an Account that his Army was upon the Frontiers, which was confirmed by three or four Nobles, sent by the Cazique of *Guacachula*, a populous City, situate on the Road to *Mexico*, and a Place which the new Emperor looked on as one of the Ramparts of his Empire. They came to request Succour against the *Mexicans*, complaining of their Violences, and offering to take up Arms against them, so soon as the *Spaniards* should come within Sight of their Town. They made the Undertaking appear easy and just; saying, that their Cazique ought to assist as a Vassal of the King of *Spain*. *Cortes* asked them what Force the Enemy had in those Parts? They told him twenty thousand in the District of their City, and ten thousand more in another City, called *Yzucan*, four Leagues from them; but that, in *Guacachula*, and its Dependencies, they could raise a very considerable Number of Men, who would be glad of an Opportunity to take up Arms. *Cortes* examined them very carefully, that he might discover the Intentions of their Cazique; and they gave so good an Account of themselves, as fully convinced him of their Sincerity; and, though he should have had some remaining Suspicion, he would, at that time, have dissembled it; for, in case the Treaty could not have been depended on, it was nevertheless necessary to drive away the Enemy, and subject the frontier Towns before the *Mexicans* came with a greater Force to defend them.

Cortes applied himself so earnestly to this Enterprize, that the very same Day he formed an Army of three hundred *Spaniards*, twelve or thirteen Horse, and above thirty thousand *Tlascalans*, under the Command of *Christopher de Olid*; and after he had made this Disposition, he put his Design in Execution with so much Expedition, that the Army marched next Morning. *Olid* car-

ried the Envoys, sent from *Guacachula*, with him, and had Orders to advance with Circumspection, till he came near the City; and in case he suspected any Treachery, to engage the *Mexicans* in some advantageous Post, and break them before they attacked the Town. They all marched on very cheerfully, till, at six Leagues from *Tepeaca*, and almost at the same Distance from *Guacachula*, they found it rumoured among the Peasants of the Country, but without any good Foundation, that the Emperor of *Mexico* was on the March with his whole Force, to relieve those Cities.

The Soldiers of *Narvaez* believed the Report, and so multiplied the Enemies Forces in their Imagination, that, without hearkening to Reason, or obeying Orders, they insolently protested that they would march no farther: So that *Christopher de Olid* grew angry, and in a contemptuous Manner bid them return; threatening them with the Displeasure of *Cortes*, since they were not touched with the Dishonour of their Retreat. But as he was preparing to prosecute his March without them, there happened a new Accident, which, if it did not altogether shake his Constancy, yet retarded the Success of the Expedition. They saw several Bodies of Men descending from the neighbouring Mountains, and advancing with more than ordinary Diligence; and *Christopher de Olid*, believing the *Mexicans* were coming to attack him, drew up his Men in order, in which he acted rightly; for too much Care never did hurt in an Army. But some Horse, whom he had sent before to gain Intelligence, returned with an Account, that it was the Cazique of *Guaxacingo*, with his confederate Caziques, who were come to assist the *Spaniards* in their War against the *Mexicans*, who had ravaged their Frontiers, and threatened their Dominions. Upon this, *Olid* ordered their Troops to halt, and the Caziques to come before him, which was presently done.

But that which should have given them all entire Satisfaction, occasioned a second Uneasiness in the Soldiers. It began amongst the *Tlascalans*, and next infected the *Spaniards*; for they both declared, that those People were not to be trusted; and that they were sent by the *Mexicans* to serve them by falling on the *Spaniards* during the Engagement. *Christopher de Olid* heard them, and, without enquiring sufficiently into the Matter, entered into their Suspicions presently, seized those Caziques, and sent them away to *Tepeaca*, for *Cortes* to determine concerning them. An inconsiderate Action, by which he ran the risque of raising a Disturbance between his own People and those who really came as his Friends. The Prisoners were brought before *Cortes*, complaining with a good deal of Reason of *Olid*. *Cortes* heard them with great Kindness, and, ordering their Irons to be taken off, endeavoured to regain their good Opinion. But upon further Consideration he found it would be necessary to carry on this Enterprize in Person; the Distrust which his *Indian* Allies had of each other, and the Uneasiness among the *Spaniards*, seeming to threaten some fatal Event. He presently set out, and in a few Hours came up with the Army: There every body was pleased with his Presence, Things looked in quite another Manner, and the Storm that was beginning to gather dispersed; he reprimanded *Olid*, for not sending him an Account of the Accident, since he was so near, and for discovering his Jealousy by the Imprisonment of the Caziques; and, having joined all the Forces, without any farther Delay he marched on to *Guacachula*, ordering the Envoys from that City, to go and inform their Caziques where he was, and what Force he had brought along with him.

The *Mexicans* were posted on the farther Side of the City, but on the first Notice from their Sentinels they advanced with so much Speed, that by the Time the *Spaniards* came within Musket-shot they had formed their Army, and possessed themselves of the Road, with an Intention to try their Strength under Cover of the Town. The Victory was very vigorously disputed; the *Mexicans* not only defending themselves, but advancing with all the Signs of Resolution to maintain their Ground to the utmost; when the Cazique of *Guacachula* laid hold of this Occasion to give a Proof of his Fidelity, falling on

on their Rear, and at the same time assaulting them from the Walls with such Bravery as much facilitated the Victory; and in half an Hour the *Mexicans* were intirely defeated, there being but few who were not either killed or wounded. When *Cortes* had settled his new Conquests, he returned to *Tepeaca* which he called *Segura de la Frontera*, and there he received the News, that his firm Friend *Maxiscatzin* was at the point of Death, at *Tlascala*, which hastened his Return thither, though not time enough to find him alive: He died a Christian, and as much attached to the *Spanish* Interest as ever; so that *Cortes* was much concerned for the Loss of him, but his Grief however was soon lessened by the coming of a fresh Reinforcement of *Spaniards* in the following Manner.

7. A Ship of moderate Burden arrived at *Juan de Ulua* and brought thirty *Spanish* Soldiers, two Horses, and some Provisions and Ammunition, which *Velasquez* sent to *Narvaez*, taking it for granted that all the Conquests in that Country were his own, and the Troops of *Cortes* at his Devotion. Their Commander was *Pedro de Barba*, the same who was Governor of the *Havanna* when *Cortes* sailed from the Isle of *Cuba*, having by his Friendship escaped the last Snares that were laid to stop his Voyage. *Pedro Cavallero*, who commanded on the Coast, no sooner discovered the Vessel, but he went out in a Boat, saluted the new Comers with great Civility; and having found by the very respectful Manner with which *Pedro de Barba* inquired after *Narvaez* the Design of their coming, answered him, without the least Hesitation, that he was not only in good Health, but in great Prosperity, all those Countries having submitted to him, and that *Cortes* and some of his People were fled to the Mountains; which induced them to land without the least Distrust, and go to *Vera Cruz*, where they discovered the Deceit, and found themselves Prisoners to *Cortes*. *Barba* commended the Stratagem of *Cavallero*, for in reality he was not sorry to find his Friend in so good a Condition.

They were carried up to *Segura de la Frontera*, and *Cortes* shewed a particular Satisfaction at the Arrival of more *Spaniards*, with the agreeable Circumstance of receiving this Succour from the Hands of his Enemy. He treated *Barba* very kindly, and gave him a Company of Cross-bows, upon the Confidence he had of his Friendship. He distributed Gifts among the Soldiers, upon which they agreed to serve under his Command. He afterwards read the Letter privately, which *Barba* brought for *Narvaez*; in which *Velasquez*, supposing him Master of all those Conquests, gave him Orders to maintain himself there at all Adventures; for which End he promised him very powerful Succours; and, lastly, told him, that if *Cortes* was not dead, he should immediately send him away with a sufficient Guard, for that he had received express Orders from the Bishop of *Burgos* to send him Prisoner to Court. About eight Days after arrived a second Vessel with another Reinforcement for *Narvaez*; which *Pedro Cavallero* seized after the same manner. She brought eight Soldiers, and a Mare, with a considerable Quantity of Arms and Ammunition, under the Command of Capt. *de Lobera*. They all immediately went to *Segura* and lifted themselves, as the others had done.

These Succours came by a Way so unlooked for, that *Cortes* considered them as good Omens, and Forerunners of future Success. He had already resolved on the Conquest of *Mexico*, and the great Number of Allies by which he found himself supported in his last Expedition confirmed him in his Resolution. But the Passage on the Lake was the grand and unavoidable Difficulty, and gave him great Concern; for, after the Enemy had once found out the Secret of breaking the Bridges of the Causeways, there was no depending upon portable Bridges, which were only to be used when they were pinched in Time; wherefore he began to think of building twelve or thirteen Brigantines, which should be able to resist the *Indian* Canoes, and transport his Troops to the City; and these he proposed to carry in Pieces on the Shoulders of the *Indian Tamenes* for fourteen or fifteen Leagues at least of very bad way, over the Mountains of *Tlascala*, to a River near the Lake. He had a vigorous Imagination, and was naturally an Enemy to such lazy Spirits as fancy

difficult Things to be impossible. He communicated his Thoughts to *Martin Lopez*, on whose Ingenuity and great Abilities he depended for the compassing this important Design; and found he did not only approve of it, but also undertook to execute it without Difficulty.

He sent him before to *Tlascala*, with all the *Spanish* Soldiers who had any Skill in the Carpenters Trade, in order to begin the Work, with a sufficient Number of *Indians* to cut Wood, or do any other Service for which there might be Occasion; at the same time he ordered the Iron-work and Rigging, and whatever had been preserved out of the Ships that were sunk, to be brought up from *Vera Cruz*; and, having observed that those Mountains produced Trees which afford a kind of Rosin, he drew out such a Quantity as was necessary for the careening of his Barks. He was in want of Powder, but soon found Means to make very good, sending to search for Sulphur in the Vulcano discovered by *Diego Ordaz*; for he believed they could not fail of finding it there: And some *Spanish* Soldiers belonging to the Artillery offered their Service; and, in fine, returned with as much Sulphur as was wanted. When this Affair was over, he began to think of returning to *Tlascala*, to hasten as much as he could the Preparations for his Expedition; and before he went he left his Instructions with the new Council at *Segura*, and appointed Capt. *Francisco de Orozco* Commander of the Garrison, with about twenty *Spanish* Soldiers, and the Militia of the Country, at his Disposal.

8. *Cortes* complained with some Warmth of *Francisco Garay*, because, knowing the Progress he had made in the Empire of *Mexico*, he did not, notwithstanding, endeavour to make a Settlement in the Province of *Panuco*; but such a happy Ascendant had the Fortune of *Cortes*, over that of his Rivals, that as *Velasquez* furnished him with Succours, the same Way by which he intended to destroy him, and support *Narvaez*; so the Measures which *Garay* had taken to usurp some Part of his Government, turned likewise to his Advantage. We have already related how *Garay* was repulsed, when *Cortes* was with his Troops at *Zempoalla*; notwithstanding which, he prepared another Fleet, with a greater Number of Soldiers, commanded by his best Officers.

But the second Expedition was as unfortunate as the first; for the *Spaniards* were no sooner landed, than they met with such Resistance from the *Indians*, that they were glad to retreat to their Ships in the utmost Disorder; and, being wholly intent how to avoid the present Danger, put to Sea without observing the same Course. They were separated for some Days, and, without knowing any thing of each others Design, they arrived almost all at the same time, on the Coast of *Vera Cruz*, where they agreed to serve under *Cortes*, without any other Motive than that of his great Reputation. This Succour was looked upon as sent from Heaven; for tho' it be certain that the Confusion of the Soldiers and Sailors might help to disperse these Vessels, which forced them on the Coast, where they were so much wanted, yet their coming so opportunely, and after so many Misfortunes, to augment the Troops of *Cortes*, is an Event worthy of particular Reflection.

The first Ship that arrived was commanded by Captain *Camargo*, and had on board sixty *Spanish* Soldiers; a little after came another with fifty choice Soldiers, and seven Horses, commanded by Captain *Miguel Diaz*, a Gentleman of *Arragon*, who had signalized himself on all Occasions; and lastly, though somewhat late, arrived the Vessel commanded by Captain *Ramirez*, with forty Soldiers, ten Horses, and great Abundance of Provisions and Arms. They all landed, and the first, without staying for the rest, made the best of their Way to *Tlascala*, leaving an Example to the Followers to take the same Rout, which they all did with entire Satisfaction; for the great Advantages made by *Cortes*, in *New Spain*, had made such a Noise over all the Islands, that the Soldiers were easily led whither they thought Prosperity invited them. This Succour augmented the Number of the *Spaniards*, and inspired them with fresh Hopes. The Soldiers received the new Comers with Joy; they embraced each other as Friends of a long Acquaintance, without

without any other Tye than that of coming from the same Country.

Notwithstanding this good Fortune, he could not quiet the Soldiers of *Narvaez*, who were importunate with him, for leave to return to the Isle of *Cuba*; they put him in Mind of his Promise, and he could not deny but that they went upon the Expedition to *Tepeaca* on that Condition; for which Reason he was not willing to enter into any new Disputes with them, and the rather because he found his Troops augmented with Soldiers, better disciplined, and did not think it a proper time to march at the Head of unwilling Mutineers.

For these Reasons therefore he ordered a Proclamation to be made: *That whoever had a Mind to return home, was free to go, and should be furnished with Vessels, and every thing else that was necessary.* The greatest Part of the Soldiers of *Narvaez* made use of the Opportunity, but some stayed; and what deserves to be remarked is, that *Andres de Duero*, who appeared on several Occasions so much attached to the Interest of *Cortes*, was one of those who retired; and although there be no Account of the Reason of this Separation, we may very well believe there was but little Sincerity in the Pretences with which he coloured his Retreat; since we find him, shortly after, making use of all his Interest at Court in favour of *Velasquez*.

9. *Cortes* having now got rid of these Mutineers, whom *Alverado* had the Care of conducting to the Vessels, began to consider of the Time necessary to be employed in building the Brigantines. He dispatched new Orders to the Confederates, to hold themselves in readiness to march upon the first Notice, directing the Quantity of Provisions and Arms they were to provide: And at his Leisure Hours he wrote an Account of all the Particulars of the Conquest, to be sent to the Emperor; designing to equip a Vessel, and send new Agents, who might hasten the Dispatch of the former, or give him Notice of the Condition his Affairs were in at the Court of *Spain*; his Uncertainty therein being now one of his greatest Difficulties.

Cortes drew up this Account in form of a Letter, and repeating every thing of Importance in the Dispatches he sent the Year before by the Captains *Portocarrero* and *Montexo*, he gave his Majesty a faithful Relation of all his Adventures, from the Time he marched out of *Zempoalla*, and by his Courage and Conduct made his triumphant Entry into the capital City of the Empire, till he was afterward forced to retreat to *Tlascala* with considerable Loss. He also acquainted him with how much Security he was able to maintain himself in that Province, together with the Number of *Spaniards* that had augmented his Troops, and the great Confederacies he had made with divers *Indian Nations*, for renewing the War against the *Mexicans*. He expressed, with a noble and generous Confidence, the Hope he had of reducing to his Majesty's Obedience all that new World, whose Bounds to the North were unknown even to the Natives. He enlarged upon the Riches of that Empire, the Fertility of the Soil, and the Wealth of the several Princes. He highly extolled the Valour and Constancy of the *Spaniards*, and the Affection and Fidelity of the *Tlascalans*; with Relation to himself, he left it to his Actions to speak for him. He desired speedy Justice against the unfair Proceedings of *Velasquez*, and *Francisco Garay*; and made pressing Instances of an immediate Succour of Soldiers, Horses, Arms, and other warlike Provisions. He represented, in yet stronger Terms, the Necessity of sending some Ecclesiastics and Regulars of approved Virtue, to assist Father *Olmedo* in the Conversion of the *Indians*; giving an Account that some of the Chief among them were already baptized, and that in the rest there was such a Disposition to receive the Truth, as gave great Hopes of its making a considerable Progress.

The General sent these Dispatches by the Captains, *Mendoza* and *Ordaz*. His private Instructions to them were, "That before they discovered their Commission, or made any Declaration of their being sent by him, they should first find his Father, and the two Agents who were sent the Year before, and jointly carry on

"their Negotiation, according as the Condition of his Affairs should require." He remitted also a second Present to the Emperor, consisting of Gold and other Curiosities, which had been preserved at *Tlascala*, to which the Soldiers also contributed, and were, upon this Occasion, very liberal; adding the Booty acquired in the Expeditions of *Tepeaca* and *Guacachula*; a Present less in Value than the former, but more deserving, as being amassed in the Midst of their Disgraces, after those Losses whereof *Cortes* had given a faithful Account in his Letters.

10. It is now necessary, in order to the perfect understanding of what is to follow, that we should look over into *Spain*, in order to see what Effects both these and the former Applications produced in his Favour had; since, at present, he was not in more Danger from the Arms of his Foes in the new World, than from the repeated Efforts of those implacable Enemies which, in spite of all his glorious Successes, laboured his Destruction in the old. That we may perform what we intend of this kind at once, we will take up things from the Beginning, reducing the whole of this Controversy in the *Spanish* Court, into as narrow a Compass as is possible. It was a long time that *Martin Cortes*, with the two first Envoys of his Son, *Alonso Portocarrero*, and *Francisco de Montexo*, held the wretched Employment of waiting in the Antichambers of the Ministers, so far from being admitted to Audience, that, not daring to importune them, they only presented themselves in the Throngs as they passed by, and were forced to content themselves with receiving an accidental Glance of an Eye, the comfortless Notice taken of those who are afraid to ruin their Pretensions, by advancing them unseasonably. The Emperor, however, gave them a very favourable Hearing, and found sufficient time to inform himself, exactly, of all that passed in new *Spain*, and to judge what might be expected from the Enterprize. And, in order to this, he made himself Master of the whole Affair, not disdaining to ask Questions upon many Points. By this Means the Emperor discovered the great Advantages which might be expected from such wonderful Beginnings: And the Idea he at that time formed of the Merit of *Cortes* helped to recommend him to his Favour, as he was naturally inclined to value extraordinary Men.

The sudden Departure of the Emperor did not permit him to come to any Resolution, in a Matter wherein so many Difficulties were raised, as well by the Agents of *Velasquez*, as by some Ministers who supported them. But when the Day of his Embarkation came, which was the 20th of *May*, 1520, his Majesty did, in a particular Manner, recommend the Affair of *Cortes* to Cardinal *Adriano*, Governor of the Kingdom in his Absence. The Cardinal was very sincerely desirous to favour his Cause; but as the Informations, by which he was to govern himself, came from the Council of the *Indies* (where the Votes were influenced by the Authority and Prejudice of the President the Bishop of *Burgos*) he found himself at a Loss how to come to any Resolution; nor was it an easy Matter to assure himself of making a right Judgment, while the Representations of *Velasquez* came cloathed with the Appearance of Justice, and the noble Exploits of *Cortes* were discredited with the Name of Rebellion. Afterwards, when it was most necessary, there wanted Time to examine into the Truth of this Affair, the Cares of the Ministers being employed in Matters of the last Importance. It was, indeed, a very improper time to consider of new Enterprizes, when the Ministers were so wholly employed in finding Remedies for the Evils which afflicted the State within Doors, that those without made no Sort of Impression upon them: So that *Martin Cortes*, and his Friends, sensible of the small Advantages they reaped by their Solicitations, and of the general Disorders of Affairs, retired to *Medillin*, with a Resolution to let the Storm blow over, and expect the Return of the Emperor, who was perfectly well apprized of the Affair, and had shewn a Disposition to do Justice to their Pretensions; and they plainly saw that his Authority was necessary to surmount the Opposition of the Bishop of *Burgos*, and other Impediments which arose from the present Posture of Affairs.

Some little Time after *Ordaz* and *Mendoza* arrived at *Seville* after a prosperous Voyage; and, without discovering themselves, or their Commission, they took Care to be informed about *Cortes's* Affairs, a Precaution which imported no less than their Liberty; for they understood, to their great Surprise, that the Commissioners of Trade had express Orders from the Bishop of *Burgos*, to stop and imprison any Person who should be sent from *New Spain*, and to seize on the Gold and other Merchandize that he should bring, either on his own Account, or by way of Commission. Upon which they only endeavoured to secure their Persons, and thought themselves very happy in preserving their Letters and Dispatches, leaving the Present for the King, with every thing else, in the Hands of those Judges, and to be disposed of at the Pleasure of the Bishop of *Burgos*. They parted from *Seville*, not without great Apprehension of being discovered; determining, if possible, to find out at the Court either *Martin Cortes*, or the two Agents, in order to get Light how to proceed; but hearing, on the Road, that they were retired to *Medellin*, they went on to that Town, where their Arrival was welcomed with all the Demonstrations of Joy which such wonderful and wished for News could inspire. It was debated among them, whether it would be proper to carry the Dispatches of *Cortes* immediately to the Cardinal-Regent, without delaying to inform him of such important News: But, considering the present Disturbances of the Kingdom, they thought it would be to no Purpose to speak of distant Advantages, upon which they resolved to continue in their Retirement, till the Ministers were more at leisure.

The Account which came soon after, of the Emperor's Return, contributed very much to restore the public Tranquility; he gave Assurance, in his Letters, that he would leave all other Affairs, to come where his Presence was so necessary. This Assurance entirely settled every thing, and *Martin Cortes*, judging it a proper Time to renew his Solicitations, set out immediately for the Court, with the four Commissioners from his Son; where, after some small Delays, they had a particular Audience of the Cardinal-Regent. They informed him, in general, how far Matters were advanced towards the Conquest of *Mexico*, and referred him to the Letters of *Cortes* for the Particulars. They gave him also an Account of the Orders they found at *Seville*, for imprisoning any one who should come from *Cortes*, and of the Seizure of the Present they had brought for the King. Upon this Occasion, they represented the Reasons they had to distrust the Bishop of *Burgos*; and, lastly, desired Leave to except against him, in a legal way, as a Judge, offering to make good the Reasons of their Exception, or suffer the Penalty of their taking such a Step. The Cardinal heard them with Attention; he seemed touched with their Misfortune, and comforted them with Promises of a speedy Dispatch: He was particularly displeased with the Orders given at *Seville*, and the Seizure of the Present, as being done without his Knowledge. And farther, the Cardinal answered them, with regard to their Request concerning the Bishop, That they might take their Remedy against him at Law.

With these Encouragements to hope for better Fortune they immediately entered their Exception against the President of the Council of the *Indies*, in his own Court, delivering their Reasons in Writing, with all the Temper and Moderation necessary to a due Respect. But their Reasons were so strong, and the Truth of what they alledged so well known to the other Judges, that they durst not deny Justice in an Affair of that Importance, and more especially on the Approach of the Emperor's Return. After a full Hearing, the Bishop was absolutely forbid to interfere in any Matter between *Cortes* and *Velasquez*. His Orders were revoked, the Embargo at *Seville* taken off, and the Importance of the Undertaking appeared in its true Light. The heroic Actions of *Cortes*, which were almost obscured before by the Suspicion of his Fidelity, were now celebrated as they deserved, and the Cardinal, by several Decrees, recommended the Dispatch of the Envoys, and was so sincerely desirous to forward the Affair, that, even after he had

received the News of his Exaltation to St. Peter's Chair, he dispatched some Orders favourable to *Cortes*, as he was on the Road to embark.

11. In a short Time after the Emperor's Arrival in his *Spanish* Dominions he gave Audience to the Envoys of *Cortes*, and notwithstanding those of *Velasquez* at the same Time presented their Request; yet, as he had been well informed of the Case, on both Sides, by Letters from the Cardinal, now Pope, he, by a new Sentence, confirmed the Recusation of the Bishop of *Burgos*, and appointed Commissaries to determine this Affair. The first thing the Council did was, to look over the Memorials, drawn from Letters and Relations produced at the Trial; but there they were so embarrassed by contradictory Accounts, that they thought it necessary to order the Agents, on both Sides, to explain themselves *viva voce* at the next Meeting; for they were all desirous to dispatch this Affair, and examine strictly into the Accusations brought by the Parties against each other, and into the Strength of their respective Arguments, that so they might come to the Knowledge of the Truth.

The next Day the Agents appeared before the Council, with their Advocates, and, amongst those for *Velasquez*, *Andres de Duero* signified himself. But People were the less surprized to see him unfaithful to his Friend, knowing he had been so first to his Master. The Memorials were read, and the Parties at the same Time were examined, in order to discover how they justified themselves from their respective Accusations. From their Answers the Judges drew what was sufficient to decide the Affair; and, after some few Days Hearings, the Court unanimously agreed, "That it was not reasonable for *Velasquez* to appropriate to himself the Conquest of *New Spain*, without a better Title than that of having expended some Money in the Preparations for that Enterprize, and naming *Cortes* for Commander: That he could only have his Action for what he had laid out: That the Nomination of *Cortes* afforded him no Pretence; for besides that he gave him the Commission without the Authority of the Commissioners of the Royal Audience, whose Orders he should have received, or so much as acquainting them with it, he lost those Prerogatives the Day that he revoked it, and could have no right to say, that the Conquest was made by his Order; *Cortes* being, by that Revocation, left free to act as he should judge most advantageous for the Service of the King, with the Troops and Vessels, which for the most Part he had equipped at his own Expence, and that of his Friends: And lastly, they censured *Velasquez*, as a Person who had shewn a very ungovernable Ambition, in aspiring to usurp the Glory and Advantage of the Actions of another, and as having been guilty of a Rashness, which deserved a very severe Reprimand, in sending an Army against *Hernan Cortes*, without considering the Consequences which might have attended such violent Proceedings, or regarding the Orders he had received to the contrary, from the Ministers of the Royal Audience of *Santa Domingo*."

These Conclusions were laid before the Emperor, which being approved by his Majesty, Sentence was pronounced, declaring *Hernan Cortes* to be a good Minister and faithful Subject, honouring with the like Approbation the Officers and Soldiers under his Command; imposing perpetual Silence on *Velasquez*, on the Subject of having any Pretensions to the Conquest of *New Spain*, and strictly commanding him, on Pain of severe Punishment, not to raise the least Obstacle to that Affair, directly or indirectly, with a Reservation to any Demand he might have, on account of Monies by him expended in the Armament of the Vessels which he was to sue for, in the ordinary way of Justice. And thus ended this Affair; the Judges referring the Honours designed for *Cortes*, the reprimanding *Velasquez*, and other Conclusions of the Council, to the Dispatches that were to be sent in the Name of the Emperor. The next thing taken into Consideration was the Assistance to be given *Cortes*, the Care of which the Emperor referred to the same Council. He gave a very favourable Audience to

his Agents, bestowed several Marks of his Kindness upon *Martin Cortes*, on account of his Son's Merit, whom he promised to reward according to his Service.

Several Regulars were named for the Conversion of the *Indians*: He ordered a considerable Number of Arms and Horses to be embarked in the first Fleet, and, considering how much the utmost Dispatch imported to them, he commanded the Orders to be immediately drawn, and sent; one was directed to the Royal Audience of *Santa Domingo*, another to *Velasquez*, strictly enjoining him to desist from further interfering in that Enterprize, and severely censuring his violent Proceedings; another to *Francisco Garay*, blaming him for attempting any thing on *New Spain*: The last was directed to *Cortes*, and abounded in those Marks of Honour and Favour, which Kings bestow on those from whom they have received extraordinary Services, when they do not disdain to own the Obligation. These Dispatches were signed by the Emperor in *Valladolid* the 22d of *October* 1522, and sent away with two of the Envoys of *Cortes*, the other two remaining to solicit Succours, and receive Instructions that were framing for the Government of the new conquered Country. But to return,

12. When our Hero resolved to renew the War, it was towards the Year 1520, and he had no sooner resolved than so lucky an Accident happened, as gave both himself and his Soldiers fresh Spirits. A Ship arrived at *Vera Cruz* with Arms and Ammunition on the Account of private Merchants, but both the Captain and all his Men were so charmed with the Reports they heard of the Riches of *Mexico*, that they quitted their Ship, and joined the Army. The next Day there was a general Muster, when it appeared, that there were five hundred and forty Foot, and forty Horse, together with nine Pieces of Cannon. The *Tlascalans* furnished ten thousand Men, and the Confederates in Proportion.

The Army marched that Day six Leagues, and took up their Quarters in a Place called *Texmeluca*, which signifies a Grove of Oaks. It was a considerable Town, situate on the *Mexican* Confines, and in the Jurisdiction of *Guaxacingo*, whose Cazique took Care to provide sufficiently for all the Troops. The Day following they continued their March with all necessary Precautions. They received Advice, that the *Mexicans* were assembled on the other Side of a Mountain, which rendered the Road of *Texcuco* very difficult, and because they came not to that Place till towards Evening, and it was not adviseable to march through such broken mountainous Ground when Night was approaching, the Army made a halt. In the Morning they began to mount the Hill, and penetrate the Woods, but they had not marched much above a League, when the Van-guard returned, with an Account that the Enemy had stopt up the way, with Trees laid a-cross, and sharp Stakes, which they had fixed in the loose Sands, to wound the Horses; upon which *Cortes* said to the *Spaniards* aloud, These valiant People don't seem very desirous to meet us, since they take so much Pains to stop up our way to them; and he ordered two thousand *Tlascalans* to join the Van-guard, and clear the Road, which they executed with so much Expedition, that the Rear of the Army scarce seemed to stop.

From this Place they discovered the great Lake of *Mexico*, and upon this Occasion *Cortes* put his Soldiers in Mind of the Riches they had enjoyed, as well as of what they had suffered in that City, mixing the good and bad, that he might animate them to Revenge. They likewise discovered several Fires in distant Towns, succeeding one another with some Intermision; and, tho' there was no doubt but these were Signals made on the Discovery of the Army, they pursued their March, with the same Precaution. They soon discovered, at a great Distance, the Enemy's Army, which took up all the Plain, without making any Motion, seeming resolved to continue in a Post from whence they could easily make a Retreat. The *Spaniards* rejoiced at the Opportunity of coming so soon to an Action, and the *Tlascalans* did the same: But the Joy of the latter soon turned to Fury; so that *Cortes* was obliged to make

use of his Authority, and the Diligence of some of his Captains, to prevent their running into Disorder.

The *Mexicans* were on the farther Side of a great Baranco, or Chasm in the Earth, which must of Necessity be passed. It was made deeper by a Brook, which, collecting all the Waters from the Mountains, ran through it, and was at that Time considerably swelled. The *Mexicans* had a little wooden Bridge over it for the Use of Passengers, which they could easily have broke down, but had left on Purpose, as was afterwards supposed, that they might destroy their Enemies in that narrow Pass, thinking it impossible that they could ever form themselves on the other Side, when so vigorously opposed. After this Manner they reasoned, when at a Distance from Danger; but when they discovered the Army of *Cortes*, which they had believed to be so numerous, their Imaginations were struck with other Notions: They wanted Courage to defend their Post, and therefore began to retire by little and little, without turning their Backs. *Cortes* advanced with Speed, and when he came up to the Baranco, he esteemed it a Piece of good Fortune that the Enemy had quitted it; for, notwithstanding the *Spaniards* found no Resistance, they had some Difficulty in passing it. He detached twenty Horse, and some Companies of *Tlascalans*, to keep the Enemy in play, without engaging farther, until such Time as the rest of his Troops were passed. But the *Mexicans* no sooner saw them drawing up on the other Side of the Baranco, than they laid aside all their Policy, dispersing themselves at once, some betaking themselves to the most unfrequented Paths, and others seeking Refuge in the Mountains.

Cortes did not care to lose Time, but marched to possess himself of *Texcuco*. The Army in their March made some Slaughter of the *Mexicans*, who had absconded in the Woods. The same Night the Troops quartered in a Place lately forsaken by the Inhabitants, within three Leagues of *Texcuco*, where they doubled their Sentinels, and were in a Manner all Night under Arms. But the next Day, at a little Distance from the Town, they discovered about ten *Indians*, who were coming in Haste along the Road, with the Appearance of a Message, and who brought with them a Plate of Gold, in form of a Flag, hanging to the Top of a Lance, which was looked upon as a Sign of Peace.

The Chief of them came as Ambassador from the King of *Texcuco*, desiring *Cortes* to spare his People and Country; acquainting him, that he desired to be his Confederate, for which End he had provided good Quarters for all the *Spaniards* in the City; and that the rest of the Nations, under his Command, should be supplied with every Thing that was necessary. *Cortes* put some Questions to him; and, as he came well instructed, he answered without Hesitation; adding, that his Master had just Reason to complain of the Emperor, who was about to execute his Revenge upon him by some Extortions, and other Oppressions not to be endured, for his having refused him his Vote in his Election, for which Reason he was resolved to unite himself with the *Spaniards*, as one of the most interested in the Ruin of that Tyrant.

It does not appear from any of the *Spanish* Historians who this King of *Texcuco* was; but they all agree, that he was both a Tyrant and a Usurper, so that as soon as the *Spaniards* were in Possession of the Place, the Nobility desired *Cortes* to restore their lawful Prince; which, as it was an Act of Justice, and seemed to promise much in favour of the *Spanish* Interest, he readily performed, to the great Joy of the Inhabitants.

13. As they made some Stay in this City, *Olmedo* found Means to convert the King to the Christian Religion; and he proved both a faithful, and an useful Ally; sending six or seven thousand of his Subjects to assist in widening the Canals, that they might the better receive the Brigantines, which had been prepared in order to sail into the great Lake, against the armed Canoes, which the *Indians* employed thereon. *Cortes*, at the same time, desiring to undertake something to facilitate the Enterprize upon *Mexico*, resolved to advance to the City of *Iztapalapa*,

Iztapalapa, six Leagues forward, that he might deprive the *Mexicans* of the Shelter for their Canoes, and partly to give the confederate *Indians* some Employment.

The City of *Iztapalapa* was situated upon the same Causeway by which the *Spaniards* made their first Entry into *Mexico*; and disposed after such a Manner, that the greatest Part of the Building was within the very Lake, whose Water was brought into that Part of the Town, which was built upon the Bank, by Trenches, to let it in as Occasion required. *Cortes* charged himself with the Care of this Expedition, and took with him the Captains *Alverado* and *Olid*, with three hundred *Spaniards*, and ten thousand *Tlascalans*; and though the young King of *Tezcuco* was desirous to accompany him, he would not permit it, telling him his Presence would be more useful in the City; the military Government of which he left to *Sandoval*, and, with both of them, such Instructions as he thought necessary for the Security of their Quarters, and to keep things in order in his Absence. They presently began their March by the Causeway, designing to possess themselves first of that Part of the City which was built upon it, and dislodge the Inhabitants from the other Part, with the Artillery and Fire-arms: But the Enemy was informed of their Motions, and the Army was no sooner come within sight of the Place, than they discovered a Body of about eight thousand Men; at a little Distance from the Walls, who came out to defend them with so much Resolution, that, though they found themselves inferior in Number, they stood the Engagement, and fought with Bravery enough to retire with Reputation, which they did in a little time to the City; where, without staying to defend the Entrance, or shut up the Gates, they instantly disappeared, throwing themselves into the Lake in disorder.

Cortes was sensible that this kind of Retreat had the Appearance of a Stratagem, to draw him into some greater Danger, and therefore marched his Army into the City with all possible Precaution, but he found the Houses utterly abandoned; and, though the Noise and Cries of the Enemy continued in that Part, which stood in the Water, he resolved, with the Advice of his Captains, to maintain himself in the Post where he was, and lodge within the Walls, without attempting any thing farther, the Day being far spent: But it scarce began to be dark, when they perceived the Canals every where to overflow, the Water running impetuously over the lower Grounds.

Cortes immediately understood that the Enemy's Design was to drown this Part of the City, which they might easily do by opening the Sluices of the great Lake; and, as the Danger was inevitable, he was obliged to give Orders, instantly to quit the Place; and, though they made all the haste possible, the Water came above their Knees. *Cortes* was very much mortified, that he had not prevented this Stratagem of the *Indians*; as if it was possible, with the utmost Vigilance, to provide against all Accidents. He drew out his Army into the Road of *Tezcuco*, to which Place he thought to retire, deferring the Enterprize of *Iztapalapa* to a more favourable Opportunity; for it was impracticable, at this time, without a greater Force on the Lake-side, and some Vessels, to drive the *Mexicans* from the Place. The Troops lodged that Night on a little Hill free from the Water, where, nevertheless, they suffered very much, being wet and without any Defence against the Cold; but in such good Heart, that there was not the least Murmuring among the Soldiers.

At the first Appearance of Day, he continued his Retreat, and hastened the March of his Men. As soon as it was broad Day, they discovered a formidable Body of Enemies in pursuit of the Army. *Cortes*, notwithstanding this, marched on, but more slowly, though the Soldiers moved but very unwillingly, being animated with a Spirit of Vengeance against their Enemies. When *Cortes* thought convenient, he ordered his Troops to halt and face about; and the Enemies began the Attack with the same Precipitation that they pursued; but the *Spanish* Cross-bows, and the Bows of the *Tlascalans*, gave a Check to their first Fury; and at the same time the

Horse charged them, making Room for the confederate Troops, who entirely broke that disorderly Multitude, and obliged them to leave the Field with considerable Loss.

Cortes pursued his March without stopping, to reach his Quarters before Night. But the Enemy, no less diligent in rallying than retiring, advanced a second and third time to the Attack, without being terrified with the great Slaughter they had sustained; till such time as, fearing to approach too near *Tezcuco*, where the whole Strength of the *Spaniards* lay, they marched back to *Iztapalapa*, sufficiently chastized for their Boldness, having lost, in the three Attacks, six thousand Men: And tho' *Cortes* had some wounded, he lost only two *Tlascalans* and one Horse, who, covered with Arrows and Cuts, yet lived to bring off his Master. *Cortes*, and all his Army, a little before Night, entered the City of *Tezcuco*, with the Glory of three Victories obtained by the Way, which gave Reputation to the Expedition, and covered the Disgrace of the Retreat.

Whilst *Cortes* remained in *Tezcuco*, he received frequent Visits from the Neighbouring *Caziques*; among the rest there came Messengers from the Provinces of *Chalco* and *Otumba*, with an Account that there was a powerful Army of *Mexicans* upon their Frontiers, who had Commission to destroy them, for having made an Alliance with the *Spaniards*. They desired Succour to assist them in their Defence: This Request appeared necessary, for it imported *Cortes* very much, not to suffer the *Mexicans* to fix themselves in a Place where they might cut off his Communication with *Tlascala*. He immediately dispatched *Sandoval* and *Lugo*, with two hundred *Spaniards*, fifteen Horse, and a sufficient Number of *Tlascalans*; among whom, there were some who had obtained his Permission to retire to their own Country, and secure the Spoils they had obtained in the War. These Wretches marched with the Baggage of the Army, and, as Avarice regulated the Weight of their Burdens, they had so overloaded themselves, that they could not keep up with the Troops, but were forced to stop frequently to take Breath.

The *Mexicans* being informed of this, fell upon them in one of their resting Places; *Sandoval* and *Lugo* returned immediately to their Relief, and fell upon the Enemy so vigorously, with their whole Force, that they turned their Backs as soon as attacked: Five or six *Tlascalans*, who were disarmed and embarrassed with their Burdens, perished upon this Occasion, but the *Spaniards* recovered all the Booty, with some Addition. They continued their March, till the Army, having passed the Province of *Chalco*, approached the Frontiers of *Tlascala*. The *Mexicans* had assembled all the Troops of the neighbouring Provinces, to chastize the Rebels of *Chalco* and *Otumba*; and, knowing that the *Spaniards* were coming to the Relief of those two Nations, they reinforced themselves with Part of the Troops quartered about the Lake; and, having thus a very formidable Army, posted themselves on the Road the *Spaniards* were to pass, to try their Strength in the Field. *Sandoval* and *Lugo*, having given what Orders they thought necessary, advanced in order of Battle, without altering their Pace: But, on Sight of the Enemy, the *Spaniards* and *Tlascalans* halted, to examine more narrowly the Intention of that Body of Troops.

14. The *Mexicans* had the Advantage in Numbers, and advanced in Crowds, and made the first Discharge, without any Effect. The two Captains, taking Advantage of their Confusion, ordered the Horse to advance, whose Attack immediately made Room for the *Spaniards* and *Tlascalans*, breaking this disorderly Multitude with great Slaughter. The Flight of the Enemy soon became universal; and the Troops of *Chalco* and *Otumba*, which had sallied out on the Noise of the Battle, coming up at the same time, the Chace was so bloody, that the *Mexican* Army was entirely defeated, with little or no Loss. Eight of the most considerable Prisoners were reserved, in order to get some Information from them; and the Army passed that Night to the City of *Chalco*, whose *Cazique* went before to prepare Quarters with great abundance

abundance of Refreshments for all the Troops; nor did he forget to have the Victory celebrated with Rejoicing, after the usual Manner of that People.

The Inhabitants of *Chalco*, as Subjects of the *Mexican* Empire, were Enemies to the *Tlascalans*, and had, besides, perpetual Disputes with them about their Frontiers: But this Night all their Quarrels were forgot, at the Desire of the *Chalqueses*. The *Spaniards* were Mediators at the Treaty, and, the Chiefs of both Nations being assembled, Peace was concluded: *Sandoval* and *Lugo* undertaking to get it confirmed by *Cortes*, and the *Tlascalans* to have it ratified by the Republic. This Affair thus finished, they returned to *Cortes*, who highly commended both the *Spanish* Officers, the Soldiers under their Command, and all the *Indian* Auxiliaries. He set the eight *Mexican* Captains at Liberty, and sent them with Proposals of Peace to their Emperor; not that he hoped any thing from it, farther than shewing the Justice of the War to all the People in that Part of the World, by obliging the Enemy to draw it upon themselves, by repeated Refusals of all Terms of Accommodation.

15. About this time *Cortes* was informed that the Brigantines were finished, by the Industry and Care of *Martin Lopez*, and the Republic of *Tlascala* granted him ten thousand Men to carry these Vessels from the Place where they were built to the Lake, which they accordingly performed; and, if we consider it attentively, this will appear one of the wisest Contrivances of this great Captain, and the happy Execution of it, one of the most surprising things performed by the *Spaniards*, in the Course of this Expedition. He was no sooner acquainted with this, than he again took the Field, and had several Engagements with the Enemy, in most of which he was successful; but, at the Attack of a Place called *Tacuba*, he was compelled to retreat. A Vessel arrived at this time at *Vera Cruz*, and, in her, *Julian de Alderte*, a Native of *Tordesillas*, with the Character of the King's Treasurer, Father *Urrea*, of the Order of *St. Francis*, *Antonia de Caravaial*, *Geronimo Ruiz de la Moto*, *Alonso Diaz de la Reguera*, and several Soldiers of Distinction, with a very considerable Succour of Arms. They immediately marched to *Tlascala*, and there had an Escort to conduct them safe to *Tezcuco*, themselves carrying the first News of their Arrival.

Soon after there arrived Messengers, dispatched in haste from the Caziques of *Chalco* and *Thamanalco*, to demand Succour; for the Emperor *Guatimozin*, as appeared by his Conduct, applied himself entirely to the Arts of War; and had considered that there was no better way to compass his Design, than by seizing on that Frontier, whereby he might cut off their Communication with *Tlascala*, and prevent Succours from *Vera Cruz*; a Point of so much Consequence, that *Cortes* found himself absolutely obliged to protect those Allies, to whose Fidelity he owed the Preservation of this Pass. He immediately dispatched *Sandoval* to their Relief, with three hundred *Spaniards*, twenty Horse, and some Companies of *Tlascala* and *Tezcuco*. *Sandoval* marched with such Diligence, that his Succour arrived very opportunely. The Caziques had assembled all their Troops, which, joined to those, made a very considerable Body. The Enemy was not far off their Army, having lodged the Night before at *Guatepeque*, and it was resolved to attack them before they entered the Territories of *Chalco*. In the mean time the *Mexicans*, depending upon the Number of their Forces, possessed themselves of some hollow Ways, in order to wait their coming in a Place where they might be secure against the Horse.

The *Spaniards* saw the Difficulty when they came to the Charge, and *Sandoval* stood in need of all his Resolution to dislodge the Enemy from the Post; which, however, they did, Sword in hand, but not without Loss. The *Mexicans* lost a great Number in this Conflict; however, they thought themselves strong enough to rally, and draw up upon the Plain: But *Sandoval*, having overcome the Difficulty of the Passage, attacked them so briskly that they had not time to form. The Van-guard continued the Fight with desperate Fury, but soon gave Way, and dispersed; and the *Spaniards* followed with so

much Vigour, that the *Mexicans* lost the greatest Part of their Troops. *Sandoval* remained Master of the Field, and chose a Place for his Army to halt in, and take a little rest, resolving to advance that Night to *Guatepeque*.

But scarce had the Troops began to enjoy the Repose they so much wanted, when the Scouts gave the Alarm so warmly, that it was necessary to form the Army with all Expedition. A Body of fourteen or fifteen thousand *Mexicans* were advancing so near, that the *Spaniards* could hear their Drums and Horns. These Troops were sent as a Reinforcement to those which had marched from *Mexico* before. The *Spaniards* advanced to receive those new Comers, and attacked them so seasonably, that they made Way for the Horse to charge; who made such a Slaughter of the Enemy, that they were soon obliged to retire to the Town of *Guatepeque*; but the *Spaniards* followed them so close, that they entered the Place at the same time, and maintained the Entrance; till the rest of the Troops coming up, they divided into the several Streets, and Sword in Hand drove the Enemy out of the Town. The *Mexicans* lost great Numbers, and the rest fled. This Town was so large, that *Sandoval* was resolved to quarter there that Night; and the *Spaniards*, with the greatest Part of their Allies, lay under Cover.

He was soon after obliged to take the Field again; the Enemy having rallied; and *Cortes* himself came quickly after into the same Country, where he had several Engagements with the *Mexicans*, not much to his Advantage; for, confiding in the Bravery of his Troops, and despising too much the Inexpertness of the *Indians*, he attacked them even in the most difficult Posts, and thereby gave them such Advantages, as he found it very difficult to struggle with. Yet his old and new Allies remained firm and faithful, which induced him to accept the Invitation given him of going to *Guatepeque*, in order to refresh himself and his Army; and, before he well arrived there, he found himself called to fresh Toils, by the News that the *Mexicans* had assembled a very powerful Army at *Quatlavaca*, so that it was absolutely necessary for him to march thither.

16. This large and famous Capital of an *Indian* Principality, *Quatlavaca*, was a populous Town, strong by Nature; situate between Baranco's, or Breakings of the Earth, above eight Fathoms deep, which served as a Ditch to the Place, and Passage for the Water that descended from the Mountains. The Army arrived at this Place, after having subdued all the Towns which lay in their Way, without any Difficulty. The *Mexicans* covered the Banks with such a Number of Soldiers, that the Passage seemed impossible: But *Cortes* drew up his Army at a convenient Distance; and, while the *Spaniards* and the Confederates endeavoured to divert the Army with their Fire-arms and Arrows, he went to view the Baranco, and, finding it at some Distance lower much narrower, he immediately ordered two or three Bridges to be made of Trees, cut at the Root, which reached from one Side to the other; and which, laid together as well as was possible, made a Road for the Infantry to pass.

The *Spaniards* of the Van-guard, leaving the *Tlascalans* to keep the Enemy in play, immediately passed over, and formed a Battallion on the other Side of the Ditch, which was continually augmented by the Allies. But the *Mexicans*, who were quickly sensible of their Negligence, poured down upon those that had passed with so much Resolution, that they had much to do to keep their Ground; and the Success had been very doubtful, if *Cortes* had not opportunely arrived; who, whilst the Foot were getting over, had found out a Passage for the Horse; which, though very difficult and dangerous, was of great Use in the extreme Danger to which the *Spaniards* were reduced. The Horse wheeled in order to charge the *Mexicans* in the Rear, which they did; assisted by some Foot, who had passed the Ditch by the Means of two or three Trees, which were fallen down by their own Weight, and lay across the Baranco. But the *Mexicans*, who now saw the Danger that threatened them in the Midst of their Fortifications, gave themselves over lost; and, dispersing, sought only to escape in the best

best Manner they could to the Mountains. They lost great Numbers both in the Defence of the Ditch and in their Flight, nevertheless the greatest Part of them saved themselves among the Rocks and Precipices. The Town was found entirely abandoned, with great Store of Provisions, and some Spoil; which was given to the Soldiers.

A little after, the Cazique, and some of the chief Inhabitants who were willing to submit, called to the *Spaniards* from the further Side of the Ditch, desiring Leave to return to the Town, and prepare Quarters for the Troops; which was granted, and they were of Use afterwards, by the Intelligence they gave of the Enemy's Motions, and by the Knowledge they had of the Country. Early the next Morning, the Army took the Road of *Suchimilco*, a Place which deserved the Name of a City, seated on the Edge of a fresh Water Lake which had a Communication with the great Lake; the Buildings were partly on the Land and partly in the Waters, where a great Number of Canoes served them to pass from Place to Place. It was of great Importance to take a View of this Town, which was within four Leagues of *Mexico*, but the March was very troublesome; for after they had passed a Defile three Leagues long, they came into a dry barren Country, where the Soldiers suffered much for Want of Water.

The Fatigue of the March, and the Heat of the Summer, increased their Thirst to such a Degree, that, at their Entrance into a Forest of Pines, they were insensible of any Relief from its Shade. Near the Road they found some Farm-houses: Here the Army lodged, and enjoyed that Night the Rest and Refreshment they wanted. The Enemy had purposely quitted them, to wait for the *Spaniards* in a stronger Post. *Cortes* drew up his Army in Order of Battle at break of Day, and began his March, expecting to meet with a good deal of Difficulty in his present Enterprize, it not being likely that the *Mexicans* would leave a Post of so great Importance, and so near *Mexico*, without a strong Garrison, especially since all who had escaped from their past Engagements went to that Place. His Conjectures proved right, for the Enemy had drawn up their Battalions in a Plain at some Distance from the City, having a great and rapid River in their Front, which discharged itself into the Lake. They had double lined the Banks of this River, and disposed their main Body for the Defence of a wooden Bridge, which they would not cut down, having barricaded it with Planks and Fascines; and supposing, that though this Fortification should be forced, they should have a sufficient Advantage in the Narrowness of the Pass, and be able to destroy their Enemies as fast as they came over the Bridge: *Cortes* perceived the Difficulty, but, without appearing concerned, extended the Troops of the Allies along the Bank of the River, and, whilst both Sides made some Discharges at each other with little Effect, he commanded the *Spaniards* to advance, and go and take the Bridge. They met with such an obstinate Resistance, that they were twice repulsed; but, returning a third time with greater Valour, and making Use of the Enemy's Trenches against them, they soon gained the Pass; which so discouraged the *Mexicans*, that they began every where to fly; their Commanders ordering the Signal for a Retreat.

The *Spaniards* made haste to seize upon the Ground the *Mexicans* had quitted, and at the same time several Companies of *Tlascala* and *Tezcucó* threw themselves into the River and swam to the other Side, and joined the Army. The Enemy was drawing up in Order of Battle, under the Walls of the Town, but upon the first Advance of the *Spaniards* they began to retire, provoking them still by some Discharges of Arrows, which did no Execution, to signify that they retreated out of Choice: However, *Cortes* fell upon them with Vigour, as they continued retiring into the City; in the Entrance of which they lost great Numbers; but, sheltering themselves within the Barricadoes, with which they had blocked up the Streets, they began again to use their Arms, and defy their Enemies.

Cortes left Part of his Troops without the Town, to secure his Retreat, and to oppose any Attacks that might

be made from abroad, and entered with the rest: For which Purpose, ordering some Companies to force the Barricadoes in the Streets on the Right and Left, he advanced to the principal, where the Enemy had their greatest Force. With some Difficulty he broke through their Blockade, and, carried away by his Courage, forgot the Care he ought to have taken of his Person; for throwing himself, with more Bravery than Prudence, into the midst of a Multitude of Enemies, he found himself surrounded by them; when he would have retired to the Assistance of his Foot. He supported himself for some time with the utmost Courage; until his Horse, being tired, fell under him, and put him in extreme Danger of his Life. Those who were nearest, immediately advanced, and before he was in a Condition to make use of his Arms he was in a manner taken; the only thing that defended him, being the great Desire the *Mexicans* had to seize him alive, for a Present to their Emperor. At this Instant *Christoval de Olea*, a Native of *Medina del Campo*, a Soldier of distinguished Valour, who was not far off, saw the Distress of his General, and, calling to some *Tlascalans* who were fighting near him, forced his way to the Place with so much Resolution, and was so well seconded by those that followed him, that, after having killed with his own Hand those who pressed most upon his General, he had the good Fortune to restore him to his Liberty.

Cortes immediately made use of it to punish the Enemy, who, upon escaping to that part of the City which stood in the Water, left the *Spaniards* Masters of all the Streets upon the firm Land. *Cortes* came off with two slight Wounds, and *Olea* with three dangerous Cuts with a Sword. *Herrera* informs us, that *Cortes* owed his Liberty to a *Tlascalan* unknown, both before and after; and relates the Action as a kind of Miracle; but *Bernal Diaz*, who was one of the first that came to the Relief of the General, attributes the whole Honour to *Olea*; and the Descendants of this valiant Man may very well be excused if they rather believe an Author who relates what he saw, than one who goes upon Conjectures. Whilst this Engagement lasted in the Town, the Troops that were without were not idle: The Nobles of *Mexico* made an extraordinary Effort to reinforce the Garrison of *Suchimilco*, the Preservation of which their Emperor *Guatimozin* had very much at Heart. They embarked with ten thousand chosen Men, and landed at some Distance from the Town, knowing the *Spaniards* were engaged in the Streets, designing to fall upon their Rear; but they were discovered, and charged with so much Resolution, that they were glad to reembark, leaving a good Number of their Men behind them, dead in the Field.

This happy Success made *Cortes* Master of the Place, and of all the Streets and Buildings upon the firm Land, and, having placed sufficient Guards by the Water-side, he lodged his Troops near the principal Temple, which, having a sort of a Wall capable of resisting the Arms of the *Mexicans*, seemed commodious for the Repose of the Soldiers, and the Cure of their Wounds; at the same time he ordered some Companies to mount, and view the Top of the Temple; which being forsaken, he posted an Officer and twenty or thirty *Spaniards* in the upper Court, with Instructions to relieve the Sentinels often, that they might observe every thing that passed, as well by Land as by Water: A very necessary Precaution, and of which the Usefulness was soon experienced; for at Close of Evening they gave notice, that they discovered on the Side of *Mexico*, above two thousand armed Canoes that advanced with all Speed; by which timely Advice the *Spaniards* were enabled to prevent the Dangers of the Night, by doubling their Guards at the landing Places, and in the Morning they saw the Enemy disembark, at a great Distance from the City, in Appearance about fourteen or fifteen thousand Men. *Cortes* went out to receive them, chusing advantageous Ground for his Horse, and leaving behind him a good part of his Troops for the Defence of his Quarters.

The two Armies quickly drew near, and the *Mexicans* began the Charge; but upon receiving the first Fire they gave Ground, and the rest of the Troops coming up

K k

Sword

Sword in Hand, and charging them briskly, they soon turned their Backs and fled, and the whole Action was rather a Chace than a Victory. The Day appointed for the Retreat came, which was executed as had been resolved, the Enemy still advancing to seize the difficult Passes, in order to disturb their March; but this Opposition was easily overcome, and with considerable Advantage, and Cortes returned to *Texcuco* with the Satisfaction of having obtained the Ends he proposed by this Sally; the Knowledge of *Suchimilco*, and breaking the Force of the Enemy, in order to weaken their Defence of *Mexico*. However, he was inwardly dissatisfied and melancholy, having lost nine or ten *Spaniards* in this Expedition; for besides those that were killed at the first Assault of the Mountains, the *Mexicans* took three or four of them alive at *Suchimilco*, as they were pillaging, and two of his Servants who fell into an Ambuscade by separating from the Army: What mightily increased his Concern was, the Circumstance of their being taken alive in order to be sacrificed upon the Altars of the *Indian* Idols, and their Misfortune recalled to his Mind his own past Danger, when in the Enemies Power, of dying after the same abominable Manner.

17. The Brigantines were now in a Condition to be launched, and the Canal had Depth and Capacity to receive them. The Day was appointed for the Confederate Caciques to appear with their Troops, and particular Care was taken to bring Provisions. The General looked into the most minute Matters that related to the carrying on the War, wherein great Dangers are often occasioned by small Faults, and therefore a very extensive Prudence is required. But while Cortes had his Thoughts employed in these Affairs, a new Accident happened which gave him much Trouble, put his Valour to the Test, and was a convincing Proof of his Judgment: A *Spaniard*, who had been long in the Service, came to him full of Concern, and desired to speak with him in private: When that was granted, he informed him, That during his Absence a Conspiracy had been forming against his Life, and all his Friends; the Author of it, as he said, was a private Soldier, his Name was *Antonio de Villasana*; and his first Intention was to get off clear from that Enterprize, the Difficulties of which to him appeared insuperable: He shewed his Uneasiness at first, by murmuring, and soon proceeded to dangerous Resolutions: He, and those of his Faction, blamed the General for his Pursuit of that Conquest, declaring, That they would not destroy themselves to gratify his Rashness, talking of returning to the Island of *Cuba* as if it was a thing very easy to be performed.

They met to consult about this Point with much Secrecy, and though they found no great Difficulty in quitting the Camp, and passing as far as *Tlascala*, by Virtue of a supposed Order from the General, the Inconvenience of going to *Vera Cruz* immediately occurred; for there they could not pretend a Commission, or Leave from Cortes, without a Pass under his Hand, or avoid the Danger of being severely punished. This put them to a Nonplus, and yet they persisted in their Resolution of withdrawing themselves, without fixing on the Way how to compass it. *Antonio de Villasana*, at whose Lodgings they held their Assembly, at last proposed to bring all to pass by killing Cortes and his chief Counsellors, and electing another General, who, having not set his Heart so much upon the Conquest of *Mexico*, would be more tractable, and under whom they might treat without incurring the Name of Fugitives; and they might give it the Turn of a Piece of Service to *Velasquez*, by whose Representation of it to the Court of *Spain*, it might be esteemed a Service done to the King. They all approved of the Project, and began by applauding the Scheme, and drawing up a Writing signed by all that were present, whereby they obliged themselves to follow *Villasana*, in the Execution of this horrible Attempt. And this Affair was managed with so much Dexterity, that the Numbers of those who signed increased considerably; and it was to be feared that this secret Contagion might break out into such an Evil as would admit of no Remedy.

They had agreed to feign a Packet from *Vera Cruz*,

with Letters from *Spain*, and to give it to the General, when he was at Table, all of them going in together, under Colour of hearing the News; and that, whilst Cortes was reading the first Letter, they should make use of that Opportunity to murder him, and all his Friends, with their Daggers, after which they were to go out and proclaim Liberty in the Streets, which they thought sufficient to make the Army declare for them. The Persons they had marked out for Destruction were *Olid*, *Sandoval*, *Alverado*, and his Brothers, *Tapia*, the two Alcaldes, *Martin Irico*, *Castillo*, and some other Soldiers, Favourites of the General. They had also agreed to chuse *Francisco Verdugo* for their Captain General, because he had married a Sister of *Velasquez*, and therefore they thought he might be easily brought over, and was the most proper Person to support their Party; but they durst not acquaint him with their Design till the Crime was committed, when they concluded he would be obliged to take upon himself the Employment, to prevent greater Evils. Such was the Account given by the Soldier, who begged his Life, for he was concerned in the Conspiracy. Cortes resolved to assist in Person at the seizing of *Villasana*, and, as the first Measures that were to be taken, to convict him, because he foresaw that the clearing up the Truth depended on the first Steps.

The Importance of the Affair required Precaution, and, as it was no Time to preserve the slow Proceedings of Justice, he went immediately to secure *Villasana*, attended by two Alcaldes, and some of his Captains, and found him in his Quarters, with three or four of his Accomplices. The Trouble he was in at the Sight of his General, was a plain Proof of Guilt. And Cortes, after he had caused him to be put in Irons, ordered all to retire, pretending to examine him, when, making Advantage of the Account that had been given him, he took out of his Bosom the Paper signed by all the Conspirators: He read it, and found the Names of some Persons, whose Treachery much increased his Concern; but, concealing it from his Friends, he directed the Soldiers, who were found with *Villasana* to be put into another Prison, and then withdrew, leaving Instructions with the Officers of Justice, to proceed in his Trial with all possible Speed, without taking any Notice of his Accomplices. There was not much to do in it; for *Villasana*, being convicted by the seizing of his Paper, and believing that his Friends had betrayed him, immediately confessed his Crime: Whereupon, according to military Justice, he was condemned to die, which Sentence was put in Execution that very Night, and the next Morning he was seen hanging at the Window of his own Lodging; so that the Punishment was executed at the same Time that the Cause was published, the Guilty being struck with Fear, and the rest with just Abhorrence of the Crime.

Cortes was equally afflicted and provoked, to see the Number of those concerned in the Conspiracy; but it was no proper Time to be strict in doing Justice at the beginning of his Enterprize; and therefore, to avoid punishing the Guilty, and the Inconveniencies of Impunity, he gave out, that *Villasana* had swallowed a Paper, which he believed contained the Names of the Conspirators. Soon after he assembled his Captains and Soldiers, and gave them an Account of the horrid Design and Conspiracy of *Villasana*, against his Life, and the Lives of many present; adding, "That he thought himself very happy, in not knowing whether he had any Accomplices, though the great Care *Villasana* took to destroy the Paper he carried in his Bosom, made him suspect he had some: But that he did not desire to know them, and only intreated his Friends to enquire whether the *Spaniards* had any Complaint to make against his Proceedings; because he was desirous, above all Things, to give entire Satisfaction to his Soldiers, and was ready to correct his own Faults, as he knew how to use the Rigour of Justice, when Lenity appeared of no use." At the same Time, he ordered the Soldiers that had been taken with *Villasana* to be set at Liberty; and this, confirmed by the Care he took to shew no Change in his Behaviour to those who had offended, fully persuaded them that he was ignorant of

of their Crime, and they ever after served with extraordinary Care, to remove any Suspicions of their Fidelity: However, not thinking such an excessive Security which lays Care asleep, and seems to invite Danger, at all consistent with Discretion, he ordered twelve Men for the Guard of his Person, commanded by an Officer; and 'tis likely he made choice of this Opportunity, that the People might without Surprize see this new Addition to his Authority.

Soon after he was perplexed with another Affair, though of a different Sort, which had yet some Circumstances of Sedition; for *Xicotencatl*, who commanded the first Troops that came from *Tlascala*, either upon some Disgust, which may easily be supposed, considering his haughty Temper, or that he still preserved in his Mind some Remains of his former Enmity, resolved to leave the Army. Assembling some Companies, which, upon his earnest Intreaty, engaged to stand by him, he took the Advantage of the Night for his Retreat; and *Cortes*, who was presently informed of it by the *Tlascalans* themselves, was much concerned at a Behaviour of such dangerous Consequence, in so considerable a Commander among those Nations, at a Time when he was just ready to put his Designs in Execution. He sent some noble *Indians* of *Texcuco* after him, to persuade him to return, or at least to stay till he heard what he had to offer; but the Answer of *Xicotencatl* so provoked *Cortes*, that he immediately sent three Companies of *Spaniards*, with an additional Force of *Indians*, with Orders to take him Prisoner, or kill him, in case of Resistance. The latter was put in Execution; for he made an obstinate Defence to the last; but the *Tlascalans*, who followed him, contrary to their own Inclination, shewed but little Resolution upon this Occasion, and returned with the *Spaniards* to the Army, leaving their Commander hanging upon a Tree.

Some say that the *Spaniards*, sent after him by *Cortes*, had private Orders to kill him, which seems the safest Resolution that could have been taken; but which way soever it was done, the extraordinary Foresight and Prudence of the General in managing this Affair cannot be denied, since neither the *Tlascalans* of the Army, nor the Republic, nor even his own Father, made the least Complaint for his Death; for, having been informed some Days before, that the young Man so far forgot himself, as to speak ill of his Conduct, and endeavoured to discredit, among those of his Nation, the Enterprize upon *Mexico*, *Cortes* sent an Account of it to *Tlascala*; and the Senate, in which his Father was present, answered, That, according to the Laws of the Republic, whoever was guilty of Mutiny in the Army deserved Death; and that he might proceed against him with the utmost Rigour, if he found it necessary; as they would do, both against *Xicotencatl*, and all that followed him, if they returned to *Tlascala*.

18. These Transactions did not hinder his attending to the necessary Preparations for his great Design. The Brigantines were launched by Degrees, a Work happily brought to a Conclusion, by the Industry of *Martin Lopez*; and, whilst they were carrying on Board the Sails, Rigging, and every thing else wanting, *Cortes* reviewed his *Spaniards* under Arms; They consisted of nine hundred Men, of which, a hundred fourscore and fourteen were Fire-arms and Cross-bows, the rest were armed with Sword and Buckler, and Launces; eighty-six Horse, and eighteen Pieces of Cannon; the three largest of Iron, and the other fifteen Brass, with sufficient Stores of Powder and Ball. *Cortes* put five and twenty *Spaniards* on board each Vessel, under the Command of a Captain, with twelve Rowers, six on each Side, and one Piece of Artillery, who immediately embarked; and each prepared to defend his own Vessel, and succour the rest. Things being thus disposed for the Entry by the Lake, *Cortes* resolved, by the Advice of his Captains, to possess himself, at the same time, of the three principal Causeways, viz. *Tacuba*, *Iztapalapa*, and *Cuyoacan*, without regarding that of *Suchimilco*.

But, that he might avoid separating his Troops, he divided his Army only into three Bodies, and committed the Execution of *Tacuba* to *Alverado*; with the Title of

Governor and Commander in chief of that Avenue. He had under his Command one hundred and fifty *Spanish* Foot, and thirty Horse, in three Bodies, with thirty thousand *Tlascalans*, and two Pieces of Artillery. The Attack of *Cuyoacan* was committed to Colonel *Olid*, with one hundred and sixty *Spanish* Foot, in three Companies, with thirty Horse, two Pieces of Artillery, and thirty thousand confederate *Indians*. Lastly, he gave the Charge of the Attack of *Iztapalapa* to Col. *Sandoval*, with one hundred and fifty *Spaniards*, commanded by two Captains, with two Pieces of Cannon, twenty-four Horse, with all the Troops of *Chalco*, *Guaxacingo*, and *Chulula*, amounting to above forty thousand Men.

Olid and *Alverado* marched together as far as *Tacuba*, where they were to separate, and took their Quarters in that City, without any Opposition, the same being abandoned, as were all the Towns upon the Lake; the Inhabitants that were able to bear Arms being gone to *Mexico* to defend their Capital, and the rest retired to the Mountains, with their Effects. There they had Intelligence, that the *Mexicans* had formed a considerable Body, within half a League of the Town, to cover the Aqueducts, which came from the Mountains of *Chapulteque*. *Guatimozin* took this seasonable Precaution as soon as he received News of the Motions of the *Spaniards*, which preserved those Conveyances that supplied all the Fountains in the City with fresh Water. There appeared on that Side two or three Rows of Pipes, made of Trees hollowed, supported by an Aqueduct of Lime and Stone; and the Enemy had cast up some Trenches to cover it. But the two Captains marched out of *Tacuba* with most of their Troops; and though they met with a very obstinate Resistance, they drove the Enemy from their Post, and broke the Pipes and Aqueduct in two or three Places, and the Water took its natural Course into the Lake. Thus *Olid* and *Alverado* began the Siege by cutting off their Water, obliging the *Mexicans* to seek it, at a Distance, in the Brooks that ran from the Mountains, and to employ their People and Canoes in Carriage and Convoys.

Olid marched on with his Party, and took Post at *Cuyoacan*; and *Cortes*, allowing what Time he thought sufficient for *Sandoval* to reach *Iztapalapa*, took upon himself the Command on the Lake, that he might carry Relief where it should be necessary: He had with him Don *Fernando*, Lord of *Texcuco*, and his Brother *Suchel*, a young Man of brave Spirit, who was baptized soon after, and took the Name of *Carlos*. *Cortes* left a sufficient Number of Troops in that City, to cover his Place of Arms, and make Excursions to secure the Communication of his Quarters. Having disposed all Things after he embarked, drawing up his thirteen Brigantines in a Line; his Design was to draw near to *Mexico*, and shew himself, and afterwards to fall upon *Iztapalapa*, being under some Concern for *Sandoval*, who had no Vessels to dislodge the *Mexicans* from that Part of the City, which stood in the Water, and served as a Retreat for their Canoes: But, in his Return, he discovered at a small Distance from the City, a little Island, a considerable Height above the Water; on the Top of which stood a pretty large Castle, which the Enemy had possessed themselves of, to no other End, but to provoke the *Spaniards* with ill Language and Threats, from a Post where they thought themselves out of Danger of the Brigantines.

Cortes did not leave unpunished that Insolence, in View of the City, the Terraces and Balconies of which were filled with innumerable People, who came to see the first Action of the Fleet: He drew near to the Shore of the Island, and landed with one hundred and fifty of the *Spaniards*, who took two or three different Paths, that led to the Top: They mounted, with some Difficulty, by reason that the Enemy were numerous, and made a brave Defence, 'till despairing of being able to preserve the Eminence, they retired to the Castle, where they were so crowded, that they had not room to manage their Arms: Many perished, though most were saved. Having, by this Enterprize, chastised the *Mexicans*, the *Spaniards* returned to their Brigantines; but, when they were disposing themselves to make for *Iztapalapa*, they were obliged

obliged to take other Measures; for the same Canoes came out of *Mexico*, which advanced, encreasing continually in Numbers. The first that drew near, rowing gently, were about five hundred, waiting for the rest to come up; and, in a short Time, those that came out of the City, and other neighbouring Places, made so great a Number, that it was judged they were four thousand, which, with the Motion of their Feathers and Arms, afforded a Sight both beautiful and terrible, and seemed to cover the Lake.

Cortes drew up his Fleet in form of a Half-Moon, that he might extend his Front: He confided in the Valour of his Soldiers, and the Advantage of his Brigantines, every one of which was able to make Head against a great Part of the Enemy's Fleet. With this Assurance he advanced towards the *Mexicans*, to let them see he did not decline Battle; and then ordered his Men to lie upon their Oars, and rest; that they being refreshed, he might break in upon the Enemy with the greater Force; for the Calmness of the Day left the whole to the Labour of the *Mexicans*, who did the same, and perhaps, for the same Reason; but of a sudden there came a Land-Breeze, which taking the Brigantines astern, gave them all the Force that was necessary to fall upon the *Mexicans*.

They began the Attack with the Artillery, and then the Brigantines made up with Sails and Oars, oversetting all that stood in the Way; the Fire-Arms and Cross-Bows made their Discharges without losing a Shot; the Wind too was favourable, driving the Smoke upon the Enemy, blinding them, so that they were obliged to retire to avoid it; the Brigantines themselves staving the smaller Vessels. The Nobles of *Mexico*, who were in the first 500 Canoes, made some Opposition; but the rest were all Disorder and Confusion, the Canoes running foul upon, and oversetting, one another. The Enemy lost most of their Men, and their Fleet was entirely broke and defeated. The Brigantines pursuing the miserable Remains with their Cannon-Shot, till they forced them into the Canals of the City of *Mexico*. This Victory was of great Moment, on account of the Reputation the Brigantines gained, of being invincible; and because it was a great Discouragement to the *Mexicans*, to see themselves deprived of that Part of their Power, which consisted in the Management and Swiftmess of their Canoes, not for the Number of them that they then lost, which was inconsiderable, in regard of what they had still left; but because they were convinced that they were incapable of sustaining the Shocks of the Brigantines.

19. The Night was passed but indifferently; and in the Morning, when the Brigantines were preparing to sail for *Iztapalapa*, they discovered a considerable Number of Canoes, that were making the best of their way towards *Cuyoacan*; whereupon he resolved to succour that Place first where it was immediately wanted. It was not possible to come up with the Enemy's Fleet. But he arrived soon after them, at the Time when *Olid* was engaged on the Causeway, and obliged to make a Front against the Enemy that defended it, and to the Canoes on each Side, and was on the Point of retiring, and losing the Ground he had gained. Necessity taught the *Mexicans* as much as the Art of War could have done for the Defence of their Causeways: They had drawn up towards the City the Bridges that were over the Passages, by which the Waters of the great Lake discharged themselves into the other, and fixed Timber and Planks behind them, in such a Manner, that they might mount in Ranks, to charge from the Top; they left Trenches, at proper Distances, with Water running before them, which obstructed the Access. After this Manner they had fortified the three Causeways attacked by the *Spaniards*, who, in each, were obliged to take almost the same Measures to overcome the same Difficulties.

The Fire-arms and Cross-bows played upon those who appeared above the Trench, whilst others handed Fascines to fill the Ditch, after which they brought up a Piece of Artillery, and in a few Discharges cleared the Passage, filling up the next Ditch with the Ruins of its own Fortification. *Olid* had just made himself Master of the first Ditch, when the *Mexican* Canoes arrived. But, on Sight of the Brigantines, all those on that Side fled with

the utmost Diligence, and none suffered but those who could not get out of the Reach of the Cannon. But because the *Mexicans*, on the other Side, who thought themselves secure, continued the Engagement, *Cortes* ordered the Ditch in the Rear of *Olid* to be widened, to make a Passage for three or four Brigantines; at the first Sight of which all the Canoes fled, and the Enemy who defended the next Bridge, finding themselves exposed to the great Shot from both the Land and the Water, retired in Disorder to the last Rampart next the City.

That Night the Troops took rest, without abandoning the Ground they had gained upon the Causeway, and the next Morning continued their March, with little or no Opposition, till, coming to the last Bridge, which was at the Entrance into *Mexico*, they found it fortified with stronger Works, Trenches cut in the Streets, and defended by such a Multitude of People that the Enterprize seemed hazardous, but the Difficulty did not fully appear till they were engaged. The Artillery from the Brigantines made a miserable Slaughter of the People, who were in Crowds, in the Openings of the Streets, whilst *Olid* was employed in filling up the Ditch, and ruining the Fortifications of the Causeway, which, when he had done, he charged the *Mexicans*, who defended them, making room for the confederate Troops, under his Command, to come up. The Enemy, at the same Time, were supported by Troops from the City, and made an obstinate Resistance on all Sides, but they soon lost some Ground; and then *Cortes*, who could not bear the Slowness with which they retreated, landed with thirty *Spaniards*, and gave so much Life to the Attack, that the Enemy quickly turned their Backs, and the chief Street of *Mexico* was gained.

Another Difficulty occurred; for the *Mexicans* that fled had possessed themselves of a Temple near the Entrance of the City, covering all the Outside with such Numbers of Men, that the whole Building appeared like a Hill of Arms and Feathers. They defied the *Spaniards* with as much Boldness as if they had been always Conquerors. *Cortes*, provoked at their Pride, when they had just before shewn so much Cowardice, ordered three or four Pieces of Artillery to be landed; the first Discharge whereof made them sensible of their Danger, and the *Spaniards* were soon obliged to point their Cannon lower, against those that fled to the inner Part of the City. Thus all that Part of the City was forsaken; for those who fought from Windows and the Tops of the Houses went off with the rest, so that the Army advanced, and the Temple was gained without Opposition. That Day the *Mexicans* sustained a very great Loss of Men. The Idols were cast into the Fire, and served to make Illuminations for the Victory.

Cortes was satisfied that he had gained Footing in the City; and, finding the Temple capable of more than ordinary Defence, he not only resolved to lodge his Troops there that Night, but had Thoughts of maintaining that Post, to streighten the Enemy, and of removing his Quarters from *Cuyoacan* thither. He communicated his Design to his Captains, but they opposed it with such Arguments that *Cortes* was convinced, and accordingly, the next Day, he retired to *Cuyoacan*, protected on each Side by his Brigantines; so that the Enemy durst not disturb his March. The same Day he proceeded to *Iztapalapa*, where he was put to the last Extremity: He had possessed himself of the Buildings on the Land, and lodged his Army there, fortifying himself the best he could; but the Enemy, who retired to that Part in the Water, endeavoured from their Canoes to do him all the Damage they could. *Sandoval* had made great Havock among those that approached, ruined some Houses, and had overthrown two or three Succours from *Mexico*, that came to attack him by Land: And that Day the Enemy forsaking a large House, which was but a little from the Land, he resolved to seize it, in order to enlarge his Quarters. He made a Passage with Fascines, and got into the House with some of his People; but he had scarce entered when a great Number of Canoes, which had lain in ambush, advanced with a Multitude of People, who threw themselves into the Water, and, taking away the Fascines, cut off *Sandoval's* Retreat, by which

which Means they besieged him on all Sides, shooting from the Terraces and Windows of the neighbouring Houses. He was in this Distress when *Cortes* arrived, who, discovering that vast Number of Canoes in the Water-streets that looked towards *Mexico*, made his Brigantines advance with all possible Speed, and played his Artillery with such Effect, that, terrified by the Destruction the Balls made, they all fled at once through the most retired Streets in the Town, with a Design to get through into the Lake; and such was their Disorder, that the People who were upon the Terraces, crowding into the Canoes, sunk many of them, and the rest in their Flight fell in among the Brigantines.

The *Mexicans* sustained such a Loss that Day, as diminished their Forces considerably; and the *Spaniards*, afterwards taking a View of that Part of the City they possessed themselves of, made some Prisoners, and found a sufficient Booty to please the Soldiers. *Cortes* perceived by the Difficulties which *Sandoval* had met with at *Iztapalapa*, that it was impossible to make Use of the Causeway without first ruining that half of the City which was the Retreat of the *Mexican* Canoes; and because this would occasion a Delay which might be of dangerous Consequence to the other Attacks, resolved to quit that Post, and dispatch *Sandoval* to possess himself of *Tapeaquilla*, where there was another narrow Causeway, less commodious for attacking, but more advantageous for cutting off the Enemies Provisions, which they began to want, and which were brought that Way. This Design was immediately put in Execution, and *Sandoval* marched by Land, escorted by the Brigantines, till he had got Possession of the new Quarters; the Place was forsaken, and he lodged himself there without Resistance. Afterwards *Cortes* failed to *Tacuba*; *Alverado* found this City deserted, and in his further Progress he met with various Successes; he beat down the Works, and filled up the Ditches in the same manner *Olid* did; but though he did the Enemy considerable Damage, and had once advanced so far as to fire some Houses in *Mexico*, he had lost eight *Spaniards* when *Cortes* arrived, who found the Measures he had taken did not answer his Designs; for this Way of attacking and retreating consumed his Time, and exposed his Men, without any Advantage, and was rather doing Acts of Hostility than making any Progress.

To proceed by the Causeways was very difficult, by reason of the Ditches, which the *Mexicans* were fortifying every Day, and the continual Persecutions of the Canoes, which always charged in great Numbers wherever the Brigantines quitted; for which Reason he was obliged to think of other Measures for the facilitating of his Enterprise. He then commanded all Attacks to cease till farther Orders, and applied himself to the providing such a Number of Canoes as might secure him the Dominion of the Lake, to which End he sent such Persons as he could confide in, to bring all the Canoes that remained in the Towns of his Allies; with which, and those that came from *Texcuco* and *Chalco*, he made up such a Number as gave fresh Terror to the Enemy: He divided them into three Squadrons, all managed by *Indians* who knew how to conduct them, under the Command of Captains of their own Nation; and, having distributed this Reinforcement among the Brigantines, he sent four of them to *Sandoval*, four to *Alverado*, and himself with the other five joined Colonel *Olid*.

20. Upon this Occasion the *Mexicans* not only shewed Valour, but added military Skill; for they stood in need of new Inventions, against an Invasion by a People whose Weapons, and Conduct in War, were unknown in their Country; and they gained some Advantages, by which they raised the Reputation of their good Service: They sent, by round-about Ways, Canoes full of Pioneers, to clear the Ditches which the *Spaniards* had been filling up, that they might fall upon them with their whole Force when they should be obliged to retire, a Stratagem which occasioned the Loss of some Soldiers in the first Attacks. By degrees they brought out another Stratagem still more remarkable; for they acted contrary to their Custom, and made some Sallies by Night, only to alarm the Enemies, and fatigue them by want of Sleep, that they might afterwards at-

tack them with the Advantage of fresh Troops; but nothing shewed their Ingenuity more than what they contrived against the Brigantines, by engaging them separate; for which End they built thirty great Vessels of that sort which they called *Piraguas*, but of a larger Size, and strengthened with great Planks, to receive the Shot, and engage under better Shelter. They sallied in the Night with this Fleet, to post themselves behind the Reeds in the Lake, which grew so high and thick, that they formed as it were several Groves impenetrable to the Sight.

Their Design was to draw thither the Brigantines, which cruized, about two at a time, to prevent any Relief getting into the City; and to entice them into that Wood of Reeds they had provided three or four Canoes laden with Provisions, having likewise fixed a good Number of large Stakes in the Water, in hopes to destroy the Brigantines, or to make it easier to board them. These Contrivances sufficiently shewed, that they knew how to defend themselves and offend their Enemies, and that they wanted not those Subtilties. The next Day, four of the Brigantines that attended *Sandoval* were to cruise about that Part, under the Command of the Captains *Barba* and *Portilla*. As soon as the *Mexicans* spied them, they sent out their Canoes another Way, that, being seen at a Distance, they might fly among the Reeds: Which was so well executed, that the two Brigantines pursued the Prize with the utmost force of their Oars, and soon fell in among the hidden Stakes, where they were so embarrassed, that they could neither go forward nor backward. At the same time the Enemies *Piraguas* came out, and attacked them on all Sides with such desperate Fury, that the *Spaniards* were very near being lost.

But, exerting the utmost Efforts of their Courage, they maintained the Fight until such as were expert Swimmers, with Hatchets and other Tools, removed those Stakes amongst which the Brigantines were fastened; and, being thus at liberty to work their Vessels, and play the Artillery, they sunk most of the *Piraguas*, and followed the rest as far as Cannon-ball would reach. The *Mexicans* suffered exceedingly, but the Brigantines were much damaged, several *Spaniards* wounded, and all much fatigued: Capt. *Portilla* was killed, to whose indefatigable Bravery the Success was chiefly owing, and Capt. *Barba* received several Wounds, of which he died three Days after: Both these Losses *Cortes* greatly lamented, and particularly that of *Barba*, for in him he lost a Friend ever steady, and a brave Soldier. It was not long before this Disaster was revenged; for the *Mexicans*, having repaired their *Piraguas*, and reinforced them with new Vessels of the same Kind, concealed themselves a second time among the Reeds, fortifying the Avenue with a great Number of Stakes, believing the *Spaniards* would again fall into the same Snare, without their giving a different Colour to the Deceit. *Cortes*, having Intelligence of this Motion of the Enemy, and being desirous of revenging the Loss he had sustained, as soon as he could ordered six Brigantines, in the Night, amongst another Parcel of Reeds, not far from the Place where the Enemy had hid themselves; and, making Use of their own Stratagem, one of them was to sally early in the Morning, as if in search for the Canoes laden with Provisions, and afterwards draw as near the concealed *Piraguas* as was necessary, to let them see they were discovered; which done, she was to tack, and by a hasty Flight to draw them to the Place of the Counter-ambuscade: Every thing succeeded as could have been wished: The Enemy sallied with their *Piraguas* in Pursuit of the Brigantine which they looked upon as their own, till, being come within a convenient Distance, the other Brigantines rushed out, and, before they could stop or turn, gave them such a terrible Salute with all their Artillery, that the very first Discharge overset best part of them, and put the *Mexicans* who were on board the rest, into such a Consternation, that before they could recover themselves almost all the *Piraguas* were sunk by the next Volleys, and most of the Men perished; so that the Enemies Fleet was entirely ruined; and *Cortes* had the singular Satisfaction of having given them a Defeat by their own Stratagem.

The *Spaniards* had Intelligence of what passed in the City, by the Prisoners they took; and finding that Hun-

ger and Thirst, and Want of all Necessaries, began to occasion Murmuring among the People, and Difference among the Soldiers, *Cortes* applied himself with the greatest Diligence to cut off all Relief from the City; and, to justify his own Proceedings, he sent two or three Noblemen, who were Prisoners, to *Guatimozin*, with Overtures of Peace, on very advantageous Conditions; offering to leave him in full Possession of his Empire, provided he would only acknowledge the sovereign Dominion of the King of *Spain*, whose Right was already owned among the *Mexicans*, from the Tradition of their Ancestors, and the Consent of several Ages. This was the Substance of his Proposal, which he repeated, because it grieved him to destroy so beautiful and so wealthy a City, which he looked upon as a rich Jewel in his Sovereign's Diadem.

Guatimozin received the Proposal with somewhat less Pride than he was wont, and, as several Prisoners reported, he called a Council of his chief Officers and Ministers, with the Priests, whose Opinions were principally considered in all public Affairs, in which he laid before them "the miserable Condition to which the City was reduced, the Numbers they had lost, the Complaints of the People upon their beginning to want, the Destruction of their Habitations, and desired their Advice, expressing as much Inclination to Peace as was sufficient to give room for their Flattery or Respect to second him."

This so far succeeded, that all his Officers and Ministers concluded immediately to receive the Overtures towards an Accommodation, leaving it till afterwards to consider of such particular Conditions of Peace as would be most for the Interest of the State: But the Priests positively oppos'd all Treaty, feigning to have receiv'd some Answers from their Idols, which gave them fresh Assurance of Victory. The Opinion of the Priests so far prevailed, that all who had Votes concurred with them; and *Guatimozin*, not without much Regret, because he had already begun to preface his own Ruin, resolved to carry on the War, and said to his Ministers, "That he would put to Death the first Man who should presume again to mention Peace, to whatever Distress the City should be reduced, without excepting the Priests themselves, who were most obliged to support the Oracles of their Gods." *Cortes*, being informed of this Determination, resolved to push his Attacks by all the three Causeways at the same time, and carry Fire and Sword into the very Heart of the City, and sending his Orders to the Commanders of the two Attacks of *Tacuba* and *Tapeaquilla*, he, at the Time appointed, marched himself by the Causeway of *Cayoacan*, at the Head of the Troops commanded by Colonel *Olid*. The Enemy had cleared the Ditches, and cast up Works; but the five Brigantines which were stationed upon that Attack easily overthrew their Fortifications at the Time the Ditches were filling up, and the Army advanced without any considerable Opposition, till coming to the last Bridge, which opened upon the Quay, they met with another sort of Difficulty.

The *Indians* had broke down some part of the Causeway to enlarge the Ditch, which was sixty Feet long, and turned into it the Water of the Canals, that it might be the deeper. On the opposite Bank, they had raised a Fortification covered with Planks, in which were Rows of Loopholes with some sort of Traverses; and they had provided a Multitude of Men to defend that Post: But the first Discharges of the Artillery destroyed all that Fortification, and the Enemies, having suffered much by the Fall thereof, and finding themselves exposed to the Balls, retired into the City, without turning their Backs or abating their Threats. Thus they left the Shore free, and *Cortes*, unwilling to lose a Moment, immediately ordered the *Spaniards* to possess themselves of it, making Use of his Brigantines and Canoes to land his Men, and the Horse passed the same way with three Pieces of Artillery, which he thought sufficient for that Service.

Before they advanced against the Enemy, who were still posted behind the Trenches made across the Streets, he ordered the Treasurer, *Julian de Alderete*, to stay there and fill up and secure that Ditch, and the Brigantines

to draw near to the Place where the Action was, and do what Damage they could to the Enemy. The first Engagement presently began, and *Julian de Alderete*, hearing the Noise of the Battle, and seeing the Advances of the *Spaniards*, looked upon the Employment of filling up a Ditch to be unworthy of him when his Companions were fighting, and inconsiderately advanced to join the rest, leaving that Charge to another of his Company, who either did not know how to perform it, or else would not take upon him a Piece of Work which was thought dishonourable to him who committed the Care of it to him; so that all the Men under his Command followed him to the Engagement; and that Ditch which at the Time of the Attack had been thought impracticable remained intirely abandoned.

The *Mexicans* resolutely stood the first Charge. It cost the *Spaniards* no small Trouble and some Blood, to make themselves Masters of their Trenches; and the Hazard was still greater when they had passed the ruined Buildings, and were obliged to defend themselves from the Arrows and Darts of the Enemy, which came pouring on them from the Tops of the Houses and the Windows; but in the Heat of the Engagement there appeared a sudden Slackness in the Enemy, which seemed to be the Effect of some new Order, for they hastily quitted the Ground they had defended. This Change was then supposed, and afterwards appeared, to spring from *Guatimozin's* being informed that the great Ditch was abandoned; whereupon he ordered his Commanders to preserve their Troops, and to fall upon the *Spaniards* in their Retreat.

Cortes suspected this Motion of the Enemy, and, in regard that he had but barely time enough to return to his Quarters before Night, he began his Retreat, ordering first some Houses to be set on fire, in order to prevent their receiving any Damage from them on the next Attack; but they had scarce began to march, when their Ears were stunned with the melancholy Sound of the Sacred Trumpet, so called by the *Mexicans*, because it was not permitted to any but the Priests to sound it, and that only when they animated the People on the Part of their Gods: The Sound was vehemently loud and strong, and the Tune composed of dismal Notes, which inspired those *Barbarians* with a new kind of Rage, such as made them despise Life, through a Motive of Religion. Next followed the intolerable Noise of their hideous Outcries; and, when the Army marched out of the City, they fell upon the Rear, which was brought up by the *Spaniards*, an incredible Multitude of their most resolute Warriors being picked out of the whole Army, for this Action.

The Fire-arms and Cross-bows faced about, and made Head; and *Cortes*, with the Cavalry, endeavoured to put a stop to the Enemy; but, being informed of the Difficulty of the Ditch, which hindered the Retreat, he would have formed his Battalions, and could not; because the Confederates, who had received Orders to retire, being the first that came to the Ditch, hastily threw themselves into it, in the greatest Confusion; so that his Orders were not heard, or not obeyed. Many got to the Causeway in the Brigantines and Canoes, but more threw themselves into the Water, where they found whole Troops of *Mexicans*, who either wounded or drowned them. *Cortes* was left with some of his own People to maintain the Fight, his Horse was killed under him, and Captain *Guzman*, alighting to give him his, was taken Prisoner, without Possibility of being rescued. *Cortes*, at last, got to the Brigantines, and returned to his Quarters, wounded and defeated: Above forty *Spaniards* were taken alive, to serve as Sacrifices to their Idols; one Piece of Cannon was lost; above a thousand *Tlascalans* were killed; and there was scarce any one *Spaniard* that was not hurt. This was, in reality, a very terrible Blow, of the Consequence of which *Cortes* was very sensible; but he would not suffer his Countenance to speak the Grief of his Heart: On the contrary, he appeared, if not cheerful, serene; and tho' not gay, yet tolerably composed.

While *Cortes* was employed in this Attack, *Sandoval*

doval and *Alverado* entered at the same time, and met with the same Opposition, with very little Difference in the Success of their Attacks: But they did not meet with the Misfortune of the Ditch, and therefore their Loss was less; though in both Attacks they lost about twenty *Spaniards*, which makes up the Account of above sixty of his own People, in the Action of *Cuyoacan*. The Treasurer *Alderete*, considering the Damage which his Breach of Orders had occasioned, was sensible of his Offence, and hastened to the General's Presence with much Sorrow, offering his Head to atone for his Crime. *Cortes* gave him a severe Reprimand, without any farther Punishment; not thinking it proper, at that Juncture, to discourage the Soldiers, by inflicting upon that Officer, the Chastisement which he merited. Upon this Occasion they were very sensible, says a *Spanish* Author, of the singular Gift of a private Soldier, *Juan Gatalan*, who, without any other Medicine than a little Oil, and certain Benedictions, cured their Wounds in so short a time, that it did not look like the Work of Nature.

21. The *Mexicans* celebrated their Victory with great Rejoicings, and that Night the *Spaniards* saw, from their Quarters, all the Temples of the City crowded with innumerable Lights, and Vessels of Perfumes; and in the principal Temple, dedicated to the God of War, they heard the Sound of military Instruments in several Concerts, which were not altogether disagreeable. With these pompous Preparations they celebrated the Sacrifice of those miserable *Spaniards*, who were taken alive; the Blood of whose leaping Hearts, still warm, was sprinkled upon their Idol; while these wretched Victims, with their last Breath, were calling upon the God of Truth. This was supposed to be the Occasion of that extraordinary Solemnity; and the Fires gave so great a Light, that the Motion of the People was perceived. The Advantage they had gained, joined to the Satisfaction of having appeased their God of War, by the Sacrifice of so many *Spaniards*, so far raised the Pride of the *Mexicans*, that the very same Night, a little before Break of Day, they advanced by the three Causeways, to beat up the Quarters, with a Design to set fire to the Brigantines, and to compleat the Destruction of those People; whom they, with good Reason, concluded to be either wounded or spent with Fatigue; but they knew not how to conceal their Motion; for the infernal Trumpet, which inspired them with so much Fury, turning their Despair into religious Worship, gave Notice of their Approach, and the *Spaniards* were so well prepared to receive them, that they were repulsed by the Artillery of the Brigantines, and some Pieces which were mounted at their Lodgment; which, playing upon the Causeway, upon those throngs of People, sufficiently chastised their Presumption.

The next Day *Guatimozin* employed several Artifices to intimidate the *Indian* Allies; he gave out that *Cortes* had been killed in his Retreat on the Causeway, thereby giving the People Hopes that they should shortly be delivered from their Oppressions: He sent the Heads of the sacrificed *Spaniards* to all the neighbouring Towns, that those Tokens of his Victory might bring such as had fallen off from him, back to their Obedience: And lastly, he reported that their supreme Deity, the God of War, being appeased by the Blood of these their Enemies, had informed him by an intelligible Voice, that the War should be at an End in eight Days, and, that all should infallibly perish who neglected this Advice. This he invented, concluding that he should quickly make an End of all the *Spaniards*; and he found Means to send several Persons unknown, into the Enemies Quarters, who spread these Threatenings among the *Indian* Nations which served against him.

The Oracles of that Idol had such Reputation among the most distant Nations, that the *Indians* were persuaded of the Infallibility of these Threats: The Notion of eight Days so precisely limited for the fatal Period of their Lives, had such an Effect, that they resolved immediately to quit the Army; and, during the two or three first Nights, the greatest Part of the confederate Troops deserted, even the *Tlascalans* and *Tezcucans* dis-

banded with the same Disorder, either because they really feared the Oracle, or that they were led away by the Example of those who did. This was a fresh Affliction unto *Cortes*, almost causing him to despair of the Success of his Enterprize. But the Moment that he was informed of the Occasion of that sudden Change, he sent their own Commanders after the Fugitives to stop them; delaying till the eight Days assigned by the Oracle being past, they might be sensible of the Imposture of the Prediction, and better disposed to return to the Army.

22. This notable Contrivance of *Cortes* had the desired Effect; for when the eight Days were expired, the *Indians*, having fully recovered from their Fright, returned to their Quarters with fresh Vigour and Resolution. Don *Hernando*, Prince of *Tezcuco*, sent his Brother to bring back those of his Nation, who returned with him, and some new Levies that were coming to join the Army. The *Tlascalan* Deserters did not dare to proceed on their Journey, for fear of exposing themselves to Punishment, but waited to see the Event of the Prediction, with a Design to join such of their Nation as should have the good Fortune to escape after the imaginary Defeat; but at the time they were undeceived of their Credulity, they had an Opportunity of incorporating themselves with a Reinforcement that was coming from *Tlascala*, and were better received in the Army upon their Return. The Noise this Increase of Forces, and the Distress of the capital City, made in the neighbouring Countries, prevailed with several Nations who had been Enemies or Neuters, to declare in Favour of the *Spaniards*. One of the most considerable, was the Nation of *Otomies*, a fierce unnatural People; who, after the Example of Beasts, preserved their Liberty amongst Mountains, and had hitherto kept themselves free from the *Mexican* Empire, without any other Fortification than the Sterility of their Country, which afforded no Temptation to a Conqueror.

Thus *Cortes* once more found himself at the Head of an Army, of upwards of two hundred thousand Men, passing in a few Days from a terrible Storm to an agreeable Calm. The *Mexicans* were not idle during this Suspension of Arms, to which the *Spaniards* were reduced. They made frequent Sallies, beating up the *Spanish* Quarters both by Night and Day, and were always repulsed with Loss. By some of the last Prisoners, *Cortes* was informed of the great Distress the City was in; that the Soldiers were dissatisfied, and the People reduced to Extremity for want of Bread and Water; that abundance of People died by drinking the brackish Water of their Pits, and that the Provisions they got by Canoes were equally divided among the Nobles, and became the Subject of Impatience and Discontent to the Populace, whose Clamours began to give some Suspicion of their Fidelity. Upon which Intelligence *Cortes* assembled his Captains to consult what was proper to be done. He represented the small Hopes he had that Want would oblige the Besieged to surrender, because of the implacable Hatred they bore the *Spaniards*, and of those pretended Answers of their Idols. He gave his own Opinion to proceed immediately to Action, for the Reasons he had alledged, and for fear the Allies should again desert him. And it was also resolved not to retire as before, but that each of the *Spanish* Corps should endeavour to make their Quarters good in that Part of the City, into which they should be able to penetrate.

The General, after this Resolution was taken, and having made Provision necessary for the Subsistence of his Troops, in a City where all things were wanting, caused the Forces, at the dawning of the appointed Day, to march out of their respective Quarters; *Alverado* from *Tacuba*, *Sandoval* from *Tapeaquilla*, and the General, with the Body of Troops, commanded by *Olid*, from *Cuyoacan*; each having his Brigantines and Canoes to support him. They found all three Causeways in a posture of Defence, the Bridges drawn up, and the Ditches all cleared and guarded. All these Difficulties they surmounted with the same Industry they had done others, and, after some small Delay, the three Bodies arrived in the City; and soon gained the ruined Streets. All the *Spaniards* attempted the first Day was, only to lodge themselves, each

Body

Body fortifying their Quarters with the Ruins of the Houses, in the best Manner they could.

This caused great Confusion among the *Mexicans*, and entirely broke all the Measures they had taken to charge the *Spaniards* in their Retreat. The Rumour of it was soon spread, the Danger greatly magnified, and every one's Thoughts was employed about providing some speedy Remedy. The Ministers instantly repaired to *Guatimozin's* Palace, and, by their pressing Intreaties, prevailed with him to retire that very Night to a more distant Part of the City. Councils were continually held, and the Opinions were different, being either bold and resolute, or timorous and dejected, according as the Understanding followed the Dictates of their Hearts; some voted that the King, for the Security of his Royal Person, should be immediately conveyed to some Place less exposed; others for fortifying that Part of the City where the Court then was, and others pressed hard to dislodge the Enemy from the Posts they possessed. *Guatimozin* inclined to the Advice of those who expressed the greatest Resolution; so that he declared he was fully determined to share his Fate with his People; and that Moment gave Orders that Preparations should be made to attack the Enemy at Day-break, with the Remainder of his Forces. To this Purpose the Chiefs, with all possible Expedition, assembled all the Troops, which were divided into three Battalions, with a Design of exerting their last Strength in this Effort, to the total Destruction of the *Spaniards*.

Soon after dawning, the Enemy presented themselves within Sight of the three Lodgments; but the Artillery which played upon the Avenues, made such a terrible Slaughter in their Van-guard, that they durst not advance to put their Orders in execution, and were soon convinced that their Attempt was wholly impracticable; so that without venturing nearer they began to give back, endeavouring to make what was in reality a Flight, looked upon as an orderly Retreat. But the Motion, as it was slow, gave the *Spaniards* an Opportunity to rout and disperse the Enemy, and bettered their Quarters for the ensuing Night. All was so happily and so expeditiously effected, that in less than four Days the three Leaders came in Sight of *Tlateleuco*, whither they had all directed their Course. *Alverado* was the first that came to that spacious Square, where he found the Enemy endeavouring to draw up in order of Battle: But he gave them not time, neither was it an easy Matter for *Indians*, when once in Disorder, to return to a Charge; so that, at the very first Onset, they abandoned the Ground, and in great Confusion retired to the Streets on the opposite Side. *Alverado* observed that there was at a small Distance a very large Temple, the Towers whereof were possessed by the Enemy; and thereupon he immediately detached some Companies to drive them from thence, in order to secure his Rear; which Orders they soon performed. Soon after came up, by a different Avenue, the Detachment belonging to *Olid*, but then under the Command of *Cortes* himself; and the confused Throng of *Mexicans* that fled before him into the Square, fell in upon the Battalion which *Alverado* had drawn up in order of Battle; where these Wretches being attacked on every Side, most of them perished, and the like Fate attended those who were driven by *Sandoval*, who presently after arrived.

Those of the Enemy who had retired to the Streets which led to the other Parts of the City marched with the utmost Precipitation, to defend the Person of their Prince, whereby the *Spanish* General had an Opportunity to lodge himself to the best Advantage, without any Interruption, ordering the Brigantines and Canoes to ply about the three Causeways, and to give him Notice of what should occur. The next Morning all the Streets were filled with armed *Indians*, but they were posted there only to cover those who were working upon the Fortifications, which were making for their Retreat; and *Cortes*, perceiving that they did not attempt by any Hostilities to provoke him, suspended the Attack which he at first had determined, being inclined to offer them Peace, as supposing they might be now disposed to an Accommodation. The Message was carried by three or four principal Pri-

soners, and *Cortes* was impatiently waiting for an Answer, as not doubting but the Proposal would be gladly received; because it was observed that those Multitudes of the Populace who were wont to be always ready to defend the Streets, were entirely withdrawn. The Quarter to which *Guatimozin*, with his Ministers and Soldiers was retired, was a very spacious Angle of the City, the greatest Part whereof was defended by the Lake, and the rest was at no great Distance from the great Square of *Tlateleuco*; and it was fortified by a strong Wall made of huge Planks and Fascines, which reached the Buildings on each Side of those Streets, before each of which was a broad and deep Ditch, full of Water, which they had dug across the Streets, to give a Current to the Waters of the Canals.

The ensuing Morning *Cortes*, followed by the greatest Part of the *Spaniards*, marched to view the Ground which the Enemy had forsaken, and advanced till he came within Sight of these Fortifications, which he found covered with an incredible Multitude of Men in Arms; but who seemed to be disposed to Peace, for they neither founded their warlike Instruments, nor made any Outcries. The General drew back, and returned several times with the *Spaniards* without offering to molest them: And it appeared that the *Mexicans* had orders to do the like. During the three Days Suspension of Arms, *Guatimozin* held several Councils to deliberate on the Overtures of Peace, and the Majority voted the admitting the Treaty, sensible of the miserable Condition to which they were reduced, while others, conforming their Sufferings to the Inclination of their Sovereign, shewed themselves willing to continue the War; but the detestable Priests supported the lesser Number, assuring Victory with dark and mysterious Menaces, and inspired the whole Assembly with the same diabolical Fury which possessed their own Breasts. Upon this it was resolved to prosecute the War, and to renew their Hostilities, while *Guatimozin*, before he broke up the Council, gave Orders that all the Piraguas and Canoes should retire to a Bay which the Lake made in that Part of the City, in order to secure a Retreat, in Case they should be driven to Extremity.

This Order was instantly put in Execution, and an incredible Number of these Vessels made to that Bay, of which Motion immediate Notice was sent from the *Spaniards* who were upon the Lake, to *Cortes*; who, without Hesitation, presently concluded, That the *Mexicans* were using these Precautions, with no other View than to secure their Prince's Person. Hereupon he appointed *Sandoval* for Commander in chief of all the Brigantines, with Orders to surround the Bay at a Distance, and to have a watchful Eye upon whatever Motion the Enemy should happen to make. Soon after he advanced with his Troops, but the Enemy had already received Orders to defend themselves; and, before the *Spaniards* came up, the *Indians* declared the Breach of the Treaty by their hostile Cries; and, with a steady and resolute Countenance, prepared for the Encounter; but it presently appeared that their Courage began to fail them, for they no sooner perceived the terrible Havock which the first Discharge of the Cannon made in their wooden Fortification, which they foolishly imagined to be impenetrable; but they sent Notice thereof to *Guatimozin*, for it was not long before they made Signs of demanding a Parley, by hanging out white Cloths, and frequently repeating the Word *Peace*.

They were given to understand, that whoever had any Proposal to offer from their Prince, might approach; upon which, four *Mexicans*, who seemed to be Persons of some Note, appeared on the further Side of the Ditch: These Deputies, upon a Motion made by *Cortes*, promised, in the Emperor's Name, that he should confer with him the next Day; and then brought an Excuse; which Method they pursued for four Days together, while *Guatimozin*, who never intended any such thing, was preparing to make his Escape by the Lake.

23. The Day being come, which *Cortes* had appointed as the utmost Period he would allow, *Sandoval* discovered at the Dawn of the Morning Multitudes of *Mexicans*,

Mexicans, with all imaginable Diligence, embarking on board the Canoes which were in the Bay, upon which he approached them slowly, and then the Canoes of the Enemy, on board of which were the Nobility and all the principal Persons of the City, began to move, having unanimously resolved to make their last Efforts, and at all Hazards to maintain the Fight, till their Prince had made his Retreat, after which they were to follow him by several Ways. Accordingly they put this Design in Execution, attacking the Brigantines with Vigour: But, at the same Time that the *Mexicans* were engaging with such extraordinary Fury, *Sandoval* observed, that from the farthest Part of the Bay six or seven Piraguas, with the utmost Force of Oars, were making the best of their way, upon which he ordered Capt. *Garcias de Holguin* to chase them with his Brigantine, and endeavour to take them.

That Captain, without losing a Moment's Time, used such Diligence that he soon overtook them; when turning the Head of his Brigantine, he fell in upon the foremost Piragua, which seemed to command the rest. They all at once ceased rowing, and lay upon their Oars, when they found themselves attacked, and some of those who were in the first Piragua called out to the Brigantine not to fire, saying, his *Mexican* Majesty was on board that Vessel, which Words were interpreted by some *Spanish* Soldiers, who began to have a Smattering of the *Mexican* Language. Upon this the Brigantines boarded the Piragua, into which *Holguin*, with some *Spaniards*, immediately leaped in order to secure their Prize. *Guatimozin* instantly advanced, and distinguishing the Captain, by the Respect paid him by the rest, said, "I am your Prisoner, and ready to go whither you think fit to conduct me: All I have to desire is, that some Regard may be had to the Honour of my Confort, and to that of the Women who accompany her."

He then passed into the Brigantine, and gave his Hand to that Princess to help her up, and was so much Master of himself, and so far from being in any Consternation, that, perceiving *Holguin* to be in some Concern about the other Piraguas, he with great Sedateness of Countenance added, You have no Occasion, Sir, to give yourself any Trouble concerning those, for they will all come to die at the Feet of their Prince; and upon the first Signal he made them, they let their Weapons drop out of their Hands, and followed the Brigantine as Prisoners. *Sandoval* was all that time hotly engaged with the Canoes, and by the Resistance he met with, he became sensible of the Quality of those who defended them, and of the Courage and Fidelity of the *Mexican* Nobility, who, at the Hazard of their Lives, had undertaken to secure their Prince's Liberty. But they soon had Notice of his being taken, and then their loud military Cries were converted into less noisy Lamentations. *Holguin* came up at the same Time, having first dispatched a Canoe with the News to *Cortes*, and, without bearing down too near upon *Sandoval's* Brigantine, he gave him as he passed by a brief Account of what had happened, but perceiving he was desirous of taking care of that important Prisoner, he made the best of his Way, lest *Sandoval* should send him an Order to that Purpose.

As soon as this News was brought him, *Cortes*, lifting up his Eyes towards Heaven, as acknowledging the supreme Author of all his Success, ordered two Companies of *Spaniards* to the Landing-place, to guard the Royal Prisoner, and then went himself to receive him not far from the Quarters, which he did with great Respect, Signs and Gestures serving instead of Words, to which *Guatimozin* made a Return in the same Manner, endeavouring to conceal the Agitations of his Breast by a forced Complaisance.

Guatimozin was about twenty-four or twenty-five Years of Age; so brave, that he had, by his Exploits and Victories in the Field, risen to those Honours which qualified the Nobles to ascend the Throne. He was as to his Person well proportioned, tall, robust, and strong built, and of so fair a Complexion, that among those of his own Nation he looked like one of a different Climate. The Empress, who was about the same Age, by the Gracefulness of her Carriage attracted the

Eyes of all, but her Beauty was rather majestic than delicate; she was Niece to *Motezuma*, or, as some say, his Daughter; which when *Cortes* understood, he renewed the Offers of his best Service, professing himself obliged to pay to the Person of that Princess the Veneration he owed to the Memory of that Monarch. This great Event happened on the 13th of August 1521, and therefore we may from thence date the Dominion of the *Spaniards* over this Empire. The Captive Emperor sent his Orders to his Subjects to lay down their Arms, and to submit to him who had their Monarch in their Power, which they accordingly did, and thereby put an End to the War for the present.

The kind Usage given at first to the Emperor *Guatimozin* did not last long, but the Change made in his Treatment did not properly arise from *Cortes* himself, but from the Soldiers, who, remembering what vast Quantities of Gold they had formerly seen in the Possession of *Motezuma*, demanded an Account of what was become of them; and when *Cortes* very truly protested that he knew as little of them as they did, they grew so furious and insolent, as to suggest that he had secretly secured them for his own Use. They were so much the bolder in this Matter, because they found themselves supported therein by the King's Treasurer *Julian de Alderete*, who had great Authority, and who, as he was Nephew to the Bishop of *Burgos*, hated *Cortes* heartily, and inclined to do him all the Mischief he could. This Man, finding that no Account could be obtained of these Treasures, demanded that the unfortunate *Guatimozin*, and his first Minister, should be put into his Hands in order to be examined about them, which in his present Circumstances *Cortes* durst not refuse. The Method this Gentleman took to make them discover what he sought was pretty singular.

He put them upon the Rack, as some Writers say; but as others more truly affirm, caused them to be extended upon burning Coals. The Minister looking upon the Emperor cried out violently, upon which *Guatimozin* said, *Do you think I lie here upon Roses?* Which Reproof struck the poor Creature silent, so that he expired without any farther Complaints. But *Cortes*, hearing his first Cries, broke into the Apartment and released the Emperor, and the Soldiers themselves approved his Conduct, and blamed the Treasurer's Barbarity. This Cruelty had not the designed Effect; for there was no Discovery made of the Treasure for which they sought, which made them almost distracted. They searched all Parts of the Lake to no Purpose, ransacked the Temples without finding much, and tore to Pieces the Tombs, in which indeed they found some little Gold, which *Cortes*, to pacify them, divided amongst them.

24. The Provinces of the *Mexican* Empire that were nearest that Capital immediately submitted to the Conqueror, and *Cortes*, having received Intelligence of the Kingdom of *Mechoacan*, which lies to the Westward of *Mexico*, he first sent *Montano*, with three other *Spaniards* as Embassadors, to visit the King, who at first received them indifferently, though afterwards he treated them magnificently; and went himself to see *Cortes*, who soon after dispatched *Christopher Olid* to take Possession of that Country with an Army, which he accordingly did, and forced the King, who shewed himself displeased with his Proceedings, to fly for Shelter into the Mountains. This great Flow of Success altered the Temper of the *Spanish* General, who began now to discover such Haughtiness and Cruelty in his Disposition, as nothing could justify. *Cortes*, having through this Country penetrated to the South-Sea, erected Forts and built Ships there, for farther Discoveries on that Side, and sent also *Gonzalo de Sandoval* to subdue the Countries near *Tabasco* and *Tecountepec* on the North-Sea; and *Pedro de Alverado*, another Commander, was detached with a Body of *Spaniards* and confederate *Indians* to take Possession of the Countries bordering upon the Vale of *Guaxaca* to the Eastward of *Mexico*, who all submitted to the Conqueror.

While *Cortes* was thus employed in reducing this Country to his Obedience in the Name of the Emperor *Charles V.* *Christopher de Tapia* arrived at *Vera Cruz*,
M m with

with a Commission from that Prince, to command all the new Conquests : But the Garrison *Cortes* had left at *Vera Cruz* so threatened and terrified *Tapia*, that he was glad to make his Escape, and leave the General in Possession of *Mexico*. Having got rid of this Rival, *Cortes* marched in Person to the Province of *Panuco*, which he obliged to submit to him, whereupon he divided the Country and all the *Indian* Inhabitants among the Officers and Soldiers, who treated them as Slaves ; and this was his Practice in every Province, where the People voluntarily submitted to him, or were compelled to it by force. But notwithstanding this bad Behaviour to the Natives, and his refusing to resign his Government to those who were sent to succeed him in his Command, so powerful were the rich Presents he from Time to Time sent to the Emperor, and such were the Representations made to that Prince in his Favour, that *Cortes* was declared Captain-General and Governor of *New Spain* by the Emperor.

The Governor of *Hispaniola* and *Cuba* were commanded to reinforce that General, and give him all possible Assistance : Whereupon, finding himself now established in his Command, he set about rebuilding the City of *Mexico*, which he had burnt and demolished. He assigned Places for building Churches and other public Edifices, laid out Market-Places, divided the best Part of the Ground among the *Spaniards*, and the rest among the Natives, giving them Encouragement to build and people the Place again : He assigned one quarter Part particularly to *Moteczuma*, a Son of the late Emperor, and another to one of the most popular *Indian* Generals, and they soon erected a much finer Town than that which had been destroyed, having now the Advantage of Iron Tools, Carriages and Engines, which they wanted before. But nothing could be more magnificent than the Palace *Cortes* erected for himself upon the Ground where *Moteczuma's* Palace formerly stood, about which 'tis said he used seven thousand Beams of Cedar, some of them 120 Foot in Length ; he also provided himself with a numerous Train of Artillery, consisting of thirty-five Pieces of Brass Cannon, and seventy of Iron, which gave the *Indians* a vast Opinion of his Power ; but that which was his real Strength, and did him most Service, both in *Mexico* and *Europe*, was the prodigious Wealth he acquired by the Plunder of all the Provinces he became Master of, and the rich Mines of Gold and Silver he every Day discovered, or took from the Owners.

All his great Conquests, however, could not procure him Rest, and a peaceable Establishment ; for sometimes he was in Danger from the Intrigues of the *Indians*, who were very desirous of recovering their Country, and driving out or destroying the *Spaniards* : And to put an End to these Contrivances, he, in 1527, found himself obliged to hang *Guatimozin*, and two other *Indian* Princes, whom he had detected in a Conspiracy against him. Sometimes he found no less Uneasiness from the Ambition, Avarice and Malice of some of his own Countrymen. Thus, for Instance, *Christopher Olid*, who had behaved so gallantly in the War against the *Mexicans*, revolted from him, but was soon taken off by a violent Death. *Julian de Alderete*, whom we have so often mentioned, contrived the Murder of *Cortes* while upon his Knees at Mass, which he afterwards confessed to him, and asked his Pardon. At another Time, a Priest, whose Name was *Leon*, formed a Design of blowing him into the Air by setting Fire to a Barrel of Gunpowder, which either by Contrivance or by Chance was placed immediately under his Lodgings. These Accidents shew how fortunate a Man *Hernan Cortes* was.

But how great soever his Courage, his Conduct, or his Success, yet he wanted not many Enemies envious alike of his Merit and his Fortune, and who therefore took abundance of Pains to prejudice the Emperor *Charles V.* against him.

In the Year 1528 *Cortes* found it convenient to return into *Spain*, in order to justify his Conduct against his Enemies. The Emperor *Charles V.* received him with great Respect, gave him the whole Vale of *Atrisco*, with the Towns and Villages therein ; conferred on him the

Title of Marquis of the Vale of *Guaxaca*, and, to complete his Favours, procured him a very honourable Marriage. The next Year he returned to *Mexico* with his Lady, but with a very limited Commission, which turned more to the Disadvantage of the *Spanish* Government, than to the private Loss of the Marquis, who was so much beloved and esteemed in that part of the World, as to stand in no Need of Authority to procure him Respect. He was some time afterwards Captain General, *Mendoza* being Viceroy of the Province, at which Time there happened many private Grudges between them ; but yet they joined together for the finding out a Passage from those Seas to ours, which we properly call the North-West Passage, as also the Conquest of *Ciboa* and *Quivira*, where they were persuaded by certain Friars that the People worshiped the Cross, and had other Tokens of Christianity : But all proved false ; and few *Spaniards* returned Home, their Misery was so great, and the Country so cold and barren, the People cruel, and five hundred Leagues from *Mexico*. *Cortes*, after his taking *Mexico*, sent to discover the northern Parts, and his People arrived in a Country where *Ticoantipe Cician Pipe* was King, who received them kindly, and sent an Ambassador to *Cortes*, thinking he was come out of the Clouds, and that their Vessels were great Whales. They wondered at their Horses, and accepted a friendly Peace, offering *Cortes* fifty thousand Men to assist in conquering *Tutepac*, who was his Enemy, for using the Christians well.

Some new Troubles that he met with in relation to his Discoveries, wherein the Viceroy interfered, inclined him in the Year 1542 to make a second Voyage into *Spain*, where he was received with as much Honour, and yet obtained as little Satisfaction as before. To speak impartially, the Emperor had conceived a kind of Jealousy, that if *Cortes* was rewarded according to his Merits, he would become too formidable for a Subject. The Marquis was a Man of too much Sense and Penetration not to discern the Judgment that was formed of him at Court, when he had resided there but a little while : He was however too wise, and too much a Man of Honour, to think that any Mistakes made by his Prince could cancel any Part of the Duty he owed him. For this Reason he applied himself more assiduously than ever to merit the Emperor's Affections. He attended him in his dangerous and disastrous Expedition against the *Algerines*, and notwithstanding all his former Services, and so low a Commission, as to be without a Voice in the Council of War, being unhorfed in a Charge he made against the Infidels, he is said to have lost in the Field two Emeralds of immense Value. After his return to *Spain* from that Expedition, he affected to lead a quiet and retired Life, employing most of his Time in the Instruction of his Children, of whom he had many both legitimate and illegitimate. His second Wife was the Daughter of the Count of *Aguila*, by whom he had a Son who succeeded him in his Titles, and some of whose Descendants are still remaining. As for the great *Cortes* himself he died at a Village near *Seville*, called *Castilleja de la Cuesta*, on the 2d of December 1554, in the 63d Year of his Age : But his Corpse, by his own Direction, was carried into *New Spain*.

25. In relating the History of this great Event, we have taken in every thing that is material in the best *Spanish* Writers, so that the Reader sees at one View, and in the Compass of a few Sheets, what has filled many large Volumes. When he comes to reflect seriously upon all the Passages herein related, and to consider the Conduct of *Cortes* from first to last, he will certainly be convinced, that this great Man merited the Praises that have been given him, and that he was very much superior to many, if not to most, of the Heroes of Antiquity. It must not however be dissimbled, that notwithstanding his great Abilities and many Virtues, he was far enough from having a Character altogether blameless, or from behaving in a such a Manner as that no Imputation could be fixed upon his Conduct.

If this had been the Case, it is highly probable, he would not have been attacked by *F. Bartholomew de Casas*, Bishop of *Chiapa*, who went over to *Spain* on Purpose

to complain of him, and indeed with good Reason, if what he says be true, that in the Space of twelve Years he destroyed upwards of 4,000,000 of People; but though, without doubt, the Design of this Prelate was very laudable, and he was in himself a Person of a true Christian Spirit; yet there want not many Objections capable of destroying, or at least of weakening, to a very great Degree, the Accusations he has brought against this noble Person. In the first Place, we ought to consider the wide Difference there was between these Peoples Characters; and that a Monk is not, by any Means, a fit Person to decide on the Behaviour of a Statesman and a General. The Principles he maintains are not more destructive of the Character of *Cortes*, than the Characters of all the great Men, who have attempted Discoveries or made Conquests in these Parts of the World; and therefore if we admit his Judgment in its full Extent, we must not only give up the Cause of this great Captain, but of almost all the great Captains in every Age and Country; which will perhaps be thought too great a Sacrifice. In the next Place, we ought to remember that from the very Beginning of his Expedition, our Conqueror was opposed and persecuted by the Bishop of *Burgos* and his Party, not from any Christian Spirit of Moderation and Charity towards the *Indians*, but because he had embraced the Party of *Velasquez*, who certainly meant to do all that *Cortes* did, by Means not at all milder than those which *Cortes* employed; and the Bishop of *Chiapa*, who was of the same Party, may be, in some Measure, suspected of condemning in a Person he disliked, what perhaps he would have excused in one for whom he had a greater Esteem.

We may farther observe, that though this Prelate takes a great deal of Pains to justify the *Indians*, and to lay a heavy Load upon his Countrymen, by alledging, that for one Man sacrificed by the former to their false Gods, the latter offered a thousand Victims to their Goddess *Avarice*; yet, inasmuch as he allows that they did offer human Sacrifices, he, in some Measure, allows the Truth of this General's Relations, and indeed it cannot well be supposed, that a Person of the Spirit and Temper of *Cortes* would write long Letters full only of Lies to the Emperor, his Master; and therefore we ought to make some Allowances for the Provocations he received, and for the Circumstances he was in at a Time he cut off so many *Indians*. What seems to justify our Suspicion that this good Bishop exaggerated, either wilfully or by Mistake, the Cruelty of *Cortes*, is his charging him expressly with massacring in cold Blood all the Inhabitants of the City of *Chulula*, notwithstanding they had given him a very kind Reception.

The Reader has already seen an Account of that whole Transaction, as it is related by the best Historians; and from thence it appears, that *Cortes* inflicted upon that City no greater Cruelties than they meant to have exercised upon him and his Soldiers, and that by a most treacherous Contrivance; and, if this had not been the Truth, one can hardly conceive that the *Indians* that were Confederates with *Cortes*, would have adhered to him so closely as they did, on that and all other Occasions. If he had been really so base and bloody a Person, he could scarce have gained the Affections of so many Nations, or granting that by his artificial Behaviour he might have done this, it would have been impossible for him to have preserved their Affections, as it is evident he did from the very Commencement to the End of the War: Besides, if the Ambition and Barbarity of *Cortes* deserved, in the Bishop's Opinion, no Sort of Favour or Excuse, why should we have more Indulgence for the Pride and Tyranny of *Moteczuma*, who certainly had no better Title than he to trample upon the Rights of Mankind, and to make so many Millions miserable as he did.

These are Things that deserve to be very particularly considered, because they enable us to judge truly and decisively of the Subject under our Consideration, without hesitating in our Opinion, or being doubtful whether when delivered it can be sustained. To launch out in the Praises of *Cortes*, as a Man in whose Character there was nothing amiss, and all whose Actions may be

reconciled to the strictest Rules of Religion and Morality, would be undoubtedly carrying the Thing too far, and shewing such a Prepossession in his Favour, as neither Facts nor Reason could support. But we are not to consider him in that Light; we are to look upon him as an Officer sent to extend the Power of the King, his Master, in that Part of the World; and though *Velasquez* deprived him of his Commission, yet, as he acted upon Principles of Honour, and took all due Care of the Royal Interest, as far as he understood it, we cannot refuse him that Applause which is due to his Wisdom and Courage, without acting against Reason. As to Religion he seems to have been as zealous for it as the Priests themselves; and if that Zeal was intemperate, or ill-placed, it was not so much his Fault as theirs, who taught him no better. He seems, as a Christian, to have had a great Abhorrence of Idolatry; and as an honest Man a hearty Detestation of human Sacrifices; so that if his Actions were in any Degree wrong, yet the Motives to them, so far as we can perceive, might be very right. As to his Ambition and Avarice they are not to be excused, supposing them to have been his Vices. But then we ought to reflect how difficult a Thing it is to distinguish between a laudable Desire to serve one's Prince and Country, and what is called Ambition; as well as between a criminal Love for Money, and complying with the Necessities of Times, by sending over to *Spain* what he knew was requisite to maintain his Credit, and to support him against his Enemies. Taking therefore all things together, and making the same Allowances for *Cortes*, that are usually made for Men in his Station, we may venture to affirm, that he behaved as well, and performed as great Things, if not greater, than any of the *Spanish* Captains that bore Command in this Part of the World; so that if we measure his Merit by the Importance of the Conquests he made; by the small Forces he made them with; and the Difficulties he met with and surmounted, which are the usual Measures of such Actions, there is no reason to apprehend, that we err in the Commendations we bestow upon him.

At the same Time, however, we must allow that he shed a great deal of Blood; that he introduced a new Government to this Part of the World; and did many other Things, that, however great they may appear, yet, in the Judgment of such as are Friends to a rigid Morality, subject him to Censure. But as every Man has Faults, and every Man's Faults, who moves in a superior Sphere, have very extensive Consequences; so even in this Respect, we ought not to have a worse Opinion of *Cortes*, than of his Master, the Emperor *Charles V.* or any other great Captain, that pursues a System which, for any Thing we know, may be more agreeable to the Views and Designs of Providence, than such a Conduct as might have pleased us better. I have insisted the longer upon this, that I might not be under the Necessity of making Reflections of the same Kind in other Places; for what I have said upon this Occasion will serve to shew my Sentiments upon all other like Occasions; and therefore there will be no Need of repeating them.

I am very sensible that Writers frequently value themselves upon destroying great Characters, by setting them in this disadvantageous Light; and arrogate to themselves a Power of judging in the last Resort of Mens Actions and Motives. But this I think is very unfair, and I can see no Reason, why the having this Opportunity of raising or sinking the Reputation of so illustrious a Person, should tempt me to endeavour raising in the Reader an high Idea of my Penetration or Probity, at the Expence of one who is already in Possession of Fame, from the Approbation of his Behaviour by those who ought to be, and as far as I can judge from their Writings really were, better Judges of it than I am. All the Merit I pretend to is, the having stated his Actions fairly from the best Authorities, and said of them freely what I thought, which, whether it be right or not, I most readily submit to the judicious Reader, and so return to my Task of pursuing the Conquests made by the *Spaniards* in *America*.

SECTION XIV.

The Discoveries made by the Spaniards in the Province called Golden Castile; their first Knowledge of the South-Sea, and their Establishment of Panama, by which a Passage was opened to the Discovery and Conquest of the great Empire of Peru.

1. *The Manner in which Vasquez Nunez de Balboa established himself in the Government of Santa Maria, in the Province of Castilla del Oro.* 2. *He sends two Agents to solicit Succours; one to the Admiral James Columbus, and the other to the Court of Spain.* 3. *The first Expedition of Balboa against the Indians, in which he subdued the Cazique Careta, and entered afterwards into a closer Friendship with him.* 4. *He goes, at the Request of that Indian Prince, to visit another Cazique, whose Name was Comagre.* 5. *He obtains there the first certain Intelligence of the South Seas, and of the Empire of Peru, and its vast Riches.* 6. *He returns to Santa Maria, and, receiving ill News from Spain, resolves to attempt a Discovery of the South Seas, in hopes of pacifying King Ferdinand and his Ministers.* 7. *The Manner in which he executed this Resolution, and the wonderful Success of his Expedition.* 8. *Bestows the Name of St. Michael on a Bay in the South Seas, and carries from thence a vast Treasure in Gold and Pearls.* 9. *Sends another Agent to the Court of Spain, with a full Account of the Importance of these new Discoveries.* 10. *Don Pedro Arias d'Avila, by the Interest of the Bishop of Burgos, is sent from Spain to take the Government of Castilla del Oro.* 11. *This new Governor first cruelly persecutes Nunez de Balboa, and afterwards most unjustly causes him to be beheaded.* 12. *Arias lays the Foundation of the City of Panama, which by reason of its unwholesome Situation proves very destructive to its first Inhabitants.* 13. *He fails in most of his Attempts for making Conquests and Discoveries in America, and finds it difficult to maintain his Power in the Midst of so many Disappointments.* 14. *He barbarously murders, under a form of Justice, Francis Hernandez, Governor of Nicaragua, and seizes that Province.* 15. *Observations on the foregoing Section, and on the great Difference between Genius and Cunning.*

IT is a Rule that I think ought to be observed in all Works of this Nature, to explain one Subject thoroughly before we proceed to another; and to dwell more or less upon a Subject, according to its Weight and Importance: We have hitherto observed this Rule strictly in both its Branches, which was the Reason of dwelling so long upon the Expedition of Cortes: Since this alone, in respect to its Consequences, was more than equal to all we had mentioned before taken together. In this Section, the Matters we propose to handle, though necessary to understand the Discovery and Conquest of America, and more especially the Manner in which Peru came first to the Knowledge, and then fell into the Hands, of the Spaniards; yet being in themselves of far less Consequence, we shall speak of them more concisely, in order to keep within due Bounds, and inform the Reader fully without tiring him.

We have already shewn how the Province of *Castilla del Oro* was discovered, and settled by the Industry and Pains of *Vasquez Nunez de Balboa*, a Man no less remarkable for the Success of his first Beginnings, than for the Miseries that befel him at the Conclusion of his Adventures. We have likewise shewn how he arrived by his personal Merit, at the extraordinary Authority he exercised in the new Colony, on the Banks of the River *Darien*, where he deprived *Enciso* of his Command; and, upon his endeavouring to recover it, seized and imprisoned him, under Pretence that he had usurped an Office which the King only could bestow; and for which he confiscated all his Effects: A very harsh and severe Sentence, which was certainly founded, rather in personal Resentment, for the ill Usage he had met with from him, than from any real Concern for the Interest of the Colony, which was far enough from requiring such a violent Proceeding, though that was the Pretence. But when Men have acquired Power, it is not at all strange that they should lose Moderation in the Use of it; however, there were some in the Colony better inclined than himself; who, with some Difficulty, prevailed upon him to set *Enciso* at Liberty; but it was upon this express Condition, that he should transport himself, either to *Spain*, or to *Hispaniola*, on board the first Ship that should come to *Santa Maria*, which was the Name of this Settlement.

The next Care of *Nunez de Balboa*, was to secure those Supplies, of which the Colony stood in need, and with this View it was that he made choice of his old Friend *Valdivia* to go to *Hispaniola*, in order to engage the Governor and Council there, to furnish him and his People with all they wanted; of which he had the greater Hopes

because the Admiral, *James Columbus*, was then there, and he very well knew that no body could have a greater Inclination than he had, to contribute all that lay in his Power to promote the King's Service.

2. This Point being settled, he persuaded the Colony that it was highly for their Service to send a Person they could confide in directly to *Spain*, that the Court might be informed of the Situation they were in, and of the great Probability there was of their making very advantageous Discoveries and Conquests. The Person he chose for this important Employment, was his Colleague in the Magistracy, whose Name was *Zamudio*, to which no body had any Objection. By proposing him *Balboa* gained two great Ends; for, in the first Place, he secured the sole Authority to himself, which was what he always affected; and in the next Place, he committed the Care of his Concerns to one whose Interests were the same with his own: Since he had been as deeply engaged in the before mentioned Revolution as himself. There was a small Ship belonging to the Colony in Port, and this he caused to be fitted up as well as it was possible, in order to carry the two Deputies, and his old Antagonist *Enciso*.

Before their Departure, however it was suggested to *Balboa*, that he departed not a little from his usual Wisdom in sending the last mentioned Person, whom he had used so very ill, to a Place where he might represent his Proceedings in Lights far enough from being to his Advantage. But this did not induce him to alter his Resolution, though it put him upon taking a Precaution, which answered his Purpose very effectually. He remembered that one *Passe-monte*, who was the King's Treasurer General at *Santo Domingo*, had a great Interest with the Ministers in *Spain*, and therefore he gave *Valdivia* a considerable Quantity of Gold, which he desired him to present the Treasurer, in his Name, supposing that this would attach him closely to his Interest, and therein he was not at all mistaken; for the Possession of this Gold, and the Hopes of more, induced him to espouse the Cause of *Nunez de Balboa* ever after. These Measures thus taken, he sent the two Deputies, together with *Enciso*, on board the Ship, which presently after sailed for *Santo Domingo*.

After their Departure, *Nunez de Balboa* began to contrive, in his own Mind, how to make the best Use possible of the great Power he had obtained, in order to make further Discoveries, and to acquire more Gold, which he foresaw would prove the most effectual Means for securing to him this Government, at which he had so strangely arrived, and of which he had conceived such Advantages might be made to the Crown of *Spain*, as

would perhaps have entered into no Head but his own, considering the Circumstances the Colony was then in: He was, indeed, a Person every way fit for undertaking vast things; for he had a deep Cunning, stuck at nothing, and had a Courage superior to every kind of Danger, so that nothing could fright him from his Purpose, or put him out of any Road which he thought likely to attain it.

3. It was not long before such an Opportunity offered as he expected, and he made the Use of it which it might be supposed a Person of his Abilities would make in a Matter that so nearly concerned him. At this time many *Indians* resorted to *Darien*, to see whether the *Spaniards* were going away, or what they designed; and, to cover their Intention, carried *Indian* Wheat and other Provisions to exchange for Beads, Knives, and other *Spanish* Baubles; and, to persuade them to be gone, said there was much Gold, and plenty of all Eatables, in the Province of *Coyba*, which was thirty Leagues from thence. *Nunez de Balboa* sent *Francis Pizarro*, with six Men, to discover the Country; who, having travelled three Leagues up the River, was attacked by four hundred *Indians*, under the Command of the Cazique *Zemaco*, and hard pressed: But they closing, ripped up the Bellies of one hundred of them with their Swords, and wounded many more, whereupon the rest fled.

The *Spaniards* then returned to *Darien* in a bad Plight, leaving one *Francis Hernandez* behind them, lying on the Ground; at which *Nunez* was so much offended, that he commanded *Pizarro* to go back, with some Men, for him, as he did, and brought him to the Colony: *Balboa* thinking it a Discredit to leave any one behind him alive. *Nunez* then marched himself, with one hundred Men, and advanced some Leagues towards the Province of *Coyba*; the Cazique of which was *Careta*: But, meeting the *Indians* by the Way, he soon returned to his Colony, and sent two Brigantines for the *Spaniards* that had been left at *Nombre de Dios*.

As they were sailing along the Coast, when they came to a Port belonging to the Cazique of *Coyba*, two *Spaniards* stark naked, painted red, came out to meet them: They, and one more, had a Year and an half before made their Escape out of *Nicuesa's* Ship, when he was in quest of the Province of *Veragua*, to avoid the Punishment due to some Crime they had committed, and put themselves into the Hands of this Cazique *Careta*, who always treated them very well; but, not agreeing among themselves, though in Captivity, they one Day drew their Swords, and one of them, whose Name was *John Alonso*, wounded the other dangerously, whereupon the Cazique made him a Commander in the War he had against some of his Enemies, looking upon him as the braver Man, and did nothing without his Advice. These two Men were very acceptable to those in the Brigantines, and gave an Account that the Country abounded so much in Gold, that if *Nunez* would invade it, they should be all rich. Hereupon it was agreed that one of them should go and acquaint *Nunez* of the State of the Country, and the other should stay to be serviceable, as Occasion should offer. When the Brigantines returned to *Darien*, *Nunez* was well pleased with the Intelligence they brought of the great Wealth, and at having Interpreters to deal with the Natives; and, being thoroughly informed of the Nature of that Country, sent back the Brigantines to bring away from *Nombre de Dios* those they could not fetch off at first.

In the mean time he provided one hundred and thirty of the ablest Men, with Arms, Provisions, and other Necessaries they were to carry; and, as soon as the Brigantines arrived, he set out to seek *Careta* at his Dwelling, which was thirty Leagues off. The Cazique hearing of it, waited for him in his House, where *Nunez* asked him for Provisions for his Men, and to carry to *Darien*. *Careta* answered, that when any Christians had passed that Way, he freely gave them Part of his Provisions; but that at present he had none, being at War with a neighbouring Cazique, whose Name was *Ponca*, for which Reason his People had not sowed, and were then in great Want. Having received this Answer, *Nunez*, by the Advice of

John Alonso, pretended to go back the same Way he came; and *Careta* thinking himself very safe, *Nunez* returned at Midnight, and attacked the Town in three Places, killing and wounding many, and taking the Cazique, his two Wives and Children, and several others; all of whom he sent away to *Darien*, loading the Brigantines with Provisions. At *Darien*, *Careta* intreated *Nunez* not to keep him in Captivity, promising to do all that was in his Power to furnish the Christians with Provisions, and to be his Friend: As a Pledge of which he would give him one of his Daughters, who was very beautiful; and, that his People might have leisure to till and sow the Ground, he should assist him against his Enemy *Ponca*. *Nunez* accepted of the Offer, and took his Daughter, whom he kept as his Mistress, though *Careta* thought he had taken her for his Wife; but he always loved and used her kindly, which highly pleased the *Indians*.

4. This *Indian* Cazique, *Careta*, not only kept his Word, but treated *Nunez*, and eighty Men who accompanied him, so well, that they willingly agreed to assist him in his Wars; which, when the other Cazique, whose Name was *Ponca*, heard, he fled to the Mountains; and the *Spaniards*, entering his Country, found some Provisions there, and a considerable quantity of Gold. It was not long before *Careta* informed his Guests, that he had another Neighbour more powerful, and of a better Disposition, than *Ponca*; whose Name, as well as that of his Country, was *Comagre*; that he had several Wives, and a great many Children, and lived in greater Splendor than any other Cazique. He likewise told them that this *Indian* Prince had a great Inclination to be acquainted with the *Spaniards*; and, as his Dominions were larger and more fruitful than his own, *Careta* advised them to go thither, and offered to accompany them, as he did; and the *Spaniards* found every thing agreeable to the Account he had given them.

For the Palace of *Comagre* was a large wooden Building, one hundred and fifty Yards in Length, and eighty in Breadth; surrounded with a good stone Wall, and well furnished within, after the Manner of those People. They likewise found there good store of Provisions: They had several Sorts of Drinks of several Colours, not much inferior, either in Strength or Flavour, to Wine. The Reception they met with, was equally kind and hospitable; *Comagre* and his Sons taking all the Pains imaginable to make them welcome and easy, and discovering in their Conversation a Knowledge and Politeness much superior to any of the *Indians* they had hitherto met with: They made them Presents also of Gold and Pearls, to a very considerable Value; so that they had no Reason to repent of their Journey, or distrust *Careta*, who had brought them thither; and who seemed to be likewise highly pleased with the courteous Entertainment that his Friend had given them, hoping it would make the *Spaniards* still more willing to oblige him.

Nunez and his Men being thus joyfully received and entertained, *Comagre's* eldest Son, who was a discreet Youth, being desirous to oblige his Guests, caused several pieces of Gold, valuable both for their Workmanship and Fineness, weighing about four thousand Pieces of Eight, and seventy Slaves, to be brought, all which he gave to *Nunez* and *Colmenares*. They immediately set apart a fifth of the Gold for the King, dividing the rest among themselves; about which some quarrelled, struggling and making a Noise for the best and finest of those Pieces.

Comagre's eldest Son, who was present, ran to the Scales, and, striking them with his double Fist, threw all the Gold upon the Ground; saying, "That Christians need not fall out about such a Trifle; but, if they were so fond of it as to disturb peaceable Nations, and leave their own Native Country for the sake of it, he would shew them a Province where they might have as much as their Hearts could wish, but that there must be a greater Number of them, because they were to encounter a Monarch who defended his Dominions with much Bravery: That they first would meet with a Cazique, who had a vast Quantity of what they looked upon as Wealth, who was six Suns, that is, six Days Jour-

ney from thence, pointing with his Finger towards the *South-Sea*; which he told them they would see as soon as they were past certain Lands; and that there were other Nations had Vessels little inferior to those of the *Spaniards*, with Sails and Oars; and that, beyond that Sea, they would find immense store of Gold, out of which those People eat and drank." And having understood from the *Spaniards* that there was great plenty of Iron in *Spain*, he signified that there was more Gold in those Parts than Iron in *Biscay*.

This was the first Intimation given of that large Country; and, because the Youth was acquainted with the great Extent of that Kingdom, and the Number of its Inhabitants, he added, that there ought to be one thousand Christians, at least, to invade it; and he offered to go with them, to assist them with his Father's Men. This Discourse was interpreted by the two *Spaniards* who had fled from *Nicuesa*, and lived with *Careta*. *Nunez* and his Followers, having heard of all this Golden Country, were so overjoyed, that they thought they could never make haste enough to discover it.

6. After a short Stay in the Dominions of this Indian Prince, *Nunez de Balboa* retired to his own Government of *Santa Maria*, in order there to consider at his Leisure of the properest Means for making the Discoveries, upon which himself and his People were so much bent. A very little before *Valdivia* was returned from *Hispaniola*, and brought from thence, on the Part of *James Columbus*, the strongest Assurances of Support, which induced *Balboa* to send him over a second time with the same Views and the same Instructions, but with fresh Proofs of the Services he had rendered to the Crown, and fresh Presents for those he thought might do him Kindnesses with the Ministers. But the Vessel that carried *Valdivia*, and such as attended him, was very unfortunate, being ship-wrecked in her Passage on the Coast of *Jucatan*; the Men with great Difficulty got on Shore, which proved a new Misfortune; for it had been much better they had perished at Sea, since they were quickly surrounded and made Prisoners by the Natives; who, with all the cruel Circumstances imaginable, sacrificed them to their Idols.

Such was the End of *Valdivia* and his Companions, two only escaping, one of whom was *Aguilar*, who was of so great Use to *Cortes*, and with whose History the Reader is already acquainted. The News greatly afflicted *Balboa*, inasmuch that, to prevent the ill Consequences that might follow from it, he had some Thoughts of going himself to *Spain*; but the Colony would not suffer him, looking upon his Presence as absolutely necessary to their own Preservation. He had very soon sufficient Reasons to believe that they had judged right; for, by the Dispatches he received from his Agent *Zamudio*, he was informed that *Enciso* had incensed the Court against him to such a Degree, that there was no pacifying the Ministers, or persuading them that he was not the very worst of Men, and one who had in the highest Degree contemned and trampled upon the royal Authority.

When *Nunez de Balboa* had considered the Contents of these Letters, and the melancholy Situation he was in, he saw plainly that there was nothing could deliver him, or restore his Character in *Spain*, but making an immediate Use of the Informations he had received, by proceeding in, and perfecting his Discoveries of larger and richer Countries, than hitherto the *Spaniards* had been acquainted with. This he very rightly judged would cover all past Faults, and atone for every Irregularity he had committed; and therefore, without communicating to the Colony any of the Particulars contained in his Dispatches, he applied himself solely to persuade them to such an Expedition, as the most likely Means to make them all rich and happy; and his Labours in this Respect proved so effectual, that all Hands were immediately employed in making the necessary Preparations for going in search of those golden Regions; and this, with a full Confidence, that if once they could be found, they might, without Difficulty, be subdued. Such were his and their Designs; let us now see how they were executed.

7. *Nunez de Balboa*, having resolved to march over to the *South-Seas*, and provided all things for the Expedition, set out from *Darien* about the Middle of September, 1513; going by Sea as far as the Territories of the Cazique *Careta*, who received him in a very friendly Manner. He there left the Brigantine and Canoe, and advanced towards the Mountains, and the Country of *Ponca*, *Careta* assigning some of his Subjects to attend him. The Cazique *Ponca*, who had Spies abroad, being informed that the *Spaniards* were coming up his Mountains, hid himself. *Nunez* sent some of *Careta's* Indians to assure him, that he would do him no harm, but would be his Friend; and he thought fit to come to him, carrying as a Present the Value of one hundred and ten Pesos of Gold, which was all he had.

Nunez received him with much Joy, that he might have no Enemy behind. He gave him abundance of Beads, Looking-glasses, and Hawk's-bells, and that which the Indians most valued, viz. some Iron Axes. He demanded of him Guides, and Men to carry Burdens, whilst he went up the Hills, and advanced farther. The Cazique granted all he desired, and gave him Plenty of Provisions, and then the *Spaniards* marched on into the Dominions of a great Lord, whose Name was *Quarequa*, whom he found ready to oppose him with a great Number of Men, armed with Bows and Arrows, and a sort of Slings, with which they threw Pieces of Wood hardened in the Fire like Darts. They had also Macanas, made of Palm-tree Wood, as hard as Iron, which they used, like Clubs, with both Hands. In this manner the Indians met the *Spaniards*, asking what they would have, or what they came for? requiring them, at the same time, to proceed no farther. Observing that they valued not what was said, their Lord came forward, clothed in Cotton, with some of the prime Men; all the rest stark naked.

They attacked the *Spaniards* with dreadful Cries and extraordinary Fury. *Nunez*, seeing such a Multitude, ordered his Soldiers to discharge some Cross-bows and some Firelocks, whereupon some dropped down dead. The Indians, seeing the Fire, and hearing the Report, believing they had been Flashes of Lightning, and that the *Spaniards* had Power to destroy them, fled, to a Man, in such Consternation, that they thought the *Spaniards* were Devils. The Dogs were set on them, whilst their Masters cut off the Limbs of some with their Swords, the Dogs tearing others in Pieces. The Cazique was there killed, and about six hundred more; some were taken, and their Town plundered, where the Conquerors found a considerable Quantity of Gold. Among the Prisoners were a Brother of the Cazique, and some others, clothed like Women; and *Nunez*, judging that they were guilty of Sodomy, set the Dogs at them, and they were in a Moment torn to Pieces; which was all the Proof there was in this Case, though *Gomera* positively affirms it.

Some *Spaniards* were grown sickly with Hunger and Weariness, for which Reason *Nunez* left them in *Quarequa's* Town, where he took fresh Guides, and Men to carry Burdens, to dismiss those that belonged to *Careta*; thus proceeding to the Top of the Mountains, whence they said the other Sea might be seen. From *Ponca's* Lands to this Mountain's Top was about six Days Journey; but they spent twenty-five, through the Uncoothness of Lands, and because they were scarce of Provisions, and had little Rest. At length they arrived, on the 25th of September, 1513, whence the Sea could be seen.

Nunez, having notice given him, a little before they came to the Top, that they were very near, commanded all to halt, went up alone, and, seeing the *South-Sea*, on his Knees returned Thanks to Heaven for being the first that had seen it. Having performed this, he called his Men, and repeated the same; they followed his Example, whilst the Indians stood amazed to see them so overjoyed. He then extolled the Intelligence given him by *Comagre's* Son, promising all his Men much Wealth and Happiness; and they believed him: For he was very much beloved, because he made no Difference between himself and every Soldier. Besides, he was familiar, and shewed much Compassion for the Sick and Wounded,

Wounded, every one of whom he visited, and was himself undaunted in Dangers, never shewing the least Concern in the greatest Perils. He then caused a Certificate to be drawn of his taking Possession of that Sea, and all in it, for the Crown of *Castile*; in testimony whereof, he cut down Trees, erected Crosses, raised Heaps of Stones, and cut the King of *Spain*'s Name on some Trees. He then resolved to go down the Mountains, to observe what there was on them, and on the Sea-coast.

Being informed that, near this Place, there was another Town, belonging to a Lord whose Name was *Chiapes*, he advanced very cautiously; and *Chiapes* went out to meet him with a great Number of Men, in which he confided, for the *Indians*, seeing so few *Spaniards*, generally made little account of them till they had felt their Swords. When they drew near, the *Spaniards* saluted them with their Fire Arms first, and then with their Cross-bows, after which they let go the Dogs; the *Indians*, seeing the Fire of the Muskets, hearing the Report, smelling the Gunpowder, observing how many dropt down dead, and that the Dogs tore all they came at, turned their Backs and fled with the utmost Precipitation: The *Spaniards* pursued, with their Dogs, killing some, but chusing rather to take Prisoners, in order, by their means, to make Peace with *Chiapes*, that he might not retard their Passage. They dismissed some of those they had taken as Messengers to their Lord, with some of *Quarequa*'s Men to assure him they would do him no Harm if he would be their Friend. He thought it safest to put himself into the Hands of these dreadful Enemies, and carried the Value of four hundred Pieces of Eight in Gold. *Nunez* received him very graciously, and gave him Beads, Looking-glasses, and some Hatchets; and here he dismissed *Quarequa*'s *Indians*, giving them Trifles, with which they went away well pleased.

From thence he sent Captain *Francis Pizarro* to view the Sea Coast, and what there was about the Country; as also *John Escarray* and *Alonso Martin*, with twelve Men each, to find out the shortest Ways to the Sea. *Alonso Martin* hit upon the readiest Road, and, in two Days, came to a Place where he found two Canoes upon dry Land; yet saw no Sea; but, whilst he was considering which Way these Canoes were come up the Land, the Sea-water came in and lifted them up about a Fathom in Height: For, upon that Coast, the Sea ebbs and flows every six Hours, two or three Fathoms, so that great Ships are left dry, and no Sea-water appears for two or three Leagues at least. *Alonso Martin*, seeing the Canoes swim, went into one of them, and bid his Companions bear Witness that he was the First who entered the *South-Seas*; another, whose Name was *Blaez de Atienza*, did the like, and bid them bear Witness he was the Second. They returned to *Nunez* with the News, at which all rejoiced very much.

8. The sick and wounded *Spaniards* that were left behind being come up, *Nunez* resolved to proceed himself to the Sea-side, and to try what farther Discoveries could be made, taking the *Indian* Chief with him. When they came to the Shore the *Spanish* Commander marched on, armed as he was, till the Water took him up to the Middle; causing a Notary to draw and subscribe a public Instrument, importing, That he had taken possession of that Sea, its Coasts, and the Islands in it, on Behalf of the Crown of *Castile*; at which Ceremony the *Indians* were very much amazed.

He proceeded next to pass the Mouth of a great River, and landed on the opposite Side, in the Territories of another *Indian* Prince, whose Name was *Coura*, and who, at first, endeavoured to make some Resistance; but, finding that it was in vain, he suffered his Son to go and treat with them, and himself was soon after reconciled, and carried them a considerable Present. *Balboa* observing a large Bay of the Sea, resolved to navigate it; and, to that Purpose, desired the *Indians* to furnish him with Canoes, which they did, and offered to accompany him, though, at the same Time, they advised him to suspend his Discovery, because the Winter was coming on. But he, being obstinate, embarked

with fourscore *Spaniards*, together with *Chiapes*, and some of his *Indians*, on board nine Canoes.

They weighed anchor upon the twenty-ninth of September, 1513, which was the Reason he called it *St. Michael's Bay*. When they were at some Distance from Land the Waves began to swell so high, that *Nunez* repented he had not taken *Chiapes*'s Advice. It was a wonderful Providence that they did not all perish; and the *Indians*, who swim like Fish, made the Danger more evident, as being better acquainted with the Place, which rendered the *Spaniards* more apprehensive. The Roughness of this Bay is occasioned by the many little Islands, Rocks, and Shoals, that are in it. The *Indians*, being best skilled in those Affairs, had recourse to their usual Remedy, fastening two Canoes together with Cords, for then they do not so easily overturn. They made the best of their Way next towards an Island, where they landed, and lashed the Canoes to the Rocks or Trees. There they continued all the Night, with as much Uneasiness as if they had been looking Death in the Face; for upon the Flood the whole Island was covered with Water, and they stood in it up to their Waists, or very near it: When Day appeared, and the Water ebbed, they went to look for their Canoes, and found some beaten in Pieces, and others split, all of them full of Water and Sand; and nothing remained of all their Goods and Provisions; which was a very dismal Sight. In this Distress, they pulled off the tender Bark of the young Trees, and, bruising it with Grass and other Herbs, caulked the Crannies of the Canoes that were not quite staved, and thus embarked again half famished.

They immediately steered to the Land of an *Indian* Lord, whose Name was *Tumaco*, in the Creek of the Bay, where they found him ready to oppose them. *Nunez* seeing his Men weak and hungry, picked out a few of the ablest, whom he placed in the Front, and engaged: In a very short Space the Dogs and the Swords made sad Havock among the *Indians*, the Cazique himself being wounded. *Chiapes* sent some of his Men to acquaint *Tumaco* with the Power of the *Spaniards*, and how kind they were to their Friends, as himself, and other Lords they had met in their Way, very well knew by Experience. *Tumaco* would not be persuaded the first Time, but the second Messenger prevailed so far, that he sent his Son, whom *Nunez* entertained very courteously, giving him a Shirt, and some Toys, and bidding him advise his Father to come himself and be his Friend. *Tumaco* seeing his Son had been well used, went the third Day with a great Attendance of his Subjects, but carried no Present; however *Nunez* paid him much Respect.

Chiapes told him, that the *Spaniards* were good, and it was but reasonable to assist them, since they were Strangers in their Country: Being pacified, and out of Fear, he sent some Servants home, who brought Gold, to the Value of six hundred and fourteen Pieces of Eight, and, what was much more, two hundred and forty large Pearls very fine, and many more that were bright but small. The Joy *Nunez* and his Men conceived at the Sight of them is inexpressible, believing the immense Treasures *Comagre*'s Son had told them of were now at hand, and thinking all their Sufferings well repaid. The large Pearls were of a great Value, and would have been of greater, but that the *Indians* using Fire to open the Oysters they grew damp, and were not so white as they naturally are: The *Spaniards* afterwards taught the *Indians* how to open them without Fire. *Tumaco*, observing that the Pearls occasioned such Joy among them, to shew that he valued them but little, sent some *Indians* to fish, and within four Days they brought as many as weighed no less than ninety six Ounces. Both *Spaniards* and *Indians* were well pleased, the former concluding they should be possessed of all that Wealth, and the latter, especially the Caziques, for the Friendship of the *Spaniards*, seeing them fond of Gold and Pearls, which they valued but little; but *Chiapes* rejoiced most because he had been instrumental in gaining *Tumaco*'s Friendship.

Those two Caziques assured *Nunez*, that there was an Island about five Leagues from thence, in that Bay, governed

verned by a powerful Cazique; where there were abundance of large Oyfters, which had Pearls in them as big as Beans. *Nunez* ordered the Canoes to be immediately made ready to go over to it. The Caziques intreated him not to think of it at that time, but to stay till Summer, when the Sea was calm, and he might then go with ease, and they would bear him company, and he approved of their Advice. The Cazique *Tumaco* also informed *Balboa*, that the Coast extended prodigiously, pointing towards *Peru*; that there was an immense Quantity of Gold, and that the Natives used certain Beasts to carry their Burdens, being the Sheep of that Country, and made a Figure of them with Earth to represent them the better. The Spaniards were amazed; some said they were Camels, others that they were Stags, or Fallow Deer, of which there are many on the Continent about as big as small Calves, but their Legs so short, that they are not above a Span in length, and their Horns small. This was the second Intimation *Nunez* had of *Peru*, and its Wealth.

9. It was about the Middle of *January* that *Nunez de Balboa* returned back to *Santa Maria*, carrying with him Gold to a very great Value, and Pearls to a much greater; of which he made a very fair Division, reserving the fifth Part for the King, and distributing the rest among the Soldiers in such a Manner, that they were perfectly satisfied with his Conduct. He judged now, and not without great Appearance of Reason, that he had performed so signal a Service, that it was impossible for the Ministers to deny that it made amends for any Indiscretions into which he had fallen. He resolved therefore to send another Agent to *Spain* with the King's Money, and with more considerable Presents than it was in his Power to send by the former. The Person he made choice of for this Negotiation was *Peter Arbolanchos*, a Man of Capacity, and, which was of greater Consequence to him, a Person of great Integrity and unshaken Fidelity.

He applied himself, when he came to Court, to the famous Bishop of *Burgos*; who received his Letters with Civility, which changed into the greatest Kindness and Friendship upon the Sight of the Gold and Pearls that *Balboa* had sent him; for these fully convinced him that he was innocent, and a good Officer, and therefore he took Pains to set him right in the Opinion of King *Ferdinand*, who was then living, and who had hitherto a great Aversion to *Nunez de Balboa*; but the Favours of this Prelate came too late, for he had already done this unhappy Man such an Injury as he was not able to repair. It was a Maxim with this Bishop, that there was nothing so dangerous as to suffer the great Men who made Discoveries in the *Indies* to perfect them; and therefore as soon as they had opened the Road to new Countries, and had overcome the first, which are always the greatest, Difficulties, it was his constant Method to send some of his own Creatures to reap the Fruits of their Labours.

The Person he had fixed upon, before the Arrival of *Balboa's* Agent, to go Governor of *Castilla del Oro*, was one *Don Pedro Arias d'Avila*, whom the Spanish Writers, by joining his two first Names, commonly call *Pedrarias*, a Man of Birth, of a Court Education, which had furnished him with several Qualities very suitable to the Climate of *Spain*, but not at all calculated for the King's Service in the *Indies*: He was haughty and proud to the last Degree, naturally insincere, and a very artificial Dissembler, barbarously unjust, and cruel beyond Expression, one who thought the only Compensation that could be made for leaving his native Country, was to raise a vast Fortune, which, as he wanted Talents to do in an honest Way, he resolved to bring about by the Methods he understood, which were Violence, Fraud, and Oppression; in all of which he was a complete Master.

We have his Character drawn to the Life by the Hand of the Bishop of *Chiapa*, who represents him as the wickedest Monster that was ever sent into those Parts; but out of Respect to his Patron the Bishop of *Burgos*, after giving so true a Character of him he does not name him. Such was the Person that was sent over to take Possession of that Country which *Balboa* had discovered.

10. This new Governor, *Pedrarias*, sailed from *Spain* the 12th of *April*, 1514, with a Fleet of fifteen Sail, with two thousand Soldiers on board, and a Fryar, one *John de Quevedo*, who had been consecrated, before his Departure, Bishop of *Darien*, and many other Persons, in other great Offices; and amongst the rest *Enciso*, the mortal Enemy of *Balboa*, was his Provost Marshal. He arrived in the latter end of the Month of *July*, in the Gulph of *Uraba*, and from thence proceeded to *Santa Maria*, where he was received with all imaginable Respect, by the famous *Nunez de Balboa*, of whom he had heard so much, and for whom he cared so little.

He was very much surprized at his Appearance, and at the State in which he found the Colony. There was indeed a very strong Fort, and four hundred and fifty brave Fellows to defend it; but the Governor's House, or if you will, his Palace, consisted but of three Rooms, and his Dress corresponded with his Dwelling: He had a Pair of Canvas Drawers, and a Cotton Waistcoat over his Shirt, and that was all. His Diet was of a piece with the rest; a Joint of roast Pork, some Greens and Fruit, was all his Table afforded; at which no other Liquor was drank but good Spring-water. Such were the Manners of this Conqueror, who fared nothing better than the meanest of his Soldiers; but there was no Murmuring, no Complaints; he maintained his Authority by the Means which had acquired it, his Merit; and his Soldiers loved him, and feared him as a Father. His sole Fault was his Ambition, that had led him to do some unwarrantable things to obtain Power; but when obtained, none used it better.

His Accounts were clear; he made good every Point he had written to *Spain*, and opened a Passage to the *South-Seas*, and subdued all the Country between them and his Colony; in return for which good Services *Pedrarias* committed him close Prisoner to the Custody of *Enciso*, and did not set him at Liberty till he had fined him in above half his Fortune. In order to justify this Proceeding he sent over a very false Report to the Court of *Spain*, and expected that this should have procured him a Power of going greater Lengths; but in this he was mistaken. He had brought over some honest Men with him, who ventured (which was strange) to send the naked Truth to Court; and, which was stranger still, it met with all the Credit that it deserved.

When the King's Letters came to be opened, his Majesty declared in them, that he was perfectly satisfied with the Conduct of *Nunez de Balboa*, that therefore he had created him Lord-Lieutenant of the Countries on the *South-Seas*; that he expected the Governor should take his Advice; and that the Measure of his Obedience to his Orders would appear from the Respect he shewed to *Balboa*. *Pedrarias*, equally displeased and disappointed, took care to conceal both, and, like a true Courtier, resolved to conform, in Appearance, to his Master's Orders, but to disobey them in effect, and to leave no Means untried, to work the Destruction of the Man he hated, in which, as we shall see, he succeeded to the full.

In order to lessen the Character of his Predecessor, and raise his own, the new Governor sent several of his Officers to make Excursions into the Country, which he thought must produce new Discoveries, as indeed they did, but not to the Advantage of the Colony or of the Crown of *Spain*, since they contributed only to shew the Avarice and Cruelty of the Spaniards in the most glaring Lights: His Officers knew the only Method to obtain his Favour and Protection was to make him large Presents, and to plunder all the Caziques without Mercy; so that in a few Months time, that Reputation for Honesty and kind Usage which *Nunez de Balboa* had been at so much Pains to establish, was entirely lost, and War between them and the Natives broke out afresh with greater Fury than ever, so that there were no great Hopes of his making any Progress; which when he came seriously to consider, he entered upon a new Scheme, and, by the Assistance of his Bishop *Quevedo*, reconciled himself to *Balboa*, who very sincerely applied himself, as he had done formerly, to the public Service, and that too with his usual Success, which

which received, as might be naturally expected, the Envy of *Pedrarias*, notwithstanding that *Nunez* had promised to marry his Daughter, and he had thereupon called, and in public treated, him as his Son.

The Business in which he had employed him, was the building a Town, establishing a Port, and from thence fitting out Ships upon the *South-Seas*; all which, with incredible Labour and Fatigue, he at length accomplished, which added to the great Reputation he had before acquired. *Pedrarias* seeing this, and that most People in his Government were inclined to remove, and to settle in the Town built by *Nunez de Balboa*, as soon as it was finished, resolved no longer to delay the removing out of his way a Man, whose Superiority became more and more conspicuous; he sent for him therefore to *Santa Maria*: And *Nunez de Balboa* made no Difficulty of obeying his Order, either because he did not suspect his ill Intentions towards him, or that, relying upon his own Innocence, he thought it out of the Governor's Power to hurt him.

Upon his Arrival, however, *Pedrarias* commenced a fresh Prosecution against him on the same Pretences for which he had fined him before; and to these he added another very extraordinary Accusation, which was a treasonable Intention to usurp the King's Domain, founded upon nothing more than his having cut down, without the Governor's Licence, some Timber for erecting public Edifices; and upon this Charge he condemned him to suffer Death, to the Amazement of the Colony and the Terror of all the Inhabitants. He persisted however in his Design, and caused this unfortunate Gentleman to be publicly beheaded. Such was the Fate of *Vasquez Nunez de Balboa*, who, in the forty second Year of his Age, suffered as a Traytor, for having served his Prince with too much Zeal and Fidelity. The Royal Audience at *Santo Domingo* condemned this Action of *Pedrarias*, as a downright Murder; but it does not appear that he was ever called to any Account for it; but, on the contrary, was permitted to go on in the same base and barbarous Track for many Years together. This happened in the Year 1517, and in the third of *Pedrarias*'s Government.

12. When he had thus, at the Expence of Law and Justice, freed himself from a Man whom he both hated and feared, *Pedrarias* resolved to settle a new Colony at *Panama*; notwithstanding that, from the Heat and Moisture of the Country about it, it was very unwholesome; but, as it stood commodious for Trade, and was a Place very convenient for the Discoveries then making, the Governor remained fixed in his Resolution, built a Palace there, and made it the Seat of his Government. Upon this others came thither to dwell, so that by degrees it grew a tolerable Place, and increased in its Inhabitants very fast, because it was pretty well fortified, and because the Harbour is very spacious, where the Ships upon the Ebb are left dry. The Circumference of the City is small, by Reason of a Morass that encloses it on one Side, and the Damps that rise from it render the Place very unhealthy: It stretches out from East to West, so that when the Sun rises there is no going along the Streets, because there is no Shade; and the Heat is so offensive, that it occasions many Distempers. Though it has been several times proposed to remove it to some better Place, it has not been done on Account of the great Price the Houses bear, and that the ancient Inhabitants are dead; and such as live there now are generally Traders, and stay there no longer than they can acquire enough to go somewhere else.

There is a River runs near the City, and the District is large, in which there are many Farms, and store of black Cattle, the Soil being proper for them; several Sorts of *Spanish* Fruit have been planted, and there are of the Country very good, as Pine-apples, Plantain, Guayabas, besides others about the Fields. The Rivers afford Gold, which was found in plenty upon the first building of the City. It is well supplied with Provisions, being furnished from both Seas. Neither Wheat nor Barley grow within its District, but there is much Maize or *Indian* Corn carried from *Spain* and *Peru*. There are good Fish in the Rivers, and in the Sea, though different from

what are found in *Spain*: Near the Houses along the Coast there are vast quantities of Cockles, by the Natives called *Chucha*; and it is thought, that for the Sake of them the *Spaniards* at first built the City there, as being some Supply in time of Want. In the Rivers of this Province, there are vast Numbers of Alligators, so large, that they are hideous to look at; and one has been found in the River of *St. George*, that was twenty five Foot long: The Flesh of them, which the *Spaniards* were wont to eat for want of better, when they were upon their Discoveries, is bad and ill-scented: The Creatures themselves are fierce and frightful, and have devoured many *Spaniards* and *Indians*, and even Horses, while crossing Rivers. There are few of the Natives in the Territories of this City, having been destroyed in the Wars: The Trade there is extraordinary, rich Ships coming in continually from *Peru*, laden with Gold and Silver.

The Commodities carried from *Spain*, on board the Fleets, are conveyed thither on numerous Teams kept for that purpose; a considerable Part being sent up the River *Chagre*, within five Leagues of *Panama*, which lies in between eight and nine Degrees N. Latitude. This Place being considerable, the King ordered many Religious Men to be sent over to convert the *Indians*, and made it a Bishopric. Yet it is said, that during the first twenty eight Years after the Conquest of *Peru*, above forty thousand Men were computed to have died there, of violent Distempers. Soon after, *James Albetex* founded another Town at *Nombre de Dios*, which was also famous for many Years, those two being noted for the Trade between the North and South Seas; and here, as well as at *Panama*, many thousand *Spaniards* perished by the bad Air.

In the Reign of King *Philip II*, to avoid the said Mortality, *Nombre de Dios* was quite abandoned, and the Inhabitants removed to *Porto Bello*, where the Trade now continues. As soon as these two Towns were founded, Orders were taken for making a Road between them, being the nearest between the two Seas; though the Mountains were very uncooth, on which there were then infinite Numbers of Lyons, Tygers, and other wild Beasts, and such a multitude of Monkeys of several Sizes, as deafened their Ears with their Cries; which, running up the Trees when any People passed by, were wont to throw Stones at them, but the *Spaniards* kept them in awe with their Cross-bows.

13. It must be allowed that this *Pedrarias* did not want Talents suitable to his Office; for he had Courage, Diligence, and a strong Desire to do great things; and yet, notwithstanding all this, in the Compass of eight or nine Years, he did little or nothing, which the *Spaniards* attributed to the just Judgment of God, for his cruel Usage to *Nunez de Balboa*. There is no doubt that God is always just; but perhaps we are not wise enough to distinguish his Judgments, and, therefore, it may be as well to refer the want of Success in this Governor's Administration, to Causes more manifest, without excluding, however, the divine Justice, which has certainly connected Misery and Vice, and plagues the Neglect of moral Duties, by a continual Train of Misfortunes. The Truth of the Matter is, that his Vices defeated all his Schemes, and rendered all his Undertakings abortive. Instead of treating the *Indian* Caziques as his Predecessor *Nunez* had done, with Civility and Justice, he behaved towards them like an imperious Master, and yet he was not able to extort half the Quantity of Gold that had been freely bestowed on *Balboa* in Presents. He granted Licences to various Persons to undertake Discoveries, but on such hard Terms, and with so many Restrictions, that they had no better Success than himself; and all their Endeavours had no other Effect than to waste great Numbers of Men, and to bring an Odium upon Expeditions into the *South-Seas*.

But what chiefly employed the Care of this Governor, was reducing *Urraca*, Cazique of the Mountains, whose Country was very rich in Gold; and who, after the Decease of *Nunez*, would have nothing to do with the *Spaniards*, presuming, as he said, that they could mean no good to others, who persecuted and murdered each other.

other. *Pedrarias* made war upon him for five Years together, and in that Space of time destroyed a great Number of his Subjects, yet was never able to subdue or render him tributary. On the contrary, this *Indian* Prince was frequently too hard for the *Spaniards*; his Subjects were stout and warlike, the Situation of his Dominions gave him great Advantages; for the *Spaniards* could never act against him with Horse, and with all this he was himself a Prince of great good Sense, extremely brave and enterprising, one who foresaw Advantages as soon as any Man, and there were very few who could manage them better. This the Reader will easily believe, when he is told that *Pedrarias* lost more Men in the Course of this War, than *Cortes* in the Conquest of *Mexico*, without getting a Foot of Land, or an Ounce of Gold by the Bargain. But he made himself some amends by his grievous Extortions, upon such of the *Caziques* as had submitted to the *Spaniards*; and, with the Gold he forced from them, maintained so great an Interest at Court, that notwithstanding every Enterprize of his was attended with Loss, yet every new Project he sent over, was approved and applauded.

This will appear the more extraordinary, when it is considered that never any Man met with more Opposition than he did; for, on the one Hand, he was hated to the last Degree by the *Indians*, for whose Sake the Bishop of *Chiapa* went in Person to *Madrid*, to solicit Relief. The *Spanish* Officers were likewise uneasy, and wrote home a true Representation of his Conduct, which was such as would have ruined the Fortune of any other Man. Besides all this, he was upon very bad terms with the Royal Audience at *St. Domingo*, which was then, what it still is, the supreme Tribunal in the *West-Indies*; and the chief Reason for his removing the Seat of his Government from *Santa Maria* to *Panama* was, that he might be farther out of their Reach. Thus it plainly appears, that this Man's selfish, haughty, and overbearing Temper, was very near as fatal to himself and his Dependents, as to others that he had to deal with; and that he might have been infinitely more happy, as well as made others so, if he had behaved better; which might prove an useful Lesson to other Governors, if they were a Sort of People capable of learning any Good from the Examples of their Predecessors, or of listening to such Truths as they might always learn from the Voice of the People.

14. We shall have occasion to mention this Man sometimes in the following Pages; but as we shall have no Opportunity of continuing the History of his Administration to its Close, we will take leave of him here, by relating another extraordinary Exploit of his, while he continued in full Possession of Power. He was informed, about the Beginning of the Year 1526, that the Court of *Spain*, wearied with continual Complaints against him, was at length resolved to send him a Successor. As he knew no Means of avoiding this, and yet had no Mind to part with his Power, he began to cast about in his own Mind, where to find another Establishment. There was only one Expedition which had met with any kind of Success under any of his Creatures, and that was the Conquest of *Nicaragua*, by *Francis Hernandez*, who acted under his Licence, and he had also been at some Expence in fitting him out.

He resolved therefore to retire into this Country, for two Reasons: First, that he might secure it for himself, though of right it belonged to him who had subdued it; and next, that he might avoid delivering up his Province to his Successor in Person, for fear he should treat him as he had done *Balboa*. One would have imagined, that when his Affairs were in such a Situation, he should have abated somewhat of his Pride, or at least of his Cruelty; but whether it was that he had no Power over his Temper, or, that he knew he had still Interest enough with the Ministers to prevent his being called to an Account for so small a Matter as a Murder, so it was, that he committed one more base and barbarous, if possible, than that of *Nunez de Balboa*.

The thing happened thus: He pretended, as soon as he came into the new Province, that he had Information his Deputy had a mind to revolt, he therefore sent for him to answer to this Charge. *Francis Hernandez*, who knew there was not a Word of Truth in it, came with that Boldness that is natural to Innocence; and *Pedrarias* had him no sooner in his Power, than he caused his Head to be struck off, alledging that there was no other Way for a Government to be safe against Persons in Power, when their Fidelity was once suspected. As black and heinous as this Fact was, he escaped being questioned for it; and was confirmed in his Government of *Nicaragua*, as if the gratifying his own unjust Resentments had been an indisputable Proof of his Attachment to the Crown of *Spain*, and Zeal for its Service.

15. I shall close this Section with remarking that there never was an Observation more true than that which was laid before the Reader when we opened this History of the *Spanish* Conquests in *America*, which was, that they were entirely owing to the Abilities of particular and private Persons, called forth by Accidents, and never to the Wisdom or Foresight of the *Spanish* Ministers; who, on the contrary, were so ready to cramp such as they ought to have encouraged, that they really made the Disobedience necessary, which they pretended to correct, and gave Birth by their ill Management to those Inconveniences they endeavoured to avoid.

I am not at all afraid of owning that I first made, and now repeat, this Observation with a View of shewing how weak and foolish a thing it is for Men who want Genius to think of limiting and circumscribing such as are endowed with it. It is a Sort of Policy not much unlike erecting Banks to stop a Torrent, which is the surest Way to increase the Mischief. That natural Fire, which a warmer Writer perhaps would have stiled Divine, and we call Genius, is a noble and generous Flame, that, like the Rays of the Sun, cherishes and enlivens all within their Reach, and which becomes dangerous only when artificially contracted. We have seen what *Cortes* did, and how he was treated. In the next Section, which is the last that regards the *Spaniards*, we shall see several Instances of the same kind, all which prove that it is infinitely more adviseable for Statesmen to use fair and gentle Methods, with Persons of such extraordinary Abilities, and rather lead them by proposing the just Rewards of Glory, than pretend to compel them by little Arts which are equally vain and fatal, either to those by whom they are used, or the Nation in whose Service such Talents are exerted. Had *Velasquez* and the Bishop of *Burgos* been able to circumvent *Cortes*, the *Mexican* Empire had stood, and the *Spaniards* had lost those Treasures which it has since yielded. Had *Nunez de Balboa* escaped the Snares that were laid for him, *Peru* had been sooner subdued; and if *Francis Pizarro* had not been wise enough to take Warning by his Example, it had very probably never been subdued at all.

Heroes, like other Men, have their Faults, but, perhaps, their Faults merit more Indulgence: Those who have none of their Excellencies, have frequently more Faults and blacker Vices. Envy is not the Produce of a rank, but of a barren, Soil; and Malice is a Weed that springs in dirty Minds, as the most poisonous Plants are found in Marshes. Whoever reflects on the pitiful Creatures that extinguished so great a Genius as our Sir *Walter Raleigh*, will pardon this Digression, and forgive a Man for indulging his Desire of securing future Merit from those Mischances which have been fatal to it in former times. It is all that lies in the Power of one who is immersed in Books; it is the utmost Service his Pen can render to those whom his Mind adores; and if by celebrating the Memory of great Men, who are gone, he can contribute to excite others to an Imitation of their Actions, and recommend Virtue to the Practice, as well as the Praise, of Posterity, it is the utmost Extent of his Wish, and it is the only Way he knows to be useful to Mankind and his Country.

SECTION XV.

The History of the Discovery and Conquest of the Empire of Peru by FRANCIS PIZARRO, together with the Discovery of Chili, and the Conquest of that Country also.

1. *An Account of the first Notice which the Spaniards had of Peru and of the Copartnership of Pizarro, Almagro, and Luquez, for the Conquest of that Country.* 2. *The Terms upon which that Agreement was made, and the Shares of the respective Parties.* 3. *Francis Pizarro undertakes the Discovery with the Assistance of Almagro, and meets with many Hardships.* 4. *They resolve to prosecute their Designs notwithstanding these Discouragements.* 5. *They proceed to the Port of Tumbez, and the Riches of this Country engages them to send Pizarro into Spain, for which Purpose they return to Panama.* 6. *The Voyage of Francis Pizarro to Europe, his Commission from the Emperor and Return to America.* 7. *The Difficulties he found in resuming the Discovery, and what followed on his sailing for the Coast of Peru.* 8. *His surprising Success which spread the Terror of the Spanish Arms throughout all that Empire.* 9. *The State of the Incas of Peru at this Time, and the History of the Brothers Huescar and Atahualpa.* 10. *This Subject continued, to the Time of their Application to Pizarro.* 11. *The Interview between Atahualpa and the Spanish Embassadors.* 12. *Atahualpa goes to visit Pizarro in Person, and the Consequences of that Visit.* 13. *The Spaniards seize on the Person of Atahualpa, and demand a most extravagant Ransom.* 14. *While a Prisoner he plots and executes the Murder of his Brother Huescar.* 15. *A Conspiracy charg'd upon Atahualpa, for which he is barbarously and unjustly put to death.* 16. *The Confusions into which the Empire of Peru fell for want of a Chief.* 17. *Discords and Divisions among the Spaniards.* 18. *The noble Dispositions of Mango Inca, with other Particulars.* 19. *The Discovery of Chili by Diego de Almagro, and the Return of Ferdinand Pizarro from Spain.* 20. *A civil War breaks out between the Marquis Francis Pizarro and his Colleague Almagro, in which the latter is at first successful.* 21. *The Marquis Francis Pizarro obtains a signal Victory, and thereupon puts his old Colleague Almagro to death, which is followed by new Troubles.* 22. *A Bastard Son of Almagro sets up for himself, and causes the Marquis Pizarro to be assassinated.* 23. *Vaca de Castro is sent by the Emperor Charles V. into Peru, who defeats the young Almagro and puts him to death.* 24. *The Wisdom and Firmness of this new Governor extinguishes all the Troubles in this Province.* 25. *A succinct Account of the subsequent Discoveries of the Spaniards in America.* 26. *This Subject continued and concluded.* 27. *Observations and Remarks upon this Section, and upon the State of the Spanish Empire in the West-Indies.*

1. **T**HE Designs formed by Men of superior Abilities do not perish with them; for Envy, being satisfied when they are no more, cherishes their Memory, and preserves their Schemes, in order to depress and keep under succeeding Pretenders to Merit. This was the Case of *Vasquez Nunez de Balboa*, who first formed the Project of extending the naval Power of Spain on the South-Seas, and at the same Time enlarging her Conquests by Land into the Empire of Peru, of which he had procured some tolerable Accounts before he died. It was the Desire that *Pedrarias* had of wrenching this Project out of the Hands of its Author, that put him upon treating *Balboa* as he did; but, as we have shewn before, all his Expeditions failed, and so did those of several Persons, to whom he granted Licences, for prosecuting their Discoveries. At last, in the Year 1524, three Gentlemen, all Inhabitants of the new City of *Panama*, rich, far in Years, and of great Reputation, offered to venture upon this Undertaking at their own Risk and Expence, provided they might be allowed fair and reasonable Terms; suggesting, at the same Time, that it was more honourable for the Governor to grant them such Conditions, than to look for new Adventurers, out of the Bounds of his own Jurisdiction. *Pedrarias* listened very readily to this Proposal, nor did he at all scruple granting them as easy Terms as they could desire, believing that he ran no Hazard in so doing, since, if they miscarried, as every body thought they would, he was to lose nothing; and, on the other Hand, if they succeeded, he flattered himself that he should always have Force sufficient to maintain his Authority, and secure to himself the Fruits of their Enterprize.

In order to conceive rightly on this Affair, it will be requisite to give some Account of these Undertakers. The first of them was *Francis Pizarro*, whom we have mentioned more than once before: He was a Native of the Town of *Truxillo*; and most of the Spanish Writers agree, that he was a Man of Quality. But how noble soever he might be by Birth, most certain it is, that he quitted his Country and went into the *West-Indies*, in order to repair his broken Fortune. He served first

in the Wars of *Hispaniola* and *Cuba*, and sailed afterwards with *Hojeda* to the Gulph of *Darien*, and was left by him as his Lieutenant, in the Colony which he settled there. He served afterwards under *Vasquez Nunez de Balboa*, and in the Course of several Years, that he bore Command in these Parts, he had justly gained the Character of a bold, enterprising, and experienced Officer: He had likewise attained to a very considerable Fortune; and on the first Building of *Panama* settled there, and seemed disposed to have passed the Remainder of his Days in quiet. The second of these Adventurers was *Diego de Almagro*, who took his Name from the Town in which he was born in Spain, and thereby did it Honour; for as to his Family, it was so obscure, that even the Glory of his Exploits could not afford Historians Light enough to find out who was his Father; but he was a Man of Genius and Experience, and, at the Time he entered upon this Affair, of Fortune likewise. The third was a Priest, one *Ferdinand de Luques*, or, as some Writers call him, *Lugne*, a Man likewise in Years, of great Parts, and a much larger Fortune than either of the former; for he was Proprietor of the Island of *Tabago* in the Bay of *Panama*, had a good Estate besides, and a very large Sum in ready Money. This Partnership made a great Noise, as it was indeed a very singular thing in its Kind, for three private Men to undertake raising a joint Stock for conquering a great Empire; and, like other Projects above the Reach of common Minds, it was treated as a wild and visionary Scheme, which would certainly end in the Ruin of the Projectors.

2. These three great Men did not however give themselves much Pain about what other People said; in which they shewed themselves wise and firm. The Manner in which they sealed and ratified their Agreement, was no less singular than the Agreement itself; for they repaired solemnly to high Mass, which was celebrated by the Priest *Ferdinand de Luques*, who having broke the Wafer into three Pieces, took the first himself, and gave the others to his Companions, in Token that they should pursue this Design with the same Zeal and Steadiness as they did that of their Salvation. It is now proper to see what the Nature was of this Agreement;

of

of which the best Authors report, that they entered into Articles never to abandon each other, for any Hazards or Disappointments they might meet with in the Enterprize, till they had made a Conquest of *Peru*; and solemnly took their Oaths in public, for the Confirmation of these Articles; each of them being assigned a particular Part, in conducting and executing the Scheme: *Francis Pizarro* was to command the first Party that went upon the Discovery; *Almagro* was to carry him Recruits, and reinforce him from Time to Time; and *Ferdinand de Lugne* was to remain at *Panama*, and lay in Ammunition and Provisions to support the Enterprize; and whatever Gold, Silver, precious Stones, or other Effects should be acquired, after the Charges, and the Emperor's Fifths, paid, were to be divided equally amongst them.

They took care to make the best Enquiries they could into the Causes of the Miscarriages which had formerly happened, that they might the better avoid them; they were likewise very assiduous in finding out Persons who had been employed in former Undertakings, that they might have the Benefit of their Experience; and they bought for the Service of this Expedition a fine new Ship, that had been built by the Direction of *Vasquez Nunez de Balboa*, and which was just finished as he died. Their Pilot was *Francis Penate*; *Nicholas de Ribera* was Treasurer; *John Carillo* had the Charge of keeping an account of the King's Fifths; and one *Salzedo* was next in Command under *Pizarro*. The whole Number of Men employed were no more than one hundred and fourteen; and exclusive of Officers they had but fourscore, the most inconsiderable Body surely that ever had the Boldness to undertake such an Enterprize.

3. About the Middle of the Month of *November 1524*, all Things being ready, *Pizarro* embarked, and proceeded to the Island of *Tabago*, distant from *Panama* about five Leagues, from whence he sailed to the *Pearl Islands*, in the Middle of that Bay, where he took in Wood, Water, and Hay for his Horses, and sailed to *Port Pinas*, or *Prineaple*, upon the Continent, on the South Side of the Bay of *Panama*. Here *Pizarro* went on Shore, with his Soldiers, and endeavoured to penetrate into the Country; but meeting with nothing but Bogs or Mountains, over-run with Wood and Deluges of Rain, as they approached the Equator; and the People having fled from their Habitations, so that no Provisions were to be had, *Pizarro* ran farther down the Coast to the Southward, and then landing again found the Country no better; and lost a great many of his Men by Sicknes, want of Provisions, or the Hardships they suffered in their Marches and Counter-Marches. Whereupon he sent the Ship to the *Isle of Pearls* for Provisions; and, in the mean time, was followed by *Almagro*, with two other Ships, and a Recruit of sixty Men and upwards. These two Captains meeting upon this wretched rainy and unwholesome Coast, and landing their united Forces, had some Skirmishes with the Natives, in which *Almagro* lost an Eye; but happening, in some of their Excursions, to meet with a Parcel of Gold, of the Value of fourteen or fifteen thousand Crowns, they resolved, notwithstanding all the Difficulties and Hazards they underwent, to proceed in the Enterprize, in which they were the more encouraged by the Pilot *de Ruys*, who (while *Pizarro* marched with the Soldiers on Shore) ran down as far as *Cape Passaro*, under the Equator, and taking some Prisoners, was assured by them, that the Treasures of *Peru* were much beyond any thing that had hitherto been reported of them, whereupon he returned to *Pizarro* with the agreeable News. In the mean time, that General suffered incredible Hardships in the Absence of *Almagro*, who was gone to *Panama* with the Gold they had got, to procure another Reinforcement of Troops and Provisions, without which it was very evident that nothing could be done.

4. At the Time of his returning to *Panama*, *Almagro* found *Pedrarias* removed from his Government, and succeeded by *Peter los Rios*, who permitted him to raise what Men he could to reinforce *Pizarro*; whereupon he embarked again with forty Soldiers more, some Horses and Arms, Cloaths, Shoes, Provisions, and Medicines,

and returned to *Pizarro*, whom he found in a very miserable Condition, great Part of his Men being sick or dead: They removed therefore from that unhealthy part of the Continent, and put their Men on Shore in the Island of *Gallo*; here they remained fifteen Days, and then returned towards the Continent again, running along the Coast further to the Southward; however, they still met with such a drowned Country, and bad Weather, that it was once proposed to return back to *Panama*. Even *Pizarro's* Heart failed him, and the two Commanders, it seems, were upon the Point of drawing their Swords, so hot was the Contest for and against the proceeding in the Enterprize; but at length it was agreed, that they should go to the Island of *Gallo* again, where *Pizarro* should remain with the Men till *Almagro* went to *Panama* for Recruits; and great Care was taken that none of the Men should write home, and discover their wretched Condition; for most of them had shewn an Inclination to desert the Service whenever they should have an Opportunity, and threatened to apply to the Governor of *Panama* to be recalled from an Expedition which had consumed such Numbers of them, and, if prosecuted, would probably destroy the rest; and, notwithstanding all the Care their Commanders took, one of them found Means to send a Paper subscribed by most of them, desiring to be recalled, which was enclosed in a Bottom of Cotton Yarn, and thereby concealed from the Knowledge of their Officers.

This Paper coming to the Hands of the Governor of *Panama*, he was so far from suffering *Almagro* to levy any more Recruits, that he sent a Ship with a Commissary on board to the Island of *Gallo*, on purpose to bring back all the Men that survived: The Commissary arriving, *Pizarro* begged of him that he would, however, suffer as many of them to stay with him as were willing to remain in the Enterprize; which the Commissary consenting to, *Pizarro* drew a Line with the Point of his Sword, and haranguing his Men, told them, they were at Liberty to return to *Panama*, if they thought fit; but it grieved him, that they should now abandon the Enterprize, when they were upon the Point of reaping the Reward of all their Sufferings: As for his Part, he would perish in the glorious Undertaking rather than desert it; and those that voluntarily remained with him, should share with him the Treasures of which they had so near a Prospect, desiring those that were willing to proceed in the Enterprize to come over the Line he had drawn. But such were the Sufferings of these poor Wretches, that much the greatest Part of them forsook him; only thirteen Men and a Mulatto came over the Line he had drawn, the rest embarked and returned to *Panama* with the Commissary.

5. The Affairs of *Pizarro* never seemed in a worse Situation than at this Time; for he was not only deprived of all Hopes of performing any thing remarkable for the present, but had also a very indifferent Prospect for the future. In this Distress he removed to the Island of *Gorgona*, in order to supply himself with fresh Water: There he remained till he was joined by *Almagro* and his Pilot, with some few Recruits, which they, with some Difficulty, had prevailed upon to enter into this Expedition. With these Men they embarked, and sailed still along the Coast till they had passed the Equator, and found themselves in the Latitude of 30° South; having spent about two Years in making a Voyage, which may very well be performed, now the Currents, Trade, Winds, and their Seasons, are known, in as many Weeks. In this Passage, however, they took several Indian Floats, with Cargoes of considerable Value; and gained such Intelligence of the Situation of Things upon the Coast, that *Pizarro* resolved to send one *Peter de Candia*, so called, because he was born in that Island, to *Tumbez*, in order to learn whether the Informations they had hitherto received might be depended upon or not; which was a very well contrived Expedient.

This Man had a great deal of good Sense, a very fair Character, and was so expert in his Conduct, that he found Ways and Means to render himself so agreeable to the *Indians*, that he executed his Commission as effectually as could be desired, and returned safely to *Pizarro*,

with

with a full Account of all that he had seen. By which it plainly appeared, that the Riches of this Country very far exceeded even the Reports they had received concerning them. For he declared, that he had seen their public Edifices erected with wonderful Art and Skill, and so excessively rich, that the very Walls of them were covered with Gold and Silver, with many other Things of the like Nature.

After hearing this Man's Relation, they held a kind of Council amongst themselves upon the present State of their Affairs, and unanimously agreed, that the wisest Course they could take would be to return all together to *Panama*, where they made no Question that the News of such important Discoveries would effectually restore their Affairs, and procure them such Supplies, as would enable them to prosecute their Design with all the Success imaginable. This Resolution once taken, they proceeded to put it in Execution; being thoroughly satisfied that in the Situation they were in, they could undertake nothing; and that by remaining upon this Coast, they should lose all their Men by degrees, and thereby bring an irretrievable Disgrace upon the Project, which would not only ruin themselves, but discourage all future Attempts of this Nature.

6. Upon the Return of *Francis Pizarro* to *Panama*, with many indubitable Proofs of his Discoveries, it occasioned a vast stir in that Colony; for those who had before derided this Project as absurd and impracticable were now convinced of their Error, and that it was likely to prove a much more considerable Discovery than any hitherto made by the *Spaniards*; yet the Opposition made by the new Governor to his levying Men for the carrying on his Design, and some other Accidents, made it evident, that it would be impossible for him or his Associates to proceed farther, without the Assistance of a superior Authority. It was therefore agreed by them all that *Pizarro* should go in Person to *Spain*, in order to obtain the necessary Powers from the Crown, for removing all those Difficulties; and it was likewise agreed, that he should solicit for himself the Title of Governor; for *Almagro* that of Adelantado, or the King's Lieutenant; and for *Lugne*, the Protectorship of the *Peruvians*, and the first Bishopric of that Country. *Pizarro* accordingly set sail, and, arriving in *Spain*, proceeded to the Court of the Emperor *Charles V.* which was then at *Toledo*; here he met with a very gracious Reception, on his presenting his Imperial Majesty with some *Peruvians* in their proper Habits, two or three *Peruvian* Sheep, and several Gold and Silver Vessels and Utensils of the Fashion of the Country.

The Emperor was pleased to hear him relate the Difficulties he had met with in these three Years Voyage; and in the End referred the Overtures he made to the Council of the *Indies*; who having framed their Report, *Pizarro* was ordered to proceed in the Conquest of *Peru* for the Space of two hundred Leagues to the Southward of *Tumbez*, which lies at the Bottom of the Bay of *Guiaquil*: He procured also the Title of Governor and Captain-General to be conferred on him for Life, with the Offices of Adelantado, or Lord-Lieutenant, and of Alguazil-Major; he was also empowered to erect four Castles in *Peru*, where he thought proper, and retain the Government and Inheritance of them to him and his Posterity. He obtained for *Ferdinando de Lugne*, that he should be recommended to the Pope to be made Bishop of *Tumbez*; and, in the mean Time, constituted Protector-General of the *Peruvians*. *Almagro* was constituted Governor of *Tumbez*, and a twentieth Part of all the Profits and Revenues of the Country, when conquered, were to go to *Pizarro* and *Almagro*; two Thirds thereof to the former, and one third to the latter; *Almagro* was made a Gentleman, and his Bastard Son legitimate: The thirteen Men that remained with *Pizarro* in his Distress on the Island of *Gallo* were made Gentlemen, if they were not so before; and those that were Gentlemen then were ordered to be knighted.

These Commissions and Powers were executed at *Toledo* on the 26th of *July* 1528, and six Dominican Friars were ordered to go over with *Pizarro* as Missionaries, to assist in the Conversion of the *Peruvians*; and

thus this great Affair was finished much to the Satisfaction of our Adventurer, who found himself vested with a legal Authority to pursue his Conquests, which was all he wanted, and no less to the Satisfaction of the Court, which gained thereby a Prospect of annexing another Empire to their Dominions in *America*, without being at any Expence. It may not be amiss to remark here that the *Spaniards* had a Felicity in making their Conquests, which never attended any other Nation; since neither *Columbus*, *Cortes*, *Balboa*, or *Pizarro*, who brought so many Millions of Pistoles into the royal Coffers, ever received so much as a Marvedy from thence towards the Charge of their respective Expeditions.

7. When *Francis Pizarro* had received his Commissions of the Tenor before-mentioned, he repaired to his native Town of *Tuxillo* in *Estremadura*, in order to raise Forces, and to visit his Family, of which it may not be amiss to say something farther in this Place. His Father *Gonzalo Pizarro*, surnamed *The Long*, because he was very tall, was a Man of Family, and had served as a Captain of Foot; he married a Woman of Family likewise, by whom he had two Sons, *John* and *Ferdinand*, but as for *Francis* he was illegitimate, and the Son of a Country Girl, who was afterwards married to an honest Farmer, by whom she had *Francis Martin de Alcantara*. Old *Gonzalo Pizarro* had also another natural Son, of his own Name; and the whole Family being well beloved in their Neighbourhood, they made great Dispatch in providing all that the new Governor wanted, which having effected, he embarked at *Seville*, with his four Brothers, viz. *Ferdinand*, *John*, *Gonzalo*, and *Francis*, in the Month of *January* 1530, and arrived at *Nombre de Dios* on the Coast of *Terra Firma*, from whence he marched with his People to the City of *Panama*.

But his ingrossing all the Honours and Commands to himself, so disgusted *Almagro*, that he refused to assist in the intended Expedition, till *Pizarro* promised to relinquish the Title of Adelantado, and to give him an equal Share in whatever they should acquire; and upon these Concessions, *Almagro* promised to assist him as formerly, and smothered his Resentment for the present, that the Service might not suffer; but they were never thoroughly reconciled, as will appear hereafter. At length *Pizarro* embarked at *Panama* in three Ships, taking with him one hundred and eighty-five Soldiers, thirty-seven Horses, and such a Quantity of Arms, Ammunition, and Stores, as might enable him to fix Colonies on the *Peruvian* Coast; but meeting with the like contrary Winds as he had done in the first Voyage, and finding it very inconvenient, and indeed impracticable to keep his Horses longer on board, he was obliged to land above an hundred Leagues to the Northward of *Tumbez*; and now, thinking himself strong enough to drive the naked *Indians* before him, he fell upon them, plundered their Towns, and made many of them Prisoners without any manner of Provocation, whereupon the rest fled from the Sea Coasts up into the Country; and *Pizarro* was afterwards so distressed for Provisions, and lost so many Men by Sicknefs and Hardships, and the fatiguing Marches through Bogs and Thickets of *Mangroves* in this extraordinary hot Climate, that his Forces were exceedingly diminished; and he now too late perceived his Error, in not courting the Natives, being in no Condition to make a Conquest of *Peru* with the Forces he had left.

He took therefore most of the Treasure he had plundered the *Indians* of, and sent his Ships back with it to *Panama*, to raise more Recruits; inviting, at the same Time, some Adventurers from *Nicaragua*, and other Parts of *North America*, to come and join him, promising them a Share of the vast Treasures he was now assured of finding in *Peru*; which had a very good Effect, and procured him soon after a very considerable Reinforcement. In this Expedition he had already gained so much that he was able to send thirty thousand Pezoes in Gold to *Panama*, besides a considerable Quantity of fine Emeralds; and might have sent many more, if it had not been for the Folly of some of his People, who took it into their Heads that these precious Stones were as hard

as Diamonds, or at least ought to be so, so that in trying them with Hammers they broke abundance of them to Pieces.

8. *Francis Pizarro* resolved to continue in Action till his Recruits arrived; and, having in some Measure informed himself of the State of the Country, he judged it very possible to make some Advantage of the Disputes that reigned at this time, between the Inhabitants of *Tumbez* and those of the Island of *Puna*. He endeavoured to gain the good Will first of the Islanders; but finding them to be a very false and perfidious People, he attacked and routed them, which he hoped would have opened a Means of contracting a close Alliance with the *Tumbez*; because he found six hundred of them, together with one of the most considerable Persons of the City, Prisoners amongst these People, whom he set at Liberty, and sent home, together with three of his own People; who, if the *Spanish* Writers are to be believed, this barbarous Nation sacrificed to their Idols, which however was not known immediately to *Pizarro*, who continued to reckon the *Tumbez* as his Allies, upon whose Assistance he might depend at all times.

In the mean time *Almagro* having sent *Pizarro* a considerable Reinforcement from *Panama*, and *Ferdinand de Soto*, and other Adventurers, arriving with their Troops from *Nicaragua*, he thought himself in a Condition to carry on the War upon the Continent, especially as he had some Reason to expect to be supported by the *Tumbez*: Accordingly, having provided a sufficient Number of Floats or Barklogs, he transported his Troops to *Tumbez*, in which he lost some Men on going ashore by the Roughness of the Sea, which runs very high on that Coast; and some of his People were attacked and cut off by the Natives, which was a Surprise to him as he took them to be his Friends. The *Spanish* Writers give various Reasons for this Alteration in the Conduct of the Natives of *Tumbez*; who, but a very little before professed themselves their very good Allies and Confederates. Some relate, that, observing the *Spaniards* had enslaved the Natives of the Island of *Puna*, and perfectly subverted their Religion and Government, demolished their Temples, and every thing they held sacred, they expected to be treated in the same Manner by the *Spaniards*, and therefore thought fit to oppose their landing in their Country.

Others inform us, that while the *Spaniards* were engaged in the Reduction of *Puna*, a very great Alteration in the Face of Affairs happened upon the Continent. *Atabualpa* had defeated the Forces of his Brother *Huescar* the Emperor; cut in Pieces most of the Inhabitants of *Tumbez* and the neighbouring Provinces for adhering to him; and the Troops that opposed *Pizarro's* landing in *Tumbez*, were those detached by *Atabualpa* to that Province, on purpose to repel the Invasion of the *Spaniards*. But whatever was the Reason of the *Peruvians* opposing the Descent of these Strangers, it is evident that they were put in such Confusion by the *Spanish* Horse and Artillery, that they fled as the *Spaniards* advanced; and, after the Slaughter of some thousands of them, were forced to abandon the Town and Castle, and even the whole Valley of *Tumbez*; leaving behind them all the Gold and Silver Plate, Emeralds, Pearls, and other rich Spoils which lay heaped up in the Temple of the Sun, and the Inca's Palace, being so vast a Treasure, that the *Spaniards* could scarce believe their Eyes, when they found themselves so suddenly possessed of it; and such was the Consternation of *Atabualpa* and his whole Court, when the Fugitives related what Slaughter the Thunderer's Ordnance had made among them, and how impossible it was to escape the *Spanish* Horses, to which Animals their Fears had added Wings; that they concluded, if the *Spaniards* were not Gods, as they at first conjectured, they were certainly Devils, and that it was not possible for any human Force to defend their Country against them; of which *Pizarro* receiving Intelligence, resolved to take Advantage of the Terror they were in, and march immediately to find out *Atabualpa*, while he remained under that Delusion.

But he found it necessary to defer his March, till he had erected a slight Fortress upon the Sea Coast (to which

he gave the Name of *St. Michael*) for receiving the Recruits that he expected, and to serve him for a Place of Retreat and Security, in case any unforeseen Accident should happen. This was the first *Spanish* Colony planted in *Peru*, and here the first Church was erected, in the Year 1531, and *F. Reginald de Pedraga* was constituted Protector of the *Indians*, *Ferdinand de Lugne* being unable to execute that Employment, on Account of his Indisposition. This Measure was certainly the wisest that he could take; for he not only wanted such a Settlement for the Reception of his Recruits, but shewed likewise his Judgment in the Choice he made, since there was no Place so proper for his Purpose upon the whole Coast.

He took another Step that was equally judicious; he divided all the Gold and Silver in his Possession fairly amongst the Soldiers; and to such as were to remain in the Colony, he delivered their Shares without Abatement, that they might have wherewithall to subsist, and to carry on their Trades; but for such as continued to march with him, he gave them only Acknowledgments of his having so much in his Hands, with a Promise to pay it when they came to *Panama*. By this Establishment, he shewed plainly his Intention to remain in the Country, which it was evident he could not do but by Force; and therefore the very News of his erecting a Town, fortifying that Town, and compelling the *Indians* who lived near it, to obey not him only, but the meanest of his *Spaniards*, as Lord, soon filled the whole Empire with the Noise of this Enterprize, and engaged the two Brothers, who were contending for the Empire, to turn their Eyes upon those who might very soon have that Empire to give, since the Terror of their Arms was already spread among Nations of whom the *Spaniards* had not the least Knowledge.

9. As the Differences between these two Brothers proved their Ruin, and the chief Cause that this great Empire fell into the Hands of the *Spaniards*, it is absolutely necessary that we should give some Account of them, in order to render this History perfectly intelligible; and this shall be done in as few Words as the Subject will admit. *Huana Capac*, or as some of the *Spanish* Writers call him *Guana Cava*, was the Sovereign of *Cuzco*, and had annexed to his Empire many Provinces, so that his Dominions were five hundred Leagues in extent from his capital City. The Country of *Quito*, which was still governed by its natural Princes, grew next the Object of his Ambition; he resolved to make himself Master of it, which, considering the Superiority of his Force, was no hard Matter for him to do: He did it accordingly, and, having visited it as a new Conquest, he was so much charmed therewith, that he resolved to make it the Place of his Residence; and accordingly, leaving his eldest Son *Huescar*, *Mango Inca*, and other Children at *Cuzco*, under proper Guardians, he transferred the imperial Residence to *Quito*, where he married the Daughter of the deceased Prince, and thereby gained a legal Title to a Country, the Possession of which he had acquired by Force. In Process of time, however, finding that great Inconveniencies ensued from his quitting his ancient Residence, he returned thither for a time, and left his Son *Atabualpa*, whom he had by the Princess of *Quito*, and for whom he had the greatest Tenderness, under the Care of the most eminent Persons in that Principality, whither he proposed shortly after to return, as he did, and then to settle the Affairs of that Principality, and pass the Remainder of his Days at *Cuzco*; but Providence otherwise disposed of him, and he died at *Quito*, having left the best Part of his Treasures, and the old imperial Army, at *Cuzco*; declaring by his Will, that as *Quito* never made a Part of the Empire of the Incas, there was no Reason that it should descend, together with the Empire, to his legal Successor, and therefore he bestowed it upon his youngest Son *Atabualpa*, whom the *Spanish* Writers generally call *Atabaliba*, who was, indeed the Heir of it by his Mother.

After his Death, the young Prince secured the Army and the Treasures of his Father, and then sent an Embassy to *Huescar*, to signify the Nature of his Father's Will,

to render Homage to him in his Name, and to desire from him the Confirmation of the Kingdom of *Quito*, which he was willing to hold from the Incas. *Huescar* was by no means pleased with this Embassy, and therefore sent his Brother Word that he should suffer the Troops to return to their Duty; that he should quit the Sovereignty of *Quito*, which being a frontier Province of his Empire, he could by no means leave in his Hands; and, that after doing this, if he repaired to *Cuzco*, he would give him a Share in his Father's Treasures, and assign him Lands for his Subsistence. He added, that in case he did not accept these Proposals, he would certainly make War upon him, and recover the Possession of *Quito* by the same Method his Father acquired his first right to it. Upon receiving so unkind a Message from his elder Brother, *Atabualpa* called the principal Persons his Father had intrusted with his Education, to Council; who advised him, since Peace could no longer be preserved, to take the Field first; since that was a Measure by which he might gain much, and could lose nothing at all.

10. *Atabualpa*, or *Atabaliba*, embraced this Proposal, as indeed it was the wisest that could be offered, and the most suitable to his Circumstances; and with the Army his Father had left, immediately entered the Dominions of his Brother. *Huescar*, on his Part, brought a more numerous Army into the Field, and it was not long before a general Engagement ensued, which lasted for three Days, and was as bloody as it was obstinate. It ended however in the Defeat, and which was still worse, in the Imprisonment of *Atabualpa*, who was taken upon the Bridge of the River *Tumibamba*, and shut up in a Palace which bore the same Name. But observing that the Soldiers, elevated with their late Victory, were entirely given to Feasts and Sports, he took his Opportunity; and, having provided himself with the necessary Instruments, pierced a Hole through one of his Apartments, and thereby made his Escape. He returned to his own Subjects, whom he found broken and dispirited by their last Defeat; but he revived their Courage in an Instant, by assuring them, that his Father had appeared to him in his Prison, changed him into a Serpent, and thereby gave him an Opportunity of sliding through the Wall. What to a sensible People would be ridiculous, is to a superstitious and credulous Multitude, a Miracle. The News was spread throughout the whole Principality; the People in general quitted their Habitations to take up Arms in his Service, and he had, in a very short Space of Time, a much greater Body of Troops than before. He defeated with these, two or three Armies that opposed him; took, and levelled with the Ground, the Place where he had been imprisoned; and having by his Victory vastly augmented his Conquests, he drew from the Provinces he subdued prodigious Numbers of Troops. When he arrived at *Tumbez*, he purposed to have made himself Master of the Island of *Puna*, in which however he failed. This did not at all discourage him; but leaving that War to be renewed at some happier Juncture, he marched with all his Forces to give *Huescar* battle, who, he was informed, was coming against him with a prodigious Army.

When *Atabualpa* was come to *Caxamalca*, he sent two of his best Officers with three or four thousand light-armed Troops, to reconnoitre his Brother's Army; these drawing very near to the Camp of *Huescar*, found it necessary to quit the high Road, to prevent being discovered. It happened very unluckily for *Huescar*, that, to march more at his leisure, and without being disturbed by the Noise of the Army, he had taken the same Bye-road with about seven hundred of his principal Officers, and who formed at once his Court and his Guard. The Officers of *Atabualpa* knew the Imperial Standard, and soon saw how Matters stood: They laid hold therefore of this Opportunity of making a short End of the War, and attacked *Huescar* and those about him with so much Fury, that after a short Dispute the Inca was made Prisoner. The Victors were soon in as much Danger as the Vanquished, for the Army of *Huescar* being informed of what had happened, surrounded this Handful of Men, and threatened to cut them to Pieces immediately. In this Distress

they were obliged to have Recourse to a very natural Expedient; they told *Huescar*, that if he did not order his Troops to retire, they must be obliged to secure themselves from Shame at least, if not from Death, by cutting off his Head, and then fighting it out to the last Man. The Officer who delivered this Message, observing that it had a great Effect on the Mind of *Huescar*, added, That as it was a necessary, so he would find it both a just and profitable Measure; for that as his Brother pretended to nothing more than his own little Sovereignty of *Quito*, so if he could resolve to gratify him in that Particular, there was no doubt of his restoring him to Liberty, and even acknowledging him as his Sovereign; but that he must resolve speedily, since there was not a Moment's Time to be spared. *Huescar*, finding himself in this Distress, and seeing no other way to escape, submitted to the Terms prescribed, and, making a Signal to his Forces to forbear charging, directed the principal Officers to come to him, and ordered them to march with the Army back to *Cuzco*. They implicitly obeyed the Commands of their Sovereign. And this was the Situation things were in, when both the Brothers had recourse to *Francis Pizarro*, and claimed his Assistance.

It is evident enough from what has been already said, that scarce any People could be more superstitious than the Inhabitants of *Peru*, and certain it is, that the Fables upon which their Religion was founded, proved of greater Consequence than any other thing to *Pizarro* and his Associates; who otherwise would never have reduced them. One Instance of this shall suffice, and indeed that is so extraordinary that there is no need of adding another: They were thoroughly persuaded that their Incas descended from the Sun, and they very soon came to believe that the *Spaniards* were the Children of the Sun likewise, in which the Story I am going to tell fully confirmed them. The eldest Son of the Inca *Tabuarhuacac* beheld in antient Times, as their Tradition taught them, a very strange Phantom, different in Aspect and Dress in the highest Degree from the *Peruvians*; for whereas they have no Beard, and the Cloaths they wear come no lower than their Knees, this Spirit, who called himself *Virachoca*, had a long Beard, and his Robe reached down to his Feet; and he likewise led in his Hand an Animal absolutely unknown to the young Prince. This Fable, universally spread, and generally received, operated so strongly upon the Minds of the People, that they no sooner saw a *Spaniard* with a long Beard, his Legs covered, and his Horse in his Hand, than they cried out: *Look, look, there is the Inca Virachoca, the Son of the Sun.*

11. It was immediately after the settling of the new Colony by the *Spaniards*, that the Embassadors from *Atabualpa* arrived, and signified to *Francis Pizarro*, the great Desire their Master had to cultivate a good Correspondence with him; upon which he immediately took a Resolution to advance towards *Caxamalca*, where he understood the Inca was, in order to visit him. It so fell out, that the Rout between these two Places lay through a burning Desert of about twenty Leagues over; in passing through which the *Spanish* Soldiers suffered excessively; but however, when they came to *Motapa* they met with rich Vallies, and a plentiful Country; wherein they refreshed themselves, and then continued their Journey. They met soon after with certain Embassadors, that had been dispatched by *Atabualpa* to compliment *Pizarro*, who presented him, on the Part of the Inca, with a Pair of Gold Buskins very finely wrought, and Bracelets of the same Metal set with Emeralds; which they desired him to put on when he had Audience of the Emperor, that by the Sight of his own Presents he might know him. The Chief of this Embassy was himself of the Race of the Incas, and shewed much Ceremony and Politeness in his Behaviour. He brought, besides these Presents for the General, Provisions and Gifts for the Army, the former in great plenty, and very acceptable; the latter rich, and therefore no less satisfactory; which raised the Minds of the *Spaniards* prodigiously, inasmuch as they attributed it wholly to the Fear of that Monarch and his Subjects, in which without doubt they were right, and

and yet not in the Sense in which they understood it; for it was not so much the Fear of their Arms, as the Dread the People had of them on a religious Score, as supposing them the Offspring of the Sun.

It fell out unluckily for these Embassadors, that the *Spaniards* had no Interpreter but an *Indian* of *Puna*, baptized by the Name of *Philip*, and on the Score of his Youth called *Philipillo*, i. e. *Little Philip*, a mean, villainous Rascal, born of the Scum of the People, and whose Mind was yet more dirty than his Original: He had not Sense enough to comprehend the Compliment of the Inca; and therefore, instead of the true Meaning of it, delivered *Pizarro* some Nonsense of his own. After the Embassador was departed, the *Spaniards* deliberated upon his Message; some suspected, that the Inca had bad Designs; others swore, that as his Gold was good, they had no Reason to doubt of his Intention: In the End, they resolved to continue their March, and they did so, meeting every where with a kind Reception; and being extremely well entertained at the public Expence. In the mean time, *Atabualpa* employed his Time very indifferently, endeavouring to secure the Possession of the Empire, by murdering most of the royal Family, and such as were most attached to the Prince his Brother. When they came to *Caxamalca*, they found the Inca gone, but to a Place not far distant, whither the General sent, as his Embassadors, his Brother *Ferdinand Pizarro*, and *Ferdinand Soto*.

They were received with great Ceremony, and immediately introduced to the royal Presence; which struck the *Spaniards* at once with Reverence and Joy; for not only the Inca himself, but all who were near him, glittered with Gold and Jewels, and the Embassadors were served with perfumed Liquors, by two beautiful Princesses, in Vessels of Gold set with Emeralds. *Ferdinand Pizarro* made the Inca a long Compliment; in which he told him, or rather would have told him, of the great Kindness done him by the Pope and the King of *Spain*, who had sent them expressly, to deliver him and his Subjects from the Tyranny of the Devil; but the Interpreter, who understood nothing of this, delivered such strange Stuff of his own, that the Inca could comprehend little or nothing of his Meaning. He shaped however the best Answer to this Speech that he could; in which he recommended his Subjects to their Favour and Protection, beseeching them, as they were the Children of the Sun, to be gracious and beneficent as their Father; but the Interpreter murdered this Speech too, in such a manner, that though the Tenderness of it drew Tears from the Officers attending upon the Inca, yet neither of the *Spanish* Captains were able to make any thing of it; and therefore all they could say at their Return to *Pizarro*, was, that they had been very kindly entertained, and that the Inca's Court was splendid beyond Description, and almost beyond Imagination; which raised the Hopes, and sharpened the Desires of the *Spaniards* exceedingly; and they likewise told him, that the very next Day, the Inca intended to come in Person, and pay him a Visit in his Camp, attended by his Guards and his Nobility.

12. *Francis Pizarro* divided his Cavalry, which amounted to no more than sixty Men, into three Troops of twenty each, commanded by *Ferdinand Pizarro*, *Ferdinand Soto*, and *Sebastian Belalcazar*, whom he ordered to draw his Men up under the Cover of an old Wall, that they might not be seen at first; and that, discovering themselves suddenly, the *Indians* might be the more surprized. He put himself at the Head of the Foot, which consisted but of one hundred Men, and so waited for the Inca in order of Battle. *Atabualpa*, on his Side, advanced in as regular Order with his Army, which was divided into four Battalions, consisting of eight thousand Men each; and, as soon as they drew near, the Inca said to his Officers, these People are Messengers of the Gods, let us be sure to do nothing that may offend them; but, on the contrary, use our utmost Endeavours to gain them by repeated Civilities. The Person who advanced to harangue him from the *Spaniards*, was Father *Vincent de Valverde*, who carried in one Hand a Cross, and in the other his Breviary.

The Figure of this Man surprized the Emperor very much; however, he ordered him a Chair, and then the reverend Father began a long wretched Discourse, which was to be delivered again by a more wretched Interpreter. This Harangue of his was divided into two Parts; the first consisted of an Account of all the Mysteries of the Christian Faith, the Mission of *Jesus Christ*, and his Mission of the Apostles, of whom he told him *St. Peter* was the first and Head. In the second Part of his Discourse he held forth the Power of the Pope as the Successor of *St. Peter*, and talked likewise much of the universal Monarchy of the Emperor *Charles*, to which it was necessary that the Inca should submit; for otherwise God would harden his Heart as he did *Pharaoh's*, and then the *Spaniards* were to inflict upon him all the Plagues of *Egypt*. We may easily guess what strange Stuff this must be, when passing through the Canal of such a Fellow as *Philipillo*, who delivered it so sadly, that the Inca himself perceived his Ignorance, and therefore delivered his Answer not in the Court Language as he would otherwise have done, but in the vulgar Tongue; which, however, did not hinder *Philipillo* from murdering it so effectually, that the Priest knew no more of the Emperor's Meaning, than the Emperor did of his.

Thus the whole was a strange Scene of Confusion, which, however, ended much worse than it began; for the *Spaniards* observing an *Indian* Idol upon a Tower excessively adorned with Silver, Gold, and precious Stones, their Avarice would not suffer them to wait any longer, so that they fell to pillaging it as fast as they could; in which the *Indians* were going to oppose them, but the Inca commanded them not to resist, let the *Spaniards* do what they would. Father *Vincent* hearing this Noise, turned about, rose from his Chair, and running to appease the *Spaniards*, threw aside his Cross and dropped his Breviary, which greatly increased the Confusion; the *Spaniards* pretending that they apprehended the *Indian* Monarch had insulted the Cross; but without doubt the Insult was on their Side, who thus scandalously betrayed and profaned their Religion, and made the Gospel of Peace a Pretence for perpetrating the most barbarous, the most perfidious, and most inhuman Cruelties, by slaughtering thousands of poor Creatures, so obedient to their Prince, that they did not move a Hand in their own Defence.

13. There is some Doubt whether *Pizarro* engaged himself at the Beginning, but it is certain, that when this Confusion rose to such a Height, he caused his Horse to pour in, and advanced in Person to seize *Atabualpa*, of whose Robe he laid hold; and, falling down himself, dragged the Inca after him from his Chair, at which time one of the *Spaniards* striking at him with his Sword, wounded *Pizarro*, who was the only *Spaniard* that lost any Blood in this dishonourable Fray; for certainly it could not be called a Battle, since the *Indians* fell like Sheep, without offering the least Resistance. The *Spanish* Writers differ widely from each other in their Accounts of this Transaction, at which we need not wonder; for, being naturally proud, and unwilling to injure the Reputation of their Countrymen, they endeavour all they can to disguise the Truth, and to hinder their Readers from seeing a Series of Facts utterly inexcusable. The Desire of imposing Falshoods will always beget Confusion; for let the Parts or Abilities of Men be what they will, there is no giving Consistence or Connection to a Bundle of Lies.

Herrera informs us, that *Pizarro*, before *Atabualpa* and his *Indians* entered the Square, commanded his Musketeers to take Post, and that, upon a Signal given them, the Captains *Ferdinand Pizarro*, *Ferdinand de Soto*, *Sebastian de Belalcazar*, and *Christopher de Mena*, who commanded the Cavalry, should fall upon the *Indians*, and the Foot should do the like; and directed them before the Execution began, that they should permit a certain Number of the Enemy to enter the Gates, which they should afterwards take special Care to shut and secure: That Father *Vincent* having made his Speech to the Inca, told *Pizarro* he was treated with Contempt, and that the Tyrant demanded Restitution of the Gold and Silver the *Spaniards*

Spaniards had plundered his Subjects of ; whereupon, says *Herrera*, *Pizarro* did not think fit to lose more Time, for he had before resolved what to do, being a Man that had served twenty Years in the *West-Indies* ; and, knowing the Victory depended on seizing the Persons of the Sovereigns, he lifted up the white Cloth, which was the appointed Signal for executing the Orders he had given ; and thereupon *Peter Candia* fired the great Guns, and the Musketeers their Pieces, to the Amazement of the *Indians* ; and the more so, because it was unexpected : Then the Drums beat, the Trumpets sounded, the Horse fell in three several Ways among the *Indians*, while the Infantry made a Slaughter of them with their cross Bows, Pikes, and Swords ; and *Pizarro*, in Person, with fifteen chosen Men, marched up to the Chair on which *Atabualpa* was carried, and, killing those that supported it, with many more that crowded to supply their Places, after a very great Slaughter of the *Indians*, seized the Inca, and pulled him down from his Chair ; after which the *Peruvians* fled and were pursued by the *Spaniards*, who did not leave off killing them till the Fugitives broke down part of the Wall of the Square, by which Means some of them escaped.

De la Vega, who was himself an Inca, or a Descendant from the Family of those Princes, whose History he writes, observes, that the *Spanish* Generals pretended the *Indians* were treacherous, that *Atabualpa* had formed a Design to surprize the *Spaniards*, and put them all to the Sword ; and that *F. Vincent* complained to the General, they refused his Invitation to become Christians, and treated him and the Cross with Contempt, and thereupon incited the General to fall upon them. But in these Accounts, says *de la Vega*, the General and Captains were not sincere ; they endeavoured to put the best Gloss upon their Actions, leaving out of the Narrative they sent to the Court of *Spain* all their cruel and unjustifiable Proceedings, and adding whatever had a fair Appearance ; it being confirmed, says that Historian, by several other Writers, that *Atabualpa* commanded his Subjects not to resist the *Spaniards* ; for if the Inca had not commanded them not to fight, certainly, said he, they would never have endured to see their Prince overthrown and taken, having Weapons in their Hands ; they would all rather have died in his Defence, as many of them did in endeavouring to support his Chair, and not have suffered an hundred and sixty *Spaniards*, whom they were able to have subdued with Stones, to commit such Outrages ; whereas, there was not one *Spaniard* either killed or wounded, unless *Francis Pizarro* the General ; who received, as has been said, a little Hurt in his Hand by one of his own Men, as he went to seize on *Atabualpa*.

The Truth is, the *Indians* did not fight, because they held every Command of the Inca to be a Part of their Religion, and of the Divine Law, though it was to lose their Lives and Estates. Such are the Variations with which this Story is told, by the most considerable Writers ; and indeed, take it in what Light we will, or can, it admits of very little Excuse, and ought to be considered as an Instance, that the Thirst of Wealth corrupts even the noblest Minds. But we have not room to expatiate upon the Subject ; our Business is to pursue the History, and to shew the Reader what the Consequences were of this barbarous and bloody Action.

13. When all was over, *Pizarro*, having seized the Inca, and conveyed him to his own Quarters, directed the Spoils of the Field to be brought to him, which were great ; consisting of large Gold and Silver Vessels, Utensils, fine Garments, Jewels, and Ornaments, belonging to the Inca, the Royal Family, and great Officers ; there were taken also several Ladies, Wives of the *Caziques* and *Orejons*, and some of the *Mamacons*, or consecrated Virgins ; and *Pizarro* directed Thanksgiving to God to be observed that very Day, being the 3d of May 1533, and in that very Field where the Ground was covered with the dead Bodies of the miserable *Indians* they had thus murdered and plundered. Next Day he sent out a Detachment of his Forces to plunder the Inca's Camp, where he met with another rich Booty ;

though, it is said, the *Peruvian* Generals had carried off three thousand Loads of Gold and Silver before the *Spaniards* arrived there ; therefore, in order to induce the *Indians* not to carry off or conceal any more of their Treasures, he caused it to be proclaimed that their Inca was alive, and that they were at Liberty to come and attend him, and perform their usual Services ; whereupon several of the *Indian* Generals and great Officers returned to *Caxamalca* to attend their Captive Sovereign. He also caused the Inca's Women to be brought to him, and suffered him to be served in the same Manner he used to be before this Misfortune : Though he still kept him in Fetters, which made the Inca apprehensive they would take away his Life in the End, unless he could find some way to obtain his Liberty.

Having observed therefore the insatiable Thirst of the *Spaniards* after Gold and Silver, he promised to give them as much of those Metals as a great Room in the Castle of *Caxamalca* would hold for his Freedom ; and, that the *Spaniards* might not doubt the Performance of what he offered, he proposed sending some *Spanish* Officers, with his People, to *Cuzco*, to the Temple of *Pacha Chamac*, and other Places, to bring the Treasures repositied there to *Caxamalca* ; and, at the same time, issued his Orders, that the *Spaniards* who were dispatched to those Places should be hospitably entertained, in the Countries through which they passed, and receive all the Assistance his Subjects could give them.

In the mean time, *Almagro* having lifted an hundred and fifty Men in his Service at *Panama*, embarked with them for *Peru* to reinforce *Pizarro* ; but was obliged, by contrary Winds, to land at *Cape Francisco*, to the Northward of the Equator, where he was joined by another strong Party of *Spaniards*, that were going to share *Pizarro's* Fortunes, making together a Body of between two and three hundred Men ; but being obliged to pass so many Morasses and Mouths of Rivers, and march through continual Rains under the Equator, he lost thirty or forty of his Men, and fell sick himself : However, surmounting all these Distresses and Difficulties, he arrived at length at the *Spanish* Colony of *St. Michael's*, near the Bay of *Guiaquil*, and there he understood that *Pizarro* had made the Emperor *Atabualpa* Prisoner, and possessed himself of a vast Treasure ; whereupon, it is said, *Almagro* consulted with his Officers, whether they should join *Pizarro* or go upon some further Discoveries, independent of him, if he refused to let them share the Treasure he had got ; and *Almagro's* Secretary, it seems, sent *Pizarro* Intelligence, that his Master had no good Intentions towards him.

But *Pizarro*, either believing he should not be able to keep so large an Empire as *Peru* in Subjection, with the few Troops that were with him, or that *Almagro*, having more Forces than he commanded, might join a Party of the *Indians*, and take his Booty from him, and set up for himself, sent very obliging Messages to *Almagro*, inviting him to advance and join him ; and, at the same time, acquainted him with the Arts that were used to set them at Variance, and thereby ruin their Enterprize on *Peru*, which was not to be carried on but by their united Forces and Endeavours ; and particularly, he acquainted *Almagro* with the Treachery of his Secretary, who thereupon ordered him to be hanged up, and immediately began his march towards *Caxamalca*. There was certainly a great deal of Policy in this Conduct, and *Pizarro* shewed himself therein a Person of deep Penetration, and great Parts ; but, at the same time, there was something in it of Ingratitude ; so that we ought to place it among the Number of those Actions of his, which instead of deserving Praise stand in need of Excuse.

14. The coming of *Almagro* made a very great Noise, and the Inca *Atabualpa*, receiving Advice that another Body of *Spaniards* was arrived upon the Coast, began to reflect that this would not be to his Advantage ; for *Pizarro* would now no longer be under a Necessity of carrying Matters fair with him ; being enabled, by this Reinforcement, to maintain his Conquests by force. He hastened therefore the bringing in the Treasure he had offered for his Ransom, that he might obtain his Liberty before

Pizarro was joined by *Almagro*; but another Accident happened about the same Time, which he apprehended might be still more fatal to him.

The three *Spanish* Officers that were sent with his People to *Cuzco*, happening to pass through the Town where *Huescar*, his Brother, was Prisoner, went to see him; and acquainting *Huescar* with what *Atabualpa* had offered for his Ransom, that Prince informed them how unjustly he had been deposed by *Atabualpa*, his Brother, who had no Right to the Empire or the Treasures he had promised; and as he understood one principal Design of the Expedition of the *Spaniards*, was to relieve the Distressed, and to do Justice to those that were oppressed, he did not doubt but they would release him from his Captivity, and restore him to his Throne; which he should not only gratefully acknowledge, but would furnish them with much more Treasure than the Usurper could possibly do; for his loyal Subjects had buried most of their Gold and Silver Plate after the Battle, wherein he was made Prisoner, to conceal it from the Rebels, but would readily produce it again, and pay it to the *Spaniards* for his Ransom, if they required it.

Pizarro's Messengers seemed to listen to his Overtures, and promised the Inca that Justice should be done him; but left that Prince, however, in Prison, and continued their Journey to *Cuzco*; and Advice being immediately carried *Atabualpa*, of the Conferences between the *Spanish* Officers and his Brother, he soon saw that he should be undone, unless *Huescar* was immediately despatched out of the way, knowing that the greatest Part of the Subjects of the Empire were little in his Interest; and, as they would infallibly be supported by the *Spaniards*, to whom his Brother had discovered his Treachery, and promised such Mountains of Gold and Silver, they would certainly sacrifice him to their Avarice, if they had no regard to the Justice of his Brother's Cause; but reflecting, if he should order his Brother to be put to death, the *Spaniards* might make this a Pretence for taking away his own Life, he was forced to act with Caution.

He resolved, in the first Place, to sound how *Pizarro* stood affected towards *Huescar*; which he did by feigning he had Intelligence, that the Officers who had his Brother in Custody, had put him to Death without his Knowledge, for which the Usurper expressed a very great Concern. But finding *Pizarro* was not moved at the Relation, and that he only said, *This was the Fortune of War, and the Lives of Captives were at the Conqueror's Disposal*; *Atabualpa* dispatched an Express for putting *Huescar* to Death, and his Orders were immediately executed, though it remains uncertain what Death he died; for some Writers affirm he was burnt, others, that he was drowned, and some, that his Body was cut in small Pieces, that his Subjects might not pay those Honours to the Corpse of their deceased Inca as were usual. However he suffered, there is one Thing worthy of Remark, which is, That when the Murderers came into his Presence, and *Huescar* understood their Business, he expressed himself in these Words: "My Reign is indeed
" but short; but the Person by whose Orders I am put
" to death, who was born, and ought to have continued
" my Subject, will not live to enjoy long that Power
" which he endeavours to purchase at the Expence of
" the Blood of his Brother and his lawful Prince."

The *Peruvians*, however, made great Lamentations for him as soon as his Death was known, crying to Heaven for Vengeance on his Murderers: Some also desired the *Spaniards* to revenge it on the Usurper *Atabualpa*. In the mean time, the three Officers that were sent to *Cuzco* being arrived there, were adored by that People as the true Descendants of the Sun: But the *Spaniards* lamented that they were Men of mean Parts and Education, who knew not how to preserve that Respect and Veneration the *Peruvians* had conceived of them, which was then so necessary to facilitate their future Attempts. The *Indians*, we are told, soon perceived they must deduce the Original of the *Spaniards* from some baser Fountain than the Sun, and the Esteem and Affection they at first entertained for the Christians, on the mighty Pro-

fessions they made of their Justice and Honour, was on a sudden converted into Dread and Aversion.

They were afflicted to find so vicious and profligate a Race of Men, who trampled on every thing that was sacred, and whose Avarice seemed to exceed all Bounds, should become Masters of their Country; and from that time meditated how they might throw off that intolerable Yoke which they found the *Spaniards* were about to impose upon them. However, they durst not disobey the Commands of their Inca *Atabualpa*; but having amassed a considerable Quantity of Treasure, they loaded it on the Backs of their Tamenes or Porters, and conveyed it to *Caxamalca*, with a View, possibly, of asserting their Liberties to greater Advantage, when they should have procured the Release of their Inca: But the most valuable Treasure, consisting of Gold, Silver, and Emeralds, being lodged in the Temple of *Pacha Camac*, the invisible God, as *Pizarro* was informed, he dispatched his three Brothers thither, with the *Peruvian* Officers *Atabualpa* deputed, to fetch it to *Caxamalca*.

But the Priests of *Pacha Camac* receiving Advice how the Temple of *Cusa* had been ruined by the *Spaniards* that went thither, to prevent the like Misfortune sent away four hundred Loads of Gold, Silver, and Jewels before the *Spaniards* arrived, which were buried in the Earth, or carried to such a Distance that the *Spaniards* could never discover them; however, *Ferdinand Pizarro* found as much Plate in this Temple as amounted to ninety thousand Crowns besides what the Soldiers embezzled, and returned with it to *Caxamalca*.

The Marshal *Almagro* being advanced by this time into the Neighbourhood of that Place, *Pizarro*, the General, went out to meet him, and congratulated his Arrival, received him with all the Marks of Affection and Esteem imaginable, and offered him such a Share in the Spoils as made him perfectly easy; but his Soldiers, who expected to divide the Booty with those that served under *Pizarro*, were told, they were intitled to no Part of it, as not having been present in the Action when the Inca *Atabualpa* was made Prisoner, which was near creating a Mutiny amongst them; but they were pretty well appeased when *Pizarro* agreed to distribute an hundred thousand Ducats among the Men which came with *Almagro*. The rest of the Plunder, after the Emperor's Fifth was deducted, was divided by *Pizarro* among his Officers and Soldiers, in such a Proportion as he saw fit, in which he pretended to have a great Regard to the Merit of the respective Adventurers. And it is said, after he had reserved the Inca's golden Chair to himself, he distributed as much Gold and Silver Plate amongst the Soldiers, as amounted to 1,500,000 Crowns and upwards; which, considering the Value of Gold and Silver at that Time, was more than fifteen Millions at this Day. But as large as this Sum appears in round Numbers, it will be yet found more extraordinary and surprising, if we consider amongst how small a Number of Men it was divided.

We cannot exactly say what every private Man's Share came to, but we learn from good Memoirs, that each Horseman had near two thousand Ounces of Gold for his Share, and the Foot in Proportion; so that I see no Reason to doubt of the Truth of what I once saw in a MS. of Sir *John Hawkins*: That the meanest of *Pizarro's* Soldiers had two thousand Pounds for his Share, and some of them, that is, of the Foot, twice that Sum; and yet it is agreed, that the whole Money then divided did not exceed a Fifth part of *Atabualpa's* Ransom, which, at this Rate must have amounted to more than one Million and an half of our Money. After the Division was made, about sixty of the private Men insisted upon their Discharge, that they might go home and live in peace upon what they had got. *Almagro* opposed this vehemently, alledging, That it would greatly weaken their small Army; and most of the Council were of his Opinion. *Francis Pizarro*, who had more Sense than *Almagro* and all the Council put together, agreed to the Demand, and gave this wise Reason for it: That when once it appeared that private Men could get so much in so little a time, there was no doubt to be made, if one
Man

Man went away they should have then come in his Place; and having given this Reason there was no farther Dispute about it.

As *Ferdinand Pizarro* was the Person made choice of to go over to *Spain* with these Men, and this vast Mass of Treasure, he went to take his Leave of *Atabualpa*, with whom he was in much greater Esteem than any of the *Spanish* Officers. The Emperor received the News with great Sorrow and Concern, and could not help speaking his Sentiments freely. My Lord, said he, you are going home; which is certainly matter of Joy to you, though tis matter of Grief to me; for I already apprehend, that before your Return, that Fellow with one Eye, meaning *Almagro*, and that other Fellow with the great Belly, which was the King's Treasurer, will send me to my long home, and therefore let us take our last farewell.

He made a very right Judgment in this; for when the *Spaniards*, who had been sent for the rest of *Atabualpa's* Ransom, made a Report of the prodigious Quantities of Gold they had seen, and the Reasons they had to believe that much greater Quantities were concealed, *Almagro* gave it as his Opinion, that they should wait no longer, but get rid of the Inca as soon as they could; and then make as much haste as possible to get Possession of all the Gold in *Peru*. A base and bloody Resolution, which, though *Francis Pizarro* at this time rejected with Horror, yet it was not long before he approved and agreed to it.

15. The Fate of *Atabualpa* is undoubtedly one of the most memorable things that falls within the Compass of this Section, and therefore it is requisite that we should give a clear and distinct Account of the Fact, tho' in as few Words as possible; and this is what we shall labour to perform with the strictest Impartiality, and the greatest Regard to Truth. There were various Reasons why *Francis Pizarro*, though a very brave and gallant Man, had not that Tenderness for this *Indian* Monarch, that *Cortes* had for *Moteczuma*; but that which governed him principally was, a sort of Contempt with which *Atabualpa* treated him, and the visible Preference he gave in point of Esteem and Regard to other Officers in the *Spanish* Army. The Cause of this Behaviour is one of the most singular Passages that occurs in all the *Spanish* Histories of the Conquest of *Peru*, and cannot fail of giving great Pleasure to the judicious Reader.

Atabualpa, however cruel to his own Family, appeared to be a Prince of great Wisdom and Penetration; and one who laboured to inform himself as thoroughly as it was possible, with respect to the Manners, Customs, superior and inferior Qualities of the *Spaniards*, that he might be the better able to deal with them, if upon the Payment of the Sum proposed for his Ransom they should actually restore him to his Liberty. That which most of all perplexed his Enquiries and disturbed his Meditations, was their Art of Writing and Reading, as to which he could not comprehend whether it was a natural Endowment, or whether it was acquired by Labour and Application. In order to satisfy himself in this Point, he asked one of the *Spanish* Soldiers whether he could express the Name of God upon his Thumb-nail. The Man readily said he could, and did accordingly; after this the Inca went about to several of the Captains and Soldiers, and shewing them his Thumb-nail, asked them if they knew what that Mark signified; and from their Answers, he began to entertain an Opinion that reading and writing were natural to this Nation, which he thought a very great Advantage: But unfortunately he asked the same Question of the General, who, not being able to read it, was put greatly to the Blush, which not only changed *Atabualpa's* Opinion, with respect to reading and writing, which he now saw plainly were the Fruits of Education, but gave him likewise a very low Opinion of the General, supposing that he must have been of a very mean Original, since he was less knowing in this Respect than many of his Soldiers.

This Contempt that he shewed for *Pizarro*, begat a Prejudice in him, which very soon turned to the Dis-

advantage, and in the End proved the Ruin, of the Inca. It fell out that *Philippillo*, or *Philip* the Interpreter, fell in love with one of *Atabualpa's* Wives, which incensed that Monarch so much, that he signified to *Pizarro*, that he ought not only to punish such a Fellow, but even to put him to Death; which the General was so far from doing, that he only made a Jest of the whole Affair; in which without doubt he shewed as little Regard to his own Character, as to that of the Emperor's. *Philippillo* took the Jealousy of *Atabualpa* much to Heart; and as all such low Fellows suffer Hate and Fear to compound their Resentments, so he determined in himself to destroy that Monarch immediately out of the Way, as the sole Means of providing for his own Safety. It was with this View that the Villain insinuated to *Pizarro* that he ought to be very watchful of the Inca's Motions, because he was actually contriving the Destruction of the *Spaniards*. This wild and ridiculous Story was digested into a formal Accusation, by the Direction of the General and his Favourites, who appointed Commissioners to try *Atabualpa*; directing *Sancho de Cuellar* to take upon him the Office of Attorney General, to exhibit a Charge against the Inca, which he did; and it consisted of the following Particulars, viz. That *Huescar*, Inca, being his eldest Brother and lawful Sovereign, and himself a Bastard, he had caused *Huescar* to be deposed and imprisoned, and afterwards usurped his Throne: That he had caused his said Brother to be murdered, since he became a Prisoner to the *Spaniards*: That *Atabualpa* was an Idolater: That he caused his Subjects to sacrifice Men and Children: That he had raised unjust Wars, and been guilty of the Blood of many People: That he kept a great many Concubines: That he exacted Taxes and Tribute of the *Peruvians*, since the *Spaniards* possessed his Country, and consumed and embezzled the public Treasure: That he had incited the *Indians* to rebel and make War against the *Spaniards*, since he had been their Prisoner.

The very reading these Articles sufficiently proves that they were not calculated to bring a bad Man to Justice; but to give the Colour of Law, and the Form of a fair Tryal, to one of the wickedest and vilest Contrivances that ever entered the Heart of Man. Yet black and villanous as this Affair was, it is very doubtful to say whether it reflects more Honour or more Infamy upon the *Spanish* Nation. For no sooner was this dark Design set on Foot, than almost all the Persons of Family and Distinction that served in the Army, declared against it; and declared in Terms that spoke them equally Men of Sense and Men of Honour: They declared that they knew no right the *Spanish* Nation had to make themselves Judges of an *Indian* Prince, or of his Title to his Dominions; that with regard to the *Spaniards*, he had behaved so well, and done them so many Kindnesses, that to treat him in this Manner, was not only the highest Barbarity, but the most flagrant Ingratitude; that if after all they were resolved to be rid of him, the best thing they could do was, to send him into *Spain*, together with their Charge, and leave the Cause to be decided by the Emperor. But *Pizarro* and his Council were determined to go on, and though the other Party delivered a Protest in Writing against all their Proceedings, and appointed one *John de Herreda* Protector of the Emperor's Person, yet they persisted in trying him, and assigned him one of their Party for an Advocate; who to be sure made such a Defence as did no great Service to his Client.

The Issue of this Business was, that after a mock Shew of Justice, they condemned the Inca to suffer Death, which at first they resolved should be by burning; and to this Sentence, to give it a fairer Appearance in *Spain*, where it might very well be expected that it would be reviewed, they procured the Approbation of Father *Vincent*, who prostituted his Character as an Ecclesiastic in this bloody Affair; and, which was much worse, prostituted, as far as in him lay, the Christian Faith, and the Credit of the Gospel; for which his Memory ought to be infamous in every Country where the People call themselves Christians. Yet this cruel and blood-thirsty Friar, after being so great an Instrument in his Sufferings, undertook

dertook the Conversion of *Atabualpa*, and the Argument he used to induce him to be baptized, was worthy of such a Preacher. He told him that if he would consent to die a Christian, he should not be burnt, but strangled only, which had the desired Effect, and he was accordingly baptized in the Evening, and strangled the next Morning, to the eternal Dishonour of all who were concerned in so iniquitous and scandalous a Proceeding.

There are some who pretend that this Murder of the Inca was chiefly owing to the *Indians* themselves, who were for revenging the Death of their lawful Emperor *Huascar*; and thereby fulfilling the prophetic Threatning of that Prince at his Death, which has been already mentioned, and this has been very gravely insisted upon as an Apology, if not a Defence, for the Conduct of *Pizarro* and his Officers. A little Consideration, however, will shew us that there could be no Truth in this: First it appears, that notwithstanding his Brother's Death, *Atabualpa* was universally acknowledged and obeyed as the lawful Inca throughout the whole Empire, which does by no Means agree with this Story of the *Indians* desiring to have him put to death. It may indeed be said that things may be true, though they are not probable, but then we cannot know them to be true without Proof, of which none of the Historians who report this bring us any, either good or bad.

Secondly, if it had been so, the *Spaniards* would certainly have made the *Indians* his Prosecutors, or rather have set up the Inca his Brother, who had a fair Title to the Crown, and have left them to have taken Vengeance for that Crime, which, if they could have done it, would have answered their Purpose, and saved their Credit; and as they did not do it, we may very fairly presume that no such thing was in their Power. It must indeed be allowed that these are only negative Arguments, but yet Arguments they are, whereas what is said on the other Side is meer Suggestion.

But thirdly, there is the clearest Proof of the contrary; for as soon as *Atabualpa* was murdered, the *Indians* began every where to act offensively against the *Spaniards*, which they had never done before; and this shews that the former Conduct was the Effect of Duty to that Prince whom the *Spaniards* would have us believe they disowned; and the latter is as clear a Mark of their universally detesting that Crime, which it is pretended was done at their Persuasion. If therefore we take these Considerations together, there can be no longer any Doubt but what the *Spaniards* have advanced is a pure Fiction, contrived to give some Sort of Colour to an Action too foul to be avowed, even by those who committed it.

16. The Events that followed upon the Death of the Inca *Atabualpa*, very plainly shewed that human Nature is the same in all Countries and Climates; that some Men from Principles of Honour, Fidelity, and Love to their Country, adhere to what is right, whatever seeming Advantages may invite them to pursue a contrary Conduct, while others, after gaining to themselves Character, Credit, and Employments, by putting on a specious Appearance of Virtue, shew their natural Dispositions at once, when tempted by the Hopes of Gain, and released from the Fear of any other Punishment than what results from the Consciousness of having done Evil.

Rumrivi, one of *Atabualpa*'s Generals, who retired from the fatal Slaughter at *Caxamalca*, with the Rear-guard of his Army, made himself Master of *Quito*; and, as soon as he heard of his Master's Death, cut to pieces such of his Officers as he believed loyal to the deceased Prince, and endeavoured to keep what he could for himself. *Quisquis*, another of these Generals, acted much the same Part; but, having a better Army under his Command, secured a greater Part of the Country, and yet shewed himself far from being valiant, by flying before a handful of *Spaniards* who were sent in pursuit of him, and gave a farther Proof his Cruelty, which is a quality inseparable from Cowardice, by murdering a few *Spaniards*, who, by their Temerity in pushing on too far, had fallen into his Hands.

This Man, justly apprehending that it would be impossible for him to maintain himself against the other *In-*

dian Commanders, as well as against the *Spaniards*, while his Power had no other Authority than what it derived from Force, contrived to get into his Hands a younger Brother of the Inca's, whose Name was *Paullu*, whom he would have persuaded to have taken the Title of Emperor, hoping under the Shadow of his Title to have preserved the Power he had obtained. But this Prince, though very young, discovered a Greatness of Soul truly admirable, and worthy of the highest Praise; for disdaining a Crown, which he knew could not be worn but at the joint Expence of his Family and his Country; he generously refused it, telling *Quisquis* that he scorned to derive from the Misery of the Empire, that Authority which he could not hope for in better Times; and, that he esteemed it far more honourable to be thought a worthy Man, than a bad Monarch; which had such an Effect even on *Quisquis*, that, though he had him in his Power, he did not attempt to seize his Person, but allowed him to retire, as he did, to *Francis Pizarro*, towards whom he behaved with the same Dignity and Firmness. He told the General that the true Heir of the Empire was his elder Brother *Manco Capac*; and that if he had any such Purposes as he pretended, of doing Justice, and protecting such as had right on their Side, he ought to shew it by declaring in favour of that Prince who had already a good Army about him; and who, with the Assistance of the *Spaniards*, would infallibly restore the Lustre of the imperial Diadem; which, as we shall see hereafter, had the desired Effect. I mention this, though it carries me a little beyond that Period of time of which I was speaking, that I might not omit altogether so singular an Example of Virtue and good Sense.

As for *Quisquis* he still went on in his old Way, and having had Information that the *Spanish* General had left but a small Body of Men to guard *Requelma*, the royal Treasurer, with all the Riches he had taken in his Hands, he made a very bold Push in Hopes of surprizing him, but met with so brave a Resistance, that he was obliged to retire without carrying his Point; and this shews us another thing, that there are in all Nations Men of such low and profligate Dispositions, as not to be ashamed of encreasing the Calamities of their Country, by attending solely to their private Interest in Times of public Confusion; when a little Reflection would shew them that acquiring Wealth is only exposing themselves to greater Dangers than such are in who have less, and consequently is acting as much against their Interest as against their Duty and the Public. All Passions indeed obscure Fore-sight, but Avarice makes Men stone blind.

It is impossible to conceive a Country in a worse Condition than *Peru* was now in, or a Nation in greater Distraction than its Inhabitants. On the one hand they were dispirited with superstitious Fears of the *Spaniards*, which hindered them from considering, in a proper Light, their Force, and the Strength they were able to bring against them; on the other, they were no less confounded with respect to their own Government, some following one of the Incas, and some another; and thus, when Union alone could afford them any Chance for Safety, they split themselves into Factions and Parties, and thereby drew on their own Ruin. This is a Lesson worthy of Attention; for what was then the Condition of *Peru*, may be that of any other Country upon the Globe, and consequently the Behaviour of its Inhabitants may serve to instruct all other Nations. But it is now time to return to the Progress of the *Spaniards*, and the Effects of their Arms; from which we digressed only with a View to state some Points to the Reader, as agreeable to the Subject, and no less worthy of his Attention; which Task having thus fulfilled, we will resume the Thread of our Narrative.

17. *Pizarro*, however, did not carry his Resentment so far, but that, after he had taken and killed, he thought fit to treat the Corps of the Inca with the Respect due to a sovereign Prince; he celebrated the Inca's Funeral with great Solemnity, and went into Mourning for him; but he soon discovered how detestable this Murder rendered him among the Natives. The two Factions immediately united

united against him, under *Manco Capac*, the Brother and Heir of *Huescar*, whom they proclaimed Emperor of *Cuzco*. Whereupon *Pizarro* proclaimed *Toparpa*, a Son of *Atabualpa*, Emperor; caused him to wear the Imperial Coronet, and to be treated with the same Honours his Father had been, issuing such Orders in his Name, as might best serve the Interest of the *Spaniards*; but this Inca died soon after; and so *Pizarro* conjecturing that nothing could tend to establish the *Spanish* Dominion in *Peru*, more than his possessing himself of the capital City of *Cuzco*, he began his March thither with all his Forces, consisting of near four hundred Men, besides such as were stiled confederate *Indians*.

In the mean time *Atauchi*, Brother to the late Emperor *Atabualpa*, having collected a great Quantity of Treasure, to purchase his Brother's Ransom, brought it to *Caxamalca*; but finding *Atabualpa* murdered, and the *Spaniards* marched from thence, determined to be revenged on them, and joining his Forces with some *Peruvian* Generals, surprised the *Spaniards* upon their March to *Cuzco*, killed some of them and made several Prisoners, and amongst the rest *Sancho de Cuellar*, who had drawn up the Process against the late Inca *Atabualpa*, and attended his Execution. With these Prisoners the *Indian* Generals retired again to *Caxamalca*, where they strangled *Sancho* the *Spaniard*, at the very same Post where their Emperor was put to death; but understanding that *Francis de Chaves*, *Ferdinando de Haro*, and some of the rest of their Prisoners, had protested against the Inca's Death, they resolved to give them their Lives and Liberties, entering into the following Articles of Peace and Friendship with the captive *Spaniards* before they dismissed them: *Viz.* That neither Party should, for the future, offer any Violence to the other; and particularly, That the *Spaniards* should not attempt to depose *Manco Capac*, who had been proclaimed at *Cuzco*, and was the lawful Heir of the Inca *Atabualpa*; That both Sides should release their Prisoners; and, That the *Spaniards* should not treat the *Indians* as Slaves, but Freeman: That the Laws of their Country should be observed inviolably when not repugnant to those of Christianity; and that this Treaty should be ratified by the *Spanish* General, and his Sovereign the Emperor of the *Romans*.

The *Spaniards* insisted, on their Part, That the *Indians* should profess the Christian Religion: That a Part of the Country should be assigned them for their Subsistence; and, That they might retain the *Indians* as hired Servants, though not as Slaves; which the *Indians* agreed to; and dismissed their Prisoners with rich Presents. But *Pizarro* and *Almagro*, at first, positively refused to ratify the Articles, and would hear of nothing but an absolute Submission, and an entire Surrender of their Country and their Persons, to the Will of the Christians: Which occasioned long and bloody Wars afterwards. Whereas the *Spanish* Historians admit they might have established Christianity in *Peru* without spilling a Drop of Blood, if the Ambition and Avarice of the Adventurers had not prevented it. The General *Pizarro*, continuing his March towards *Cuzco*, was again attacked by several Parties of the *Indians* at some difficult Passes in the Mountains; but, finding themselves unable to resist the Fire-arms and Horses of the Christians, they fled, after a faint Resistance, to the capital City, declaring it was in vain for any human Force to oppose the *Spaniards*, who were armed with Thunder and Lightning, and could kill their Enemies at so many hundred Yards distance. Whereupon the People of *Cuzco*, without offering to defend the Walls, or that impregnable Castle already mentioned, fled with their Wives and Children, and what was most valuable to them, to the Woods and Mountains; and *Pizarro* entered the City without Opposition, in the Month of *October*, 1532, where he met with a prodigious Booty, notwithstanding the Citizens had so much time to carry off their Goods and Treasures.

We have not room here to enter into a long Account, either of the Particulars, or of the Amount, of the immense Wealth, which the *Spaniards* say was found in this City; but shall content ourselves with observing, that as it was the Custom in this Country to bury with their great Men the best part of the Riches of which they died possessed,

so their Conquerors, who made no sort of Difficulty of rifling Sepulchres as well as Temples, found not only as much Wealth in the Dwellings of the Dead, but rather more, than in the Habitations of the Living; so that such as rate the Plunder of this City at the lowest, compute it at the full Value of *Atabualpa's* Ransom. When the General *Francis Pizarro* had thus got into his Hands the Capital of *Peru*, from whence the Inca *Manco Capac*, and the greatest part of the Inhabitants were fled, he thought fit to invite them to return to their Dwellings, apprehending, if they were made desperate, that the whole Power of the Empire might assemble against him, and reduce him to great Streights by cutting off his Provisions, though they durst not meet him fairly in the Field.

The *Indians*, accepting *Pizarro's* Invitation, returned to their Houses in *Cuzco*, and even the Inca made some Overtures to him, intimating, that he should be content to embrace the Christian Religion, and hold his Dominions of the Emperor of the *Romans*, provided, that neither he nor his Subjects should be molested for the future, in their Persons or Estates: And, being encouraged by *Pizarro* to believe he should have the Terms he demanded, the Inca came in Person to *Cuzco*, and had an Interview with the *Spanish* General, who caused him to be crowned, and invested in the Empire, by binding the royal Wreath, or Coronet about his Head, and proclaiming him Inca in the same manner his Predecessors used to be inaugurated into that Dignity; and assured the Inca he would strictly observe the Capitulation made by *Francis de Chaves*. These pacific Measures the *Spaniards* found themselves under a Necessity of taking at this time, not only because they saw all the southern Provinces of *Peru* assembling against them under the Inca *Manco Capac*; but because *Rumnavi*, *Quisquis*, and other *Peruvian* Generals, had collected a very great Army in the southern Provinces, and possessed themselves of *Quito*, which obliged him to send out a considerable Detachment of his Forces, under the Command of *Sebastian Belalcazar*, to reinforce the new Colony at *St. Michael's*, and to make Head against the *Peruvian* Generals in *Quito*.

This Measure was taken with great Wisdom and Prudence, and the Commander last mentioned, upon his Arrival at *St. Michael's*, found there a great Reinforcement of Volunteers, who came from different Parts of the *Spanish* Settlements, in order to obtain a Share in the Riches of *Peru*. Out of these he chose one hundred and twenty Foot, and fourscore Horse; which having incorporated into his own Army, he marched directly to *Quito*, in order to make himself Master of the Riches of the deceased *Atabualpa*, most of which he knew remained there. The *Indian* General, who commanded in that Province, did all that lay in his Power to harass and fatigue the *Spanish* Army, and to prevent their coming to a decisive Action; but this turning to no Account, and finding that *Belalcazar* continued to advance directly to the Capital, he caused all the Riches of the late Emperor to be brought into the Hall of the Palace, to which he set fire: and then, abandoning the City, marched off with his Troops, and left the *Spaniards* in possession of the Place: But while *Francis Pizarro* and his Officers were thus employed in the Reduction of the several Provinces of the Empire, they were suddenly interrupted by an unexpected Invasion from their Countrymen in *Mexico*, who on the Report of the vast Wealth obtained by these Adventurers, resolved to come in for a Part. The Story is too remarkable, and too closely connected with our Subject to be entirely neglected, and therefore we shall endeavour to give the Substance of it in the concise manner possible.

The famous *Peter de Alverado*, of whom we have said so much in the foregoing Section, was the Person who formed this Project, and the Condition he was in at that time, gave him a fair Opportunity of putting it in Execution: He was possessed of the Province of *Guatemala*, where he fitted out several Ships, and, to increase his Force, he seized upon two Vessels more that were actually fitting out in one of the Ports of *Nicaragua*, for the Service of *Pizarro*; and on board these Ships he embarked five hundred Horse and Foot, as good Troops as any that were

were at that time in *America*; and with these, in the Year 1535, he landed at *Puerto Vejo*, after having endured very great Hardships in his Voyage. He found himself next, obliged to traverse a rough mountainous Country near the Equator, in which March, if all the *Spanish* Writers may be believed, he suffered still greater Calamities, and lost no less than sixty of his Men, by the unexpected Severity of the cold Weather.

However, as he had been very long in the Service, and was accustomed to all Sorts of Difficulties and Dangers, he continued to prosecute his Design; and arriving in the Neighbourhood of the *Spanish* Colony of *St. Michael*, he there refreshed his Forces, and disposed every thing for continuing his Progress into the Heart of that Country; but, in the mean time, *Pizarro* had sent *Almagro* to reinforce *Belalcazar*, and they had together a considerable Body of Troops, with whom they had performed some great Exploits against the *Indians*, but were now resolved to act against *Alverado*, in case he continued obstinately bent on the Prosecution of his Design, and would not return into his own Government. The two *Spanish* Armies advanced 'till they came in Sight of each other in the Valley of *Riobamba*, where it was expected a Battle would have ensued; but *Alverado* foreseeing the Consequences that must attend an Action, let Victory remain on which Side it would, willingly listened to a Negotiation, which very soon ended in an Agreement between him and *Almagro*, in the Management of which they shewed themselves to be both very able Persons; for they agreed, that two Treaties should be drawn, one of which only was to be made public, whereby it was stipulated that both Parties should be at Liberty to prosecute the War against the *Indians*, and the Discovery of distant Countries, with like Freedom, by which *Alverado* seemed to carry his Point; and by which he really carried thus much, that he provided for such of his People as desired to remain in *Peru*, who were put upon the same Footing with the Forces of *Pizarro*.

But by the secret Treaty he agreed to return into his own Government, and to accept the Sum of one hundred thousand Pesos in Gold, in consideration of the Expences he had been at in fitting out his Fleet and Forces; and at the same Time he promised never to return to *Peru* so long as either *Pizarro* or *Almagro* lived: These Treaties thus settled, they marched together towards *Cuzco*, the Capital of *Peru*, in order to confirm them with *Pizarro*, and to receive the Money from him. But when *Pizarro* was informed of this Transaction, he took a Resolution of preventing *Alverado's* Visit by going to meet him, because he was a little doubtful whether the Sight of *Cuzco* and the rich Country about it might not revive the Ambition of his Competitor, and render him less willing to execute his Agreement, of which he very well knew the Value, and therefore highly approved it: But before he could accomplish his Intention, there happened some other Events, which had like to have changed the Face of Affairs, and renewed both the general and civil War, which, however, by his Prudence and Generosity he prevented.

18. We have before mentioned the generous Manner, in which one of the *Indian* Princes of the Royal Family refused to assume the sovereign Dignity, because of Right it belonged to Inca *Manco*; which Prince, notwithstanding what had befallen *Atabualpa*, resolved to go to *Pizarro* to obtain the Ratification of that Treaty, which had been made with his Subjects by the *Spanish* Prisoners in the Manner before-mentioned; in which he succeeded, and lived upon very good Terms with the General. *Quisquis*, the *Indian* Commander, remained all this Time at the Head of a great Body of Forces, yet declared he was ready to lay down his Arms, and submit, as soon as he knew of the Ratification of the Treaty before-mentioned. While he waited for this, *Alverado* and *Almagro* came into his Neighbourhood with their Forces, and, knowing nothing of this Negotiation, prepared to attack him; the *Indian* General retired for some Time, in Hopes they would receive contrary Orders; but when he perceived they continued to advance he

resolved to venture upon a Battle, in which he was defeated, with great Loss; which might have renewed the *Indian* War, if the rest of the Chiefs of that Nation had not been partly so frightened by his losing an Engagement, in which he was greatly superior in Number, that they durst undertake nothing, and partly satisfied from the Assurances given them by *Pizarro*, that this Accident should not hinder their having the same Terms they were promised before.

The rich Booty obtained by this Victory might also have renewed the Disputes amongst the *Spanish* Generals, if *Francis Pizarro* had not resolved to perform all that *Almagro* had promised immediately; and accordingly, leaving *Cuzco* to the Care of the Inca and his Brothers, he set out with a Party of Horse and a Detachment of *Indians*, and arrived at the Valley of *Pacha Camac*, where he met with *Alverado* and *Almagro*; and to ingratiate himself with the former, gave him the Command of all the Troops while he remained there, commanding all the Officers to obey Don *Alverado's* Orders, and acknowledge no other General while he continued in *Peru*; and was so much better than his Word, that he paid *Alverado* twenty thousand Pesos more than he had stipulated for the Expences of his Journey; besides, a great Number of Turquoises, Emeralds, and Vessels of Gold, for the General's particular Use; whereupon *Alverado* returned to *Mexico*, entirely satisfied with his Reception, and the Treasures he had acquired, especially when he saw all the Gentlemen that had accompanied him in his Enterprize well provided for.

This Matter being thus settled, *Pizarro*, leaving the Care of the Frontiers to *Almagro*, employed himself in building Towns and settling Colonies on the Sea Coasts, particularly *Lima*, which is now the Capital of *Peru*, though this City was originally called the City of the Kings, because the first Stone of it was laid upon the Feast of the Epiphany in the Year 1534, and was inhabited by *Spanish* Gentlemen, who had the *Indians* of the Neighbourhood assigned them to do their Drudgery, which they looked upon as a very great Hardship, and which was directly contrary to the Instructions sent to the Governors of all the Provinces of the *West-Indies*; though I do not believe, that this was agreeable to the Designs of the *Spanish* Court. After the General had built the City of *Lima* he advanced a little farther, in order to discover the Country effectually, while he laboured to do something of the like kind nearer Home. Then he marched Southward, and founded another fair City, which from the Place of his Birth he called *Truxillo*, assigning his *Spaniards* Lands and People, according to their several Conditions, as he had done before at *Lima*.

While *Pizarro* remained at his new City of *Truxillo*, Advice came from *Spain* that his Brother *Ferdinand* had, in a great Measure, succeeded in his Negotiation at that Court; for whereas Don *Francis Pizarro* had petitioned his Imperial Majesty to extend his Government 200 Leagues farther Southward, to grant him the Province of *Atabillios* in *Peru*, with the Revenues thereof, the perpetual Vassalage of 20,000 *Indians*, and the Title of Marquis; his Brother wrote Word, that the Emperor had conferred the Title of Marquis of that Province, and enlarged his Government considerably to the Southward; but as to the Command he desired over the *Indians*, he would inform himself of the Customs of that Country, and of what Damage or Prejudice such a Concession might prove, and then he would shew him all the Grace and Favour in that particular that was consistent with Justice. And as to *Almagro* the Title of Marshal of *Peru* was confirmed to him, and a Government of two hundred Leagues Extent of Country conferred on him to the Southward of the Country assigned to the Marquis *Pizarro*.

Almagro residing at the City of *Cuzco* at this Time, and receiving Advice that the Government of the Country which lay South of the Marquis's Government was conferred on him; and observing that *Cuzco* was not within the Limits assigned to Don *Pizarro*, he immediately took upon him the Title of Governor of *Cuzco* and the District belonging to it, in his own Name, and no more acted in Subordination to the Marquis.

John

John and *Gonzalo Pizarro*, Brothers to the Marquis, opposed this Usurpation, as they called it; and their Differences rose to that Height, that they entered into War with *Almagro* at *Cuzco*, and several were killed on both Sides, of which the Marquis receiving Intelligence, caused himself to be carried in a Hammock on the Shoulders of *Indians*, who, relieving one another at proper Stages, carried him thither with such Expedition, that he arrived at *Cuzco* before he was expected by either Side; and representing to both Parties, that these Feuds would probably end in the Destruction of themselves and their Enterprize, if they were not speedily accommodated, he entered into a Treaty with *Almagro*, for adjusting all their Differences; and first, he observed that *Almagro* was mistaken in his Opinion, that *Cuzco* was without the Limits of his Jurisdiction, for the Emperor had made him a new Grant of the Country, which lay South of that conferred on him by the first Grant.

The Marquis also suggested to *Almagro*, that the Country which lay to the Southward of the District of *Cuzco*, was richer in Gold and Silver than any that had been yet discovered, of which he was contented *Don Almagro* should take the Government upon him, and that he should march at the Head of the best Part of their united Forces, and possess himself of it; and, in the mean Time, he would apply to the Emperor to get him confirmed in the Government, to which they gave the Name of *New Toledo*, extending it from the District of *Cuzco* to the Country of *Chili*, which lies South of *Peru*. The Marquis also stipulated that if the Emperor did not think fit to confer that Government on *Almagro*, he would divide that of *Peru* with him, with which Overture *Don Almagro* and his Party were then well satisfied, and immediately made Preparations for an Expedition to the Southward.

About the same Time another Detachment of *Spaniards* and *Indians* were sent to reinforce *Don Belalcazar* in *Quito*, to enable him to finish the Conquest of that Province; and a third Body marched to the North East, to reduce some Provinces bordering on the Ridge of Mountains called the *Andes*; thus the *Spaniards* shewed very plainly what their Designs were, and how far it was from their Intentions to perform the Agreement they had made with the *Indians*; yet they endeavoured still to keep fair with these People, and to amuse them with Promises, that they might make use of their Assistance in the Performance of such Enterprizes, as very far surpassed the Strength which they had in this Country.

19. It was in the Year 1535, that *Almagro* resolved to carry into Execution the Project formed in Concert with *Francis Pizarro* for penetrating into *Chili*; and for the facilitating so arduous an Enterprize, he demanded the Assistance of *Inca Manco*, who still confiding in the *Spaniards*, notwithstanding the Manner in which he had been treated, offered to do for him all that was in his Power: As a Proof of this, he appointed his Brother *Paullu*, with whose Character we have before acquainted the Reader, to accompany him in this Expedition, and joined with him the High Priest of the *Indians*, called in their Language *Villachumu*, from whence the *Spaniards* found the Word *Villahoma*, which is the Name we find him mentioned by in their Histories. He added, under the Command of these Chiefs 15,000 Men, in hopes, that by rendering them so notable a Service, he should prevail upon the *Spaniards* from Principles of Honour and Gratitude to fulfil their Treaty towards him. *Almagro*, with this Body of Men, began his March Southwards, and marched as far as the Province called *Charcas*, which he found a very barren and inhospitable Country, and therefore slighted it, as not worth keeping; but it has since proved the most valuable of the *Spanish* Acquisitions, since therein lies the famous Mountain of *Potosi*, from whence more Silver has been brought into *Europe* than from all the other Places in which Mines of that rich Metal had been before discovered.

In this Province the Adelantado *Almagro* was informed that there were two Passages into *Chili*, both of them attended with Difficulties, though directly opposite in their Nature; the one long and tedious, through a sandy Desert, where his People would be sure to feel great In-

conveniencies from Heat and Thirst; the other much shorter, but exposed to still greater Inconveniencies in the Judgments of his Guides, since it lay through the Mountains, which were not only excessively steep and rugged, but covered likewise with Snow, which rendered them excessively cold and impassable, except at one Season of the Year. *Almagro*, considering that this was the shorter way, and the Cold however sharp, more supportable to *European* Constitutions than excessive Heat, resolved to take this Rout, notwithstanding all that the *Indians* could say to dissuade him from it. In their Passage they found the Cold so excessive, that it cost the Lives of ten thousand *Indians* and one hundred and fifty *Spaniards*, exclusive of such as escaped with the Loss of their Fingers and Toes.

They likewise lost all or the greatest Part of their Baggage, but at length they came down into the Plains, where such of the Inhabitants as had formerly obeyed the Incas submitted to the *Spaniards* out of Respect to *Paullu* and the High Priest, but those who had hitherto remained free determined to continue so; and it was not till long after, and in Consequence of many bloody Wars, that they were reduced under the *Spanish* Yoke. But while *Almagro* was thus employed, all things fell again into Confusion in *Peru*.

Francis Pizarro finding the *Inca Manco* a little impatient under the bad Usage he had received, thought proper to deliver himself from his Remonstrances by shutting him up in Prison, which was so far from frightening him into a tame Submission, that it induced him to undertake what he was suspected of before he was imprisoned. But as it was impossible for him to execute his Design of raising the whole *Indian* Nation, unless he was at Liberty, he contrived a Method to get out of Prison, which was singular enough. He applied himself to *Ferdinand Pizarro*, now returned from *Spain*, a Person of great Generosity, and who bore much Affection to the *Indians*, desiring his Leave to go to a solemn Feast, and promising to bring him, at his Return, his Father's Statue, which was all of solid Gold.

In the mean time, the *Indians* that were with *Almagro* grew discontented at the ill Usage they suffered, and complained to one another of the Barbarity of the *Spaniards*; and in these Conferences, none had a greater Share than the Interpreter *Philippillo*, who at last engaged in a Plot against *Almagro's* Life; but, being no less a Coward than a Villain, when he reflected on the Danger to which he was exposed, he endeavoured to secure himself by flight. He was soon retaken, and then he attempted to inform against the *Inca Paullu*; but, being put to the Torture, he confessed that to be a Lie, and owned likewise, that by false Suggestions he had procured the Death of *Atabualpa*, for all which he suffered a most cruel Death, as he well deserved. In order, however, to understand this Matter clearly, it is very requisite the Reader should know the Nature of this Plot or Conspiracy against the *Spaniards*, which in Fact was this: The *Inca Manco* had now not only lost all Confidence in the *Spaniards*, but was likewise so sensible of the Injuries he received, and of the little Hopes there were of ever being better treated by these haughty People, that he determined to try what could be done by Force; and as he was satisfied that his Subjects were as brave and as faithful as the *Spaniards*, he judged it better to rely upon the Justice of his Cause and the Assistance of his People, than upon the Promises of those who had so basely broke their Words to his Brother, and had never kept the Conditions they made with him.

His Feast, to which he went with the Leave of *Ferdinand Pizarro*, was in reality a kind of Assembly of the States of *Peru*, in which it was debated how the Strength of the whole Empire might be the soonest raised, and the most effectually employed; this Question was soon resolved, for every one of the *Indian* Chiefs undertook to raise their Troops in an Instant, and indeed they were very soon as good as their Words, so that the *Inca* was able to take the Field at once, with three considerable Armies. He took the Castle of *Cuzco*, and closely blocked up the City with the first; the second marched against the General *Francis Pizarro*, who lay in the City

City of *Lima* with a good Body of Troops ; and the third was intended to act against *Almagro*, of which Notice was sent to the High Priest, who took Measures for making his Escape, in which he was so lucky as to succeed ; and for his Concern in these the *Spanish* Interpreter was put to Death.

The Inca *Paullu* had also Notice given him of the Situation his Brother's Affairs were in, and what was expected from him towards putting them in a better Condition ; but he rejected these Propositions totally, and declared, that he would never break his Faith to the *Spaniards* ; which Secret the Interpreter having disclosed with his last Breath, *Almagro* declared *Paullu* Emperor ; and though he refused that Title before, yet for the Sake of Safety, and that his Nation might not want a Protector, he now suffered it to be given him. These Misfortunes engaged *Almagro* to hasten out of *Chili* with the *Spaniards* under his Command, notwithstanding that he had received some Reinforcements ; and this March was not performed without considerable Loss, notwithstanding he took the other Road, to avoid the Inconveniencies he had met with in entering this Country : But, as in his first March he suffered by Cold, so in the second his Army endured all the Miseries of excessive Heat and Thirst, notwithstanding all the Pains and Precautions that could be taken to avoid them ; but, however, their Loss was not so great as before, and he returned into *Peru* with a better Army than was left in it.

20. The Affairs of that Country were now in a dreadful Situation, and grew daily worse and worse, a double Civil War breaking out in its Bowels. The Inca *Manco* still continued to besiege *Cuzco* with an Army of two hundred thousand Men ; the *Spaniards* in the Place were but seventy, yet having some Horse and a good Train of Artillery, they vigorously defended the Place, and, which is still more wonderful, they made several Sallies, with great Success, in one of which *John Pizarro* lost his Life ; as for the General he sent from *Lima* four several Detachments, amounting in the whole to near three hundred Horse, under the Command of four experienced Generals, who were notwithstanding so unlucky as to lose themselves, and their respective Parties, under their Orders. This not only troubled but weakened the Governor at *Lima*, to such a Degree, that he was obliged to call in all his Garrisons, and even then had been too weak to have done any thing considerable, if he had not declared all the *Indian* Vassals and Slaves free, who would serve the *Spaniards* against their Masters and Countrymen, which had a very good Effect, and put him very soon in a Condition to raise both the Sieges of *Cuzco* and *Lima*, and this was the first Civil War wherein the Natives of *Peru* served against each other.

It was followed by another between the *Spaniards*, who one would have thought should have chose any other Time rather than this to have quarrelled amongst themselves. But *Almagro* finding himself at the Head of so powerful a Body of Troops, resolved to renew his old Claim to *Cuzco*, and in Case he could make himself Master of that City, determined to make it the Seat of his Government, and in this Disposition marched directly towards it. The Inca *Manco*, about this Time, took a very surprizing Step, for he resolved to disband his Army and return to the Mountains. All his chief Officers endeavoured to dissuade him, by representing that as the *Spaniards* were quarrelling amongst themselves, he had now the fairest Opportunity of recovering his Dominions ; to which he answered, that while he kept the Field, the *Spaniards* would undoubtedly endeavour to compromise their Differences ; but if he withdrew, as he designed and intended, what they suggested might very well come to pass, and that then it would be time enough to think of proper Measures for renewing the War, to which they assented, and the *Indian* Armies accordingly dispersed.

Almagro being arrived before the Walls of *Cuzco*, and finding the *Indians* drawn off, sent a Summons to Don *Ferdinand Pizarro*, the *Spanish* Governor, to deliver up that Capital to him ; but he answered, he held that City by a Commission from the Marquis, and should not

deliver it up without his Orders, especially as he knew it to be within the Limits of his Brother's Government, and immediately proceeded to put the Place in a Posture of Defence ; but part of the Garrison being Friends to *Almagro*, and holding a Correspondence with him, introduced his Forces into the Town at Midnight ; and *Ferdinand* and *Gonzalo Pizarro* were surprized in their Beds and made Prisoners, by which *Almagro* became possessed of *Cuzco*, with little or no Bloodshed, and most of the Troops which had served the *Pizarro's* entered into his Pay. In the mean Time, the Marquis *Pizarro* hearing no News from his Brothers at *Cuzco*, and concluding all the Parties he had sent thither to reinforce them had been cut off by the *Indians*, determined to send such a Body of Troops thither as should be able to force their way against all the Opposition the *Indians* could make ; and having assembled five hundred *Spanish* Horse and Foot, gave the Command of them to Don *Alonso de Alverado*, with Orders to march with all Expedition. *Peter de Lerma* was also ordered to march with his Detachment, as Captain of a Troop of Horse, though he was an older Officer than *Alverado*, and had done great Service in those Wars, which so disgusted *de Lerma*, that from this Time he meditated the Ruin of the Enterprize.

Alverado continuing his March with the utmost Diligence, most of the *Indians* that were pressed to carry his Baggage, amounting to upwards of five thousand, perished in the first Part of the Journey by the intolerable Fatigue, being loaden and driven beyond their Strength, insomuch that he was forced to halt till he could press some thousands more of the *Indians*, to supply the Places of those he had lost. *Almagro* receiving Intelligence at *Cuzco* that Don *Alonso Alverado* was advancing, sent some *Spaniards* of Quality to him, to represent that *Cuzco* belonged to his Government, according to the Division the Emperor had made of *Peru* between him and the Marquis *Pizarro* ; and therefore advised him to retire to *Lima* again, till he and the Marquis should adjust the Limits of their Governments ; but *Alverado*, not entertaining any such Thoughts, made all the Gentlemen Prisoners who were sent to treat with him ; whereupon *Almagro* took the Field, constituting *Orgonez* his Lieutenant-General, and having made a Party of *Alverado's* Horse Prisoners, understood by them, that great Part of his Troops were better affected to him than they were to the *Pizarro's*, particularly *Peter de Lerma*, who, with a great many of his Friends, would desert *Alverado* the first Opportunity.

He advanced therefore as far as the Bridge of *Abancay* on the other Side, whereof *Alverado* lay encamped ; so that there was nothing but a small River that parted their Forces : They remained quiet, however, without endeavouring to attack each other all Day ; but in the Night *Orgonez*, fording the River at the Head of *Almagro's* Horse, put *Alverado's* Forces into great Confusion, and giving *Peter Lerma* and the rest of their Friends, by this Means, an Opportunity to join them, *Almagro* gained an easy Victory, with very little Bloodshed, making Don *Alonso* his Prisoner, with whom he returned in Triumph to *Cuzco*, on the 20th of July 1537. Some of the principal Commanders advised the Conqueror to secure his Peace for the future, by putting the *Pizarro's* to Death, and then march with his victorious Army against *Lima*, which, however, he refused to do ; alledging, that it was a Shame for a Gentleman and a Soldier to put People to Death in cold Blood, and that by attacking *Francis Pizarro* in the City of *Lima*, he should plainly become a Rebel to the Emperor ; since he neither had, nor pretended to have, any Claim upon that Part of the Country : He held, however, that nothing could be more just or reasonable, than that he should march towards the Sea-side, to establish there a Colony that might maintain his Correspondence with the other *Spanish* Settlements, that from them he might from Time to Time draw Recruits.

He began to move very soon from *Cuzco* towards the Coast, that he might execute his Design of securing a Port before the Marquis could have any Intelligence, or at least be able to collect a Force sufficient to withstand him.

him. In this, however, he failed, though by an unforeseen Accident; for the Marquis, not hearing from *Alonso Alverado*, began to apprehend that the *Indians* had blocked him up in the Mountains, and therefore, collecting his whole Force, which did not much exceed four hundred Men, he marched with them towards *Cuzco*; but on the Road he received full Intelligence of all that had happened, and that *Almagro* was in the Field, carrying with him his Brother *Ferdinand Pizarro* as his Prisoner, but that his other Brother, *Gonzalo*, was left with *Alverado* Prisoner at *Cuzco*.

This gave the Marquis great Uneasiness, because of the small Force he had with him; so that he plainly saw himself at the Mercy of his Enemy, who, by advancing to *Lima*, might have carried all before him: However, he behaved himself with great Prudence and Dexterity in this time of Distress; for marching directly back to *Lima*, he began there to recruit his Forces, and in the mean time sent Commissioners to amuse *Almagro* with a Treaty, offering to compromise Matters with him, upon such Terms as he should think reasonable; tho' this was done only to prevent his attacking him before he was prepared. In the mean time, *Gonzalo Pizarro* and *Alverado* made their Escape from *Cuzco*, with about one hundred *Spaniards* of their Party, and not long after a new Treaty was set on foot, in Appearance, for settling the Differences between these two great Generals; but in reality, with a View to engage *Almagro* to set *Ferdinand Pizarro* at liberty, which was become the more necessary, because *Almagro's* chief Officers pressed him daily to put that Man to death. The Method taken by the Marquis to procure his Liberty was as singular as it was successful.

He sent to *Almagro*, to let him know that if he persisted in carrying Arms in that Country, which plainly belonged to him by the Emperor's Grant, he would find the other *Spanish* Settlements would consider him as a Rebel; but that, if he meant no more than to obtain Justice to himself, and pay due Obedience to the Laws, he was content that Things should remain as they were, till such time as the Emperor should decide them, and would likewise provide *Almagro* with a Ship, to carry his Agents wherever he thought fit, provided his Brother *Don Ferdinand* was immediately set at liberty. *Almagro* readily accepted this Proposal, and, to his own great Prejudice, restored Freedom to *Ferdinand Pizarro*; after which the Marquis did not shew himself very ready to comply with this Treaty; but, on the contrary, put his Brother at the Head of all his own Forces, joined to a great Succour he had a little before received from *Panama*, and the other *Spanish* Settlements.

21. *Almagro* saw too late the Error that he had committed, and how difficult a thing it would be to repair it: He gave Orders, however, for fortifying *Cuzco*, and taking all possible Precautions to cover himself from the ambitious Designs of the Marquis. In this he succeeded in some measure; for he got back to *Cuzco* before *Ferdinand* and *Gonzalo*, the Marquis's Brothers, could reach that City, with the Forces the Marquis intended should besiege it. But here again, the Cautions of *Almagro* proved fatal to him; for tho' he had it in his Power to have starved and destroyed his Enemies in the Mountains, yet he neglected it, either from an Unwillingness to hurt his Countrymen, or from a Confidence in his own Force; neither was he less to blame, when those Commanders, at the Head of seven hundred Horse and Foot, invested the City of *Cuzco*; for as the Place was strong, and the Garrison very numerous, he must have destroyed the Enemy if he had contented himself with acting upon the defensive; but this he scorned to do, as looking upon it beneath his former Actions, and therefore he marched out with all his Troops to the *Salinas*, or salt Mines, with a full Resolution to give the Enemy battle, supposing that their Army had been new raised Men, and consequently much inferior to his own in Point both of Courage and Discipline; but here once more he was mistaken, the Enemy proving superior to his Troops in all respects; for, first, they had the Advantage in Numbers; in the next place, they were better armed, being for the most part Musketiers; whereas *Almagro's* Men had only Cross-bows and

Swords; and lastly, instead of being raw, new raised Soldiers, they were regular Troops that had served in *Flanders*.

The Battle however was extremely bloody and obstinate, but in the End *Almagro* was totally defeated, most of his Captains killed; and himself, who was so weak that he was carried into the Field in a Litter, obliged to take Shelter with a Handful of Men he had left in the Castle of *Cuzco*; which he could not keep long, but was obliged to surrender at Discretion, which he did the rather, because he hoped that *Ferdinand Pizarro* would return the Kindness he had shewed him when so long a Prisoner in his Hands. In this too he was greatly mistaken; for tho' he was upwards of seventy Years of age, and withal very infirm; yet *Ferdinand Pizarro*, knowing his great Courage, and the many Friends he had in the Army, was excessively afraid of him, and therefore confined him closely, and suffered none of the Officers to visit him.

He likewise took care to send away most of the other Prisoners to *Lima*, and dispatched on different Expeditions such of his own Officers as expressed any kind of Tendernefs or Concern for *Almagro*. After he had remained Prisoner some Months in *Cuzco*, the Lawyers were employed to draw up Articles against the old General; the principal whereof were, That he had seized on *Cuzco* by force; that he had entered into a secret Treaty with the Inca; that he had encroached on the Government granted to the Marquis, and fought two Battles with the Emperor's Forces under the Command of the Marquis, the one at the Bridge of *Aboncaj*, and the other at the *Salinas*: And, his Enemies sitting in Judgment on him, he was capitally convicted and condemned to die, though he appealed to the Emperor, and applied in very moving Terms to *Ferdinand Pizarro* to save his Life: He bid him remember that he had spared his Life, and even refused to put to death any of his Relations, on Account of the Friendship he bore him and the Marquis; that he would do well also to remember how instrumental he had been in enabling his Brother to make those Conquests, and raising him to the Honours he possessed; desired the *Pizarros* would consider he was an old gouty Man, who could not live many Years, and suffer him therefore, after the innumerable Hardships he had sustained, to die a natural Death. But they, looking upon their old Companion and Fellow-Soldier as the only Obstacle to their Glory and Ambition, and believing by his Death they should obtain the sole Dominion of *Peru* without a Rival, were deaf to his Intreaties; and having ordered him to be strangled privately in Prison, they afterwards ordered his Head to be cut off on a Scaffold in the great Square of *Cuzco*.

His Body lay all Day exposed almost naked on the Scaffold, his Friends not daring to bury him, lest they should incur the Displeasure of the merciless *Ferdinand Pizarro*, and his Enemies not thinking it worth while to give themselves any trouble about his Funeral: But towards the Evening a poor Negro, who had been a Slave to the Deceased, brought a course Sheet, and with the Help he had of some *Indians*, who had been Servants likewise to that General, wrapped up the Corpse and carried it to a Church, where the Friars buried it under the high Altar.

As the Design of this Work is to give the *English* Reader a full and fair View of the Transactions of these Conquerors in *America*, together with just Characters of those Heroes who were at the Head of their Armies, it is requisite to subjoin to this Account a true Picture of this unfortunate Commander: *James Almagro* was of low Stature, but well set and strong; his Enemies said he was of mean Parentage, which might be Matter of Fact, and yet it was more than they knew or could know, since he was found in the Streets, and, being never owned by any Body, went by the Name of the Town in which he was found. His Education was of a piece with his Birth; that is to say, we find it very uncertain what it was, or where he received it: He became a Soldier almost as soon as he became a Man, and his Behaviour was such that he forced a Passage even to superior Commands: He was

truly brave, without valuing himself much upon it : He had a wonderful Presence of Mind, so that no Danger could disconcert him ; he had so much Fortitude, that no Difficulties could discourage him. He was very kind to his Soldiers, liberal in Rewards, slow, and not severe, in Punishments, yet he maintained a very strict Discipline, merely from the Force of his Example ; for he was very exact in doing his own Duty, and, though he kept a good Table for his Officers, he fared himself as hard as any private Man in the Army ; and when some spoke of this as an Affectation, he said Monks were prescribed to by their Rules, sick Men by their Physicians, and that his was the Diet of a Soldier. He was very loyal to his Prince, merciful to the *Spaniards*, generous in the highest Degree, and knew not what it was to frame a base Design ; but with all this he was haughty and ambitious, very cruel at first to the *Indians*, but living some time with an *Indian* Woman, by whom he had his Son *James*, he grew first mild, and at last so kind to them, that they loved him better than any other *Spaniard*.

Ferdinand Pizarro, after his Death, went over to *Spain* to justify it ; but, though he corrupted most of the Ministers, he had much ado to avoid paying for it with his Life ; for *James Alverado*, who was Guardian to the young *Almagro*, prosecuted him so steadily, that it is thought he took him off by Poison, notwithstanding which he suffered an Imprisonment of three and twenty Years, which afforded him time for true Repentance.

22. The Death of *Almagro*, though covered with all the Appearances of Justice, was extremely resented by the *Spaniards* ; and, instead of extinguishing, as was expected, increased his Faction ; which shews, that Cruelty, or even Severity, is far from being the best Remedy for civil Dissentions, which it often irritates and seldom cures : But this was not the only Mischief that followed this Action. The Loss of so able a Commander proved a great Prejudice to their Affairs, retarded their Discoveries, and gave a Check to their Conquests ; and this, not only by hindering their Proceedings, and diverting them from compleating what he had begun, but by raising them up new Enemies. For thereupon the *Indians*, observing the Divisions among the *Spanish* Generals, had recourse to Arms again ; and though the *Spaniards* in *Peru* amounted to two thousand and upwards, they found it more difficult to maintain their Ground at this time, than at first, when not four hundred Men ; for the Terror the *Indians* were under from the Fire-arms and Horses, which they had never seen before, was in a great Measure worn off, and they had learned of the *Spaniards* how to ride and handle their Arms ; and, having taken some Horses, were not afraid to fight the *Spaniards* at their own Weapons, nor did there want Instances of some Parties being defeated by them ; and had not the *Indian* Slaves and Vassals stuck close to the *Spaniards*, discovered the Passes and Places of strength, and from time to time brought them both Provisions and Intelligence, probably *Pizarro* had been obliged to have abandoned his Conquests at last.

The most considerable Acquisition made after the Death of *Almagro*, was the Conquest of the *Charcas*, in which lay the invaluable Mines of *Potosi* ; whose Treasures drew such Multitudes of Adventurers thither, that the *Indians* of that Province were compelled at length to submit and become Slaves to the *Spaniards*. But they were not so successful in *Chili*, that brave People disputed the Ground with the *Spaniards* by Inches, nor could they ever make themselves entirely Masters of it. And even in the Province of *Los Charcas*, *Gonzalo Pizarro*, and his Forces, were so surrounded and distressed by the *Indians*, that the Marquis was forced to march in Person, with the Garrison of *Cuzco*, to his Relief. The Conquest of *Los Charcas* being finished, the Marquis founded the Town of *La Plata*, so named from the Silver Mines, and divided the City and the Country about it, with the *Indians* that inhabited it, amongst the Conquerors : To his Brother *Ferdinand Pizarro*, who was then in *Spain*, he allotted a very large Share ; and to his Brother *Gonzalo*, another Part of the Country, in which, some time after, the Silver Mines of *Potosi* were discovered.

Ferdinand Pizarro also had a Share in these Mines, as a Citizen of *La Plata*. And a particular Part of it being assigned to his Officers, they discovered so rich a Vein, that 'tis said they digged from it the finest Silver without any Alloy.

This Division of the Country was made in the Year 1538 and 1539 ; and now the Marquis found himself possessed of a Territory seven or eight hundred Leagues in Length, viz. from the Equinoctial to the South Part of *Los Charcas*, in which were more rich Mines than in all the World besides ; and yet was not his Ambition or Avarice satisfied, but in an extreme old Age he employed his Brother *Gonzalo* in the Conquest of other Nations. This Gentleman, who had all the Qualities of a great Commander, was at this time Governor of *Quito* ; and the Method he took for Discovery, was to strike off to the Eastward, that they might know something of the Breadth of *America* ; but his Endeavours were obstructed by very great Difficulties, under which he had like to have perished ; but one of his Captains, whose Name was *Orellana*, by his Direction sailed down the great River of the *Amazons*, quite to the Mouth of it, and from thence returned to the *Spanish* Settlements on the other Side of the Continent of *America* ; which, considering the Time at which it was performed, must be acknowledged as great and surprizing as any of the *Spanish* Enterprizes in the new World, and opened a Way to the Discovery of Countries as rich and valuable as any that had been yet found.

As for the Marquis *Pizarro*, after he had dispatched his Brother *Ferdinand* to *Spain*, and employed his Brother *Gonzalo* in the Manner before mentioned, he applied himself solely to securing and establishing his Authority ; in order to which he thought it necessary to continue those Severities which had been used against the Party of *Almagro*, and even to encrease them ; for he not only discharged many, and discouraged all the Officers that had been attached to the old Marshal, but likewise restrained them from going home to *Spain* on any Pretence whatever ; and at last, seeing them reduced to live upon the Alms of such of their Countrymen as were more in his Favour, he resolved to deprive them even of this pitiful Subsistence ; and with this View he published an Edict, forbidding any to relieve them ; which threw those unhappy Persons into Despair, and him into greater Danger from their Distress, than he could ever reasonably have feared from their Power.

For after the Publication of this Edict they grew wild and desperate, and seeing no End to their Miseries, but by dispatching themselves or the Marquis, or by a general Insurrection ; they resolved upon this last, and attempted it in this Manner :

The bravest of the *Almagrians*, singly, or two or three at a time, resorted privately to the capital City of *Lima*, where they did not want Friends who concealed them in their Houses, till they found they amounted to two or three hundred Men, all hardy Veterans, and several experienced Officers amongst them, who resolved to attack the Marquis as he went to the great Church on Midsummer-day, 1541 ; but he, having some Intelligence of the Design, did not go out of his Palace that Day ; and the Conspirators, upon this Disappointment, had resolved to wait for the Arrival of *Vaca de Castro*, whom they understood the Emperor had sent over. But being informed that their Plot was discovered, and they were in Danger of being sacrificed to the Fury of the Marquis, if they did not prevent it by some bold Attempt, twelve of them met at the House of young *Almagro*, which stood on the Side of the great Square in *Lima*, on Sunday the 26th of June, at Noon, and with their Swords drawn marched cross the Market Place to the Palace of the Marquis, crying out " Long live the King, but let the Tyrant die." Nor were they opposed by any, though there were not less than a thousand People assembled in the Square ; nay not a Man stirred to give the Marquis Intelligence of it ; insomuch that the Conspirators found the Gates of the Palace, and all the Doors, open ; and the first Notice the Marquis had of their Approach, was by one of his Pages, after they had entered the House ; where-

whereupon he ordered some Doors to be shut, imagining he should be able to defend himself till Assistance came in.

But *Francis de Chaves*, who was then with the Marquis, neglecting to fasten the Door, and believing it had been some ordinary Tumult that would have been easily suppressed by his Presence, went out, and, meeting the Conspirators upon the great Stair-case, demanded the Reason of that Insolence, which they answered only by several mortal Wounds they gave him; and rushing forward, the Servants and all the Company that were with the Marquis fled, except his Brother-in-law, *Don Francis de Alcantara*, and two of his Pages who defended the Doorway of the drawing Room whither the Marquis was retired for some time. But at length the Conspirators broke through and killed the Marquis and his Brother, and the two Pages, who behaved themselves, however, very bravely, and desperately wounded four of the *Almagrians* before they fell.

Then the Conspirators went into the Market-place again, declared the Tyrant was dead, and proclaimed the young *Almagro* Governor of *Peru*; for all the *Almagrians* immediately assembled when the twelve attacked the Marquis in his Palace, securing his Guards, and preventing any Assistance coming to him. They also secured all the Horses and Arms in the City, and commanded all the Inhabitants that refused to join not to stir out of their Houses without leave. They also plundered the Houses of the Marquis, of his Brother *Francis de Alcantara*, of his Secretary *Pizarro*, and some other of the principal *Pizarrists*, wherein they found an immense Treasure. In the Marquis's Palace alone, 'tis said they found to the Value of one Million of Crowns in Gold and Silver, but did not meddle with the Furniture, leaving it standing for the Use of the young *Almagro*, whom they had carried thither, after they had proclaimed him their Governor. Thus fell *Don Francis Pizarro*, in the capital City of *Lima*, which he had founded ten or eleven Years before, and was privately buried by his Servants, by the young *Almagro's* Permission; no Person of any Figure daring at this Juncture to attend his Funeral, lest it should give Offence to the prevailing Party.

His Fate was very like that of his unfortunate Associate, *Almagro*. He died a violent Death like him; like him was a Victim to Ambition; and like him went to the Grave in Obscurity, after a Life of Splendor! The Marquis *Pizarro* was never married, but had several *Indian* Concubines, some of them Daughters and Sisters of the Incas. He was undoubtedly brave, prudent, endowed with public Spirit, and had almost all the Qualities that are thought necessary in a great Man, together with that essential Ingredient, a blind and boundless Ambition; which alone rendered him dangerous to others, and thereby made the Resentment of others fatal to him: For few fall by the Sword who know how to forgive.

23. As soon as it was publicly known that the Marquis *Pizarro* was dead, *Lima*, *Cuzco*, and most of the principal Towns, declared for *Don Diego de Almagro*, the natural Son of old *Almagro*. Some Places, however, refused to acknowledge *Almagro's* Authority, but expected the coming of *Vaca de Castro*, with the Emperor's Commission, in which they were encouraged by *Pedro Holguin*, and several other Generals and Officers; who assembled a good Body of Troops, and took Possession of *Cuzco* again, which they gave out they would hold for the Emperor, and declared War against *Almagro*. *Alonso de Alverado* assembled another Body of Troops, between *Lima* and *Quito*, and declared also for the Emperor; and these two Generals preparing to unite their Forces, *Almagro* marched out of *Lima*, at the Head of six Hundred Horse and Foot, towards *Cuzco*, with an Intent to retake the Place, or give Battle to *Pedro Holguin*, before he should be joined by *Alonso de Alverado*.

This new Governor *de Castro* was, in all Respects, a very singular Person. He was a Gentleman by Birth, and by Profession a Lawyer; but it is said he made no great figure in that Profession on account of the great Strictness of his Notions as to Justice, which would not allow him to undertake any thing that was not

perfectly right, or to take any Steps in Favour even of a good Cause which were not strictly just as well as legal. The Emperor, being informed of this Man's Abilities, resolved, without consulting his Ministers, to make use of them in a Manner much superior to their Owner's Expectations. I will free, said he, the Bar from this strange Fellow, and see what his Probity will be able to do in the *Indies*. He came without Money or Forces, but, by the Accident before mentioned, found two Armies ready to receive him, upon which he went directly to *Lima*, where he caused himself to be proclaimed Governor of *Peru*; but such a Governor *America* had never seen before. He shewed himself an absolute Stoic; he threatened no body, he flattered no body; he acted like a Governor, but he lived like a private Person: He shewed no Respect to Persons, nor made any Distinction between *Indians* and *Spaniards*.

The People were amazed at first, but in a few Weeks he was obeyed with that Submission no Tyrant ever exacted, merely because the People saw he meant nothing but their Good. He marched against young *Almagro*, in *September*, 1542, with a very powerful Army; upon which that young Gentleman sent two Deputies to treat of a Peace, and to propose various things in his Name; several of his Officers writing to the Governor on his Behalf and their own, representing that they had been always good Subjects, and were desirous of continuing so; that they were driven into their present Condition by the Cruelties of the Marquis, and that they were willing to submit upon reasonable Conditions. The Governor would never talk upon the Subject; he said he had all the Authority from the Emperor that Prince could give, that he had done no body any hurt by Virtue of that Authority; but had done, and would do, all the Good he could. He said farther, that such as obeyed him were the Emperor's good Subjects, to whom he would behave as their Governor; that for such as acted otherwise they were Rebels, who in time would find a Judge that would never depart from the Letter of the Law, but would punish as that directed him to do; for, though as a Man, he was compassionate, yet, as an Officer of Justice, he knew not what Pity was.

The Report of the Governor's Conduct was far enough from giving Satisfaction to young *Almagro*, and those about him; therefore Orders were sent to his Deputies to make still greater Offers, in case *Almagro* might be suffered to reside at *Cuzco*, and to enjoy his Father's Government without Molestation, till the Emperor should decide this great Controversy, having already all the necessary Lights given him by the Agents on both Sides, by *James Alverado* and *Ferdinand Pizarro*, from whom News was suddenly expected, which might prevent the Effusion of *Spanish* and *Christian* Blood: But *Vaca de Castro*, instead of treating with *Almagro*, endeavoured to gain his Officers, and induce them to desert him; which *Almagro* discovering, both Parties prepared for Battle, and drew up their Troops in the Vale of *Chupas*. These little Armies were both composed of Veteran Officers and Soldiers. The Governor had the Advantage in Point of Numbers, his Troops consisting of seven hundred *Spaniards* besides *Indians*, and *Almagro's* of five hundred *Spaniards*; but then the latter had the Advantage of a Train of Artillery, and of good Ground, and would probably have gained the Victory if all his Officers had been true to him; for his Artillery was so pointed that the Enemy could not approach his Camp on any Side without considerable Loss. However, to his Amazement, when the Cannon were fired, they did no manner of Execution, and the Enemy advanced as if they had nothing to fear from the Artillery: Whereupon *Almagro* made up to *Pedro de Candia*, who commanded the great Guns, and, suspecting Treachery, killed him with his own Hands, and leveling one of the Cannon himself cut off a whole Rank of the Governor's Troops, putting the Army in Disorder.

But the Enemy were now advanced too near his Train of Artillery to suffer from them, and his Men had quitted the Ground where they were so advantageously drawn up to meet the Enemy, which occasioned the Loss of the Battle, though it was fought with great Obstinacy till two

two Hours within dark, when *Almagro*, finding his Troops over-powered, retired out of the Field with *Manco Inca*, and three or four *Spanish* Officers, intending to have taken Refuge in the Mountains with the *Inca* and his *Indians*, till he should meet with a favourable Opportunity of recovering his Government; but taking *Cuzco* in his Way, with a Design of carrying off his Treasure, and such of his Effects as would have been most useful to him in his Exile, the very Men in whose Hands *Almagro* had put the Government of the City, hearing he had lost the Battle, apprehended him, and delivered him up to the victorious Governor, to make their own Peace with him; and young *Almagro*, who was not much above twenty Years of age, was formally tried, condemned, and executed in the same Place, and much in the same manner, as his Father had been, and was afterwards buried by some Friars of the Convent of *Merced*, in the same Grave with his Father, having obtained a much greater Fame for his Humanity, Parts, and Education, tho' his Conduct and Experience in War could not be supposed equal to his Father's; and indeed it was unfortunate he was so young and unexperienced, and consequently had so little Influence and Command of his Troops, every Officer almost imagining he merited the chief Command in the Army, and that *Almagro* was infinitely obliged to him for taking his Part, while others were contriving to purchase their own Peace by betraying their General. They had but very indifferent Success, however, from the Practice of these base Measures; for the Governor proved as inexorable as he professed himself, and as he gave no Quarter in the Field of Battle, so he did not think the taking off *Almagro's* Head a sufficient Attonement for his Rebellion and its Consequences; but, on the contrary, caused such as had been his principal Counsellors to be apprehended, tried, and put to Death without Mercy, by which Means he totally extinguished, not only the Rebellion, but the Faction that had raised it.

Yet there was no Suspicion that he mingled any thing of private Malice, or particular Resentment, with his Zeal for the public Service; for he behaved very kindly to such as had in due time returned to their Obedience; and though no Governor ever had a fairer Opportunity of raising his Fortune by the vast Confiscations made in his Time; yet such was his Contempt for Money, that he took nothing; but contented himself with his own Appointments, and employed the Wealth he saved out of them, which was very great, for the Service of the Crown and the Good of the People. This had such an Effect, that though Multitudes deplored the Fate of those unhappy Men who died by his Sentences, yet they bore no Dislike to him; but acknowledged, that what he did was the Effect of an honest Zeal, and not of any Cruelty in his Nature, and many of the Criminals professed this to be their own Sentiments in their very last Moments: The only People who shewed any Discontent, were the Officers and Soldiers of *Pizarro's* Party, who thought they were not enough considered, and told him, as much; but he told them in return, That he did not come there to support or reward any, but to extinguish all Parties; and that they ought to think themselves happy, that in Consideration of their late good Behaviour, he forgot what was past, since they must be sensible that he punished in *Almagro's* Partizans no other Crimes than those of which themselves had been guilty.

24. The Peace of the Province being restored by this strict Distribution of Justice, the Governor *de Castro* disbanded the best part of his Troops, laid aside all his Severity, and began to cultivate with the utmost Diligence the Arts of Peace: He caused the old Colonies to be better settled, and was mindful to have new ones planted: He took care to have the old Mines improved, and such as were daily discovered, to be wrought, for the Benefit of his Master and the lawful Proprietors: He was very attentive to the Administration of Justice: He erected Colleges and Schools in all the Cities and great Towns. He obliged the Clergy to labour diligently in converting the *Indians*, relieved most of their Grievances, and in the Space of little more than a Year, made such Alterations as could scarce have been expected in fifty. He would have done still more, but that the *Spanish* Ministers,

whom he neither courted nor bribed, prevailed upon the King to erect a kind of Royal Audience in *Peru*, and to give very great Powers to Commissioners who composed the Audience, who made it their Business to cross the Governor in every thing; which begat new Disturbances, both among the *Spaniards* and the *Indians*, and fresh Complaints to the Court of *Spain*, with which perhaps the Ministers were not displeased, because whenever they came the Money came along with them. Whereas in the Governor *de Castro's* Time, though the Emperor received large Sums from *Peru*, yet the Ministers got nothing; and when Things went once wrong they quickly grew worse and worse, and Matters were in Danger of falling once more into Confusion.

The Emperor being informed of the Revolts in *Peru*, and the ill Usage of the *Indians*, he displaced his Commissioners there, and chose others, giving them an Oath to deal justly, and to order Things uprightly. He made forty Laws, and signed them at *Barcelona*, the 20th of *November*, 1542; but those Laws were ill taken in *Peru*. They were certainly well intended, and very agreeable to the Rules of natural Justice and Equity; but in the Situation Things were in, by no Means expedient to be published in *Peru*, where Things grew daily more perplexed: Besides *Blasco Nunez Vela*, who was appointed Viceroy in 1544, and who had Directions to see these Orders put in execution, was a Man no way qualified for his Employment. On his Arrival he caused his Predecessor, who was a much wiser Man than himself, to be imprisoned, and behaved in every Respect so severely that he gained no Friends, though he provoked many to become his Enemies. Three of the Judges who should have supported him, conspired against him, and caused him to be imprisoned, while in the mean time *Gonzalo Pizarro* drew together Troops, and disposed all Things for a Rebellion.

The Disputes between the Judges and the Viceroy facilitated his Design; for tho' the latter quickly recovered his Liberty, and drew one of the Judges to his Party, yet the rest of the Judges continued to act by their own Authority, and behaved so cruelly, and so tyrannically, that at length, perceiving they had no other Remedy, they were glad to admit *Gonzalo Pizarro* Governor of *Peru*, to send him a Commission in the King's Name, and to receive him with all Demonstrations of Respect into the City of *Lima*. The Viceroy returned into the Province of *Quito*, where he discovered, in his Adversity, much greater Abilities, and many more Virtues, than in his Prosperity; and though his Forces were considerably inferior to those of the Rebels, yet his own Intrepidity, joined to that loyal Disposition, which is natural to the *Spaniards*, enabled him to make a long Dispute. At length, however, a decisive Battle was fought between him and *Gonzalo Pizarro*, on the 19th of *January*, 1546; in which the Viceroy, being wounded and taken Prisoner, had his Head struck off; for whose Death, though done by his own Command, *Pizarro* hypocritically wore Mourning. Henceforward this Man behaved himself rather as a sovereign Prince than a Governor, busying himself in amassing Wealth, and in taking all the Precautions he could think of for securing himself and his Associates from the Effects of the royal Resentment, which without question they had reason to dread. In the mean time, the Emperor, justly alarmed at the Consequences of those Seditions, which threatened the Loss of so considerable a Territory as that of *Peru*, came at length to a Resolution of trusting rather to the Wisdom of one Man, than to the Force of many.

This Man was the Licenciate *Peter de la Gasca*, who had the Title of President of the Royal Court of *Peru*, and a Commission so ample, that, had it not been some way limited by his Instructions, he would, in effect, have had royal Authority: But to balance this he had neither Men nor Money, the Court trusting altogether, though surely not very prudently, to his great Capacity. He was, in few Words, a Man of unshaken Courage, deep Prudence, mild Behaviour, unblemished Probity, and absolutely disinterested; he was not afraid to go in a Manner naked, against insolent and victorious Rebels; and all the Reward he demanded for the Services he should

should perform, was, that, having settled the Province in Peace, he might be at Liberty to depart into *Spain*. *Gasca* arrived at *Nombre de Dios*, and carried himself mildly, saying, he came not to make War; but, according to his Profession, to make Peace, and rebate the Rigour of the Laws that caused the War. From *Panama* he sent the Emperor's Letters, and wrote himself to *Pizarro*, telling him, he was come to pardon all Offences, to draw him to Obedience, to give Satisfaction to his People, and if he refused this Grace, but not till then, to make War.

Pizarro was enraged at the Receipt of these Letters, and would not suffer the Person who brought them to sit down, which the Gentleman took for a great Affront. *Pizarro* called for his Friends, to know what Answer to give to the President's Letter. *Carvajal*, the chief Incendiary, was absent, and therefore it was hoped he would accept of Grace; yet every Man delivering his Opinion, some advised to take and raze *Panama* and *Nombre de Dios*, that the President might have no Places to receive his Men and Shipping; and they having all the Ships in the *South-Sea*, might keep *Peru* to themselves, and then they doubted not but to make *New Spain* revolt too, or at least they would rob all the Towns on the Sea Coast, and live by Spoil and Rapine; which indeed they might have done, having the General of the Sea true to them. At last *Pizarro* cunningly answered *Gasca*'s Letter, by consent of thirty of his Men, under their Hands, That they understood of his coming by *Hinojosa*, General of the Sea, and the fair Shew of Good he pretended; but it was too late, after so many Murders, occasioned by the Viceroy's Cruelty; persuading him to return, to inform the Emperor that they would receive no Governor but *Pizarro*, and offering to send some Men of Quality into *Spain* to make their Case known to the Emperor.

Carvajal returning, diverted *Pizarro* from all good Intentions, and would not suffer him to make any Acknowledgments to *Spain*; they sent these Letters to *Gasca*, and offered to give him a great Quantity of Money to return Home, and if he refused it, they wrote to the Admiral *Hinojosa*, to apprehend him. These Letters being brought to *Panama*, put *Gasca* in Fear that he should be killed, for they absolutely refused to receive him in *Peru*. But *Gasca* dealt so cunningly with *Hinojosa*, that he brought him to submit himself and Fleet, and become a true Servant to the Emperor. This was the Overthrow of *Pizarro*, and *Hinojosa* was continued General, and none of his Captains displaced. *Gasca* now prepared again for War, and furnished himself for his Journey to *Peru*; and before his Arrival sent a Pardon to all the common Sort. In his Expedition he carried himself courteously and friendly. *Gasca*'s Carriage, and the Submission of the Ships, made a great Change among the Rebels, for happy was he that could appear for the Emperor. *Pizarro* was much grieved to hear of these Alterations; but like a courageous Captain sent to all his Friends to come to him with their Forces, but most Part of them forsook him; and the Towns of *Lima*, *Cuzco*, and the rest, took Part with the Emperor.

When *John de Casta* came to *Pizarro* to *Arequipa*, they consulted what to do, having four hundred and fifty Men and the whole Country against them: He resolved to go to *Chili*, where never *Spaniard* had been; but he was followed by one *Centeno*, with a loyal Party for the Emperor, between whom was fought a cruel Battle. *Pizarro*, gaining the Victory, lost two hundred and twenty Men, and *Centeno* many more. *Centeno* fled, but the others, having so great a Loss, did not follow him. *Pizarro*, upon the Victory, divided his Forces into several Parts. *Cepeda*, a principal Man on his Side, persuaded him to make Conditions with *Gasca*, which he would not do, but was angry at the Motion, and grew suspicious of him; who out of pure Kindness had proposed it. *Gasca* came into *Peru* with two thousand Men, where he heard of the Overthrow *Pizarro* had given *Centeno*; and his Men being sickly, and finding the Corn green, and not to be eaten, they were much discouraged; but *Centeno* coming with the Remainder of his Forces put them in Heart, whereupon he went in

Pursuit of *Pizarro*; but had great Trouble in passing the River *Apurrima*; but *Pizarro* being apprized of it, departed from *Cuzco* with one thousand Soldiers. A little before this *Donna Maria Calderon* speaking against the Tyranny of *Pizarro*, *Francis Calderon* entered her Chamber one Morning, and strangled her in her Bed.

Now came their Armies in View of one another, every one taking Advantage of the Place. *Gasca* delayed giving Battle, in hopes that most of *Pizarro*'s Men would leave him, but they did not; and he being forced by Snow, Cold, and Hunger, engaged in a general and bloody Action. *Cepeda*, who, as I said, before advised to accept of Conditions, fled to *Gasca* which, much disheartened *Pizarro*'s Side; this Example, and others, that did the like, made most of them yield. *Pizarro* seeing it, chose rather to submit than fly, and yielded himself to *Villa Vicentia*, Serjeant-Major, who carried him to *Gasca*. Never was such a Battle fought, in which the Heads and chief Commanders were Doctors and Scholars. *Gasca* sent Forces to cut off those that escaped in their way to *Cuzco*, and to secure the Town. The Day following, being the 9th of April 1548, *Gasca* committed the Cause of *Pizarro* and other Offenders to Judges, who condemned him and thirteen more to Death; whereof *Francis Carvajal* was one, and indeed the chief Promoter of all the Mischief in these Parts; he was 84 Years of Age, and had been an Ensign in the Battle of *Ravenna*, had served under the great Captain *Gonzalo Fernandez*, and was the most noted Soldier in the *Indies*, yet never esteemed valiant or skilful; it was a Bye-word, as cruel as *Carvajal*, because he had been the Executioner of four hundred *Spaniards*, *Pizarro* caused to be put to Death after *Blasco Nunez* came into *Peru*, carrying Blacks with him continually for that Purpose. *Pizarro* was never overthrown but in this Battle, though he had fought many. *Gasca*'s Soldiers looked for a better Reward than was given them, though indeed they were well dealt with; yet they mutinied upon it, but were soon quieted again. *Gasca* took a Course for the pacifying of the *Indians*, and reducing them to the Christian Religion, as also for the peaceable Government of the Kingdom.

When *Gasca* arrived at *Nombre de Dios* out of *Spain*, he brought not an hundred Men with him, nor had he any Money, but procured Credit; and at his going away paid all Debts, and carried with him to the Emperor almost two Millions, but for himself not a Penny; being the first Man, in Authority, that ever did the like; for Covetousness was the Bane of all the *Spanish* Affairs 'till his Time. Indeed any Nation must be quickly ruined where the Men great aspire to Authority, with no other View than to make themselves rich. As for this celebrated Governor, when he had thoroughly settled Things in *Peru*, he prepared for his return into *Spain*, and came to *Panama*, having much Wealth there, which he could not carry; but it happened that two Sons of *Rodrigo Conberas*, Governor of *Nicaragua*, with two hundred Soldiers, entered the Town and took that Treasure, and as much more as they could get. One of the two Brothers put himself with his Wealth on board two or three Ships, the other followed *Gasca*, thinking to rob and kill him, murdered many, and slew a Bishop; because he sent to their Father in *Spain* an Account of their Villanies. They drew to them all factious and discontented People, that favoured the Party of *Pizarro*. *Gasca* hearing of those Disorders returned with Speed, fought with and overcame them; one of the Brothers was drowned in passing a River; and he dispatched Ships after the other, and took him and all his Wealth.

This proved a fortunate Affair to *Gasca*, and got him great Honour: He embarked at *Nombre de Dios* for *Spain* in 1550, with much Wealth for others and Reputation to himself. His going, coming, and staying, was little more than four Years. This Man completed what *Vaca de Castro* had only begun, and left every thing in tolerable good Order; for which, upon his Return the Emperor gave him the rich Bishopric of *Placentia*, and sent for him into *Germany*, that he might receive a clear and distinct Account of the State of his

Affairs in *America*. It is very remarkable, that these Governors, who did such wonderful Things; and instead of enriching themselves promoted the Welfare of the Crown, and provided for the Revenues of the People, were not Courtiers but Lawyers, not Men of great Nobility, not yet mere Adventurers, not the Creatures of any Ministry, or supported by any Minister, but owing their Preferment entirely to their Reputation, which made them known to the Emperor, their Master, and secured his Choice.

We shall here end our Account of the Discovery and Conquest of *Peru*, which has been so fully treated; that the Reader cannot but have a very clear Idea, as well of the Maxims, upon which the *Spanish* Court proceeded, as of the Characters of these great Men, by whom these Discoveries and Conquests were achieved, and of the Troubles that were afterwards occasioned by their excessive Ambition. But, as the Pursuit of this Method, with Respect to the other Provinces of the *Spanish* Empire, in the new World, would swell this Work to too great an Extent; we shall content ourselves with giving as concise an Account as is possible of the Times when, and the Persons by whom, the rest of the most considerable Discoveries and Conquests were made, without entering into any farther Particulars, that we may have the more Room to speak of what other Nations have performed in those Parts, and thereby render this Part of our Work as compleat as possible.

25. While *Hernan Cortes* was employed in reducing, under his Obedience, all the Provinces of the *Mexican* Empire, and while *Francis Pizarro* was occupied in *Peru*, there were other great Captains and experienced Seamen employed in the Discovery of several other Parts of *America*: As for Instance, *Sebastian Cabot*, a *Venetian* born, and who had been long in the Service of the Crown of *England*, entered about the Year 1526 into that of *Spain*; and the same Year sailed up the great River of *Plate*, and discovered Part of the Country of *Paraguay*. The Year following *Francis de Montejo* settled and subdued the Country of *Yucatan*; and about the same Time, *John Bermudez* first saw one of those Islands, which have since borne his Name, and make at present a Part of our Possessions in the *West-Indies*. From the Year 1528 to 1533 various Discoveries were made by the Captains of *Francis Pizarro*, both on the East and West Coasts of *South America*; and within this Space it was, that *Peter Heredia* caused the Foundation to be laid of the City of *Carthagena*, to which he gave that Name from the Resemblance it bore in its Situation to the City of *Carthagena* in *Old Spain*.

In 1535, *Peter de Mendoza* founded the Town of *Buenos Ayres*, on the River *Plata*, which City was twice abandoned, and twice rebuilt. At this time the famous *Hernan Cortes* made, in Person, an Expedition by Sea, to discover the Northern Coasts of the Kingdom of *Mexico*, and was himself the first that took a View of *California*, which then, and long after, was esteemed to be an Island. In 1537, the Province of *New Granada* was entirely discovered: And in 1539, as if the Discoveries Northwards were to keep exact Pace with those of the South, the great Kingdom of *Cibola* was first made known to the *Spaniards* by a *Franciscan* Friar; which Discovery at first was very little regarded, but has been since found to be of as great Consequence, or rather of greater, than any of the Discoveries on the Northern Continent in *America*. In 1540, one *Peter de Baldivia* made his Expedition into *Chili*, and reduced a great Part of that rich Country.

The very next Year, *John Cabrillo* a Native of *Portugal*, in the Service of *Spain*, discovered the most Northern Parts of *California*, and gave to a great Cape or Headland, in the Latitude of 44 Degrees, the Name of *Cape Mendocina*, in Honour of Don *Antonio de Mendoza*, at that time Viceroy of *New Spain*. In 1543, *Lewis de Alverado* discovered the great River of *Mississippi*, which he clearly described, though he did not give it any Name. In the Year 1545, the Mines of *Potosi* were first opened; and in 1554, the *Spaniards* discovered those of *St. Barbe* and *St. John*. In the Year 1574, *Juan Fernandez* discovered, in the *South-Sea*,

the two Islands that have been since known by his Name, though in the old *Spanish* Maps there are four laid down, the other two being called the Islands of *St. Felix* and *St. Ambrose*, lying somewhat more to the North than those to which we generally give the Name of *Juan Fernandez*. In 1582, the *Spaniards* completed the Discovery of that great Country to which they have since given the Name of the Kingdom of *New Mexico*. In 1589, Don *Pedro Sermiento* made that famous Settlement in the Streights of *Magellan*, of which we have given so large an Account in our first Volume. In the Years 1638 and 1639, some *Spanish* Missionaries travelled through, and described most of the Countries that lie upon the great River of the *Amazons*; and considering the Report they made of the Fertility and Riches of those Countries, it is surprising that the *Spaniards* did not make this Discovery turn to greater Account; but perhaps this may be ascribed to their Want of People, at least in Proportion to such a vast Extent of Country.

In 1675, some Missionaries discovered, in the Heart of *South America*, the Country of the *Moxas*, of which to this Day we have no farther Account than what those Missionaries have given us. This Country lies in the Torrid Zone, from 10 to 15 Degrees of South Latitude; and it is believed that there are Mines of great Value therein, though hitherto it has been visited only by the Priests, who have erected the same sort of Sovereignty there which they possess in *Paraguay*.

26. In the Year 1701, *F. Eusebius Kino*, a Jesuit, discovered that the Country of *California* was not an Island, as till that time it had been supposed, but was separated from the Continent of new *Mexico* only by a River, over which he passed without much Trouble. And thus we have given the Reader a short Account of the *Spanish* Discoveries, in the Order of Time in which they were made, from their first Entry into the new World, down to our own Days; and if it appears that since their having established so great and powerful an Empire in this Part of the Globe, they have discovered much less in Proportion than when they first came thither, we must not attribute it either to their having absolutely surveyed all Parts of those two vast Continents, of which they are reputed Masters, or that they have lost that Thirst after Gold and Silver with which they were so strongly possessed in past Times: For the Truth is, that both in North and in *South America*, there are vast Tracts of Country of which they know very little; but then the Provinces of which they are at present in Possession afford them such certain Supplies of Gold and Silver, and at the same Time they find that the Preservation of these Countries requires such a strength of People, that they are cautious of extending their Settlements for fear of lessening their Security; and therefore the great Maxim of their Policy is to conceal the Notices they from time to time receive of new Mines, that they may not come to the Knowledge of Strangers, whose Neighbourhood they dread, and not without Reason; since if any hardy and industrious Nation should ever fix themselves effectually in any Part of either of these Continents, the *Spaniards* would soon feel what they so much fear, the Impossibility of keeping the Countries they possess at present. But it may not be amiss before we conclude this Section, and part with the Subject, to give the Reader a general Notion of the Advantages derived to *Spain*, from the Conquests made by her Subjects in the two *America's*.

The common Opinion is, that his Catholic Majesty possesses larger Dominions than any Prince in the World, and without doubt it is very well founded; for, with regard to *America*, the whole Coast from thirty-seven Degrees of North Latitude, to fifty-three Degrees of South, is on one Side entirely theirs; and on the other there are only the *Portuguese* Colonies in *Brazil*, with a few inconsiderable *French* and *Dutch* Settlements, but what belongs to them or to the Natives. In a Word, the *Spaniards* command in the South Seas the most extended Coast in the new World, that is, from Cape *St. Sebastian*, the most Northern Point of *California*, to the Streights of *Magellan*, at least two thousand Leagues, or between six and seven thousand Miles: They likewise possess the largest

largest and most valuable Islands, viz. *Cuba*, Part of *Hispaniola*, and *Porto Rico*.

It is an Opinion commonly received amongst us, that the *Spanish West Indies* are very unwholesome, but, like many other general Propositions, this may be said to be true and false at the same time; a very considerable Part of *Mexico* and *Peru* are in the Torrid Zone, and yet, where they have the Advantage of a favourable Situation, are both healthy and pleasant; but besides these there are many fair Provinces in both the temperate Zones: Neither can the habitable World boast of more delightful Regions than there are in the Kingdom of *New Mexico* in the North, and about *Buenos Ayres* in the South, as the Reader will be told more particularly hereafter; the Truth is, that the Country about *Porto Bello* is extremely agreeable and unwholesome, and so is part of the Sea Coast of *Chili*, by Reason of the great Rains which fall there, and the want of Inhabitants. And from hence we form an Idea of the rest, though very unjustly. Perhaps too, the Luxury of the *Spaniards*, and the Inactivity of their Lives may contribute to shorten their Days, and thereby discredit the Places they inhabit; but as it is certain that the *Indians*, before their Arrival, lived to a good old Age, and many who are temperate do so still, I say, all this considered, we may conclude, that if any active and industrious People were to settle in these Countries, they would not be very much incommoded by the Climate.

As to the Soil of the Countries in general, it is wonderfully rich and fruitful, producing Corn in abundance, and such Pastures as are nowhere else to be seen; Trees for Fruit, Beauty, and Use; Shrubs odoriferous, and of physical Virtues; Herbs and Roots, in plenty; and, in short, every Thing that can be sought for, either grows naturally or may with very little Pains be produced here. In the Bosom of the Earth all Sorts of Metals are found, especially those which Men value most, Silver and Gold; Springs and Rivulets are every where to be seen: And then, for the Convenience of Navigation, there are the noblest Rivers which the World can boast; such as the River of *Plate*, the *Amazons* River, and many others. If the *Spanish* Councils were turned for the Encouragement of Trade, there are in these Countries such a vast Variety of valuable Commodities as might furnish the People possessed of them with inexhaustible Treasures; for besides Gold and Silver, of which prodigious Quantities are annually exported, both from *Mexico* and *Peru*, here are Emeralds, Pearls, and various other sorts of Stones; not to speak of Copper and other baser Metals: Rich Drugs of all Kinds, Logwood, Santal, Redwood, and many other sorts of Materials for dying: Tobacco, Ginger, Sweet-meats of all Kinds, with a vast Variety of luxurious Articles: And then, as to Things of more necessary Use, *Vigonia* Wool, the Hides from *Buenos Ayres*, Tortoise-shell, Indigo, and many more, might be enumerated. Neither is the Country deficient in Sea-ports, especially in the *North-Seas*, where there are several safe and spacious Harbours, besides good Roads, Bays, and Creeks. Yet these in the *South-Seas* are, in a great measure, wanting, and the *Spaniards*, not without Reason, esteem it an Advantage, because it makes it the easier for them to defend the Coast against Strangers; and in Respect of one part of the Country trading with the other, this is no great Hinderance; because they have a good Port for the carrying on of their *East-India* Trade, which is what they chiefly value on this side. And if ever they should increase their Shipping so as to make new Ports requisite, Engineers would soon put them in a Way to improve the imperfect Efforts of Nature: But while they continue to act on the Maxims which they have hitherto pursued, they are not likely to think their Havens on the *South-Sea* too few. We ought now to speak of the Number of Inhabitants, because therein consists the true Wealth and Strength of a Government: But we must ingenuously confess, that with any tolerable Accuracy it is not easy to settle it. The *Spanish* Writers are remarkably silent on this Head, and as to what others report on this Subject, it deserves less Credit than any other Part of their Relations, be-

cause it is impossible that what they assert should consist with their own Knowledge.

This however is certain, that the *Spanish America* is but thinly peopled if we consider its Extent; and, on the other hand, it seems to be as certain, that it is much better peopled than we commonly imagine, of which I will give several apparent Proofs: Sir *Francis Drake* made his first Expedition in 1578, and with a very slender Force; acquired immense Riches, and did prodigious Damage to the *Spaniards*. In 1587, *Candish* did the like, in a Vessel of One hundred and twenty Tons, though he had not in her above thirty Men; landing in several Places, and bringing away as much Riches as he could carry. These Successes established an Opinion, that the *Spaniards* were very weak in these Parts, yet all the following Expeditions, which were undertaken with much greater Force, miserably miscarried; which induced that wise Princess, Queen *Elizabeth*, to restrain her Subjects from such Attempts. This, however, did not discourage the *Dutch*, who in 1623, fitted out a grand Fleet for the *South-Seas*; it consisted of fifteen stout Ships, and there were three thousand picked Men on board. They came happily into these Parts of the World, and made several Descents, but to no Purpose, being constantly repulsed, so that they returned with great Loss and Shame. Our Countryman, *Gage*, persuaded *Cromwell*, and indeed the *English* Nation, that the Conquest of the *West-Indies* was a very practicable Design, but it did not prove so in the Event; for though we made ourselves Masters of *Jamaica*, yet whoever considers the mighty Force that *Penn* and *Venables* had, will rather wonder that much more was not done, than admire what they did; so that it seems to be a Thing out of dispute, that it is not so much the Weakness of the *Spaniards* as the Weakness of their Councils, which has occasioned their Losses in those Parts. And, to say the Truth, we can scarce doubt of this, if we reflect that they have found a Way to make their *American* Colonies contribute to the Destruction of their Power at Sea. Though the same Cause is the great Source of ours, and is the only one that can create a naval Force to *France*.

But to return to the Point; viz. the Number of People in the *Spanish* Settlements: A certain Author has guessed, that there may be in the whole three Millions of *Spaniards*, Mulattoes, and Negroes; besides which, there are certainly a much larger Number of *Indians*; for though it may be, and without doubt it is true, that the *Spaniards* practised intolerable Cruelties when they first arrived in these Parts, yet we are assured that this was done contrary to the express Direction of their Catholic Majesties, and that they have long since altered their Policy in this Respect, though many *Indian* Nations are still their implacable Enemies, and so are likely to continue. When these Countries were first reduced, the settling many Ecclesiastics might be a very proper Measure, since it is certain they were, in those Days, very zealous not only in converting, but in protecting the *Indians*; interposing on all Occasions in their Favour; but as Times are altered since, they and their Measures should have altered accordingly. Monasteries and Nunneries, if they are not contrary to the Spirit of Christianity, are at least incompatible with that of settling Colonies, and so they have been found: Priests, generally speaking, proceed upon narrow and selfish Views, and so do all religious Orders, particularly the *Jesuits*, who therefore are the least qualified for Missionaries, though deficient in no other Respect, as fully appears from their Conduct in *Paraguay*, where the Fathers have established a much more regular Government than subsists any where else in *America*, and are able to raise a greater Number of regular Troops in a Week, than could be assembled by the Viceroy at *Peru* in a Year.

The Corruption and Tyranny which reigns among all the Officers who derive their Authority from the Crown, sensibly affects the State, since it not only ruins the Revenue, but discourages Industry and extirpates Public Spirit. An unaccountable Fondness for Gold and Silver is another Prejudice to the *Spanish* Settlements; has pre-

vented

vented the Government from encouraging new Discoveries, and spread such a sordid Spirit through all its Subjects as is visibly productive of the worst Effects; for tho' Mines may be most beneficial to the Sovereign, and to the Mother Country in the first Instance, yet, taking all Things together, they are least so; of which the present State of *Spanish America* is the strongest Proof.

27. We have now treated this Subject so fully and so clearly, that we hope the Reader has nothing farther to expect. We might indeed have confined ourselves within narrower Limits, and have run through the Story of these great Events in fewer Pages; but then the Account must have been very superficial, and instead of satisfying, it would only have raised the Curiosity of the ingenious Reader; whereas now we dare assure him that with respect to the Discovery and Conquest of *Mexico* and *Peru*, he has seen as good an Account as we were able to give him, after perusing and comparing the best *Spanish* Writers; and we have always thought that it was our Duty to execute Things to the full, and not leave People under the Necessity of consulting many other Books, in order to come at what they might justly expect from its Title to have found in this.

There are some speculative People that have taken Pains to depreciate the Character of the Conquerors of the new World, by pretending that the Advantages derived to *Spain* by the Countries added by them to her Dominions are scarce an Equivalent for the Mischiefs she has sustained by the draining away such incredible Multitudes as have transported themselves to *America*, since those Conquests were made; but, with their Leave, this does not so much concern the Conduct of those Conquerors, as that of the *Spanish* Ministry, which we never took upon us to vindicate, and in which we should most certainly have failed if we had: But the great Point which deserves notice, and which can alone enable our Readers to form a true Judgment of this Matter, is the Profits that might accrue to the Crown of *Spain* from these prodigious Acquisitions, if she had known how to have managed them with Skill and Prudence proportionable to that Wisdom and Spirit which these brave and active Officers discovered in bringing such extensive, and such valuable, Provinces under her Dominion.

In order to give them some Opportunity of doing this, it may not be amiss to inquire, as far as it is in our Power to do, what these two great Empires of *Mexico* and *Peru* really produce; for when this is once known, we may very well judge who is in the Fault, and whether, in respect to the *Spanish* Nation, the boundless Ambition of those Conquerors, or the ill Management of those who have received the Benefits that have arisen from these Conquests, deserves the Blame.

To begin then with *Mexico*: The Ecclesiastical State of the Country at present consists of an Archbishop, and eleven Suffragan Bishops, whose Revenues, computed according to their own Returns of their Tenths, which we may be sure do not exceed the Value of them, amount to one Million and a Half Sterling *per Annum*. It is farther computed, that their Revenues make about a Fourth of those belonging to the Clergy, and that the Estates of the Ecclesiastics may be reckoned a Fourth of the Whole Province or Viceroyalty; according to which Computation the Total Revenues of *Mexico* may be taken at twenty-four Millions of our Money. But there is another Way of calculating the Wealth of *Mexico*, which I will present to the Reader, because I am pretty confident he will find it nowhere else: There was brought into the King's Exchequer at *Mexico*, in the Year 1730, somewhat better than a Million of Marks of Silver. This was the King's Duty from the Mines, which ought to be one Fifth of the Metal taken out of them. It is true, most People think the King is pretty roundly cheated; but because this does not appear to us, we will suppose he is honestly paid, and that this is a Fifth Part of what is dug out of the Mines; the Whole therefore must amount to five Millions of Marks (a Mark is equivalent to eight of our Ounces); so that if we compute this Silver

at five Shillings *per Ounce*, then the Inhabitants of *Mexico* receive annually from their Mines ten Millions in Money.

With respect to the Riches of *Peru*, we cannot give quite so distinct an Account; but, however, we will give the Reader the best Account we can; and first, as to the Mines of *Potosi*, we have a clear Relation of them for fifty Years, that is, from their first Discovery, to the Year 1595: Within which Space they had produced forty-four Millions of our Money; but it is allowed, that since that time, they have sunk very much in their Value, and it is no less certain that other very rich Mines have been since discovered. The Gold and precious Stones, brought from this Country and *Chili*, are of incredible Value; and, if we may trust to the Accounts that are given us of the City of *St. Jago*, in the last mentioned Country the Wealth of the Inhabitants is so great, or rather they have such a Plenty of Gold, that almost all their Utensils, for common Kitchen Service, are made of that rich Metal. After all, if we had the clearest Accounts of the Produce of their several Mines, they would not go a great Way towards satisfying us as to the Advantages that *Spain* reaps from these Countries, inasmuch as the *Spaniards* settled in *America* are known to have vast Hoards of Plate; send annually prodigious Sums in Silver to the *East-Indies*; and employ much larger Quantities in a Contraband Trade with the *English*, *French*, and *Dutch*. But we have a tolerable Account, after all these Deductions are made, of what is annually returned to *Spain* in Time of Peace; and therefore, upon this, we shall chiefly insist: The Galleons bring home about three Millions in Gold, and the Flota one: In Silver, the ordinary Cargo of the Galleons is twenty Millions, and of the Flota ten: In precious Stones, such as Pearls, Emeralds, Torquoises, &c. they export about half a Million; in other rich Commodities, such as Cochineal, Indigo, Logwood, &c. about three Millions and an half; so that taking all these together, they bring home thirty-eight Millions, without reckoning what comes by register Ships, and in a clandestine Way; which those who are best acquainted with it, have estimated at twelve Millions more: Upon the whole therefore, keeping ourselves within the strictest Bounds of Moderation, we may venture to assert that *Spain* draws now from seven to ten Millions Sterling from these Countries every Year, and must formerly have drawn much more.

If she is able to keep very little of this, which is very positively said, and I believe may be very true, it does not at all lessen the Value of these Acquisitions: She might keep every Penny of it if she would, by setting up and encouraging proper Manufactures in her Dominions. As she does not, it is become the common Interest of all the trading Countries in Europe, that she should be maintained in these rich Possessions, not for her Sake, but for their own; and indeed, as things are now managed, she wastes her unhappy Subjects the *Indians*, and her still more unhappy Negro Slaves, in digging Gold and Silver for other People. Such, according to the wise Dispositions of Providence, are the Rewards of Industry, and the Punishments of Idleness, Luxury, and a People's want of Attention to their own Concerns.

But if a few wise and good Princes were to rule in *Spain*, the Case would very soon be altered; they would first make use of their Treasures to erect Manufactures in their European Dominions, and next lay open this rich Trade to all their Subjects in those Dominions. Such a Conduct would, in the Space of a few Years, change the Face of their Affairs entirely; and nothing could hinder their becoming again what they once were, the most formidable maritime Power in this Part of the World.

It would then appear what vast Advantages accrued from the Discoveries and Conquests of *Columbus*, *Velasquez*, *Balboa*, *Cortes*, *Pizarro*, *Almagro*, *Baldivia*, and all the other Heroes, that stand recorded in *Spanish* Histories: Heroes, who, without doubt, merit all the Praises that have been bestowed upon them; and who, with prodigious Labours, with infinite Hazards, and at the Expence of the Lives of many thousands of brave Men, purchased

purchased those Treasures which have been wasted away in gratifying the Pride of Princes, the Lusts of Priests, and the innumerable Vices of a long Train of weak and wicked Ministers. Happy would it be for all other Nations if *Spain* alone was infamous for this kind of Extravagance and Madness! Happy for them; if after following they would grow wiser by her Example! Happy for them, that she is not yet sensible of her Faults!

The Mistakes that have been made by the *Spaniards*; however strange, however amazing, they may appear, when thus examined and pointed out upon Paper, are such as any other Nation may be very easily betrayed into, when her Circumstances become like those of the *Spaniards*. All Colonies are a kind of political Children, and, as such, contribute to the Honour, Safety, and Riches of their Parents, if those Parents are not wanting to themselves; it is, however, very common for Governments, as well as private Persons, to fall into many great Errors upon this Head; such as treating young Colonies with vast Tenderness and Indulgence, forming from thence very sanguine, and sometimes very unreasonable Expectations; and, because these are not answered as soon as expected, falling out with, and disregarding, those Colonies, at the very time when, if they had been attended to, they might have more than answered their Expectations. It is likewise common with them, as well as Parents, to grow unreasonably, I was going to say ridiculously, jealous of their Off-spring; by this foolish Conduct, actually producing those Mischiefs they endeavoured to avoid, and which could have been produced only by such Endeavours.

They are apt to fancy, that, because these Children are settled at a Distance, they forget that they are Children; and, full of this idle Fancy, they soon forget that they are Parents, and begin to treat them with an arbitrary Authority; because they live at a Distance, and support themselves by their own Labours, they make it their Study to draw from them wherewith to maintain the Luxury and Prodigality of those Children who live at home with them, and are thereby become the Objects of an irregular Affection, which very soon degenerates into an excessive Indulgence. Hence arise all those Mischiefs that are so warmly deplored by those, who, if they would act with proper Care and Spirit, might easily amend them; for it is with Colonies as it is with Children, nine times in ten their Errors spring from the Usage they have met with; and they are blamed for their Miscarriages by those who are in reality the Authors of those Miscarriages, and ought therefore to blame themselves.

An ancient and almost incurable Mistake this has been; but it is nevertheless a Mistake for all that, and a Mistake which it imports every great and wise People to amend. A Nation that has great Colonies abroad can never want Trade, Riches, or maritime Power, unless she is wanting to herself. A familiar Example will illustrate this, and that in such a Manner as must convince every Person of the Truth of this Remark. A Man who has a large Estate and no Children, must of necessity employ many Servants, of whose Fidelity he cannot be altogether, or at least always, certain; and, with respect to a Nation, Subjects obtained by the Sword, that is, by Conquest, or Slaves purchased by Money, are in the Nature of Servants; but the natural Subjects of a State, by which I mean such as have been born or bred up under its Laws, are to all political Purposes Children, let them live where they will; and, if due Care be taken of them, will discharge the Duties of Children. But if Parents, who are in this Condition, instead of seeking the Advantages they might attain from it, employ their Cares another Way, and divert their Thoughts and their Affections from their Children to Servants and Strangers, it is no Wonder that their Affairs go wrong.

Now this was precisely the Case of the *Spaniards*: The Emperor *Charles V.* happened not to be born in *Spain*, and, which was still more fatal to that Country, was chosen Emperor of *Germany*, which quite turned his Thoughts from *Spanish* Affairs; so that though he was as great a Captain, as able a Statesman, and as wise a Monarch as ever sat upon that Throne, yet with all his

Virtues and all his Abilities he laid the Foundation of their Misfortunes, at the very Time when he thought he was laying the Ground-work of an universal Monarchy; and at a Time too, when, by attending closely to the Affairs of *Spain*, he might have made it a greater, happier, and more potent Nation, than ever the *Persians*, *Greeks*, or *Romans* had been. His Son *Philip* heightened all these Misfortunes, though he pursued quite a different Conduct; but then he pursued it to the same End, that is to say, by affecting universal Monarchy he ruined his own.

He was generally and very justly reputed a Prince as well versed in Politics as any of his Age, or perhaps of any other; yet he was so much taken up in endeavouring to reduce the Netherlands, enslave *Italy*, conquer *England*, over-run *France*, and in annexing *Portugal* to his Dominions, that he never considered his Subjects in the *Spanish America*, farther than as they enabled him by constant Supplies of Money to carry on these his vast Designs. From what has been said it is evident, that however wise, however penetrating, these Princes might be, they certainly over-shot themselves in their Schemes concerning the *Western Indies*. Instead of looking upon it as an Estate, they seemed to think it only a Farm, of which they were to make presently what they could. In doing this it must be owned they acted with Skill and Vigour, for they drew immense Sums from thence; which they wasted in *Europe*, to disturb others, and in the End to destroy their own State. Mr. *Lewis Roberts*, Author of the *Map of Commerce*, an excellent Book for the Time in which it was written, tells, that it appeared by the Records in the Custom-house of *Seville*, that in the Space of seventy-four Years, computing backwards, from the Time in which he wrote, the Kings of *Spain* had drawn into that Country, from *America*, two hundred and fifty Millions of Gold, which make about ninety-one Millions Sterling. He also observes, that this very Prince, *Philip II.* of whom we have been speaking, spent more in his Reign than all his Predecessors in the whole of their respective Reigns, though no less than sixty-two Kings had reigned before him. Yet this cunning, this ambitious, Monarch left his Subjects in a manner quite exhausted; and, by establishing a most pernicious System of Politics, left the total ruining of his Dominions, by way of Legacy, to his Successors; a Point which, with wonderful Obstinacy, they have steadily pursued ever since.

All who are in any Degree acquainted with the History of *Europe* know, that, for a long Course of Years, *Spain* maintained at once Wars in *Flanders*, *Germany*, *Italy*, and sometimes in *Ireland*, which created a prodigious Expence of Treasure and of Troops, neither of which from the Death of *Charles V.* they were in any Condition to spare. As Families were reduced by the Expence of serving in the Army, they were induced to seek new Fortunes in the *West-Indies*; and thus Numbers went over thither, not to cultivate the Country, or to improve Trade, but to strip and plunder those who went before them. Other great Families again concurred with the Measures of the Crown, in hopes of Vice-royalties and other valuable Offices in its Conquests; but, if ever their Schemes were beneficial to their Families, which may admit of doubt; certain it is, that they contributed more and more to the Ruin of the *Spanish* Nation. For though his Catholic Majesty once possessed *Naples*, *Sicily*, *Sardinia*, *Milan*, with other Territories in *Italy*, besides the Low Countries and some other Provinces, which are now lost; yet, for want of attending to Commerce, and by having no Sort of Oeconomy, all this turned to his Prejudice; and it plainly appeared, towards the Close of the last Century, that with all their boasted Sagacity and Firmness the *Spaniards* had ruined themselves, by acquiring too great Power; and rendered themselves Beggars, by abusing their immense Riches: With swelling Titles, and wide Dominions, they were despicably weak, and scarce any but Copper Money was to be seen, in a Country which received above twenty Millions annually from its Plantations.

Before I quit this Topic I must take notice of another Thing, which is certainly very extraordinary. This wrong Turn in the *Spanish* Policy had a wonderful Effect: It made all the Enemies of that Nation rich, and all its

Friends poor. Every body knows that the *United Provinces* not only made themselves free and independent, but rich and powerful also, by their long War with *Spain*. Our Maritime Power was owing to the same Cause. If *Philip* the II^d had not disturbed Queen *Elizabeth*, our Fleet might have been as inconsiderable at the Close of her Reign as it was at the Beginning, when we were pestered with Pirates, even in the narrow Seas. Our Plantations abroad were chiefly owing to Expeditions against the *Spaniards*. Our Manufactures at home were the Consequence of affording Refuge to the King of *Spain*'s Protestant Subjects. When Queen *Elizabeth*'s Successor closed with *Spain*, he suffered by it, while *France*, the only Country then at War with *Spain*, was a Gainer. I say nothing of *Cromwell*'s Breach with *Spain*, and the Advantages he drew from it; because the World seems well enough apprized of all I could say on that Subject already.

But I cannot help observing, that both the *Dutch* and we were at vast Expences after the Restoration, to preserve the *Spanish Flanders*, while the *Spaniards* themselves were inactive, and left all to be done by their Allies. As soon as the Tables were turned by the Accession of King *Philip* V. the *French* became great Losers by siding with this Nation, though they had always got by fighting against them; insomuch, that all the true Patriots in *France* complained, that while *Lewis* XIV. shewed himself an excellent Parent, in his Family, he discharged but indifferently his Trust, as the Father of his People; but to what End should I look abroad, when it is plain, for our own Situation, that we were never Friends with her, but at our Cost; and never Foes, but at her's. By so long a Series of Mismanagement the *Spaniards* have brought their Affairs into so wretched a Situation, that they neither have, nor can have, any very great Benefit from their vast Dominions in *America*. They are said to be Stewards for the rest of *Europe*; their Galleons bring the Silver into *Spain*, but neither Wisdom or Power can keep it there. It runs out as fast as it comes in; nay, and faster; insomuch, that the little Canton of *Bern* is really richer, and has more Credit than the King of *Spain*, notwithstanding his *Indies*.

At first Sight this seems to be strange and incredible; but, when we come to examine it, the Mystery is, by no Means impenetrable. The Silver and rich Commodities, which come from the *Indies*, come not for nothing (the King's Duties excepted) and very little of the Goods and Manufactures, for which they come, belong to the Subjects of the Crown of *Spain*. This shews how the Wealth

of the *Spanish Indies* becomes the Property of other Nations; and how the Preservation of their Dominions becomes as much the Concern of their Neighbours, as it is their own. It likewise shews how terribly they are hurt by the ambitious Schemes of their Court, in *Europe*; and how every fresh War in *Italy* serves to weaken *Spain*, and exhaust her Colonies; so that, in the End, some great Revolution will happen there, but of what Kind, it is not easy to foresee; but certain it is, that the *Spanish* Power gradually declines, and many of their best Settlements are already sunk to nothing.

As for Instance, *Florida* is become a Burthen to them; they having nothing there of Consequence but Fort *St. Augustine*, which they keep to cover the Passage of their Plate Fleets; the Island of *St. Domingo* is impoverished, to the last Degree, and the City of that Name had been long enough ago left desolate, if it was not for the general Tribunal of Justice held therein, which is its sole Support: Yet the *French* have a large and flourishing Colony on the same Island; and if ever they should, as 'tis more than probable they will, elbow out the *Spaniards* from thence, it will change the Face of Affairs in the *West-Indies* extreamly. The Island of *Cuba* is no longer what it was; and, in short, their Affairs decline so fast, under their present Management, that, unless some timely Remedies are applied, the Ruin of their Colonies must follow very soon.

This is a Lesson fit to be considered by other Nations; and it was for that Reason I have insisted upon it so much. It would, however, be no difficult Task to proceed still farther, and to examine the Consequences that may follow, in case the *Spaniards* should either be deprived of their Islands in *America*, or should abandon them, which I look upon as the more likely Event of the two: But I have already bestowed too much Time upon this Subject, and I am sensible, that such a Discourse might appear too grave to some, and too chimerical to others; and therefore I shall not insist upon it here: However, as I have Reason to hope, this Work will long outlive its Author, I flatter myself that, whenever the Event happens, Posterity will take notice of my Conjecture; and it will be very happy for the *British* Nation, if right Measures are taken in Time to secure those Advantages that may be derived from such an Event; or at least to avert those Dangers to which our Colonies must be exposed, if, whenever it happens, our Strength in the *West-Indies* should not be great enough to enable us to seize a considerable Share of what they forsake.

SECTION XVI.

A concise History of the Discovery, Settlement, and Cultivation of Brazil by the Portuguese; the Conquest of the greatest Part of that Country by the Dutch, the Recovery thereof by the Portuguese, and the vast Advantages that have accrued to them of late Years from this noble Colony.

1. A short Introduction, shewing the Nature, Necessity, and Importance of this Section.
2. The Discovery of this Country, A. D. 1500, by Don Pedro Alvarez Cabral.
3. The small Advantages expected from Brazil, when first visited by the Portuguese.
4. Some Account of its antient Inhabitants, and their Manners and Customs, from Dutch and Portuguese Writers.
5. The Methods taken to settle it first by Europeans.
6. The Establishment of a regular Colony under a Governor General from the Crown of Portugal.
7. The Attempts made by the French to establish themselves in this Country, and the Manner in which they miscarried.
8. Another Attempt of the same Nature, by the same Nation, attended with no better Success.
9. The Dutch undertake, under Colour of their War against Spain, to make themselves Masters of Brazil.
10. Their wonderful Success and the surprizing Progress of their Arms in that Country.
11. The Endeavours used by the Portuguese to repel these Invaders, and to maintain themselves in the Possession of Brazil.
12. Count Maurice of Nassau is sent over by the States General and the Dutch West-India Company, to take upon him the Government of their new Conquest.
13. His wise and prudent Administration, by which the best Part of that noble Country was secured for and settled on the Behalf of the Dutch.
14. Their Treaty with the Portuguese; they recal Count Maurice, and begin to act tyrannically in that Country.
15. The Portuguese again take up Arms, fall upon the Dutch in their Settlements, and after a long War drive them

them entirely out of Brazil. 16. The History of this Colony continued from thence down to the present Times, with some curious Remarks on the Gold and Diamond Mines discovered there. 17. Observations and Reflections upon the principal Events in the foregoing Section.

1. IF we consider the admirable Situation of this Country, its great Extent, and other Advantages derived from Nature, we might readily pronounce, that a Settlement there must be attended with almost all the Benefits that Men usually seek or desire in such Establishments; and though it be very true, that this Country was not only discovered and settled by the *Europeans*, near two hundred Years before any important Discovery was made of the rich Gold Mines which it contains, yet this only shews, that Judgments built upon Reason, and the natural Structure of this terraqueous Globe, are not only as sound and certain, but even more so than such as are grounded on Experience. If towards the Middle of the last Age, a Man of the greatest Reading, and soundest Understanding, had declared, that there were Gold Mines in this Country, he would have been looked upon as an Enthusiast, one of those whom too much Learning had made almost mad; for it would have been said, That after inhabiting this Country for near two Centuries, the *Europeans* would certainly have discovered such Mines, if they had been there; but the Fact comes out quite otherwise: Those Mines were there, and yet they were not discovered; and it seems to be a very high Reflection upon the boasted Knowledge of Mankind, that, with respect to *Europeans* as well as *Indians*, most of these valuable Discoveries have been made by Chance.

If those Relations which are printed under the Name of *Americus Vespucius* were really his, we must be obliged to own, that he pretended, amongst other Things that he never performed, to the Discovery of this Country; but the Matter of Fact is, that all the Dates in these Pieces so manifestly give the Lye to the Matters contained in them, that the only Way to save the Honour of this famous Man is, to deny that they are his: Some alledge, that the old Admiral, *Columbus*, gained some Knowledge of the Coast in the Year 1499, in his third Voyage; but, not to dwell upon Uncertainties, we will fix the Discovery to the succeeding Year, wherein we have the concurrent Authority of both *Spanish* and *Portuguese* Writers to support us; and we shall next enter into a regular and succinct History of this Colony from that time to this, which is certainly a Thing not to be met with in our Language, or perhaps in any other.

2. Don *Pedro Alvarez Cabral*, a Man of Quality as well as of great Abilities, sailed in the Month of *March*, 1500, with a Fleet of thirteen Vessels of various Sizes, for *Sofala*; from whence he was to have continued his Course to the Coast of *Malabar*; but, after passing the *Cape de Verd* Islands, he stood so far out to Sea, in order to avoid the Calms, so common on the Coast of *Africa*, that on the 24th of *April*, he fell in with an unknown Coast on the West, and as the Sea ran very high he was obliged to sail along that Coast as far as the Latitude of 15 Degrees South, where he found a good Haven, to which he gave the Name of *Porto Seguro*, or the *Safe Port*, and the Country itself he called, *the Land of the Holy Ghost*, which Name was afterwards changed for that of *Brazil*, on account of its abounding with a kind of Wood of that Name, which had been so called in *Europe* about three hundred Years before this Country was discovered. Don *Pedro* having sent People on Shore, to examine this new Land, and they reporting that it was extremely well watered, very fertile, full of Fruit-Trees, and inhabited by a mild and gentle People, he resolved to land his Men there, in order to refresh them.

He did so accordingly, and found it exactly agreeable to what his People had reported; and that the Savages were so far from offering any Insult to the *Portuguese*, that they received them with more Kindness and Good-will than they had Reason to expect. It so fell out, that Don *Pedro* had with him some condemned Criminals, whose Sentence, by the Clemency of the King of *Portugal*, had been changed from Death to Transportation; of these

he thought fit to leave two in the Country, to learn the Language, to make farther Discoveries, and to acquire the best Knowledge they could of the Land, and its Inhabitants; but believing, as he very well might, from the very first View of this Country, that the Discovery he had made was of very great Importance, he resolved to lose no Time in giving an account thereof to his Master, and therefore dispatched immediately one of his Vessels back to *Lisbon* for this Purpose, with some Persons on board upon whose Fidelity he could depend, together with one of the Savages of that Country, to be instructed in the *Portuguese* Language, to facilitate the perfect Knowledge of this new found Land. He likewise set up a Stone Cross, as a Monument of his having been there, and of his having taken Possession of that Country in the Name, and on the Behalf, of his Majesty the King of *Portugal*, a Thing at that Time the more necessary, because of the Disputes that were then subsisting between the *Spaniards* and *Portuguese*, about their Discoveries.

It was in consequence of this Account, that the King of *Portugal* sent several Persons to discover upon these Coasts; who very soon found that this was Part of the Continent of *America*; upon which, as might have been very easily foreseen, there arose great Disputes between the two Crowns, about the Extent and Boundaries of this Country; but at last it was settled, that from the River of *Maranon* to the River of *Plate*, should be yielded to the King of *Portugal*.

3. It cannot be supposed that these first Discoverers could form any distinct or just Notion of the Nature and Importance of so vast a Country, which, according to its present Boundaries, may be fairly reckoned two thousand four hundred Miles, from North to South; and two thousand from East to West; tho' the *Portuguese* have scarce penetrated five hundred Miles, any where, even to this Time. The Northern Parts of the Country lie near the Equator, are subject to great Rains and variable Winds, more especially about the Months of *March* and *September*, when they are frequently disturbed with most dreadful Hurricanes and Tempests, by which the Country is frequently under Water, and must consequently be very unwholesome. Here, therefore, the *Portuguese* content themselves with the bare Edge or Sea-Coast, without endeavouring to penetrate deeper into the Country, desiring only to maintain their present Possessions and thereby keep out Foreigners.

In the middle Part of *Brazil*, from the Latitude of five Degrees South to the Tropic, it is observed that the Winds and Seasons are the Reverse of those in other Parts of the World within the same Latitudes; for whereas in them a dry Season comes on when the Sun goes Northward, and the wet Season begins when the Sun returns to the Southward; here the wet Season begins in *April*, when the South-east Winds set in with violent Tornadoes, Thunder and Lightning; and in *September*, when the Wind shifts to East-north-east it brings with it a clear Sky and fair Weather; and this is the Time of their Sugar Harvest. There are but two Winds blow upon this Coast; viz. the South-east from *April* to *September*, and the North-east from *September* to *April* again; but thirty or forty Leagues at Sea they meet with the constant Trade-wind, which blows in the *Atlantic* Ocean all the Year round, from the Eastward, with very little Variation. There is no Country, between the Tropics, where the Heats are more tolerable, or the Air more healthful than this, being constantly refreshed with Breezes from the Sea, and abounding with Lakes and Rivers, which annually overflow their Banks; and in the Inland Part of the Country, the Winds from the Mountains are still cooler than those that blow from the Ocean.

That part of *Brazil* which lies still more to the South, and without the Tropic of Capricorn, is one of the finest in the known World, in all Respects; but the

the *Portuguese* Dominions are but narrow here, confining on the *Spanish* Territories on the River *la Plata*. We have taken this Opportunity of describing the whole Country as it lies; but the Reader will easily conceive that it was subdued and planted by Degrees, and that the Accounts transmitted from Time to Time to *Lisbon* were agreeable to the Alterations in the State of the Colony. It was from the Nature of these Reports, that Things at the beginning went on slowly. The first *Portuguese* Inhabitants were sensible enough, that the Soil was fertile, the Air temperate, and the Country well watered; but alas! they could report no more. *Brazil* appeared to them no otherwise than as a pleasant, fruitful, and well situated Country, capable indeed of furnishing Abundance—but not of Gold and Silver—very fit for any Sort of Improvement; but destitute, as they supposed, of Mines.

Upon these Reports the Ministry did not indeed order it to be deserted; but they transported wicked People thither, according, as from Time to Time their Crimes brought them under the Censure of the Law, which had two very bad Effects; for first it discredited the Colony in the Eyes of the *Portuguese* Nation; and next, it proved the Means of corrupting the poor *Indians*, who were much more apt to catch the *Portuguese* Vices, from their Example, than to receive the Christian Religion by their Teaching; and indeed in all Colonies. I am afraid the Lives of Christians are such as may be justly esteemed the Source of untractable Infidelity among the *Indians*.

4. But, to apprehend this more thoroughly, we must have some Acquaintance with the Natives of *Brazil*, and their State and Condition at the Time of which we are speaking. These Savages differed very little in Stature or Complexion from the *Portuguese* themselves, but they much exceeded them in the Strength, Robustness, and Vigour of their Bodies. The Manner of their Living, however, was barbarous enough; for they lived in the wide Plains, some in Villages, and others moving about, according to their Humours. Their Villages consisted only of three or four very large Houses, not unlike our Barns, in which a whole Family or Tribe lived together, under the eldest Parent, in the State of Nature; but, however, we can say nothing as to the Extent of their Authority.

They made use of Fowling and Fishing for their Subsistence, and made up the rest of their Diet with the Fruits of the Earth; so that though they had not any luxurious Plenty, yet, in so fertile a Country, they could not suffer any great Degree of want. But, what seems somewhat extraordinary, they were, notwithstanding this seemingly frugal and temperate way of Living, continually at War with each other; but for what Causes it is not easy to imagine; unless we should admit what some old Writers affirm, that they made these Wars chiefly, that they might kill and eat each other, esteeming human Flesh the greatest of Dainties. But perhaps the Testimonies of those who own themselves guilty of extirpating thousands of these poor Creatures, to whom they could have no Quarrel worthy of rational Beings, ought not to be received, or at least not received in its full Extent; for there is a certain kind of Malignity in human Nature, which leads us to calumniate and misrepresent those that we injure; as if by aggravating their Vices we could justify, or at least excuse, our own.

But, at the Bottom, this will be found a Doctrine equally false and absurd, for we ought to reclaim bad Men, and not to murder them; and Experience shews us, that with regard to other *Indians*, who have been painted in as black Colours as the People of *Brazil*, they derived their Characters rather from the heated Imaginations of *European* Writers, than from any bad or brutal Conduct in them all. But let us descend a little into Particulars from such Authorities as we have. The *Portuguese* and *Dutch* Writers give the Name of *Tapuyers* to the Natives which inhabit the North Part of *Brazil*, and the Name of *Tupinambies* or *Tupinamboys*, to those who dwell in the South of *Brazil*; but divide these again into several petty Nations, differing in Lan-

guage, but not much in Manners and Customs; and therefore, I shall only treat of them under the two first grand Divisions of *Tapuyers* and *Tupinambies*.

The *Tapuyers* are Men of good Stature, and as they inhabit a hot Climate, almost under the Equator, are of a dark Copper Colour, their Hair black, and hanging over their Shoulders; but they suffer no Hair on their Bodies or Faces, and go almost naked; the Men only inclosing the Penis in a Case, as some other *Americans* do, and the Women concealing their Nudities with Leaves. The Men have also a Cap or Coronet of Feathers, but I don't perceive the Women have any Covering on their Heads. Their Ornaments are glittering Stones, hung upon their Lips or Nostrils, and Bracelets of Feathers hung about their Arms; some of them paint their Bodies of all Manner of Colours; whereas, others, rubbing their Bodies with Gums, stick beautiful Feathers upon them, which makes them look more like Fowls than human Creatures, at a Distance. The *Tupinambies*, who inhabit the South of *Brazil* are of a moderate Stature, and not of so dark a Complexion as their northern Neighbours, who lie nearer the Line; but neither the one or the other are so dark as the *Africans* are, who lie in the same Latitude, it having been more than once observed, that there were no Negroes in *America*, till they were transported thither by the *Spaniards* and *Portuguese*.

The *Tupinambies*, however, resemble the *Africans* in their flat Noses, which are not natural, but made so in their Infancy; a flat Nose being esteemed a Beauty among them. They have also black curled Hair on their Heads, but suffer no Hair to grow on their Bodies and Faces, any more than the *Tapuyers*, and paint themselves like the northern *Brazilians*. The general Food of the *Brazilians* was the Cassavi or Mandioca Root dried to Powder, of which they make Cakes like our Sea Bisket. They carried this Flower with them also on Journeys, and it served them infused in Water both as Meat and Drink; but I don't find they had any Sort of Corn till the *Europeans* carried it thither. They used also to feed on other Roots, Fruits, and Herbs, and such Venison as they could take in Hunting, as also on Fish and Fowl, if they lived near the Water; and with every thing eat a great deal of Pepper. Some have added, that they were Cannibals, and eat human Flesh from one End of *Brazil* to the other, but late Travellers observing no such thing, little Credit can be allowed to this, for Reasons already given.

The general Liquor the Natives drink is Spring-Water, of which 'tis said they have the best and the greatest Variety in the World; but there are other kind of Liquors, which have a very good Body, made of their Fruits, pressed and infused; or of Honey; with which they sometimes get very drunk, sitting whole Days and Nights over their Cups. They are charged also with being a very lazy Generation, that will never work or hunt, but when Necessity compels them. And as to Arts and Sciences, they were scarce Masters of any, unless the Art of Spinning and Weaving, and forming their Arms (which consisted of Bows, Arrows, Lances, and Darts) and the Art of Building, which was but mean; for their Houses did not need any great Contrivance. As for Letters, Characters, and Arithmetic, they were perfectly ignorant of them. They had some Knowledge of the Virtues of several Herbs and Drugs, which they frequently administered with Success to the Sick; but, a certain Writer relates, that when they despaired of recovering the Patient, all his Relations agreed to knock him on the Head, which they thought much better than a lingering Death, and this probably may be just as true as their devouring human Flesh.

Hunting, Fishing, and Fowling, were rather their Business than Amusements, being absolutely necessary for the Support of their Families, in a Country where they had no tame Cattle or Corn. Drinking, Singing, and Dancing, were more properly their Diversions; these they practised on their rejoicing Days, for a Victory, or the Birth of their Children. They are great Smokers, and take the strongest Tobacco. Their Pipes are a hollow Reed or Cane, the Bowl a large Nut-shell, that holds almost a handful of Tobacco. They are a tractable

and ingenious People, ready to learn any Art or Science the *Portuguese* will teach them: And take nothing so kindly of the Fathers as the instructing their Children, which has given the *Jesuits* an Opportunity of making abundance of Converts; and those who live under the *Portuguese* generally conform themselves to their Customs in eating, drinking, cloathing, &c. few of these go naked.

Such were, and such are, the Natives of this famous Country, little addicted to Labour, because not at all infected with Avarice; their Desires but few, and those easily gratified; their greatest Vice, the Desire of Revenge, and that easily raised. But let us now return to our History, and the Steps by which the *Portuguese* Settlements in *Brazil* became so considerable as we now find them; in spite of the many Difficulties they had to struggle with, particularly one, of which, though far from being the least, I do not find any Notice has been taken; by which I mean the vast Disproportion between the Mother Country and the Colony; the Country of *Brazil* being three hundred times as big as that of *Portugal*; I do not, however, intend by this, the Country she has settled in *America*, but that whole Tract of Land to which she lays claim, and which passes therefore in the Maps under the Name of *Brazil*.

5. To facilitate the new Establishments made here, the Crown had first of all recourse to the making very extensive Grants to such as were inclined to go and settle there, or who had a Power of sending others thither. Upon this Plan it was that some of the richest and most powerful of the Nobility had Districts given them equal in Extent to *Portugal* itself. This was for some time attended with little Inconveniency; for the Crown might very well give to others what was useless to herself, and what was to be improved and made useful without her being at any Expence. In short, there was little more reserved than Quit-rents, and these too of no great Value; the State being content with the Sovereignty, and leaving the Property in a Manner wholly to the Subject.

These Methods were extremely necessary at that time, when the *East Indies* took up the whole Attention, not only of the Ministers, but of the Nobility; who found Means to repair their shattered Fortunes, by obtaining Governments in that Part of the World where they soon acquired to themselves vast Estates. Those who were content to try their Fortune in this new Colony, found many Obstacles in their Way; the Natives had not, indeed, any Notions of Liberty; but, upon their first feeling of Slavery, they grew desperate, and, if any Credit be due to the *Portuguese* Historians, killed and eat without mercy every Christian that fell in their Way.

But the Fertility of their Country made some amends for these Inconveniencies, and drew abundance of People from other Parts of *America* to settle there; where they erected a new kind of Government among themselves, which, perhaps, sprang, like most other Governments, from downright Necessity, the very Nature of which Necessity prescribed the Form of their Constitution; in short, every Master of a Family was a Planter and a Soldier. In the former of these Capacities he laid out as much Land as himself and his Family could cultivate, in the latter Profession he was no less assiduous, performing his Functions duly and vigorously, because in Defence of his own Property; and hence it was that every District in the new Colony had the Title of a Captainship, which Title they still retain, though the State of things is absolutely changed; and from being the bravest and most martial, they are now become the most lazy, most luxurious, and most effeminate People in the World.

But in those early times, when Honesty and hard Labour were the only ways of thriving, they grew apace, and in the Space of fifty Years they spread over a very large Space of Country, and erected abundance of good Towns, amongst which the five principal were these, *Tamacara*, *Fernambuca*, *Ilbeos*, *Porto Seguro*, and *St. Vincent*, each of which had a well peopled and a well cultivated Territory about it. The flourishing State of *Brazil* soon awakened the Attention of the Court, and

the Crown began to repent of having been so liberal in its Grants, when it appeared that those Grants were become so profitable: A thing common enough in all Countries as well as *Portugal*, though there are very few Countries in which Governments have acted with the same Spirit as that of *Portugal* did upon this Occasion.

6. It was in the Reign of King *John III.* that these great Improvements were made, or at least that the Crown became so sensible of them; and therefore the first Step that Monarch took, was to revoke all the Grants made to the original Proprietors, which he did in the Year 1549. The same Year he sent over *Thomas de Sousa* with the Title of Governor-General of *Brazil*; he carried with him abundance of Officers civil and military, with a considerable Body of Soldiers on board a Fleet of six Sail of Men of War; he carried over likewise six Fathers of the new Order of *Jesuits*, to convert the *Indians*, and an entire new Plan of Power, adjusted according to the Will and Views of the Court. He was also instructed to build a new Town in the Bay of *All Saints*, and to take the necessary Measures for securing the Colony against its Enemies; and to do every thing that might increase either its Trade or its Reputation.

He arrived in the Month of *April* that Year, and began very soon to enter upon the Execution of what he was directed to perform, making War upon the Savages, building the Town of *St. Salvador*, and Monasteries for his *Jesuits*. What he could not finish, his Successor *Edward Acosta* saw compleated; so that in his Time the Number of Towns was doubled, together with the Inhabitants. He was obliged to think likewise of strengthening these Towns, by raising better Fortifications than those with which they had been till then surrounded; and this, because other Nations began to think of settling in *America*, and sharing with the *Spaniards* and *Portuguese* those Advantages they saw derived to them from their Colonies.

He executed this Design with all the Precaution necessary, demolishing the old Fortifications of Earth as fast as he was able, to raise stronger of Brick and Stone, and to furnish them with Artillery, which, however requisite for his Purpose, were furnished him but very slowly from *Portugal*. It was not long before the Expediency of this new Method of fortifying, which Reason had suggested, was justified by Experience, the *French* making more than one bold Attempt to disturb the *Portuguese* in their Possession of this Country.

7. It is a Piece of History of which the bare reminding our Readers is sufficient; that in the Reign of *Henry* the II. of *France*, the Affairs of that Kingdom were in great Confusion; the Disputes between the *Catholics* and *Hugonots* being then at the greatest Height, which threw the Natives of the Kingdom into Parties, and made Numbers of active and industrious People willing to leave their native Soil, and seek an easier and more contented State in distant Climates. Amongst these there was one *Nicholas Durant*, Lord of *Villegagnon*, a Man of good Family, some Fortune, a Knight of *Malta*, and who had served at Sea with very great Reputation, which so far entitled him to the Favour of the Government, that he was made Vice-Admiral of *Bretagne*. But though this Preferment was rather honourable than lucrative, yet it created him so much Envy, and he was so ill treated at *Nantes*, that he took a sudden Resolution to quit the Kingdom at all Events, and carry a Colony into some distant Part of the World. He had by Chance received some tolerable Accounts of *Brazil*, and, having weighed them attentively, he drew up a Scheme for fixing a Settlement in that Country, and a View of the Advantages that might be expected from it; both which he presented to *Gaspar de Colligny*, then Admiral of *France*; and demanded his Assistance towards the fitting out a Squadron capable of making such a Settlement as he intended.

The Admiral was a Man of great Abilities and great Virtues; he was zealous for the Protestant Religion, and knew that the *Sieur de Villegagnon* was no very warm Catholic; he therefore very readily accepted of his Proposal, and promised to give him all the Encouragement in his

Power. The more the Admiral conversed with this Gentleman, the better he was pleased with him; he found him brave and enterprising; a Man of sound Sense, eloquent, and a good Scholar; therefore he opened to him freely the Cause of his taking this Affair so much to heart; which was, the settling in a good Soil and wholesome Air, a Protestant Colony: That in Case the Affairs of his Friends should ever come to be totally ruined in *France*, they might have some Place to which they might repair out of the Reach of their Enemies. The *Sieur de Villegagnon* very readily approved what his Patron desired, and undertook the Execution of it. Upon which the Admiral represented Things so to the King, that three Vessels of convenient Size were fitted out in the most effectual Manner, with a sufficient Number of Seamen, as well as Adventurers, on board: And in the Month of *May*, 1555, this small Squadron sailed from *Havre de Grace* for *Brazil*, where, after a tedious and troublesome Voyage, they arrived in *November*. At first they landed upon a Rock, which they found to be uninhabitable, and therefore, marching farther within Land, they fixed upon a very commodious Spot of Ground almost under the Tropic of *Capricorn*, where they erected a convenient Fortrefs for their Security, both against the Natives and the *Portuguese*, which they called *Fort Colligny*. When they were there fixed, the *Sieur de Villegagnon* sent the Admiral a large Account of his Proceedings and Situation; he described to him both the Country and the Inhabitants; observed to him, that it was extremely practicable to maintain themselves there, and to make it both a useful, and a thriving Colony; but at the same time he remarked, that such as were sent over to him, must not expect the Delicacies of *Europe*; that they had no other Bread there but what was made of a certain Root ground to Powder, no Wine, much Fish, and some Venison; and that People who could live contentedly upon such Provision would be welcome to him, and find a secure Retreat at his Fort in *Brazil*.

The Admiral, as soon as he had received this Letter communicated it to the famous *John Calvin* of *Geneva*, who prevailed upon a Dozen of zealous Protestants of that City, to engage in the Design of improving this new Settlement. One *Du Pont*, a Man of good Sense and Character, was put at the Head of this Affair, and with him were joined two Ministers, *Peter Richer*, who had been formerly a *Carmelite*, and *William Chartier*; very good Men, but withal great Zealots: They set out all together, from *Geneva*, in the Month of *September*, 1556; and went first of all to *Chatillon*, where they were very kindly received by the Admiral, and by his Assistance, joined to their own Interest, soon got together three hundred Men, who embarked at *Honfleur* on board three Vessels well provided, about the Middle of *November* following. They arrived at *Fort Colligny* on the 7th of *March*, 1557, and were received with great Joy and Satisfaction; but it was not long that Things continued in this State, for the *Sieur de Villegagnon* and the Minister *Richer* fell out about Religion, and their Disputes rose so high, that the former drove the latter, and all his Adherents, out of the Colony; upon which they sailed up the *Rio Janeiro*, and established themselves upon the Continent, where they continued about eight Months, and then, either through the Difficulty they found in subsisting, or from their being weary of a Country which so little answered their Expectations, they returned home to *France*; where they did not fail to represent the *Sieur de Villegagnon* in the blackest Colours, as a Traitor and Apostate. This did his Business effectually with the Admiral, who, as he had no other View than serving the Protestant Cause by protecting this Establishment, so when he found it would not answer that End, he gave himself no farther Concern about it.

The *Sieur de Villegagnon*, finding himself thus abandoned, lost all Patience, and, taking the best Measures he could for the Security of the Colony in his Absence, returned to *France*, where he published an Apology for his own Conduct, in which he painted out the Ministers in a Light as bad as that in which they had placed him; and finding this produced no Good, he retired to a

Commandery of his own Order, and spent the remainder of his Days in writing against the Protestants. The *Portuguese*, in the mean time, laid hold of this Opportunity to rid themselves of their new Neighbours, and the very next Year, 1578, *Emanuel Sa*, then Governor of *Brazil*, cut off the *French* that were left behind, and demolished their Fort. I have dwelt the longer upon this Story because it is very instructive, and shews the Folly of attempting to raise Colonies upon any other than a national Interest. Before I quit this Point, there is one curious Circumstance which I must relate, for the Information of the Reader: The *French*, during the short time they were possessed of this Settlement, made a greater Progress in Trade, and established a more friendly Correspondence with the Natives than the *Portuguese* had been able to do in about fifty Years; so that the Loss of this Colony was a very great Disadvantage to that Nation.

We must not, however, attribute this to better Conduct, or Superiority of Genius; for it was owing to neither, but the Effect of a very odd Accident: About twenty Years before, a Ship from *Normandy* had been lost upon that Coast; some of the Men got ashore, were well received by the Natives, married amongst them, grew as much Savages as themselves; and having perfectly learned their Language, without absolutely forgetting their own, did the new Colony, in quality of Interpreters, great Service; yet I do not find that they joined it, or laid hold of this Opportunity to return to *France*; which I the less wonder at, because I have always observed that the *French* have a greater Propensity to these sort of Measures than any other Nation, and it is this that secures them so great an Interest with all the Savages bordering upon their Settlements in *North America*. But to return.

8. The *Portuguese* after this, continued to enjoy their Settlements quietly, till the Year 1612, when they were again disturbed by the *French*. It is true, that in this Space of Time there happened some Disputes between them and the *Spaniards*, but those were about Limits only, had no extraordinary Consequences, and were quickly adjusted; but in regard to the *French*, it fell out quite otherwise: One Capt. *Riffaut*, who had been cruising on the *Spaniards*, happened to touch at the Island of *Maragnan*, on the Coast of *Brazil*, and there contracted so great an Intimacy with the *Indian* Chief of the Island, that he invited him to bring a sufficient Number of his Countrymen to fix a Settlement there, assuring him in the first place, that it would turn to a very good Account; and in the next, that he would give him all the Assistance in his Power in support of such a Design. Which Offer the *French* Captain readily embraced, and promised to make Use of all the Interest and Credit he had to carry this Scheme into Execution.

Accordingly, in the Year 1594, he found means to equip three Ships, and those too so effectually, that there might have been just Grounds to have hoped some extraordinary Success from the Expedition; but, whether it be really an easier matter to deal with Savages, than with those who take themselves to be the most civilized People in the World, so it was, that Captain *Riffaut* had three or four Mutinies to quell before he could reach his intended Island; upon the Coast of which, either by Accident, or by the Quarrels among his own People, the biggest of his three Ships ran ashore and was lost, which obliged him to return to *France* without doing any thing; but, however, some few of his People, and amongst them one Mr. *de Vaux*, chose to stay with the Savages, who made them very welcome. This young Gentleman was very brisk and active, liked the Climate, and continued there some time very well pleased. His Behaviour to the *Brazilians* was so engaging, and he proved useful to them in so many Respects, that they made the same Applications to him as the *Indian* Chief had formerly done to Captain *Riffaut*, which at last engaged him to think seriously upon the Subject; the Consequence of which was, that he took the first Opportunity of going home, in order to bring about what his Friends seemed to desire so earnestly.

On

On his Arrival in *France*, he applied himself to King *Henry IV.* and endeavoured to persuade him that vast Advantages would flow from such an Establishment. That Monarch, who had the Good of his Subjects at Heart, as much or more than any Prince that ever sat upon his Throne, was very far from rejecting the Proposal; but, not caring to risk much on the Faith of a young Adventurer, he directed a small Vessel to be equipped; and gave Orders to a Person of great Merit and good Sense, upon whose Report he could perfectly depend, whose Name was Monsieur *la Rivardier*, to go over with Mr. *Vaux*, which he accordingly did in the Spring of the Year 1604, and remained six Months in *Brazil*; where having informed himself of all things necessary, he returned to *France*; from whence he made several Voyages back to *Brazil*, before the Government could come to any Resolution on the Head of a Colony, because the Propositions he made were such as required considerable Expence; and he declared, if less were done, it would be thrown away.

At length, however, the thing was resolved upon, and Preparations were actually making for sending a strong Squadron thither, when the Murder of *Henry IV.* put a stop to it, and all things of the like Nature; however, Mr. *Rivardier* was so fond of the Place, and so much persuaded that a Settlement there would turn to Account immediately, that he embarked his whole private Fortune, and drew several of his Friends to do the like, in order to carry this Scheme into Execution. By this Means he found a Way to equip three stout Vessels, and to engage about three hundred Men to go to *Brazil*; having obtained from the Queen Regent the necessary Powers for that Purpose; and, on the 19th of March, 1612, he embarked with them at *Cancale*, on the Coast of *Bretagne*.

A Storm, however, forced them into *Plymouth*, from which Port they sailed again in April, and arrived, in July following, at the Island of *Maragnan*. There he began to erect a Fortrefs, on the Summit of a Hill, near the best Port in the Island, and between two fine Rivers which washed both Sides of the Mountain, and ran from thence into the Sea. Upon the Bastions of this Fort they mounted twenty-two pieces of Cannon; and every thing seemed to promise them all the Success they could desire; when, about two Years after their first Arrival, a strong Squadron presented itself before the Bay, sent by Don *Jerom de Albuquerque*, the Portuguese Governor of *Brazil*, who soon forced them to surrender; and, according to his Orders, the Place was instantly, and absolutely, demolished; which cured the *French* of all farther Thoughts of settling in that Country, or disturbing its Inhabitants for the future.

9. The Crown of *Portugal* devolving on the Head of *Philip II.* King of *Spain*; in the Year 1581, he became thereby Possessor of *Brazil*; which he left to his Successors, together with the War against the Inhabitants of the Seven United Provinces in the Low Countries, who had formed themselves into a Republic, and shaken off their Dependence on the Crown of *Spain*. The Progress of this new Republic was so rapid, that, after forming an *East India* Company, which in a very short Space of Time brought prodigious Advantages to its Proprietors, they, in 1624, proceeded to set up a *West India* Company likewise, which proved fatal to the Portuguese from its first Institution. *James Willikens*, and the famous Sea Captain *L'Hermite*, were sent to cruize upon the Coast of *Portugal*, where they took abundance of rich Prizes; and, upon their Return, it was determined to equip a new Squadron the very next Spring, in order to attack *Brazil*.

The *Dutch* were very well apprized of the State of that Country, and of the small Resistance they were likely to meet with in it. The Coasts, which were no less than twelve hundred Leagues in Extent, were not like to be every where well fortified; the People, who had for so long a Tract of Years enjoyed a profound Peace, those Attempts of the *French*, before mentioned, only excepted, could scarce be thought martial; and almost all the great Families in *Portugal* having some of their younger Branches settled in that Country, they might very well

hope to meet with vast Riches. And, besides all this, the *Dutch* had taken great Care to carry on a kind of Smuggling Trade there, for several Years, by which they had many fair Opportunities of penetrating into the Secrets of the Country; and, having been so often received as Friends, the coming of their Vessels upon the Coasts was not like to create immediate Apprehensions of an Enemy.

Such was the Situation of things when *James Willikens* entered the Bay of *All Saints*, with a Squadron under his Command; and began to shew, very clearly, what his Intentions were; which so frightened the Portuguese, that they immediately used all possible Methods to carry off, and secure, their Effects, instead of providing for their Defence. The *Dutch*, taking Advantage of their Consternation, landed immediately; and their Admiral, without much Difficulty, made himself Master of the great City of *St. Salvador*, which was the Capital of *Brazil*. The Portuguese Governor, Don *Diego de Mendoca*, had neither the Courage to defend the Place, nor the Prudence to withdraw himself in time; and his Behaviour, though very bad in itself, appeared so much the worse, from the Conduct of another Person; who, though in like Circumstances, shewed himself of quite a different Temper: This was the Archbishop *Michael Texeira*, of one of the best Families in *Portugal*, and in Years; who summoned all the Clergy and Monks about him; and, having represented to them the Necessity there was of laying aside their clerical Capacities at such a Juncture, prevailed upon them to take up Arms; and, though deserted by the Governor, his Soldiers, and the Inhabitants, they made for some time a very gallant Defence, and at last made a good Retreat to a neighbouring Town; where, after acting the Part of Soldiers so well, they turned Pioneers; and, under the Conduct of their Archbishop, fortified the Place, and gave the Enemy as much Trouble as if they had been the most regular Troops in the World; which Instance shews, at once, the Danger of having a Coward; and the Advantage of having any Man of Spirit, at the Head of a Colony, let the Force he commands be what it will.

But the *Dutch*, by the taking this Town, besides acquiring an immense Booty, became Masters of the largest and best peopled District in the whole Country; so that it looked as if they were in a fair Way of making a complete Conquest, in a very short Space of Time, of the whole Colony; which it is very probable they would have done, if it had not been for the heroic Archbishop, who took upon himself the Quality of Captain General; which he said came to him from Heaven, in the legible Characters of public Necessity; and every Man of Spirit in *Brazil* thought this Authority sufficient.

As soon as the News of this Misfortune reached *Portugal*, it threw, not only the City of *Lisbon*, but the whole Kingdom, into Confusion; and so much the greater, because most of the Nobility suspected that the Spanish Ministry were not much displeased at an Event which might lessen the Wealth and Power of their great Families, and abate somewhat of that high Spirit which they had hitherto shewn, ever since they fell under the Dominion of the Spanish Monarchs. This was, indeed, probable enough, for at that time two thirds of the Portuguese Nobility had their Estates, or at least the best Part of them, in *Brazil*; so that, by the Loss of that Country, they must have been brought very low.

But, however, it very soon appeared, that this refined Notion had nothing in it of Truth; for King *Philip IV.* in whose Reign this fatal Affair happened, shewed himself as much concerned as any Portuguese Prince could have been, when he was informed of this Descent of the *Dutch*. He immediately sent his Orders to *Portugal* for equipping a Fleet for the Recovery of *St. Salvador*; and, at the same Time, wrote a Letter, with his own Hand, to the Nobility, desiring their Assistance on this Occasion, and promising to send a strong Spanish Squadron to join whatever Fleet they could fit out. This revived the Spirits of the Nation, and the Portuguese Lords exerted themselves so effectually, that in three Months time they had a Fleet of twenty-six Sail, well equipped, and thoroughly manned, ready to put to Sea. The Spaniards

niards were not quite so hasty in their Preparations; but, however, in 1626, so early as the Month of *February*, their Fleet joined that of *Portugal*. The whole was commanded by Don *Frederic de Toledo Otorio*, Marquis of *Valduesa*, and there were on board it fifteen thousand Men.

But it is now Time for us to look over to *Brazil*, where the *Dutch* being in Possession of *St. Salvador*, and the Country about it, began to extend themselves very rashly on every Side, either from Contempt of the *Portuguese*, who had behaved so ill, or from an extravagant Thirst of Plunder. The brave Archbishop soon convinced them of their Mistake; he had now got together fifteen hundred Men, and with these he not only cut off most of their Parties, but at last fairly drove them into the Town, cut off their Provisions, blocked them up, and reduced them to great Distress. As soon as he had done this, however, he put the Army under the Command first of *Nunez Marino*, and then of Don *Francis de Mauro*; for he declared, that his own Commission expired with the Necessity that bestowed it.

In these Circumstances were Things in this Country, when the *Spanish* and *Portuguese* Fleet arrived in the Bay of *All-Saints*. Don *Emanuel de Menezes* landed immediately four thousand Men, and with these joined the Army before the Place, which, as we may easily apprehend, did not hold out long; though, to do the *Dutch* Governor Justice, he was inclined to defend it to the last Extremity; but the Garrison, differing from him in Opinion, mutinied, and forced him to surrender on the 20th of *April*, upon which the *Spanish* and *Portuguese* Fleet returned triumphant, supposing the War to be at an End; and that the *Dutch* like the *French* would have a care how they made Attempts again upon *Brazil*.

10. In this, however, they were greatly mistaken, for the rich Plunder of *St. Salvador* being brought by Admiral *Willikens* into *Holland*, the People were continually enquiring whether there were not other great Cities in *Brazil*, and when they should go and take them. This Spirit, which at that Time of Day did not at all displease the Government, encouraged the *West India* Company to think of making another Expedition. Accordingly in 1629 they began to equip a very strong Squadron for this Purpose, which was to be commanded by Admiral *Lonk*, and was to take a considerable Body of Land Troops on board under General *Wardenbourg*. This Fleet, which consisted of no less than forty-six Sail of Men of War, arrived in Sight of *Fernambuca* on the 3d of *February* 1630; and on the 15th of the same Month General *Wardenbourg* landed with near three thousand Men, and marched directly towards the City of *Olinda*. He found it covered by three good Forts, in each of which there was a numerous Garrison. He attacked, however, and carried them all, but not without a vigorous Resistance; but this Success in taking these Forts, so effectually frightened the Inhabitants of the City, that they immediately submitted, though the Natives shewed a great deal of Spirit, and behaved on this and every other Occasion with great Courage and Fidelity.

I cannot lose this Opportunity of making one Remark, which, however, has been made before by the ingenious Mr. *Salmon*; which is, that the *Portuguese* have lost nothing by the great Pains they have taken in converting the *Brazilians*, since by making them Christians of their own Communion, they have made them good Subjects; and thereby added great Strength to their Colony, which has proved a Means of securing it against all Enemies; and one would think much might be done by some other Nations, if they would follow the same Method, instead of extirpating the *Indians* in the Countries where they are settled, or, which is much the same Thing, leaving them in a State of Infidelity, and allowing them to extirpate each other, which if they were Christians they would not do, but join the *Europeans* as they did here.

While the *Dutch* General was thus employed on Shore, the *Dutch* Admiral was no less active by Sea; and as the *Portuguese* had no naval Force to resist him, or at least none in Comparison of that employed against them; it is no great Wonder, that they reduced all the Sea-Coast to the South of *Olinda*, which they did in a very short

Space of Time, and likewise took care to secure and fortify every Place that fell into their Hands, being resolved not to fall into the same Error which had been fatal to them before; but to obtain such a Footing in the Country, as might enable them to keep their Ground against the whole Force of the *Portuguese*, and lay a solid Foundation for the Execution of the great Design they had formed, of making themselves Masters of the best Part of *Brazil*; which, it must be confessed, was a very bold Undertaking, considering the *Portuguese* had been so long in Possession of this Colony, and were become so numerous. It was with this View that Admiral *Lonk* resolved to make himself Master, at all Events, of a very strong Post, which seemed the fittest for his Purpose; and of which, therefore, it is necessary, that we should give the Reader some Account. The whole Coast of *Brazil* is as it were guarded, or defended, by a long thick flat Ridge of Rocks, in some Places twenty, in others thirty, Yards broad: If it were not for Breaks and Passages here and there in this rocky Intrenchment, it would be impossible to approach the Shore. There is a very large Passage two Leagues to the North of *Olinda*; but almost before this City this Ridge of Rocks appears again, and the Inhabitants pass to it in Boats at High-Water, for at low the Rocks even in the Passage are visible enough.

This Part of the Ridge the *Portuguese* call *Reciffo*, and the *Dutch* *Receif*. On the North Point was an open Passage for the Ships to approach the Shore, very narrow, and at Spring-Tide not above twenty-two Foot deep. Between this Ridge of Rocks and the Continent lay a sandy Island, about a League in length, which was called the *Sandy Receif*, to distinguish it from the stony. It lay in the Latitude of 8°. 20'. South, and had a good Castle, called *Fort St. George*, well furnished with Artillery, and esteemed impregnable; this was the Place the *Dutch* Admiral sought to make himself Master of, which he did; and it was in a great Measure the Cause of the City being taken. After the *Dutch* were possessed of it they made the *Receif* very strong, and the chief Seat of their Commerce; so that it became one of the most considerable Places in *Brazil*, especially after they had demolished the City of *Olinda*, that they might not divide their Forces too much, as they must have done, if they had long endeavoured to keep it.

11. The News of this second Attempt upon *Brazil* by the *Dutch*, and their having actually conquered the Captainship of *Fernambuca*, alarmed the *Portuguese* and *Spaniards* excessively, and obliged them to think of sending thither immediately, such a Force as might be able to drive out the Enemy, and secure the Country effectually for the future. It happened at a very bad Time for them, as the Disaffection of the *Portuguese* to the *Spanish* Government was, at this Juncture, greater than ever; but the Necessity was so strong, and so apparent, that, notwithstanding the many Difficulties they had to struggle with, and the Weakness of their Government, a Fleet and Army was ordered for this Service. But the equipping of the one, and the raising the other, took up a great deal of Time, which the *Dutch* employed in fortifying themselves in extending their Conquests, and taking all the necessary Precautions for the Defence of them, in which they proceeded with all that Industry and Vigilance, for which, in those Days, their Nation was famous.

Before we proceed farther, it will be proper to take notice of those Causes, which induced the *Dutch West-India* Company to become so extremely sanguine in their Endeavours to make themselves Masters of this Country; which I am the better able to assign, having seen a Copy of a Memorial, presented by that Company to the States in the Year 1643, containing the very Reasons in support of their Conduct in this Particular. In the beginning of this Memorial it is said, that the Causes which can best justify launching into an extraordinary Expence, for acquiring any Place whatever, are reasonable Views of immediate Profit, which ought to be very considerable, or future Prospects of Gain, that ought to be still more so; and both these, they affirm, induced them to prosecute with so great Zeal the Conquest of *Brazil*. As to the former,

former, they alledged three Things: First, the Wholeness of the Climate, the Pleasantness and Fertility of the Country, which rendered it, of all others yet known, the fittest for receiving and maintaining a considerable Colony; they next take notice of its convenient Situation for Trade, as being in a manner at an equal Distance, or at least in a more equal Distance than any other Country, from *Europe* and the *Indies*: And thirdly, they mention the rich Product of this Country in Sugars, as alone deserving all the Expence they had been at about it, since they were better in Quality, made with much less Expence, and transported with far greater Ease from hence, to all Markets where this valuable Commodity could be sold, than from any other Place. As to the second Point, what might be hereafter expected from their being in Possession of this Country, they likewise took notice of three several Heads: First, they laid it down as a Thing evident, that the Possession of *Brazil* was of equal Consequence, in time of Peace and in time of War: In regard to the former, it would afford the Means of raising very large and very convenient Magazines, for the Supply of such Ships as might either touch there in long Voyages, or be driven into their Ports, as very often happened from Distress of Weather. And as to the latter, it would afford greater Advantages in equipping, refitting, and sheltering, either whole Squadrons of Men of War, or Privateers, than any other Place in the known World. They next alledged, that it was so placed as that not only their *East* and *West India* Fleets might touch there very conveniently for Refreshments; but that they must be obliged to put in there, and could not easily, or at least not safely, proceed in such distant Voyages without having such Assistance. And lastly they suggested, that no Place in the World was so happily seated for commanding, at once, both the *East* and *West India* Trades, and consequently the whole Commerce of the Globe. It is true, that these Reasons were given to the States ten Years after the Time of which we are now writing; but without doubt they had occurred to, and been considered by, the Directors of the *West India* Company long before, which induced us to place them as we have done.

It is very probable that either these Reasons, or some of a like Nature, were laid before the States by the *West India* Company about this time, since we find the utmost Readiness expressed to assist and support them. It was with this View, that as soon as their Fleet returned from *Brazil*, Admiral *Pater* was sent thither with a much stronger Force, in order to put the *Dutch* in a Condition to conquer that whole Country. He arrived in Sight of the Coast of *Fernambuca* on the first of May 1631, where he found the City of *Olinda* in the Possession of his Countrymen, but closely blocked up by the famous *Portuguese* General *Albuquerque*, with a numerous Army. The Admiral thought fit, thereupon, to land four hundred Men, under the Command of an experienced Officer, to take a View of the Enemies Works, that he might be the better able to judge how to attack them. But the *Dutch* Garrison, in the City, no sooner saw his Fleet come to an Anchor, and these Troops debarked, than they made such a vigorous Sally upon the Besiegers, as forced them to retire from before the City with considerable Loss. After this, Admiral *Pater* landed two thousand Men; and, at the same time, acting upon the Sea Coast with his Fleet, enabled his Countrymen to extend their Conquests very considerably, especially towards the South, having an Intention to enter the Bay of *All Saints*, and attack the City of *St. Salvador* by Land and Sea; but while he was thus executing great things, and projecting greater, he had Intelligence that the *Spanish* and *Portuguese* Fleet was actually at Sea, and of a Strength sufficient to undertake the Relief of *Brazil*.

This Fleet, which was commanded by Admiral *D'Ouendo*, had sailed from *Spain* in a very indifferent Condition, though it consisted of about thirty Sail. At the *Canaries* it was joined by fifteen more, and in the Height of the *Cape de Verd* Islands, met with such an Accession of Force, as rendered it fifty four Sail of large Ships. The *Dutch* Admiral had but sixteen, but he was

jealous of the Honour of his Country, and therefore resolved to fight at any rate. It was with this View, that he might render his Countrymen the greater Service, that he resolved not to wait for, but to meet, the Enemy, which he accordingly did in the Latitude of six Degrees South. As soon as they appeared in Sight, and the *Dutch* Fleet saw how unequal the Dispute was like to prove, ten of their Captains bore away, and left the Admiral with six Ships only, to fight an Enemy almost ten times his Strength. Admiral *Pater* had two Flags under him, who, to their immortal Honour, were two of those who joined him; so that there were three Admirals to six Ships.

The Battle was long and bloody; abundance of the *Portuguese* were sunk; and it plainly appeared that if the other ten Ships had staid, Victory would have declared for the smaller Number; but at last, Admiral *Thys*, in the *Prince William*, was sunk; and not long after, a *Portuguese* Man of War discharging a Broad-side at the *Dutch* Admiral, a Ball unluckily fell in the Powder Room, by which the Ship was blown up, and that brave Man lost. The four *Dutch* Ships that remained, retired upon this, and did it with so much Courage and Address, that they not only arrived safely at *Olinda*, but likewise carried off a *Portuguese* Man of War that they had taken; so that, upon the whole, it may be safely affirmed there never was a more glorious Action than this, since the *Dutch* became a maritime Power. When Admiral *D'Ouendo* arrived, he contented himself with sending Refreshments and Reinforcements to the Army of *Albuquerque*, but attempted nothing against the City of *Olinda*, and consequently left things in very little better State than he found them; which he excused from the great Loss he had suffered in the Battle; amounting, in the whole, to no less than thirteen Sail taken and sunk.

In the Month of *October* he set sail for *Lisbon*, but had the Misfortune to meet in his Passage with four *Dutch* Men of War well manned, who made no scruple of attacking him, though he had still forty Sail, and most of them large Ships. He lost in this Engagement the Captain of his own Ship, twenty two Captains more, his Vice-Admiral, three Men of War, two Frigates, and about seven hundred private Men; so that he brought home the wretched Remains of a Fleet unfortunate from the Beginning, and yet without any Impeachment of his own Character; the Blame falling entirely upon the Ministers, who had obliged him, in spite of his Remonstrances, to sail with Ships half equipped and half manned.

However, when the Misfortune could not be remedied, these Ministers declared that they were willing to do all that was left in their Power, which was, to repair it; and therefore Orders were given for providing a greater Fleet, and for equipping and manning thereof, as it ought to be; the Command of which was to be given to Don *Frederic de Toledo*, whose Reputation was remarkably high, and not without Reason. But, after abundance of Pains taken, it was found that nothing could be done that Season, and therefore it was deferred till the next Spring; when it was resolved to send such a Force as should put an End to the War at once; but as it is much easier to talk of such things, and to lay fine Schemes in the Cabinet, than to carry them into Execution; so, notwithstanding this famous Admiral actually proceeded on his Voyage with a very large Fleet, every way well provided; yet he did so little, that none of the Authors I have met with have recorded what he did.

12. These Delays to which the *Spanish* Affairs have been always liable, proved extremely prejudicial to them in *Brazil*; where the *Dutch*, having the Advantage of several good Officers both by Sea and Land, made a most surprizing Progress; reducing, in the Space of seven Years, four intire Captainships under their Dominions, viz. *Fernambuca*, *Tamaraca*, *Paraiba*, and *Rio Grande*; and the Importance of these Conquests very quickly appeared in the Mischiefs done to the *Spaniards* in this and other Parts of *America*, of which we have a very exact Computation: From whence it is evident, that from the Time of the *Dutch West India* Company's being erected, to the Year 1637, they had destroyed and taken, in Money and Merchandize, to the Value of forty-five Millions

of Florins, or four Millions and an half of our Money; and of eight hundred Ships, which the Crown of *Spain* had fitted out against them, they destroyed or took five hundred and forty-seven. These extraordinary and unexpected Strokes of good Fortune raised the Spirits of the Directors of the *Dutch* Company to such a Degree, that they resolved to put themselves at once upon a level with the *East India* Company; and to do this effectually, they could think of no better Way than to make choice of some Person of great Quality and Interest, whom they might put at the Head of their Affairs, and whose Credit and Power might add a greater Strength to their own.

It was with this View that they cast their Eyes on Count *John Maurice de Nassau*, who was nearly related to the Prince of *Orange*, and who had served the States for several Years, in their Armies, with great Abilities and Applause. He very readily accepted the Proposal that was made him, and, with the Consent of the Prince of *Orange* and the States-General, was declared Governor of *Brazil* and *South-America*, with the same Powers given to the Governor-General of the *East Indies* in all Affairs Civil and Military. That this new Officer might take Possession of his Dignity in a Manner suitable to his Quality and Character, the Company resolved to fit out a Fleet of thirty-two Sail of large Ships, and to embark a Body of two thousand seven hundred Land-Forces; but as this took up a good deal of Time, and Count *Maurice* was impatient to be gone, he sailed from the *Texel* on the 25th of *October*, 1636, with four Ships only, and no more than three hundred and fifty Soldiers on board; with which small Squadron he arrived on the Coast of *Brazil* on the 23d of *January*, 1637, with *Adrian Vander Dussen*, who had joined him near the Island of *Madeira*: He was soon after followed by the Captains *Selan*, *Carpenter*, and *Giselin*, who were to serve under him, and very soon took the Field with two great Bodies of Troops, the one consisting of near three thousand Men, with which he prepared to act against the *Portuguese* Army; and the other of six hundred, which was to be employed in various Expeditions, to divide and distract the Enemy.

On the other hand, as they could not help perceiving that their All was now at Stake, the *Portuguese* had a great Army in the Field under the Command of the Count *de Banjola*, an Officer of great Courage and Experience, who had served under the Marquis *de Spinola* in *Flanders*; and another Body of light-armed Troops under one *Cameron*, who was a *Brazilian* by birth, had raised himself by his Merit, and always served them with equal Reputation and Fidelity. They had a strong Garrison at *Porto Cavallo*, with which they harassed the *Dutch* in the Captainship of *Fernambuca* extremely; and as they did not doubt this would be the first Place attacked, they assembled the Bulk of their Forces under Count *de Banjola* for the Defence of it. It very soon appeared that, in this Respect, they had formed a very right Judgment; for Count *Maurice* had no sooner put himself at the Head of his Army, than he marched directly towards *Porto Cavallo*; upon which a Battle ensued, wherein, after a very obstinate Resistance, the *Portuguese* were defeated and afterwards forced in their Camp, though it was very strongly intrenched. Upon which the Count *de Banjola* retired with the Remains of his Forces under the Cannon of the Citadel of *Povacaon*; from whence however he retired on the Approach of the *Dutch*, who besieged that Fortress in form: There was in it a Garrison of six hundred Men, who very bravely defended the Place for a Fortnight, and were then obliged to capitulate.

Count *Maurice* pursued this Success, and advanced with his Army to the Town of *Openeda* on the River of *St. Francis*, at the Distance of about six Miles from the Sea, which he took, and built a Citadel there, and another at the Mouth of the River, by which he effectually covered his new Conquest. He then returned to *Olinda*, and having provided for the settling the Civil and Military Government in the manner directed by his Commission, he resolved to fit out two Fleets; one under the Command of Admiral *Lichtbart*, with Orders to attack the South-Coast of *Brazil*, the other under the Command of Commodore *Hanskins*, which was destined to a Service

of still greater Importance, and of which therefore I think myself obliged to give an exact, though concise, Account. From the very Time that the *Dutch West India* Company made their first Attempt upon *Brazil*, and were so successful in taking the City of *St. Salvador*, they had meditated the bold Design of fixing themselves likewise on the other Shore of *Africa*, supposing that if they could once make themselves Masters of the two Points of the opposite Continent, they should be able to bridle the Ocean, and by having the Command of this Passage to the *Indies*, distress the *Spaniards*, *Portuguese*, *English*, and, in short, all other Nations in the North. There was something very wise and very great in this Project, something equal to the Genius of a trading Nation; and in short, something worthy of being imitated; which is the Reason that I have mentioned it.

But though with a View to execute this Scheme, they had searched all the Coasts from *Cape Verd* to the *Cape of Good Hope*, yet they had found no Place proper for that Purpose: At last it was agreed, that nothing could answer this End so well as the Castle of *St. George de la Mina*, on the Coast of *Guinea*, in the Possession of the *Portuguese*. This Place accordingly they attempted in the Year 1625, but miscarried with very great Loss, which however did not discourage them. For, having a strong Settlement in that Neighbourhood, their Governor, whose Name was *Nicholas Van Yperen*, sent to advise Count *Maurice*, that now was the proper Time, and if he sent him a small Squadron with a competent Body of Troops on board, he made no question of his being able to carry this important Project into Execution.

It was with this View that Commodore *Hanskins* was dispatched: He joined the *Dutch* Governor on the 25th of *July*, and they attacked the Castle with such Resolution, that though it was one of the strongest Places in that Part of the World, yet it surrendered on the 29th of *August*; so that Commodore *Hanskins* returned to *Olinda* in the Month of *October* following, and was received by Count *Maurice* with all the Marks of Honour and Respect that the Performance of so important a Service deserved. The Campaign in 1638 was equally glorious for the *Dutch*; the Count *de Banjola* had again assembled a very numerous Army, for the Defence of the Captainship of *Segerippa*, which however Count *Maurice* attacked and defeated; after which he took the Capital, and reduced the whole Province.

This great Run of Success made such a Noise in that Part of the World, that the Inhabitants, or rather the Natives, of *Siara*, one of the Northern Captainships, declared for the *Dutch*; and, upon a Promise of being left free, offered to assist them against the *Portuguese*. A Body of Troops was accordingly sent to join them, under the Command of Captain *Gartman*, who with the Help of a *Brazilian* Prince, *Algodojo*, reduced that whole District. It is, however, to be observed, that it was the Infidel *Brazilians* that were Enemies to the *Portuguese*, for those whom they converted remained always firm to them, and began even at this time to raise Insurrections in their Favour in the Captainships of *Paraiba* and *Rio Grande*, which the *Dutch* had subdued; and this obliged Count *Maurice* to reduce and demolish several of their best Towns, and, the better to keep them under, he likewise found it necessary to rebuild and fortify the Town of *Philipina*, which he called *Frederickstadt*, in honour of the Prince of *Orange*.

Count *Maurice*, having been so fortunate in all his Undertakings, resolved now to put in Execution the repeated Orders he had received from the *West India* Company, for attacking *St. Salvador* in the Bay of *All Saints*, which was looked upon as the Capital of all *Brazil*: He embarked for this Purpose all the Troops he could draw together at *Olinda*, and he landed with them in the Bay before-mentioned on the 8th of *April*, 1638; thinking to have surprised the *Portuguese*. The Count *de Banjola* was in the Neighbourhood with a small Body of regular Troops, with which he immediately threw himself into the Place, though the Governor of it was his Enemy, and it was upon the Differences known to subsist between them, that Count *Maurice* chiefly reckoned. The *Portuguese* Governor at first disputed the Command with Count

Banjola,

Banjola, but that Nobleman told him, their Quarrels could only serve to ruin them; whereas, if they agreed, each of them might become as great as he could wish. To which Proposal the Governor answered: *Sir, I perceive you are a wiser Man than I, and no body shall obey your Orders more punctually.*

Count *Maurice* attacked, and, without much Resistance, made himself Master of the strong Fort of *Albert*, that of *St. Bartholomew*, and the famous Castle of *St. Philip*. This Success encouraged him to erect two Batteries against the City of *St. Salvador*, and to attack at the same Time Fort *Roses*, which covered the City on one Side; and a Hornwork, which was its principal Strength, on the other: There lay between these a Piece of Ground covered with Shrubs and Bushes: Count *Banjola* advised the Governor to post himself there with four hundred of his own Troops, while he made a Sally with his Forces. This Scheme had the Effect he desired, for, after an obstinate Dispute, the *Dutch*, endeavouring to retire through that Piece of Ground, were attacked in the Rear; and, besides three hundred of their best Men, lost four Officers of Distinction, and their principal Engineer. Upon which Count *Maurice* abandoned the Castles he had taken, and raised the Siege with some Precipitation.

This proved in many Respects fortunate for the *Portuguese*, who otherwise were in the utmost Danger of being totally undone. In the first Place, it shewed that neither Count *Maurice* nor his *Dutch* Troops were invincible; but that if other Men did their Duty they might be overcome; in the next, it totally reconciled the *Portuguese* Generals; who perceiving, that the Count *de Banjola* was far enough from depreciating other Mens Merit; and that, on the contrary, he ascribed much of that to their Courage, which in reality was due to his own Conduct, they changed their Measures immediately, and, from thwarting his Councils, received and executed his Orders with the highest Respect. Lastly, it hindered the savage *Brazilians* from taking Arms in favour of the *Dutch*, which was what the *Portuguese*, of all Things, feared the most; because they knew that a little Discipline made them excellent Soldiers, at least for that Climate.

But as Misfortunes seldom come alone; so on the very Heels of this Mischance on Shore followed another at Sea, no less to the Loss, and much more to the Discredit, of the *Dutch* Arms. We have, in another Part of this Work, spoke of the taking the *Spanish* Plate Fleet, by *Peter Hein*, which was the greatest Action performed under the Auspice of the *Dutch West India* Company; and, next to that, was their taking *St. Salvador*, which made them so eager to see both these great Actions repeated. We have already shewn what became of the Attempt to gratify them in one; and, though, we digress a little from our Subject, yet the Reader will probably be glad to learn what was the Fate of the latter. Thus then the Case stood. The *States General* and the *West India* Company equally approved the bold Spirit and sage Conduct of *Cornelius Jol*; who, by mere Dint of Merit, had raised himself from the lowest Station in the Fleet, to be thought worthy of the Command of it; and he it was that, about this Time, they pitched upon to repeat the glorious Action of *Peter Hein*, and to bring the *Spanish* Treasures, once more, into the Low Countries; a Commission which he readily accepted, and to which, it was thought, they had no Seaman, in their Service, more equal.

He sailed from the *Texel* the 14th of *April* 1638, and, touching at *Brazil*, communicated to Count *Maurice* the Instructions he had received, who thereupon furnished him immediately with six hundred good Men, and Provisions for seven Months, after which he sailed in Search of the *Spanish* Fleet. He fell in with them a little to the West of the Island of *Cuba*, but escorted by a greater Number of Ships of War, and those too larger and better equipped than he expected; his Squadron consisted but of thirteen Sail; with which, however, he ventured to attack them, and there is little Doubt to be made, that he would have given a good Account of them too, if those who served under him had followed his Example; but when the Dispute grew warm all his Squadron left

him and their Vice-Admiral, except two Ships, who fought very gallantly, till their Captains were killed.

Cornelius Jol disengaged his four Ships from those of the Enemy, and, returning to his own Squadron, sent for the Officers on board, dismissed such as had behaved worst, reprimanded the rest, and exhorted them all to do their Duty better the next Time, as he was determined to renew the Attack: He did so accordingly, but it was with the like Success; his Captains abandoned him again, and he again disengaged himself, but with more Difficulty: He sent for his Officers the second Time; and being now persuaded, that it was not so much through Fear of the Enemy, as Aversion to him, that they misbehaved; he treated them with greater Gentleness, displaced none of them, but engaged them all to sign a Resolution to fight the Enemy, when they should be next commanded so to do, and to obey their commanding Officer exactly, and with Alacrity, which they did cheerfully.

Highly pleased with this Pledge of their Fidelity, he fell upon the *Spaniards* a third time, when they behaved a little better at first, but soon after shewed that they were more afraid of Danger than of Perjury; for they abandoned him again, which so provoked that gallant Officer, that he cashiered five of his Captains, gave their Ships to inferior Officers, and went in search of the *Spaniards* for the fourth time. He then found his Opportunity was lost, the *Spaniards* were separated and retired into several Ports, so that he was able to do nothing. He then divided his Fleet into three small Squadrons, stationed one before the *Havanna*, detached another to *Brazil*, and returned home with the third, where he was received with Honour and Respect; his Masters declaring that they were intirely satisfied with his Conduct, and that they did not impute the Miscarriage to him, but to those who out of Fear and Pride had disobeyed his Orders.

13. After Count *Maurice* returned from his fruitless Expedition against *St. Salvador*, he applied himself with the utmost Diligence to the Establishment of good Order and perfect Discipline in all Parts of his Government; reviewing his Troops in Person; appointing experienced Officers to command them; fortifying all the frontier Places; and giving all Sort of Encouragement to such of the Natives as shewed an Inclination to assist him, and to live peaceably under the Protection of the *Dutch*; by which wise and prudent Measures he prevented the Enemy from making those Advantages that might have been expected from their late Success. The *Spanish* Government, having received an exact Account of the State of Affairs in *Brazil*, came to a settled Resolution of repairing their past Mistakes, by sending thither such a Fleet, and such an Army, as should effectually put an End to the War, by obliging the *Dutch* to abandon all their Conquests in that Country.

This Fleet of theirs consisted of twenty-six Galleons doubled manned, and provided with every other Necessary in the same Proportion; twenty large Men of War, and five thousand regular Troops, under the Command of a *Portuguese* Nobleman of a great Family, and whose Virtues were still more illustrious than his Birth, the famous Don *Fernandez Mascarenhas*, Count *de la Torres*, who sailed in the Autumn of 1639, and received considerable Reinforcements in his Passage; but, being detained by Calms upon the Coast of *Afric*, the excessive Heats produced a Plague on board his crowded Ships, which swept away above three thousand Men before he reached the Bay of *All Saints*; and the rest of his Troops were in so bad a Condition, that he was under a Necessity of putting them into Quarters of Refreshment, which certainly saved the *Dutch*, who were at that time but in a low Condition, expecting with great Impatience those Succours from *Holland* that soon after arrived, and by means of this Accident arrived in time. The Vigilance, however, of *Mascarenhas* was such, that in the Month of *January*, 1640, he put to Sea with a Fleet of ninety-three Sail great and small, and twelve thousand Men on board.

Count *Maurice*, on the other hand, was far from being negligent; and, having drawn together forty-one Men of War, well manned and provided in every Respect,

spect, he waited within four Miles of the Port of *Olinda* for the Enemy; the Fleet being commanded under his Excellency, by *William Loos* a Dutch Admiral, reputed as brave a Man, and as good a Seaman, as any at that time in the Service of the States. On the 12th of the same Month the Fleets met, and engaged between the Island of *Tamaraca* and the River *Gojana*; and fought from one in the Afternoon till it was Night. The Loss sustained by the Dutch was not great; for they had but four Men killed, and as many wounded, and one Ship rendered unserviceable. Amongst these four Men, however, was their Admiral *William Loos*, who might be truly said to die in the Arms of Victory. He was replaced the next Day by *James Huyghens*, who engaged the Spanish Fleet a second time; and, by dint of his superior Skill as a Sea Officer, obtained great Advantages. On the 14th he attacked them a third time on the Coast of *Paraiba*, where he had still greater Advantages; but the great Victory of all, was after the fourth Day's Fight, wherein they suffered excessively, and were at last driven where the Dutch durst not follow them, that is to say, upon those Sholes on the Coast, to which the Portuguese have given the Name of *Baxes de Rochas*; where many perished by Shipwreck, and more by Hunger and Thirst. The Remainder that escaped endeavoured to return home; but, great Disputes arising amongst their Commanders, they separated; and of all this mighty Fleet only four Galleons and two Men of War arrived safe in the Ports of *Spain*; and these too escaped with much Difficulty a Dutch Fleet that was steering for *Brazil*.

While these great Transactions happened at Sea, the Portuguese, being very well informed that Count *Maurice* had embarked his whole Strength on board his Fleet, assembled a Body of regular Troops, under the Command of Don *John Lopez Vervailho*, an Officer of great Experience and Courage, and a great Body of *Brazilians* under their Countryman Colonel *Cameron*; who, falling into the Dutch Settlements, unexpectedly took several Places, and did a great deal of Mischief. It was not long, however, before *Hanskins*, who had the Title of Colonel on Shore, as well as Commodore at Sea, put himself at the Head of a Body of Planters, and with them very soon gave a Check to these insolent Invaders. A short Time after Admiral *Lichtbart*, and Commodore *Cornelius Jol*, arrived with great Reinforcements from *Holland*; the former was immediately sent by Count *Maurice* into the Bay of *All Saints*, to destroy the Country, which he did with a Barbarity not to be described, and consequently not to be excused. Commodore *Jol* acted the like Part on the Country near the River *St. Francis*; and this Manner of making War appeared to the Count *de Montalvan*, at that time Viceroy of *Brazil*, so abominable, that he could not be brought to believe that a Person of Count *Maurice's* Quality could be pleased with it; and therefore he sent Deputies to represent to him the Barbarity of such a Behaviour, and to desire that they might settle a Cartel, by which the Proceedings of the War might be regulated; and such horrid Scenes of Murder and Devastation prevented for the future, as proved equally ruinous to both Parties.

As Count *Maurice*, in giving these Orders, had followed the Company's Instructions against his own Inclinations, he very gladly embraced this Opportunity of shewing his own noble and generous Temper, which was ever averse to such kind of Proceedings. He therefore readily embraced the Proposal, and offered to send Commissioners immediately to *St. Salvador*, to settle such a Provisional Treaty with the Viceroy, for the common Benefit of the Subjects of both States: But, just as these Deputies were on their Departure, there arrived two Gentlemen of Distinction from the Viceroy; who, at an Audience they demanded, and obtained from Count *Maurice*, acquainted him with the amazing Revolution that had happened in *Portugal*, which was likely to have a great Effect on the general State of Affairs, and might probably put an End to the War in *Brazil*, since hitherto it had not been carried on by the Dutch against the Portuguese Nation, but against the Portuguese as Subjects to the Crown of *Spain*; and therefore it was very natural to

suppose that the Dutch would no longer consider them as their Enemies, when they could be no longer considered as the Subjects of that Crown, but rather as an independent Nation, inclined, both by Nature and Interest, to cultivate a good Correspondence with the Subjects of the *States General*. At least, these Messengers from the Viceroy were charged to represent things in this Light to Count *Maurice*, who gave them a very patient Hearing, and dismissed them with a favourable Answer, though resolved to do what was most for his Masters Service.

14. It was in the Month of *December* 1640, that *John*, Duke of *Braganza*, seated himself on the Throne of *Portugal*, which was that of his Ancestors; and took the Title of *John the IVth*. This Revolution, one of the most sudden, and most successful the World ever saw, put into his Hands immediately the whole Dominions of *Portugal*, the little Town of *Ceuta* in *Africa* excepted, and the Conquests made by the Dutch in *Brazil*, and elsewhere. It was not long before Count *Maurice* had a very exact Relation of the whole Affair; and, foreseeing that this Revolution would certainly be attended, either with a Peace, or a Truce, between the *States General* and the new King; he resolved to do all that he could in the shortest Time possible, that whenever the Peace or Truce was concluded, it might find the Dutch with their Hands full. I shall not pretend to justify this Resolution of Count *Maurice*, or to reconcile it to the Laws of Nature, and of Nations; but, we know, that great Captains are seldom great Casuists, and perhaps this might be his Case.

He put this Design of his in Execution almost as soon as he had formed it, making himself entirely Master of the Captainship of *Segerippa*, which the Portuguese had recovered; he sent away Admiral *Jol*, with a Fleet of twenty-one Sail, and above three thousand Men on board, to reduce the Island of *Laonda*, on the Coast of *Congo*, and that of *St. Thomas*, immediately under the Equinoctial; both which Services he performed: The latter, however, cost him his Life; for while he was busy in settling the Affairs of his new Conquest, a Distemper broke out in his Fleet, which carried off a great Number of Men, and amongst them the Admiral and six of his chief Captains. He was buried with great Military Pomp in the Cathedral of *Pavofan*, which is the Capital of that Island, and left behind him the Reputation of being the boldest, most resolute, and strictest Officer of his Time; but withal, one of the roughest in his Behaviour that ever bore Commission; yet he was a Man of such nice Honour, that, in his Expedition, the Year before, on the Coast of *Cuba*, being driven to great Distress for Provisions, and in no Condition to take them by Force, he sent to the Spanish Governor for a Supply; who, out of Regard to his personal Merit, granted him all, and more than he desired; upon which he immediately quitted the Coast, declaring, that he could no longer act against an Enemy, who had treated him with such Generosity.

Count *Maurice*, in pursuance of his Instructions, which represented to him the Captainship of *Maragnan* as a Country extremely wholesome, abounding with Sugar, Cotton, Ginger, Tobacco, and other rich Commodities, as well as very convenient from its Situation, resolved to seize it likewise. He dispatched, for this Purpose, Admiral *Lichtbart* and Commodore *Hanskins*, with a Fleet of six Sail of Men of War and six Frigates, with which they soon reduced the Island of *Maragnan*, and the Town of *St. Louis*, upon which the rest of the Districts submitted without Resistance; so that at the Close of the Year 1641, the Dutch were actually in Possession of seven of the fourteen Captainships, into which the Country of *Brazil* was divided.

But Things did not long remain in this State; for, partly by Revolt, and partly by Conquest, these Countries returned again to their old Masters.

It is now necessary to look over into *Europe*, in order to see how those Events came about, which furnished the Means of making as sudden a Revolution in *Brazil*, as ever happened in a Country so well secured; and in the Recital of which, it will appear, that the Dutch themselves taught those Arts, by which they suffered; and first practised

practised those Frauds, that proved afterwards so fatal to themselves. King *John*, desirous of being acknowledged by as many Kingdoms and States as possible, in Quality of rightful Possessor of the Crown of *Portugal*, as undoubtedly he was, sent *Don Tristan de Mandoca Hurtado*, his Embassador, to the *Hague*, to represent to the *States-General* the Reasonableness of owning his Title, and the Advantages that must accrue from their living in a good Correspondence together. The first was readily admitted by the *Dutch* Statesmen; and, by Degrees, they came likewise into the Second; but, as they thought themselves Gainers by the War, and a vast Over-match for *Portugal*, unsupported by *Spain*, they put off the Conclusion of the Treaty as long as they could.

At last, on the 13th of *June* 1641, they signed a League offensive and defensive, with the Crown of *Portugal*, for what regarded the Dominions of both States in *Europe*; and a Truce for ten Years in the *East* and *West Indies*: This last was conceived in very general Terms; for it was to comprehend all the Dominions of both Parties, and was to commence from the Day of the Publication of the Truce; it was likewise stipulated, that Commissioners should meet in eight Months, in order to conclude a definitive Peace, and to settle the Pretensions of both Parties; but, at the same Time, the *Dutch* took care to provide, that if this Treaty should prove ineffectual, the Truce, and free Trade between the Dominions of both States, should still continue; only the *Portuguese* should not be at Liberty to export any of the Commodities of *Brazil* into *Holland*; and, on the other Hand, the *Dutch* were to be under the like Restriction, with Respect to the Dominions of *Portugal*. It is evident, from the very Frame of this Treaty, that the States contrived every thing for their own Advantage; and that the King of *Portugal* submitted to it from pure Necessity. Experience, however, soon made this more visible. On Complaints, that several Places were taken from the *Portuguese* after the Publication of the Truce; Restitution was refused, as to some; and though Orders were given, as to others, agreeable to the Spirit of the Treaty, yet they were drawn up in such a Manner, that most of the *Dutch* Governors refused to comply with them.

The *Portuguese* Viceroy, and the rest of that Nation in *Brazil*, entered easily into the Politics of the *Dutch*; and instead of attempting to do themselves Justice, by Force, they practised exactly the same Method for their own Advantage: They magnified the Wisdom of the *Dutch* Government, confided in the Promises made them, and took in good Part all the Excuses that were made for Non-performance of them; by which Means they so over-reached Count *Maurice*, in the two last Years of his Government, that he persuaded himself, and easily engaged the Directors of the *West India* Company, to believe, that their Territories were effectually settled, and that they had nothing to fear in *Brazil*, either from the Natives, or from the *Portuguese*; who thought themselves happy under their Administration, and were as much attached to it as the *Dutch* themselves.

But the Contrivances of their Enemies might probably have proved abortive; if the Managers of the *Dutch West India* Company had not entered into a Conspiracy against themselves. They found that they were now possessed of what they had so long fought; several strong Forts on the Coast of *Africa*, and a very large Part of the rich Country of *Brazil*; and they were desirous of making the greatest immediate Profits possible of both. It was from this Notion, that they sent over repeated Orders to Count *Maurice*, to take such Measures as might increase their Revenue, and prove the Importance of *Brazil*, by sending over vast Quantities of Sugar and other valuable Effects, and not suffering such as were in Debt to the Company to pay in small Sums, or at different Terms, but speedily, and at once. Count *Maurice* observed to them, that the Execution of these Orders would be attended with many Inconveniencies; that a long War had been carried on; that the Country had been but lately reduced; that most of those who were in Debt to the Company were *Portuguese*, who had settled in their Territories, and who had hitherto behaved well,

and ought therefore to be kindly treated, and not driven to Extremities, which might put them upon Things that otherwise would not have entered into their Heads. But this was talking to the Deaf; the Company had heard that *Brazil* was very rich, they were possessed of a great Part of it, and could see no Reason why all that it produced should not be immediately shipped for *Holland*.

There were some other Things also that gave them great Uneasiness. Opposite to the *Receif* there lay a very commodious Island, upon which their Governor caused a new Town to be built, chiefly out of the Ruins of the *Portuguese* City of *Olinda*, fortified it thoroughly, and gave it the Name of *Mauriceburgh*; which, in a short Time, was grown a very considerable Place, and which he united to the *Receif*, which was become the Centre of the *Dutch* Commerce, by a Stone Bridge: This first and last cost forty thousand Pounds. Now, though all this was done for the Benefit and Convenience of the *Dutch* Inhabitants, and to secure the Company's Capital in that Country from Danger, yet they could not help grudging the Expence.

But what put them most out of Humour was the Palace Count *Maurice* built for himself. It was indeed a very stately Structure, standing in the most commodious Part of the Town, in the midst of very fine Gardens, elegantly laid out, and curiously planted with Cocos of all Sorts, as well as Lemons, Citrons, Pomegranates, Figs, and other Fruit-trees. These Gardens were certainly very expensive; and as to the Palace, it was said to have cost six hundred thousand Florins; and so contrived, as to command the most admirable Prospect both by Sea and Land. Before the Front of this noble Structure there was a Battery of Marble, rising gradually from the River-side, upon which were mounted ten large Pieces of Brass Cannon. Without the City, Count *Maurice* had also a most magnificent Villa or Country Palace, surrounded with fine Gardens, and adorned with curious Fish-ponds, but withal encompassed with strong Walls, and the whole so disposed, as to serve at once for the Governor's Pleasure, and for the Defence of the City, which was covered by it, as a Fort, on that Side; and it proved extremely useful to them when the War broke out again. He likewise made many other Improvements, such as laying out Parks and Meadows within the Fortifications, which, while duly taken care of, produced all Things necessary for the Subsistence of the Garrison; and were, in all respects, equally commodious and beautiful.

In this Manner Count *Maurice* employed those Treasures, which were the Fruits of his many Victories and extensive Conquests; and which, a Man of a less generous Temper, would have found Means to have transported to *Holland*, as his private Fortune. But those Marks of Greatness of Mind, and public Spirit, which ought to have extinguished, nourished that Envy, which had been conceived against him, and while he was labouring to extend and secure the Power of the Company in *Brazil*, the Directors of that Company in *Holland* were employed in censuring his Conduct, and in magnifying his Extravagance, in laying out such vast Sums, while the Colony produced so little to the Company's Stock. Such was the Situation of Things, and such the excellent Reasons which induced the Directors to form a Design of recalling Count *Maurice*, as the only Means of making the Colony turn to an Account, and bring in such a Revenue, as might be proportionable to the Views and Expectations of the Company; which wise Project of theirs, they at last brought to bear; Count *Maurice* himself assisting them therein, being grown to the full as weary of their Management, as they were of his; so that on the 11th of *May* 1644 he took leave of the Council, quitted the Government, when he had held it eight Years, and returned into *Holland*, on board a Fleet of thirteen Sail of large Ships, with near three thousand Soldiers on board; eighteen Companies only being left for the Defence of the *Dutch* Settlements, agreeable to the Instructions he had received, and to that Scheme of frugal Management, which was now to take Place, and by which they hoped to repair that Extravagance and Profusion, with which they charged Count *Maurice*.

I have taken as much Care as it was possible to inform myself fully as to these Particulars, and have represented this whole Transaction to the Reader exactly in the Light it appeared to me, and I flatter myself it will give him as great Satisfaction as I have felt in writing it; by shewing him how the most dangerous Mistakes arise from Narrowness of Thinking, how easily the best Designs of the very best Men may be misrepresented, and with what an Appearance of Wisdom, Disinterestedness, and public Spirit, such Measures may be cloathed, as in reality are big with public Ruin.

After Count *Maurice's* Return, the Government of *Brazil* was put into the Hands of such great and able Men as the *West India* Company could confide in; for that, at this Time, was the Phrase in more Parts of the World than one; and perhaps it will not displease the inquisitive Reader to have a short Account of the Illustrious Persons who were the Successors of the great Count *Maurice* of *Nassau*, one of the ablest, bravest, and most worthy Men of that Family, so famous for producing Heroes: The Chief of them then were, Mr. *Hamel*, a Merchant of *Amsterdam*; Mr. *de Bassis*, a Goldsmith of *Haerlem*; and Mr. *Bullestraat*, a Carpenter of *Middleburgh*; all Men of very good Sense, and great Fidelity to the Company; whose Diligence and Activity in its Service, we find greatly commended by some *Dutch* Writers, who certainly meant as honestly as they did; but unfortunately for the Service of the Republic, as well as of their Masters, they mistook their Talents, and by wading out of their Depth became the Authors of a thousand Mischiefs, which to be sure they never intended.

They were bred to Trade, and understood it thoroughly; but this kind of Understanding did not so well answer the Purpose as a Governor's. They forced the *Portuguese* that lived under them, to pay what they owed the Company in a short time; but by the Methods they took to do this they lost their Hearts for ever. They furnished these very *Portuguese* with Fire-arms and Powder, but they sold both very dear; so that the Company were great Gainers by the Bargain. They sent over to *Holland* the Produce of those Lands which Count *Maurice* had assigned for maintaining the Fortifications, which in the mean time ran to ruin. They gave Licences upon very easy Terms to the Soldiers to return home; which lessened the Expence of the Army. In short, they brought the whole Charges of the Government into a narrower Compass than could be expected; but by doing this they brought the Government itself into such a Degree of Danger, as invited those to rebel, who by this very Management were oppressed in their Persons, and the Proprietors of most of their Plantations so intangled by their Debts to the Company, that very few of them were worth a Groat. A very sober *Dutch* Writer, who was there upon the Spot, tells us, That in 1645 there was a greater Quantity of Sugar sent to *Holland* than at any time before, which he attributes to this wise and frugal Administration, and which, to speak the Truth fairly and in plain English, was not either more or less than selling all *Dutch Brazil* for one Year's Purchase.

15. The *Portuguese* Viceroy at that Time was Don *Antonio Telles de Silva*, a Man who seem'd formed by Nature for the Execution of that Employment at this Juncture: He had great Parts, but greater Prudence; much Penetration, more Sagacity; but excelled most in dissembling to Perfection. In private Life, and in all common Occurrences, a Man of strict Honour, humane, easy of Access, familiar with all sorts of People, but without losing his Dignity. As soon as he was informed that Count *Maurice* was gone, and had carried with him two Thirds of the Force of *Brazil*, he formed a Design of getting rid of the *Dutch* intirely; but this he never communicated to his Friends, to the Enemy he always denied it.

He insinuated to the *Portuguese* that were Subjects to the *Dutch*, that they were only labouring for Strangers, and Strangers of another Religion; whereas they might be Masters of all they now farmed at a high Rent, and enjoy good Employments besides, if their King was restored to his just Rights. These Suggestions had their Effect, and those who heard them could not avoid being moved by them.

But the Person who undertook to manage this whole Affair was one *John Fernandez Viera*, a very extraordinary Man, and of whom I shall give a very short Account: He was originally a Butcher's Boy, from whence he was raised to the Rank of a Page to one of the Magistrates of *Olinda*, while in the Hands of the *Portuguese*. He became a kind of Factor, or Manager for the *Dutch*, and by his Industry and Art grew excessively rich, being Master of four Sugar Plantations, and intrusted with the Management of many more.

He had an excellent Head, laid the Whole of the Conspiracy himself, and sent it over to *Portugal* by a Person who was not at all acquainted with the Design; after which he sent a Relation of his to Court, with a Letter recommending him to the King of *Portugal*, by which he got a Troop of Horse, and acted there as Agent for the Conspirators. He foresaw that this must reach the Ears of the *Dutch*; and when it did so, he went directly to the Council, owned the Thing, produced his Letter, and offered to give Security for his good Behaviour, which he did without much Trouble; two of the richest *Portuguese* in the *Dutch* Territories becoming bound for him, who were as deep in the Conspiracy as himself.

It may be justly wondered that, in such Circumstances, this was accepted; but the Wonder will cease when it is known that he owed the chief Persons in the Administration upwards of two hundred thousand Florins, which rendered it adviseable for them not to see him ruined. By this adroit Contrivance he most effectually secured his Liberty, which he made Use of to carry on this great Design with all the Dexterity imaginable; in which he was assisted by two Persons, who made a great Figure in the Province, *Antonio Cavalcante*, and *Amador Argousa*, equally deep in the Management of the *Dutch* Affairs; and determined, like him, to raise their Fortune upon the Destruction of those who trusted them.

The Day fixed for the Execution of this Plot was, the 24th of June, 1645; when one of the Daughters of *Antonio Cavalcante* was to be married, and a great Feast given at the House of *Viera*, to which most of the Officers and principal Persons in the Company's Service were invited, and where, without doubt, they would have been all seized, if not murdered, if the Design had not been discovered the very Evening before it was executed. A Ship that arrived from *Amsterdam*, brought Letters from the Directors of the *West India* Company; with an Account, that the Minister from the *States General* at the Court of *Portugal* had discovered, that a great Conspiracy was carrying on in *Brazil*; and that they would do well to enquire what Supplies had been lately sent from *Lisbon* to the *Portuguese* in those Parts.

This Enquiry produced such Discoveries as struck the *Dutch* with universal Consternation; which gave *Viera* and his Associates time to make their Escape into the neighbouring Woods, where they took up Arms. There *John Fernandez Viera* assumed the Character of General and Commander in chief, assisted by Colonel *Diaz*, with a few *Portuguese* Troops, and Colonel *Cameron* at the Head of a much more numerous Body of *Brazilians*. With this small Army he fixed his Head Quarters at *Pojug*, a Town between the *Receif* and Cape *St. Augustine*; so that the *Dutch* had the Misfortune of seeing the War break out, not only unexpectedly, but in the very Heart of their Dominions. At the same time *Antonio Cavalcante* raised another Part of the Country; and *Amador Aragousa*, at the Head of a flying Party, was burning and destroying all the *Dutch* Plantations without Mercy. In this dreadful Situation the Council assembled all the Troops they could; and, at the same time, published a Proclamation, whereby they promised Pardon and Peace to all who should submit and return to their Duty, excepting only *Viera*, *Cavalcante*, and *Aragousa*. The Person they made Choice of to command their Forces, was Lieutenant-Colonel *Huys*, to whom they gave the Title of General; but it would have been better if they could have given him an Army, since the Troops he got together were few in Number and very ill provided.

But besides this, the Council had a mind to negotiate, and therefore they sent two Captains, *Vandor Voord*, and *Dirck*

Dirck de Hoogstrate, to the Viceroy, at the Bay of *All Saints*, to complain of the Infraction of the Truce, between the Crown of *Portugal* and the *States General*, which had still four Years to come. The Viceroy received them with great Civility, and answered them with much Prudence. He said that he was responsible for the Conduct of the Inhabitants of that Part of *Brazil* subject to the Crown of *Portugal*; and, if they had broke the Truce, he would give them what Satisfaction they could desire; but, with respect to the *Portuguese* settled in the *Dutch* Dominions, if provoked by Oppressions they had taken Arms, it was what he could not help, and for which it was very unjust to make him answerable.

This was what he said in public, but in a private Conference he had with Captain *Hoogstrate*, he drew him over to his Interest, and prevailed upon him to resolve upon giving up the important Post of *Cape St. Augustine*, of which he was Governor. In the mean time General *Huys* attacked Colonel *Cameron*, but had the Misfortune to be beat, with the Loss of one hundred Men. Soon after this the *Portuguese* Fleet, under the Command of Admiral *Salvador Correa de Banavides*, appeared on the Coast; and, though it was very numerous, yet the *Dutch* Admiral, *Lichtbart*, offered them Battle, though he had but five Men of War; but the *Portuguese* Commander refused it, pretending he had no Orders to act against the *Dutch*; and that all his Business was to land a Body of Men in his Master's Dominions, which he accordingly did; but those Men, without any Ceremony, entered the *Dutch* Territories, and made themselves Masters of all the Places that fell in their Way.

The *Dutch* Council, upon this, sent Orders to their General *Huys* to retreat; but he, staying for one Captain *Black*, whom he had sent away for several Ladies and rich Effects out of the Country, had the Misfortune to be surrounded by the *Portuguese*, beaten, and taken Prisoner; which the best *Dutch* Accounts that I have met with attribute to his Want of Conduct and Courage.

Upon this Orders were sent to Admiral *Lichtbart* to attack the *Portuguese* Ships whenever he had an Opportunity, and he exerted upon this Occasion the same Spirit and Courage which he had so often shewn upon others; for, with four Ships, a Frigate, and a Bark, he attacked the *Portuguese* Fleet of seventeen Sail, took three of the largest Ships, together with the Admiral; killed seven hundred Men, and burnt and sunk almost all the other Vessels; which raised the Hopes of his Countrymen not a little, and they began to flatter themselves they should have better Success for the future, than they had hitherto had from the Beginning.

But these Hopes were very soon dashed, by their receiving the unexpected News of the Loss of *St. Augustine*, which was given up by Captain *Hoogstrate*, in consequence of the Agreement which, as we have before mentioned, he had made with the Viceroy, when sent to treat with him by the *Dutch* Council as their Minister. He received for this infamous Action the Sum of 18000 Florins, which Sum he employed in raising a Regiment of six hundred and fifty *Brazilians*, of which he was made Colonel by the *Portuguese*, and wanted not Impudence enough to appear at the head of it, against his Country; and, which was still more astonishing, behaved bravely and with great Fidelity in the Service of his new Master.

Their great Superiority enabled them to make a quick Dispatch in most of the Expeditions they undertook; so that in short Time almost all the strong Places in the Captainship of *Fernambuca* surrendered to them. At last they blocked up the *Receif*, always the strongest, and now the only strong Place the *Dutch* had left; and reduced those who were in it to such Hardships, that they must have been starved out, if they had not been relieved by the Arrival of a Fleet from *Holland*. When the News of these Proceedings arrived in *Holland*, the Mob was excessively irritated, and in their first Fury surrounded the House of the *Portuguese* Ambassador; which, but for the prudent Interposition of the Prince of *Orange*, they had certainly pulled down. That Minister, however,

endeavoured to persuade the *States General* that his Master had no Concern in this Rebellion; that he absolutely disapproved it; and that the Viceroy had never given any kind of Countenance to *Viera*. But the *Dutch* Statesmen were too wise to give any Credit to him: On the contrary, they equipped a Fleet of fifty-two sail of Men of War, under the Command of Mr. *Bankert*, Admiral of *Zealand*, whom they declared Admiral of *Brazil*, *Guinea*, and *Angola*; with him they sent Colonel *Schuppen* and Colonel *Henderson*, who had served under Count *Maurice* with great Reputation; and thus an open War begun between *Portugal* and *Holland*, on the other Side the Line.

But never any Fleet met with so many unfortunate Accidents as this did; for, within two Days after they sailed from the *Texel*, they were forced to anchor in the *Downs*, where they lost two Ships in a Storm; they sailed again, and were forced into the *Isle of Wight*; where, the first Sight they saw, was the Wreck of a great Ship, which proved a *Dutch* Merchantman from *Brazil*, with a Cargo of the Value of two Millions, which was entirely lost; and, out of three hundred Persons, only thirty saved; in the Port of *St. Helen's* they remained wind-bound seven Weeks, and at last met with a Storm on their putting again to Sea, by which they suffered extremely: Many more such Checks they met with before they arrived at the *Receif*; where the People were reduced to such Extremity, that they were on the Point of throwing themselves upon the Enemy, to seek a certain Death by the Sword, rather than expect a lingering one by Famine.

By the Help of these Reinforcements the War was still kept on Foot, and some small Advantages gained; but, in the Beginning of the Year 1647, they were again blocked up in the *Receif*, where their whole Force consisted but of one thousand eight hundred Men, with which they made a gallant Defence; but at length, on the 16th of *May*, they resolved to sally with their whole Strength, and to attack the Enemy in the Field; which they did, at first, with some Degree of Success; but, being overpowered by Numbers, were at length beaten; and, in their Fight and Flight, lost one thousand one hundred Men, most of their Officers, nineteen Colours, and all the Artillery and Ammunition they had carried with them. This great Misfortune hindered them, indeed, from making any more Sallies; but by lessening their Numbers so much, enabled them to make a longer Defence, since their Provisions sufficed now for seven Months, which would otherwise have lasted them but three.

I have dwelt the longer upon this Part of the Story, because I conceive it cannot be considered as either unpleasant or useless; and I have observed, with some Degree of Amazement, that this kind of History is very little known here in *England*; where the being able to discourse pertinently of *Greek* and *Roman* History, passes for Learning; and an Acquaintance with the Story of *Italy* in the middle Ages, has its Admirers amongst the Virtuosi; both which I hold equally laudable and sensible; but still I am persuaded that this kind of History is of more Consequence than both, to the Inhabitants of a Country flourishing by Trade; and therefore I have taken so much Pains to reduce these Matters into Method and Order, that the Study of maritime History might become more pleasant and easy, and consequently grow more into Repute and Fashion, amongst a Nation that so deservedly value themselves upon the glorious Title of a maritime Power. The true Meaning and real Importance of which Title, can only be learned by the Perusal of Works like these. But to return from Reflections to the Current of our History.

The Progress of the *Portuguese* was so great, and so irresistible, and the Disasters that attended the *Dutch* followed so close on each other, that nothing seemed capable of preventing the total Ruin of the *Dutch* Affairs in that Part of the World. This naturally might, and indeed did, produce a kind of national Despair; which hastened, though I think it did not cause, that Ruin which it foresaw. The Province of *Zealand* recalled their Admiral *Bankert*, with whom came home most of the Officers they had sent with him, heartily disgusted with the Service.

Service. The Difficulties they met with in their Passage, when outward bound, were repeated in that which brought them home; so that *Bankert* died before the Fleet arrived in *Holland*, and so did several of his Officers almost as soon as they came ashore; but the *Sieur Shuk*, who was sent home by the Administration in *Brazil*, survived; and upon his Application to the *States*, and his most particular and affecting Account of the Posture of things in that Country, they resolved to make one general and great Effort for the Preservation of so valuable an Acquisition; and accordingly gave Orders for equipping a strong Fleet of fifty Sail of large Men of War, and embarking therein six thousand regular Troops, the Command of which they gave to Admiral *Witte-Wittezen*, at that Time esteemed the ablest Officer in their Service.

This Armament alarmed the Crown of *Portugal* to such a Degree, that Orders were sent to the Ambassador then resident in *Holland*, to promise the *States* any thing that might prevent their prosecuting this Design, which, at first, had some Effect; but the *Dutch*, receiving at this Time the melancholy Account of what had happened at the *Receif*, determined not to be the Dupes of such a Negotiation; and therefore, towards the End of the Year 1650, they not only dispatched Admiral *Witte-Wittezen* with his Fleet, but likewise projected the sending another Fleet after him, with an additional Supply of between five and six thousand Men more. One would have imagined, Succours like these, exceeding, if I am not mistaken, any thing that has been done by other Maritime Powers, in Support of any single Colony, would have answered the End effectually, more especially as *Portugal* did not arm in any Proportion, or send over any regular Troops, at this Time, to *Brazil*: But, however, all proved vain and ineffectual; for the Elements declared as fierce and as inflexible a War against the *Dutch* Fleets and Armies, as the *Portuguese*, the *Negroes*, and the *Brazilians*. The Climate, which seemed natural to all these, proved absolutely mortal to the *Dutch*. The former living there on the natural Produce of the Country, were healthy, hearty, and robust; intermarrying with the Natives, they multiplied apace, and had but one common Interest, whereas the latter subsisting entirely on the Provisions sent them from *Europe*, grew pale, wan, and feeble, and died in great Numbers.

Hence it came to pass, that when the great Fleets before mentioned, after suffering much by Storms and Tempests in their Passage, arrived at length on the Coast of *Fernambuca*, they found, instead of a Colony, a mere Hospital of sick, maimed, and infirm People; and, in the room of those Fortresses they were to have relieved, a Collection of Church-yards filled with the Bodies of those who had been before sent on the same Errand; the Sight of which affected the Admiral in such a Manner, that, notwithstanding the precise Orders he had received, he determined with himself not to bury the remainder of his People there, which from his first Arrival he began to do apace, but to return home without delay, which he accordingly did, leaving things in a much worse Condition than he found them; and the *West India* Company, besides all the rest of its Misfortunes, oppressed by a very heavy Debt, contracted on the Score of his unfortunate Expedition. We need not wonder, therefore, that upon his Return there was a dreadful Out-cry set up against him; to allay which, the *States* were obliged to commit him to Prison; but he very soon justified himself to their Satisfaction, and indeed to the Satisfaction of every body but the Proprietors of the *West India* Company, on whose Directors at home, and in *Brazil*, he laid the blame of all these Miscarriages.

It would be needless to pursue this Subject more particularly from this time to the total Exclusion of the *Dutch*, because it would contain only a Repetition of the same kind of Facts, and consequently prove far enough from being entertaining or instructing. It may therefore suffice to say, that towards the close of the Year 1653, the *Portuguese*, who now publicly owned the Cause of *John Fernandez Viera*, sent a Fleet of sixteen large Men of War to attack the *Receif* by Sea, and to blow up Part of its Fortifications; which so terrified the *Dutch* Gar-

rison, that they absolutely refused to fight; so that the next Year they surrendered every thing they possessed; and, in 1655, they returned to *Holland*. It is inconceivable what an Uproar this raised in that Country, and with what Heat and Fury the People demanded Justice against General *Sigismund Schuppen*, who had commanded in Chief for many Years, and who was Governor of the *Receif* when it surrendered. The *States*, perhaps, out of favour to him and his Officers, sent them to Prison; and they could not, in respect to Justice, refuse him the only Grace he asked, which was to make a public Defence; wherein he laid open, so clearly, his own long and faithful Services to the *Dutch* Nation, recapitulated all the Successes they had under the Administration of Count *Maurice*, and gave so true a Picture of the Miseries and Misfortunes they had suffered since he went thither last, that the People wept, and the Judges acquitted him.

There is something so strange, something so unaccountable in this Transaction, from the Beginning to the End of it, that I cannot think it will be looked upon as either tedious or impertinent, if I point out clearly, and in a narrow Compass, the Causes of this extraordinary Revolution, which I take to have been principally three. The first, and indeed the principal one, was recalling Count *Maurice* of *Nassau*, and changing the Government; which I must beg leave to explain, for the Sake of such of our Countrymen as may not fully apprehend it. Count *Maurice* was a great Captain, and a true Politician; he very well knew, that in a conquered Country a military Administration was as requisite as a civil one; and so contrived his own, that it was a proper Mixture of both. His first Care was to extend the Dominions of his Countrymen, that they might have room enough to fix a potent Colony, and a fertile Territory sufficient to maintain it. On the Frontiers he built strong Fortresses, brought the Native *Brazilians* to relish living according to their own Manner, under the *Dutch* Protection, and to be willing to work for Wages; he likewise filled the Country with *Negroes*, from his Conquests in *Africa*; and, when he had thus secured a large, pleasant, and fruitful Country, and People enough to subsist in it, he began to build his new City of *Mauriceburgh*, to raise his admirable Palace, to lay out his fine Gardens, and to do every thing that might encourage Art and Industry; and, by adorning and enriching the Country, fix such People as came to get Estates there, to their Estates when got. By this Policy of his, it must allowed that he did not fill the Company's Coffers, but he served his Country and the Company too very effectually, by putting the Colony upon a right Establishment, and giving it such a Force within itself, as all the Power of his Enemies could not have overthrown: This he was able to do from the extensive Authority lodged in his Hands, by his Commission from the *States*; and yet the Extent of his Power could only reach to what was good; had he endeavoured to carry it farther, his Council might, and would, have interposed: But it was quite otherwise with the Government that succeeded him; for they had a boundless Power of doing Mischief, and very little Capacity of doing Good, as appeared very clearly from their whole Administration, and indeed it could not well be otherwise; for, whereas Count *Maurice* came naturally from commanding at home to a Government abroad, these Men were fetched from behind Counters to act the Part of Soldiers, Seamen, and Statesmen. I do not say this to disparage Trade, but to shew the Folly of supposing that the greatest Masters of Trade should be able by Instinct to manage those Trades they were not bred up to, and consequently upon their own Principles cannot understand. They were of excellent Use to Count *Maurice*, as his Council, and I firmly believe he could not have done without them; but then I hope I shall escape Censure for affirming, that they knew as little how to do without him.

The second Cause of the Declension of the *Dutch* Affairs, was the too hasty Desire of the Company to draw a great Revenue from this Colony, which put them upon most unreasonable Reductions of their Expence. The first Point

Point was, that of a Governor General, who, by keeping a kind of a Court, seemed to be an intolerable Burden upon such as were at the Expence of it; but if they had considered that this Governor, who kept this Court, acquired for them the best Part of that Colony, and put the rest of it into so good a Situation, they would have judged the Services of such an Officer a sufficient Recompence for the keeping Him. Their next Reformation was in the Military Establishment, which in 1641 Count Maurice had fixed at upwards of seven thousand Men, and which, immediately upon his Removal, they very frugally reduced to two thousand seven hundred, and even allowed such of these Soldiers as would pay for it, to go home: The Magazines, that were always well filled in the Time of Count Maurice, and from which, as we have seen, he furnished several Fleets for distant Expeditions, they emptied, to raise Money by the Sale of their Contents, and very foolishly suffered their Servants and Soldiers to live upon *European* Provisions, instead of accustoming themselves to live upon the Produce of the *Brazilian* Territories. It was likewise a great Fault that they laid high Taxes upon the great Manufacture of the Country, Sugar, which threw it entirely into the Hands of the *Portuguese*, their own Subjects being afraid to meddle with a Trade in which the first Miscarriage was attended with total Ruin. Another notorious Blunder was, their sending over a vast Number of *Jews*, who, finding the People sinking under heavy Taxes, brought in that excellent Cordial of high Usury, to keep up their Spirits. By these, and such like Methods, they, in the Space of a few Months, brought all Things into Confusion; and, from that Time forward, never took one sensible Step towards bringing them out.

The third Cause of the Ruin of this Colony was, that the States did not interpose in time, and take the Care of the *Dutch Brazil* into their own Hands, instead of leaving it to a Company which had shewn themselves so unequal to what they had undertaken; and therefore, for their own Good, as well as for that of the Public, this very important Concern should have been taken out of their Hands. But by continuing the same Government, the States and the Company pinned down the unhappy People that were left there, labouring under Miseries and Misfortunes of all kinds, without Remedy and without Hope! If they had sent over in time a new Governor-General, Things might have been restored; but for want of this, they ran continually from bad to worse, as it was very natural for them to do; so that after ten Years Struggle, as well against their own Weakness and ill Management, as the superior Force of their Enemies, they suffered the Colony to expire; but, when they found their Malady incurable, they had better have taken the *Brazilian* Method, and, without waiting Extremities, knocked it on the head at once.

But to conclude this Subject with a short State of both Administrations: When Count Maurice, after eight Years residing in *Brazil*, quitted the Government, he left them seven Captainships, one City, thirty great Towns, forty-five regular Fortresses, ninety Sail of good Ships, three thousand regular Troops, twenty thousand *Dutch* of all Ages and Sexes, sixty thousand Negroes, and above twice as many *Brazilians*: At that Time the Colony yielded twenty-five thousand Chests of Sugar annually, and a Carpenter, Cooper, or Smith, could earn five or six Guilders a-day, and live very comfortably upon one; And, after expending Millions upon this Colony, for ten Years together, and the Loss of several thousands sent thither from time to time, there returned to *Holland*, in 1655, between six and seven hundred Persons, of all sorts, not worth a Groat.

Upon this the States declared War against *Portugal*, by which their *East-India* Company were great Gainers, but the *Dutch* Nation still Losers; so that, after five Years, they were glad to make a Peace, under the Mediation of our King *Charles II.* which was signed the 6th of *August*, 1660, in which the principal Articles relating to our Subject are these that follow: That the Crown of *Portugal* shall be obliged to pay to the States the Sum of eighty

Tons of Gold, either in ready Money or Sugar, Tobacco or Salt, or else assign the said ready Money upon the *Portuguese* Customs: That the Places taken on each Side should remain to those who were then in Possession of them: And that a free Trade should be allowed to the *Dutch* in *Portugal*, *Africa*, and *Brazil*, without paying any more Customs than the native *Portuguese*.

16. The *Portuguese* have, since this time, remained in quiet Possession of all this vast Country, which is the Reason that it is very difficult, if not impossible, to give any distinct Account of what has passed there since this Time: For the *Portuguese* are, in the first place, not much addicted to Writing; and in the next, they are not extremely willing that the World should be acquainted, farther than they must be from Facts, with the State of their Colonies in *Brazil*; and it is for this Reason, that they suffer no Ships to trade thither but their own; a Point in which they are extremely precise, inasmuch that they have made it a kind of capital Maxim in their Policy. But it is with them as it is with all other Nations of this Stamp; they flatter themselves that this Rule which they lay down is inviolably adhered to; yet it is certain that the Fact is otherwise, and that sometimes *English* Interlopers, and now and then *French* and *Dutch*, sell their Cargoes in *Brazil*, especially in time of War; and in time of Peace, when there is not an Opportunity of carrying on a clandestine Trade in this manner, they find out another, which is, sending thither Goods, under the Name of some *Portuguese* Merchant, in the very same manner that the Goods are sent to the *Spanish* Colonies, under the Name of *Spanish* Merchants.

In both Cases they are no more than Brokers; but, to their immortal Credit, the fairest and the most honourable in the World; for they are never known to break their Faith, or to injure those who trust them. As to the Trade which the *Portuguese* themselves carry on to this Colony of theirs, it has for these last hundred Years been so great, that it is thought to have been the principal Cause why they have slighted that of the *Indies*, as we have shewn in its proper Place; tho' formerly it consisted principally in Sugar, Tobacco, *Brazil* Wood, and other Commodities of great Value; yet within these last forty Years they have received from thence Commodities of still greater Value, or rather, to speak in the Language of our Times, of the greatest Value, such as Diamonds, and Gold; and of this precious Metal we have been thought to have so large a Share, that without it we could scarce have carried on the last general War, and the expensive Measures that have succeeded it; and though this may not be strictly true, yet there is certainly so much of Truth in it, that it ought to make us curious in the inquiring after, and obtaining the best Account we can of these Plantations, which is so much the more necessary, because hitherto the Accounts we have had are as far from being satisfactory as Accounts well can be. The Pains I have taken upon this Subject, have not indeed enabled me to give the Reader so exact a View of all the *Portuguese* Settlements in *Brazil* as I could wish; but, however, as I shall have no Occasion to treat of this Country again, I will take this Opportunity of giving him the most particular and satisfactory Accounts I have met with, till something better shall be published upon the Subject.

All the Trade of the five northern Captainships of *Brazil*, viz. *Paria*, *Maragnan*, *Siara*, *Rio Grande*, and *Paraiba*, is carried on in the last mentioned Port, which lies on a River of the same Name, at the Distance of about five Leagues from the Sea; it is a fair and populous Town for that Country; and there are annually about seven or eight Ships sent hither from *Lisbon* and *Oporto*, of the Burden of two hundred and fifty Tons each. Their Lading consists chiefly in Sugar, of which they make more in these northern Captainships, than in the South; especially since the Discovery of the Gold Mines, which has made the Inhabitants of those Parts of the Country negligent. There was a Time when the Trade of *Brazil*, in this Commodity, was superior to any in the World; for the Sugar of *Brazil* was the first that was known in *Europe*; and the *Portuguese* are said to have set up their Works in this Country, about

the Year 1580; and their being so long in Possession has made them more careful and exact in it, than any other Nation; so that even now the clayed Sugars from *Brazil*, are whiter and finer than ours; and yet the Method they take of doing this, is neither a Secret, so as not to be known, nor difficult, so as not to be attained; for in plain *English* it is no more than this:

When their Sugar is put into their Pots, and, by the draining out of the Molasses, they are sunk two or three Inches below the Brim; they scrape off that thin hard Crust that is found on the Top of the Sugar; and then they pour in their Mixture for refining it; it is nothing more than a fine soft white Clay, beat and mixed with Water, till of the Consistency of Cream, with which they fill up the Pan. The white Water in ten or twelve Days passes quite through, and whitens the Sugar as it passes; the thick Body of the Clay lodges on the Top of the Sugar, and is easily taken off with a Knife. Besides Sugar in this State, they bring likewise dying Woods, several Sorts of Drugs, and other valuable Commodities from *Paraiba*; which, however, is the least frequented Port in *Brazil*, though it is generally allowed that these northern Captainships are the best peopled; and that the Inhabitants are very easy in their Circumstances, though there have not as yet been any Mines found, or at least wrought, in these Parts. Though some *Spanish* Writers affirm, that, from the Appearance of the Soil on the Sides of their Mountains, it is highly probable they are rich in Silver; which, perhaps, they are restrained from searching for by the Orders of the Viceroy; or at least this was the Case forty Years ago, when some *Spanish* Deserters made a Proposal of this kind to the *Portuguese* Governor of this Captainship.

Tamarca, which lies next to *Paraiba* and the Captainship of *Fernambuca*, carry on their Trade from the City of *Olinda*, which we have mentioned before. It is seated on a Hill not far from the Sea; and this Situation renders the Streets very uneven and very incommodious. The Port too is but narrow, and the Entry into it extremely difficult; yet there is a considerable Refort thither of Ships from the other Parts of *Brazil*, and from the *Canaries*; and the annual Fleet from *Lisbon* consists generally of about thirty Sail, escorted by a Man of War. These Merchantmen are generally about the same Size with those sent to *Paraiba*, and their Cargoes are composed chiefly of Sugar and *Brazil* Wood; which last is supposed to be the best of its kind in the World; and therefore we shall speak of it somewhat more particularly: Many, otherwise correct Writers, having fallen into very gross Mistakes upon this Subject.

It is an Opinion commonly received, that the Country of which we are speaking gave its Name to this Wood, and that it was called *Brazil* because it came from thence; nay, we are told so in the very last Edition of the *Dictionary of Commerce*, and in one of the new Articles; but, however, the Fact is directly otherwise; and, as we have said elsewhere, the Colony was so far from giving its Name to the Wood, that, on the contrary, the Country was first called the Land of the *Holy Ghost*; and from its abounding with this kind of Tree, lost the Name imposed upon it by its first Discoverers, and took that of *Brazil*. If the Proof of this is demanded against the Authority of abundance of Books, which say directly the contrary, we may cite *John de Barros*, the famous *Portuguese* Historian; who says expressly what we do, and was likely to know as much of this Matter as any Man. But that learned Prelate of France, *Peter Huet*, Bishop of *Avranches*, has put the Matter entirely out of doubt; for he assures us, that the famous Rabbi, *David Kimchi*, in his *Commentary on the Chronicles*, affirms, that the *Hebrew* Word *Algummim*, ought to be translated *Brazil*; now it is certain that this learned Jew wrote before the Country of *Brazil* was discovered, and consequently the Wood was so called before any of it came from thence.

There are also different Sorts of this Wood; such as the *Brazil* of *Japon*, *Brazil* of *Lamon*, *Brazil* of *St. Martha*, and *Braziletto* from *Jamaica* and the *Leeward Islands*; but the very best comes from this Country, and the best in this Country from *Fernambuca*. The *Brazil*-Tree

grows generally in dry barren Places, and amongst Rocks; it is very thick and large, and the Timber usually crooked and knotty; the Flowers it bears are of a most beautiful bright red, have a very fragrant Smell, and, instead of hurting, as most Perfumes do, they cherish and strengthen the Brain: Though the Tree is very large, it is covered with so thick a Bark, that when the *Brazilians* have taken it off, a Tree as big as a Man's Body is left no thicker than the Calf of his Leg. The Wood is very heavy, dry, and hard; it crackles much in the Fire, and scarce raises any Smoak when it is burned, because it has so little Moisture; there is no Pith in it, except in what comes from *Japon*; and therefore it may be doubted whether this be really the same kind of Wood or not.

That is held to be the best which is thickest, soundest, hardest, and without any Bark sticking to it; it ought likewise upon splitting to turn from a pale to a deep red; and lastly, upon chewing the Chips of it, the best Sort yields a sweet sugary Flavour. This Wood is put to various Uses by the Turners, and takes a very good Polish; but it is principally employed in dying, in which it yields a very fine bright Red. It is from the *Brazil* Wood that one kind of Carmine is made, by beating it in a Mortar with Leaf-Gold, and steeping it in White-Wine-Vinegar, and afterwards boiling it; when it yields a thick Scum, which, carefully taken off and dried, becomes, when reduced to a Powder, Carmine, but very far inferior to what is made by another Method, from *Cochineal*.

The next Captainship of *Brazil*, is that of the Bay *Babia*, as the *Portuguese* call it, or Bay of *All Saints*; which is about twelve Leagues over, but in several Places is scarce navigable, on account of Sand-Banks and Shoals: There are in it several small Islands, on which the *Portuguese* have Tobacco and Sugar Plantations, and they have likewise very good Fisheries on the Coast of these Islands, and on the Banks. I have an Account of a Voyage to *Brazil* by a *French* Gentleman, in the Year 1717, which is very curious, and from which I shall give the Reader some very entertaining Particulars, which I do not remember to have met with any where else, or at least not in our Language; and because I am not able to put them in a better Dress, I will give them exactly in his Words.

“ There is not a Place in the World, *China* only excepted, from whence I came, where there is so much Trouble to get on Shore, or to know how to act when one is on Shore, as in *Brazil*. We came into this Bay on the 16th of November; and when we were within a League of the City of *St. Salvador*, we were restrained from proceeding any farther, by a Gun fired from a little Fort; upon which we came to an Anchor, and sent our Supercargo ashore in our Boat. He was a very sensible Man, and withal had a great deal of Gravity, a Quality of all others the most necessary, for one who has any Business to transact with the *Portuguese*: As soon as he came ashore, he was conducted to an Audience of the Viceroy, who received him with a great deal of State; and yet shewed him, at the same Time, as much Civility as he could expect. He told his Excellency that he came on behalf of three *French* Ships homeward bound from the *East Indies*, that were in many respects greatly distressed, and had no Hopes of performing their Voyage, but from his affording them his Protection and Relief.

“ The Viceroy continued for some Minutes silent, and then gave him his Answer to this Effect: That he was very sorry for their Misfortune, because his Master's Orders were very precise against admitting any foreign Vessels into the Port; and that he was the more concerned to hear that they were *French*, because it was chiefly on their Account that these Orders were given; because several Vessels of their Nation, that had been admitted into the Ports of that Country upon the very same Pretences, had carried on an illegal Trade, directly contrary to the King's Orders, and had shipped great Quantities of Tobacco. He told them farther, that the King's Orders were to seize and confiscate without Distinction, whatever foreign

“ foreign Vessels entered that Port; unless it plainly
 “ appeared they were in such a Condition as not to be
 “ able to keep at Sea; that therefore they were to have
 “ twenty-four Hours given them to consider whether
 “ they would come and anchor under the Guns of the
 “ Fort in order to be examined, or to put to Sea with-
 “ out receiving any Relief at all. He added, that if the
 “ Case was such as our Agent represented it, he might
 “ very freely enter the Port; and, upon Examination,
 “ all the Care should be taken to assist and supply him,
 “ that he could desire; but that he would do well to
 “ remember that the *Portugueze* were not to be imposed
 “ upon.

“ As our Ship was really in such a Condition that we
 “ had no Reason to fear any Examination, we made
 “ Sail immediately on the return of our Supercargo, and
 “ came to an Anchor under the Fort. The next Day the
 “ Judge came on board, attended by several Secretaries
 “ and other Officers, all of them very grave sober-look-
 “ ing People, who examined every thing with all the
 “ Nicety and Strictness of an Inquisition. They called
 “ for our Journals, questioned our Pilots, Mariners,
 “ and even the Cabin-Boys, particularly as to this
 “ Point, Whether we had not formed a Design of touch-
 “ ing at *Brazil* before we were in such Distress? They
 “ all answered in the Negative; but still we had so lit-
 “ tle Hopes, that every one in the Ship, who had it in
 “ his Power, made them some Present or other, which
 “ they took indeed, but scarce gave us Thanks. At
 “ last they took their Leaves, and sent some Carpenters
 “ on board, to whom our Captains made such an Ap-
 “ plication, that they reported our Leaks to be so
 “ dangerous, that the Crew were very much alarmed,
 “ and were afraid of sinking before they got out of the
 “ Ship.

“ As soon as this Report was made, we had Leave
 “ to go on Shore, which was refused us before; and we
 “ had also Leave given us to take Lodgings where we
 “ thought fit in the City, but with strict Caution not to
 “ attempt any kind of Trade on Pain of forfeiting both
 “ Ship and Cargo. The Officers put on board the Vessel
 “ talked the same Language at first, but seeing the Im-
 “ pression it made, and that our People were very exact
 “ in that Particular, they were so kind as to explain
 “ themselves the third Day, telling us that this was all
 “ a Farce; that the Judges themselves knew it; that
 “ they understood by our Presents, we were a good sort
 “ of People, and, that we should have, every Night,
 “ Boats come off with all sorts of Merchandize; and
 “ that they would take care we should run no sort of
 “ Risk, either in buying or selling. The Boats came
 “ accordingly, and though at first we were a little sus-
 “ picious, yet in one Week’s time their Language was
 “ perfectly understood, and Trade went on briskly every
 “ Evening, as soon as it was dark.

“ We imagined there would be no Difficulty in pro-
 “ curing Carpenters and other Workmen, if we gave
 “ them good Wages, but we were mistaken; for none
 “ of these People durst take our Money till they had
 “ Leave, and that Leave was not to be had but by dint
 “ of Presents; which being properly bestowed the Car-
 “ penters came on board and went to work. It is lite-
 “ rally true in *Brazil*, that Money will do all Things,
 “ and that nothing is to be done without Money. We
 “ staid there four Months, and found few honest Men
 “ except the Viceroy.

“ He was the first that ever had that Title, all the
 “ former Governors being called Captains-General;
 “ and his Title was not only higher, but his Power much
 “ greater than theirs; which was intended to redress the
 “ many Corruptions and Iniquities that had crept into
 “ the Government. The Nobleman graced with these
 “ Honours, was the Count *de Villaverda*, one of the
 “ greatest Families in *Portugal*, who had served as Ge-
 “ neral of Horse in the last War, and was in every re-
 “ spect a Man of as much Worth and Honour as his
 “ own, or any other Country, could boast. He found it
 “ very difficult to execute his Instructions, but he certainly
 “ set all his People a good Example; for in the corruptest

“ Country in the World he behaved with the greatest
 “ Probity Man could do, and laboured all that was in
 “ his Power to prevent the bad Effects of a contrary
 “ Conduct in others. But it may be naturally expected
 “ that I should give some Account of this great City,
 “ and I shall accordingly do it as exactly as I can:
 “ *St. Salvador* is situated at the Entrance of the Bay of
 “ *All Saints*, and has a very fine Port, which might be
 “ made still more commodious than it is, if Art and
 “ Industry gave a little Assistance to Nature: The pre-
 “ sent Viceroy has attempted this, and it is most certain
 “ that if they execute his Design in its full Extent,
 “ the Harbour of *St. Salvador* will become the best in
 “ *America*.

“ The City is divided into the Upper and the Lower:
 “ We will begin with the second, in which live all the
 “ Merchants, and People of Business; and perhaps
 “ there is not in the World a Place, for its Size, of
 “ greater Hurry or greater Trade: It lies at the Foot of
 “ a Hill which is not very high, but excessively steep.
 “ There is in it a royal Arsenal, besides the King’s Ware-
 “ houses and Magazines; which are large, well filled;
 “ and kept in excellent Order. There is likewise a very
 “ fine Yard for building Ships; and it is very wonderful;
 “ that the Policy of the *Portugueze*, in this respect, is
 “ not imitated by other Nations that have Colonies in
 “ *America*; for Ships are not only built here, at a much
 “ easier Rate than in *Europe*; but are likewise better, and
 “ more serviceable, because the Timber is excellent in
 “ its Kind, and incorruptible in its Nature, so that the
 “ Worms, which in the *Mediterranean* and the *West Indies*,
 “ make a swift and certain Destruction in all our
 “ Vessels, how well soever they may be sheathed, are
 “ not able to penetrate these. The same Thing is
 “ practised in almost all the other Parts of *Brazil*,
 “ which is certainly a very wise, and a very profitable Re-
 “ gulation. And as, on the one hand, we may be
 “ very well surprized, that other Nations have not imi-
 “ tated the *Portugueze* in this respect, so, on the other
 “ hand, there is no less Reason to be astonished; that a
 “ Nation so prudent and politic in this Particular, scarce
 “ acts with common Sense in any other.

“ The upper Town is seated on the Summit of the
 “ Mountain; the Houses are large enough, and some
 “ are pretty convenient; but the Inequality of the
 “ Ground on which they stand spoils their Appearance,
 “ and renders the Streets very disagreeable: The grand
 “ Place, or great Square, is in the Middle of the Town;
 “ and the Viceroy’s Palace, the Town-house, the Mint,
 “ and other public Buildings, occupy four Sides,
 “ which are handsome enough, but have only this singu-
 “ lar in them, that they are built of Stone brought from
 “ *Portugal*, for in all this Country they have none fit for the
 “ Purpose: The *Jesuits* College is, beyond all Dispute,
 “ the largest, fairest, and most finished Building in the
 “ City, more especially the Sacristy, which is lined
 “ throughout with the most beautiful Tortoise-shell,
 “ wrought and fixed together in the most elegant
 “ manner, so that nothing can be conceived more agree-
 “ able to the Eye, or more satisfactory even to the
 “ nicest Taste: There are several other fine Churches;
 “ and that of the *Benedictine* Abbey, which is now
 “ building, will rival, if not exceed, the Church of the
 “ *Jesuits*; but the Cathedral, which without doubt
 “ ought to be the noblest Structure, and which really
 “ seems to be so at a Distance, is however far from ap-
 “ pearing either neat or regular when one comes to
 “ examine it; yet, if the Richness of Gilding may
 “ entitle a Church to be thought fine, this must be ac-
 “ knowledged to surpass not only all the Churches here,
 “ but throughout the greatest Part of *America*.

“ There is also amongst the Convents in this Capital,
 “ one very remarkable of the Order of *St. Clare*, and
 “ another, destined to the Use of such young Girls as are
 “ exposed and abandoned by their Parents. It is amaz-
 “ ing to see how much these Foundlings are considered
 “ in this Country; the Kings adopts them all, and the
 “ Ladies of the first Quality frequently take them
 “ Home, when at a proper Age, and breed them up as
 “ their

“ their own ; which is certainly a very laudable Charity ; but is, in some Cases, attended with great Inconveniencies. The City of *St. Salvador* is the Seat of an Archbishopric, which is usually filled by some Ecclesiastic of the best Family in *Portugal*, as well on Account of its large Revenue, as because of the Share that Prelate has of the Government. The City is much longer than it is broad, and, if we speak of it only within the Walls, it is but small ; but if we take in the Suburbs, it may pass for a pretty large Place ; the Number of Houses having been computed at two thousand, and that Computation is, perhaps, rather below than above their real Number.

“ The Viceroy has two Councils, one of Criminal, the other of Civil Affairs, in which he presides ; but Justice goes on very slowly, and there is not a Country in the World where so much Paper is blotted by the Lawyers as here, before any final Judgment is obtained. In former times it was here as in the *Spanish* Governments, the Captain-General durst not punish, much less put to Death, any Native of his Master's Dominions in *Europe* ; but the present Viceroy has broke through this, and ventures to condemn Murderers and such like Criminals, to suffer the Punishments they deserve ; but the Proceedings are still so slow, and the Precautions taken so many, that there is no sort of Danger of any Man's being sent to the Gallows there, before he very richly deserves it ; and the only Scandal to the Government is, that the Road thither is not quite so much beaten as it ought to be ; for it would be certainly much better that five were hanged every Year, than ten murdered with Impunity.

“ The Commerce of *Brazil* is very considerable, and the Luxury of the Inhabitants as great as can well be imagined. There is an annual Fleet comes from *Portugal* with *European* Goods, consigned by the Merchants of *Lisbon* to their Factors here, where they never wait long for their Cargoes, which consist of Sugar, Tobacco, and Gold Dust, all of which are commonly laid up in their Magazines ready against the Arrival of the Fleet, with the Contents of which they are also perfectly well acquainted ; so that to land the Commodities of *Europe*, and to ship those of the Country, is almost all they have to do. The Inhabitants may be divided properly enough into three Sorts of People, *viz.* Planters, Factors, and Mariners. The former buy as many Slaves as they can employ in their Sugar and Tobacco Works, or in the Mines ; and when the *Lisbon* Fleet comes they ship their Commodities on board it, and receive an Equivalent in *European* Goods and Manufactures by the next Year's Fleet. The Factors keep Magazines of all Sorts of Goods that come from *Portugal*, with which they purchase Sugar, Tobacco, and Gold, of such Planters as want an immediate Supply of the Things they deal in, without waiting for next Year's Fleet. As for the sea-faring People, the chief of their Business consists in making frequent Trips to the Coast of *Guinea* to purchase Slaves. I do not speak here either of the Lawyers or the Soldiers ; and my Reason for it is, they being generally either Planters or Merchants.

“ The *Guinea* Trade is very considerable ; those employed in it from this City or Bay, bringing over usually twenty, or five and twenty thousand Negroes every Year ; and of these, fifteen thousand, at least, are disposed of amongst the Inhabitants of *St. Salvador*. There is not a *Portuguese* there, who has not, at least, a dozen Blacks in his Service, and they very often employ them in such Offices as are equally contrary to the Interest of Religion, and of the State. They arm, for Instance, such of them as are clean-limbed well-made Fellows, each with his Sword and Dagger ; and as they have a Sort of brutal Fierceness, which some miscall Courage, they are capable of doing any thing they are commanded, of what Kind soever ; and, by this Means, they acquire such a Habit of doing Mischief, that they very frequently do it without any Commands at all. There are also Abundance

“ of these Fellows that are free ; that is to say, have either obtained their Liberty, as a Reward of their Services, or, have purchased it with Money. It is really astonishing, all Things considered, that some dreadful Revolution has not happened to the *Portuguese* in this Country, from their weak and ill-judged Indulgence for these Negroes, who are much more numerous, as well armed, and, if it be possible, more wicked than themselves.

“ It may seem strange that I say this, but it will surely appear stranger, when I affirm, that in saying this, I do not at all exceed the Truth. In short, the far greater Part of the *Portuguese* settled here, are Hypocrites in Points of Religion, and totally destitute of Morals ; Thieves and Sharpers by Profession ; and very frequently Murderers from Resentment. There is no Order, no Decency, no Obedience known amongst them ; every Barber, Shoemaker, and Taylor, struts with his Sword and Dagger, and looks upon himself as equal to any Officer in the Colony, because his Face is of the same Complexion. The present Viceroy is sensible of, and detests, this Conduct. When he first came over he laboured to reform it ; but Custom has so strongly established it, that hitherto his Labours have proved vain.

“ Of late Years, and since the Discovery of the Mines, they have formed a kind of new System of living, which some Time or other will prove fatal to them ; for, instead of cultivating their Plantations, they send most of their Slaves to the Mines, upon these Conditions : Their Master finds them a Pound of Meal a Day, and if they eat any thing else they buy it themselves ; in return, the Slave is bound to pay his Master daily such a Quantity of Gold ; if he happens to get more, he lays it by, to make up for Deficiencies, or, by living hard, he saves enough to purchase his Freedom. Thus the Masters are at a kind of Certainty, with respect to their Estates ; for so many Slaves produce so much Money certain : But, in the mean Time, their Sugar and Tobacco is decaying ; and, which is much worse, they are in Danger of wanting necessary Subsistence ; for which they now depend chiefly upon the Fleets from *Portugal* ; and perhaps at *Lisbon* this may be looked upon as an Advantage, because it is a very strong Tie upon the Colony ; since, if they do not continue good Subjects, they must be content not to eat. As it is, indeed, few People live worse, since the greatest Part of their Victuals is salt Meat, or dried Fish, and all the Bread they have is made of a powdered Root, so that there is scarce a Country in *Europe* where a Man cannot live better upon Half a Crown a Day, than he can in *Brazil* for twenty Shillings.

“ The Truth of the Matter is, that the People of *Brazil* love Shew and Magnificence, fine Cloaths, Jewels, and a large Train of Servants, better than what we call Good-Living. Yet some Feasts they have, but Feasts that bring after them a long Train of Fasts ; for every Man has his Guardian Saint, upon whose Anniversary, perhaps, he spends his whole Year's Revenue, or, at least, the best Part of it, and never has a good Dinner afterwards, except at his Neighbour's, upon the like Occasion. Yet there are prodigious Sums of Gold pass through these Peoples Hands, though undoubtedly they were much happier before the Mines were discovered, and would be so again, if there was not a Grain of Gold Dust in the Colony. The Plate Fleet, this Year, from *Rio Janeiro*, was said to be worth thirty Millions ; that is, about a Million and an half of *English* Money ; but the Fleet from the Bay carried but twenty-four thousand Arbores of Sugar, whereas they had formerly made sixty thousand, and their Tobacco Trade decays in Proportion : Yet, I believe, it may be doubted whether *Portugal* is much the richer for all this Gold ; since the *English* and *Dutch* furnish all the Manufactures, or, at least, the greatest Part of them that are sent to *Brazil* ; whereas, when they brought over only Sugar, Tobacco, *Brazil*-Wood, and other such-like

“ Commo-

“ Commodities ; they had considerable Returns made
“ them in Money.

“ They seem to be still under great Apprehensions
“ of being, some Time or other, attacked in this Coun-
“ try, against which they are provided pretty effectually,
“ since there are very few Colonies better fortified,
“ in all respects, than this, as will appear from the
“ Account I am going to give you of their Works for
“ the Security of the Bay. In the first Place, they
“ have at Point *St. Antonio* a great square Fort, and
“ below it a smaller, with ten large Pieces of Cannon,
“ which two Fortresses command the Mouth of the
“ Bay. They are likewise tracing Ground for a new
“ Fort, which is to be called *The Castle of St. Peter*,
“ and, when built, will be very strong. In the Middle
“ of the Harbour they have a large Fortrefs, which of
“ late they have repaired, and have now augmented.
“ The Arsenal is flanked by two strong Bastions, which
“ command the whole Port. On the other Side, between
“ *Monserat* and this City, they have erected a fine Ci-
“ tadel, which is a regular Square, admirably fortified
“ in every respect, and well furnished with Brass Ar-
“ tillery. At the Point of *Monserat* again, they have a
“ small, but strong Fort, with twelve Pieces of heavy
“ Cannon. There are yet two other Fortresses to be
“ mentioned, one between *St. Antonio* and the City,
“ where they make their Gunpowder, and the other the
“ Powder Warehouse, which lies on the other Side of
“ the City, and commands a large artificial Lake made
“ by the *Dutch*; so that the City of *St. Salvador* is cover-
“ ed by the Sea on one Side, and by the Lake on the
“ other. The Garrison consists of two Regiments of
“ Foot, three Regiments of Militia, and a Regiment
“ of free Negroes, besides some Cavalry which the
“ Viceroy keeps up to restrain the *Banditti*, who are
“ very troublesome and do a great deal of Mischief in
“ the distant Parts of the Colony.

“ After having thus related to you the principal things
“ I have seen here, though with little Method, yet
“ with much Truth, I ought now to conclude; but as
“ there are still some things that have escaped my Pen,
“ though not my Observation, I think it may not be
“ amiss to add them here, though without much Or-
“ der, rather than omit them entirely; the rather as
“ they will contribute to explain some Passages that have
“ gone before, and render the whole of my Account
“ more perfect. The better Sort of People in *St. Sal-
“ vador* very much resemble the *Chinese*, that is to say,
“ they are excessively civil and complaisant to Strangers,
“ with a View to obtain from them Presents and Gra-
“ tifications of much higher Value than the Trifles they
“ bestow; and if their Expectations on this head are
“ not answered, they never fail to give Strangers as
“ strong Proofs of Resentment at the End of their Ac-
“ quaintance, as they did of their Politeness at the Be-
“ ginning. Their Forces in *Brazil* are, at present,
“ much superior to any thing that can be sent against
“ them; and what I take to be the chief of their Strength
“ is, their being used and seasoned to the Country; so
“ that I am fully persuaded that an Attempt to dispossess
“ them by any Nation except one, would be vain and
“ fruitless, and serve only to create a vast Expence of
“ Blood and Treasure to no end or purpose: But for all
“ this, it is very certain that either Privateers or small
“ Squadrons of Men of War might distress them very
“ much upon their Coasts, and, perhaps, enrich them-
“ selves considerably, by taking some of their Maritime
“ Places.

“ At the very Time I was there a Pirate did a great
“ deal of Mischief, and took abundance of Ships with
“ Impunity. The Crew, as is usual in such Vessels,
“ was composed of People of all Nations; and it was
“ commanded by a *Spaniard* from the Island of *St.
“ Domingo*. The Force of this Ship was far from being
“ great; for, according to the Accounts the *Portuguese*
“ gave of her, she carried but thirty Guns, and her
“ Crew consisted but of three hundred Men; yet the
“ whole City of *St. Salvador* was alarmed at the Re-
“ port; and though the Viceroy immediately equip-
“ ped a fine new Frigate, which he had caused to be

“ built there, yet she was manned so slowly, that the
“ Pirate had time enough to bear away with her Prizes.
“ In a Word, there is nothing of the old Spirit and
“ Bravery of the *Portuguese* Nation to be seen here; but,
“ on the contrary, the People are all lazy, indolent,
“ and quite given up to their Pleasures; this I take to
“ be owing to their being served by Negroe Slaves; for
“ the Servility of these poor Creatures makes their Mas-
“ ters insolent; and most of them keeping Seraglios
“ of black Women, become enervate in their Bodies,
“ and lose all Firmness and Grandeur of Mind; a thing,
“ which as it occurred to me from Experience, so I be-
“ lieve it will appear very natural to you, from your
“ own good Sense and thorough Knowledge of human
“ Nature.

“ Upon the whole, therefore, I am inclined to believe
“ that, unless by a constant Succession of wise and good
“ Governors, the Manners of the Inhabitants are chang-
“ ed, and their ill Customs abolished, there will, some
“ time or other, either from their Want of Provisions,
“ the Insolence of the Negroes, or some such like Cause,
“ happen an Insurrection or Revolution, which will
“ change the Face of Affairs here; for that a Country,
“ where the Inhabitants are plunged into Luxury and
“ Corruption, should enjoy, for a long series of Years,
“ uninterrupted Tranquility, is contrary to all Maxims
“ of Policy; and, indeed, that private Crimes and Public
“ Peace should constantly dwell together, is not very
“ reconcileable to Common-Sense.” Thus far my Au-
“ thor, to whose Account I shall presume to add a few
“ Particulars that I have collected elsewhere.

The City of *St. Salvador* lies in the Latitude of 14°
South, and is at present the Centre of the *Portuguese*
Trade in this Part of the World. Authors differ very
much in the Accounts they give us of the Fleets sent
hither annually from *Lisbon*; for some make them dou-
ble what others report them; but the Reason of this is,
that the one speak of the whole *Brazil* Fleet, which
generally assemble in the Bay of *All Saints*, in order
to return together to *Europe*; and the other of the Fleet
from *Lisbon*, expressly destined for the Bay, which may
be about thirty Sail escorted by two Men of War, and
which usually sail about *March*.

The Commodities they carry are Wine, Brandies,
Meal, or Flower; Oil, Cheese, Cloths, Stuffs, Linnen,
Iron rough and wrought; Paper, all kinds of Kitchen
Utensils, Laces, and most kinds of Apparel. On the
other hand, they bring from thence the best Tobacco
in *Brazil*, which is so much esteemed in *Europe*; Sugar,
Indigo, Balsom Copahu, or Copaiva, Ipecacuanha, Pa-
reira Brava, Cinnamon, long Pepper, Ginger, Woods
for dying, and some for inlaying; Ambergrease, and
other rich Drugs and Perfumes; besides these they also
export from hence raw Hides, Train-Oil, and Whale-
Fins, abundance of these Creatures being taken upon
this Coast, and, for this forty Years last past, Gold,
Amethysts, and Diamonds. There are likewise some
Silver Mines in *Brazil*, which, though not wrought to
such Profit as to allow the exporting much of this Metal
to *Portugal*, yet furnished sufficient for home Circula-
tion; and of this Silver that Money is coined at *St.
Salvador*, which is current through the whole Colony;
and which bears on one Side the Arms of *Portugal*, and
on the other a Cross charged with a Sphere, with the
following Motto: *Under this Sign will I stand*.

All the rest of the Captainships which lie farther to
the South, carry on their Trade by the *Rio Janeiro*, so
called for its having been discovered in the Month of
January 1515; and which, from being scarce known to,
is at present become one of the most famous and con-
siderable Rivers in, the World. The Banks of it are as
beautiful and pleasant as can be imagined; the Climate
fine; the Soil extremely fertile, producing Sugar, In-
digo, Tobacco, and Cotton, all in very great Perfec-
tion. It has been likewise found, that *European* Corn
will grow here with very little Trouble, and to great
Perfection; but, for the Reasons already assigned, this,
and all other Improvements, have been disregarded, tho',
independent of the Gold Mines which have been dis-
covered in this and the neighbouring Captainships of *St.*

Vincent, this might be considered as the very richest Part of *Brazil*. The *Portuguese* that are settled here are quite a different Sort of People from those in the Bay of *All Saints*; for they are active, industrious, well inclined to Foreigners, and suffer the *Indians*, who live amongst them, to enjoy as much Freedom as themselves, which renders the Country a perfect Paradise; and it is not easy to imagine, what vast Cargoes were brought from the *Rio Janeiro* before the Gold Mines in that Country were discovered.

The City of *St. Sebastian*, which is the Capital of this Country, stands very commodiously in 23 Degrees of South Latitude, on the West Side of the River, about two Leagues from the Sea. This City, which is very well fortified, is the Seat of a *Portuguese* Governor, and a Bishop's See, Suffragan to the Archbishop of *St. Salvador*; there are likewise several other considerable Towns on the *Rio Janeiro*, all of which have a large Share of Trade, as may appear from the Number of Ships, which compose the Fleet sent hither annually from *Portugal*, which consists of between twenty and thirty Sail of Vessels, of 500 Tons Burden, which are usually escorted by two Men of War. The Commodities brought from hence are, generally speaking, the same with those brought from the Bay of *All-Saints*, Diamonds only excepted. After saying this, it may be naturally expected that we should give the Reader some Account of the Diamond Mines here; which, however, is a Thing very difficult to do, there being very little known of them, with any Degree of Certainty; but the few Circumstances that we have been able to draw together, in relation to this important Article, are these.

It is about forty Years ago, that some precious Stones were brought to the City of *St. Sebastian*, taken out of a small River lying Westward of that City, which were, at first, judged to be very fine Pebbles; but it was not so soon that they were brought over to *Europe*. About the Close of the last general War these fine Pebbles were found in greater Quantities; and we are told, that some rich Planters began to employ their Slaves in digging the black heavy Earth, on the Sides of the Mountain, from whence this River descended, and then these Stones were found in greater Plenty; some of them were very large, but most of them of a black or yellowish Cast, which hurt their Lustre, and sunk their Value; yet notwithstanding this, many of the yellow Stones were brought to *Lisbon*, and sold for Topazes.

Afterwards, the Crown of *Portugal* interposed, and the working of these Mines was forbidden; which, however, did not hinder their coming in considerable Quantities; for sometimes it was said, they were found in this or that River, and not dug out of any Mine; sometimes they had other Names given them, and many of them were sent to *St. Salvador*, and from thence exported to *Europe*, under a Notion of their coming by the *Goa* Fleet from the *East-Indies*. This involuntary Fraud raised their Value; and, at last, the Crown of *Portugal* became convinced, that such as pretended to great Skill in Stones had deceived them; and that some of these *Brazil* Diamonds were scarce to be distinguished from Oriental Stones: Upon this they altered their Measures, and it was permitted to send over rough Diamonds in the *Rio Janeiro* Fleet, under certain Restrictions; which Licence making the Value of these Jewels still more and more apparent, the King of *Portugal* resolved to put this Trade under a new Regulation; which, as far as I know, has subsisted ever since. This new Order took Place in the Year 1740, when his *Portuguese* Majesty let these Mines to a Company at *Rio Janeiro*, for an annual Rent of one hundred thirty eight thousand Crusades, which is twenty six thousand Pounds of our Money, upon Condition, that they employed no more than six hundred Slaves at these Mines; which Condition plainly proves, that they are far greater and more considerable than they have generally been esteemed to be.

It is very probable, that the coming of these Stones into *Europe* may sink the Price of Diamonds considerably; but it must, at the same Time, be allowed, that it cannot but prove highly advantageous to the *Portuguese*, since it will operate very effectually in their Favour, in

regard to the Balance of Trade; for if they dispose of these Stones to any Nation, upon whom they have already a Balance, they must bring Money into the Kingdom; and if, on the other Hand, they can find a way to sell them, either to us, or to the *Dutch*, this will lessen the Balance in our Favour, and prevent the Exportation of Gold, which must have been otherwise sent abroad, to pay that Balance; so that, take it either Way, the Discovery of these Diamond Mines, is of very high Consequence, and, if wisely managed, may prove of prodigious Advantage to this Nation.

But let us now proceed to what little remains of the History of this valuable Colony. Southward from the Captainship of *Rio Janeiro* lies the Captainship of *St. Vincent*, which I take to be the richest Country in *Brazil*, perhaps in all *South America*; and therefore I shall describe it more particularly. It is bounded on the North by the Captainship of *Rio Janeiro*; on the East by the Ocean; on the South by the new Captainship, or that styled *Del Rey*; and on the West by the Mountains of *la Plata* and Countries inhabited by various savage Nations: It extends from the Latitude of 22 Degrees to 27 Degrees South; and is in length from North to South, about three hundred Miles, and in Breadth, from East to West, in some Places, near one hundred and eighty Miles, but the greatest Part of it is not above half so broad.

The Town of *St. Vincent* is situated on a very fine Bay of the *Atlantic* Ocean, or, as some of the best Maps I have seen represent it, on a kind of Peninsula, very well fortified; a little to the North-west lies the Town of *Santos*, which some look upon to be the Capital of the Province; and which, as I have found, in the Memoirs of a *Spanish* Traveller, has as fine a Port as any in the *West Indies*, capable of holding the largest Ships, and which might be fortified in such a Manner, as to be able to resist any Strength, that either in this Part of the World, or from *Europe*, could be brought against it. The same Writer, who was in these Parts, towards the End of the last Century, has given us a very full Account of them, with which I was furnished by an ingenious Gentleman, who thought it might be of use to me in the History of *Spanish America*, which I was then writing, and which I shall insert here, as in its proper Place; the rather, because I think there is no Part of the World less known, or which, therefore, it can be more agreeable to the inquisitive Reader to find accurately described.

“ The *Portuguese*, says my Author, had not shewn
“ any great Concern, either for extending or improving
“ their Territories in *Brazil* after the Expulsion of the
“ *Dutch*, till a certain Statesman advised Don *Pedro*, about
“ the Year 1685, to think of improving his *American*
“ Dominions; and more especially, the two Extremi-
“ ties of *Brazil*. That Minister suggested, that the Cli-
“ mate, at the Bay of *All Saints*, would frustrate what-
“ ever Endeavours might be used to render the People
“ active and industrious; but that it was otherwise,
“ both with the northern and southern Extremities of
“ *Brazil*; where a wise Government, and a little En-
“ couragement, might render the Country of much
“ greater Advantage to the Crown of *Portugal*, than
“ hitherto it had been. This Advice was received and
“ followed; which gave Birth, on one Hand, to the
“ establishing the *Portuguese* Forts and Settlements to-
“ wards the River of *Amazons*; and on the other, to
“ the Improvement of the new Colony at *Santos*, which
“ was then but very small.

“ The Method taken for this Purpose was singular
“ enough, most of the Persons made Choice of were of
“ the mix'd Herd, or, as the *Portuguese* call them,
“ *Mestices*, who married *Brazilian* Women; and the
“ Person intrusted with the Government of these new
“ Planters, were Priests and Monks; but they were
“ sent expressly from *Portugal*, and Care was taken that
“ they should be fit for the Purpose. The Captain-
“ General of *Brazil*; and all the Officers in the sou-
“ thern Captainships, had Orders to treat these People
“ kindly, and to give them no Disturbance in their
“ Measures. It very soon appeared, by the Effects,
“ that

“ that this Plan was very wisely concerted ; for they
“ multiplied prodigiously, and, in the Space of about
“ fifteen Years, the Priests added several hundreds of
“ Families to their Colony ; extending Westward four-
“ score, or one hundred, Miles farther than the *Por-
tugueze* had any Settlements before that Time. By
“ Degrees they purchased Slaves, more especially the
“ Ecclesiastics, whom they employed in the Silver
“ Mines ; and, treating the Negroes better than most of
“ their Neighbours, they soon became very rich ; so
“ that several Parish Priests, in the Captainship of *St.
Vincent*, were worth from ten to fifty thousand Cru-
“ sades ; that is, from fifteen hundred to eight thou-
“ sand Pounds apiece.

“ They paid the King’s Fifth very regularly, and
“ this was the beginning of the Riches drawn from this
“ Part of the World. But when it was once known,
“ that so much Wealth was to be had in these hitherto
“ uncultivated Regions, there began very soon to resort
“ thither abundance of Adventurers, of all Countries,
“ and of all Characters ; when I say of all Countries,
“ I mean *Spaniards*, as well as *Portugueze*, free Negroes,
“ *Mulattoes*, and all the different Mixtures that are to be
“ met with in *Brazil*, down to the *Carribocos*, who are
“ the Offspring of *Brazilian* Savages, by Negroe Wo-
“ men ; and by different Characters, I mean Monks as
“ well as Laymen, Soldiers, Mechanics, broken Planters ;
“ and, in short, all that Sort of Men, who are ready to
“ go any where, or to do any thing to get a Living. As
“ these were quite a different Race from those of the
“ new Colony before-mentioned, it is not to be sup-
“ posed that they could dwell together, more especially
“ as the former were the quietest, and most simple ; the
“ latter the most riotous and turbulent People in the
“ World.

“ These Adventurers, therefore, took care to look
“ out for a new Settlement, and they found one of the
“ properest Places in the World for their Reception, at
“ no great Distance. This was the thick and vast Forest
“ of *Parnabaccaba*, which overspread all the Mountains
“ at the Back of this Captainship, and in which hitherto
“ none but wild Beasts took up their Dwelling. They
“ soon cleared a Part of this Wilderness for their Habi-
“ tation, in which they established not only a new
“ Town, which they called *San Paulo*, but a new Re-
“ public also, in which they lived after the Manner they
“ liked best. At first this was overlooked, because the
“ Country was judged of no great Value, and the adja-
“ cent Captainships were very well pleased to be rid of
“ those Sort of Folk, who resorted thither. In the Space,
“ however, of a very few Years, they grew too strong
“ to be dealt with ; for, receiving, as they did, all Sorts
“ of People, they quickly increased from two or three
“ hundred, to as many thousand, Men ; and being a
“ bold, hardy, enterprising, and daring Crew, the Go-
“ vernors knew not how to deal with them. In the
“ first Place, they took care to fortify the Avenues to
“ their Territory, which were naturally strong ; and
“ they seldom ventured abroad, but in Bodies of four-
“ score, or one hundred, Men, and in such Parties
“ they frequently traversed the whole Extent of *Brazil*.
“ These were the People who first discovered and wrought
“ the Gold Mines, which must be excessively rich, since
“ they were able to obtain such vast Quantities of Metal,
“ without any of those Assurances which the *Spaniards*
“ have in their Settlements in *Chili*. As this required,
“ however, a great Number of Hands, they seized
“ upon all the straggling *Indians* and Negroes they could
“ meet with, and compelled them to undergo such
“ Fatigues as they thought proper.

“ This new and extraordinary Commonwealth was
“ denominated, from the Place of their Denomination,
“ *Paulists*, and they would not suffer any of the *Por-
tugueze* Officers to enter their Territories ; yet they ac-
“ knowledged the Sovereignty of the Crown of *Portugal*,
“ and paid regularly what they said was the Fifth of
“ the Gold they obtained ; which, in the Year 1691,
“ amounted to one thousand Marks, or eight thousand
“ Ounces ; which shews, that at that time they drew an-
“ nually from the Rivers and Mountains in their Posses-

“ sion, forty thousand Ounces of Gold ; they took care,
“ however, every time they paid the Tribute, to de-
“ clare, they did it freely, and of their own Accord,
“ out of Respect to the Crown of *Portugal*, and not
“ from any sort of Fear or Sense of Obligation. The
“ Tyranny of the Governors of *Brazil*, and the Op-
“ pression of the *Spanish* Governors in the adjacent Pro-
“ vinces, furnished this new State with abundance of
“ Members, so that at last it became a very difficult
“ thing to get Admittance amongst them, and the Me-
“ thod in this Respect was singular enough to deserve
“ Notice:

“ They obliged such as presented themselves upon their
“ Frontiers, which they never suffered any Stranger to
“ enter, to submit to a very strict Examination, that
“ they might know whether they were fit for their Com-
“ munity, and be sure they were not Spies, or Persons
“ who intended to betray them ; upon the bare Suspi-
“ cion of which they made no Scruple of beating their
“ Brains out : But if, upon this Examination, they judg-
“ ed they might prove useful Members, they obliged
“ them to bring in two Slaves for their Support ; assign-
“ ing them a Dwelling and Plantation, by which they
“ commenced *Paulists*, and were to continue so to the
“ End of their Lives ; for any Attempt to desert was
“ punished with Death without Mercy. They made no
“ Exception of Country or Complexion ; a Savage was as
“ welcome to them as a *European* ; and every Man after
“ his Admission was at liberty to lead what kind of Life
“ he liked best, provided he did not disturb the Peace
“ of the Society. The Jesuits of *Paraguay*, either out
“ of Concern for the Souls of these People, or moved by
“ the Report of their great Riches, made several At-
“ tempts to gain Admittance amongst them, but to no
“ sort of Purpose ; yet they lived upon very fair Terms
“ with this strange Society ; and the *Portugueze* shrewd-
“ ly suspected, that the reverend Fathers furnished them
“ with Fire-Arms and Ammunition, because they knew
“ not how they could be furnished any other way.”

Our Author proceeds no farther, and therefore it is
impossible to say when or how this little Republic was
subverted ; but it is certain, that all this Country is now
in the Hands of the *Portugueze*, and as much under the
Obedience of the King of *Portugal* as any other Part of
Brazil ; but the City of *St. Paul* is still looked upon as
the Centre of the Mines, and a Garrison is maintained
there, for their Security. We know not, however, in
what manner the Gold is wrought or refined there ; but,
in all Probability, their chief Works are *Lavadero’s*,
which have been largely described in the first Volume, since
we do not hear of their using Quicksilver, as the *Spaniards*
do ; but it is very certain, that they are much increased
in Value, since the King of *Portugal*’s Fifth amounts very
commonly to one hundred and fifty thousand Pounds *per
Annum* : And it appears by the latest Accounts, that these
Mines are continually improving.

The only Captainship to the Southward of that of
St. Vincent, is that of *del Rey*, extending from the Lati-
tude of 28 to 34 Degrees, 30 Minutes, South, being about
four hundred Miles in Length, but not above one hundred
broad in any Part of it. The Country is fruitful and
pleasant ; but the *Portugueze* absolutely neglected it till
the Discovery of the Mines of *St. Vincent* put them upon
planting and securing it, by erecting several Forts on the
North-side the River *la Plata*, to which the *Spaniards*
formerly pretended, and upon which they are still sup-
posed to cast a jealous Eye. The Country in this Pro-
vince is as pleasant and fruitful as any in *Brazil*, and as
capable of Improvement ; but as it has not been so long
inhabited as the other Captainships, it is far from being
thoroughly peopled. There are only a few Villages upon
the Sea Coast, and some Fortresses on the River of *Plate*.

The chief Advantage which the *Portugueze* draw at
present from this Province, is a kind of smuggling Trade,
which they carry on with the *Spaniards*, whom they
furnish with Rum and Tobacco of their own Growth, and
with Wines, Brandy, Cloaths, Silks, and Linnens from
Europe, which occasions Quarrels and Disputes between the
two Nations, though in reality the true Ground of their
Con-

Contentions, is the Thirst of Gold in both Parties, and the Desire that each has of becoming sole Possessors of that large Ridge of Mountains which are the Western Boundaries of this Province and that of *St. Vincent*, and are supposed to be full of Mines. Some speculative Politicians have insinuated, that it is not impossible that the *Spaniards* may, some time or other, carry their Point; but if they do they must begin with reducing the *Paraguay Indians*, who are at present subject only to the *Jesuits*; for otherwise it is very certain, that they cannot raise Men enough to give the *Portuguese* any Uneasiness, who, though they have not People to spare for settling this last District in *Brazil*, have however such Numbers in the adjacent Captainship of *St. Vincent*, as would very soon repel any Invasion from their Neighbours, who, after all, it is very certain, are on this Side rather weaker than themselves. So that Struggles of this Nature if ever this should happen, may be reputed at a great Distance, and if the *Portuguese* were as free from any Apprehensions of intestine Disorders, it might be affirmed that scarce any Colony is more secure than that of *Brazil*.

17. Thus we have given the Reader, according to our Promise, a full and methodical History of this Country, from the very first Discovery thereof to this Day; that is, for upwards of two hundred Years; and have shewn by what Methods it was first peopled, from a Country scarce equal in extent to one of its Captainships; how the new Planters grew excessively rich; and how the Envy of the *French* brought them to attempt an Establishment on the same Coast, with all other Transactions relative to this Colony; so that, what we have to say by way of Remarks, will be but very short; but we hope, notwithstanding that, they will afford the Reader both Pleasure and Profit. When the Spirit of Trade and Discovery, which exerted itself in *Portugal* in the fifteenth Century, first appeared, the Crown made no other use of its Prerogative, than to point out, proportion, and procure, suitable Rewards for such as distinguished themselves in promoting the public Interest; and then every Enterprize was carried on with Vigour, every Expedition was attended with Success. The little Country of *Portugal*, which had hitherto made so inconsiderable a Figure among the Kingdoms of *Europe*, began to take the Lead of them all; and, from creeping along the Coasts of *Africa* with a few little Vessels, her Fleets began to stretch to the *East Indies*, and to embrace that Trade which was the Object of *Alexander's* Ambition. The *East Indies*, by the Rout of the Cape of *Good Hope*, was their proper Discovery; and, though *Columbus* had a little the Start of them, yet the finding and settling of *Brazil* plainly proves that *America* could not have lain long hid from their Researches. The Fruit of these great Discoveries and Conquests, was a prodigious Trade, immense Riches, and an amazing naval Power, all deduced from a right turn in the Government, which established its Power in the Extention of that of its Subjects, without exerting a tyrannical Authority over them. This created Fleets, Armies, and a Dominion superior to any thing the *Europeans* had enjoyed, from the Destruction of the *Roman Empire*. But as a true and laudable Ambition raised the *Portuguese* to such a Height, a false and bastard Ambition made way for their Ruin. *Sebastian* King of *Portugal* was a Hero, he had all the Virtues incident to that Character; but they took a wrong Turn: He embarked the whole Force of *Portugal* in a War upon the Continent for his own Glory, and to serve no national Purpose whatsoever; there he perished, and all his Army with him; which, in itself, was a great Misfortune to his Subjects; but in its Consequences a much greater; for this threw them under the Dominion of *Spain*, which, as we have abundantly shewn in the foregoing Section, was the greatest Mischief that could befall them; for, after this, there appeared no public Spirit in the Government; all their Conquests in the *East-Indies* were either given to Men who had an Interest at the Court of *Spain*, or to such as that Court desired to get out of their Way.

There was no longer any Spirit of Virtue, Generosity, or Concern for public Good, either left or encouraged;

the enriching of private Families took Place of this; and, while a few of these carried their Point, the *Dutch* stript them of their Empire in the *East Indies*, and bid fair for making themselves Masters of *Brazil*; which, if they had, *Portugal* had remained a Province of *Spain*, and not a very considerable Province neither. When the *Portuguese* recovered their former Government, we see they recovered Spirit enough to preserve *Brazil*; but, since that Time, the Court has been infected with the *Spanish* Policy; and, the Desire of extending their royal Power has, in a great Measure, extinguished that Spirit which once made them a great People. But, to confine our Reflections to *Brazil*, the great Point in the *Portuguese* Councils at present is, to secure this Trade, or at least the Profits of it, to the Crown; in order to which the several Fleets destined for *Paraiba*, *Fernambuca*, the Bay of *All Saints*, and *Rio Janeiro*, sail as regularly as the *Spanish* Galleons, and in the very same Manner. If this Trade had been left more open, the Number of Ships would have been vastly greater, and there would have been no need of Men of War to escort them, or of another Squadron being sent to look out for, and bring them home, as is at present the Case every Year, and yet the *Algerines* frequently pick up some. This Method is the last dying Effort of a maritime Power; Convoys and Escorts are pitiful things; the Flag of a maritime Power ought to be a sufficient Protection, and no Nation ought to be esteemed so that suffers another to insult a Cock-boat.

Yet all this Policy is far from producing mighty things, as we shall see from a few Examples; *Brazil* Wood is now a royal Commodity, that is to say, it is sold for the Advantage of the Crown only; and it produces about 100000 Crusades, which is something better than 15000 Pound, annually. We have already seen what the Diamond-Farm brings in; and take the whole of the King's Fifth from the Gold Mines, and it will never be found to exceed half a Million of our Money. To remedy these Mischiefs, they had recourse to Methods that increase them; for they have set up several Companies for the doing what might be better done without any Company at all: For instance, they have an *African* Company for supplying Slaves at *Rio Janeiro*, a Company to manage the Mines, and an *East India* Company, now they have almost lost the Trade to the *East Indies*. But if, instead of these Schemes, they would redress the Grievances of their Subjects in *Brazil*, encourage Plantations rather than Mines, open their Ports to all Nations, and allow of a free Trade thither from *Portugal*; instead of fewer than one hundred Ships that are now annually employed in that Trade, they would very soon have many hundreds, and *Brazil* would quickly have ten times as many Inhabitants as at present; consequently the Country would be better cultivated, and their Dominions more extended, which would produce a much larger Revenue to the Crown than it enjoys at present.

There was, indeed, a Project of quite another kind set on Foot for the Improvement, as they call it, of this Trade in *Portugal*, of which I shall give a very short Account. In the Year 1709 the King of *Portugal*, perceiving that the vast quantities of Gold that came from *Brazil* did but just touch at *Lisbon*, and then travelled over all the Countries of *Europe*, directed this Matter to be very seriously examined in his Council: Supposing that if a Method could be found out to prevent this Gold from straying, the Business would be done, and himself become, at once, the richest Prince in *Europe*. His Council accordingly examined this Point very carefully, and they reported that the *English* and *Dutch* ran away with all the Gold, in Consequence of their furnishing the Goods and Manufactures that were sent to *Brazil*; they therefore proposed, that the using these Goods, and the wearing these Manufactures, should be prohibited in that Colony; and that the People should be content with what could be sent them from *Portugal*. This was considered as a great Stroke of Policy, and was on the very Point of being put in Execution, when it was prevented by the following Method:

The famous Lord *Galway* was then there on behalf of this

this Nation, and had the Confidence of the King, of whom he demanded a particular Audience upon this Occasion, at which he delivered himself in the following Manner: “ Your Majesty cannot be sufficiently commended “ for that steady Attention which you have always shewn “ to the Affairs of your Government, and the Pains you “ have lately bestowed in examining into the Ballance of “ Trade, is a new Proof of that Merit which would “ entitle you to the Crown, had it not descended to “ you from a long and glorious Line of Royal Ancestors. But permit me, Sire, to observe, that there is “ a greater King, one by whom all Kings reign, and “ whose Providence is over all his Works. According “ to his Distribution of things, Riches belong to some “ Nations, and Industry to others; and by this Means “ the Liberality of Heaven is made equal to all. Vain, “ Sire, are all human Councils when opposed to his Wisdom, and feeble the Efforts even of royal Power, “ when directed to cross his Will. You have forbid “ Gold to be exported out of your Dominions, and you “ would willingly enforce this Prohibition, but the thing “ is impracticable. You may restrain your Subjects it “ is true, but you cannot set Bounds to their Necessities. “ But say that this was possible; suppose you could defeat the Industry of the northern Nations, what would “ be the Consequence? Their Husbandmen, Grainers, “ Weavers, and all that infinite Train of Manufacturers, “ that now labour quietly at home to cloath and feed “ your Subjects, would then turn Soldiers; and, instead “ of seeing their Merchantmen in the River of *Lisbon*, “ you would hear of their Fleets conveying them to “ *Brazil*, to fetch much more of that Gold than you “ now fetch for them. Besides, Sire, if they are Gainers “ by your Trade, they become thereby the natural Guarantees of your Dominions: It is not their Treaties “ only, but their Interests that bind them to your Service. You have potent Enemies, and you require “ powerful Friends. The Ambition of *France* knows no “ Bounds: The Pride of *Spain* will teach her to keep “ up a perpetual Claim to your Territories and Crown: “ You can have no Recourse to frustrate the Views, and “ to defeat the Endeavours, of those Potentates, but to the maritime Powers; and therefore let me beseech your “ Majesty to consider, that every Project to distress them, “ is in Effect a Scheme to destroy yourself.” This Speech had the desired Effect; the intended Prohibition was laid aside, and the *English* Nation has reaped the Benefit of this Trade ever since. I came to the Know-

ledge of this Fact, which is very imperfectly related by a *French* Author, by an Accident; and I thought it my Duty, and a Piece of Justice owing to his Lordship’s Memory, to relate it fully and fairly, as I have done; and now I shall take leave of this Subject, in order to give a short, but distinct Account of our own Discoveries in *America*, according to what I proposed at the Beginning of this Chapter.

The Labour of collecting these is great; that of digesting them into Order still greater; and the reducing the Substance of large Books into small Sections greatest of all: But the Encouragement I have hitherto received by the kind Entertainment of my Writings, and the many friendly Communications that I have met with, and to which their Merit is chiefly owing, will enable me, I doubt not, to go through the rest of this large Task, with as much Success as I have hitherto done. The Reputation of doing this is the chief Reward I have in View, because I am satisfied that a *Collection of Voyages* like these, where things are regularly connected, and the Subjects treated in their full Extent, will be of constant Service, as they have been hitherto one of the chief things wanting towards forming a Compleat Body of History. We have, indeed, very large Collections of Materials in several Languages; but then, almost all Nations have produced Writers extremely partial to themselves, and our own amongst the rest; but the Business is to purge these partial Relations, to free them from trivial Circumstances and needless Particulars, so as to bring the Knowledge they convey within a reasonable Compass, that it may be both easily read and easily understood, which is what we have endeavoured in the former Sections, and shall study to perform in what follows. As for large and entire Histories of Colonies, they are not to be expected here, as being frequent enough already, and therefore the less necessary, and requiring, besides, much more Room than we can spare. But in the last Book of this Collection, we shall insert some curious *English* Voyages, which will supply the Reader with a full Account of the Actions of those great Men of this Island, whom we are now to compare with those Heroes of other Climates, that have been already recorded; and when we have paid that just Tribute of Praise that is due to their Memories, we shall proceed in like Manner to a succinct History of the *French* and *Dutch* Settlements, which will effectually compleat the View we promised to give of *America*, and make the *West Indies* as well known as the *East*.

SECTION XVII.

The Discoveries and Settlements made by the ENGLISH in different Parts of America, from the Reign of Henry VII, to the close of that of Queen Elizabeth; interspersed with various Remarks on the Progress of our Trade and naval Power, and the Difficulties which the Nation had to struggle with in their first Attempts.

1. The History of Madoc, one of the Princes of Wales, and his supposed Discovery of America set in a true Light, and vindicated from some groundless Reflections made thereon by foreign Writers.
2. The generous Disposition of King Henry VII, with respect to encouraging Discoveries; and the Voyages of John, and Sebastian Cabot, in his Service, who first visited the Continent of America.
3. The Voyage of Sebastian Cabot, for the Discovery of a North-west Passage, in which he sailed along the Coast of that Part of North America, to which the Spaniards afterwards gave the Name of Florida.
4. The Voyage of Sir Thomas Pert, Vice-Admiral of England, and Sebastian Cabot, to Brazil, and other Parts of the West Indies.
5. The first Attempt of Mr. Hore, Merchant of London, to establish a Colony in Newfoundland; the strange Misfortunes he met with, and a memorable Instance of the Justice and Generosity of King Henry VIII.
6. The several Voyages of Captain William Hawkins to Brazil, and a singular Proof of his Abilities and Integrity.
7. A succinct Account of the Discoveries and maritime Expeditions to America, under the Reign of King Edward VI.
8. That History continued during the Reign of Queen Mary, and her Consort, King Philip.
9. The Methods taken for extending our Trade, and making Settlements in the Reign of Queen Elizabeth.
10. An Account of Sir Francis Drake’s giving the Name of New Albion, to a Country lying in the northern Part of California, and the Importance of that Discovery.
11. The first Settlement of Newfoundland, with a short Account of the Nature thereof, and the Advantages

which have accrued from the Fishery upon its Coasts to this Nation. 12. The first Attempt to settle Virginia, under the Direction of Sir Walter Raleigh, with an Account of that Colony. 13. The several Voyages of Captain John Davis, and the great Discoveries made by him in North America. 14. Sir Walter Raleigh's Expedition to Guiana; the Consequences of that Expedition, and Remarks thereupon. 15. Other remarkable naval Transactions, within the Compass of that Reign, relating to this Subject. 16. A succinct View of the State of our Trade to America, at the Time of the Death of Queen Elizabeth. 17. Remarks and Observations on the principal Events mentioned in the foregoing Section.

1. **T**HE Glory of having first discovered far distant Countries, and adding thereby to the Knowledge and Commerce of Mankind, has always had Charms sufficient to invite different Nations to put in their Claims, even though they have not been extremely well founded. When *America* was first made known, it occasioned abundance of Enquiries; and, as it was natural, recalled to many Peoples Remembrances and Considerations, Stories which had before been deemed scarce worthy of Notice: Amongst the rest our Nation put in; and the Tale told in Favour of us, as it is the earliest in Point of Time, seems to merit Relation as well or better than any other. In short, this Story asserts that *Madoc*, Prince of *Wales*, was the first Discoverer of *America*, and the Detail of his Expedition runs thus: He flourished in the twelfth Century, and was Son of *Owen Guyneth*, Prince of *North Wales*; his Brethren raising a civil War about the Division of his Father's Dominions, he chose rather to go to Sea with a few of his Friends, and seek out new Habitations, than run the Hazard of what might happen in this Dispute. Accordingly, about the Year 1170, steering due West, and leaving *Ireland* on the North, he came to an unknown Country, where he settled a Colony; and, returning thence into *Wales*, carried a second Supply of People, but was never heard of more.

That the Country he went to was really *America*, is more, I think, than can be thoroughly proved; but that this Tale was invented after the Discovery of that Country, on purpose to set up a prior Title, is most certainly false. *Meredith ap Rees*, who died in 1477, and was a famous *Welch* Poet, composed an Ode in Honour of this *Madoc*, wherein was contained an Account of his Discoveries. Now as this was several Years before *Columbus* made his first Voyage, we may be sure that this was really a *British* Tradition, and no Tale of late Contrivance. Some foreign Writers, indeed, have suggested that this was a pure Invention, designed to prejudice the Reputation of the great Discovery made by *Columbus*; but in this they rather shew their Malice to us, than discover ours; for beyond all doubt, the *Welch* had, and have still, such a Tradition, and therefore some wiser and better informed Critics have endeavoured to prove that it was not *America*, but *Groenland*, to which our *Welch* Prince sailed. In Proof of which they have observed that this Country was well known in the ninth and tenth Centuries, though it was afterwards lost.

But with Submission to these great Men, this Story does not at all answer their Purpose; for, it is evident, the Course does by no means agree; since, if he had sailed to that Country, he could not have left *Ireland* to the North. I have seen a very ingenious Discourse upon this Subject, in which is suggested, that Prince *Madoc* landed in some Part of *Florida*; that, in process of Time, the Colony he planted there proceeded round by Land, and reached the northern Parts of *Mexico*, which Country they conquered, and were those foreign Ancestors of the *Mexicans*, of whom we have heard so much from the *Spanish* Writers that have recorded the Adventures of *Cortes*, and with which the Reader is so well acquainted, that there is no need of our saying any thing more of them here, except it be this, that several *British* Words have been discovered in the old *Mexican* Tongue, and that no other *European* Nation can shew a better founded Tradition than this; for the Truth of which, however, I am very far from contending.

2. If there had been really any Desire in the *English* Nation to contest the Title of the Crown of *Spain* to the Country of *America*, it might have been undoubtedly fixed upon a much better Foundation; for, in the Life

of Don *Christopher Colon*, written by his Son in the reign of our King *Henry* the VIIIth, it is expressly said, that this great Man sent his Brother *Bartholomew* into *England*, to offer his Discovery to King *Henry* VII. and he did accordingly present a Map, dated the 13th of *February* 1488, to that Monarch; and having explained to him his Brother's Design, and what he proposed thereby, it was readily accepted; and Don *Bartholomew* was sent to invite his Brother into *England*, with an Assurance that the King would grant him all he desired. This Agreement was four Years before the Voyage of *Columbus* in the Service of their Catholic Majesties, and therefore had we been so much inclined to hunt for Titles to this new found Country, here had been a fair Pretence. But King *Henry* the VIIIth was of another Disposition; and, though he was a Prince much addicted to encourage such kind of useful Undertakings, he scorned to aim at reaping the Fruits of other Prince's Adventures; and therefore he contented himself, after missing by mere Accident *Columbus's* Discovery, with inviting other Seamen of known Reputation, to enter into his Service for like Purposes.

Amongst these was *John Cabot*, Citizen of *Venice*, who had been long settled at *Bristol*, and who thought himself capable of performing, as a Seaman, things little, if at all, short of what *Columbus* had done. He accordingly applied himself to the King, who, by Patent inrolled, dated the 5th of *March*, in the eleventh Year of his Reign, and in the Year of our Lord 1495, granted to the said *John Cabot*, and his three Sons, *Lewis*, *Sebastian*, and *Sancias*, Authority to sail with five Ships of what Burthen and Strength they thought fit, upon Discoveries to the East, West, and North; giving them the full Property of such Country or Countries as they should discover, with this Reservation only, that they should return to *Bristol*, and that they should pay him the Fifth Part of the neat Profits of their Voyage; in Consideration of which, they were to have the exclusive Right to the Countries so discovered, to which no other *English* Subjects were to trade, but by their Leave and Licence. But the Year before that Patent was granted, that is in 1494, *John Cabot*, with his Son *Sebastian*, had sailed from *Bristol* upon Discovery, and had actually seen the Continent of *Newfoundland*, to which they gave the Name of *Prima Vista*, or *First Seen*. And on the 24th of *June* the same Year he went ashore on an Island, which, because it was discovered on that Day, he called *St. John's*; and of this Island he reported very truly, that the Soil was barren, that it yielded little, and that the People wore Bear-Skin Cloaths, and were armed with Bows, Arrows, Pikes, Darts, Wooden Clubs, and Slings; but that the Coast abounded with Fish; and upon this Report of his, the beforementioned Patent was granted.

3. The next Voyage made for Discovery was by *Sebastian Cabot*, the Son of *John*, concerning which all our Writers have fallen into great Mistakes, for want of comparing the several Accounts we have of this Voyage, and making proper Allowances for the Manner in which they were written; since I cannot find there was ever any distinct and clear Account of this Voyage published, though it was of so great Consequence. On the contrary, I believe that *Cabot* himself kept no Journal of it by him; since in a Letter he wrote on this Subject, he speaks doubtfully of the very Year in which it was undertaken, though from the Circumstances he relates, that may be very certainly fixed. On the 3d of *February*, in the 13th Year of the Reign of King *Henry* VII, a new Grant was made to *John Cabot*, by which he had Leave given him to take Ships out of any of the Ports of *England*, of the Burden of two hundred Ton, to sail upon Discoveries; but before this could be effected, *John Cabot* died; and *Sebastian*

bastian, his Son, applied himself to the King, proposing to discover a North-west Passage, as he himself tells us; and for this Purpose he had a Ship manned and victualled at the King's Expence at *Bristol*, and three or four other Ships were fitted out at the Expence of some Merchants of that City, particularly *Mr. Thorne* and *Mr. Hugh Elliot*. But whereas *Sebastian Cabot* himself says, that he made this Voyage in the Summer of 1496, he must be mistaken, and he very well might, speaking from his Memory only; and to prove this I need only observe, that this Date will not at all agree even with his own Account of the Voyage; for he says expressly it was undertaken after his Father's Death; who, as we have shewn, was alive in the *February* following; so that it was the Summer of the Year 1497, in which he made this Voyage; and what he afterwards relates of his Return, proves this likewise.

But we have a direct and clear Authority as to this Fact, which is, that of *Robert Fabian*, who fixes this Voyage of *Sebastian Cabot's* to the Month of *May* 1497. And on the 11th of *June*, the same Year, he sailed as high as $67^{\circ} 30'$ finding the Sea still open, and he thought that he might this way have passed through into the *South Seas*, but his Crew mutinied, which forced him to return into the Latitude of 56° and from thence he ran down to 38° along the Coast of the Continent of *America*, which, as he expressly says, was afterwards called *Florida*, where Provisions growing short, he returned into *England*, touching by the way at *Newfoundland*. On his return, he says, he found the Nation in much Confusion, and great Preparations making for a War in *Scotland*, which agrees exactly with *Grafton's Chronicle*, who places these Preparations under the Mayoralty of *William Purchase*, that is, to the Year before-mentioned; and *Robert Fabian* says farther, that in the 14th Year of King *Henry VII.* there were three Men brought to the King, taken in the new-found Island, which he before mentioned, who were cloathed in Beast-Skins, eat raw Flesh, spoke a strange uncouth Tongue, and were very brutish in their Behaviour; but he farther adds, that he saw these People himself two Years afterwards, and that they were then cloathed like *Englishmen*, and he could not have known them to be otherwise, if he had not been informed that these were the Men brought over by *Sebastian Cabot*.

Thus, with the utmost Exactness I could use, I have set this Matter in its true Light; and have thereby shewn, that he was not only the first Person who attempted a North-west Passage; and shewed thereby, that he understood *Columbus's* Principles, but was likewise the first Discoverer of the Continent of *America*, which *Columbus* did not see till a Year after, as well as the first Discoverer of *Florida*, which Country was not so called till the Year 1512; when, as we have before shewn, it was visited by *John Ponce de Leon*, who took Possession of it for the King of *Spain*, and usually passes for the first Discoverer. It may not be amiss to observe, that *Sebastian Cabot* clearly affirms, that his Voyage was made to discover a North-west Passage; which Notion of his gave Light, as is acknowledged even by Foreign Authors, to *Ferdinand Magellan*; and induced him confidently to affirm, that such a Passage might be found by the South, which he happily effected twenty two Years after this Attempt made to the North by *Sebastian Cabot*.

I cannot say that any great Use can be made of this kind of Knowledge, but there seems to be no Reason why we should not pique ourselves upon knowing these Matters with as much Exactness as Strangers; who, by dipping into our Accounts, pretend to great Knowledge in these Matters, and very often impose upon such as will not rake into their own old musty Antiquities, but pay an implicit Regard to the bold Assertions of modern Authors; by taking the contrary Method, and resolving to be satisfied, even in Trifles, we come to judge accurately and truly, of the Deserts both of our own and of foreign Nations; so as to yield the Preference to some, and maintain our just Rights against others. As for Instance, though we cannot dispute with the

Spaniards the actual Discovery of *America*; yet, we may fairly deny, what the present Geographer of his Catholic Majesty asserts, that we rejected *Columbus's* Proposal; and we may likewise call him to a severe Account, for placing the Voyages of *Sebastian Cabot* to *Florida*, twenty-six Years later than he should have placed them, from the Accounts given by *Ramusio*, *Gomara*, *Peter Martyr*, and other Authors, whom he either had read, or ought to have read, before he took upon him to write on this Subject; of which though he writes sensibly, yet this will not excuse his writing Untruths.

Sebastian Cabot is by many of our Writers positively affirmed to be an *Englishman*, born at *Bristol*; but the *Italians* as positively claim him for their Countryman, and say he was born at *Venice*; which, to speak impartially, I believe is the Truth; for, he says himself, that when his Father was invited over to *England*, he brought him with him, though he was then very young. His Voyage for the Discovery of the North-west Passage, gained him so great a Reputation, that he was invited into *Spain*, and employed by their Catholic Majesties, *Ferdinand* and *Isabella*, in a Voyage for the Discovery of the Coasts of *Brazil*, in which he had much better Success than *Americus Vespucius*, who missed the River of *Plate*, whereas *Cabot* found it, and sailed up it three hundred and sixty Miles, which gained him such a Character at the Court of their Catholic Majesties, that, on his Return, he was declared *Piloto Maggiore*, or Grand Pilot of *Spain*; and resided several Years at *Seville* with that Character, and had the Examination and Approbation of all the Pilots intrusted by that Government.

4. Yet, after some Years, he thought fit to return into *England*, and was employed by King *Henry the VIIIth*, in Conjunction with *Sir Thomas Pert*, who was Vice-Admiral of *England*; and built a fine House near *Blackwall*, called *Poplar*; which Name still remains, though the House is long ago decayed. This Voyage of his was in 1516, on board a Ship of two hundred and fifty Tons, with another of the like Size, in which he proceeded to the Coast of *Brazil*, and afterwards visited the *Spanish* Islands of *St. Domingo*, and *St. John de Porto Rico*; in the latter of which they traded, and paid for what they had by the Exchange of Vessels, made of Pewter, as we learn from *Oviedo*; who, notwithstanding, asserts that this Vessel was a Privateer, whereas, in Fact, she was a Frigate fitted out at King *Henry the VIIIth's* Expence for Discovery.

It is a very great Misfortune that we have not a clearer and more distinct Account of this Expedition; since it very plainly appears from the Writers of those Times, that great Expectations were raised by it, and that the Miscarriage occasioned a good deal of Noise and some Reflections; but they did not fall upon *Cabot*, as appears from the following Note, taken from a Book, published by *Mr. Richard Eden*, whose Collections led the way to those of *Mr. Hackluit*, and which Book was published in 1553. "If manly Courage, saith he, (like unto that which hath been seen in your Grace as well in foreign Realms, as also in this our Country,) had not been wanting in others, in these our Days, at such Time our Sovereign Lord of noble Memory, King *Henry VIII*, about the same Year of his Reign, furnished, and sent out certain Ships, under the Governance of *Sebastian Cabot*, yet living, and one *Sir Thomas Pert*, whose faint Heart was the Cause that the Voyage took none Effect; if, I say, such manly Courage, whereof we have spoken, had not at that Time been wanting, it might happily have come to pass, that that rich Treasury called *Perularia*, which is now in *Spain*, in the City of *Seville*, and so named, for that in it is kept the infinite Riches brought thither from the new-found Land of *Peru*, might long since have been in the Tower of *London*, to the King's great Honour and Wealth of this Realm." I do not find that this worthy Gentleman left *England* after this; but, on the contrary, remained here, and promoted, to the utmost of his Power, whatever Designs were set on foot for the Encouragement and Extention of our Commerce; so that,

as I shall have Occasion to shew hereafter, he may be truly reputed the great Master of *English* Seamen, and the Father of our Colonies and Commerce.

It was this great Man that still kept up an Opinion, which, he had himself first entertained, that some Passage there was into the *South Seas*, by the North-west; and upon this Subject he wrote with so much good Sense and Strength of Reason, that if the Ships, which, while I am writing this Paragraph, have failed in Search of this Passage, should succeed, the Honour of the Discovery will redound to him; and therefore it is but just, to take this Opportunity of reviving his Reputation. His Discourses had such an Effect on King *Henry VIII.* a Prince of vast natural Parts, great Learning, and strongly inclined to heroic Undertakings, that he resolved to send another Ship, or more, on the Discovery, which he did in the nineteenth Year of his Reign. Both *Hall* and *Grafton*, in their Chronicles, speak of this; and tell us, that on mature Deliberation, the King fitted out two fair Ships, which sailed from the Port of *London*, on the 20th of *May* 1527; but not a Word of the Captain's Name, or of the Strength of these Ships; the only Particular we have is, that the King sent several cunning Men on board them. We are to understand, by *cunning Men*, Persons skilled in the Mathematics; who, with the common Sort of People, passed now, and long after, for cunning Men and Conjurers.

The worthy Mr. *Hackluit* has taken abundance of Pains to supply us with some Circumstances of this Expedition, but to very little Purpose; and, notwithstanding all his Inquiries from Persons who lived in and near those Times, could obtain no other Satisfaction than this, that a Canon of *St. Paul's*, who was reputed a great Mathematician, was one of the principal Persons concerned, and actually had took a Share in the Voyage; but to this reverend Person's Name both Sir *Martin Frobisher* and Sir *Richard Allien*, who were Mr. *Hackluit's* Authors, were Strangers; one of them, however, remembered the Name of the biggest Ship, which was *Dominus Vobiscum*, or the Lord with them, which agrees very well with the other Part of the Story, that the chief Promoter of this Voyage was a Priest. These Ships sailing very far to the North-west, the largest of them was cast away in the Mouth of a very large Gulph, very probably in the Entrance to *Hudson's Bay*, and there perished; the other, having coasted along the Island of *Cape Britton* (so they wrote it then) returned in *October* following, and brought a large Account of the Places they had seen, and of the Hardships they had undergone.

It appears from thence, that these early Attempts to discover new Countries, and extend our Commerce, were attended with great Difficulties, much beyond those that were met with by the *Spaniards* and *Portuguese*, which may be attributed to several different Causes, and amongst others these: Our Shipping was then but mean, though both the Kings whom *Cabot* served appeared, to be very desirous of having a naval Force, since *Henry VII.* had spent fourteen thousand Pounds in building one large Ship, and his Son *Henry VIII.* added several others to the Navy; yet I think our Ships were, generally speaking, larger than those of most of our Neighbours; but very probably they were built abroad, and neither in Form nor in Materials were fit for those Seas to which they were navigated. The Skill of our Seamen could not be very great at this time; for as in all other practical Cases, so in this, nothing advances People so fast as Experience, and therefore I reckon that the want of this was a great Deficiency in these Times; we may add, that we pursued, with incredible Diligence, those Discoveries that carried us into dangerous and disagreeable Climates, which was directly contrary to the Practice of the *Spaniards* and *Portuguese*; besides those Voyages produced little or no Advantage, so there was nothing to provoke the common, or even the trading, sort of People, to engage in them: And lastly, King *Henry VIII.* was bent upon finding a North-west Passage, that he might have a Way of his own to the *East Indies*, and not be obliged to follow the Rout either of the *Spaniards* or of the *Portuguese*.

5. It was this Inclination of the King's, that produced

a Spirit in the Nation of discovering and settling in these Northern Parts, let the Dangers be what they would, or the Difficulties to be overcome ever so many or apparent; a very strong Instance of which occurred in the twenty-eighth Year of his Reign, and is the most remarkable Passage in it to our Purpose: One Mr. *Hore*, a Merchant of *London*, a Man of good Family, considerable Fortune, great Courage, and very well versed in most of the Branches of the Mathematics, was resolved to undertake a Voyage, and attempt a Settlement on *Newfoundland*, and to go thither himself. He no sooner made this Intention of his known, than he received all the Countenance and Encouragement from the Crown that he could expect; and as this gave much Credit to the Expedition, so, in a short time, abundance of young Gentlemen, of good Fortunes and distinguished Families, offered to share both the Expence and Danger of the Undertaking.

Amongst these were Mr. *Wickes*, a West-country Gentleman of five hundred Marks a Year; Mr. *Tuck*, a *Kentish* Gentleman of Fortune; Mr. *Tuckfield*, Mr. *Thomas Butts* Son of Sir *William Butts*, the King's first Physician; Mr. *Hardy*, Mr. *Biron*, Mr. *Carter*, Mr. *Rastal*, Brother to Serjeant *Rastal*, and several others; who went with Mr. *Hore* in the largest of his two Ships, the *Trinity*, of the Burden of one hundred and forty Tons: In the lesser Ship went Mr. *Armigall Wade*, a young Gentleman of great Hopes, and much Learning; Mr. *Oliver Dawebney* of *London*, Merchant; and other Persons of Character, to the Number of thirty, in both Vessels. About the End of *April*, 1536, all Things were ready; the *Trinity* and *Minion* fit to sail, and the whole of both Ships Company, to the Number of one hundred and twenty, mustered at *Gravesend*; after which they went with much Ceremony on board.

They soon after sailed, and arrived in the Space of two Months at *Cape Breton*; from whence they sailed round a great Part of *Newfoundland* to *Penguin Island*, in the Latitude of about 50 Degrees, as they computed; but which lies, truly, in 50 Degrees 40 Minutes; where they found great Plenty of those Fowls, from whence the Island takes its Name: They afterwards went on shore upon the East-side of *Newfoundland*, and had an accidental View of a Boat full of the Savages that inhabited that Country, whom they pursued both by Sea and Land, but were not able to overtake them. They staid here till their Victuals began to grow very short, and being then afraid to trust themselves at Sea in such a Condition, they delayed going on board till they were in such Distress that they actually eat one another; that is to say, some killed their Companions privately in the Woods, hid them, and then roasted and eat their Flesh secretly, till this horrid Practice coming to the Knowledge of their Captain, he, by a most judicious and pathetic Speech, brought them to resolve rather to live upon Grass and Herbs than subsist by this detestable Method any longer.

But it fell out soon after, that a *French* Ship put in there well manned and well victualed, of which our Countrymen resolved to take Advantage, being weary of a Country in which they had endured such Miseries; and therefore, watching a fair Opportunity, they possessed themselves of the *French* Ship, and, leaving their own, sailed directly for the Coast of *England*. They returned safely, and arrived at *St. Ives* in *Cornwall* about the End of *October*; and then the Gentlemen, dispersing themselves, returned to *London*; but so much altered by their Fatigues, that Sir *William Butts*, and his Wife, could not know their Son, but by a particular Mark upon his Knee. We had never known a Word of this strange Adventure, if it had not been for Mr. *Richard Hackluit*, who rode two hundred Miles to gain these Particulars from the Mouth of Mr. *Thomas Butts*, the only Person then living, who had a Share in that Expedition; and no wonder, since it was fifty-three Years afterwards that he obtained this Communication: There is another Circumstance relating to this unfortunate Enterprize, which must, by no Means, be omitted.

Some Months after, the *Frenchmen* came to *England*, with a dreadful Complaint, that the *English* had ran away with their Ship, and had left them to starve, if they had

not

not supported themselves by fishing. King *Henry* examined very closely into the Affair, and finding that extreme Want was the sole Cause of an Action, otherwise inexcusable, he satisfied the *French*, to the full Extent of their Demands, out of his own Coffers, and pardoned, in his own Subjects, that Wrong which Necessity forced them to commit. These were very hard Beginnings; and yet to these we owe our *Newfoundland* Trade; and, I think, it is much to the Honour of the *English* Nation, that without having any of those Encouragements, which the *Spaniards* met with from the very beginning, they continued to pursue those Expeditions for Discovery; till in the End they met with those Rewards which they so well deserved.

6. Within this dark Period of Time, for the Accounts of our rising Navigation have been most imperfectly transmitted to Posterity, there were Numbers of *Englishmen*, who, with very little Prospect of private Advantages, spread themselves, by the Help of foreign Shipping, into all Parts of the World; that, by their Enquiries and Observations, they might be able to understand how Trade was managed, and Maritime Affairs conducted, in other Countries; that, in time, by their Informations, the like Advantages might accrue to their own, of which Voyages and Travels, there are many short Notes collected in *Hackluit*; which do great Honour to these Times, and ought to perpetuate the Memory of the worthy Persons; who, with so much Labour and Hazard, laid the Foundation of our naval Strength and Glory.

These Notices soon roused active and industrious Persons, to try what Use could be made of such Helps, and perhaps the Reader will not think his Time mispent in reading an Instance of this Kind. Mr. *William Hawkins*, the Father of the famous Sir *John Hawkins*, and the Grandfather of Sir *Richard Hawkins*, both eminent Seamen, was himself an Officer in the Navy of King *Henry* the VIIIth, and for his Merit much esteemed by that Prince, made about the middle of his Reign three prosperous Voyages to *Guinea* and *Brazil*; in the last of these, having some Dealings with a Prince or Chief of the *Brazilians*, he expressed a Desire of seeing *England*; but, at the same Time, shewed a Suspicion of his not obtaining Leave to come Home again; to cure which, Captain *Hawkins* very readily offered to leave Mr. *Martin Cockram*, of *Plymouth*, who stood next to himself in Esteem with the *Indians*, as a Hostage, which Offer was readily accepted.

This *Brazilian* Chief he brought over, and presented to his Master King *Henry*, who received him kindly, entertained him courteously, and dismissed him generously, after a Year's stay in *England*. But it so fell out, in his Passage home, that, either through Change of Air, Shortness of Provisions, or some other Misfortune, the *Indian* Chief died; which threw the *English* into great Concern, from an Apprehension that Mr. *Cockram* would be either punished with Death, or detained during Life, upon account of this Accident: But the thing fell out better; for upon hearing what the *English* had to alledge; the *Savages* readily observing, that it was far from being likely that they would return to their Country if they had treated their King amiss, and that it was not in their Power to preserve his Life, if attacked by Sickness; they freely set their Hostage at Liberty, kindly entertained the Men, and furnished the Ship with a sufficient Cargo for *England*, which encouraged other Merchants to trade to the unsettled Ports of *Brazil*, (by which I mean the Ports not yet in the Possession of the *Portuguese*) and this from several Places, viz. *Bristol*, *Southampton*, and *London*, during all the latter Part of this Monarch's Reign, who must be allowed to have had a very public Spirit with regard to Maritime Concerns, for the Improvement of which he spared neither Pains nor Treasure.

7. In the Time of King *Edward* the VIth the Court was split into Factions, which necessarily occasioned Disputes and Divisions among the People; so that the Times were by no Means favourable for new and great Undertakings, or even for the Improvement of those Branches of Commerce, which were but newly opened;

on the contrary, it seems that several Persons, who were intrusted with Offices by the Lord High Admiral, and such as had the Care and Direction of the Customs, laid heavy Burdens upon those that engaged in the *Iceland* and *Newfoundland* Fisheries; and took such large Sums for Licences, and under other Pretences, as had like to have ruined the former, which was an old Trade, and greatly discouraged the latter, which was a new one.

Upon Complaint of this to Parliament, the Matter fell under a close Examination, as appears from some Papers of Sir *William Cecil*, which are yet in being; for there are no Journals of the Proceedings of the *House of Commons* so early as this Time preserved: But from the Papers before-mentioned, we are informed, that this Complaint was made by the West-country Members, and by a Burgess from *Yarmouth*, in *Norfolk*; and thereupon a Law was made in the Year 1548, and the second of that Prince's Reign; by which it was enacted, that every Officer, who should, for the Time to come, extort, procure, or receive any Sum of Money from a Merchant, Master of a Ship, Factor, or Fisherman, for, or under Colour of, granting him Leave, or Licence, to fish in the North Seas, on the Coasts of *Iceland*, or on the Banks of *Newfoundland*, should, for the first Offence, forfeit treble the Sum so extorted; and for the second, should suffer Fine and Ransom at the King's Pleasure.

The same Year the King was pleased to grant to *Sebastian Cabot*, his old Servant, by the Advice and Council of his Uncle, *Edward* Duke of *Somerset*, the Office of Grand Pilot of *England*, with a Fee of one hundred sixty-six Pounds thirteen and four-pence, to be paid him Quarterly at the Exchequer; which shews, that these kind of Services were still regarded; and that in such Intervals of Peace, as the Ministry then had, they were mindful of the Interest of their Country, and inclined to do what lay in their Power to promote Navigation and Commerce. But they were still hurt by a too earnest Desire to grasp at the whole Trade of the *Indies*, which induced them to listen to all the Proposals made for discovering either a North-east or a North-west Passage; and by bending all their Strength that way, neglected those Undertakings that were easier, and which might have been carried into Execution at a much lighter Expence. This was owing to Mr. *Sebastian Cabot*, who first started the Notion of a Passage into the *South Seas* by the North-west, and who fell very readily into the other Project of finding a Passage into the *Indian* Ocean by the North-east.

He was at that time Master of the great Company erected for the Benefit of Commerce, under the Title of *Merchant-Adventurers for the Discovery of New Lands*, and the great Oracle, as he deserved to be, of all the seafaring People; and this gave him an Opportunity of pushing that Point which he had most at Heart, the Importance of which he understood better than any Man, and in the Execution of which no body had gone farther, or managed an Expedition with greater Discretion. But this Turn diverted the whole Attention of the State to this Point, and this alone, as if nothing had been worth discovering but a Passage to the *Spice Islands*; while in the mean time the *Spaniards* attacked and subdued a very great Part of both the Continents of *America*. If, instead of this, the Endeavours of the Seamen in that Reign had been applied to the prosecuting what *Cabot* had so well begun, I mean the intire Discovery of *Florida*, and the Countries adjacent, it must have ended in a Settlement on the Gulph of *Mexico*, which might probably have been attended with very great Advantages.

It cannot however be denied, that the Schemes which were prosecuted had a very fair Appearance of Success, and I think it may be allowed also, by such as take the Pains to peruse Mr. *Cabot's* Instructions to Sir *Hugh Willoughby*, that no Man ever conceived with greater Strength of Judgment, or expressed himself in clearer Terms, than he did. I might, to prove this, give an Extract of these Instructions; but it would be beside my present Purpose, and giving the Reader no more than what he may already find in *Hackluit*; whereas I aim at affording him new Lights, without transcribing other People's Labours, except where I am under a Necessity

of doing it. It must be admitted, that tho' the Prosecution of these Projects, for finding a North-east and a North-west Passage, were not either of them attended with Success, and tho' they consumed a great Treasure, and which is much more to be regretted, were attended with the Loss of several excellent Captains and many able Seamen, the Profits which the Nation reaped, might be truly said to countervail, in some measure, even the vast Expences these Voyages occasioned.

As for Instance: We opened, by our Attempts to find a North-east Passage, the Trade to *Archangel*; and, for some time, engrossed the valuable Commerce of the *Russian* Empire: And even to the North-west our Discoveries were of great Consequence, and led us to a more distinct Knowledge of that Part of the World than any other Nation has attained, insomuch that I think it may be truly said, it is of all our Labours that which has shewn our Excellency in Point of Seamanship most; and, if our present Attempt for discovering a Passage through *Hudson's Bay* should prove successful, as I sincerely believe it will, we shall have no reason to blame those who from time to time have pushed this Design with so much Vigour; because I am thoroughly persuaded, that whenever it is attended with Success, it will, in a very few Years, repay this Nation all that she has expended for Ages upon this Account.

We may from hence see, how much these Expeditions for Discovery are preferable to much more expensive Expeditions in pursuit of Projects dictated by political Views; for in these last we waste Ships, Men, Treasure, and all to little or no Purpose; whereas, with Respect to the former, whether we succeed or not in our main Point, we are sure of making such incidental Advantages as, sooner or later, make us ample Amends for the Pains we take; so that a maritime Power cannot follow a wiser Course than to encourage all such Projects, or employ her naval Force better, than in attempting such of them as have a probable Appearance; because this nourishes and keeps alive that active, penetrating, enterprising Spirit, which is so necessary to a State like ours, and which will always be attended with Advantages upon the Whole, tho' in many particular Instances it may not be attended with Success. But it is now time to proceed from these Reflections which naturally flow from the Consideration of what was done by our Statesmen in the Reign of King *Edward*, to those of the like kind that occupied the Thoughts both of our Politicians and People, in the Reign of his Sister and Successor; in speaking of which, tho' a beaten Topic, I hope to strike out several Things that are new.

8. As there were several of King *Edward's* Ministers employed by Queen *Mary*, so we find that in the Reign of this Princess the same Measures were pursued, and the same Attention shewn for new Discoveries, and for giving all the Assistance that was in the Power of the Crown, to such as engaged in these Undertakings. But after the Marriage between the Queen and King *Philip* of *Spain* took place, we began to grow much better acquainted with all Circumstances relating to the *West Indies*, than in former Times, and it became fashionable at Court to read and understand whatever had been published, in any Language, relating to the Conquests and Discoveries of the *Spaniards*; but because the Number was not great of such as could peruse and understand those Works in the original Languages, several Persons took Pains to translate them into *English*, and to epitomise them, that they might be read with the greater Facility; amongst these were Mr. *Richard Eden*, who composed one of the first Collections of Travels that was ever published in our Language, and which was afterwards revised, corrected, and augmented, by Mr. *Edward Willes*. Several other Pieces of the same kind came abroad, and several of the *Spanish* Officers that attended their King hither, took a great deal of Pains to set forth the Exploits of their Nation in the *West Indies*; and our Sea-Officers, with whom they conversed, did not fail to make their Advantage of these Discourses, and to gain such Knowledge of the Situation Things were in throughout all their Dominions in *America*, as afterwards cost the *Spaniards* very dear.

This Intercourse with that Nation, also furnished many

Englishmen with Opportunities of going to their Settlements, and of obtaining such Lights with respect to their Navigation and Commerce, as proved afterwards of the highest Use. But notwithstanding all this, our Trade and Naval Power suffered deeply by this Connection between the two Nations, which not only hindered, during that Reign, those Voyages we had formerly made to *America* from being pursued, but involved us likewise in a tedious, dangerous, and unnecessary, War with *France*; by which we not only lost the important Fortrefs of *Calais*, but also suffered deeply in our Shipping; so that it appears by some Fragments which still remain of Speeches made in the House of Commons, that loud Complaints were made on this Subject in Parliament by the Citizens of *London* especially, whose Losses were greater than those of the rest of the Kingdom by those mistaken Measures.

Yet such Branches of our Commerce as did not immediately interfere with that of *Spain*, were greatly favoured in this Reign, in which the *Russian* Merchants were incorporated, and *Sebastian Cabot* appointed their Governor for Life, and a *Russian* Ambassador, who came over hither, was treated with great Distinction, both by the King and Queen; which procured us suitable Returns, by the granting extraordinary Privileges to such Merchants, and Subjects of *England*, as traded in any Part of that extensive Empire. The Trade to *Guinea*, likewise, met with some Countenance from the Court, by which Means the Shipping engaged therein was increased, and many more Traders drawn to be concerned therein; so that as great a Spirit in this Respect appeared as could well be expected; while the trading Corporations throughout the Kingdom were exposed to great Inconveniencies, by taking their Ships for the public Service; for so, at that Time, assisting King *Philip* was called, tho' it was evidently against the Interest of the Nation, and it was our want of Success in that War which saved the Balance of *Europe*, which must have been totally lost, if he had compassed his Design, and ruined the Power of *France*; so that in fact, our naval Force was employed against itself, of which the Queen's Ministers were sensible; but as for the Queen herself, she was governed by an odd Principle, which was that of making the best Wife in the World, to one of the worst of Husbands; but, very luckily for the Nation, she was so sensible of the Misfortunes that attended this injudicious War, and particularly of the Loss of *Calais*, that it broke her Heart, and thereby made way for that great and glorious Reign which restored the Face of our Affairs, revived our languishing Commerce, re-established our naval Power, and, by the happy Issue of a long and bloody, but necessary and prosperous, War against *Spain*, secured our own Liberties and preserved those of *Europe*.

9. Queen *Elizabeth* succeeded to the Crown by the Death of her Sister, in the Month of *November*, 1558; and, from the very beginning of her Reign, made the naval Power of this Nation her peculiar Care: She began with putting the small Remains of the Navy into the best Condition possible; provided a safe Harbour in the River *Medway* for their Reception, and erected a new Castle for their Protection. She likewise took care to have a small Squadron at Sea as soon as possible, and knowing that by a hasty Breach with *Spain*, she might, and indeed must, expose her Naval Strength to the Danger of being crushed by a superior Force, she very wisely chose to dissemble her Resentments against that Crown, and to provide for the Increase of the Seamen and Shipping of her Kingdom, before she discovered those Resolutions which she carried afterwards into Execution with so much Honour to herself, and so much Advantage to her People. I the rather take notice of this, because it is the only Stroke of the Queen's Policy which has escaped our Historians, who either overlooked or misunderstood it, and therefore, as it very nearly concerns my Subject, I shall set it in a full and clear Light.

At the Beginning of her Reign the Queen had several Enemies to deal with; some who declared openly against her, and others who secretly sought her Ruin: Among the former were the *French*, to whom at that Time *Scotland*, in Virtue of a Marriage between Queen *Mary* and the

the *French* King, in some measure belonged. At the Head of the latter was King *Philip* of *Spain*, one of the greatest Politicians that ever sat upon a Throne, who knew the Value of *England*, had in some measure possessed it, and, which was not at all wonderful, had no Mind to lose it. His first Project for keeping it was, by marrying *Elizabeth*, as he had done her Sister, in which finding himself deceived, his next Project was to conquer it, from which he never departed. The Queen, when she rejected the first, foresaw the last, and resolved to provide against it, which she knew could no other way be done but by obtaining a great naval Force.

To arrive at this, she first of all contrived to amuse *Spain* by carrying on the War with *France*, in which she did the same thing her Sister did; and yet, the one was the worst, the other the wisest Measure that ever was taken. Queen *Mary* really meant to ruin and distress the *French*, and was above all things desirous of recovering *Calais*; and this from a mistaken Zeal for the Interest of the Nation. Queen *Elizabeth* made an artificial War against *France* to increase her own naval Strength, by encouraging her Subjects to take Prizes, and that she might have an Opportunity of securing *Scotland*; but, though excessively provoked, she never thought of hurting *France*, and when offered *Calais*, she refused it; and all this, because she knew the true Interest of the Nation. She knew, that while she continued to act against the *French*, she should have the *Spaniards* for seeming Friends; that this War was not against the Humour of her People, or against Justice; that it would raise a vast Number of Seamen, because every Port in *England* fitted out Privateers; and that it would raise the Reputation of her naval Power, by reducing *Scotland*; for all which Ends, as she wisely provided, so she met in them all the Success she could desire. She knew, however, that *France* was not her natural Enemy; that from the Disputes about Religion, which ran high in that Kingdom, she was in no Danger from its Power; and that whenever she came to declare against *Spain*, she should stand in Need of its Assistance; for which Reason she made a very harmless War, and gave such broad Intimations of her being willing to compose all Differences, as in due Time produced a Peace. She likewise knew that the Possession of *Calais* was a mere popular Advantage; that, in reality, it was attended with an Expence which could not well be afforded; that if she was possessed of it, it would be a continual Bone of Contention with *France*, and that, how much soever it might be afterwards her Interest to part with it, it would be an unpopular, and therefore an improper, and an imprudent, Thing to give it up. This that great Princess knew, and therefore she wisely refused it; but upon making a Peace she reserved her Rights to it, and procured such Concessions from the *French*, as proved a continual Check upon them, and were oftentimes of more Use than the Fortresses itself.

In the mean Time she continued her Care of the Navy, and neglected nothing that might keep up and promote a maritime Spirit among her People; she sought out and distinguished the Sea-Officers that had served under her Father; she was continually fitting out, on one Pretence or other, little Squadrons, at a small Expence; she gave the Command of them to different Officers, that she might excite a Spirit of Emulation, but what principally conduced to aggrandize her Power was the Pleasure she shewed, whenever any Occasion offered of rewarding her Subjects, who undertook, at their own Expence, such Expeditions as contributed to extend their Commerce, and open new Branches of Trade. We have a strong Instance of this, in the Countenance she shewed to Capt. *John Hawkins*, who between the Years 1562 and 1568 made three Voyages into the *West Indies*, and in all but the last had very great Success, though he carried on his Trade partly by Force. She promoted the Trade to *Russia*, and through that Empire to *Persia* and the *Indies*, to the utmost of her Power, and managed it with such Prudence and Dexterity, that the Reputation of her Government was very high, in that, and in other Countries, in which the rest of the Kingdoms and the States of *Europe* were hardly known. The Trade to *Gui-*

nea was likewise so much her Care, that, finding the *Portuguese* gave her Subjects much Disturbance, she enquired into the Causes of those Disputes, and took Care to remedy them by a Treaty with that Crown.

All this time her Differences with *Spain* subsisted, and though there was no open War between the two Crowns, yet there could scarce be said to be either Friendship or Peace between their Subjects; and the Queen, perhaps, was not very solicitous that there should; for having now attained what she aimed at, a very considerable Naval Force, and being willing to let the *Spaniards* see, that though she declined a War, she had no Reason to be afraid of it, she took Advantage of the King of *Spain's* Marriage with *Anne* of *Austria*, his Niece, to give such an Instance of her Generosity and Power, as did great Honour to her Administration; for she caused that Princess to be conducted to *Spain* by an *English* Navy; this was a plain Demonstration, that her Sparingness, upon other Occasions, was not the Effects of any Nearness of Temper; but that, by a constant Frugality, she might have it always in her Power to be royally magnificent upon proper Occasions.

But this extraordinary Mark of Civility was far enough from meeting a proper Return, and the *Spaniards* went on in disturbing the Trade, and distressing the Navigation, of her Subjects; which induced the Queen to suffer her Subjects to use the best Measures they could for redressing themselves; in which they were not wanting. In the Year 1572 Capt. *Francis Drake* made his famous Expedition into the *West Indies*, with two Ships, one called the *Dragon*, of seventy-five Tons, the other the *Swan*, of twenty-five Tons, and on board them both he had no more than seventy-three Men; and yet, with this Force, he ventured to declare War against the King of *Spain*, for the Injuries he had received in his Voyage with Capt. *Hawkins* to the *West Indies*. In this Voyage he performed wonderful Things; for, besides taking several large Ships, he fairly took the Town of *Nombre de Dios*, by Storm, gained an immense Treasure, and had a Sight of the *South Seas*; after which he returned safely to *Plymouth*, and made a fair Distribution of the Profits of his Voyage among his Owners.

This glorious Event encouraged others to follow his Example; so that, in a very short Time, the *English* Privateers made various Voyages into all Parts of *America*, and every little Port in *England* swarmed with Seamen, who were perfect Masters of their Profession; and Pilots capable of navigating Ships to any Part of the known World became so numerous, that there were daily new Projects set on foot, which in the former Age would have been thought impracticable; but in this were carried into Execution at the Charge of private Persons, without any Expence to, or Assistance from, the Crown, though they had all the Countenance and Encouragement they could desire: But amongst all these, there was none so considerable in itself, so clear a Proof of maritime Skill, and so honourable, in every Respect, to the Nation, as the next Expedition of Capt. *Francis Drake* in 1577, in which he sailed round the Globe, as we have shewn at large in the first Part of this Work, and therefore need not repeat here. But one Part, however, of that Voyage so immediately concerns the Subject of this Section, and relates to so considerable a Discovery, that, as we then promised, we shall, as in its proper Place, speak of and explain it more particularly here.

10. Capt. *Drake* sailed from *Plymouth*, with five small Ships, the biggest but of one hundred Tons, on the 13th of *December* 1577, and it was the 5th of *September* following before he entered the *South Seas*, where having performed several glorious Actions, and gained prodigious Riches, he proceeded to the most Northern of the *Spanish* Settlements; with a View to discover, if possible, that Passage which had been so much talked of from our *Northern* into the *South Seas*, by a Strait like that of *Magellan's* to the North-west. This was certainly a very wise and great Undertaking, and a prodigious Improvement upon the Design of his Voyage; for, as yet, no *Englishman* had had the Opportunity, and perhaps it never entered into any Man's Head, to search for such a Passage on this Side; tho' it is most likely, that by this Method it may be

be found. Our Author's Endeavours, however, were strangely crossed by the unexpected Severity of the Weather, of which the Reverend Mr. *Francis Fletcher*, who was Chaplain in this Voyage, gives us a large Account; and, as it relates to a Subject of great Importance, and contains a Multitude of curious Circumstances, though not delivered in the most polished Stile, we shall give it the Reader, for the Sake of Exactness, in his own Words.

" From *Guatulco* we departed the Day following, viz. April the 16th, setting our Course directly into the Sea, whereupon we sailed five hundred Leagues in Longitude to get a Wind, and between that and June the 3d 1400 Leagues in all, till we came in 42 Degrees of North Latitude, wherein the Night following we found such an Alteration of Heat into extreme and nipping Cold, that our Men, in general, did grievously complain thereof, some of them feeling their Healths much impaired thereby; neither was it that this chanced in the Night alone, but the Day following carried with it not only the Marks, but the Stings and Force, of the Night going before, to the great Admiration of us all; for besides that the pinching and biting Air was nothing altered, the very Ropes of our Ship were stiff, and the Rain which fell was an unnatural and frozen Substance; so that we seemed rather to be in the frozen Zone, than any way so near unto the Sun, or these hotter Climates.

" Neither did this happen for the Time only, or by some sudden Accident, but rather seemed, indeed, to proceed from some ordinary Cause, against the which the Heat of the Sun prevails not; for it came to that Extremity in Sailing but 2° farther to the Northward in our Course, that tho' the Seamen lacked not good Stomachs, yet it seemed a Question to many amongst us, whether their Hands should feed their Mouths, or rather keep themselves within Coverts, from the pinching Cold that did benumb them? Neither could we impute it to the Tendernefs of our Bodies, though we came lately from the Extremity of Heat, by reason whereof we might be more sensible of the present Cold, inasmuch that the dead and senseless Creatures were as well affected with it as ourselves. Our Meat, as soon as it was removed from the Fire, would presently, in a Manner, become frozen up; and our Ropes and Tackling, in a few Days, were grown to that Stiffness, that what three Men before were able with them to perform, now six Men, with their best Strength and utmost Endeavours, were hardly able to accomplish; whereby a sudden and great Discouragement seized upon the Minds of our Men, and they were possessed with a great Mistrust, and doubting of any good to be done that Way; yet would not our General be discouraged, but as well by comfortable Speeches of the divine Providence, and of God's loving Care over his Children, out of the Scriptures, as also by giving other good and profitable Persuasions, adding thereto his own chearful Example, he so stirred them up to put on a good Courage, and to acquit themselves like Men, to endure some short Extremity; to have the speedier Comfort, and a little Trouble to obtain the greater Glory; that every Man was thoroughly armed with Willingness, and resolved to see the uttermost, if it were possible, of what Good was to be done that Way.

" The Land in that Part of *America* bearing farther out into the West than we before imagined, we were nearer on it than we were aware, and yet the nearer still we came unto it, the more Extremity of Cold did seize upon us. The 5th Day of June we were forced by contrary Winds to run in with the Shore, which we then first descried, and to cast Anchor in a bad Bay, the best Road we could for the present meet with, where we were not without some Danger, by reason of the many extreme Gusts and Flaws that beat upon us; which if they ceased and were still at any time, immediately upon their Intermission there followed most vile, thick, and stinking Fogs, against which the Sea prevailed nothing, till the Gusts of Wind again removed them, which brought with them such Extre-

mity and Violence when they came, that there was no dealing or resisting against them. In this Place was no abiding for us, and to go further North the Extremity of the Cold (which had now utterly discouraged all our Men) would not permit us, and the Winds, being directly against us, having once gotten us under Sail again, commanded us to the Southward, whether we would or no; from the Height of 48°, in which now we were, to 38°, we found the Land by coasting it to be but low, and reasonably plain; every Hill (whereof we saw many, but none very high) though it were in June, and the Sun in the nearest Approach unto them, being covered with Snow.

" In 38° 30' we fell in with a convenient and fit Harbour, and June the 17th came to an Anchor therein, where we continued to the 23d of July following; during all which Time, notwithstanding it was in the height of Summer, and so near the Sun, yet we were continually visited with like nipping Colds as we had felt before; inasmuch, that if violent Exercises of our Bodies, and busy Employment about our necessary Labours, had not sometimes compelled us to the contrary, we could very well have been contented to have kept about us, still, our Winter Clothes; yea, (had our Necessity suffered us) to have kept our Beds; neither could we at any Time, in the whole fourteen Days together, find the Air so clear as to be able to take the Height of Sun or Star.

" And here, having so fit Occasion (notwithstanding it may seem to be besides the Purpose of writing the History of this our Voyage) we will a little more diligently enquire into the Causes of the Continuance of the extreme Cold in these Parts; as also into the Probabilities or Unlikelihoods of a Passage to be found that way. Neither was it (as hath formerly been touched) the Tendernefs of our Bodies coming so lately out of the Heat, whereby the Pores were opened, that made us so sensible of the Colds we here felt. In this respect, as in many others, we found our God a provident Father and careful Physician to us; we lacked no outward Helps nor inward Comforts to restore and fortify Nature, had it been decayed or weakened in us; neither was there wanting unto us the great Experience of our General, who had often himself proved the Force of the burning Zone, whose Advice always prevailed much to the preserving of a moderate Temper in our Constitutions; so that even after our Departure from the Heat, we always found our Bodies not as Sponges, but strong and hard, more able to bear out Cold, though we came out of Excess of Heat, than a Number of Chamber-Companions could have been, who lie on their Feather-beds till they go to Sea, or rather, whose Teeth in a temperate Air do beat in their Heads at a Cup of cold Sack and Sugar by the Fire.

" And that it was not our Tendernefs, but the very Extremity of the Cold itself, that caused this Sensibleness in us, may the rather appear in that the natural Inhabitants of the Place (with whom we had for a long Season familiar Intercourse, as is to be related) who had never been acquainted with such Heat, to whom the Country Air and Climate was proper, and in whom Custom of Cold was as it were a second Nature, yet used to come shivering to us in their warm Furs, crouding close together, Body to Body, to receive Heat one of another, and sheltering themselves under a Lee Bank if it were possible; and as often as they could, labouring to shrowd themselves under our Garments to keep them warm: Besides, how unhandsome and deformed appeared the Face of the Earth itself? shewing Trees without Leaves, and the Ground without Greenness in those Months of June and July. The poor Birds and Fowls not daring (as we had great Experience to observe it) so much as once to rise from their Nests after the first Egg laid, till it, with all the rest, be hatched, and brought to some strength of Nature able to help itself: Only this Recompence has Nature afforded them, that the Heat of their own Bodies being exceeding great,

“ great, it perfecteth the Creature with great Expedi-
 “ tion, and in shorter Time than is to be found in any
 “ other Places. As for the Causes of this Extremity,
 “ they seem not to be so deeply hidden, but that they
 “ may, at least in Part, be guessed at; the chiefest
 “ of which we conceive to be the large spreading of
 “ the *Asian* and *American* Continents, which (somewhat
 “ Northward of these Parts) if they be not fully joined,
 “ yet seem they to come very near one to the other;
 “ from whose high and Snow-covered Mountains the
 “ North and North-west Winds (the constant Visitants
 “ of these Coasts) send abroad their frozen Nymphs to
 “ the infecting of the whole Air with this insufferable
 “ Sharpness; not permitting the Sun, no not in the Pride
 “ of his Heat, to dissolve that congealed Matter and
 “ Snow which they have breathed out so nigh the Sun,
 “ and so many Degrees distant from themselves. And
 “ that the North and North-west Winds are here constant
 “ in *June* and *July*, as the North Wind is alone in *Aug-*
 “ *ust* and *September*, we not only found it by our
 “ own Experience, but were fully confirmed in the Opi-
 “ nion thereof by continual Observations of the *Span-*
 “ *iards*.

“ Hence comes the Squalidness and Barrenness of the
 “ Country; hence comes it, that in the midst of their Sum-
 “ mer the Snow hardly departeth even from their Doors,
 “ but is never taken away from their Hills at all; hence
 “ come those thick Mists and most stinking Fogs, which
 “ increase so much the more by how much higher the
 “ Pole is raised, wherein a blind Pilot is as good as the best
 “ Director of a Course; for the Sun striving to perform
 “ his natural Office in elevating the Vapours out of these
 “ inferior Bodies, draws necessarily abundance of Moisture
 “ out of the Sea; but the nipping Cold (from the former
 “ Causes) meeting and opposing the Sun’s Endeavours,
 “ force him to give over his Work imperfect, and, instead
 “ of higher Elevation, to leave, in the lowest Regions wan-
 “ dering upon the Face of the Earth and Waters, as it were
 “ a second Sea, through which its own Beams cannot
 “ possibly pierce, unless sometimes when the sudden Vio-
 “ lence of the Winds doth help to scatter and break thro’
 “ it, which thing happeneth very seldom, and when it
 “ happeneth is of no Continuance. Some of our Mariners
 “ in this Voyage had formerly been at *Wardhouse*, in 72
 “ Degrees of North Latitude, who yet affirmed that they
 “ felt no such nipping Cold there in the end of Summer,
 “ when they departed thence, as they did now in these
 “ hottest Months of *June* and *July*. And also from these
 “ Reasons we conjecture, that either there is no Passage
 “ at all through those Northern Coasts (which is most
 “ likely) or, if there be, yet it is unnavigable. Add
 “ hereunto, that though we searched the Coast diligently,
 “ even unto the forty-eighth Degree, yet found we not
 “ the Land to trend so much as one Point, in any Place,
 “ towards the East; but rather running on continually
 “ North-west, as if it went directly to meet with *Asia*;
 “ and even in that Height, when we had a frank Wind
 “ to have carried us through, had there been a Passage,
 “ yet we had a smooth and calm Sea, with ordinary
 “ flowing and reflowing, which could not have been, had
 “ there been an Opening, of which we rather infallibly con-
 “ cluded than conjectured that there was none.”

This shews us clearly Mr. *Fletcher*’s Opinion, and he gives
 us likewise a very large and full, to say the Truth, a very
 tedious and trifling, Account of their Landing and Stay
 here; of their being taken for Gods by the Natives, and of
 their attempting to offer Sacrifices to them, with which,
 I suppose, the Reader will easily dispense; but after this
 he comes to the Point, and tells us, That these People
 behaved extremely well during their Stay; and that their
 King, in testimony of his Respect for, and Submission to,
 Captain *Drake*, presented him with the Ensigns of his
 Regal Dignity; which he received as a Resignation of his
 Kingdom to the Queen his Mistress, in whose Name, and on
 whose Behalf, he took Possession of it, and set up a wooden
 Cross, with a Brass Plate and a proper Inscription, in
 Testimony thereof. This Country he called *New Albion*,
 and this for two Reasons; the first was, because of its

white Cliffs; the other, that it might have some Affi-
 nity, as Mr. *Fletcher* expresses it, in Name with our own
 Country, which was some time so called.

He afterwards acknowledges, that upon taking a View
 of the Inland Parts, they found them very rich and fer-
 tile, contrary to their Expectations; but as to the People,
 he allows, that, both on the Coast and within Land, their
 Behaviour was perfectly uniform, and they had no Rea-
 son to complain of them, but rather to commend and
 applaud them. It is very true, that Mr. *Fletcher*’s Ac-
 count of Sir *Francis Drake*’s Voyage is by much the
 largest, but I am far from esteeming it the best: I inserted
 so long a Passage from it, that the Reader might be able
 to judge of his Performance as well as my Sentiments.
 He has given us a very extraordinary Description of the
 excessive Cold they met with both at Sea and on Shore,
 and discourses on it more largely, to shew his Capacity
 and Judgment; yet I do not find that Experience has at
 all confirmed this, as the Reader will perceive by turning
 to the other Voyages of *Candish*, and those who followed
 him, and who went to *California* as well as Sir *Francis*
Drake.

I mention this the rather, because *Candish* was there
 so soon after Sir *Francis Drake*; for I find by the original
 Account of his Expedition, that he was there in *November*
 1587, but do not find that he said one Word of its
 being cold; and tho’ it may be objected, that he was in
 the Southern Part of *California* only, yet the Difference
 is so inconsiderable, that it is impossible to reconcile the
 two Accounts, supposing them both to be exact. Again,
 in Sir *Francis Drake*’s Voyage, printed by *Hackluit*, it
 is only said, That in the Latitude of 42 Degrees the
 Men were extremely pinched with Cold; and finding it
 increase as they sailed farther North, it was resolved to
 alter their Course, and stand in for the Land more to the
 South; where they found a good Bay, and a very gentle,
 friendly, and honest People; yet the Truth of the Matter
 is, that the *Spaniards* had, thirty-seven Years before,
 sailed along this Coast to the Height of 44 Degrees, as
 far as *Cape Mendocino*; and they afterwards discovered
Cape Blanco beyond that, which is a plain Proof that the
 Cold is not so intolerable as Mr. *Fletcher* would make
 it. But the real Design of all his Remarks is, to dis-
 courage all Hopes of finding a Passage this Way into the
 North Seas, which however was not Sir *Francis Drake*’s
 Opinion, if we may credit what other Writers have told
 us; and indeed so many Absurdities have been discovered
 in Mr. *Fletcher*’s Description of *New Albion*, that Father
Charlevoix makes no Scruple of calling it a fabulous
 Country, and from hence takes Occasion to make some
 Reflections upon Sir *Francis Drake*, which that Gentle-
 man did not at all deserve.

But to shew the Reader the true Design of dwelling so
 long upon this Subject I must observe, that his Account
 discredits *Drake*’s Discovery extremely, which not only
 turns to the Prejudice of that great Man’s Character, but
 may likewise prove disadvantageous to this Nation, by
 giving them a very mean Opinion of what ought to be
 considered as a very noble Acquisition. The Discovery,
 as I conceive, consisted chiefly in his marching up into
 the Country, which before that Time, it is probable, the
Spaniards had never done; and with respect to our Title
 to this Country, I conceive it to arise from the Good-will
 and voluntary Submission of the People, Facts as well
 proved as in the Nature of Things we can expect,
 and which certainly give us as good (if not a better)
 Claim to *New Albion*, as the *Spaniards* can shew for any
 Part of their Possessions.

The Country too, if we might depend upon what Sir
Francis Drake or his Chaplain says, may appear worth the
 seeking and the keeping, since they assert that the Land
 is so rich in Gold and Silver, that upon the slightest
 turning it up with a Spade or Pick-ax, those rich Metals
 plainly appear mixed with the Mould. It may be ob-
 jected that this looks a little fabulous; but to this, two
 satisfactory Answers may be given; the first is, That
 later Discoveries on the same Coast confirm the Truth
 of it, which, for any thing I can see, ought to put the
 Fact out of question; but if any Doubts should remain,

E c c

my

my second Answer will overturn these. For I say next, That the Country of *New Mexico* lies directly behind *New Albion*, on the other Side of a narrow Bay, and in that Country are the Mines of *Santo Fe*, which are allowed to be the richest Silver-Mines in *North America*: Here then is a very valuable Country, to which we have a very fair Title.

But perhaps it may be asked, How shall we come at it, since, as Things stand at present, it seems to be the Country in the World most out of our Reach? But if it had been so, I would not have given myself or the Reader so much Trouble about it; and therefore I am next to tell him, that if Mr. *Arthur Dobbs's* Expedition for discovering a North-west Passage succeeds, *New Albion* will be a Country very much within our Reach, and, I dare say, prove to the full as habitable as the Coast of *Hudson's Bay*; and therefore I hope that this Example will fully shew the Use and Value of good Collections of Voyages, because it is impossible to foresee all the Advantages that may arise from any Discovery or Settlement at once, nor is it easy to pronounce, that any Discovery, how unpromising soever in its first Appearance, is absolutely useless, and not worth minding.

This is a Caution of a very serious Nature, since there is nothing easier than for Men of quick Wits and tolerable Learning in other Respects, to ridicule Voyages to cold, barren, desert Countries, and to represent that as Folly and Madness, which is in truth a most noble kind of public Spirit, which, if pushed still farther than it has ever been, would be attended with Consequences of still greater Advantage to Mankind, than those that have flowed from it already; and yet these have been very beneficial to this and other Nations, as any judicious Man will very easily and clearly discern, by comparing the State of those Nations, before they addicted themselves to Commerce, and since they have reaped the Profits of it.

11. We have already shewn the Right this Nation has to *Newfoundland*; which is an Island of a triangular Figure, about the Size of *Ireland*; and, according to the best Computation that can be made, about eight or nine hundred Leagues in Circumference: On the North it is separated from the Continent by the narrow Streights of *Bellisle*; on the West it has the Bay of *St. Laurence*; on the South, *Cape Breton* and the Banks; and on the East it has the Ocean. It lies about six hundred Leagues from the *Land's-end* in *England*, and the great Bank is generally looked upon as half way to *Virginia*. There is no Country in the World better furnished with Harbours, and it is abundantly supplied with fresh Water. The Climate is very hot in Summer, and very cold in Winter, so that the Snow lies upon the Ground for four or five Months at least. This is the best Account that we are able to give with Certainty about it; for if we read the different Relations written of this Country, by Persons who ought to have been best acquainted with it, we shall find them so opposite and contradictory, that it will be very hard to judge from them, whether it be one of the best or worst Countries in the World.

But by considering the Views with which these several Accounts were written, and adverting to the Situation of this Country, between 47 and 52 Degrees of Northern Latitude, we may be easily persuaded that it is no Paradise; and yet it is more to the South than our own Island; but lying off a Continent very little better than frozen, the Winds which blow over must bring along with them Weather very different from ours. It is, however, very certain, that Filberds, Strawberries, some Kinds of Cherries, and other such-like Fruits, grow here; and, though Corn and Hay succeed but indifferently, yet there is great Plenty of Venison, wild Fowl and Fish; so that with dry Food in plenty from *Europe*, People may live here very comfortably even in Winter, since the Country produces Fuel of several Kinds in abundance.

The great Advantage, however, resulting from our Possession of the Place never depended much upon its Produce; so far from it, that one of the best Writers upon the Trade of this Nation gave his Opinion clearly, that it was more for our Interest there should be no Settlements upon it at all; which, in my Judgment, he has by

unanswerable Arguments made good; but the Value of *Newfoundland* to this Crown and Country results from the Fishery upon its Coasts, and upon the Banks near it, which has been, and still is, of inestimable Benefit, for Reasons that shall be presently given. It is very certain, that we did not prosecute our Discoveries in and about this Island, or attend to the Advantages that might be made from the Fishery, in many Years after *Cabot* had taken Possession of it; but I do not however believe, that we ever left or deserted it, as some Writers would have us believe, and that we did not claim it again till the Reign of Queen *Elizabeth*. I am, on the contrary, persuaded, that some of our fishing Vessels resorted yearly to this Coast, though perhaps not many; and this, for two Reasons; first, because the unsettled State of our Affairs kept the best part of our Seamen one way or other in the public Service; and next, because we had a great Fishery, at that time, on the Coast of *Iceland*.

But that we really kept Possession of the *Newfoundland* Fishery all that time may, I think, be undeniably proved by two Arguments likewise: The one taken from the Act of Parliament before-mentioned, in the second Year of the Reign of *Edward* the VIth, which would have been needless, if this Fishery had not subsisted; and the other from the Account given us of the State of this Fishery in 1578, by Mr. *Parkhurst*, which is very curious, and yet little taken Notice of. He tells us, that in this Year there were about fifty Sail of *English* Ships employed upon that Coast; but he tells us likewise, that there were one hundred Sail of *Spaniards*, besides twenty or thirty Sail of *Biscayneers*, fifty of *Portuguese*, and one hundred and fifty *French*. He adds another Circumstance, which is still more to our Purpose; and it is this, that wherever the *English* fished, they were reputed Lords of the Harbour, and exercised an Authority over other Nations, by making use of their Boats when they had Occasion for them; which makes it plain to me, that we constantly kept up our Title, for otherwise it is impossible to give any Reason why we should have exercised this Dominion, where we were so far from being the most powerful. An immemorial Custom was Foundation enough for such a Practice, and nothing but this could be esteemed so.

He tells us also, that our own Ships were the strongest, largest, and best equipped; and that, by this Means, we protected our own Trade and the Trade of other Nations, which is a Confirmation of what I have observed; he says, that next to ours the *Spaniards* were the best equipped, and he computes the Tonnage of these Vessels at about six thousand, and the *French* at about seven thousand, Ton; but the *Portuguese*, he says, were the worst equipped of all. As for the *Biscayneers*, they were chiefly employed in Whale-Fishing, and in making Train-Oil. The great Consequence of this Trade to our Nation arose from hence; that, in the first Place, it raised a vast Number of Seamen, and those the best and ablest that were any where bred, so that, even at this time, there could not be fewer than two thousand employed therein. Next, it gave Bread to a vast Number of Manufacturers and Mechanics, such as Ship and Boat-Builders, &c. Thirdly, it produced a great deal of Money from the Sale of the Fish. Fourthly, almost all the Provisions consumed in *Newfoundland*, such as Bread, Beef, Pork, Butter, Cheese, Linnen, and Woollen, Cloths, Nets, Hooks, and Lines, were all furnished from *England*; to which we may add, that these Vessels being fitted out in *March*, and returning in *September*, they not only brought Home a Number of People full of Money, which they spent in *England*, but they also left us a certain Proportion of stout able Seamen, fresh Men going out in their room, and becoming in a Voyage or two as good Mariners as themselves.

Thus it clearly appears, how this bleak, barren, and inhospitable Country came to be of such Consequence; which was very soon discerned by the wise Ministry of Queen *Elizabeth*, towards the Close of whose Reign it grew to such a Height that we employed yearly two hundred Sail and upwards of Fishing-Vessels, and on board

board them upwards of eight thousand Seamen, a clear Proof of the Improvements that were then made in the Space of twenty Years; and which confirms, beyond Question, what I remarked at the Close of the preceding Paragraph, that all Discoveries are of use, and every Branch of Navigation worth looking after, and keeping. If the Reader consults other Accounts of *Newfoundland*, within this Period of Time, he will see that I have not been much assisted by them, but that I have set the Subject in a new Light, from Facts of which they have taken little or no Notice.

But I come now to speak of those that are more generally known, and of the famous Patent of Sir *Humphrey Gilbert*, which is one of the first of them. This Gentleman was a Native of *Devonshire*, had a good Fortune, was well allied, had a competent Knowledge both of military and maritime Affairs, and a generous Desire to raise his private Fortune by the Pursuit of the public Service. It was with this View that he represented to Queen *Elizabeth* the Expediency of settling all those Countries upon the Continent of *America*, which had been formerly discovered by *John* and *Sebastian Cabot*, because, otherwise, it was not at all unlikely that the *French*, who had often reviewed these Places, would be desirous of supplanting the *English*, and because it was very far from being improbable that those Countries abounded with very rich Minerals. Upon these Suggestions very full Letters Patents were granted by the Queen to Sir *H. Gilbert*, his Heirs and Assigns, with free Leave, not only to discover, but to plant and settle, and even to fortify and build Castles, in any of these northern Countries, not then in the Possession of any Christian Prince, with Authority to govern such Colonies, according to the known Laws of the Land, with several other Clauses, equally well contrived for securing this Grant from becoming any way injurious to the Public.

After obtaining this Favour from the Queen, our worthy Knight applied himself to his Relations and Friends, in order to frame a Society capable of carrying this Design into Execution; and he met with such Success therein, that he thought himself very soon in a Condition to undertake a Voyage for this Purpose; yet, when it came to the Point, Things fell out very crossly; for some of his Associates began to form particular Projects inconsistent with his general Scheme, and others absolutely failed in performing their Engagements; which, however, did not hinder this gallant Gentleman from putting to Sea, with such of his Friends as had stuck close to their Promises; but the Voyage proved very unfortunate, and was attended with the Loss of one of his best Ships, in which was Mr. *Miles Morgan*, whom he much esteemed, and several other Persons of Worth and Figure. This was a severe Blow, which he was the less able to sustain, as having already suffered extremely in his Fortune, by the Money he had been obliged to advance to supply other Mens Deficiencies; and therefore he was constrained to assign part of his Patent to other Persons, who were to make Settlements in the northern Parts of *America* about the River of *Canada*; but these People proving likewise very dilatory, he found himself obliged to think of another Expedition, in Person; because his Patent was to expire, if within the Space of six Years he had not actually gained Possessions under it.

In the Spring of the Year 1583 he had again brought this Design into some Order, and to furnish the necessary Expences thereof he was obliged to sell his Estate, though he had great Assistance from his Friends; and several Gentlemen of Rank and Fortune agreed to go with him in Person; with this View a small Squadron was fitted out, consisting of the following Vessels, viz. the *Delight* (or *George*), of one hundred and twenty Tons, Admiral, in which went Sir *Humphrey* himself, as General, *William Winter*, Captain, and part Owner, and *Richard Clark*, Master; the Bark *Raleigh*, fitted out by Mr. *Walter Raleigh*, of two hundred Tons, Vice-Admiral, Mr. *Butler*, Captain, and *Robert Davis* of *Bristol*, Master; the *Golden Hind* of forty Tons, Rear-Admiral, Capt. *Edward Hayes*, Commander and Owner, and *Wil-*

liam Cox, of *Limehouse*, Master; the *Swallow*, of forty Tons, *Maurice Brown*, Captain; the *Squirrel*, of ten Tons, *William Andrews*, Captain, and one *Cade*, Master. In all these Vessels were shipped about two hundred and sixty Men, among whom were many Shipwrights, Masons, Carpenters, Smiths, Miners, and Refiners. The Resolution of the Proprietors was, that the Fleet should begin its Course northerly, and follow as directly as they could the Trade-way to *Newfoundland*, from whence, after having refreshed and supplied themselves with all Necessaries, their Intent was to proceed into the South, and not to pass by any River or Bay, which, in all that large Tract of Land, should appear worthy their looking into; they likewise agreed upon the Manner of their Course, and the Orders to be observed in their Voyage, which were delivered to the Captains and Masters of every Ship in writing.

The 11th of June they set sail from *Causet Bay*, near *Plymouth*; but, on the 13th, their large Ship the *Raleigh*, under Pretence that her Captain and a great Number of her Men were suddenly taken ill of a contagious Disease, left the Fleet and returned to *Plymouth*; some say in great Distress, but others, that it was done with a Design to break the Voyage. After her Departure the *Golden Hind* succeeded her in Place as Vice Admiral. The 30th of July they had the first Sight of Land, as they computed it about 51°, but with such foggy Weather, that they could not possibly perceive the Land, nor take the Sun's Height: From thence they followed the Coast to the South, with clear Weather, till they came to the Island called *Baccalaos*; here they met with the *Swallow*, which had been separated from them in the Fog, but were surprized to see her Men in a different Garb from what they had on when they left them; upon Enquiry, they found they had met a *Newlander* fishing Bark returning homewards, which they had rifled of Tackle, Sails, Cables, and Provisions, and the Men of their Apparel. Continuing the same Course Southward, they came the same Day, being the third of August, to the Harbour of *St. John*; where they found the *Squirrel*, which had likewise been separated from them, riding at Anchor at the Mouth of the Harbour; having been refused Entrance by the Vessels which were fishing within, to the Number of thirty-six sail of all Nations. Sir *Humphrey* was preparing to make good his Passage by force of Arms; but having first sent in his Boat to inform the Masters of the fishing Barks, that he had a Commission from the Queen to take Possession of these Lands for the Crown of *England*, they were satisfied, and submitted to the levying a Tax of Provisions from each Ship, for supplying the Wants of Sir *Humphrey's* small Squadron. Going into the Harbour, the Admiral's Ship was by the Carelessness of the Men run upon a Rock, which lay visible above Water: But, by the Assistance of the Fishermens Boats, she was got off again, with little or no Damage.

On the 4th Sir *Humphrey*, whom they called the General, and his Company were conducted on Shore by the Masters of the *English* fishing Vessels, and their Owners or Merchants who were with them. On the 5th the General, having caused a Tent to be set up in view of all the Ships in the Harbour, to the Number of between thirty and forty Sail, and being accompanied by all his Captains, Masters, Gentlemen, and Soldiers, summoned all the Merchants and Masters, both *English* and Foreigners, to be present at his taking a formal, and solemn Possession of these Territories. Being assembled he caused his Commission, under the great Seal of *England*, to be openly read before them, and to be interpreted to those who were Strangers to the *English* Tongue.

By Virtue of this Commission, he declared that he took Possession of the Harbour of *St. John*, and two hundred Leagues every way invested her Majesty with the Title and Dignity thereof; and having had (according to Custom) a Rod, and Turf of Soil delivered to him, entered Possession also for himself, his Heirs, and Assigns, for ever. He signified to those who were present, and through them to all Men, that from thenceforward they should look upon those Territories as appertaining

taining to the Queen of *England*, and himself, authorized under her Majesty to possess and enjoy them, with Power to ordain Laws for the Government thereof, agreeable (as near as conveniently could be) to the Laws of *England*; under which, all People coming thither for the future, either to inhabit, or by way of Traffic, should submit and be governed. Some Writers have attributed all this Solemnity, which, however, was attended with many other Ceremonies, to a high degree of Vanity, in our West-country Knight; and have ridiculed severely his Pretences to improve the Trade of this Kingdom and enlarge the Queen's Dominions, by cutting a Turf; in which, however, they injure this poor Gentleman's Memory extremely, and shew how little they are qualified to give their Readers a true Account of things of this Nature.

The plain Reason of Sir *Humphrey*'s Conduct throughout this Affair, was his Concern for his Grant, which was perpetual to him and his Heirs, in case he took Possession of any Countries within six Years, and otherwise it was void: There were now but a few Months to come. He had sold his Estate in *England*, and it concerned him very nearly to secure an Estate somewhere else; and therefore it was not from any Principle of Vanity, but rather of Prudence and good Oeconomy, that he did this; as appears by his granting several Parcels of Land to Persons, who covenanted to pay a certain Rent to him and his Heirs, and to maintain Possession by themselves and their Assigns.

There now remained only to gather in the Tax of Provisions granted by every Ship which fished upon the Coast adjoining; and while some of the Men were doing this, others were set to repair and trim the Ships; and the Remainder the General sent to enquire into the Commodities and Singularities of the Country, which were to be found by Sea or Land. They found no Inhabitants in the South Parts, which probably the Natives had abandoned, upon their being so much frequented by *Europeans*. In the North there were Savages of a very harmless Disposition; among other Inquiries, the General had, in a particular Manner, recommended a Search after Metals. They had in their Company a *Saxon* Miner, who at first brought a sort of Ore to the General, which had more the Resemblance of Iron than of any other Metal. Soon after he found another Sort of Ore, which he delivered with a Shew of great Satisfaction to Sir *Humphrey*, and assured him, upon the Peril of his Life, that if Silver was what he and his Companions sought, there it was, and they need seek no farther. We learn all these Circumstances from Captain *Edward Hayes*, who seems, by his Writing, to have been a very intelligent Person; and therefore he enquired very strictly about this Silver-Mine, which procured him such an Answer from the General, as shewed that he was absolutely satisfied on that Head; and I must own I see no Reason to doubt there being Silver-Mines in this Country, since we know they are generally found in cold Climates, and in a hungry barren Soil; and, as to the northern Situation, we are certain that there are rich Silver Mines in *New Mexico*, a Country not far to the Southward of *Newfoundland*; and Silver Ore has been found in *Scotland* several Degrees farther to the North than it is supposed to have been found here.

But though Sir *Humphrey* was very well satisfied with the Account his *Saxon* gave him, yet he thought himself obliged to proceed in his Discoveries Southward; for which while he was providing some of his Men fell sick, some deserted, some died, and some fell to plundering and Piracy: In short, the Number of his People was so lessened, that he was constrained to leave the *Swallow* behind him. The Captain of his Admiral going home, Captain *Brown* of the *Swallow* took the Command of the Admiral, and the Captain of the *Squirrel* deserting likewise the Expedition, Sir *Humphrey* went on board that little Vessel himself; as thinking her the fittest for observing and discovering the Coast, because she could run into every Creek, which a larger Ship could not do. All things being now ready, and plenty of Provisions of all Sorts being put on board, they sailed on the 20th of *August* from the Harbour of *St. John*,

with three Ships, the *Delight*, the *Golden Hind*, and the *Squirrel*, and proper Boats and Pinnaces for Discovery. Before their Departure they made an exact Observation of *St. John's* Harbour, and found it to be in the Latitude of $47^{\circ} 40'$ North. The next Night they reached *Cape Race*, which is twenty-five Leagues distant; and from thence sailed about eighty-seven Leagues towards *Cape Breton*.

All this time they had the Wind indifferently good, but never could get Sight of the Land, being hindered by the Currents; at last they unhappily fell into those Flats and Sholes in which most of them perished. On the 27th the General ordered his Men in the Frigate to sound, and found thirty-five Fathom white Sand, in the Latitude of 44° . The Wind coming South, the next Evening they bore in with the Land, all the Night West North-west, contrary to the Advice of Mr. *Cox*, Master of the *Golden Hind*. On the 29th the Wind blew vehemently at South and by East, with Rain, and so thick a Mist, that they could not see a Cable's-length before them. Early in the Morning they found themselves in the midst of Sholes and Sands, among which they found sometimes deep, sometimes shole Water, every three or four Ship's-length. After they began to sound, a Signal was immediately given to the *Delight* to cast about to the seaward, but it was too late; for she struck immediately, and her Stern and Hind-Quarters presently beat to Pieces. Upon which the *Golden Hind* and the Frigate cast about East South-east, bearing to the South, which carried them to the seaward, and with much Difficulty got clear of the Sholes.

In the *Delight* perished Captain *Maurice Brown*, with near one hundred Persons: The Captain might probably have saved his Life, if he would have left the Ship when she first struck, but he would not be the first to set an ill Example. In the mean Time fourteen Persons leaped into a small Pinnace of a Ton and a half burden, no bigger than a Thames-Barge. They looked out some time for the Captain, but not seeing him took in Mr. *Clark*, the Master of the *Delight*, and one more: Being now sixteen in Number, they cut the Rope and committed themselves to the Mercy of the Waves, without any Provisions, or a Drop of fresh Water, and nothing to work with but one single Oar. The Boat seeming to be over-loaded, one *Edward Headly*, thinking it was better for some to perish than all, proposed to cast Lots, and that four of the Number, upon whom the Lot might fall, should be thrown over-board to lighten the Boat: But he was over-ruled by Mr. *Clark*; who, though it was proposed that he should be excepted from the Number, persuaded his Comrades rather to submit to Providence. The Boat was driven before the Wind six Days and six Nights, during which time these poor Wretches had no other Sustenance than their own Urine, and some Weeds which swam on the Surface of the Water; and in this Extremity of Cold, Wet, Hunger, and Thirst, only *Headly* and one more perished the fifth Day; but the other fourteen lived till they were driven the seventh Day on Shore, on the Coast of *Newfoundland*; whence they got in a *French* Ship to *France*, and so to *England*, before the Year's-end. During their seven Days dangerous Course they had the Wind always at South, which saved their Lives; and it is very remarkable, that in half an Hour after they were on Shore it came about and blew full North.

After the Loss of the Admiral the Men being generally discouraged, and in want of Necessaries, Sir *Humphrey Gilbert* proposed returning to *England*, having, in his Judgment, made Discoveries sufficient to procure Assistance enough for a new Voyage in the Spring. His People, when he made this Proposal, were at first a little backward, but, upon hearing his Reasons, they submitted; and, according to his Advice, on the last of *August* they altered their Course and returned back for *England*. On the second of *September* they passed in Sight of *Cape Race*, and had afterwards frequently very bad Weather, with such high Seas, that they in the *Hind* often expected to see the *Squirrel* swallowed up; notwithstanding which, Sir *Humphrey* would by no means be persuaded to leave her. On the 9th, the Storms and Swelling of the Seas increasing,

creasing, he was again pressed to leave the Frigate, but his Answer was, *We are as near to Heaven by Sea as by Land.* About Midnight the *Squirrel* being a-head of the *Golden Hind*, her Lights were at once extinguished, which those in the *Hind* seeing, cried out, *Our General is lost!* and it was supposed she sunk that Instant, for she was never more heard of.

The *Golden Hind* arrived in safety at *Falmouth*, on the 22d of *September*, more fortunate than her Companions; not only as she returned, but as she lost but one Man during the whole Course of this unfortunate Undertaking. Such was the End of this Expedition, very disastrous to its Author; who lost first his Fortune, and then his Life, by it; to which, if the Sallies of some dis-tempered Mens untimely Wit could effect it, we might add his Reputation also. Yet to this Expedition I make no scruple of imputing all our succeeding Colonies in *America*; and the Grounds of this Opinion of mine, which I must confess is new, I lay down thus:

12. We have before shewn that Sir *Humphrey Gilbert* was a Man of great Interest and Alliances: For, besides his eldest Brother Sir *John Gilbert*, and his younger Brother Sir *Adrian Gilbert*, who were of the whole Blood, he was, by the Mother's Side, Brother also to Sir *Walter Raleigh*, who had a great Concern in this Undertaking; and who is on good Grounds allowed to have been one of those true, brave, and steady Friends, who went to Sea with him in his first Attempt, which there is just Reason to believe was in 1579. This great Man, after Sir *Humphrey Gilbert's* Misfortune and Loss in his last Voyage, procured his Patent to be renewed to himself, which was dated the 25th of *March* 1584, and he resolved immediately to carry it into Execution; to which purpose he made Choice of two very able Sea Officers, Captain *Philip Amadas*, and Captain *Arthur Burlew*; who, in two small Barks fit for Discovery, sailed from the West of *England* upon the 27th of *April* following, shaping their Course for the *Canaries*, which they passed on the 10th of *June*, and proceeding from thence to the Islands of *America*, they crossed the Gulph of *Mexico*, and soon after discovered the Coast of *Florida*. Some Authors who have written of this Expedition, and who are pleased to speak in very high Terms of Sir *Walter Raleigh's* Skill in maritime Affairs, venture nevertheless to affirm, that the Persons he employed were so ignorant of Navigation, that, by the Computation of able Seamen, they went above two thousand Leagues out of their Way; but as I am very well satisfied they pursued Sir *Walter's* Instructions, so I cannot help thinking this Imputation of Ignorance ought to be wiped away; and this may be very easily done, by shewing the true Cause why this great and knowing Seaman directed this Course: He had observed that all the Attempts hitherto had failed, by the Adventurers pursuing their Discoveries from the North, which was one Reason why he chose another Rout; besides which, he had a better and stronger Motive; for, considering all the Lands on the Continent of *America* from the last Settlements of the *Spaniards* to 60° North, as lying within his Grant, he very prudently chose to settle those first, which lay nearest those *Spanish* Settlements; and this was the clear and certain Cause of his directing his Servants to take this Course; which was so far from being a Proof of their Ignorance, that it is a full and fair Testimony of their Master's extensive Knowledge.

It was on the 2d of *July* they fell in with the Coast of *Florida*, in shole Water, where they smelled a most delightful Odour, as if they had been in the midst of a Garden, abounding with the most fragrant Flowers, by which they supposed they were near, though they saw no Land. On the 4th they discovered the Continent, and sailed along the Coast 40 Leagues, till they came on the 13th to a River, where they anchored, and, going on Shore, took Possession in right of the Queen, and for the Use of the Proprietors. This Place they afterwards found to be the Island of *Wokoken*, on the Coast of the Country since called *Virginia*, in 34° Latitude; and in it they found Deer, Rabbits, Hares, Fowls, Vines, Cedars, Pines, Sassafras, Cypress, and Mastic Trees. The Author of the History of *Virginia* says,

they anchored at the Inlet of *Roenocke*; at present under the Government of North *Carolina*. They went to the Tops of the Hills which were nearest the Shore, from whence, though they were not high, they discovered the Sea on all Sides, and found it to be an Island of twenty Miles in Length, and six in Breadth. It was the third Day before they saw any of the Natives; but then, a little Boat, with three of them, appeared: One of them going ashore, they rowed up to him, and he not only waited their coming without any Signs of Fear, but went on board, where they gave him a Shirt and Hat, with some Wine and Meat, which he expressed a liking to. After he had, with a seeming Satisfaction, narrowly viewed the Barks with all that were in them, he went in his own Boat to above a quarter of a Mile's Distance, where he fished, and in half an Hour loaded his Boat with Fish, as deep as it could swim, and came again to the Point of Land; where, to shew his Gratitude, he divided it into two Parts; and, making Signs that he designed it for the two Ships equally, he departed.

The Natives from the Continent, after this, repaired to their Ships frequently, and exchanged several Sorts of Skins, white Coral, and some Pearls, for some tin things, and other Baubles of inconsiderable Value. The very next Day after they saw the three *Indians*, several Boats appeared in view; in one of which was the King of the Country's Brother, attended by forty or fifty Men of a tolerable good Appearance. They made him, and four of his Chiefs, Presents of several Toys, which he accepted of very kindly; but he took all himself, and gave them to understand that none there had a Right to any thing but himself; two Days afterwards they let him see their Merchandize, of which nothing seemed to please him more than a pewter Dish, for which he gave twenty Deer-Skins; and, making a hole in the Rim of it, hung it over his Neck for a Breast-plate, making Signs that it would defend him against the Enemies Arrows. The next thing he bought was a Copper Kettle, for which he gave fifty Skins. As long as he thought fit to traffic with them, none, but such as like him wore Plates of Gold or Copper on their Heads, were allowed either to buy or sell; but as soon as they had done every Man had his Liberty. They offered very good Exchange for Hatchets, Axes, and Knives, and would have given any thing in Truck for Swords; but the *English* would not part with any. The King's Brother came afterwards frequently on board, and would eat, drink, and be merry with them; and once he brought his Wife and Children with him, who afterwards came frequently with their Followers only.

They often trusted the King's Brother with Goods upon his Word, to bring the Value at a certain time, which he never failed of doing. He had a strong Inclination to have a suit of Armour and a Sword, which he saw in one of the Ships; and would have left a large Box of Pearls in pawn for them, but they refused it; that he might not know they set a Value upon them, till they could discover whence he got them. They understood from the Natives, that their Country, which they found to be very fruitful and productive of all things, in so very short a Time as is hardly credible, was called by the Name of *Wingandacoa*, and their King *Wingina*. When they went on Shore they were entertained with extraordinary Civility, and once in particular by the King's Brother's Wife, at a little Village in *Roenocke*. They were told of a great City where the King resided, six Days Journey on the Continent, which, however, they did not see; they made no long Stay, nor proceeded any farther on Discovery, only just to the neighbouring Parts, in their Boats; and, being satisfied with what they had seen, returned to *England* about the Middle of *September*, pleased with the Advantage they had made in this short and prosperous Voyage; and, with the Hopes of the future Advantages they should make, especially as they found all things here entirely new and surprizing.

They gave a very advantageous Account of Matters, by representing the Country so delightful and desirable, so pleasant, and abounding with all the Necessaries of Life; the Climate and Air so temperate, good and

wholefome, the Woods and Soil fo charming and fruitful, and all other Things fo agreeable, that Paradise itfelf feemed to be there in its native Luftre. They gave particular Accounts of the Variety of good Fruits, fome whereof they had never feen before; efpecially, that there were Grapes in fuch abundance as were never any where known; ftately tall large Oaks, and other Timber; red Cedar, Cyprefs, Pines, and other Ever-greens and fweet Woods, for Tallnefs and Largenefs exceeding all they had ever heard of. Wild Fowl, Deer, Fish, and other Game, in fuch Plenty and Variety that no Epicure could defire more than this new World feemed naturally to afford. To make it yet more defireable they reported, that the Native *Indians*, who were then the only Inhabitants, were fo affable, kind and good-natured; fo tractable in learning Trades and Fafhions; fo innocent and ignorant in all manner of Tricks and Cunning, and fo defirous of the *Englifh*, that they rather feemed ready to take any Impreffion, than any ways like to oppofe the fettling of the *Englifh* near them.

Upon this fair Representation of the Effects of their Voyage, and of the noble Discovery that had attended it, Queen *Elizabeth* was pleafed to promife what Affiftance it fhould be neceffary for the Crown to give for promoting and perfecting this Settlement; and fhe was likewife pleafed to beftow the Name of *Virginia* upon this new found Country; but whether, as is commonly believed, in regard to its being difcovered under a Virgin Queen, or in allufion to the uncorrupted State of the Land and its Inhabitants, is a Queftion I will not pretend to decide; but perhaps the former was the Senfe impofed by Sir *Walter*, the compleateft Courtier fhall I fay, or rather the compleateft Man, of his Time; and the latter the Senfe in which the Queen would have had it underftood: But however that matter be, we muft not confound the *Virginia* of Sir *Walter Raleigh* with the Province now fo called; for, without all queftion, it was in thofe Days a very different Thing, and comprehended the whole Country claimed by the Crown of *England*, from the Southern Limits of the new Province of *Georgia*, to the utmoft Extent of our Discoveries Northwards, agreeable to the two Patents granted to Sir *Humphrey Gilbert*, and to his Brother Sir *Walter Raleigh*.

It was not long before the Proprietor refolved to fit out a much more confiderable Fleet than had hitherto been employed in fuch Undertakings, that fomething might be done worthy of the Nation, on whose Behalf this Settlement was to be made, of the powerful Queen who had protected it, and of himfelf, who was the Author and Patron of this Scheme; Sir *Walter* intended to have commanded in this Expedition himfelf, and to have carried with him a fufficient Number of Forces to have completed this Design of making a Settlement there; but being at that time jealous that his Abfence might be prejudicial to his Intereft at Court, which the Earl of *Leicefter* fought all Occafions to leffen, he committed the Conduct of this fecond Enterprize to his Lieutenant, Sir *Richard Greenville*; who, on the 8th of *April*, fet fail from *Plymouth* with feven Ships fitted out by the Company, of which himfelf and feveral Gentlemen were Members; and this Company was the firft of that kind that was eftablifhed in *Europe*: Thefe King *James* incorporated by the Name of the *Governor and Company of the Weft Indies*; which, for their Mal-adminiftration, was diffolved by his Son King *Charles I.*

On the 26th of *June*, 1585, Sir *Richard Greenville* anchored at *Wokoken*, and in *Auguft* following they began to plant on the Ifland of *Roenocke*, five Miles diftant from the Continent, where Sir *Richard* landed one hundred and eight Men, under Governor *Ralph Lane*, and Captain *Philip Amadas*, who was conftituted Admiral of the new Colony, tho' I do not find he had fo much as a Bark left with him.

Sir *Richard* did not remain above three Weeks longer in thofe Seas; but having made fome Discoveries to the Southward, and having traded with the *Indians* for Skins, Furs, Pearls, and other Commodities, he failed on the 25th of *Auguft* on his Return to *England*, in which he took a very rich Prize; fo that this Voyage appeared to

the Eyes of the Nation no lefs prosperous than the former, and the new *Virginia* Company began to entertain very fanguine Hopes of their Undertaking. Let us now return to the firft Planters in *Virginia*, and give an Account of what happened to the firft Colony the *Englifh* eftablifhed there, or in any Part of *America*. Sir *Richard Greenville* was no fooner failed, than the People whom he left behind applied themfelves with Diligence to what had been recommended to them by Sir *Walter Raleigh*, which was the difcovering the Continent, and with this View they travelled eighty Miles South, and one hundred and thirty North from that Part of the Main oppofite to their Ifland; but in thefe Expeditions, venturing indiscreetly too high up the Rivers, and too far into the Country, the *Indian* Governors grew jealous of their Designs, and began firft to be weary of their Company, and then to cut off their Stragglers when they fell into their Hands; and they alfo formed a Conſpiracy to deftroy the reft, but were happily prevented.

The Journals of the Colony's Proceedings were duly entered, and afterwards delivered to the Company in *England*, who were not fo careful as they fhould have been to fend them Supplies of Proviſions, and the *Englifh*, not underſtanding the Nature of the Climate, neglected to gather Food in Seafon as the *Indians* did, by which Means they were reduced to great Streights. The Natives never after kept Faith with them, but watched all Opportunities to cut them off. And as this obliged them to be more wary in their Enterprizes on the Main, fo it hindered them from having any Supply from thence; however, they endured all with incredible Refolution, and extended their Discoveries near a hundred Miles along the Sea-coaſts. They kept the *Indians* in Awe by threatening them with the Return of their Companions and the Reinforcement of Men; but no Ships coming from *England* in all that Winter, nor in the Spring following, nor in Summer, they difpaired of being able to fupport themfelves any longer, the Natives beginning to deſpife them, when they ſaw them as it were abandoned by their Countrymen; and the *Englifh* expected every Day to be ſacrificed to their Cruelty. In this Diſtreſs their chief Employment was to look out to Sea, in hopes of finding ſome Means of Escape, or Recruit; and, when they were almoſt ſpent with Want and Watching, Hunger and Cold, in *Auguſt* they difcovered Sir *Francis Drake's* Fleet, who was returning from an Expedition againſt the *Spaniards* in *North America*, and had been commanded by the Queen to viſit this Plantation in his Way, and ſee what Encouragement or Affiſtance they wanted.

The Sight of Sir *Francis's* Fleet was moſt joyful to theſe poor People: Their firſt Petition to him, was to grant them a Supply of Men and Proviſions, with a ſmall Ship or Bark to attend them, that, in caſe they could not maintain themſelves where they were, they might embark in it for *England*. Sir *Francis* granted their Requeſt; and they ſet all Hands to work to fit the Ship he had given them, and furniſh her with all manner of Stores for a long Stay; but a Storm ariſing, which drove the Veſſel from her Anchor to Sea, and the Ship ſuffering ſo much in it that ſhe was not fit for their Uſe, they were ſo diſcouraged, that, notwithstanding Sir *Francis* offered them another Ship, they were afraid to ſtay, and earneſtly intreated him to take them with him, which he did: And this put an End to the firſt Settlement.

It was not at all owing to any Negligence in Sir *Walter Raleigh* that this Miſfortune happened; for he continually preſſed the Company to reflect on the Neceſſity of ſupporting the Colony in time, and ſo ſollicitous he was in this Buſineſs, that, finding the Fleet which was preparing under the Command of Sir *Richard Greenville* went on but ſlowly, he propoſed that the firſt Ship that was completely manned and equipped, ſhould be ſent, without ſtaying for the reſt, which was done; but when ſhe arrived at the Ifland *Roenocke*, ſhe found it deſerted. A few Days after came Sir *Richard Greenville* with his Squadron of three ſmall Veſſels, and found not a Man upon the Place, to his great Diſappointment; however, he reſolved to ſettle again, and therefore left behind him fifty Men, with Directions to build a Houſe, or rather Fort,

Fort, for their own Security, furnishing them besides with all Necessaries for two Years, and giving them the strongest Assurances, that they should be constantly and regularly supplied.

This second Colony had no better Fortune than the first, for the *Indians*, taking Advantage of the Smallness of their Number, and the Difficulties they had to struggle with, attacked, and cut them off; so that when Mr. *John White* came thither with three Ships and considerable Supplies, on the 22d of *June*, 1587, he found their Fort demolished, some Huts they had erected near it destroyed, and not far from them the Bones of a dead Man. In all these Revolutions *Manteo*, the *Indian*, remained firm to the *English* Interest, and it was from his Information that Mr. *White* learned what was become of this last Colony.

The Misfortunes that had attended these two Settlements, would certainly have discouraged a Man of less Constancy and Fortitude than Mr. *White*; but he had a Commission to be Governor, and Sir *Walter* had strongly recommended to him the keeping Possession of the Place. He therefore erected a new Habitation, and, chusing eleven of the most capable Persons that came along with him, constituted a regular Society, to which he gave the Title of the *Governor and Court of Assistants of the City of Raleigh in Virginia*, hoping they might be able to retrieve the Credit of this Undertaking, and conduce to the Improvement of the Commerce and Navigation of his Country, and thereby answer the Expectations of his honourable Patron, whose Name he had given to his new Plantation. On the 13th of *August* *Manteo*, the faithful *Indian*, was christened, and created by the Governor *Lord of Dassumonpeak*, an *Indian* Nation so called, as a Reward of his Fidelity and Service to the *English*; and on the 18th of the same Month was born the first Child that was the Issue of Christian Parents in that Place, being the Daughter of Mr. *Ananias Dare*: She was after the Name of the Country christened *Virginia*. Good Government and Industry soon rendered Mr. *White* and his Men formidable to the *Indians*, who courted their Friendship, and made Leagues with the Corporation, which they kept or broke as they thought themselves too weak or too strong for the *English*, who, as much as they seemed to thrive, underwent so many Hardships for want of due Supplies from *Europe*, that nothing but the invincible Constancy, which is the distinguishing Character of their Nation, could have supported them in the midst of so much Misery.

Yet so far were they from repenting of their Undertaking, or desiring to return, that they disputed for the Liberty of remaining at *Roanoke*, and obliged Mr. *White* their Governor to return for *England*, and solicit the Company to send them Recruits of Men and Provisions. Mr. *White* undertook to negotiate their Affairs; and, leaving 150 Men in the Corporation, set sail for *England*, where he arrived in Safety, and was two Years there before he could obtain a Grant of the necessary Supplies. At last he had three Ships fitted out for him, with Provisions and more Men for the Colony. And on the 15th of *August* he arrived at *Cape Hattaras*; and, landing on the Island *Roanoke*, found by Letters cut on Trees, in large Roman Characters, that the *English* were removed, but he could not tell where. They saw the Letters C. R. O. on several Trees; and, searching farther, on one of the Palisades of the Fort which they had quitted, they found cut in large Capital Letters the Word *Croatan*, one of the Islands forming the South, about twenty Leagues southward of *Roanoke*. On this Advice, they embarked in quest of their Fellows at *Croatan*; but they were scarce all of them aboard, before a dreadful Storm arose, which separated the Ships one from another. They lost their Anchors and Cables, and durst not venture in with the Shore, so they all shifted for themselves, and, with various Fortunes, arrived in *England* and *Ireland*.

This dreadful Blow proved the Ruin of the third Settlement, of which I do not find that the Company took any farther Care, or that any new Attempt was made for preserving the Possession of this Country to the Crown of *England*, which had been so highly magnified, and the Advantages thereof painted in such strong Colours at the Beginning. Some have attributed this to Sir *Wal-*

ter Raleigh's Troubles; but surely they were but indifferently acquainted with his History, since it was during the latter Part of Queen *Elizabeth's* Reign that he stood in the highest Credit at Court, and was most capable of procuring Favour from it. But that I may not leave this Subject altogether dark and imperfect, I shall venture to suggest what appears to me to be the true Reason why there was no more Care taken of so promising a Scheme as this was of which we are writing. Sir *Walter Raleigh*, as very clearly appears from his manner of conducting it, had the public Service alone in View, which induc'd him to throw the Concerns of this Colony into the Hands of a Company, in which, no doubt, he thought he had provided for them effectually, and therefore turned his own Thoughts and most vigorous Endeavours to other Purposes, in which he was so entangled, that he found it impossible to disengage himself, when he saw their Negligence, and foresaw the Consequences of it, which were fatal to a Settlement that cost him so much Pains, and of which he had once so great Hopes.

13. But neither the Business of Planting, nor the Profits resulting from military Expeditions, could hinder such as were addicted to the Study of Maritime Affairs from wishing to see the new Passage to the *Indies* fairly opened. And notwithstanding many Attempts had been made to very little Purpose, yet no considerable Mariner, no Man of Reputation for Cosmographical Learning, could propose any reasonable Scheme for this Purpose, but there were Merchants enough ready to lend their Assistance, and to lay down whatever Money was requisite for carrying it into Execution. This Freedom and Readiness of venturing their private Fortunes for the Public Service, was certainly very honourable and commendable, but they did still more, for they did not only prosecute such Attempts like Merchants, but adhered to them with a philosophic Firmness; so that when a Man returned without Success, and plainly shewed that he had done his Duty, and that there were still Hopes, they encouraged, they rewarded, they fitted him out again and again: But this was an Age of public Spirit; the People went eagerly into whatever great Ministers proposed; most of those Ministers had only the Service of their Mistress at Heart; and the Queen herself was truly the Mother of her People.

In such a Reign it was natural that Wonders should be done, and it happens very luckily for those who celebrate these Wonders, that they are able to maintain all that they assert, by incontestable Evidence; an Instance of which we shall give in a succinct Account of the Voyages of Capt. *John Davis*, for the Discovery of the North-west Passage; which, however, should not have been brought in here, but have been referred to another Section, if we had not found them necessary to shew the Limits of our Discoveries in the northern Parts of *America*; and having thus opened the true Design of his Attempts, we shall proceed to the Narrative of them, in such a Manner, as to render the Nature and Success of his Enterprizes, as clear as it is possible. In order to this, it is requisite to observe, that before his first Voyage was undertaken, there was a Design of attempting to discover a North-west Passage formed by some Traders of the West of *England*; who, when they understood that the like Project had been set on foot at *London*, proposed joining their Forces, which was accepted, and Mr. *William Sanderson*, Merchant of *London*, who was both a principal Man in the Undertaking, and a large Contributor towards the Expence, recommended Capt. *John Davis*, as a proper Person to have the Direction of this Enterprize; and he was accordingly appointed Commander of the *Sun-shine* of *London*, a Bark of 50 Tons, on board of which were three and twenty Persons, and, in Conjunction with the *Moon-shine*, of *Dartmouth*, a Vessel of thirty-five Tons, with nineteen Persons on board, they sailed from the last mentioned Port on their Voyage for Discovery. *June* 7, 1585.

On the 14th of the same Month they were forced into one of the *Sylley*, or, as it is now written, the *Scilly Islands*, where being detained for a Fortnight, Capt. *Davis* shewed his active and indefatigable Genius, by making

making an accurate Chart of them, which was a thing, at that time, very much wanted. On the 28th they sailed from thence, and continued their Course to the North-west, till on the 19th of *July* they came into a whirling Tide, which set Northwards, and sailing about half a League into a very calm Sea, which bent South-south-west, they heard a mighty Roaring, as if it had been the Breach of some Shore, which could not but be very terrible, since the Weather was so foggy that they could not see from one Ship to another, though at a very small Distance. Upon this the *Moon-shine* was ordered to hoist her Boat out to sound, but they could find no Ground in three hundred Fathoms and better; then the Captain, the Master, and Mr. *Jane*, who wrote this Account, went towards the Breach to see what it was, and it proved to be several Islands of Ice which were broke loose, and floating in the Sea; they got out upon these, and walked upon them, and when they went back into their Boat, they carried several large Pieces of Ice, which melted into very good fresh Water.

On the 20th the Fog breaking up they discovered the Land, which looked like a Sugar-loaf, and made so uncomfortable, or rather so horrid an Appearance, that Capt. *Davis* called it the *Land of Desolation*. On the 21st they were forced to bend their Course South again, to clear themselves of the Ice, which they did, and then ran along the Shore. On the 22d the Captain endeavoured to go ashore, but was hindered by the Ice; the Water on the Coast was very black, and though the Seamen made use of their Lines, they could catch no Fish. On the 24th the Captain caused the Mens Allowance to be increased, to encourage them; but it is very remarkable, that he assures us the Weather was far from being cold, but like ours in *April*, very sharp, when the Wind blew from the Shore; and on the contrary, very hot, when it blew from the Sea.

On the 25th they bore away North-west, and continued their Course for four Days. On the 29th they discovered Land in the Latitude of $64^{\circ} 15'$ North, the Sea quite free from Ice, and the Weather very temperate. Upon viewing the Coast they found many pleasant Bays and commodious Ports, but judged it not a continued Land, but rather an Archipelago, and therefore they resolved to go ashore on one of these small Islands, in order to search for Wood and Water, and to gain a better Knowledge of the Country; they were no sooner on Shore, than they found evident Marks of the Country's being inhabited, by there lying upon the Ground a small Shoe, several Pieces of Leather sewed with Sinews, a Piece of Fir and Wool, like Beaver. They went next upon another Island, where, getting upon a high Rock, they were seen by the People of the Country, who set up thereupon a most hideous Howling; when they perceived this, the *English* likewise made a Noise, to give Notice of what had happened, to their own People; upon which Capt. *Bruton*, of the *Moon-shine*, presently came to their Assistance, with a good Number of his Seamen; and presently after their Arrival there appeared ten Boats full of the Natives coming from a neighbouring Island, and two of these Canoes advanced so near the Shore, that they could easily talk with those that were in them; their Language was much in the Throat, and their Pronunciation harsh and unpleasant; one of them, however, seemed inclined to come on Shore, but first pointed to the Sun, and then struck his Breast so hard, that they could hear the Blow; upon which, Mr. *John Ellis*, Master of the *Moon-shine*, was appointed to treat with him; and he going to the Sea-side, pointing to the Sun, and striking his Breast, as the Savage had done, he at length ventured on Shore, and they threw him Caps, Stockings, Gloves, and what else they thought might please him; but the Night drawing on, they took their Leaves on both Sides.

The next Morning there came thirty-seven Canoes rowing by their Ships, calling them to come ashore. The *English*, however, did not make great Haste; upon which one of the Savages leaped on Shore, and went to the Top of a Rock, where he danced and beat a Drum, to shew his Joy. The *English* then manned their Boats,

and came to them to the Water-side, where they waited in their Canoes; and after the formal Ceremony of swearing by the Sun, the Savages made no Scruple of trusting them; but, on the contrary, shewed all possible Signs of Kindness, and even of Politeness; for when the Author of this Voyage offered to shake Hands with one of them, he first took his Hand and kissed it. They readily parted with any thing they were asked for, and were content with whatever was given them, shewing no Signs of Greediness, much less of Treachery or Infidelity. They bought of them five of their Canoes, and several of their Stockings and Gowns, which were made, some of Seal and other of Bird Skins, all of them well dressed, and neatly made; so that it plainly appeared they had various Trades amongst them. They had plenty of Furs; and when they saw that the *English* admired them, they gave them to understand, by Signs, that they would go up into their Country and come down and bring them more, but the Wind proving fair in the Night, Capt. *Davis*, despising Profit, on the 1st of *August* sailed still farther to the North-west; and on the 6th of the same Month they entered into a very fair Road, free from Ice, in the Latitude of $66^{\circ} 40'$, where they landed under a high Mountain, the Cliffs of which shone like Gold.

Captain *Davis*, having taken a view of every thing, began to think of bestowing Names on the Places he had discovered. He gave to the Hill the Name of *Mount Raleigh*; the Road where the Ship lay he called *Totness Road*; the Sound, at the Foot of the Mountain, *Exeter Sound*; the North-foreland, *Diers Cape*; and the South-foreland, *Walsingham*. Here they discovered four white Bears of a prodigious Bigness, two of which they killed and brought on board; the Fore-paw of one of which measured fourteen Inches. They saw a Raven upon *Mount Raleigh*, and at the bottom of the Hill they found some Shrubs and Flowers like Primroses; the Coast, however, was very mountainous, and altogether barren, affording neither Wood nor Grass, nor so much as Earth; the Mountains being all of Stone, but the bravest Stone, says our Author, that ever we saw. Yet this Account concludes nothing against the Fruitfulness of the inland Part of the Country, which might be very good for all that, and, indeed, probably was so, since the Bears were very fat, and yet it appeared, upon opening their Stomachs, and upon viewing their Dung, that they were not ravenous, but fed upon Grass.

They weighed on the 8th from *Mount Raleigh*, sailing still along the Coast, which lay South-south-west, and East-north-east. On the 11th they came to the most southerly Point of this Land, which they called the *Cape of God's Mercy*, and here they were surprized with a very thick Fog; upon the breaking up of which, they found that they were shut into a very Streight or Passage, in some Places sixty Miles broad, in others ninety; the Weather very fine and temperate, and the Water of the same Colour with that of the Ocean, which filled them with Hopes. They sailed through this Streight for sixty Leagues, and then discovered several fair Islands in the midst of it, with an open Passage on both Sides, through which they sailed. One Bark taking the North, the other the South Side; but the Wind changing, and the Weather growing foggy and foul, they were forced to lye by for five Days, in those which have been ever since called *Davis's Streights*. On the 14th they went ashore, and saw evident Marks of the Country's being inhabited; for they found Part of a Stone-Wall and a human Skull. On the 15th they heard a great Howling on Shore, which they supposed to be Wolves, and therefore went ashore to kill them; when they came to Land they found the Creatures they had taken for Wolves were Dogs, and they came instantly running to the Boat to meet them, wagging their Tails, and shewing other Signs of Joy, as it is usual for those Animals to do at the Sight of Men. There were twenty of them in all, and as they were of the Size of Mastiffs, with short Ears and long bushy Tails, the Seamen being afraid of them, fired and killed two, one of which had a leather Collar on. They found likewise there two Sledges, one made of several kind of Boards that were sawed, and the other of Whalebone. They likewise saw Larks,

Larks, Ravens, and Partridges. On the 17th they went ashore again, and, in an Oven built with Stones, they found a small Canoe made of Wood, an Image, a Bird made of Bone, Beads for Necklaces, and other Trifles. The Coast made no very promising Appearance, as having neither Wood nor Grass; but the Rocks were of a fine bright Stone, like Marble beautified with Veins of different Colours. Upon the Shore they found a Seal or Sea-Calf just dead and thrown under a heap of Stones.

Captain *Davis* and his Master were extremely well pleased with the Appearance of this Streight, though they began to doubt whether the Season would permit them to continue long in it; which nevertheless they took for the very Channel into the South Seas, in search of which they came, and resolved to report so much upon their return to *England*. The Reasons which confirmed the Probability of there being a Passage in this Streight, and upon which they grounded their Hopes of future Success, were, 1st. That this Place was all Islands, with great Sounds between them. 2d. That the Water remained all of the same Colour with the main Ocean, without altering; whereas they never came into any Bay before nor after, but the Colour of the Water was altered very blackish. 3d. Because they saw to the West of those Islands three or four Whales in a Skull, which they imagined came from the Western Sea, because to the Eastward they had seen no Whales. 4th. Because as they were rowing into a very great Sound lying South-west, from whence those Whales came, there came suddenly a violent Counter-check of a Tide from the Southward, against the Flood which they came in with, not knowing from whence it received its Source. 5th. Because in sailing twenty Leagues within the Mouth of this Entrance, they had sounding in ninety Fathoms on a grey andousy Sand; and the farther they ran into the Westward, the deeper was the Water: So that among the Islands they had near the Shore no Ground in three hundred and thirty Fathom. 6th. Because it ebbd and flowed six or seven Fathom, the Flood coming from divers Parts, so that they could not with any Certainty discern the chief Source of it.

On the 19th it was resolved by the Officers to continue the Prosecution of their Discoveries; but the Wind changing on the 20th, they were obliged to remain at Anchor; and the Weather growing very foul, they, on the 24th, hoisted Sail for *England*. On the 10th of September they fell in with the *Land of Desolation*; on the 27th they had Sight of the *English* Coast, and in a Storm lost the *Moonshine* that Night. On the 30th Captain *Davis* came safely into *Dartmouth*, where he found the *Moonshine*, which arrived about two Hours before. Upon his return to *London*, Captain *Davis* gave a very clear Account to his Owners, of his Expedition, and of what he had done; observing, that at the Time he put to Sea, he had only general Instructions to search for a Passage to North-west, without any Intimation where that Passage was most likely to be found; that he had accordingly entered a Streight which he thought might possibly be that Passage; but the Weather changing, and the Season of the Year being two far advanced, he judged it requisite to return home.

His Owners were so well satisfied, that they procured him an Audience of Secretary *Walsingham*; who approved very much of the Enterprize, and of the Manner in which he had conducted it; but at the same Time recommended it to him to complete this Discovery, to which he was also pressed by those who were concerned in his former Undertaking, and by some Merchants of *Exeter*, who desired to join in the Expences necessary for a second Expedition; to which he willingly consented, and accordingly undertook it; and as he has written himself an Account of this Voyage, which was a very remarkable one, I shall give it the Reader, as near as may be, in his own Words.

“ On the 7th of May, 1586, I set out from *Dartmouth* with four Sail, viz. The *Mermaid* of 120 Tons, the *Sunshine* of 60 Tons, the *Moonshine* of 35 Tons, and a Pinnace of 13 Tons, called the *North Star*. We coasted the South-side of *Ireland*, and on the 13th

“ steered away North-west, till we came to the Latitude of 60°. At which Time I divided my Fleet, and ordered the *Sunshine*, and the *North Star*, to seek a Passage Northward, between *Groenland* and *Iceland*, to the Latitude of 80°, if Land did not hinder them. I departed from them the 7th of June; and on the 15th discovered Land in 60° Latitude, and in Longitude from the Meridian of *London* Westward 47°. The Ice lay, in some ten, in some twenty, in some fifty, Leagues off the Shore; so that we were constrained to bear into 57° to double the same, and to get a free Sea, which through God's favourable Mercy we at length obtained.

“ On the 29th, after many Storms, we again discovered Land, in Longitude from the Meridian of *London* 58° 30', and in Latitude 64°, being East from us, into which since it pleased God by contrary Winds to force us, I thought fit to bear in with it, and to set up our Pinnace, which we had provided in the *Mermaid* to be our Scout for this Discovery, and so much the rather, because the Year before I had been in the same Place, and found it very convenient for such a Purpose, being inhabited by a People of tractable Conversation, and the Sea void of Ice. The Ships being within the Sounds, we sent our Boats to search for Shore-water, where we might anchor, which in this Place is very hard to find. The People of the Country, espying them, came in their Canoes towards them with Shouts and Cries; but when they saw in the Boats some of our Company that were there the last Year, they rowed to the Boat, and, taking hold of the Oar, hung about the Boat, expressing a great deal of Joy; and making Signs that they knew all those that had been there the Year before. I went ashore with others of the Company, and took with me twenty Knives. We had no sooner landed but they leaped out of their Canoes and came running to us, and embraced us with many Signs of hearty welcome; there were eighteen of them, and I gave to each of them a Knife, and they offered me Skins for a Reward; but I made Signs that they were not sold, but freely given to them; and so dismissed them for that Time, with Signs that they should return after certain Hours.

“ The next Day, with all possible Speed, the Pinnace was landed upon an Island, there to be finished; and while it was setting up the People came continually to us, sometimes a hundred Canoes at a time, bringing Seal-skins, Stag-skins, White Hares, Seals, Salmon-Peal, small Cod, dry Caplin, with other Fish, and some Birds. I sent one of the Boats to search one Part of the Land, while I went to another Part, with strict Command that there should be no Injury offered to any of the People, nor any Gun shot. They formed Tents made of Seal-skins, wherein was Store of dried Caplin, being a small Fish, no bigger than a Pilchard, some Bags of Train-Oil, many little Images cut in Wood, and Seal-skins in Tan-Tubs, whereof they diminished nothing. When they had passed ten Miles within the snowy Mountains, they came to a plain champaign Country with Earth and Grass, like to our moory and waste Grounds in *England*; they went ten Leagues up into a River, which in the narrowest Place was two Leagues over, finding it still to continue they knew not how far. But I with my Company took another River, which, although at first it afforded a large Inlet, yet it proved but a deep Bay, the End whereof I attained in four Hours; and there leaving the Boat well manned, went with the rest of the Company three or four Miles into the Country, but found nothing, nor saw any thing but Gripes, Ravens, and small Birds, as Larks and Linnets. The third of July I manned my Boat, and went with fifty Canoes attending upon me into another Sound, where the People, by Signs, willed me to go, hoping to find their Habitation. At last they made Signs that I should go into a warm Place to sleep; at which Place I went on Shore, and desired they would leap with our Men, which they agreed to, but ours did over-leap them; from leaping they went to wrestling; we found them

G g g strong

“ strong and nimble, and to have Skill in wrestling,
 “ for they cast some of our Men that were good Wrest-
 “ lers.

“ On the 4th the Master of the *Mermaid* went to
 “ certain Islands to store himself with Wood, where he
 “ found a Grave with divers buried in it, covered with
 “ Seal-Skins only, and a Cross laid over them. The
 “ People are of good Stature, well proportioned, with
 “ small slender Hands and Feet, broad Visages, small
 “ Eyes, wide Mouths, the most Part unbearded, great
 “ Lips and close-toothed; they are much given to
 “ bleed, and therefore stop their Noses with Deers Hair,
 “ or that of an Elan. One of them kindled a Fire after
 “ this Manner: He took a Piece of a Board wherein was
 “ a Hole half through; then he put into the Hole the
 “ End of a round Stick like a Bed-staff, wetting the
 “ End thereof with Train-oil, and (as your Turners do)
 “ with a piece of Leather by the violent Motion he
 “ speedily produced Fire; this done he made a Fire with
 “ Turfs, into which, with many Words and strange Gef-
 “ tures, he put divers things, which we supposed to be a Sa-
 “ crifice; they desired me to go into the Smoak, and I
 “ willed them likewise to stand in the Smoak, which
 “ they would by no means do; I then thrust one of them
 “ into the Smoak, and commanded one of my Men to
 “ tread out the Fire and spurn it into the Sea, to shew
 “ them that we did condemn their Sorcery. They are
 “ very simple in their Conversation, but marvelously
 “ thievish, especially of Iron, which they have in great
 “ esteem. They cut away the *Moon-shine*'s Boat from
 “ her Stem; they cut our Cables and our Cloth where
 “ it lay to air, though we did carefully look to it;
 “ they stole our Oars, a Caliver, a Boat, a Spear, a
 “ Sword, with divers other things, which so grieved the
 “ Company, that they desired me to dissolve this new
 “ Friendship; whereupon I ordered a Caliver to be shot
 “ among them, and immediately upon the same a Fal-
 “ con; which strange Noise did so amaze them, that
 “ they departed with all Speed; but within ten Hours
 “ they returned and intreated a Peace, which being grant-
 “ ed, they brought us Seal-Skins and Salmon-Peel, but
 “ when they saw Iron they could not forbear stealing;
 “ which when I perceived, I commanded that in no
 “ Case they should be any more hardly used, but that
 “ our own People should be more vigilant to keep their
 “ things.

“ They eat all their Meat raw; they live most
 “ upon Fish, drink Salt-water, and eat Grass and Ice
 “ with Delight; they make Fishing-nets with Whale-
 “ Fins; 'tis probable they have Wars with those on the
 “ main Land, many of them being fore wounded, which
 “ Wounds they received upon the main Land, as by
 “ Signs they gave us to understand. The 17th of July
 “ I went ashore in our new Pinnace, and with the most
 “ Part of my Company went to the Top of an high
 “ Mountain, hoping from thence to see into the Coun-
 “ try; but the Mountains were so many and so lofty
 “ that we could not see far; we returned to our Pinnace
 “ and saw a strange Sight, which was a mighty Whirl-
 “ wind, continuing three Hours with little Intermision,
 “ which taking up the Water in great Quantities, furi-
 “ ously mounted it into the Air. The next Morning,
 “ the Storm being over, we sailed into a mighty great
 “ River, directly into the Body of the Land, and
 “ found it to be no firm Land, but huge, vast, and
 “ desert Islands, with mighty Sounds and Inlets passing
 “ between Sea and Sea. On the 9th we returned to
 “ our Ships, where our Mariners complained heavily
 “ against the People, that they had stolen an Anchor
 “ from us, had cut one of our Cables very danger-
 “ ously, and spared not to sling Stones at us of half a
 “ pound Weight: The next Day I went ashore and used
 “ them with much Courtesy, and when I returned they
 “ followed me in their Canoes; I gave some of them
 “ Bracelets, and seven or eight of them came on Board,
 “ whom I used kindly, and let them depart; as soon as
 “ Sun was set they began to practise their devilish Nature,
 “ and with Slings threw Stones very fiercely into the
 “ *Sun-shine*, and knocked down the Boatswain; where-

“ upon we pursued them with our Boats, and shot at
 “ them; but they rowed so swiftly, that we could not
 “ reach them.

“ On the 11th five of them came to make a new
 “ Truce; the Master acquainted me with their coming,
 “ and desired they might be kept Prisoners until we
 “ had our Anchor again; but when he saw the chief
 “ Ring-leader and Master of Mischief was one of the
 “ five, he was then very urgent to have him seized, and
 “ so it was determined to take him; he came crying
 “ *Iliaout*, and, striking his Breast, offered a Pair of
 “ Gloves to sell; the Master offered him a Knife for
 “ them: So two of them came to us, one we dismissed,
 “ but the other was soon made Captive among us; then
 “ we pointed to him and his Fellows for our Anchor,
 “ which being had, we made Signs to him he should be
 “ set at Liberty; about an Hour after the Wind came fair,
 “ and we set sail and brought him away with us. One
 “ of his Companions, following our Ship in his Canoe,
 “ talked with him, and seemed to lament his Condition;
 “ we still using him well, and saying to him *Iliaout*,
 “ i. e. we mean no harm, at last he aboard spake four
 “ or five Words to the other, and clapped both his
 “ Hands on his Face, the other did the like, and so
 “ parted; we judged the covering his Face, and bow-
 “ ing down his Body, signified his Death; after some
 “ Time he became a pleasant Companion among us;
 “ I gave him a new suit of Frize of the *English* Fashion,
 “ of which he was very fond; he trimmed up his Darts
 “ and all his fishing Tools, and would make Okam, and
 “ set his Hand to the Rope's-end; he fed upon Caplin
 “ and dry *Newland* Fish. The 17th, being in Latitude
 “ of 63° 8', we fell in with a mighty Mass of Ice, very
 “ high, like Land, with Bays and Capes; and, supposing
 “ it to be Land, we sent our Pinnace to discover it; but,
 “ on her return, we were assured that it was only Ice,
 “ which caused great Admiration to us all, and the ra-
 “ ther, because in this Place we had very tickle and
 “ strong Currents. We coasted this Mass of Ice till the
 “ 30th, finding it a great Bar to our Purpose. The
 “ Air was now so foggy, and the Sea so pestered with
 “ Ice, that all Hopes of proceeding was banished; for
 “ on the 24th of July our Shrouds, Ropes, and Sails,
 “ were so frozen and compassed with Ice, only by a
 “ gross Fog, as seemed to us very strange, who the
 “ last Year found this Sea free and navigable without
 “ Impediments.

“ Our Men, through this Extremity, began to grow
 “ sick and feeble, and withal hopeless of good Suc-
 “ cess; whereupon, very orderly and discreetly, they in-
 “ treated me to regard our present State, and withal
 “ advised me, that in Conscience I ought to preserve my
 “ own Life and theirs; and that I should not, through my
 “ own Boldness, leave their Widows and fatherless Chil-
 “ dren to give me bitter Curses. This did move me
 “ to commiserate their Condition, yet considering the
 “ Importance of this Discovery if it could be accom-
 “ plished, the great Hopes of a Passage by what we had
 “ seen the last Voyage, and that there was yet a third Way
 “ to be attempted, I thought it would turn to my Dis-
 “ credit if the Action should fail through my Neglect,
 “ therefore resolved to prosecute it; and considering
 “ the *Mermaid*, by Reason of her Burden, was not so
 “ nimble and convenient for this Purpose as a smaller
 “ Bark, and was 100 *l.* a Month Charge to the Adven-
 “ turers; I determined to revictual the *Moon-shine*, and
 “ proceed as God should direct me: Whereupon I al-
 “ tered my Course to recover the next Shore, where this
 “ might be performed; and the 1st of August discovered
 “ Land without Snow or Ice, in Latitude 66° 33', and
 “ in Longitude, from the Meridian of London, 70°.

“ On the 2d we anchored in a very good Road, where,
 “ with all Speed, we graved and re-victualled the *Moon-
 shine*; we found it here very hot, and we were very
 “ much troubled with Muskitos, which did sting griev-
 “ ously. The People of the Country caught a Seal, and,
 “ with Bladders fast tyed to him, sent him to us with
 “ the Flood, so as he came right with our Ship, which
 “ we took as a friendly Present from them. On the
 5th I

“ 5th I went on Top of a Hill, and espying three
“ Canoes under a Rock, went to them, and found in
“ them Skins, Darts, &c. whereof we diminished no-
“ thing; but left upon every Boat a Silk Point, a Bullet
“ of Lead, and a Pin. The next Day the People came
“ to us without Fear, and bartered with us for Skins;
“ our Savage kept close, and made Shew that he would
“ fain have another Companion. Being thus provided, I
“ departed on the 12th, leaving the *Mermaid* at Anchor;
“ her Crew finding many Occasions of Discontent, and
“ being unwilling to proceed, here forsook me.

“ The 14th, failing West fifty Leagues, we discovered
“ Land, in Latitude 66 Degrees 19 Minutes; and
“ the next Day we stood to the South; and on the
“ 18th discovered a very fair Promontory North-west
“ from us, in 65 Degrees, having no Land on the South,
“ which gave us great Hopes of a Passage. The 20th
“ I went to the Top of a high Hill, whence I perceived
“ that this Land was all Islands; we coasted this Island
“ towards the South, from 67 to 57 Degrees. The 28th,
“ having great Distrust of the Weather, we arrived in a
“ fair Harbour, and sailed ten Leagues into the same,
“ being two Leagues broad, with fair Woods on both
“ Sides: Here we continued to the 1st of *September*, in
“ which time we had two very great Storms; I went
“ six Miles into the Country, and found the Woods were
“ Fir, Pine-apple, Elder, Yew, Withey, and Birch. Here
“ we saw a black Bear, and Store of Birds, as Pheasants,
“ Partridges, wild Geese, Bucks, Blackbirds, Jays,
“ Thrushes, and other small Birds. The 1st we set
“ sail, and coasted the Shore with fair Weather. The
“ 4th we anchored in a good Road, among many
“ Islands. Eight Leagues to the North of this Place we
“ had strong Hopes of a Passage, by reason of a mighty
“ Sea passing between the two Lands, West; we greatly
“ desired to go into this Sea, but the Wind was directly
“ against us.

“ The 6th we sent five young Men ashore to an
“ Island, to fetch some Fish which we had left there
“ covered all Night. The Savages who lurked in the
“ Woods suddenly assaulted our Men, which we per-
“ ceiving let slip our Cable, and, under our Fore-sail,
“ bore in to the Shore, and discharged a double Musket
“ upon them twice; at the Noise of which they fled,
“ having killed two of our Men with their Arrows, and
“ grievously wounded two more; the other escaped by
“ swimming, with an Arrow shot through his Arm.

“ This Evening it pleased God farther to increase our
“ Sorrows with a furious Storm at North-north-east,
“ which lasted to the 10th: We unrigged our Ship, and
“ intended to cut down our Masts; the Cable of our
“ Sheet-anchor broke, so that we expected to be driven
“ on Shore, and become a Prey to the Cannibals; yet, in
“ this deep Distress, God gave us Succour, and sent us a
“ fair Sea, so that we recovered our Anchor again, and
“ new moored our Ship; where we saw that God had
“ manifestly delivered us, for two Strands of our Cable
“ were broken. The 11th, the Wind coming fair at
“ West-north-west, we departed with Trust in God’s
“ Mercy, shaping our Course for *England*, and arrived
“ in the West-country the Beginning of *October*, where
“ the *Sunshine* arrived a few Days before us; she had been
“ at *Iceland*, and from thence to *Groenland*, and so to
“ *Estotiland*, and thence to *Desolation*, where she traf-
“ ficked with the People, staying in the Country twenty
“ Days. They lost Sight of the Pinnacle, called the
“ *North-Star*, on the 3d of *September*, in a very great
“ Storm, and lay a-hull to tarry for her all the next
“ Day; but saw her no more: The said Pinnacle never
“ returned home.”

We find annexed to this Account of Capt. *Davis*’s second
Voyage, a Letter of his to Mr. *William Sanderfon*, who
seems to have been his Patron; in which he excuses
his Want of Success in this Voyage, declares his confident
Hope, that such a Passage might yet be found, the Im-
provement of his Knowledge by this last Voyage, and his
Resolution to prosecute this Discovery to the utmost,
though it should cost him the little paternal Fortune he
had in the West; and concludes with an Assurance, that

he would communicate to him a fair and clear Chart of
his Voyage, which would give him a perfect Compre-
hension of the Arguments he had to offer in support of
his Notion, that this Passage, so often attempted in vain,
might still be found. This Letter is dated from *Exeter*,
the 14th of *October*, 1586; and it had all the good Effects
that Capt. *Davis* could expect from it, since his Friend
still continued to have as good an Opinion of him as ever,
and so it appears the rest of his Owners had; but it went
no farther than the Approbation of his Conduct in his last
Voyage, for when he came to propose a third Expedition,
the West-country Merchants, and most of those in *Lon-
don*, grew weary of the Expence, and would be con-
cerned no longer. He proposed, however, to the rest of
the Adventurers, a new Scheme, which took Effect, and it
was this: That they should fit out three Vessels, one of
which only should be employed on the Discovery, and the
other two in Fishing; by which he proposed to defray all,
or at least the best Part, of the Expence. It is very re-
markable that Mr. *Bruton*, who served with Capt. *Davis*
in his first Voyage, accompanied him also in this, and so
did Mr. *John Jane*, who has been his Merchant or Su-
percargo, and many of his old Seamen; which shews the
Confidence they had in his Skill, and how sensible they
were of his Care and good Usage.

The Vessels provided for this last Voyage were the
Elizabeth of *Dartmouth*, the *Sunshine* of *London*, and the
Ellen which was but very small. As for the History of
the Voyage, which is but short, we shall give it as we did
the former, in the Words of the Author. “ We de-
“ parted from *Dartmouth* the 10th of *May*, and discover-
“ ed Land on the 14th of *June*. On the 16th we an-
“ chored among many low Islands which lay before the
“ high Land; the People came to us crying, *Iliaout*;
“ and shewing us Seal-Skins. On the 20th I left the
“ two Ships to follow their Fishing, taking their faithful
“ Promise not to depart till I returned unto them, which
“ should be in the End of *August*; but they, finishing
“ their Voyage in sixteen Days, presently returned for
“ *England*, without regarding their Promise, whilst I,
“ not distrusting any such hard Measure, proceeded on
“ the Discovery. On the 24th, in Latitude 67 Degrees,
“ 40 Minutes, the Weather was very hot, thirty Savages
“ came to us in their Canoes, twenty Leagues from the
“ Land, intreating us to go ashore. I coasted the Shore of
“ *Groenland*, from the 21st to the 30th, having the Sea all
“ open towards the West, and the Land on the Starboard-
“ side, East from me, the Weather extremely hot and
“ very calm. The Sun was five Degrees above the Ho-
“ rizon at Midnight, Latitude 72 Degrees 12 Minutes;
“ the Compass in this Place varied 28 Degrees towards the
“ West. The 3d of *July* we fell in again with Ice; and on
“ the 6th put our Bark through it, seeing the Sea free on the
“ West side; and when we had sailed five Leagues West
“ we fell in with another mighty Bank of Ice which we
“ could not pass; therefore returning again, we got clear
“ on the 8th at Midnight, and recovered the open Sea
“ through God’s Favour, by giving us fair Winds and
“ and calm Weather. On the 15th, in Latitude 67 De-
“ grees 45 Minutes, a great Current set us to the West
“ six Points from our Course.

“ On the 19th we had Sight of *Mount Raleigh*. On
“ the 30th we crossed over a great Inlet or Passage,
“ being twenty Leagues broad, and situate between 62
“ and 63 Degrees, in which Place we had eight or nine
“ great Races, Currents, or Over-falls, like the Water
“ under *London-bridge*, and bending their Course into the
“ Inlet. The 31st, in Latitude 62 Degrees, coming
“ close by a Foreland, we fell into a mighty Race, where
“ an Island of Ice was carried by the Force of the Cur-
“ rent as fast as our Bark could sail with all Sails bearing.
“ This Cape, as it was the Southern Limits of the Gulph
“ we passed over Yesterday, so was it the North Pro-
“ montory, or Beginning of another great Inlet which
“ we passed over this Night, where we saw the Sea falling
“ down towards the Inlet with a mighty Over-fall, and
“ circular Motion, like Whirlpools, in the same manner
“ as forceable Streams force through the Arches of
“ Bridges. On the 10th of *August*, as we were seeking
“ out

“ our Ship, that went to fish, being among many Islands,
 “ we struck on a Rock, and had a great Leak: The
 “ next Day we stopped our Leak, in a Storm; and on
 “ the 15th, being in Latitude 62 Degrees 12 Minutes,
 “ and not finding our Ships, nor (according to their
 “ Promise) any Mark or Beacon which I willed them
 “ to set up, and they promised to do, upon every
 “ Headland or Cape within twenty Leagues every Way
 “ from their Fishing-place, and we having but little
 “ Wood in our Ship, and but half a Hoghead of fresh
 “ Water, I shaped my Course for *England*, and arrived
 “ at *Dartmouth* the 15th of *September*.”

Upon his Return from this, as after his second Voyage, he wrote a Letter to Mr. *Sanderfon*, dated from *Sandridge*, *September* 16, 1587; wherein he tells him, That he had returned safe with all his Company: That he had sailed sixty Leagues farther than he intended at his Departure: That he had reached the Latitude of 73 Degrees North, finding the Sea all open, and the Streight forty Leagues broad; concluding from thence, that the Passage was most certain, and the Execution most easy; but, as we shall see hereafter, he was in this mistaken, which however, does not at all lessen his Merit or the great Discoveries he made, by which he entitled his Country to all this Coast of *North America*; the Value of which may hereafter prove as great as any Discovery made in this Reign. Neither ought we to esteem it any Diminution of his Merit, that he was so confident of finding a Passage this Way to the very last; because as far as he, or any Man, could judge, there was indeed great Probability of the Thing, and nothing but such a Spirit as his will ever be able to effect this Discovery whenever it shall be made.

But he was not only an able Officer and a most skilful Seaman, but had likewise a Head perfectly well turned for making all possible Advantages of the Service in which he was employed; as appears from the Minutes of a Memorial of his which I have seen, addressed to Secretary *Walsingham*; wherein he tells him, That he found many ignorant and malicious People had a very mean Opinion of what he had done, because his Voyages had not answered the Expence; but he persuaded himself that so wise and honourable a Statesman, would think in a manner different from the Vulgar, and esteem his Services capable of producing great Advantages to the Nation, even supposing that no such Passage as he expected should be found; in Support of which he laid down the five following Points.

I. That it would redound very much to the Honour of the Queen and her Subjects, if the People in these Northern Regions were converted to the Christian Faith; in which pious Work many of those busy and fiery Spirits might be profitably employed, that, by their factious Stirrings at Home, served only to create Confusion in Church and State: For if these People, who seemed neither destitute of Wit, Industry, or valuable Commodities, were once brought over to the Christian Faith, they might soon be brought to relish a more civilized kind of Life, and be thereby induced to take off great Quantities of our coarser Woollen Manufactures; which would employ the Poor at Home, increase our Shipping, and augment the Number of our Seamen.

II. That in the Judgment of such as were best acquainted with the Fishing Trade, the Cod he caught were the fattest and finest that were ever seen; and that the Plenty of these Fish was so great as might well encourage the establishing an annual Fishery at the Mouth of the *Streights*, which would afford immediate Profit, and might lead to future Discoveries of greater Importance.

III. That notwithstanding the Shores of the Countries he had seen were bleak and barren, yet the inner Part of the Country might, notwithstanding, be very rich and fertile: That as the People he had conversed with had some of them Utensils of different Metals, it might be presumed there were Mines of Value in these Countries; and that how little Profit soever these People might make of them, they might be wrought to great Advantage by such as understood them better.

IV. That it was very evident from the several Voyages he had made, that there was nothing intolerable in these

northern Climates, and that it would be of great Service to the Nation to keep up a constant Succession of Enterprizes on this Side, since it might be done with very little Expence at first; would contribute to make these Parts of the World better known, and secure the Advantages derived from them to the *English*; whereas, if they were discontinued or abandoned, other Nations would not fail to make Attempts of the like kind, and so come in process of Time to reap the Fruits of other Mens Labour.

V. That the Furs brought from thence were much esteemed, and allowed to be richer and more valuable than any that came from *Muscovy*; and that if the Fashion of wearing them at Court were encouraged, it might prove a means, when all others failed, of promoting this Commerce; for you know right well, most honourable Sir, concludes he, that it is a great Secret in Policy to make the Follies of the Extravagant, and the Vanity of the Ambitious, contribute to the Maintenance of Industry; so that even the Vicious and the Lazy, may of their own Accord furnish the Rewards of Labour and Virtue.

I shall, hereafter, take Occasion to shew, that he has very wisely and sensibly recommended the propagating the Christian Religion, as the most proper Means for extending, as well as establishing, our Colonies, and rendering them highly beneficial. There is no Question that the sending a few Preachers to convert any of these Nations to Christianity, would be a thing of greater Consequence to this Nation, than building many Forts to secure our Commerce with *Savages*; for these People would then live in Towns, wear Cloaths, cultivate their Lands, and, instead of destroying and extirpating each other, as at present, they would live peaceably, and consequently grow daily more numerous; which would occasion such a Consumption of our Manufactures of all kinds, and such a Return of their Commodities, which is the only true and just Standard of Trade, as neither Fraud nor Force can any other way attain. His Reflections, with respect to the Expediency of keeping up this northern Navigation, are highly sensible, and it would have been much for our Interest, if, even at the public Expence, they had been continued; for then Sir *Josiah Child* would not have set down this North Fishery among the Number of our lost Trades, as he does with just Reason. That our Neighbours would be wiser in this Respect than ourselves, was in itself a very shrewd, and in Fact has proved a prophetic Observation; for the *Dutch* and other Nations still frequent *Davis's Streights*, which we have in a manner deserted, and employ thereby a vast Number of People at home, besides raising annually fresh Supplies of skilful and well seasoned Seamen, which a maritime Power ought to regard as a Point of the highest Consequence, and in that View ought to favour most such Branches of Commerce as are known to contribute thereto, especially if they are not at a great Distance. With these Remarks we shall dismiss this Subject for the present, and, as the Nature of our Plan directs, proceed from these Discoveries in the most northern Parts of *America*, to the Attempt made for fixing a Settlement more to the South than any we have yet obtained.

14. The speaking of this Southern Settlement brings us back to Sir *Walter Raleigh*, a Gentleman whose Name must often occur in all Books that any way relate to *English* History, and whose Memory will be ever celebrated by such as can distinguish any kind of Worth; for he had all and excelled in all. Amongst the rest, the completest Courtier of his Time, which perhaps drew upon him more Envy than all his other great Qualities; and I am induced to think so from the Nature of those Calumnies by which he was most hurt; for though deeply malicious, they were so indifferently forged, that they could not bear the least Inspection; so that notwithstanding they cost him his Favour often, and his Life at last, from the Credulity of Princes, yet they never had any Effect upon his Reputation with wise Men in his Life-time, nor have injured his Reputation in the least with Posterity.

He was always useful to his Country, but most so when

when he had least Credit at Court. At such Times he did not relinquish Business to go and hide himself in Country Retreats, and thence write pitiful Letters and Poems to screw himself again into the Affections of the Queen his Mistress, as some other of her great Men did, and which he could have done better than any of them; nor did he form Intrigues against her Ministers, and force himself into Power and his Sovereign's Presence; but he took another Road peculiar to, and worthy of, Sir *Walter Raleigh*: He applied himself to contrive, and not to contrive only, but to execute, such great and glorious Enterprizes, as raised his Fame so high, that the Whispers of Envy could be no longer heard; and, when the Queen recalled him to her Favour, it never appeared as an Act of Grace, but as a Stroke of Justice; so that after these Recesses, he shone at Court with double Lustre, and his Mistress, haughty as she was, could not help appearing upon these Occasions proud of the Possession of such a Man, and ashamed of his Absence.

It was in one of these voluntary Exiles that Sir *Walter Raleigh* executed a Design he had long meditated, I mean his Expedition to *Guiana*, an Expedition great in itself, though unfortunate in its Consequences; formed upon the most noble Principles, and performed with equal Valour and Prudence, and in a Word every way equal to the Genius of its Author, and, Experience has since fatally shewn, superior to every Genius but his. He saw, with Regret, the Plantation of *Virginia* abandoned, and he saw that the Want of immediate Profit was the Cause; he resolved therefore to strike out the Means of settling a new Colony in another Part of *America*, which should be free from this Inconvenience, and which should transfer the richest Products of that Country to the *English*, if they had but Courage and Conduct enough to fetch them. In order to this he enquired, with the greatest Diligence, into the State of the Country before mentioned; he sought from Books and Papers all the Assistance that could be had of that kind; he drew from personal Informations, which were more in his Power than perhaps they ever were in any other Man's, all the Notices that they could give; but he drew the greatest Lights from his own profound Knowledge and extensive Experience.

He was undoubtedly as well versed in all Parts of Philosophy and natural History, as any Man of his time, and perhaps much better; for, besides all the Knowledge which results from Reading, he had likewise a great practical Skill, whence, without doubt, arose his confident Belief, that this Country of *Guiana* was the richest in *America*, and by consequence, according to the Opinion of those times, and indeed of these, the richest in the World. He did not go thither therefore to satisfy his own Mind upon that head, but that he might furnish himself with the means of satisfying others; for he very well knew that it would have been an idle and ridiculous thing in him to think of moving People to attempt a Plantation merely by a rational and philosophical Argument, which he knew few would be able to understand, and of those that did, many would oppose his Sentiments from Pride, and more from Prejudice. He chose therefore to treat the Riches and Value of this noble Country in the plainest way, and as a Point of fact; and foreseeing that it would be objected, that if it were so, and the Facts so notorious as he represented it, the *Spaniards* would certainly have settled there, and not have left it to fall into the Hands of any other Nation; this induced him to draw up a very clear and succinct Account of the several Methods used by the *Spaniards* to discover and gain this Country, which at once answered the Objection, and proved to such as had an high Opinion of the Judgment formed by the *Spaniards* of the Wealth and Importance of these Countries, that *Guiana* was one that deserved the highest Commendations.

These Accounts of his are dispersed through various Pieces written by him upon this Subject; but, for the Ease of the Reader, we shall collect and range them in their natural Order, by which means they will become a kind of Supplement to what has been already delivered of the *Spanish* Discoveries and Conquests; this be-

ing the sole Reason of our omitting them there, because we foresaw the Necessity of repeating, or at least of recapitulating, them here, for the Sake of explaining Sir *Walter Raleigh's* Expeditions. We have shewn in that Chapter how the Marquis *Pizarro* overthrew the Empire of the Inca's, and made himself Master of all their Territories, and of a great Part of their Treasures; and we have likewise shewn that this was so far from satisfying his Avarice and Ambition, that he proposed to extend his Conquests beyond the Limits of *Peru*, in order to penetrate into the Heart of *South America*, from the Hopes he had conceived of finding richer Countries there than any he had yet met with.

It was with this View that he ordered his Brother *Gonzalo*, after he had taken Possession of *Quito*, which was the last Conquest of the Inca's, to continue his Expeditions on that Side, though he was sensible that he could receive little or no Assistance from the Informations of the Natives; his Brother accordingly entered the Province of *Los Quixos*; and, after making himself Master of that Country, the People of which were downright Barbarians in Comparison of those of *Peru*, he determined to pass the high Mountains which bound that Province on the North, and assembled a great many *Indians*, and a good quantity of Cattle for that Purpose; but, when he had ascended half way up these Mountains, he found that he had taken his Measures wrong, and that the Cold was so intense, that it would be impossible for him to prosecute his March in that Manner. He therefore quitted his Cattle and the best Part of his Baggage, resolving to make all the haste he could into the plain Countries on the other Side, and trust to the Provisions he might meet with there.

Accordingly he descended into the Valley of *Zumaque*, which he found very plentiful, and in which therefore he refreshed his Forces for two Months, endeavouring then to continue his March Northward; but, finding the Road extremely rough and mountainous, he turned directly East, in Hopes of meeting with an easier Passage; this opened a Way into a new Province well peopled and very rich; the Inhabitants of which were dreadfully amazed at the coming of the *Spaniards* amongst them, and indeed they very well might, for they behaved towards them in a Manner barbarous beyond Expression; for *Gonzalo Pizarro* exercised the greatest Cruelty imaginable on the Inhabitants of these Regions, inasmuch that he gave Men to be eaten alive by his Dogs. This engaged all the Natives to put themselves in Arms against him, so that he was obliged to encamp himself as in an Enemy's Country; and his Cruelties, together with the Despair he was in of ever being able to find what he was seeking after, had like to have put an End to his Enterprize at once. He was encamped on the Bank of a River, which swelled so much in one Night, that if the Sentinels, who perceived the Water was apace getting Ground, had not warned them of their Danger, they had been all drowned; but at the Alarm they soon secured themselves, by making towards the Cottages of the wild People; and *Pizarro* resolved to return to *Zumaque*, not knowing what other Course to take. From thence he proceeded again with all his Men, and after a March of four Leagues he met with a great Village called *Ampua*, governed by a Cazique, and found a great Number of the Inhabitants in a Posture of Defence, expecting their Enemy; but there was another and greater Obstacle in his Way than this Cazique and all his Troops, and that was a River so wide and deep that he could have no Thought of venturing to swim over it. He could therefore find no better Expedient than to enter into a Treaty with the People of the Country, and to desire the Help of their Canoes to cross this River.

The Cazique received this Proposal with great Civility, offered them what they asked, and gave them as many of these little Boats as they desired; and on this, *Pizarro* made him a Return of a great many little *Spanish* Toys, by way of requital. This Cazique having received Advice of the ill Treatment many of his Neighbours had received from the *Spaniards*, thought of nothing more than how to get rid of them, and to de-

liver himself from the Danger of such bad Guests, endeavoured to make them believe there were great Riches to be found among the People that dwelt upon the River, some Days Journey lower. *Pizarro*, by his Actions and by his Guides, who were his Interpreters, returned him Thanks for his Courtesy; but, finding no Appearance of those pretended Riches, he returned to *Zumaque* very much dissatisfied with his Expedition; however, he had too much Courage to retire back to *Quito* just as he came. He had a Mind therefore to attempt some great Exploit, and, by the Discovery of some other Part, to render himself as considerable as the Marquis *Pizarro*, his elder Brother: He opened his Mind to *Francis Orellana*, a Gentleman of *Truxillo* in *Spain*, who was come to join him in the Valley of *Zumaque*; and, having taken one hundred effective Soldiers, and some *Indians* for Guides and to carry Provisions, he marched directly to the East.

Either the Ignorance of his Guides, or the Hatred they bore him, engaged him in a Country all full of Mountains, Forests, and Torrents, so that he was constrained to make Ways where he found none, and to open himself a Passage through the Woods with Hatchets, where none had ever gone before. At length, after many Days March, he pierced through as far as the Province of *Coca*; the Cazique of which Province came to meet him, and offered him all the Accommodations the Country afforded for his Refreshment; *Gonzalo* promised himself much from this kind Entertainment, and by the Assistance of his Guides entered into Conversation with the Cazique: He informed him, that the Country through which he had passed, which was so full of Mountains, Forests, and Brooks, was the only Passage he could have taken to come thither, that, it was extremely difficult to get thro it; but that if he was willing to embark on the River he saw before him, or to follow it by Land, he might assure himself, that, along the Banks of another River much greater than this, he should find a Country abounding with all Things, whose Inhabitants were covered with Plates of Gold. There was no need of saying any thing more to *Pizarro*, to incite him to any kind of Enterprize, who presently sent two of his Guides to *Zumaque*, with Orders to his Officers to come and join him, who marched immediately; and, surmounting all the Difficulties of the Way, arrived, much fatigued, at the Town of *Coca*.

Pizarro having rested some few Days, afterwards put them in Battalia before the Cazique, who was so much terrified with them, that he amassed almost all the Provisions of his whole Province to make a Present of them to *Pizarro*, that by this Magnificence he might civilly acquit himself of his new Acquaintance, who was more impatient of his Stay than the other; and the next Morning, having filed his Troops along the River, he took his Leave of the Cazique, presenting him with a fine Sword, and put himself at the Head of his Cavalry, and followed the pleasant Course of the River. This good Way did not last long, but they had Rivulets to swim over, and were forced to march in uneven Ways, and for forty-three Days, without finding any Provisions, or any Fords, or Canoes by which to pass the River. This long March having mightily fatigued our Travellers, they were stopped by a very surprising Sight; the River was pressed by two Rocks, and on each Side its Passage, at no more than twenty Feet Distance from one another; and the Water going through this Streight precipitated itself into a Valley, and made a Leap of two hundred Fathoms: Here it was that *Pizarro* caused that famous Bridge to be made for his Troops to pass over, which is so much boasted of by the *Spanish* Historians.

But finding the Way not at all better on the other Side, and the Provision growing more and more scarce every Day, *Pizarro* resolved to make a Brigantine, to carry by Water all his sick Men, Provisions, Baggage, and the Gold which they had got amongst them. This was no small Difficulty; but Industry and Necessity surmounted it, and the Vessel being finished, *Pizarro* embarked all in it that hindered his March, and gave the Command of it to *Francis Orellana*, with fifty Soldiers; giving him express

Order not to part far from him, but to come every Night to the Camp. He observed this Order exactly, till his General, seeing all his Men much pinched with Hunger, commanded him to go and seek some Provisions and Cottages, where his Men might be refreshed. *Orellana* had no sooner received his Orders, but he launched out into the Middle of the River, and the Rapidity of the Stream carried him as fast as he could wish, for he made above one hundred Leagues in three Days, without the Use of either Sails or Oars.

The Current of *Coca* carried him into another River which was much larger, but not near so swift: He made his Observations of it one whole Day, and seeing that the farther he went down, the more the River widened; he made no doubt but this was that great River which had been so often, and in vain sought after. The Joy he conceived at his good Fortune so transported him, that it made him quite forget himself, so that, dreaming only of the Enjoyment of this good Success, and trampling upon his Duty, Oath, Fidelity, and Gratitude, he had now nothing in View but to bring about the Enterprize he was contriving. To this End he persuaded his Companions, that the Country was not the same with that which their General had described; that it had not that Plenty the Cazique had told him he should find at the joining of the two Rivers; that they must certainly float along farther, to find that pleasant and fertile Country, where they might store themselves with Provisions; and besides, that they all saw there was no likelihood of getting up this River again which they came down in three Days, but, as he believed, could not make the same Way back again in the Space of a whole Year; that it was much more reasonable to wait for their Company on this new River; and that, in the mean time, it was necessary for them to go and seek Provisions.

Thus concealing his Design, he hoisted Sail; and, abandoning himself to the Wind, to his Fortune, and to his Resolution, he thought of nothing but pursuing the Course of the River, till he should discover it quite to the Sea. His Companions were amazed at the Manner of his putting in Execution the Design he had been proposing to them, and thought themselves obliged to tell him, that he went beyond the Orders of his General; and that in the extreme Want he was in, they ought to carry him the little Provisions they could find; and that he had given sufficient Evidence he had some ill Design, because he had neglected to leave two Canoes at the Bank of the two Rivers, as the General had appointed him, for his Army to pass over in. These Remonstrances were made chiefly by a *Dominican* Friar named *Gaspar de Carvajal*, and by a young Gentleman of *Badajos* in *Spain*, called *Fernand Sanches de Vargas*. The Consideration they had for these two Persons, occasioned a Division in the Company, in this little Vessel, into two Parties; and from Words they were like to have fallen to Blows, but that *Orellana*, stifling their Gratitude by his Dissimulation, by fair Protections, and great Promises, appeased this Disorder.

By Means of his Friend he had in the Vessel, he gained most of the Soldiers that were against him to his Side; and seeing the two Heads of the other Party left almost alone, he caused *Fernand Sanches de Vargas* to be set ashore, leaving him quite alone, without Victuals and without Arms, in a dismal Wilderness; bounded, on one Side, with high Mountains, and with a River on the other. He had more Prudence than to treat the Friar after the same manner, yet he gave him to understand, that it was not for him to penetrate any more into the Intentions of his Commander, unless he had a Mind to be severely chastised. After this he continued his Voyage; and the next Day, being willing to know if he might depend upon all that were with him for the Success of his Resolutions, he let them know that he aspired to a much higher Pitch of Dignity than what he might have obtained in the Service of *Pizarro*: That he owed every thing to himself and to his King; and that his Fortune having, as it were, led him by the Hand to the greatest and most desirable Discovery that was ever made in the *Indies*, namely, the great River upon which they were sailing; which coming out of *Peru*, and running from

from West to East, was the finest Channel in the new World, through which they might pass from the Southern to the Northern Sea; that he could not, without betraying them all, and without ravishing from them the Fruits of their Voyage and Industry, make others share in a Favour which Heaven had reserved for them alone. By this Means he easily quieted these Murmurs, and brought his Men to have a Share of that Ambition which flamed in his own Breast. His Necessities forced him ashore for Provisions, and, as he did not take these with that Gentleness and Prudence that became him in a strange Country; the Natives, unanimously took up Arms, and with great Boldness fell upon the *Spaniards*, who defended themselves with much Courage, and killed many of their Antagonists with their Cross-bows; and upon inspecting their Bodies, found that several of them were Women; as indeed it was no uncommon thing for the *Indian* Women, in that Country, to fight by the Sides of their Husbands; but our *Spaniard*, having a romantic Head, improved this slight Incident into a formal History of a great Nation of *Amazons*, settled upon this River: By which Fable he overturned his great Design of bestowing his own Name upon it, and thereby perpetuating the Memory of his Passage; for from this Story of his it received the Name which it still bears, and will always bear, of the River of *Amazons*.

He took care, in the remaining Part of his Passage, to behave with more Prudence and Mildness to the People he met with, among whom were many gentle, and even polite Nations, as well as others fierce and warlike. In fine, he passed quite down the River to the Sea; and having coasted about a Cape, now called the *North Cape*, which by the way is the Name the *French* have bestowed on the Country of *Guiana*, two hundred Leagues from the Island of *Trinidad*, he sailed directly thither, and there bought a Ship to carry him to *Spain*; where he made such a Report of the Countries he had seen, to the Emperor *Charles V.* that he obtained as ample a Commission as he could desire; and, in the Year 1549, sailed with three Ships for the River of *Amazons*; but this second Expedition was the very reverse of the first, as being unfortunate from the very Beginning; for a contagious Distemper spreading among his Men, obliged him to quit two of his three Ships, and afterwards his Company was so reduced as to sail in a small Bark, with which he proposed to prosecute his Discovery; but being shipwrecked on the Coast of the *Caraccas*, he there lost the rest of his Men, and soon after died himself on the Island of *St. Margaret*, of downright Despair.

The ill Success of *Orellana's* Voyage cooled the ardent Desire the *Spaniards* had for the Discovery of the River of *Amazons*, and it seemed quite extinguished by the civil Wars of *Peru*, till the Marquis de *Caguete*, being Viceroy of that Kingdom, a Gentleman of *Navarre*, named *Peter de Orsua*, who had always entertained Thoughts worthy of his great Courage, turned his Designs on this great River, and believed he should be more fortunate than *Orellana*. He presented himself to the Viceroy, and proposed his Designs to him, who being well acquainted with his Merit, commended his Resolution; and was persuaded that if so difficult a Matter should succeed, it must be by the Conduct of so wise and brave a Commander. Most of the Gentry came to offer their Service to *Orsua*, who was so much in every one's Esteem, that there was no Soldier so old but would leave his Retirement with pleasure, to serve under so excellent a General; he made Choice of such amongst them as were fit for his Purpose; and to carry on the famous Conquest he designed he made all necessary Provisions, to which all the Lords and Inhabitants of the Towns contributed with a great deal of Liberality, being well persuaded that *Orsua* had Qualities that well deserved to be obliged.

He departed from *Cusco* in 1560, with the Acclamations and good Wishes of all the Inhabitants of that Place: He was attended with above seven hundred good Soldiers, and with a considerable Number of good Horses. Being well versed in the Map of *Peru*, and having been for some time laying the Scheme of his Journey, he marched directly to the Province of *Mosilones* first, to meet the

River *Moyabamba*, by which he was sure of entering into the River of *Amazons*. One would have hoped, an Attempt so wisely laid, and so universally approved, should have had a happy Issue, yet never was any Project more unsuccessful; for *Orsua* had taken with him one *Don Fernand de Gusman*, a young Man lately come from *Spain*, and another more advanced in Years, named *Lopez d' Aguirre* of *Biscay*, a little ill favoured Man, whom he had made his Ensign. These two Wretches fell in love with their General's Lady, whose Name was *Agnes*, and who had accompanied her Husband in all his Travels; and thinking they had a favourable Occasion to satisfy their Lust and Ambition together, they engaged *Orsua's* Troop to revolt, and assassinated him.

After the tragical Fact, the Traitors who committed it, who to the Number of seven or eight were in a strict Confederacy, elected *Don Fernand de Gusman* for their King, whose Mind was vain enough to receive that Title which became him so little; but he did not enjoy it long; for those very Persons that had given him the Quality of King, gave him his Death's Wound too; and *d' Aguirre* succeeded him, who made himself King, notwithstanding the Remonstrances of others. He gave all those he had gained to his Party to understand, that he intended to make himself Master of *Guiana*, of *Peru*, and of the new Kingdom of *Grenada*; and promised them all the Riches of those great Kingdoms. His Reign was so bloody and barbarous, that the like Tyranny was scarce ever heard of in the World. Therefore the *Spaniards*, to this Day, called him the *Tyrant*. However he commanded *Orsua's* Vessels, and went down the River *Coca* into *Amazon*, hoping to obtain one of those Kingdoms, and to make a considerable Progress into it: But having entered the *Amazon*, he was not able to master the Current of it, and so was constrained to suffer himself to be carried down to the Mouth of the River above a thousand Leagues from the Place where he embarked, and was driven into the great Channel which goes to the *North Cape*, being the same Way *Orellana* had taken before him. Going out of the *Amazon* he came to the Island of *St. Margaret*, which is to this Day called the *Tyrant's Port*. There he killed *Don Irean de Villa Andrada*, Governor of the Island, and *Don John Sermiento* his Father.

After their Death, with the Assistance of one *John Burg*, he made himself Master of the Island, plundered it entirely, and there committed unheard of Barbarities, he killed all that opposed him, and passed from thence to *Cumana*, where he exercised the same Cruelties. He after that desolated all those Coasts that bear the Name of *Caraccas*, and all the Provinces along the Rivers *Venezuela* and *Bacho*. He then came to *St. Martha*, where he put all to the Sword, and entered the new Kingdom of *Grenada*, designing to march from thence through *Quito* into *Peru*. In this Kingdom he was forced to a Battle, in which he was utterly defeated and put to Flight, and all Ways being stopped, when he found he must perish, he thereupon begun his Tragedy with a Sort of Barbarity without Example. He had a Daughter by his Wife *Mendoza*, that had followed him in all his Expeditions, and whom he loved entirely: Daughter (said he to her) I must kill thee; I designed to have placed thee on a Throne, but since Fortune opposes it I am not willing thou shouldst live to suffer the Shame of becoming a Slave to my Enemies, and of being called the Daughter of a Tyrant and a Traitor: *Die my Child, die by the Hand of thy Father, if thou hast not Courage enough to die by thy own.* She, surprized at this Discourse, desired him, at least, to give her some time to prepare for Death, and to beg of God the Pardon of her Sins. This he granted, but, thinking her too tedious in her Devotion, as she was praying upon her Knees he shot her through the Body with a Carbine; but having not killed her outright, he stuck his Dagger into her Heart, and she falling down at the Stroke, cry'd, *Ab Father, 'tis enough.* Soon after her Death he was taken Prisoner and carried to the Island *la Trinidad*, where he had a considerable Estate. His Process was made, and he condemned to be quartered. He was publicly executed; his Houses razed to the Ground,

Ground, and the Places where they stood sowed with Salt.

I chose to mention the Attempts of the *Spaniards* to penetrate into this Country on the South-side; first, that I might end with those Attempts made by the same Nation upon the North, by the great River *Oronoco*, or, as most of our *English* Writers write it, after the *French* Manner, *Oronoque*, by which also Sir *Walter Raleigh* made his Attempt. The first Person we read of who engaged in this Design of finding and making himself Master of the Inca's new City of *Manoa*, was *Diego de Ordaca*, who sailed from *Spain* with a great Force for this Purpose, in the Year 1531; which, by the way, shews how early this Notion was taken up, and that it was not, as is commonly believed, invented by the *Indians*, to rid themselves of *Gonzalo Pizarro*. This *Diego de Ordaca*, with six hundred Foot and thirty Horse, reached the *Oronoco*, where, by a Series of unlucky Accidents, too long for us to relate, his Expedition was totally ruined: Yet one of these Accidents proved the means (as the *Spaniards* pretend and believe) of making a full Discovery of this famous City; and the Story is thus told: When *Ordaca* came first upon this Coast, and anchored in the Harbour of *Morequito*, his Magazine of Powder, by some Mischance, blew up; and this being imputed to the Carelessness of *Juan Martinez*, his Master Gunner, he was condemned to be shot for it; but the Seamen prevailed to have this Punishment changed into his being put alone into a little Canoe, with his Arms only, and without any Provisions, and so committed to the Mercy of the Wind and Waves.

In this wretched Condition he was found by some of the *Indians* or Savages, who, having never seen a white Man before, passed him about from one Place to another, till he came to the royal City of *Manoa*, where the King no sooner saw him than he knew him to be a Christian and a *Spaniard*, for this happened but a very little after the Marquis *Pizarro* had destroyed the Empire of the Inca's in *Peru*. This Prince, however, received him civilly enough, though he was far from forgetting the Cruelties exercised by the *Spaniards* on his Countrymen. He kept him seven Months at *Manoa*; but in all that time he was never suffered to go without the City, or even to pass through the Streets of it, without a Guard, and a Cloth bound over his Eyes. At the End of this Space, when it was perceived that *Martinez* had acquired, in some Measure, the Language of the Country, the King sent for him, and proposed two Things to his Choice, *viz.* either to remain with him as long as he lived, or to return into his own Country, and he chose the latter; upon which the King sent him under a Guard the shortest way to the River *Oronoco*; but, at the Time he dismissed him, he was pleased to bestow on him, as a Mark of his Favour, a considerable Quantity of Gold, which, however, was taken from him by the Savages on the Frontiers, and by the *Oronocoponi*, a Nation so called from their living upon the Banks of that great River. They left him, however, two large Bottles, in which they thought he kept his Drink, but which were really filled with Gold Dust, and these he brought along with him to the Island of *Trinidad*, from whence he went afterwards to *St. Juan de Puerto Rico*, where he lived for some Time, and from whence he intended to have procured a Passage to *Spain*; but being seized there with a mortal Disease; after he had received the extreme Unction, and saw no Hopes of Life, he caused his two Bottles of Gold to be brought, and the Account he had written of his Voyage: The Gold he gave to the Church for Masses to be said for his Soul, and the Relation of his Voyage was entered, at large, in the Registers of the Chancery of *St. Juan de Puerto Rico*.

To this *Martinez* the *Spanish* Writers unanimously ascribe the Discovery of this famous City, which he stiled *Manoa el Dorada* or the *Golden Manoa*, on account of the prodigious Quantities of that Metal which he had seen there, in their Palaces, Temples, and other public Edifices, but more especially in their drunken Feasts, of which he gave the following very singular Account: That those who drank with the King were quite naked, and having their

Bodies rubbed over with a kind of thin gummy Balsam, they were then powdered with Gold Dust, so as to be gilt from Head to Foot; this Relation, whether true or false, proved of very fatal Consequence to the *Spaniards*, for it gave Occasion to, some say twenty, others sixty, several Expeditions in search of this golden City, all of them with very indifferent Success. *Juan Cortez* attempted it with thirty Men, but neither he nor they were ever heard of more. *Gaspar de Sylva*, and his two Brothers, sailed with two hundred Men from the *Canaries* to reinforce *Diego de Ordaca*; and, after taking a great deal of Pains, to no Purpose, returned to the Island of *Trinidad*, where they died.

Another Adventurer, in the same way, was Don *Pedro Hernandez de Serpa*, who landed at *Cumana*, and afterwards marched by Land on the Banks of the *Oronoco* till he came to an *Indian* Nation called *Wikiri*, who opposed his further Passage, and attacked his Men with such Fury that only eighteen of his *Spaniards* escaped from the Battle; yet this Enterprize was of particular Service to Sir *Walter*; for it fell out that when Captain *Amias Preston* took the City of *St. Jago de Leon* by Storm, he made one of these Adventurers Prisoner, who gave him a large Account of the vast Riches the *Spaniards* hoped to find in this Country, which coming to the Ears of Sir *Walter Raleigh*, induced him to make diligent and strict Search into the Original of this Story, whence he came to collect a Multitude of Histories, relating to this Matter of which we have given the Reader only a few, that he might see upon what Grounds this Expedition was undertaken, or rather what Reason Sir *Walter Raleigh* thought fit to assign for his Voyage, in order to draw such an Approbation of it as was necessary, from those whom nothing but a Shew of vast and immediate Profit could tempt; for, I must confess, it seems very doubtful to me, whether Sir *Walter Raleigh* gave entire Credit to these Accounts, or not; but whatever his own Opinion was, he had certainly a Right to use them as popular Arguments for promoting his Design, since no Politician ever doubted that it is lawful to cheat Men as well as Children for their own Good. But he took care to provide Reasons of another Nature, for Men of other Minds: He shewed them that of all the Countries in *America* the most profitable, the best situated, the easiest planted, the most defensible, was *Guiana*. These Notes of Excellency I have collected from his Writings upon this Subject, which are very artfully immethodical, and, under an apparent Carelessness of Style and Order, are so wrote, as to affect the Mind of the Reader with an Opinion, that he has made Discoveries in Sir *Walter's* Treatise, by penetrating into those Secrets, which he meant to conceal; while, alas! the true Secret is, that he meant thus to catch us, and make every Man's Understanding revolt in his Favour.

It was necessary, in his Time, and more especially to him; and therefore his Design is as commendable as his Execution is inimitable. But that he might proceed cautiously in an Affair of such Importance, he sent before him one Capt. *Whiddon*, to take a View of the Coast, that he might be perfectly informed of the State things were then in, and thereby become more able to take the proper Measures for overcoming those Difficulties, which a Man of less Sagacity would have esteemed insuperable. This Gentleman did his Business effectually, though he met with some Obstruction from the Force, and suffered much greater Inconveniencies from the Frauds, of the *Spaniards*, who were at that time bent upon the same Design, and labouring with the utmost Diligence to discover and secure this valuable Country.

Among other Adventurers there was one *Gonzales Ximenes de Casada*, a Man of greater Courage than good Fortune; who, after having had a large Share in the Conquest of *New Grenada*, attempted to penetrate into *Guiana*; but after a great Expence, and incredible Fatigue, to no Purpose, was obliged to return, disappointed indeed, but not in Despair. This Gentleman had an only Daughter, whom he married to Don *Antonio de Berreo*; to whom, with a large Fortune, he bequeathed this Expedition, taking from him an Oath, that he would prosecute the Discovery and Conquest of *Guiana*,

to the last Hour of his Life. He, to fulfil this Obligation, undertook this Enterprize, with seven hundred Horfe, attended by a vast Number of *Indian* Slaves; but after marching five hundred Leagues in Pursuit of this Project, he was obliged to return, but brought with him from the Frontiers of *Guiana* forty Plates of Gold, and many other valuable Curiosities, sufficient to fortify him in his Resolution not to abandon the Design. It was this *Berreio* that Captain *Whiddon* had to deal with, and of whom he made a very bad Report on his return.

When Sir *Walter's* Project was ripe for Execution, he was assisted by the Lord Admiral *Howard* and Sir *Robert Cecil*, so that in the beginning of the Year 1595 he was ready to proceed; and it appears, from his Relation, that he had in the whole five Ships. He does not tell us the Name of his own, which he commanded in Person; though, as to the rest, he distinguishes them plain enough; so that we perceive the *Lion's Whelp*, which was the Lord Admiral's, was commanded by Captain *George Gifford*; Captain *Keymis* had the Command of a Galego, besides a Bark, which was committed to Captain *Cross*, and another to Captain *Calfield*. The whole Number of Men in this Fleet is not mentioned; but the select Company of Officers, Gentlemen, and Soldiers, he used in his Discoveries, exceeded not one hundred.

Thus prepared he departed from *Plymouth* on the 6th of *February* following, and sailed to the *Grand Canaries*, and so to *Teneriff*, where he waited a while for the *Lion's Whelp*, and for Captain *Amias Preston*. But this Captain disappointed him, and went upon another Adventure, which proved some Disadvantage in the Prosecution of his Discoveries. After waiting seven or eight Days, to no Purpose, he sailed with his own Ship and a Bark, commanded by Captain *Cross*, to the Island of *Trinidad*, where he arrived the 22d of *March*, and spent a considerable Space of Time in viewing that Island, examining all its Ports and Havens, and even every little Creek, with infinite Care and Exactness. The Reasons which moved him to this Stay, were two; the first, that he might revenge himself upon *Berreio* for the Injuries he had done Captain *Whiddon's* People, eight of whom he betrayed into his Hands, and then used them barbarously; the other was, that he might obtain some Account of the Continent, and of the most proper Method for entering into *Guiana*, in both of which he succeeded, in spite of all the Care the *Spanish* Governor could take to hinder it. At last, perceiving that the *Spaniards* were contriving Measures for his Destruction, and knowing there could be nothing more fatal than to leave an Enemy at his Back, he resolved to make himself Master of this Place, which he knew would gain him the Friendship, as well as secure him the Obedience, of the *Indians*; who by the *Spaniards* were most cruelly oppressed. Accordingly he sent Captain *Calfield* to attack the Main-guard with sixty Men, and, following himself with forty more, reduced the Town of *St. Joseph* without much Trouble.

The Inhabitants he set at Liberty, keeping only the Governor and his *Spaniards* Prisoners; and afterwards, at the Request of the *Indians*, burnt the Place; but though he gratified them in this Respect, yet, in all others, he acted towards his Prisoners, and more especially towards the Governor, with so much Civility and Kindness, that he drew from him a faithful Account of all his Adventures in Pursuit of the Design before-mentioned. The same Day that *Raleigh* made his Conquest arrived Captain *Gifford* and Captain *Keymis*, and in their Ships divers Gentlemen, and others, which to his little Army was a great Succour and Solace. Then, proceeding upon his Discovery, *Raleigh* first called all the Chiefs of the Island together, who were Enemies to the *Spaniards*; for some of them *Berreio* had brought out of other Countries, and planted there to eat out and waste the Natives; then by the *Indian* Interpreter, whom he carried out of *England*, he made them understand, "He was the Servant of a Queen, who was the greatest Cazique in the North, and a Virgin, who had more Caziques under her Command than there were

"Trees in that Island; that she was an Enemy to the
"Castelans, in regard of their Tyranny and Oppres-
"sion; and, having freed all the Coasts of the northern
"World from their Servitude, had sent him to free
"them also; and withal, to defend the Country of
"Guiana from their Invasion and Conquest." Then he shewed them her Majesty's Picture, which they so admired and honoured, that it had been easy to have made them idolatrous thereof.

The like and larger Speeches he made in a solemn Manner to the rest of the Nations, both in his Passage to *Guiana* and to those of the Borders, so as in that part of the World the Queen of *England's* Fame was diffused, with great Admiration. This done, *Raleigh* returned to *Curiapan*; and though he had learnt of *Berreio* that *Guiana* was some hundred Miles further than the Accounts he had received of Captain *Whiddon* had represented it, he kept the Knowledge thereof from his Company, who he much feared would have been discouraged thereby from prosecuting the Discovery. When *Raleigh* had further gathered from *Berreio* the Proceedings of the past Adventurers and his own, he told him he was come upon the same Design, and was resolved to see *Guiana*. *Berreio* used many Arguments to dissuade him; as that he must venture in very light and small Boats, to pass so many dangerous Shallows, and could not carry Victuals enough above half the way; that none of the Country would speak with him, and if he followed them would burn their Towns; besides, the Way was long, the Winter at hand, and the Rivers beginning to swell; but above all, that the Kings and Lords who bordered upon *Guiana*, had decreed that none of them should trade with any Christians for Gold, because the same would be their own Overthrow. *Raleigh*, resolving however to make trial, directed his Vice-Admiral Captain *Gifford* and Captain *Calfield* to turn Eastward against the Mouth of the River *Capuri*, and gave them Instructions to enter at the Edge of the Shore, and upon the best of the Flood to thrust over, but they laboured in vain, nor did the Flood continue so long, but the Water fell before they could pass the Sands, tho' they used all the Skill and Diligence they could.

Then *Raleigh* sent one *King*, Master of the *Lion's Whelp*, to try another Branch, called *Amana*, if either of the small Ships would enter; but when he came to the Mouth, he found it like the rest; after him went *John Dowglas*, who discovered four fair Entrances, but all shole and shallow in the Bays leading to them. In the mean time *Raleigh*, fearing the worst, caused his Carpenter to cut down an old Galego Boat, to fit her with Banks for Oars, and so as she might draw but five Feet. In this went *Raleigh* with Gentlemen and Officers, to the Number of threescore; in the *Lion's Whelp*-Boat and Wherry they carried twenty; Captain *Calfield*, in his Wherry, carried ten; and a Barge of *Raleigh's* ten more; this was all the Means they had, having left their Ships at *Curiapan*, to carry a hundred Men with Weapons and Provisions for a Month, exposed to all the Extremes of the Weather, all the Hazards of the Water, to lie open to the Air, and upon hard Boards by Night in Storms of Rain, or under the burning Sun by Day, to smell the wet Clothes of so many crowded together, the dressing of their Food, and that mostly stale Fish, in the same Place, to be in such a Labyrinth of Rivers, in such a remote unknown Region; what Prison could be more loathsome and unhealthy, what Prospect more fearful and desolate? At first setting out they had twenty Miles of a high Sea to cross in these crazy Boats, so that they were driven before the Wind into the Bottom of the Bay of *Guanipa*, inhabited by inhuman Cannibals, who shot poisoned Arrows, and from thence to enter one of the Rivers of which *Dowglas* had brought Tidings. After four Days they got above the Force of the Tide, and might have wandered a Year about, and never been able to extricate themselves; in such a general Confluence or Rendezvous of Streams were they now bewildered, and so resembling one another, as not to be distinguished, but imperceptibly circulating and driving them about into the same Place where they had been before, passing between many Islands and Streights, whose

Borders were so thickly arched and overshadowed with Trees, as bounded their Sight to the Breadth of the River and the Length of the Avenue, while the Gloominess of the Prospect added Horror to the Loathsomeness of the Places in which they were confined.

At length, on the 22d of May 1595, they fell into a River, which, because it had no Name, they called the *Red Cross River*, these being the first Christians who ever entered the same: When they drew into a Creek, which led to a Town upon this River, their *Indian Pilot*, named *Ferdinando*, landing, was set upon by his Countrymen, who hunted him with Dogs; whereupon *Raleigh* seized an old Man passing that way, and threatened to cut off his Head, if he did not procure his Pilot's Liberty; but he, by his Agility, soon escaped them, and swam to *Raleigh's* Barge; however, they kept the old Man, and used him kindly, assuring themselves of useful Information from a Native, so long conversant in those Parts. And indeed, but for this Accident, they had never found their Way forward to the Country they sought, nor back to that where their Ships lay; the old Man himself being often in the utmost Perplexity which River to take, so numerous and intricate they were. The People who inhabit the Countries at the Mouth of this great River, are comprehended under the general Name of *Tivitivas*, a bold and hardy Race of People, who know the Value of Liberty, and have Courage enough to defend it: They live in Houses during the Summer, or dry Season, but in the Wet or Winter Months they live in little Huts, which are built upon Trees, a Thing common enough on this Coast and even in the *East Indies* where the Countries are excessively wet.

After this *Raleigh's* Barge ran a-ground, and that with such force, that it did not seem very probable they should be able to get her off; so that the Discovery seemed at a stand; but on the fourth Day after this Accident happened they set her on float, and, striking into the *Amana*, one of the noblest Branches of the *Oronoco*, they continued their Voyage, but with incredible Fatigue. As they were now within five Degrees of the Line, Sir *Walter* was forced to keep up their Spirits by directing his Pilots to give them Hopes from time to time that their Labours would soon have an End. At length the old *Indian Pilot* they had on board, perceiving that their Provisions were quite exhausted, and that they were in Danger of perishing without an immediate Supply, told them, that if they would venture up a River on their right Hand, he would bring them to a Town where they might be sure of Refreshments, and be able to return before Night. Sir *Walter* took him at his Word, and went immediately into his Boat with eight Musketeers, followed by the Captains *Gifford* and *Calfield* in their Wherries, with eight Men a-piece. But it appeared that the *Indian Pilot* had learned Sir *Walter's* Art, for they not only rowed all Day, but all Night, without seeing any Town, and a less prudent Captain than he would have been tempted to have punished the Pilot for giving them false Hopes. Yet about one the next Morning they reached this long expected Town, and obtained those Supplies of which they stood so much in need. In the mean time the Company in the Galley manned out a Boat in search of them, but next Day they returned and continued their Course. After they had made this hungry and hazardous Voyage for fourscore Miles in that River, which, besides other strange Fishes of marvellous Bigness, abounded with Crocodiles, whence the People named it the River of *Lagartis*, *Raleigh* had a very proper young Negro attending upon him in his Galley, who, leaping out to swim in the Mouth of this River, was in the Sight of them all instantly devoured by one of these amphibious Animals.

Not long after, being again in want of Victuals, they took two Canoes laden with excellent Bread, being run ashore by the *Indians* in them, called *Arwaycas*, who fled to hide themselves in the Woods, fearing, through the Prepossessions of the *Spaniards*, that *Raleigh* and his Company were Cannibals. *Raleigh*, pursuing them in Hopes of some Intelligence, found, as he was creeping through the Bushes, a Refiner's Basket; in which were Quicksilver, Salt-petre, and divers other Materials for

the Trial of Metals, and also the Dust of some Ore that had been refined. But in two other Canoes that escaped them, they heard of a good Quantity of Ore and Gold. *Raleigh* then landed more Men, and offered 500*l.* to any of his Soldiers who should take one of the *Spaniards*. He found the *Arwaycas* hidden in the Woods, who had been Pilots to the *Spaniards*, of which *Raleigh* kept the Chief for his Pilot, and carried him to *Guiana*; by whom he understood in what Parts the *Spaniards* laboured for Gold, which he divulged to two of his Company, knowing both the Season of the Year and other Conveniences would be wanting to work any Mine himself. After recruiting his People with wholesome Refreshments, he continued his Voyage: The Men seemed now quite as well pleased as their Commander had been from the Beginning, and of their own accord offered to go as far as he would; so that on the 15th Day from their leaving their Ships he entered the great River *Oronoco*, and had an Opportunity of satisfying himself as to the Number and Names of the *Indian Nations* that inhabited both Sides of it.

After having passed the Mountain *Aio*, and a great Island which he mentions he reached on the fifth Day of his entering the great River aforesaid, as high as the Province of *Aramaia*, and anchoring at the Port of *Morequito*, which is full three hundred Miles within the Land, upon the said great River *Oronoco*, he sent a Messenger to the old King of *Aramaia*, named *Topiowary*, who came the next Day before Noon on Foot from his House, and returned the same Evening, being twenty-eight Miles backwards and forwards, though himself was one hundred and ten Years of Age. He had many Attendants of both Sexes, who came also to wonder at the *English*, and brought them great Plenty of Flesh and Fish, with divers Sort of Fruits. When the old King had refreshed himself a while in the Tent, which *Raleigh* had caused to be pitched for him, they entered by the Interpreter into Discourse about the Murder of *Morequito* his Predecessor, and the other Barbarities of the *Spaniards*. Then *Raleigh* acquainted him with the Cause of his coming thither, whose Servant he was, and that it was his Queen's Pleasure he should undertake this Voyage for their Defence, and to deliver them from the Tyranny of the *Spaniards*, dilating at large (as he had done before at *Trinidad*) on her Majesty's Power, her Justice, and her Clemency towards all oppressed Nations; all which being with great Reverence and Attention received, he began to sound the old Man touching *Guiana*, as what Sort of Commonwealth it was; how governed; of what Strength and Policy; of what Extent; with whom in Alliance or Enmity; lastly, the Distance and way to enter the Heart of the Country. The King gave such an ample and perfect Account of these Particulars, that *Raleigh* wondered to find a Man of such Gravity, Judgment, and good Discourse, without the Help of Learning or Breeding.

After his Departure *Raleigh* sailed Westward to view the famous River *Caroli*, both because it was so wonderful in itself, and led to the strongest Nations of all the Frontiers, who were Enemies to the *Epuremei*, Subjects to the Inca or Emperor of *Guiana*, and *Manoa*: Even when he was short of it, or lower down than the Port of *Morequito*, he heard the roaring Falls of this River; but when he entered it with his Barge and Wherries, thinking to have gone up some forty Miles to the *Casagotos*, he was not able, with a Barge of eight Oars, to row one Stone's-throw in an Hour, and yet the River is as broad as the Thames at *Woolwich*. Therefore encamping on the Banks, he sent off an *Indian* to acquaint the Nation upon the River of his Arrival and his Purpose, and that he desired to see the Lords of *Canuri*, who dwelt in that Province. Then one of the Princes came down, named *Wanuretona*, with many of his People, and brought great Store of Provisions, as the rest had done. By him *Raleigh* found the *Carolians* were not only Enemies to the *Spaniards*, but most of all to the *Epuremei*, who abounded in Gold; and that there were three mighty Nations at the Head of that River which would join them against them; he was further informed, by one Captain *George* whom he had taken with *Berreó*, that near the Banks of this River there was a great Silver Mine, but the Rivers were now all

all so risen, that it was not possible for the Strength of Men, with any Boat, to row against the Stream. Therefore he dispatched a Party of between thirty and forty to coast the River by Land, while himself with a few Officers and half a dozen Shot, marched over Land to view the strange and wonderful Overfalls of the said River *Caroli*, which roared at such a Distance, and the Plains adjoining with the rest of the Province of *Canuri*.

When they had got to the Top of the first Hills, overlooking the River, they beheld that prodigious Breach of Water which poured down *Caroli*, and how it ran in three Streams for twenty Miles together; no less than ten or a Dozen of the steep Cataracts appeared in Sight, each as high above the other as a Church Tower, which rushed down with such Violence, that the very Rebound of the Waters made the Place seem as if it had been all over covered with a great Shower of Rain; and in some Places they took it at first for a thick Smoak which had risen out of some great Town, till they drew nearer down in the Valley to this Thunder of Waters, where they better discerned and distinguished the Effects of it. And here *Raleigh* says he never saw a more beautiful Country, nor more lively Prospects; the Hills so raised up and down about the Valleys; the Waters winding into such various Branches; the Plains so clear of Brush and Shrub, and covered all with fair green Grass; the Ground of hard Sand, and easy for the March either for Horse or Foot; the Deer crossing in every Path; the Birds towards the Evening singing on every Tree a thousand several Tunes, with Cranes and Herons, of White, Crimson and Carnation, perched along the River-Banks; the Air refreshed with gentle easterly Breezes, and every Stone they stooped to take up, promising either Gold or Silver by its Complexion. His Company, at their Return, brought several of those Stones home, which they rather found coloured outwardly like Gold, than any of that Metal fixed in them; for those who had least Judgment or Experience, kept only such as glittered, and would not be persuaded but they were rich, because they shone; and thereby bred an Opinion that all the rest were no better. Yet some of those Stones *Raleigh* shewed afterwards to a *Spaniard* of the *Caraccas*, who told him it was *El Madre del Oro*, that is, the Mother of Gold, and that the Mine was farther in the Ground: He received also many other Informations from these People, some of which, however, seemed to border upon those fabulous Accounts delivered by Antiquity, but always suspected by Men of Sense; which *Raleigh* reports, but with due Caution.

While he lay at Anchor near the Banks of the *Caroli*, he spared no Pains that were requisite to gain a thorough Knowledge of the Names and Manners of the several *Indian* Nations that lay farther within the Country, which was all, in that respect, left in his Power; there being many Reasons which rendered his farther Stay improper, and his Return to his Fleet a Point of absolute Necessity; for he had been now absent above a Month, had wandered in that Space above four hundred Miles from the Sea Coasts; and besides the Winter was coming on very fast, and the great River began to rise. Besides all this, they had no Instruments with them to open Mines; and if they advanced farther, were to act against a numerous, civilized, and warlike People; so that, having done more with a handful of People, and that too in fewer Days than the *Spaniards* had been Years in searching for this Country, he very wisely resolved to submit to Necessity, and seek the shortest Way back to his Ships. Yet as he returned to the East, he spent some Time in discovering the River towards the Sea, which he had not surveyed, and which he thought also necessary to do; in a Day's time he arrived again at the Port of *Morequito*; for, gliding down the Stream, he went without Labour, though against the Wind, little less than one hundred Miles a Day; when he came to anchor, he was very desirous of farther Conference with old *Topiowary*, who soon came with a Multitude of his People flocking down to *Raleigh's* Tent upon the Shore, loaded with Presents.

When the old King was refreshed, and the Croud retired, *Raleigh*, by his Interpreter, entered into a long

Conference with him, telling him, that as both the *Epuremei* and the *Spaniards* were his Enemies, the one having conquered *Guiana* already, and the other endeavoured to get it from both, he desired to be instructed, both in the best Way to the golden Parts of *Guiana*, and the civilized Towns of the Inca. The King answered, He could not perceive *Raleigh* meant to proceed to the great City of *Manoa*, because neither the Season of the Year, nor the Strength of his Company, would enable him; for he remembered that in the Plains of *Maqureguarai*, the first Town of *Guiana*, where all the Gold Plates were made which were scattered over the neighbouring Nations, and above four Days Journey from his own, three hundred *Spaniards* were destroyed who had no Friends among the Borderers; he therefore advised *Raleigh* never to invade the strong Parts of *Guiana* without the Help of all those Nations which were their Enemies. *Raleigh* asked, If he thought the Company he had with him were sufficient to take that Town? The King thought they were, and offered to assist him with all his Borderers, if he would leave him a Guard of fifty Men upon his Departure.

But *Raleigh*, knowing if they should escape the *Guianians*, the *Spaniards*, expecting Supplies, would repay upon him his Treatment at *Trinidad*, very plausibly excused himself. Hereupon the King desired he would forbear him and his Country at this Time; for if the *Epuremei* should know he had given *Raleigh* any Aid or Intelligence, he should soon be over-run by them, nor could he avoid the *Spaniards* if they should return, who had before led him, seventeen Days, in a Chain like a Dog, till he paid a hundred Plates of Gold and several Chains of Spleen-stones, for his Ransom; but if *Raleigh* would return in due Season next Year, he would engage all the Borderers in the Enterprize; for that he could not more desire to make himself Master of *Guiana*, than they to assist him, having been plundered in their Wars by the *Epuremei*, of their Women, whom to recover, they would willingly renew the War, without Hopes of farther Profit; for the old King complained of it as a Matter of grievous Restraint, that now they were confined to three or four Wives apiece, who were wont to enjoy ten or a Dozen, while the Lords of their Enemies had no less than fifty or a hundred; but they seem to have had a political Reason for this Recovery, to strengthen their Alliance, and increase their Forces; those Frontiers having been much depopulated, between the Subjects of the Inca and the *Spaniards*.

Raleigh, after farther Consultation, finding it absolutely improper, either to leave any of his Company, or to attempt War upon the *Epuremei* till the next Year, applied himself now, only to learn how those People wrought those Plates of Gold, which were dispersed about, and how they divided it from the Stone. The King told him, that most of their Plates and Images were not severed from the Stone; but that, on the Lake of *Manoa*, and many other Rivers thereabouts, they gathered the perfect Grains of Gold, and, mingling a Proportion of Copper, the better to work it, put it in a great earthen Pot, under which they increased the Fire by the Breath of Men through long Canes fastened to the Holes under the said Pot, till the Metal dissolved, which then they cast into Moulds of Stone and Clay, and so made these Plates and Images; whereof *Raleigh* brought two Sorts into *England*, more to shew the Manner of them, than the Value; for he gave more Pieces of Gold of the twenty Shilling Coin, with the Queen's Effigy upon them, among these People, to wear in Honour of her Majesty, and to engage them in her Service, than he received, so little did he make his Design of Gold known to them. He brought away with him, however, various Samples both of the Spar and of the Ore, which were sufficient to justify his Reports of the Riches of this Country; and he likewise brought with him the highest Testimony that could well be given him of the sincere Love and entire Confidence of the Natives, since old *Topiowari*, one of the wisest, and none of the least powerful, Princes in that Country, sent over his own Son *Cayworaco* into *England*, where he was baptized with much Ceremony by the Name of *Gualtero*. On the other hand, Sir *Walter* left behind him, at their own Request,

two of his Company, viz. *Francis Sperry* who was an excellent Draughtsman, and undertook to describe, as he did, all the Country very exactly; and *Hugh Goodwin*, a Boy who waited upon Sir *Walter*, and who was to learn the Languages of the *Indian* Nations, which he did to great Perfection, but was unfortunately devoured by a wild Beast.

After this, a Cazique whose Name was *Putoma*, and another whose Name was *Warapana*, offered to conduct him to a Gold Mine, which they accordingly performed; but the Weather being extremely bad, Sir *Walter* was desirous to make as much haste back as it was possible to his Ships, which he accordingly did; but when he found himself on the Sea Coast, and in a manner at the End of his Labours, he met with a most dreadful and dangerous Storm, which drove them almost to their Wits-end; and at length, in a dark Night, and in the midst of the Tempest, he quitted his Galley, which he found amongst Sholes and Sands, and in his Boat thrust out to Sea with so much good Fortune, however, that the next Morning, by Nine o'clock, they had Sight of the Island of *Trinidad*, and rowing cautiously under the Shore, arrived safely at *Curiapan*, where their Vessels lay at Anchor. In all this tedious and surprizing Expedition, wherein they went through such a Variety of Dangers, being always alike exposed to the Severities of the Weather, and to the Attempts of their Enemies, absolutely wanting most of the Conveniencies, and frequently even the Necessaries, of Life, except the Negro devoured by the Crocodile, he lost not so much as a single Man, which amazed the *Spanish* Governor *Berreo*, to the highest Degree, who openly professed his Admiration of Sir *Walter's* Conduct and Courage, which so visibly surpassed those of all the *Spanish* Captains employed in this Service, from *Orellana* down to himself.

After a short Stay, to put his little Squadron in order, he sailed from *Trinidad* on his Return to *England*, and in his Passage home, landed and burnt several of the *Spanish* Towns upon the Coast; and on the 13th of *July* he met with Captain *Preston*, under Cape *St. Antonio*, in the Island of *Cuba*; and on the 20th of the same Month pursued his Voyage to *England*, where he safely arrived, his Expedition being exceedingly applauded in Prose and Verse by all the reputed Wits of those Times.

But it was not long before those who envied *Raleigh* began to circulate new Calumnies, framed on Purpose to depreciate his Discovery. It is of some Consequence, even at this Day, to examine and expose these lying Stories, because they have most unaccountably found so great Credit with the Generality of Mankind, that though they commend Sir *Walter's* Design, as supposing it against the *Spaniards*, yet they question his Veracity, with regard to the Produce, Value, and Expediency of settling *Guiana*, which is the Reason (at least it ought so to be) why it was not afterwards attempted, when the Importance of Plantations were better understood. The first Suggestion was, that this was a favourite Scheme, perhaps a pleasing Vision of Sir *Walter Raleigh's*; and there was no Reason to yield implicit Credit to any Man's Dreams, how wise and learned soever. It is really strange, how far such foolish Insinuations as these prevail, and how basely Mankind repay the greatest Services that can be done them. When *Columbus* opened his Scheme in *Portugal*, it was reputed a mere Fancy and a Contrivance to gain Employment; when *Faustus* invented Printing, he was treated by some as a Conjuror, and by others the Art was condemned as prejudicial to the Book-Scriveners; and at the Time *Harvey* taught the Circulation of the Blood, he was almost generally run down; and that, according to the Physicians of those Times was treated as a ridiculous Fiction, which is now regarded as the very Foundation of the Art of Physic. The Truth seems to be, that what is pervaded and clearly comprehended by a first-rate Genius, is a mere Cloud, Vision, or airy Appearance, in the Judgment of common Men, who, either really forgetting, or affecting not to distinguish, this Difference in Capacities, would have their Judgments take Place, and the Ignorance of the Many rather reputed Wisdom than the Sentiments of a single Man; and thus, between Folly and Arrogance,

the Advantages which might be drawn from such high and rare Spirits, if due Distinction were made, are absolutely lost, and the Discoveries in the World of Science (always achieved by such Men) postponed for Ages. Sir *Walter Raleigh* was aware of this, which induced him to take so much Pains in tracing the Knowledge of the *Spaniards*, and in making what they knew, and had endeavoured on this Subject, public, by which he thought he plainly proved this was no Invention of his, but only an Improvement on the Notions of other Men. He observed likewise, that the *French*, at the very Time he attempted it, had a View to this Discovery; and, it is very certain, that since his Time, Count *Pagan* recommended such a Settlement to Cardinal *Richelieu*, so that the calling this a Whim of Sir *Walter's*, as many did then, who are believed; now is to talk childishly and ignorantly on a very important Subject.

The next Insinuation was, that there was no such thing as Gold Dust, Gold Plates, or Gold Mines there, but that all was mere Invention, calculated to recommend the Project. To this Sir *Walter* opposed three Reasons, each of which was a fair and full Answer, and indeed wholly destroyed the Objection. For first, he shewed from the Situation, it was impossible this Country should not be rich, as having *New Grenada* on one Side, *Peru* at its Back, and in that Climate which affords the richest Mines of Gold and Silver in *America*; to which, we may add, the Discovery of the *Brazil* Treasures unknown in his Age. He next pleaded the Authority of the *Spaniards*; and that with respect, not to Opinions only, but as to Facts; for he annexes to his Voyage Certificates of considerable Quantities of Gold, which they had drawn from that Country, and which made them so eager to discover it fully. This too has been confirmed by Father *D'Acughna*, and other Writers, since his Days, who very positively maintain the very same thing. He lastly urges his own actual Experience, producing very ample Specimens of Gold Ore from thence. Upon some Doubt whether the Stones by him produced were Gold Ore or not, he caused them to be examined by Refiners. From some Mr. *Westwood*, who lived in *Wood-street*, drew at the Rate of twelve or thirteen-thousand Pounds a Ton; some, tried by Messrs. *Bulmar* and *Dimock*, held after the Rate of twenty-three thousand Pounds a Ton, and some, examined by Mr. *Palmer*, Comptroller of the *Mint*, and Mr. *Dimock*, held almost twenty-seven thousand Pounds in a Ton. Yet after all this another Question was started, whether *Raleigh* did not carry this Gold from *Africa* as well as bring it from *Guiana*; to which he answered, that from the very Mines in that Country, he helped to dig it himself, though with no fitter Instrument than his Dagger.

Another Head of Calumny was, that he chiefly aimed at attacking and plundering the *Spanish* Towns upon the Coasts; and that these were in reality *Raleigh's* Gold Mines in *Guiana*. But this was so far from the Truth, that one principal Reason, which Sir *Walter* assigns for fixing here, was, that the Catholic King had neither any Right to, or Possession of, this Country. It is also most evident from Sir *Walter's* own Accounts, that, except at *San-Joseph* in *Trinidad*, he took nothing in the Places which he plundered in that Country, and from this very Instance he recommends planting rather than privateering. On the whole, therefore, this Affair has been mistaken from first to last: Sir *Walter's* Proposal was wise and well founded; his Description of this Country true and very exact, his Expectations, though sanguine, perfectly well grounded; and his own Voyage a very pregnant Proof that such an Establishment is highly practicable. If any should enquire what Views I have in labouring this Topic so much, I shall fairly answer, many: I thought the Nature of my Subject led me to it; I conceived that Sir *Walter's* Memory demanded this Piece of Justice; and I remembered that we are at War with *Spain*, *Guiana* still unsettled; and that we may, as the Phrase once was, TAKE and HOLD.

15. We are now to speak briefly of such other Transactions under the Reign of this great Princess, as may contribute to explain some Passages in this Section, and set

set what follows in a clear Light. She encouraged Privateers immediately after her coming to the Crown, as the most effectual Means of raising a Fleet in a short time; but when she found this End answered, she brought that Practice under due Regulations. She was extremely careful in giving all possible Encouragement for Discoveries, and it was with this View that she promoted, as we shall see hereafter, several Enterprizes for finding out a Passage to the *East-Indies*, by the North-east and by the North-west. The *Russia* Trade she encouraged; and her Conduct in respect to that Nation was such as raised her Credit in those Parts of the World, to the highest Degree that can be imagined. The King of *Sweden* was so charmed with what Fame reported of the Queen, that he put himself into the Number of those who were Suitors to her for Marriage. The King of *Denmark* asked her Leave to transport Corn through the narrow Seas, which, to shew her Dominion over them, she once refused; and the *Hanse-Towns* having presumed to send a Fleet through them without her Leave, she seized and confiscated their Ships; as for the *Dutch*, they more than once offered to submit themselves to her Government, and in the most public manner acknowledged that they owed the Recovery of their Liberty to her Succour and Protection; but she was wise enough to foresee, that as they grew in Power they might alter their Notions, and she took care to provide against this, by procuring the Keys of *Holland* and *Zealand* to be put into her Hands, by which Means she was able to lock up their Commerce, and naval Force, at her Pleasure.

She kept *France* in great Awe, even when it was governed by *Henry IV.*, the wisest, bravest, and best Monarch of the House of *Bourbon*. She ruined the naval Power of *Spain*, then the most formidable in *Europe*, and under the Direction of a Prince whose Abilities were equal to every thing but his Ambition: She encouraged Expeditions to the *West Indies*, as long as they proved beneficial to her Subjects; and when they appeared to be no longer so, she very prudently restrained them. It was under her Reign, that the *English* first attempted the Passage into the *South Seas* by the Straights of *Magellan*; which proved of great Consequence, not only in that Part of the World, but also in opening a Way to the *East Indies*, as we have already shewn in the former Parts of this Work, to which those Passages properly belonged.

She brought, by affording the Means of employing them, the building of Ships into Use, and by Degrees to great Perfection, which was of infinite Benefit to the Nation, and at the same time delivered us from the heavy Inconvenience of hiring Vessels from Foreigners whenever the public Occasions demanded a large Fleet; but most of these Things (though incident to my Purpose) have been already insisted on by others, and therefore I am content barely to mention them, that I may have room to mention some other Things of no less Importance, though not so much attended to. We have shewn how wretched a Situation Things were in at the Beginning of her Reign, and how suddenly and how effectually she changed the Face of our Affairs; and we have in some measure pointed out the manner in which this was done; but there remain some other Points worthy the Reader's Consideration, which I shall next handle with all imaginable Brevity.

Queen *Elizabeth* taught all her Subjects Industry and Application by her personal Conduct; she was constantly attentive to every Branch of her Government; knew exactly what was done, what might be done, and what was omitted; she understood most Things herself, and what she did not understand, she committed to the Inspection of such as were reputed to be best acquainted with them; she was slow in resolving, and quick in Execution; she heard all that could be said for, or against, *Sir Francis Drake*, before she went on board his Ship, or gave him any public Marks of her Favour; but afterwards she would never permit his Conduct to be censured.

She was sparing in her Honours, because she was resolved to use them as Rewards; and she knew that in order to this it was requisite they should not become

cheap; she never employed any but capable Ministers; for she had Men for Shew, and Men for Service; and in nothing demonstrated her great Capacity more than in her Choice of Servants. Secretary *Walsingham*, and after him Secretary *Cecil*, had the Department of the Marine, and both understood it well, so that whoever applied to them, was to make out the Reason and Probability, as well as the Profitableness, of his Project. This produced the many excellent Pieces which are preserved in *Hacklitt*, particularly *Sir Humphrey Gilbert's* Discourse of the North-west Passage, *Sir George Peacham's* Benefits of western Planting, with *Mr. Harriot's* Account of *Virginia*, and many such Things. By this Means a Spirit of useful Knowledge was promoted and kept up; all Things were thoroughly sifted before Encouragement was given, and due Regard had to what succeeded, to what did not, and to the Reason and Causes of both.

She took some Share of most Expeditions of Consequence, as well to keep up the Spirits of those concerned, as, in Case any good Prizes were made, that the Public might have its Part, in which we find her always strict, and sometimes a little severe: But, with all her Frugality and good Management in this Respect, she found War an expensive and ruinous Thing, which demanded constant and great Supplies, bringing in but slowly and inconsiderably. She was the better able to discern this, because she took care to have the Treasury-Books as regularly kept as those of a Merchant, whence she was very well able to tell how far her Revenues answered her Expences, in what Articles her Excesses were incurred, and even the Loss and Gain on particular Expeditions: As for Instance, that of *Cadiz*, or *Cales*, reputed the most fortunate in her long Reign, which nevertheless cost sixty-four thousand Pounds more than it brought in. The Balance, in this Respect, was always against her, notwithstanding the vast Sound her Prizes made in the World; for, according to a Minute of an Account made up by the famous Lord-Treasurer *Burleigh*, from the thirtieth to the thirty-fourth Year of her Government, it appears, that the bare Expence of the Navy amounted to two hundred seventy-five thousand, seven hundred and sixty-one Pounds, and all received by Prizes within those Years, which were the most prosperous in that Respect of the whole *Spanish* War, came to no more than sixty-four thousand and forty-four Pounds.

Yet, considering what Mischief was done the Enemy, how much his Commerce was embarrassed, his Merchants ruined, his Credit lessened, and his Power decreased, there was no great Cause to repine; and, in truth, we no where find the Queen did so, but she always endeavoured to put her Nobility upon such Enterprizes, as well to keep them employed, as to throw a Part of the Expence upon such as she judged were much more able to afford it than the common People.

But there was another great and useful Effect which flowed from this assiduous Care in the Queen, and this generous Conduct in her Nobility, and that was, the establishing a just Regard for Public Spirit. It was the Mode in her Days, to do every thing with a View to the Welfare of the State, and it was impossible for any Man to make a Figure at Court, or to appear with Distinction in his County whose Actions as well as Words did not discover somewhat of the Patriot. Some of the Nobility served in *Holland*, to learn the Trade of War, at the same time that they contributed to break the Power of *Spain*, and to raise the *English* Reputation for Courage, Steadiness, and other Military Virtues. The Earl of *Essex*, and other Men of Quality, served the Queen at Sea in various Expeditions of great Importance. Others again, such as the Earl of *Cumberland*, embarked in particular Enterprizes at their own Expence; and by this Means, after the formidable Invasion in 1588, the King of *Spain* found himself sufficiently employed at home, and perceived, when it was too late, that he had wasted the Blood and Treasure of all his Kingdoms to raise up two new Powers in *Europe*, viz. *England* and *Holland*, which neither he nor his Successors would be able to cope with.

But the Queen and her Ministers, when the Dangers of War were thus removed or kept at a Distance, knew how to divert the same Spirit to other good and salutary Purposes.

Purposes. In former Reigns there had been little Care taken to explore the Riches of this Kingdom; but now every Part of it was examined, and every kind of Improvement set on foot. The Lord-Treasurer sent for several *Germans* over, who were employed in erecting Iron-works, in discovering and working Lead Mines, and in making Saltpetre. We formerly exported most of our Commodities raw and unwrought, but now the Persecution in the *Low-Countries* furnished us with Multitudes of able Workmen in every Branch of the Woollen Manufactory, who had all imaginable Encouragement given them, and with very considerable Privileges were settled in different Parts of the Kingdom, more especially at *London, Norwich, Colchester, and Canterbury*. The like Care was taken with respect to other Trades, and this was attended with such Success, that, whereas in the Beginning of the Queen's Reign we bought our Artillery abroad, towards the End of it we furnished all *Europe* with Ordnance; so that at length it grew a Question, Whether it might not be requisite for the public Safety, to put a Stop to the Exportation of Iron Cannon.

There was now scarce a Session of Parliament held in which there were not Acts passed for promoting new Branches of Trade, or for preserving or regulating the Old; and though it may be, and I believe is, true, that some of the Laws, then made, have become in Process of Time rather dangerous and destructive, than profitable or advantageous, to Commerce, yet certainly they were made with a good Intent; and we have Reason to believe were well enough suited to those Times, so that we have no Reason to censure those who made them, on Account of the Inconveniencies they produce, but ought rather to blame ourselves for not repealing them. By these Steps the Face of Things in this Country was quite changed: Instead of being served by the *Venetians* and *Genoese*, with all the Commodities of the East, we brought them Home ourselves, and even furnished them to others; instead of suffering all our Domestic Trade to be managed as formerly by *Germans* and other Foreigners, we began to settle Factories abroad, and there was hardly a Nation in the known World, with which before the Death of this Queen we had not some Correspondence.

Yet instead of setting down quietly with these Acquisitions, and falling into a nominal Trade amongst ourselves, like the Modern Stock-Jobbing; we were then continually contriving and executing new Schemes, either for improving our Country, or exporting its Produce; our People, even then, began to think the Trading World too narrow for them, and admired nothing so much as finding out new Markets, where Goods always sell best, where Novelty and Variety often procure high Prices, even for indifferent Commodities. We need not at all wonder, therefore, that in these Times there were Men of such extensive Abilities produced, as seemed to grasp the whole Circle of commercial Knowledge; such as *Sir Walter Raleigh, Sir Robert Dudley, Sir Thomas Gresham*, and many others; some of whom have left us Treatises in this way, that are both read and admired in more enlightened Times. We may therefore safely pronounce, that the Seeds of all our Traffic, which have since so happily come up, and from which the Nation has reaped such mighty Profits, were sown in this Reign, and cultivated, when they needed Cultivation most, by the Royal Hand of the matchless *Elizabeth*; the Mother of her Subjects, the Terror of her Enemies, and the Benefactor of Posterity.

16. We are now to take a View of the State of *English* Affairs in regard to *America*, at the Close of this Queen's Reign, when it will appear, that there was scarce any Part of it, whether of the Northern or Southern Continent, or Islands, with which we had not some Acquaintance; though we had made no Settlements any where. *Drake* and *Candish* examined the whole Backside of *America* from South to North, and it appears very clearly from *Sir Richard Hawkins's History of his own Voyage*, that we were almost as well acquainted with those Countries as the *Spaniards* themselves; this will appear less strange, when it is observed, that some of our Seamen being surpris'd, others

being sent ashore by their Commanders, and several straggling when landed in Parties, on particular Designs, fell into the Hands of the *Spaniards*; and being sent from Place to Place, travelled through more Countries than most of the *Spaniards* that were sent thither by their Government, or were driven thither by their Necessities, some of whom, coming home, related, and several of them, particularly *Miles Phillips* and *David Ingram*, wrote Accounts of, their Adventures, as we shall have Occasion to shew in another Place.

By this Means we gained very clear and distinct Descriptions of the Countries bordering on the *Streights of Magellan*, of *Chili, Peru*, the *Bay of Panama*, the several Provinces of the Kingdom of *Old Mexico*, some Knowledge of the *New*, and even of *California*: Nor were we less acquainted with the other Side of the Continent, as the Reader may learn from the *English Voyages* of the first Chapter of this Work, in which are contained very distinct Accounts of the most Southern Parts, from the River of *Plata* to the Mouth of *Magellan's Streights*. We have likewise a sufficient Knowledge of the great Country of *Brazil*, from *Mr. Knivet*, and other Travellers; though it must be allowed that they gave great Scope to their Imagination, in what they have written, or at least what is published by *Purchas*, if it was by them written, upon this Subject. As to *Guiana*, or the Country of the *Amazons*, *Sir Walter Raleigh*, and *Capt. Laurence Keymish*, whom he sent thither soon after his Return, have written as good Descriptions of them, if not better, than any that are extant in other Languages.

As for the Coast, from the Island of *Trinity* up to *Carthagena*, it was the chief Scene of most of our Privateer Expeditions in this Reign, so that we had repeated Relations of all that was necessary to make this Part of the new World perfectly known. The remaining Part of the Coast, as far as the *Gulph of Honduras*, was likewise explained and described by several *Englishmen*, who had visited those Coasts, particularly *Capt. Barker*; and as for the *Bay of Mexico*, it was often resorted to; but more particularly by *Captain*, (afterwards) *Sir John, Hawkins*, in the Year 1568, at which time he set on shore *David Ingram*, before-mentioned, at about one hundred and forty Leagues West-by-north from the Cape of *Florida*. From thence he travelled with several other Persons of his Company by Land, to within sixty Leagues of *Cape Breton*; where they found a Passage home by a *French Ship*, in 1369, and soon after their Arrival, *David Ingram, Richard Brown*, and *Richard Twede* went to visit *Capt. Hawkins*, who had set them on shore, and related to him their Adventures. I have been more particular on this Head, because this *Ingram* has given the clearest Account of any Man concerning the North-west Passage, as the Reader will see hereafter in its proper Place, where I shall give his Account at large. The remaining Part of the Coast of *North America*, from the Cape of *Florida* to the utmost Extent of the Continent northward, was examined by several of our Seamen, as appears by what has been already said in this Section, and will farther appear from the Account we are yet to give of some Voyages that were made in the last Years of the Queen, and which I thought proper to reserve for this Place.

The first of these, in Order of Time, is the glorious Expedition of *Capt. William Parker* of *Plymouth*, who undertook, at the Expence of a few private Persons, an Enterprize against the *Spaniards*, in which he was accompanied by *Capt. Giles* and *Capt. Ward*, Land Officers; and by the Captains *Fugars, Loriman, Ashly*, and several other Gentlemen as Volunteers, which, all Circumstances considered, will appear one of the hardest Undertakings, as well as one of the most successful, in that Reign, or indeed ever attempted by our own Nation or any other of which there remains an Account in History. This Squadron of his consisted but of three small Barks, scarce equal in Strength to a Fifth-rate Man of War; of these the *Prudence*, stiled the Admiral, was of the Burden of one hundred Tons, and a hundred and thirty Men, commanded by *Mr. Parker* himself; the *Pearl*, Vice-Admiral, of sixty Tons, and sixty Men, *Capt. Robert Rawlins* Commander; the Pinnace of twenty Tons and eighteen Men. They failed

failed in November 1601, and off the South Cape had the Misfortune in a violent Gust of Wind to lose their Pinnace with all her Men but three; steering their Course from thence to the Islands of *Cape Verd*, they landed one hundred Men, and took one of them called *St. Vincent*, with a Town of the same Name; and, after having given the Spoil of it to the Soldiers, set fire to the Place. Hence they haled over to the Coast of the Continent, and coming to *la Rancheria*, or the Pearl Fishery, in the small Island *Cubagua*, they there found the Governor of *Cumana*, with a small Company of Soldiers. This did not discourage them from landing, and though at first they were received with great Warmth, they got at last the better of them, and took the Place with several Prisoners, Barks, and Boats, all which they ransomed for the Value of five hundred Pounds, which was paid them in Pearls.

They sailed from thence directly for *Cape de la Vela*, where they took a great *Portuguese* Ship of 250 Tons, coming from *Angola* and *Congo*, and bound for *Carthage*; which, having little of Value in her, except three hundred and seventy Negroes, they ransomed for 500 *l*. After this they went to the Island of *Cabecas*, where they embarked one hundred and fifty of their Men in two small Pinnaces and two Shallops, and sailed to the *Bastimentos*, where they landed, and picking up some Negroes for their Guides, with their Boats and Pinnaces, they entered the River of *Puerto Bello* the 7th of February 1602; it being Moon-light the Watch discovered them at their very first Entrance into the Haven, and haled them by the strong Castle of *St. Philip*; in which were thirty-five Brass Guns, and Soldiers enough to manage them. Having some on Board who spoke the *Spanish* Tongue, they pretended they were *Spaniards* coming from *Carthage*.

The Officer of the Castle bid them come to Anchor, which they did, but about an Hour after Captain *Parker* gave them the slip with his two Boats and above thirty Men, leaving the Pinnaces at Anchor before the Castle. With this Force he went directly to the Suburb of *Triana*, and, though the Alarm was given, landed his thirty Men, and setting it on fire left it burning, and marched into the great and rich Town of *Puerto Bello*. As soon as he entered, he marched directly to the King's Treasury, where he found a Guard of Soldiers drawn up to receive him, with two Brass Field-pieces on their Carriages; the Fight was long and obstinate, and *Parker* had lost the best Part of his Men, when Captain *Fugars* and Captain *Loriman*, who commanded the Pinnaces, hearing the Noise, came timely to his Relief, with one hundred and twenty Men. This Assistance soon turned the Scale, and the *Spaniards* began to think of securing themselves by Flight; a good Number of them got into the King's House, which they defended very resolutely for four or five Hours; but at length the *English* became Masters of that, as well as of the whole Town. They found but ten thousand Ducats in the Treasury, though there were often six Millions in it; and if they had been seven Days sooner they would have found one hundred and twenty thousand, which had been embarked in two Frigates for *Carthage*.

The Spoil of the Town, which in Money, Plate, and Merchandize, was considerable, was by Captain *Parker*, given to the Soldiers. But two Frigates, which he took farther up the River, he carried away with him; after having kept Possession of the Town two Days, Captain *Parker* generously spared it with its Churches, Buildings, and Forts, from burning; and released the Prisoners, among whom were Don *Pedro Melandez*, the Governor, the King's Secretary, and several Persons of Quality, without Ransom; satisfied with the Honour of having taken with a handful of Men, in so little Time, and with so inconsiderable a Loss, one of the finest Towns the King of *Spain* had in the *West Indies*. His Reason for this was to give the *Spaniards* an Example of civil and generous Deportment towards their Enemies; and the Governor he released, because he had fought so bravely, having received eleven Wounds in the Action.

The Town had at this Time two Churches, six or seven fine Streets, three small Forts on one Side, besides the

great Castle of *St. Philip*; all which they might have demolished, and have left the whole a Heap of Ruins! During their Stay in Town they had not the least Disturbance from any Forces of the *Spaniards*, nor any Alarm given; only as they were sailing away the Enemy began to appear, but it was only to exchange a few Bullets, and to take leave of each other from the Mouths of their great Guns. Thus Captain *Parker* returned safely home with much Honour, and not without reasonable Profit; and not only our own, but *Spanish* Writers, speak of his Expedition in very honourable Terms.

The next Year some of the *Virginia* Company resolved to fit out a Vessel for that Country, and accordingly made Choice of Captain *Bartholomew Gosnold* for their Commander, who had been formerly there. He sailed from *Falmouth* on the 26th of March 1602, in a small Vessel, and no more than thirty-two Persons on Board, of whom it was proposed that twelve should stay behind and form a Settlement, in case he should meet with any Place which he should judge convenient for that Purpose. This Captain *Gosnold* was an excellent Mariner, and therefore he did not go the former Course, but a much shorter one; and on the 11th of May he arrived in the Latitude of 42 Degrees and some few Minutes, among the Islands, forming the North Side of *Massachusetts Bay* in *New England*; where, not finding the Conveniencies he desired, he set sail again; and when he thought he had got clear of the Land, he fell upon the Bay of *Cod*, now Part of *New England*. He went ashore on a small uninhabited Island, which he called *Elizabeth Island*, and on another Island, which he named *Martha's Vineyard*, where the Natives had left some Marks of their Habitations. Here some of his Company sowed *English* Corn, and saw it come up very kindly; he built a little Fort for his, and his Mens, Security, and Trade from thence with the *Savages*, to whom *Europeans* were no Strangers; for the Commander of the first Body of them that came to trade was dressed with Waistcoat, Breeches, Shoes, Stockings, Hat, and all Accoutrements befitting an *Englishman*; but his Attendants had only Deer-Skins about their Shoulders, and Seal-Skins about their Waists; their Hair was very long, and tied up with a Knot behind; they were painted all over, but their natural swarthy Colour was easy enough to be discerned.

On the North-west Side of *Elizabeth's Island* the Captain found a Lake of fresh Water, about a League in Circumference, and very near the Sea; in the Midst of which was another little Island of about an Acre of Ground; and this they pitched upon as the most commodious Place for building their Fort above-mentioned, and they begun it accordingly. About this Lake they found an infinite Number of Tortoises, with several Sorts of Fish and Fowl; so that those who proposed to settle there had a fair Prospect of having Provisions enough. They visited the main Land adjoining to this Island, which they found, in all Respects, as charming as Meadows, Groves, Brooks, and Rivers could make it. They had some Communication with the *Indians* of the main Land, who came and bartered with them for some of their *European* Rarities, and there was nothing hardly but what was so to these People. The Commodities they gave in exchange for Knives and other Toys, were Beavers, Lucains, Martens, Otters, Foxes, Conies, Seals, Deer, and Skins. The Affairs of this Plantation might have gone on very well, had all the Planters been unanimous and easy in their Settlement here; but they were intent upon their private Interests, and contrived to make only a profitable Voyage. The Captain laboured against it, but to no purpose; so having gotten a large Cargo of Sassafras, Cedar-wood, Furs, and other good Commodities, they set sail for *England*. They left their little Fort on the 18th of June, and they arrived at *Plymouth* the 23d Day of July following, A. D. 1602.

What the Consequences were of this Voyage and Discovery will appear in the next Section; and therefore we shall pass on to the last Voyage, which we are concerned to take Notice of here; and that was made in the same Year 1602, by one Captain *Mace* of *Weymouth*, fitted out by Sir *Walter Raleigh*; and as the short Account we have

the History of this Country within this Period, wherein is demonstrated our clear and indubitable Right to the Island of Cape Breton. 14. The several Voyages to Guiana, down to the Death of Sir Walter Raleigh, after his last Expedition thither, and an Account of our Settlement at Surinam. 15. A short Account of the first planting the rich and fruitful Island of Barbadoes. 16. The History of this advantageous Settlement, down to the Restoration. 17. The Situation, Climate, Soil, Produce, and incredible Advantages that have accrued to Great Britain from this Colony, which is proved to be the best in the World. 18. The Discovery, Conquest, and Settlement of St. Christopher's, Nevis or Mevis, Montserrat, &c. 19. The Grant of the Province of Maryland to the Lord Baltimore, and the Settlement of that Country, with other Particulars relating to it within the Compass of this Period. 20. The Expedition by the Direction of the Protector Cromwell, for the taking Hispaniola from the Spaniards, with the true Causes of its Miscarriage. 21. The History of the Conquest and Settlement of the most noble and most important Island of Jamaica. 22. A short Description of the Island, a View of the vast Profits derived to Great Britain from the Possession of it, and other Particulars. 23. The Conclusion of the Section, with some Remarks and Observations on the principal Events mentioned therein.

1. **A**T the Time of King James's Accession to the English Throne, there were the fairest Opportunities offered for extending and securing the Commerce of this Island that could be wished; and therefore we need not be surprized at finding such vast Improvements made, and such mighty Advantages gained to this Nation, under a Government that has not hitherto been represented in the fairest Lights to the People. We must, however, observe, that the peaceable Temper of King James was of great Use to the trading Part of his Subjects; for the Power of Queen Elizabeth had raised such a Veneration in some, and struck such a Terror into others, that there was scarce any Nation which did not willingly embrace the Friendship of King James, and offer him whatever Terms could be thought most suitable to the commercial Views of his Subjects; which was extremely agreeable to the English, at that Time, who began to entertain very true Notions of Trade; to see its Importance, above all Things, and to wish for the Means of promoting and extending it on all Sides, to which they began to think a Peace with Spain would not a little contribute. At the Time of the Queen's Decease there was a Fleet preparing under the Command of Sir William Monson, intended for the Spanish Coast; for it was a wise and just Policy in that Princess, to keep the War at a Distance from her own Dominions, to find her Enemies work enough at Home, and thereby prevent their disturbing any of her Territories. But upon the Accession of King James this Fleet was countermanded; and, it seems, not without Reason; for the Archduke, who was then Governor of the Low Countries, thought fit to recall his Letters of Reprizal, and thereby opened a free Trade between England and Flanders, a thing highly satisfactory to the Merchants, who immediately reaped the Benefit of it.

There was likewise another Design on foot at the Time of the Queen's Demise, which was the prosecuting the Discoveries and Trade to North America, in which several Gentlemen and Merchants of Bristol were concerned, and amongst them the Reverend Mr. Hackluit, whom we have so often mentioned; and who, having a Prebend in the Cathedral Church of Bristol, and having a great Genius for promoting such Enterprizes, was fixed upon to apply in behalf of himself, and the rest of the Persons concerned, to Sir Walter Raleigh, who was still looked upon as the Proprietor of Virginia, in order to procure his Licence for this Trade. Upon his Application to that worthy Person, they received all the Encouragement they could desire; for he not only granted them a Licence under his Hand and Seal, but also made over to them all the Profits which should arise from the Voyage.

After they were thus impowered, they raised a joint Stock of a thousand Pounds, and fitted out two small Vessels, the one called the *Speedwell*, commanded by Capt. Matthew Pringe, of the Burthen of fifty Tons, with thirty Men and Boys; the other a Bark of twenty-six Tons, called the *Discoverer*, commanded by Mr. William Brown, who had under him a Mate, and eleven Men, and Boys besides. These Vessels were victualed for eight Months, and had a large Cargo on board, consisting of all sorts of Goods that were thought proper for that Country. They sailed from King's-Road, near Bristol, on the 20th of March, 1683. Being hindered

by contrary Winds, they put into Milford Haven, where they continued till the 10th of April following, and then continued their Voyage. The Rout they took was by the Azores, and they arrived without any remarkable Accident on the Coast of North America, in the Lat. of 43 Degrees; and, after having examined the Coast, on which they found nothing for their Purpose, they sailed on South-west in search of that Part of the Country where Capt. Gosnold had been.

At length, they found in the Latitude of 41 Degrees, and some few Minutes, a very convenient Bay, to which they gave the Name of *Whitson's Bay*, in honour of Mr. John Whitson, who was then Mayor of Bristol. Here they landed, and cut a good Quantity of Sassafras, and carried it on board; but, lest they should be surprized in the Woods by the Natives while they were at Work, they erected a little Fort or Redoubt, wherein they left their Effects, and four or five Men to guard them, while the rest were at work. The Natives came and trafficked with the English, forty or fifty in a Company, and sometimes upwards of an hundred, who eat and drank, and were very merry with our Adventurers; especially when they observed a Lad in their Company playing upon a Guitar, they would get round about him, and, taking Hands, dance twenty or thirty in a Ring, after the American Manner.

Our Seamen observed, that the Natives were more afraid of two Mastiff-Dogs they carried with them than of twenty Men; and when they designed to get rid of their Company, they let loose one of these Mastiffs; whereupon the Natives would shriek out, and run away to the Woods. But 'tis probable this Usage, and the erecting a Fortification in their Country, made the Indians at length look upon the English as their Enemies: For our Adventurers inform us, that a Party of Indians came and surrounded their Fort a few Days after, when most of them were absent, and would probably have surprized it, if the Captain of the Ship had not fired two Guns, and alarmed the Workmen in the Woods, who thereupon returned to the Relief of the Fort.

The Indians pretended indeed they had no hostile Intentions, but our People never cared to trust them afterwards: And the Day before the English embarked, the Natives came down again in great Numbers, and set fire to the Woods where they had cut the Sassafras; which, 'tis probable, was designed to let the English know they would preserve nothing in their Country which should invite such Guests to visit them again; for no doubt the great Guns and Fire-arms had rendered the English very terrible to them, as well as their Dogs. The Account these People gave of the Country and the Inhabitants was, as might very well be expected, much the same with what had been given before by Capt. Gosnold, and those who had sailed with him into those Parts, and therefore we need not dwell upon the Subject. Amongst other Curiosities they brought back with them, the most remarkable was, one of the Boats used by the Inhabitants, made of the Bark of a Birch Tree, sowed together with Twigs, the Seams covered with Rosin or Turpentine, and tho' it was seventeen Foot long, four broad, and capable of carrying nine Persons, it did not weigh sixty Pounds. These Boats the Inhabitants rowed, or rather paddled, with two wooden Instruments like to our Bakers Peels, by the Help

Help of which they went at a great rate. About the middle of June they had compleated the Freight of their Bark; which they sent home before them into *England*. After her Departure, they made all the Dispatch they could in loading their own Vessel; for which they procured a very valuable Cargo of Skins and Furs, in exchange for the Commodities they carried. On the 9th of August they quitted the Coast of *Virginia*, and sailed for *England*, arriving in the Mouth of the Channel in five Weeks; but meeting there with contrary Winds, they could not reach *King's-Road* before the 2d of October; but they had the Satisfaction of finding that their Bark was safely arrived a Fortnight before them.

There was another Attempt made the same Year, upon the same Account, which, however, did not end so fortunately. This Voyage was performed by the *Elizabeth* of *London*, a Bark of fifty Tons, commanded by Capt. *Bartholomew Gilbert*, who had been the Year before at *Virginia* with Capt. *Gosnold*. They departed from *Plymouth* the 10th of May, and in their Passage traded at *St. Lucia*, *Dominica*, and *Mevis*, at the latter of which they cut about twenty Tons of *Lignum-vitæ*. The third of July they set sail from thence for the Coast of *Virginia*, and particularly for *Chesapeake Bay*, which Capt. *Gilbert* was very desirous of failing to, that he might make some Enquiry after the People near those Parts. On the 25th they came near the Mouth of that Bay.

But the Wind blowing hard, with a high Sea, though they beat about for two or three Days, they could not make it, and were obliged to bear more to the eastward. The 29th, being not far from Shore, the Captain with four of his best Men landed in their Boat, and, being provided with Arms, marched some way up the Country; but in this March, being set upon and overpowered by the Inhabitants, they were all killed; and it was not without Difficulty that the Boat, with two young Men who were left in her, reached the Ship again to bring the News. They, being now in all but eleven Men and Boys in the Ship, were afraid to venture the Loss of any more of their small Company; and their Provisions growing short, the Master, *Henry Sute*, who had taken the Command, resolved, though they were in extreme Want of Wood and Water, to return homewards, which they did, and arrived in the River of *Thames* about the End of September.

The Peace being concluded with *Spain*, in 1604, removed several Obstacles that stood in the way of the *British* Trade; and at the same time opened to our Ships a free Access to many Islands, Countries and Ports, to which they had not before resorted; which occasioned a great Increase in our Exportations, and gave much Encouragement to such as were employed in the different Branches of the Woollen Manufacture. As for the Business of settling and planting on the northern Continent of *America*, that too was laid open, by the Attainder of Sir *Walter Raleigh*, which happened at the beginning of this Reign, on account of a Plot, which appeared very improbable then, and with respect to him especially, very ridiculous ever since. The Reports made by those who were concerned in the three last Voyages being very favourable to the Country, and the Profits made by them being very considerable, induced several Persons of Distinction to think seriously of promoting these Discoveries, insomuch that some of the Nobility resolved to engage in an Undertaking of this kind.

2. Accordingly *Henry Wriothesley* Earl of *Southampton*, and *Thomas* Lord *Arundel*, of *Wardour*, resolved to fit out a Ship for this Expedition. This Vessel was called the *Archangel*, and was commanded by Capt. *George Weymouth*, an experienced and skilful Seaman, who sailed on the last Day of March, 1605, from *Dartmouth*, and met with nothing of consequence, till such time as they judged themselves to be very near the Coast of *Virginia*; but the Winds carrying them to the northward, in the Latitude of $41^{\circ} 30'$, and their Wood and Water beginning to grow extremely short, they grew very desirous of seeing Land. By their Charts they had reason to expect it, and therefore bore directly in with it, according to their Instructions, yet they found none in a Run of almost 50 Leagues. After much Expectation, on the 16th of May they obtained Sight of an Island, of no

great consequence, and very woody along the Shore; but by the Fruits they found it appeared no barren nor despicable Spot, more especially as there were Streams of fresh Water running down the Cliffs in great plenty, vast numbers of Fowls, and Fish enough all along the Shore. This Island is now called *Long-Island*, and it was upon the eastern Parts of it they fell, to their great Satisfaction. From hence they could discern a great many other Islands, and the main Land stretching from the West-south-west, to the East-north-east. Several of the Islands adjoining to the Continent they visited, and found very full both of Timber and Fruit-trees, of several Sorts.

Among those Islands they met with a Harbour, in which Ships of any Burthen might lye, defended from all Winds, in six to ten Fathom Water, upon a tough Clay Ooze. This they called *Pentecost-Harbour*, because it was about *Whitsuntide* they discovered it. The Fir-trees, which were in great numbers on these Islands, yielded an exceeding sweet Turpentine; and the Muscles, which they found about the Rocks, afforded small Pearl in abundance, and some that were large and orient; and the Shell of these Pearls on the Inside resembled Mother-of-pearl; but they wanted proper Tackle to dredge for them, and therefore could not take any considerable Quantity. The Natives from the Continent came oft in their Canoes to trade with them while they lay in this excellent Harbour, their Commerce being much the same as in former Voyages, all sorts of Skins and Furs in exchange for Knives, Beads, and such like Trifles: And so good Chapmen were they at that time, that they would give the Value of ten or twelve Pounds in their Goods, for five Shillings-worth of *English* Iron Ware. We shall not enlarge on the Manners, Habits and Customs, &c. of the Natives, which were the same we have already seen. Their Bows, Arrows, and Canoes, had nothing in them but what was common among other Savages. Their Tobacco-Pipes were sometimes made of Clay, and sometimes the Claw of a Lobster only, but always of a Capacity to hold as much as ten or twelve of ours.

They grew pretty familiar with those People, but found, as others had done, that, amidst all their specious Shews of Friendship, they were very treacherous, and sought every Opportunity of betraying them. Of this they had one very evident Proof; when those Savages, having invited them on Shore to traffic, had very near drawn them into an Ambush of near three hundred Men, armed after their Manner, with Bows and Arrows; but they discovered their Treachery in time, and escaped the Snare. But the most extraordinary Discovery made in this Voyage was that of a River, esteemed by those who found it the most beautiful in *America*. They went up it with their Ships several Leagues, and gave this Account of it; that as it runs up the Main, it keeps a good Breadth for forty Miles together, in most Places a Mile, in some three Quarters, but never less than half a Mile: It flows sixteen or eighteen Feet; at low Water it is from six to ten Fathom deep; it has abundance of Harbours for Ships of all Burthens, and will secure them better from Wind and Weather than any known in *Europe*. On both Sides there are, at a small Distance one from another, many fine Coves, some of them capable of containing more than an hundred Sail, where the Ground is soft Ooze, with a tough Clay underneath for Anchor-hold. Nature also has made several convenient Places, like Docks, to grave and careen Ships of all Burthens, and secure them from all Winds; the neighbouring Land trends along on both Sides in a smooth Line, and, instead of Rocks and Cliffs, is bordered with green Grass, and tall Trees of different Sorts. After they had remained here about six Weeks, and during all that Time carried on a very profitable Trade with the Natives, they thought of returning to *England*; with which View they hoisted Sail June the 16th, and arrived that Day Month in Sight of the Land's-End of *England*.

This prosperous Voyage induced many Persons of high Rank, and many more of great Fortune, to desire to see this new Trade thoroughly established, who applied to the Crown for such legal Authorities as were necessary; which Desire of theirs was very soon complied with, and two Companies formed for settling this large Tract

of Land, which for the present was divided into *North* and *South Virginia*, and were so stiled many Years after. It was to this Intent King *James*, by his Letters Patents dated the 10th of *April* 1606, reciting, that Sir *Thomas Gates*, and Sir *George Summers*, Knights, and *Richard Hackluit*, Clerk, Prebendary of *Westminster*, *Edward Maria Wingfield*, *Thomas Hanham*, and *Raleigh Gilbert*, Esquires, *William Parker* and *George Popham*, Gentlemen, and divers others his loving Subjects, had petitioned him for Leave to send Colonies to *Virginia*, and such other Parts of *America* as either appertained to his Crown, or which were not actually possessed by any other Christian Prince or People, and lying between thirty-four and forty-five Degrees of northern Latitude, and within an hundred Miles of the Sea-Coast: And for the speedy Accomplishment of the said Plantation, intended to divide themselves into two several Companies, the one consisting of the Adventurers of the City of *London*, who were desirous to fix themselves between thirty-four and forty-one Degrees of North Latitude; and the other consisting of the Adventurers of the Cities of *Bristol* and *Exeter*, and the Town of *Plymouth*, who were desirous to settle between thirty-eight and forty-five Degrees on the Coast of *Virginia* in *America*. His Majesty, in order to promote so noble a Work, which might tend to the Glory of God, by propagating the Christian Religion among the Infidels and Savages, and bring them to Humanity and Civility, did graciously accept their Petition, and for himself, his Heirs and Successors, did grant and agree, that the said Sir *Thomas Gates*, Sir *George Summers*, *Richard Hackluit*, and *Edward Maria Wingfield*, Adventurers of the City of *London*, and all others that should associate with them, should be called the first Colony, and might begin their first Plantation at any Place upon the said Coast of *Virginia*, or *America*, where they should think fit, between 34 and 41 Degrees of Latitude; and should have all the Lands, Woods, Rivers, Ports, Fishing, and Hereditaments whatsoever to the same belonging and appertaining, from the first Seat of their Plantation, for fifty Miles either Way along the Coast, North and South, and an hundred Miles to the Westward, within Land, with all the Islands over against the said Coast for the Space of an hundred Miles at Sea; with all the Lands, Ports, Rivers, Harbours, Fishings, and Mines thereunto belonging or appertaining; and Liberty to plant, build and fortify therein; and that no other Subjects of this Crown should be permitted to settle themselves in the Lands to the westward of this Colony without their Leave. And his Majesty did grant to the aforesaid *Thomas Hanham*, *Raleigh Gilbert*, *William Parker*, and *George Popham*, of the Cities of *Bristol* and *Exeter*, and the Town of *Plymouth*, in the County of *Devon*, and all others that should associate with them, that they should be called the second Colony, and might begin their first Plantation upon the said Coast of *Virginia*, or *America*, where they should think fit between 38 and 45 Degrees of Latitude; and enjoy all the Lands, Ports, Rivers, Fishings, and Hereditaments thereto belonging, with the like Extent of Land and Sea, from the Seat of their Plantation, as was granted to the first Colony. And it was provided, that the said respective Colonies should not plant within the Space of one hundred Miles of each other; that each Company should have a Council, consisting of thirteen Persons, in whom the Government should be lodged, but limited by certain Articles under the Privy Seal; they were impowered also to dig Mines in and beyond their respective Limits to the Westward, paying the Crown a Fifth of all Gold, and a Fifth of all Copper Ore they should get; they were also impowered to seize all Ships that should trade within their respective Limits; to coin Money, raise Forces for their Defence, &c.

3. The Patentees first named were commonly stiled the *London* Company, and those last named the *Western* Company, who no sooner received this Authority from the Crown, than they began in earnest to provide for making effectual Settlements within the Bounds prescribed by their respective Grants. With this View the *London* Company fitted out three Vessels, one of an hundred Tons, another of forty, and a Pinnace of twenty.

On board of which they embarked an hundred and ten Land-Men, with every thing requisite for settling a Colony. The Command of this small Squadron was given to Capt. *Christopher Newport*, an experienced Seaman, well acquainted with the *West-India* Navigation; but to prevent any Disputes in the Passage, the Orders which regarded the Government of the Colony, and the Names of the Council who were to be intrusted with the Administration of it when settled, were delivered to them in a Box sealed up, with Directions not to be opened till they were on Shore.

They sailed from *London* on the 20th of *December*, 1606; but, by several unlucky Accidents, were, for several Weeks, detained on the Coast of *England*. At last they continued their Voyage, and, having taken in fresh Water and other Necessaries at the *Canaries*, proceeded to the *Caribbee Islands*, where they arrived on the 23d of *February*, and staid amongst them, but chiefly on the Island of *Nevis*, about five Weeks. On the 3d of *April* they sailed for *Virginia*, and arrived on the 26th of the same Month at the Mouth of *Chesapeake-Bay*. The first Place on which they landed was the Southern Cape of that Bay, where they built a Fort, which they called *Cape* and *Fort-Henry*, as they did the Northern *Cape Charles*, in honour of the two Princes; and the first great River they searched, the Indian Name of which was *Powhatan*, they called *James-River*, after the King's own Name.

Of this River they made a full Search, before they would come to any Resolution about a Settlement, and then, by unanimous Consent, they pitched upon a Peninsula about fifty Miles up the River, which, besides the Goodness of the Soil, was esteemed most capable to be made a Place both of Trade and Security, two thirds of it invironed by the main River, which affords good Anchorage all along, and the other third by a small River, capable of receiving small Vessels of one hundred Tons Burden quite up till it comes within thirty Yards of the great River again, and where generally, in Spring-tides, it overflows into the main River; for which Reason the Land they chose to pitch their Town upon had obtained the Name of an Island. In this back River Ships and small Vessels may ride lashed to one another, and moored ashore, secure from all Wind and Weather. They gave the same Name to the Town as to the River, viz. *James-Town*. The whole Island thus inclosed contained about two thousand Acres of high Land, and many thousand of very good Marsh, and is extraordinary good Pasture as any in that Country. By means of the narrow Passage, this Place was of great Security to them from the Indian Enemy; and, to strengthen it the more, they built Castles and a Fort there. This was the first Plantation of the *English* that succeeded, and which has continued to this Day.

As to the Colony, the first Business they entered upon, after they landed, was, to open their Orders, where they found the following Gentlemen appointed of the Council, viz. *Bartholomew Gosnold*, *Edward Wingfield*, *Christopher Newport*, *John Smith*, *John Ratcliffe*, *John Martin*, and *George Kendall*, of whom *Wingfield* was chosen President; but they thought fit to leave Capt. *Smith* out of the Council: For it seems the rest of the Gentlemen were so set against him, that they had confined him Prisoner ever since they left *England*, which *Purchas* insinuates was occasioned by their Envy at his superior Talents, and because the Company in *England* seemed to rely more upon his Skill and Experience than upon any of the rest; and it appears, that the Planters themselves were so convinced of his Abilities afterwards, that they were obliged not only to admit him into their Council, but in a manner resign their Administration into his Hands, after they had, by their perpetual Jars and weak Management, almost ruined the Company's Affairs. After about five or six Weeks Stay before this their intended new Town, the Ships being dispatched, Capt. *Newport* departed with them for *England* about the Middle of *June*, leaving upwards of one hundred Men settled in the Form of Government already mentioned; but, when the Ships were gone, the same Feuds and Disorders broke out again with fresh Violence.

In the Midst of these Feuds, however, they fell to planting, sowing, building, and fortifying; but, above all, they carried on a very advantageous Trade with the Natives. They might nevertheless have made much greater Gains of it, and managed it more to the Satisfaction of the *Indians*, as well as to the great Ease and Security of themselves, if they had been under any Rule, or subject to any Method in Trade, and not at liberty to out-bid one another. By this they not only lessened their own Profit, but created Jealousies, and Disturbances among the *Indians*, by letting one have a better Bargain than another; for they being unaccustomed to barter, such of them as had been hardest dealt by in their Commodities thought themselves cheated and abused. Thence they conceived a Grudge against the *English* in general, and made it a national Quarrel, which seems to have been the original Cause of most of their subsequent Misfortunes from the *Indians*. These *Indians* proved much the same as they had been found to be in other Places, fair and friendly at first, but treacherous and deceitful in the sequel. However, it was chiefly by the help of their Provisions that the *English* subsisted till the Return of their Ships.

The next Year two Vessels were sent thither full freighted with Men and Provisions for the Supply of the Plantation: One of them arrived directly; but the other, being beat off to the *Caribbee Islands*, did not arrive till the former was sailed back for *England*. But what gave the greatest Interruption to their Trade was, an Object which drew their Eyes and Thoughts entirely not only from that, but even from taking the necessary Care for their Preservation, and for the Support of their Lives, which was this: They found, in a Neck of Land on the Back of *James-Town* Island, a fresh Stream of Water, springing from a small Bank, which washed down with a yellow sort of Dust of *Ising-glass*, which, being cleansed by the fresh streaming of the Water, lay shining at the Bottom, and stirred up in them an unreasonable Desire after Riches; for they, taking all to be Gold that glittered, ran into the utmost Distraction, neglecting both the necessary Defence of their Lives from the *Indians*, and the Support of their Bodies by securing Provisions, absolutely relying upon the Power of Gold, and thinking that, where this was plenty, nothing could be wanting. Nay, they began to be so infatuated with the Hopes of Mountains of Wealth, that they despised the Mines of *Peru* and *Mexico*, in comparison of their own inestimable Stream.

They soon, however, grew sensible of their Error, and found that, if this gilded Dirt had been really Gold, it could then have been of no Advantage; for, by their Negligence, they were reduced to an exceeding Scarcity of Provisions, and that little they had was lost by the burning of their Town, while all Hands were employed about this imaginary golden Treasure; so that they were obliged to live, for some time, upon the wild Fruits of the Earth, and upon Crabs and Muscles, and such like, not having a Day's Provision beforehand. By this Neglect, likewise, they, many of them, became a Prey to the Cruelty of the *Indians*, and the rest durst not venture abroad, and so were forced to be content with what they could get. In this miserable Condition they were, when the first of the two Ships arrived from *England* to their Assistance. They neither thought or spoke of any thing but Gold; and therefore they put into this Ship all the yellow Dirt they had gathered, and what Skins and Furs they had bartered for, and, filling her up with Cedar, sent her away. When the other Ship arrived, they stowed her likewise with this imaginary Gold Dust, and filled her up with Cedar and Clapboard.

But being at length persuaded that they might apply themselves to other Labours as profitable, as well as more necessary than collecting yellow Sand, which, supposing it valuable, would be always in their Power, if they took care to fortify themselves effectually, they began to bestir themselves for that Purpose, and, by the good Management and Direction of Capt. *Smith*, they made several Discoveries in *James-River*, and up *Chesapeake-Bay*; and, in the Year 1608, they first gathered *Indian* Corn of their own planting. While Capt. *Smith*

was out on his Expedition among the Savages, he was treacherously fallen upon by three hundred of the *Indians*, under the Command of one of their Kings, called *Pamunkee*, who put all his Men to Death, and taking him Prisoner, carried him to *Powhatan*, their chief King, who would have put him to Death, had he not been saved at the Intercession of *Powhatan's* Daughter, *Pacabunta*.

Being released he returned to *James-Town*, where Mr. *Ratcliff* resigning his Presidentship, he was unanimously desired to accept of that Office. While these Discoveries were making by Captain *Smith*, Matters run again into Confusion in *James-Town*; and several uneasy People, taking Advantage in his Absence, attempted to desert the Settlement and to run away with the small Vessel which was left to attend it; for Captain *Smith* was the only Man among them who could manage Discoveries with Success, or who could keep the Settlement in any Order. Nevertheless, amidst all these Inconveniencies which they brought upon themselves, the Plantation being increased to near five hundred Men, they made two other Settlements, one at *Nansamond* in *James-River*, above thirty Miles below *James-Town*; and the other at *Powhatan*, six Miles below the Falls of *James-River*; which last was bought of *Powhatan* for a certain Quantity of Copper, each Settlement consisting of one hundred and twenty Men; and soon after they made a fourth Settlement at *Kiguotan*, near the Mouth of *James-River*. Captain *Smith* observed that two thirds of the Adventurers came over with a View of having every thing provided to their Hands, without any Care or Labour of their own, and were subsisted by the Labours of the other Industrious third, until he compelled them all to take Share in the Work; and then he soon planted Ground enough to subsist the Colony in Plenty, and, by moderate Exercise and good Food, saw them not only restored to their Healths, but in a very flourishing Condition; and, as there was now no longer Necessity of procuring Food from the *Indians* by Violence, they lived and trafficked very amicably together, and *Powhatan* suffered him to make several other Settlements in the Country.

When their Affairs were in this prosperous Situation there arrived six or seven Ships from *England*, with between three and four hundred Planters, and such ample Supplies of Ammunition and Provision, as would have enabled the Colony to have made an entire Conquest of *Virginia*, or, at least, to have procured what Terms they saw fit of the *Indians*, if they had been under any Command; but as things were managed, this Supply only brought the Colony into Confusion. Upon Report of which the Company in *England*, imagining the Divisions among the Council in *Virginia*, in whom the Government there was lodged, were the Occasion of most of the Mismanagements that had happened, procured a new Patent from King *James*, whereby they were empowered to appoint a Governor with a more ample Authority than they had by the preceeding Patent; and prevailed on the Lord *de la War* to accept of the Government of their new Colony; who thereupon made Sir *Thomas Gates*, Sir *George Summers*, and Captain *Newport*, his Deputies, until his Arrival; and these Gentlemen set sail for *England* with nine Ships and five hundred Men, in the Month of May 1609.

All the three Deputy-Governors, being embarked in one Ship, were unfortunately cast away on the Islands of *Bermudas*, being then uninhabited, but they and all the People escaped to the Shore; where, finding Plenty of Provisions, they took Possession of these Islands for the Crown of *England*, and from Sir *George Summers* they have been ever since called the *Summer Islands*. In the mean Time the rest of their Fleet arrived safe in the Bay of *Chesapeake*, with the Reinforcement above mentioned; where they found Captain *Smith* President; but both old and new Planters gave out they were not obliged to obey him, for there was another Commission granted which had superseded his, and they expected the Arrival of the Deputy-Governors every Day.

But notwithstanding these Jars, Captain *Smith* made a

thist

shift to keep them in some Order while he remained among them, for otherwise the Colony had been deserted over and over; but as this Gentleman was extremely active, and almost continually employed in some Service or other, he had the Misfortune to be blown up by Accident; which, though it did not cost him his Life, yet he was so wounded and maimed thereby, that it was found absolutely necessary for him to return to *England* with the Vessels that failed not long after; a thing, happy for himself, but extremely disadvantageous for the Settlement; since he was no sooner on Ship-board than every Man took upon him to do what seemed right in his own Eyes, which had desperate Consequences, so that those who had given him most Trouble while he was amongst them, deeply regretted the Loss of him; and yet this Sense of their own bad Behaviour did not at all incline them to Amendment, or to the setting up any other Person with such Powers as might enable him to do what Captain *Smith* had done.

On the contrary, they emptied their Magazines and lived in the greatest Profusion, till that brought on Want; and then they rambled without Order, and under no Command, through the Country; taking Provisions by Force from the Natives, who failed not to employ all their Cunning, of which they had enough, to destroy and cut them off; so that when the Deputy-Governors arrived, in two Sloops which they had built in *Bermudas*, they found them in a most deplorable Condition; War, Sickness, and Famine, having reduced them from upwards of four hundred, to fewer than fourscore, and these too uneasy and discontented. Sir *Thomas Gates*, and Sir *George Summers*, took all the Pains they could to quiet these Uneasinesses, and to bring things once more into Order; but it was all in vain; and the People shewing their empty Warehouses, their ruined Settlements, and the Number of Sick amongst them, induced those Gentlemen to consent to their embarking for *England*, as the only Means of saving those who were left; which they accordingly did, to the great Joy, no doubt, of the *Indians*.

4. But just as they were sailing out of the Bay of *Chesapeake*, they met with their new Governor, who obliged them to return to *James-Town* to repair their Habitations and Forts there, and to dispose every thing for maintaining the Settlement. This worthy Governor was the Right Honourable *Thomas West*, Lord *de la War*, of an ancient, as well as noble, Family; in which Prudence seems to have been hereditary, as well as Title. He was endued with the Virtues most requisite for his Station, as Governor of an infant Colony; for, with great Mildness and Humanity, he had the warmest Courage and the greatest Firmness of Mind, and was equally capable of persuading by Words, animating by Example, and awing by the just Use of his Authority. He accepted of this Commission from the Company, with a View of putting an End to these Distractions, which had hitherto disappointed all their Expectations, and defeated all their Endeavours, and which they justly attributed to the Want of having there some Person in supreme Authority; who might be able to direct the Industrious, encourage the Deserving, and punish the Factious and Disobedient.

As soon therefore as these old, or rather new, Planters, were once on shore again, his Lordship, in a free and plain Discourse, set before them the Folly and Madness of their Proceedings, reproving them for their Divisions, Idleness, and ill Conduct, which had occasioned their Misfortunes; advising them to reform, or he should be compelled to draw the Sword of Justice, and cut off the Delinquents; declaring, however, he had much rather draw his own Sword in their Defence; and telling them for their Encouragement, that he had brought them such Plenty of Provisions, that they would be in no Danger of wanting for the future, if they were not wanting to themselves, in providing such things as the Country produced; then he proceeded to constitute a Council, consisting of Sir *Thomas Gates*, his Lieutenant General; Sir *George Summers*, his Admiral; the honourable *George Percy*, one of his Captains; Sir *Ferdinand*

Wenman his Master of the Ordnance, and *Christopher Newport* his Admiral: These, and the rest of his Officers, having taken the Oaths to the Government, and entered on their several Employments; his next Care was, to furnish his People with Flesh, for notwithstanding there were not less than five or six hundred Hogs in the Plantation, when Capt. *Smith* went to *England*, there was not one left alive at this time; they had either been eat by the Colony, or destroyed by the *Indians*, who, to distress them, had driven all the Deer, and other Game, out of the Country; and the *English* were so ill provided with Nets, that though there was Plenty of Fish in the Rivers, they knew not how to take them.

The Company had sent over a Supply of Cloathing, Bisket, Flower, Beer, and other Liquors; but, taking it for granted, that they had Hogs, Venison, Fowl, and Fish enough in the Country, had made no Provision of Flesh; whereupon Sir *George Summers*, the Admiral, was dispatched to *Bermudas*, to bring over live Hogs from thence, for of those Sir *George* found Plenty in that Island when he was cast away there, though there were no People upon it. The Governor also set some to fishing within the Bay, and others without, where there were Shoals of Cod-fish; but their Nets and Tackle were so defective, that they could not catch any. Hereupon he endeavoured to settle a Correspondence with *Powhatan* and other *Indian* Princes, that he might purchase Flesh of them for *English* Goods; and in some of these Negotiations he succeeded, particularly with the King of *Patowmack*, one of the most potent of the *Indian* Princes; but notwithstanding he represented to *Powhatan* that he had already promised to acknowledge the King of *England* for his Sovereign, accepted of a Crown and Sceptre, and other Ensigns of Royalty from him; with Presents of great Value; this Prince would give him no other Answer, but, That he expected the *English* should depart his Country, or confine themselves within the Limits of *James-Town* Island, and not range through every Part of the Country, as they continued to do, only with a View of subduing it, as he apprehended; threatening to issue his Orders to cut them off and destroy them, if ever they were found without the Limits he prescribed them; and commanded the Messengers his Lordship sent to him, not to see his Face again unless they brought him a Coach and six Horses; for in these, he had been informed by some *Indians* who had been in *England*, their great Weroances were drawn.

The Lord *de la War* finding he was to expect no Friendship from *Powhatan*, determined he should fear him: Having taken an *Indian* Prisoner, therefore, he cut off his Right-hand, and sent him to his Master *Powhatan*, letting him know, that he would send all his Subjects in that manner, and burn all the Corn in his Country (which was ripe at this time) if he did not forbear all Acts of Hostility for the future; which had so good an Effect, that the Colony lived in Peace and Plenty for some time, every Day making fresh Discoveries, and forming new Alliances with some *Indian* Princes.

And thus the Company's Affairs being happily established again by the Conduct of Lord *de la War*, Sir *Thomas Gates* was sent to *England*, to give an Account of the State of the Colony; the Ships being freighted home with Cedar, black Walnut, and Iron Ore; which Returns appeared so inconsiderable, that the Company were in Suspence, whether they should not send for the Lord *de la War* and the Colony home. However, they first desired Sir *Thomas Gates*'s Opinion upon it; who told them that these were not the only Returns they were to expect; that if they would send over Men who understood how to make Pitch and Tar, and plant Hemp and Flax, they might furnish *England* with all manner of naval Stores; and that it would be very easy also to set up a Manufacture of Silk, the Country abounding in Mulberry Trees as well as Silk Grass; that the Soil was exceeding fruitful, producing Corn, Grass, Grapes, and other Fruits in abundance; that *European* Cattle and Corn multiplied prodigiously; and that there was great Plenty of Venison, Fish and Fowl, which they would never want when they could be provided with Boats, Nets, and Engines to take them. The Company

Company need then to be at very little Charge to support the Colony ; on the contrary, they would in a short time meet with Returns answerable to their Expectations. Whereupon the Patentees resolved to proceed with Alacrity to improve their *Virginia* Plantation, in which Resolution they were confirmed by the Lord *de la War*, who returned to *England* about this time (1610) for the Recovery of his Health.

He left behind him the honourable Mr. *Piercy*, as his Deputy ; and, while he resided in *England*, took as much Care of this Plantation as if it had been his paternal Estate ; and was no less solicitous about the Welfare of its Inhabitants than if they had been his nearest Relations : To say the Truth ; it was to the Wisdom and Foresight of this worthy Lord that this Nation owes the preserving so great and so beneficial an Acquisition ; as it was to his Courage and Steadiness they were indebted for the Plantation itself. In short, he spent the whole remainder of his Life, which was about eight Years, in the Service of the Company and the Colony, and actually died in his Voyage back to *Virginia* in 1618, with a great Supply of People, Cloathing, and Goods, for that Settlement, which, however, arrived safe. As I have now given an Account of the settling this Country, I have executed all that falls within the Compass of my Design ; but, as I apprehend that it may be both entertaining to the Reader, and better answer the Design of this *Collection*, I shall just run over a few of the principal Facts relating to the History of this Province, and then give a short Description of it as it stands at present ; in order to shew what Advantages have accrued to the Nation from an Establishment which it cost so much Labour and Pains to effect : And the same Method I shall take in regard to other Plantations, as most earnestly desiring to render this Work as agreeable, as useful, and as perfect, as it is in my Power to make it.

While Lord *de la War* was in *England* the Colony was governed by his Deputies, who, applying themselves to bring about a peaceable Correspondence with the Natives, advanced it at last so far, that several Intermarriages took Place, and amongst these the *Indian* Princess *Pacabunta* espoused Mr. *John Rolfe*, an *English* Gentleman, whose Posterity enjoy, at this Day, the Lands descended to them from this Lady. In the Year 1616 one Captain *Yardly* was at the Head of Affairs ; and the Reason I take notice particularly of his Administration is, because under it they first began to cultivate Tobacco, which is since become the Staple Commodity of the Colony. He was succeeded by Capt. *Argoll*, afterwards Sir *Samuel Argoll* ; who was a Man of a military Turn, whom we shall have Occasion to mention frequently hereafter : He repaired the Forts that had run to ruin, and put the Colony into such a State of Defence, that there was no great Danger of any Attempts that could be made against them by the *Indians*.

After the Death of Lord *de la War*, Capt. *Yardly*, who was likewise in *England*, and who, being knighted by King *James*, had the Title of Sir *George Yardly*, was sent over with the Title of Governor ; and a very good Governor he proved, for to him the People owed their being made as free as their Countrymen in this Island, since he augmented the Number of the Council, and allowed the Planters to send their Representatives to the Assembly, the first of which sat at *James-Town*, in May 1620. In his Time Negroes were first brought into *Virginia*, the Lands divided, Salt-works erected at Cape *Charles*, and an Iron Mine wrought with good Effect. He was succeeded, in 1621, by Sir *Francis Wyat*, a young Gentleman of a very good Disposition, who endeavoured all he could to promote the Welfare of the Colony, yet in his Time it was that this Settlement ran a very great Hazard of being totally destroyed ; for the *Indians*, who had lived amongst them now for seven or eight Years with great Freedom and Familiarity, formed a Design of extirpating them entirely, on account of one of their War-Captains being killed, though he had committed Murder and Robbery, and died in defending himself from falling into the Hands of Justice. The Method they took to revenge this was, by a general Massacre, which they fixed for Friday, the 22d of March, 1622, and, in all probability, it had effectually

answered their End if it had not been discovered by a converted *Indian*, the very Day on which it was to have taken place ; so that the advanced Plantations could not receive Intelligence time enough, which gave the Natives an Opportunity of cutting off three hundred and thirty-four Persons. The *English* revenged this in a manner very unbecoming them, since, pretending to be reconciled to the *Indians*, and thereby gaining their Confidence, they massacred likewise in their Turn, and pursued their first Blow so effectually as to drive most of these poor People to seek for new Habitations.

But it was not long before the *English* gave them an Opportunity of satisfying that Vice which is deepest rooted in their Nation, I mean Revenge ; for dividing amongst themselves, and falling into Factions and Parties ; and, at the same Time, running out new Settlements ; the *Indians* fell upon them again, and cut them off in great Numbers. As this Misfortune was chiefly owing to the imprudent Grants made in *England* ; it occasioned loud Complaints ; and the fatal Consequences of the Company's Mal-Administration cried so loud, that King *Charles* I. coming to the Crown of *England*, expressed a tender Concern for the poor People that had been betrayed thither, and lost ; upon which Consideration he dissolved the Company in the Year 1626, reducing the Country and Government under his own immediate Direction, appointing the Governor and Council himself, and ordering all Patents and Process to issue in his own Name, reserving to himself a Quit-Rent of Two Shillings for every hundred Acres of Land, and so *pro rata*. The Country being thus taken into the King's Hands, his Majesty was pleased to re-establish the Constitution by a Governor, Council, and Assembly, and to confirm the former Methods and Jurisdictions of several Courts, as they had been appointed in the Year 1620, and placed the last Resort in the Assembly ; he likewise confirmed the Rules and Orders made by the first Assembly, for apportioning of Land, and granting Patents to particular Adventurers.

This was a Constitution according to their Hearts Desire, and things seemed now to go on in a happy Course, for Encouragement of the Colony ; People flocked thither apace, every one took up Land, by Patent, to his liking ; and, not minding any thing but to be Masters of great Tracts of Land, they settled themselves separately on their several Plantations. Nor did they fear the *Indians*, but kept them at a greater Distance than formerly ; and they, for their Parts, seeing the *English* so sensibly increase in Number, were glad to keep their Distance, and be peaceable. This Liberty of taking up Land, and the Ambition each Man had of being Lord of a vast, though unimproved Territory, together with the Advantage of the many Rivers, which afforded a commodious Road for Shipping, at every Man's Door, has made the Country fall into such an unhappy Settlement and Course of Trade ; that, to this Day, they have not any one Place of Cohabitation amongst them that may reasonably bear the Name of a Town. The next Governor after the settling of this new Constitution, was Sir *John Harvey*, who proved of a Spirit very improper for such an Employment, since he began early to differ with his Council ; and soon after oppressed the People to such a Degree, that they were resolved to be rid of him, at all Events ; and accordingly in 1639 they seized him, and sent him Home Prisoner, with a long Charge against him, accompanied by two of the Council, appointed to manage the Prosecution against him. But as soon as he came to *London*, the King, who highly resented this Outrage on his Prerogative, sent Sir *John* back again, with the same Authority as before ; but the very next Year removed that oppressive Governor, and appointed Sir *William Berkley* to succeed him.

This Gentleman held the Government longer than all his Predecessors put together, and deserved it ; he was, in all Respects, an excellent Governor ; so careful of the Colony, and so kind to the People, that he preserved Loyalty in *Virginia* long after it was lost at Home ; nor did he submit to the Rump, till he was forced to it ; and then withdrew to his own Plantation, where he lived as a private

private Person, and would have no Concern in public Affairs at all; but he was still respected by the Inhabitants for the great Things he had performed. He had pursued the War with the *Indians* till he had reduced them so low as to be no longer troublesome, after having made their Emperor Prisoner; he encouraged the making of Pot-Ashes, Soap, Salt; Planting of Flax, Hemp, and Cotton; and the Manufacture of Silk, which he brought to great Perfection. After he retired from the Government there were three Persons sent from *England*, who ruled one after another seven Years; the first of them was Colonel *Diggs*, who acted under the Parliament's Authority; then Mr. *Bennet* was sent over by *Oliver*; and afterwards one Mr. *Matthews*, who died Governor; and, upon this Accident, the People of *Virginia* desired Sir *William Berkley* to resume the Administration of Affairs. He had a Commission from King *Charles II.* then in exile; but he absolutely refused to act, unless the People would acknowledge his Master, to which they very readily consented, which will appear the less surprising, when it is considered, that Abundance of Gentlemen, who had been ruined in the Support of the Royal Cause, had retired into this Colony from *England*.

In Consequence therefore, of this Resolution, King *Charles II.* was proclaimed in *Virginia*, before he was acknowledged in any of his three Kingdoms; but it happened very luckily for Sir *William* that his Master was soon after restored; and as a Mark of his Affection for the Province, he wore at his Coronation a Robe of Silk, sent from *Virginia*. Soon after Sir *William* went over to compliment the King upon his return, and left Colonel *Francis Morrison*, his Deputy; who behaved, in his Absence, to the general Satisfaction of the Plantation. He ordered the Laws to be revised and collected into a Body, to be laid before the Assembly, at their next Session. He took the same Care of the Church as he did of the State; he regulated the Parishes, settled the Minister's Allowance, got a Revenue for the Support of the Government, and other Laws for the Encouragement of the Linnen and Woollen Manufactures, the breeding of Silk-Worms, Tanning, and Salt-Works.

Whilst the Deputy-Governor was so busy for the Service of the Colony, Sir *William Berkley* was in *England*, taking his Instructions from the King for his future Conduct. His Majesty ordered him to promote Husbandry, Manufactures, Silk and Vineyards, that all Ships trading to *Virginia* should go to *James-Town*, and be entered at the Custom-House there before they broke Bulk; which Orders were given, with an Intent, that by them the People might be tempted to come thither, and dwell there for the Conveniency of Trade; and had they been obeyed it might have increased the Number of Buildings in that City, which is now much less than it was fourscore Years ago; every body coveting to live at his Plantation, and settle where he thinks he shall have the best Crops and Conveniency of Shipping. This is the Reason that there are so few Towns in *Virginia*, and those that are there so very small. Sir *William*, being fully instructed by the King how to proceed on his return to his Government, set sail from *England* to *Virginia*, where he arrived in the Year 1662, and immediately put the People upon improving their Plantations, and advancing Manufactures. He summoned an Assembly, and got an Act passed for building *James-Town*; each County was to build so many Houses, and some actually built their Quota; which, notwithstanding the Act, were converted into Taverns and Eating-Houses, and the Town was very little the bigger for them. Sir *William Berkley*, at his return, gave a Sanction to the new Body of Laws, and took all the Care he could to carry them into Execution, which was all that he could do, or that indeed could be expected from him. And, as we are now come down in the History of this Colony as low as this Period will permit, we are next to give a succinct Account of the Nature and Condition of this Plantation, that it may appear how well it deserves the Pains that have been taken about it, and how amply it rewards this Nation for all the Care and Expence bestowed in planting of it, which will

also acquit us of all the Promises made to the Reader upon this Subject.

5. The Situation of *Virginia* is remarkably happy and convenient, having the River *Potowmac* upon the North-east, the *Atlantic Ocean* on the East, the Province of *Carolina* on the South, and the *Apalachian Mountains* on the West, which separate it from *Florida*. It lies from 36 to 39° North Latitude, and between 74 and 80° of Western Longitude, it extends about 240 Miles in length from North to South, and may be in breadth 120 Miles from East to West. As to the Air of this Country it depends very much on the Winds. The North and North-west are either very sharp and piercing, or boisterous and stormy, the South-east and South being hazy and sultry. The Winter is dry and clear, which makes it very pleasant, Snow falls in great Quantities, but it seldom lies above a Day or two, and their Frosts though quick and sharp, yet seldom last long. Their Spring is somewhat earlier than ours; in *April* they have frequent Rains; *May* and *June* are very pleasant Months, the Heat being greatly tempered by cooling Breezes; *July* and *August* are sultry hot, the Air growing in a Manner stagnant, which produces dreadful Thunderings and Lightning; in *September* the Weather breaks, and there fall prodigious Showers of Rain, at which Season it is that the Inhabitants are most sickly. It ought, however, to be observed, that in this, and indeed in all our Colonies, the Climate grows daily better, and these Thunder Seasons less violent, which the Inhabitants very justly ascribe to the clearing the Country, and cutting down the Woods, which gives the Air a free Passage, and is attended with many other Conveniencies.

As to the Soil it is generally low towards the Sea Coasts, and for one hundred Miles up into the Country there is hardly a Hill or Stone to be met with, except that here and there some Rocks of Iron Ore appear above the Ground, and some Banks of a kind of petrified Oyster-shells, that are of a prodigious Thickness; the whole Country before it was planted was either Forest or Morass, which in the *West Indies* they call Swamps. The Bay of *Chesapeake* runs directly up the Country, almost due North, for three hundred Miles; at the Entrance it is esteemed about twenty-one Miles broad, or something more; and it continues navigable as long as it washes the Coast of *Virginia*, and much farther; into the West-side of this Bay fall four great Rivers, which rise in the *Apalachian Mountains*, all of them running from the North-west to the South-east: The most Southerly of these is *James-River*, the *Indian* Name whereof was *Powhatan*, being generally about two Miles over, and navigable, at least, fourscore Miles. *York-River*, whose *Indian* Name was *Pamaunkee*, is a little to the Northward of *James-River*, and in some Places they approach one another so near, that they are not five Miles asunder. To the Northward of *York-River* is the River *Rapahanack*, which in some Places is not ten Miles distant from *York-River*, and either of them as broad or broader than *James-River*. North of *Rapahanack* is the great River of *Patowmack*, which in some Places is not above seven Miles distant from *Rapahanack-River*, and in other Places upwards of fifty. This River of *Patowmack* is navigable above two hundred Miles, being nine Miles broad in some Places, but generally about seven. The Mouth of the River *Patowmack*, and that of *James-River*, are about one hundred Miles asunder; but the Heads of all the four Rivers rise in the same Hills, pretty near each other. There are great Plenty of Springs in all Parts of the Country, but the Water is somewhat harsher than in *England*.

As to Animals, there were neither Horses, Cows, Sheep, or Swine; before the coming of the *English*, but they have now plenty of them all; and their Horses are very serviceable, and travel at a great Rate. They have likewise Elks, but not common, Red-Deer in great Plenty; Hares, Squirrels of several Kinds, Musk-Rats, Rackoons, wild Cats, Beavers, Wolves, Foxes, and several Sorts of Dogs. As for Reptiles, they have Lizards, several kinds of Snakes, particularly the Rattle-Snake, of which an Account will

be given hereafter. As to Birds, they have Eagles of three Sorts: The first is the grey Eagle about the Size of a Kite; the second the bald Eagle, so called because the upper Part of the Neck and Head is covered with a Sort of white Down; the third a black Eagle, resembling those in *England*, very ravenous, and which do a great deal of Mischief; most Sorts of Hawks, two kind of Owls, both very large; and the white Owl very beautiful, all the Feathers of her Back and Breast being bright as Silver, except a black Spot immediately below the Throat. They have a large Bird of Prey, which they call a Bustard, but it is rather a kind of Kite; they have wild Turkeys very large, some of them weighing forty Pounds; their Partridges are smaller than ours, but to the full as well tasted; they have a Bird called the Mocking-Bird, of two Sorts, grey and red, esteemed the finest singing Bird in the World; it receives its Name from imitating the Notes of all other kind of Birds it hears: The humming Bird with a long Bill and very fine Feathers. As to Water-Fowl they have of all Sorts, such as Hens, Bitterns, Curlews, Wild Swans, Geese, Ducks, Teal, Wigeons, Cormorants, and Gulls.

As for Fish, no Country in the World has greater Plenty: In *February*, *March*, *April*, and *May*, there are Shoals of Herrings come up into their very Brooks, some of the Size of ours, but for the most Part much bigger. There are also plenty of Cod-fish and Sting-grass; which last is said to be peculiar in this Country, being so called from having a Sting in its Tail; it is esteemed good Food. In their Rivers there are the old Wife, the Sheep's-head, an excellent Fish; Trouts, Green-fish, Sturgeons in great Plenty; Plaice, Flounders, Whittings, Carp, Pikes, Mulletts, and Perch. And for Shell-fish, they have Oysters, Crabs, Cockles, and Shrimps. Of those that are not eaten, they have in their Seas Whale, Dog-fish, Sharks, Porpusses, Gar-fish, and Sword-fish: There is also a Fish they call the Toad-fish, from his swelling monstrously when taken out of the Water; and the Rock-fish, some Species whereof are poisonous, and have been fatal to those that have eaten them; though others, which are not easy to be distinguished from the former, are very wholesome Food; the Skip-jack, so called from his skipping out of the Water, is tolerable good Food; and so is the Tobacco-pipe-fish, so called from its being long and slender, like a Tobacco-pipe. They have many Insects, such as Musketoos, Buggs, Seed-ticks, Red-worms, which lie only on old Trees and rotten Logs; on which, if a Man sits down in the Midst of Summer, he is sure to catch them, but they are easily got off with warm Water. We may add to these the Worm that eats Plank, which has a kind of Horn or Screw in its Head, with which it forces a Passage through any Wood to which it sticks; and as we have heard much of these Worms, and perhaps not a little concerning them that is wide of the Truth; it may not be amiss to give an Account of them, from a Gentleman who resided long in *Virginia*, and made very exact Observations. In the Month of *June*, annually, there rise up in the Salts vast Beds of Seedling Worms, which enter the Ships, Sloops, or Boats, wherever they find the Coat of Pitch, Tar, or Lime worn off the Timber, and by degrees eat the Plank into Cells, like those of an Honeycomb. These Worms continue thus upon the Surface of the Water, from their Rise in *June*, until the first great Rains after the Middle of *July*; but after that do no fresh Damage till the next Summer Season, and never penetrate farther than the Plank or Timber they first fix upon.

The Damage occasioned by these Worms may be four several Ways avoided; 1st, By keeping the Coat (of Pitch, Lime, and Tallow, or what ever else it is) whole upon the Bottom of the Ship, or Vessel; for these Worms never fasten or enter but where the Timber is naked. 2dly, By anchoring the large Vessels in the Strength of the Tide, during the worm Season, and haling the smaller ashore; for in the Current of a strong Tide the Worms cannot fasten. 3dly, By burning and cleaning immediately after the Worm Season is over, for then they are but just stuck into the Plank, and have not buried themselves in it; so that the least Fire in the World destroys them entirely,

and prevents all Damage that would otherwise ensue from them. 4thly, By running up into the Freshes with a Ship or Vessel, during the five or six Weeks that the Worm is thus above Water; for they never enter, or do any Damage in fresh Water, or where it is not very salt.

We come now to speak of what is produced by their Soil. And first with respect to Trees; of which, we may affirm, few Countries are better stocked, or afford greater Variety. As to Timber, they have Oaks, Cedars, Firs, Cypress, Elm, Ash, and Wallnut; some of their Oaks measure two Feet square and sixty Feet in height. They have also Beach, Poplar, Hazel, &c. besides Sassafras, Sarsaparilla, and many other sweet Woods, and such as are used in Dying. Their Fruits are, Grapes of several Kinds, Cherries of various Sorts, Plumbs from the Bigness of a Damson to that of a Pear; Peaches in such Plenty that in some Places they feed their Hogs with them; Quinces in abundance, and Apples and Pears in as great Plenty as can be wished. Their Corn is of two Sorts, *English* Wheat, Barley, Oats, Rye, which all thrive very well, and yield from fifteen to thirty fold Increase; and Maize, or *Indian* Corn, which is not unlike our Pease in Taste, but grows in a great Ear or Head as big as the Handle of a large Horse-whip, having from three hundred to seven hundred Grains in one Ear, and sometimes one Grain produces two or three such Ears or Heads; it is of various Colours, Red, White, Yellow, Blue, Green and Black, and some speckled and striped, but the White, and Yellow, are most common; the Stalk is as thick as an ordinary walking Cane, and grows six or eight Feet high, in Joints, having a sweet Juice in it of which a Syrrup is sometimes made, and from every Joint there grow long Leaves in the Shape of Sedge Leaves: The manner of Planting is in Holes or Trenches, about five or six Feet Distance from each other; the Earth is opened with a Hoe (and of late Years, with a Plough), four Inches deep, and four or five Grains thrown into each Hole, or Trench, about a Span distant from each other, and then covered with Earth: They keep it weeding from time to time, and as the Stalk grows high they keep the Mould about it like the Hillocks in a Hop-Garden: They begin to plant in *April*, but the chief Plantation is in *May*, and they continue to plant till the Middle of *June*: What is planted in *April* is reaped in *August*; what is planted in *May* is reaped in *September*; and the last in *October*.

But as the great Produce of this Country is Tobacco, and as that of *Virginia* is looked upon as the best in the World, it is but just that we should give a more particular Account of it. It is certain that the Country produced vast Quantities of it before any *Europeans* went thither, and that the Use of it was taught them by the Natives; but in what manner they cultivated it, or how they cured it, is now no longer known, since at present they buy what they consume from the *English*, and therefore it is of their manner of Managing this Plant, that we shall speak. The Tobacco Seeds are first sown in Beds, where having remained a Month, the Plants are transplanted into the little Hillocks, like those in our Hop-gardens, the first rainy Weather; and being grown a Foot high there, within the Space of another Month they top them, and prune off all the bottom Leaves, leaving only seven or eight on the Stalk, that they may be the better fed; and these Leaves, in six Weeks time, will be in their full Growth; the Planters prune off the Suckers, and clean them of the Horn-worm twice a Week, which is called *Worming* and *Suckering*; and this Work lasts three Weeks or a Month, by which time the Leaf from Green begins to turn brownish, and to spot and thicken; which is a Sign of its ripening: As fast as the Plants ripen, they cut them down, heap them up, and let them lie and sweat a Night, and the next Day they carry them to the Tobacco-house, where every Plant is hung up at a convenient Distance one from another, for about a Month or five Weeks; at the End of which Time they strike, or take them down, in moist Weather, when the Leaf gives, or else it will crumble to Dust; after which they are laid upon Sticks, and covered up close in the Tobacco-house for a Week or a Fortnight to sweat,

sweat; and then opening the Bulk in a wet Day, the Servants strip and sort them, the top-leaves being the best and the bottom the worst Tobacco; the last Work is to pack it in Hogheads, or bundle it up, which is also done in a wet Season; for in curing of Tobacco, wet Seasons are as necessary as dry to make the Leaf pliant.

Yet Tobacco is very far from being the only Thing of Value which this Country produces; on the contrary, they have Flax, Hemp, and Cotton; and Silk they might have if they were not so extremely addicted to their staple Commodity, as never to think of any thing else, if Tobacco can be brought to a tolerable Market. They have likewise Silk-grass, of which they make very little Advantage, though, no doubt, under proper Management, most profitable Manufactures might be raised from it, since its Threads are finer than those of Flax, and stronger than Hemp. We may add to this, that all kind of naval Stores might be produced in *Virginia* with great Ease, and in vast Plenty: Such as Plank-Timber, Masts, Yards, Pitch, Tar, Rosin, and Turpentine, besides Sails, Cordage, and Iron. It is commonly said, and there are some who have lived in *Virginia* ready enough to affirm it, that there is hardly a Stone to be found in the Country; but, however, this is far enough from being true; for at the Water-falls there are Stones enough of different kinds fit for paving, and other Uses; and towards the Hills there are Quarries of Slate, and of a kind of Freestone; there are likewise a Sort of shining Pebbles, not at all inferior to Kerry-stones and though generally speaking they are soft, yet I have heard that when long exposed to the Air, they become very hard, and if polished are extremely beautiful. As to Mines, they have several of good Iron in almost all Parts of the Country, more especially in the Northern Neck, which belongs to Lord *Fairfax*. There was once a Lead Mine discovered, but lost in the first Massacre; there has been likewise a Talk of Silver and Gold Mines; but it is certain, that they have a great many Coals, Antimony, and other Things of Value, in the Bowels of that Country, which they would not fail to search out if Tobacco alone did not supply them plentifully.

Thus far we have described the Country itself: Let us next enquire into its Condition as a Colony; and in this Light we find it divided into twenty-five Counties, some say, twenty-nine; of these the first is *James County*, lying on both Sides *James River*, which contains five Parishes and the only Two Towns that are in *Virginia*. The first is *James Town*, on the North side of the River, and about forty Miles from the Mouth of it; it is very far from being considerable, as it does not contain above sixty or eighty Houses at most, and of these, as we observed before, the greater Part are Taverns or public Houses, for the Entertainment of seafaring People, the Gentlemen of *Virginia* making it their Choice to live on their Plantations, in order to see how their Estates are managed; and in these Seats of theirs they live so handsomely, and so hospitably, that how much soever Strangers may disapprove their Method before they come into the Country, they are quickly reconciled to it afterwards. The second is *Williamsburgh*, to which the Seat of Government is now transferred, and yet it does not consist of above forty Houses. The rest of the Counties are denominated as follows: *Henrico County*, *Prince George*, *Charles County*, *Surry*, *Isle of White*, *Nansamond*, *Norfolk*, *Princess Anne*, *York County*, *Warwick*, *Elizabeth*, *New Kent*, *King William*, *King and Queen*, *Gloucester*, *Middlesex*, *Essex*, *Richmond*, *Stafford*, *Westmoreland*, and *Lancaster*, *Northumberland*, *Acomack*, and *Northampton*.

The Number of People in these Counties, taken all together, Men, Women, Children, and Negroes, may amount to about half a Million; of these, one hundred and twenty thousand are Freemen, or their Wives and Children, and above twenty thousand are capable of bearing Arms. As for the *Indians*, there are still many Nations of them; but some of them so small, that they do not exceed four or five Families; and it is thought, that amongst them all, they could scarce raise seven hundred, some think, not five hundred fighting Men. As to the Government, it resembles that of *England*; for the legislative Autho-

rity is lodged in the Governor, or Council and Assembly: The Governor represents the King; gives his Assent to Laws, and has a negative Voice. As Governor, he is at the Head of the Civil Administration, and being by his Commission a Lieutenant-General and Vice-Admiral, the Military and Naval Power are likewise in his Hands. In other Respects, the Government is very well regulated, and the Church also is well taken care of; neither has any Plantation belonging to us been under better Management, or the People more happy than those of *Virginia*; and this appears very plainly from the Face of the Country, though there are no great Towns in it, and but very few Villages; for the Gentlemens Seats are very thick, all of them good convenient Houses, many of them large and magnificent. The Roads are no where better, the Country being, for the most part, level, and scarce any rugged or deep Ways; so that it is a common thing to travel forty or fifty Miles in an Afternoon, and sometimes an hundred in a Summer's Day. They have likewise as great Conveniencies with respect to Water-carriage as any Country in the World; and it is this that has chiefly hindered them from living in great Towns, which, though prejudicial to the Manufactures, has certainly proved very advantageous to their Plantations, which are larger, more frequent, and better secured, than in almost any other Colony; and as it has flourished extremely hitherto, so at this time it is as thriving a Colony, and as likely to continue so, as any that belong to this Nation.

The last Thing we propose is, to give the Reader some Idea of the Advantages that arise to the Nation from this particular Plantation, which I must confess is a very difficult thing to do; but, however, I shall labour to give as much Satisfaction as I can, and if I should be so fortunate as to meet with any farther Informations, Care shall be taken that the Public shall not lose the Benefit of them, since they will come in properly enough in the latter Part of the Work. In the first Place it must be observed, that as the Value of Labour differs in several Parts of this Kingdom, so the Labour of a Man in most of the Plantations is not only as advantageous to his native Country as if he worked at home, but much more so: I believe, upon a moderate Computation, we may reckon, that such a Person contributes to the public Stock, by which I mean, the Income and Wealth of the *British* Nation, four times as much: So that we may with Reason reckon, that the White People in *Virginia*, one with another, produce twelve Pounds to this Nation; the Reason of which will appear, when we consider the Nature of their Commerce more particularly. But besides this, the Negroes are of great Advantage to this Kingdom, though of infinitely less than White People would be, if they were employed in the same Work; for every one of these poor Creatures consume yearly two Hilling-hoes, two Weeding-hoes, two Grubbing-hoes, besides Axes, Saws, Wimbles, Nails, and other Iron Tools and Materials. On the Whole, there can be no sort of Question, because it appears a plain Matter of Fact, that these People necessarily take off the Sum of one hundred and fifty thousand Pounds, in the Commodities of this Country. How far it might have been more expedient for the Infant-Colony to have intermarried with the *Indians*, and thereby so increased their Numbers as to have been in a Condition to manage their Affairs without Slaves at all, I will not take upon me to determine; but this seems so clear as to admit of no Dispute, that such a Settlement would have been by far more beneficial to the Mother-Country, and out of Comparison more commodious and secure for the Planters themselves. But I mention this only incidently, and that it may pass the Consideration of Persons better versed in these Things than I pretend to be; and, from just hinting how Things might be, return to the Detail of how they really are.

I have before stated (agreeable to what able Authors have asserted upon this Subject) some general Principles of Computation, such as that every Head in this Plantation may be reckoned worth twelve Pounds a Year to this Nation, which must seem prodigious, and indeed so does every thing grounded on Calculation, to such as have not applied themselves thereto; and so they always will

will unless clearly explained, which is what I shall next attempt, as desiring to inculcate useful Truths, capable of influencing Men's Practice, and not to write paradoxical Discourses for my own, and other Peoples Amusement. In order to untie these Knots, we must consider that the People in *Virginia* live exactly as we do, or rather more freely, in that generous, open, hospitable, and consequently expensive Method, that prevailed here in the last Age. But as they are supplied both with Necessaries and Conveniences, with the Instruments of Labour, as well as the Means of Luxury, from *England*; it follows of Course that they must employ an infinite Number of Hands to provide these. For it is generally known that these Demands must be supplied from those Handicrafts and Mechanics that have most Hands in their Service; such as Weavers, Shoemakers, Hatters, Ironmongers, Turners, Joiners, Taylors, Cutlers, Smiths, Bakers, Brewers, Ropemakers, Hosiers, and indeed all the Mechanics in *England*; their Manufactures being good Merchandize in *Virginia*. The Commodities sent thither, besides Linnen, Silks, *India* Goods, Wine, and other foreign Manufactures, are Cloth, coarse and fine Serges, Stuffs, Bays, Hats, and all Sorts of Haberdashers Ware; Hoes, Bills, Axes, Nails, Adzes, and other Iron Ware; Cloaths ready made; Knives, Bisket, Flower, Stockings, Shoes, Caps for Servants, and, in short, every thing that is made in *England*.

But if they employ these People they must feed them likewise, and pay them their Wages; and not only them, but those who take the Pains to go between the Planters and these Workmen; by which I mean the Agents, Merchants, or Factors; who, though fewer in Number, yet have their Servants and Dependents; who, from the Nature of their Employments, expect to be paid at a better rate. Neither is this all, for when things are made and brought to the Factor, they are never the nearer to the Planter in *Virginia*, but must be put into the Hands of a new set of People, who are to be paid for the Carriage of them; so that now I think the most common Capacity may understand how the Labour of every Head in any Plantation must be worth four times as much to the Community of his Mother Country, as if he wrought at home; for if he spends so much, and pays for what he has, both of which are undeniable, his Labour must produce so much. This shews the Benefit of Plantations to their Mother Country; and I hope there is no need to say that this shews how much Regard and Respect is due from those who manage the Affairs of the Mother Country, to those who live and labour for her in the Plantations. But because it is not impossible we may err a little in the Measure of these Computations, and as I am far from desiring to magnify these Advantages beyond the Truth, I shall lay it down as a thing certainly to be depended upon, that every white Person in *Virginia*, one with another, is worth to this Nation ten Pounds, which will make the Value of the whole Plantation equal to an Annuity of 1,200,000 *l.* to *Great Britain*.

This I think is already, in a great Measure, demonstrated; but as I am very sensible that many People will still think full Satisfaction is not given upon this Head, if they are not shewn how this, or at least the greatest Part of it, is received; that we may not do things by halves, my next Care shall be to remove this Difficulty likewise. In order to this, we must consider that the Trade of this Colony, as well as that of *Maryland*, consists almost entirely of Tobacco; for though the Country would produce several excellent Commodities fit for Trade, yet the Planters are so wholly bent on planting Tobacco, that they seem to have laid aside all Thoughts of other Improvements. This Trade is brought to such Perfection, that the *Virginia* Tobacco, especially the sweet-scented which grows on *York River*, is reckoned the best in the World, and is what is generally vended in *England* for a home Consumption; the other Sorts, called *Oronoac*, and that of *Maryland*, are hotter in the Mouth, but they turn to as good Account, being in demand in *Holland*, *Denmark*, *Sweden*, and *Germany*; it is therefore from this Commodity that we

are to look for the best Part of that vast Sum which we have mentioned; and if we proceed diligently, and with Attention, I dare say we shall not search in vain.

In Time of Peace, I am persuaded from several different Calculations, and from the Comparison of the Informations I have sought and received from such as are, or ought to be, best acquainted with these Matters, that there is very little less than one hundred thousand Hogsheads of Tobacco exported every Year from this Colony; that between three and four hundred Ships are employed in this Trade; and upwards of four thousand Seamen. If we take things upon this Foot, then the hundred thousand Hogsheads of Tobacco will produce about the Sum at which I have fixed the Produce of this Colony to the Nation; but it may be said, that if we take Tobacco for the Commodities and Manufactures that we send to *Virginia*, it differs very widely from an Annuity; and that instead of receiving 1,200,000 *l.* from the Persons inhabiting this Plantation, we return them the most valuable things we have, to 60,000,000 of Pounds of Tobacco, which in itself is no Necessary of Life, and which we might very well do without: Thus we are all at Sea again, and it is my Business to set us once more ashore; and if I am able to clear up this last Mist, I hope there will, for ever after, be fair Weather for the Plantations.

In answer therefore to this Objection, which seems to destroy all, and to demolish entirely that Structure which I have been erecting, I say, that strictly considered, it makes more in favour of the Colony of *Virginia*, than all that I have been saying for it; and this I shall be able to make as plain as any thing can be made, in a very few Words. It is, I think, generally agreed, that Sir *Walter Raleigh* first brought Tobacco into *England*, or rather, as I apprehend, had it brought over to him from this Colony; and we find the Use of it much recommended by the learned and worthy Mr. *Hariott*, whom he sent over thither. But we must not infer from thence that *Virginia* Tobacco was always used here, since the contrary is very certain; for, as the Reader has been told, it was Sir *George Yardly* who introduced the planting and cultivating Tobacco in that Country by the *Europeans*, in the Reign of King *James I.*

Yet before this Time the Practice of taking Tobacco was become so common in *England*, that King *James* wrote a Book against it. I do not concern myself in the Controversy, whether he was right or wrong in his Opposition to this Practice; but I mention it to shew that it was become common, and that the Fashion of using it was growing strong. We had most of our Tobacco then from *Brazil*, and some from the *Spanish* Plantations; the Price of it was from four to seventeen Shillings a Pound, and if we had come to use as much of it as we do of the *Virginia* Tobacco, and had paid for it at the rate only of five Shillings, this single Article of Luxury would have stood us in upwards of seven Millions every Year. I very readily allow that this would be a very absurd and improbable Supposition, since it cannot be imagined that in such a Case, the common Sort of People either could or would have smoked Tobacco; but then let us consider what a Number of People there are to whom the Dearness of this Commodity would have proved no Restraint; and let us suppose that we should, in this Respect, have been no wiser than our Neighbours, which I look upon to be a very modest and rational Supposition, we might then, instead of forty thousand Hogsheads, have consumed ten or twelve thousand, which would have amounted to a Million or upwards, and consequently so much ready Money is hindered from going out of the Nation by the bringing in of *Virginia* Tobacco, which, viewed in this Light, is equivalent to the importing of so much Silver.

But to proceed, besides the Money saved to the Nation by the Use of this Tobacco, we export one way or other sixty thousand Hogsheads, which, at five Pound per Hogshead, amounts to 300000 *l.* exclusive of the Duty of this Tobacco, which is not drawn back. I might have taken another Method of Reasoning upon this Subject, by shewing that whatever Exchange of Commodities contributes to the Maintenance and Employment of a certain

a certain Number of People, is not only equal to, but is really much better than an Annuity, that would maintain the same Number of People in the same Way, had I not been inclined to render this Matter as evident as it is possible. After this I shall make but two short Observations, and so quit this Part of my Subject.

The first is, that in Case what we receive from *Virginia* in Tobacco should fall short of the Sum I have computed we derive from thence, this Deficiency is certainly made up some other Way; or, in other Words, the *Virginians* send us other Commodities, or pay us with the Balance of their Trade with other Places. The second Observation is, that there is not the least Danger of seeing this Country over-peopled, and thereby sinking the Value of Tobacco, because there are a multitude of things to which the People may turn their Hands; several of which have been enumerated already, and therefore I shall only observe that in the Articles of Silk and Iron, the Inhabitants of this Colony might save us 300000 *l.* a Year, and bring us in very near the same Sum from other Nations. But it is now Time to quit this agreeable Topic, which however is a very hard Task, for one who has any Tincture of public Spirit, in order to proceed with the proper Business of this Section.

6. In what we have delivered concerning *Virginia*, we have pursued the History only of the first Company established by King *James's* Patent, called also the *London* or *South Virginia* Company; but we are next to account for the Conduct of the other Adventurers, or the *Western* or *Plymouth* Company, as they are styled by the Writers of those Times, who contented themselves for some Years with trading with the Natives of *North Virginia* for Furs, and fishing upon that Coast. Two Ships being employed in this Fishery in the Year 1614, commanded by the famous Captain *John Smith*, and Captain *Thomas Hunt*: Captain *Smith* went on Shore, and took a particular View of the Country of the *Massachusetts*, and had some Skirmishes with the Natives; after which he returned to *England*, ordering *Hunt* to sail with the other Ship to *Spain*, and dispose of the Fish he had taken there; but *Hunt*, proposing to make a Market of the Natives themselves as well as of their Fish, after Captain *Smith* was gone, enticed twenty-seven Men of the *Indians* on board his Ship, and then setting sail with them to *Malaga*, sold them there to the *Spaniards* for Slaves, at the rate of twenty Pounds a Man, among whom was an *Indian* called *Squanto*, afterwards very serviceable to the *English*.

This Outrage was so resented by the *Indians* for the present, that all Commerce with them became impracticable; nor was this the first Time the Natives had been thus violently carried away by the *English*; for Captain *Harlow*, in the Year 1611, surprized one *Epenow*, and two more of his Countrymen, and brought them to *England*; where *Epenow* learned *English* enough to impose upon his Masters; and understanding that the Hopes of acquiring Mountains of Gold was the principal Inducement the *English* had to visit his Country; the cunning *Indian* in order to get thither again, pretended there was a rich Gold Mine not far from the Country where he was born, which he would guide them to if they thought it worth their while to fit out a Ship on such an Expedition. This Overture had the Success *Epenow* expected, and Captain *Hobson* was dispatched the next Year with Provisions, Tools, and Materials, proper to make a Settlement, and open the Mines *Epenow* had given them Intelligence of. This Ship arriving on the Coast of *Massachusetts*, several *Indians* came on board, promising to return again the next Day with Furs and other Merchandize; and they did, indeed, return, but in an hostile Manner, with twenty Canoes full of armed Men; and *Epenow*, beckoning to them to approach nearer the Ship, jumped into the Sea, and made his escape to them; whereupon the *English* fired upon the Canoes, and were answered with a flight of Arrows, and several were wounded on both Sides, among whom was Captain *Hobson* himself; after which, the Captain, without attempting any thing farther, thought fit to return to *England*.

In the Year 1619 Capt. *Dormer* was sent to *New England*,

and with him *Squanto*, the *Indian*, as an Interpreter, to endeavour to make Peace with the Natives, and settle a Colony in the *Massachusetts-Bay*, but to no Purpose; the *Indians* would not be reconciled, and, in a Skirmish with them, *Dormer* received farther Wounds, whereupon he proceeded to *Virginia*, leaving *Squanto* on Shore in *New England*. The Patentees, having met with such Discouragement, were, at last, so much disheartened, that they gave up all Thoughts of making a Settlement; however, other Adventurers carried on a Trade to *New England*; eight Ships were employed in it by the Merchants of *London* and *Plymouth* this, and the next, Year, and the Success was such, that the Seamen, who were Sharers also, had each 17 *l.* in six Months Time, as much as 30 *l.* now, and as good as 5 *l.* a Month, or Master's Pay. It is very probable, that the Commerce might have gone on in this Manner for several Years, without any Thoughts of planting, though that was the Motive upon which their Patent was granted, so early began the Fashion, with Companies, to make that their least Care for which they were constituted. But it so fell out, that a Congregation of Independents or Brownists, that for the Sake of their Religion had retired to *Holland*, and formed themselves into a Church under one Mr. *John Robinson*, who was their Minister, found themselves more uneasy there than they had been in *England*; and therefore formed a Project of seeking an Establishment in the *New World*, where they imagined they might enjoy Peace and Quiet; yet before they could carry this Design into Execution, it was necessary to have King *James's* Licence, not only in regard to the Rights of the Crown; but to secure them, when settled, from being turned out either by their own Countrymen or Strangers. In order thereto they got Sir *Robert Nanton* to procure the King's Consent for their transporting themselves to *America*. Sir *Robert* asked his Majesty that such a People might enjoy Liberty of Conscience under his gracious Protection in *America*, where they would endeavour the Advancement of his Dominions, and promote the Gospel: The King replied, *It is a good and honest Proposal*, and yielded to it.

This Congregation, by their Agents in *England*, treated first with the Council at *Plymouth* for a large Tract of Land towards *Norembegua* and *New Scotland*; but upon better Consideration they abandoned their Purposes, and resolved to seat themselves more to the Southward on the Bank of *Hudson's River*, which falls into the Sea at *New York*. To this End, they contracted with some Merchants, who were willing to be Adventurers with them, in their intended Settlement, and were Proprietors of the Country; but the Contract bore too hard upon them, and made them the more easy in the Disappointment they met with in settling on *Hudson's River*; several of Mr. *Robinson's* Congregation sold their Estates, and made a common Bank for a Fund to carry on this Undertaking. The Agents hired the *May-Flower*, a Ship of 180 Tons, which was freighted with proper Goods and Merchandize, and ordered to *Southampton*, where she took aboard the Company that came from *Holland* with Mr. *Brewster*. The whole Company, about 120 Persons, sailed from *Plymouth* the 6th of *September*, and fell in with *Cape Cod* on the 9th of *November*, an ill Time of the Year to begin building, planting, or indeed any hard and difficult Labour; and nothing could be more difficult and hard than theirs was like to be: Here they refreshed themselves about half a Day, and then tacked about to the Southward for *Hudson's River*; but *Jones*, the Master of the *Speedwell*, having been bribed by the *Hollanders*, who intended themselves to take Possession of those Parts, as they did some Time after, instead of putting out to Sea, entangled them among the dangerous Sholes and Breakers, where, meeting with a Storm, the Ship was driven back again to the *Cape*, upon which they put into the Harbour, and resolved, considering the Season of the Year, to attempt a Settlement there, and to proceed forward to the Bay. But *Cape Cod* not being within the Limits of the Land they had a Grant for under the Patent, they associated themselves into a Body Politic, by a formal Instrument, in which, having declared themselves Subjects

of the Crown of *England*, they solemnly engaged Submission to the Laws that should from time to time be made for the good of the Colony.

The Place they made choice of to build a Town on, was very commodious, and the Country about it not less agreeable; so they resolved not to trouble themselves or their Friends about obtaining any farther Licence, but to risque their Fortunes where Providence had cast them; in Consequence of which Resolution they went hard to work in raising their new Town of *Plymouth*, for that was the Name they gave it, and which lies in the Latitude of 42 Degrees North. The Planters designed to stay in the Country, including Women and Children, were about an hundred, of whom only one Boy died in the Passage. Their Historians mention no more than nineteen Families that settled at *Plymouth*, and give us the Names but of forty one effective Men, among whom the Chief were *John Carver*, whom they chose Governor, *William Bradford*, *Edward Winslow*, *John Brewster*, Assistant to Mr. *Robinson*, and ruling Elder of his Church, *Isaac Alerton*, *Miles Standish*, *John Howland*, *Richard Warren*, *Stephen Hopkins*, *Edward Tilly*, *Christopher Martin*, *William White*, *Richard Clack*, and *Thomas English*. But such were the Fatigues this infant Colony underwent the first Winter, that out of an hundred Planters fifty died within the Space of two Months; and had the *Indians* attacked them, they had probably all perished, but they met with no Disturbance.

After they had fixed themselves at *Plymouth Bay*, they saw very few of the Natives till the Middle of *March*, when *Samoset*, one of their Sagamores, or Captains, came to them in a friendly Manner, and gave them to understand they were welcome into the Country, and that his People would be glad to trade with them; and coming again the next Day with other *Indians*, they informed the *English* that their great Sachem, whom they called *Massasoiet*, had his Residence but three Days March to the Northward, and intended them a Visit. And accordingly *Massasoiet* arrived the 22d Day of *March*, with a Retinue of sixty People; and, being received by Captain *Standish* at the Head of a File of Musketeers, was conducted to a kind of Throne they had prepared in one of their Houses. This Monarch was of a large Stature, middle aged, of a grave Countenance, and sparing in his Speech; his Face was painted red, and both Head and Face smeared over with Oil; he had a Mantle of Deer-Skin, and his Breeches and Stockings, which were of a Piece, were all of the same Materials; his Knife or Tomahawk hung upon his Breast on a String, his Tobacco Pouch behind him, and his Arms covered with wild Cat-Skins, and in the same Garb were his principal Attendants. They did not observe any Marks of Distinction between this Prince and his Subjects, unless it were a Chain of Fish Bones, which *Massasoiet* wore about his Neck. Soon after the Prince was seated, Mr. *Carver*, the Governor, came in with a Guard of Musketeers, whereupon *Massasoiet* rose up and kissed him, after which they both set down, and an Entertainment was provided by the *Indians*, of which no Part appeared more acceptable than the Brandy, the Sachem himself drinking very plentifully of it. In *Massasoiet's* Retinue was *Squanto*, who had been carried to *Europe* by *Hunt*, and brought to *New England* again. This *Indian*, it seems, had a very great Affection for the *English*, among whom he had lived several Years; and it was to his favourable Representation of the Colony, that the Sachem was induced to make them this friendly Visit; and, at this first Meeting, to enter into an Alliance, Offensive and Defensive, with the *English*, and even to acknowledge King *James* for his Sovereign, and to hold his Dominions of him; and, as an Evidence of his Sincerity, *Massasoiet* granted Part of his Country to the Planters and their Heirs for ever.

This Alliance, being founded upon the mutual Interests of the contracting Parties, was maintained inviolably many Years. The Sachem, who had been informed by *Squanto*, how powerful a People the *English* were both by Sea and Land, promised himself their Assistance against the *Naraganset Indians*, his Enemies; and the *English* stood
